His immortality is particularly emphasised (cf. Rückert's poem "Chidher"; 'Umāra in Friedländer, *op. cit.*, p. 145; Abū Ḥatīm al-Sidjīstānī, *Kitāb al-Mu'ammariin*, p. 1; *Iṣāba*, p. 887 sqq., 892, 895). According to the *Iṣāba*, p. 882, he was given immortality after a conversation with his friend, the angel Rafā'īl, in order to establish the true worship of God on the earth and maintain it. Ibn Ḥadjar describes a meeting between al-Khaḍīr and Muḥammad in various versions (*Iṣāba*, p. 899 sqq.). On meetings with individuals who lived at a later date see *ibid.*, p. 908 sqq.; on the table which was let down to him from heaven see *ibid.*, p. 919; on his presence at the battle of Qādisiyya see *Murūdj al-Dhahab*, iv. 216.

He lives in Jerusalem and performs his *ṣalāt* every Friday in the mosques of Mekka, Medina, Jerusalem, Kūbā' and on the Mount of Olives; his food is *kam'a* and water-parsley (*Ta'rikh al-Khamis*, i. 107; *Iṣāba*, p. 889 sq., 904).

On his marriages we have as early as classical Ḥadīth (Ibn Māḍja, *Zuhd*, bāb 23) a legend also mentioned by al-Tha'labī, *Kiṣaṣ*, p. 193 sqq., which in its main features must have come from Christian sources. It is the motif of the pious youth who married by his parents against his will persuades his young wife to preserve her virginity (cf. the Syriac Acts of Thomas, 2nd Praxis). The story links up with that of Pharaoh's daughter's handmaid.

KHWĀDJA, a Persian word of uncertain etymology, an honorific title applied to personages of a town, not of military rank, bourgeois. It was generally borne by ministers of sovereigns who were chosen from among the learned. It was later used to designate eunuchs. It is found as early as the beginning of the viith (xiith) century in a verse by the poet Anwari. The derivative substantive *khwādjaḡi* in the sense of "merchant", "tradesman" is found in Meninski and the Sicilian documents published by Michele Amari (p. 212, 2).

It passed into Arabic in the forms *khuwādja* and *khwawādja*, the modern *khwawādja* (eastern dialects) and means "Sir, Mr., Monsieur". It has been borrowed by Ottoman Turkish in the form *khodja* [q.v.] and here means "scribe, clerk, copyist, literate, private tutor"; it is found again in the western dialects of Arabic which have borrowed it with the same pronunciation and the same meanings. It is found in the *1001 Nights* (cf. Dozy, *Suppl.*). The title of *Khodja*, like that of *Shaikh*, is in Turkestan only given to descendants of the Caliphs Abū Bakr and 'Umar and to those of 'Alī through his wives other than Fātima (Defrémery, *Mémoires d'histoire orientale*, ii. 407, N^o. 1; Malcolm, *Hist. of Persia*, Lahore 1888, p. 86).

(CL. HUART)

KHWĀDJA KHIḌR (or **KHIḌR** in India), is in many parts of India identified with a river-god or spirit of wells and streams. He is mentioned in the *Sikandar-nāma* as the saint who presided over the well of immortality. The name was naturalized in India, and Hindū as well as Muslims reverence him, it is sometimes converted by Hindūs into Rādja Kidār. On the Indus the saint is often identified with the river, and he is sometimes to be seen as an old man clothed in green. A man who escapes drowning is spoken of as evading *Khwādja Khizr* (Temple, *Legends of the Panjāb*, i. 221). In a poem by a Balōč regarding a fight on the Indus a boat is unloosed "to float on the *Khwādja's* waves", and it is asserted "the *Khwādja* himself will remember that battle". (*Popular Poetry of the Baloches*, i. 74), and by one poet his name is substituted for that of Mikā'il as one of the archangels. His principal shrine is on an island of the Indus near Bakhar, which is resorted to by devotees of both creeds (*Sind Revisited*, ii. 226). Manucci who was present at the siege of Bakhar in 1069 (1658) alludes to this shrine under the name of Coia Quitan. Burnes also mentions it in his "*Bokhara*".

The saint is believed to ride upon a fish, which was adopted as a crest by the Kings of Oudh, and appears on their coins. Possibly in this case there is also a survival of the fish-avatār of Vishnu. Muslims offer prayers to *Khwādja Khidr* at the first shaving of a boy, and a little boat is launched at the same time; also at the close of the rainy season. — See further **KHAḌĪR**.

KHWĀDJU KIRMĀNĪ. [See KIRMĀNĪ].

KHĀF, a town in Khurāsān, more accurately Khwāf, is first mentioned by al-Muḥaddasī in the form Khawāf as a district of Nisābūr; he describes it as small, rich in pomegranates and grapes which were made into raisins, and he calls the capital Salūmak. According to Yākūt, the district was bounded by Būshendj of Herāt and Zūen of Nisābūr; it included 200 villages and three towns: Sandjān, Sirāwand, Khardjird. Al-Kazwīnī says that Khawāf was near Nasā. According to him, it was large with many inhabitants, and had many villages, gardens and streams. It is perhaps to the same locality that Saiyid al-Murtaḍā refers as Khāf (without w), "a village in the land of the Persians ('adham)".

The modern Khāf lies on the southern road, which does not touch Nisābūr, from the Caspian Sea to Herāt, between Turshiz and Kelai Nādir on a tributary of the Hari-Rūd. Prellberg, following Macgregor, gives the total population as 15,000. According to Clerk, he describes the chief town Khāf as a town of 500 houses with several forts surrounded by pretty gardens; fields and villages stretch along the river for four miles from Khāf, of which latter the largest were Nāširābād with 300 houses and Salama and Sungun with 400 houses. Sungun must correspond to the Sandjān of Yākūt; Salama may be the modern form of al-Muḥaddasī's Salūmak and would have been the capital of the district in older times. According to Yākūt, Khardjird lay near Būshendj and must therefore have been in the eastern part of the district of Khāf, where in modern times there is no longer any settlement except the fort of Kelai Nādir. The total number of villages in the district of Khāf was given by Bunge as 26.

SCHWARZ)

KHAFAḌJA, a subdivision of the Hawāzin tribe of 'Ukail which remained as powerful Bedouins longer than most of the other tribes which inhabited the Arabian peninsula at the dawn of Islām. The genealogists give their affiliation to their kindred clans as Khafādja b. 'Amr b. 'Ukail, and they were subdivided into eleven branches: Mu'āwiya Dhu 'l-Karḥ, Ka'b Dhu 'l-Nuwaira, al-Akra', Ka'b al-'Asghar, 'Amir, Mālik, al-Haiṭham, al-Wāzi', 'Amr, Hazn and Khālid. They had their territory in the time before Islām to the south-east of al-Madīna and owned one or two villages, among which Sarw Lubn and Sharā' in are mentioned. A hundred years later we find them mentioned much further east and at war with the tribe Ḥanifa in the Yamāma (*Agḥ*, vii. 122). Probably the Ḳarmaṭian movement in the Yamāma in the early part of the fourth century of the Hidjra caused them to move further north towards the borders of the 'Irāk. Here we find

them towards the end of the fourth century established as masters of al-Kūfa under their amir Thumāl and his sons. They may have been at first allies of their cousins the Banū Yuzīd (not Bozid as in Wüstenfeld's *Tabellen*, or Yazid as otherwise stated) who established themselves as rulers of al-Mawṣil and the surrounding country. They were rather in opposition to them. In the year 391 (1000) Ḳarwāsh attacked them in al-Kūfa and they were compelled to leave the country and move along the Euphrates towards Syria, where they remained only till the following year, when the 'Abbasid general Abū Dja'far al-Ḥadj-djadj called them to his aid when the 'Ukailis besieged al-Madā'in. This brought them again back to their ancient dwelling-places and as the Baghdad government had probably supplied them with arms they utilised these a few years later, in 402 (1011), in an attack upon the caravan of pilgrims. They had seized the wells at Wākisa to the south-west of al-Kūfa a short distance into the desert, and prevented the pilgrims from approaching to the water and then fell upon them, slaughtering and plundering, making many of the survivors prisoners. Emboldened by this success they demanded the lands to the right of the Euphrates which had been in the hands of the 'Ukailis, and marched under the command of Sulṭān, 'Ulwān and Raḍjab, sons of Thumāl to al-Anbār, laying the whole neighbourhood waste and besieging the town. An army sent against them from Baghdad and supported by the 'Ukailis drove them out and Sulṭān was actually captured, but released upon the intercession of Abū 'l-Ḥasan ibn Mazyad al-Asadi. No sooner had he been released than in the following year 403, news was received at Baghdad that they were plundering the country round al-Kūfa under Sulṭān. An army was sent against them which was aided by Abū 'l-Ḥasan ibn Mazyad and they were surprised at the river al-Rummān. Sulṭān escaped but his brother Muḥammad was made a prisoner, but this defeat had the result that many of the pilgrims who had been captured in the year 403 were liberated and reached Baghdad, where they had been believed to have been killed. Meanwhile the 'Ukaili Amīr Ḳarwāsh had been captured and released and he now tried to make common cause with the Khafādja, trying to join Sulṭān ibn Thumāl, but after they had joined they were attacked by troops sent from Baghdad and routed. They both asked for pardon which, strangely, was readily granted. This gave a few years of comparative peace but in 417 (1026) Dubais b. 'Alī b. Mazyad al-Asadi and Abū 'l-Fityān Manī' b. Ḥassān, now chief of the Khafādja, made a plundering expedition against the lands which belonged to Ḳarwāsh in the Sawād [q.v.], assisted by troops from Baghdad, and they encountered him near al-Kūfa of which he had made himself master. Ḳarwāsh fled towards the North and was pursued by the combined tribes of Asad and Khafādja, who actually took possession of al-Anbār, but after this success the two tribes dispersed again to the pasturing quarters. Manī' b. Ḥassān then marched, with his followers to al-Djāmī'ain a place between Baghdad and al-Kūfa, which belonged to Dubais b. Ṣadaqa b. Mazyad and plundered the land round it; when pursued by Dubais they turned North and attacked al-Anbār. The inhabitants defended themselves for a while but

as the town was not protected by walls the *Khafādja* entered plundering and burning. When they learned that *Qarwāsh* was coming to drive them out assisted by troops from *Baghdād* they left the town, but soon returned and looted the town for the second time. When finally *Qarwāsh* was able to drive them out he spent the winter in the town and instructed walls to be built to protect the town from further surprise attacks. Now *Manī'* swore allegiance to the *Buyid* ruler *Abū Kālīdjār* and marched south to al-Kūfa where he had the *Khutba* said in the name of *Abū Kālīdjār*, for which he received jurisdiction over the waters of the Euphrates. This had the result that in 420 *Dubais* severed his allegiance to *Abū Kālīdjār* as he was afraid of the depredations of the *Khafādja*. In the following years the *Khafādja* held sometimes with one party and again with another and when in 425 (1033) *Dubais* had a quarrel with his brother *Thābit* they sided with the former but quarrels also arose among the *Khafādja* chiefs during which 'Ali b. *Thumāl* was killed and his nephew al-*Hasan* b. *Abi 'l-Barakāt* became chief of the tribe. When in 428 (1036) the *hādhib* *Bāris Tughān* rebelled in *Baghdād*, the general of the Caliph, al-Basāsiri employed among others the tribe of *Khafādja* to quell the revolt, as a result of which *Bāris Tughān* was executed. We do not hear much about the *Khafādja* for some years, but in 446 (1054) they again made an inroad upon al-Djāmi'ain, belonging to *Dubais*, which they plundered; al-Basāsiri came to his assistance and the *Khafādja* retreated into the desert. They were pursued and their stronghold *Khaffān* was besieged and raised to the ground, except the citadel which was a strong building of cement. When al-Basāsiri rebelled against the Caliph in the same year he took al-Anbār after a prolonged siege and we find that among the prisoners he took there were 100 men of the tribe of *Khafādja*. Again followed a period of comparative peace, but when in 485 (1092) the pilgrims from *Baghdād* had passed al-Kūfa they were attacked by the *Khafādja*. The news having been received at *Baghdād*, troops were sent who caused great slaughter among them and this was the cause that in future they were no longer powerful enough to do serious damage. A few years later, in 499 (1105) the *Khafādja* came into conflict with the *Taiyi'* tribe 'Ubāda over some stolen camels and while the latter could muster about 500 warriors, the *Khafādja* were unable to place a similar number into the field, but they were assisted by *Ṣadaqa* b. *Manṣūr* [q.v.], the chief of *Asa'*, and were victorious. This success was however of short duration as in the following year the tribe of 'Ubāda, now assisted by *Badrān*, son of *Ṣadaqa*, utterly routed *Khafādja* who were compelled to forsake their pasture grounds and wander north towards Syria, while 'Ubāda in future occupied the lands adjoining the *Sawād*. Again in 536 we hear of *Khafādja* making an inroad into the 'Irāk, but the troops sent against them easily drove them off, killing large numbers. How weak the *Khafādja* had become is evident from the fact that in 556 (1161) they assembled in the neighbourhood of al-Hilla and al-Kūfa, asking for the relief-food and dates which had apparently been granted them. The governors of the two towns refused to grant their request and *Qaiṣar*, the governor of al-Hilla sent 250 soldiers to drive them off, a

similar corps being sent by the governor of al-Kūfa. They pursued the fleeing *Khafādja* along, the river Euphrates as far as *Rahbat al-Shām* where the *Khafādja* made a stand as they could not retreat any farther and in the fight which ensued *Qaiṣar*, the governor of al-Hilla, was slain while *Arghash*, the governor of al-Kūfa, took refuge with the governor of *Rahba*. *Khafādja* then pleaded for forgiveness stating that they were constrained to fight by being driven to extremes. Their excuse was accepted as the *wazīr* *Ibn Hubaira* who had marched out against them saw the futility of pursuing them into the desert. The last time we hear of the *Khafādja* is in the year 588 (1192) when they came to the assistance of the town of al-Baṣra when the latter was threatened by the tribe of 'Amir. In addition to the events narrated we find that *Khafādja* were among the Arab tribes who assisted in the siege of *Tiberias* in 507 (1113) when *Baldwin* had taken refuge there after an unsuccessful raid upon *Ḥalab*.

According to al-*Qalkashandī* a branch of the tribe of *Khafādja* was settled in lower Egypt. Among the poets of this tribe in ancient time was *Tawba* b. al-*Humaiyir*, celebrated on account of his love for *Lailā al-Akhyaliya* and the elegies which the latter composed upon his death when he was killed in a raid.

(F. KRENKOW)

AL-KHAFĀDJĪ, AHMAD B. MUHAMMAD B. 'UMAR AL-KHAFĀDJĪ, called *Shihāb* al-Dīn al-Miṣrī al-Ḥanafī, was born near *Shair* about the year 979/1571 and received his earliest education from an uncle on his mother's side, *Abū Bakr al-Shanawānī*, whom he calls himself the *Sibawaih* of his age, and under him he studied both *Hanafi* and *Shāfi'i* law; the biography of the Prophet entitled *al-Shifā'* by the *Qāḍī 'Iyāḍ* [q.v.] he read under *Ibrāhīm al-'Alkāmī* and he even studied medicine under *Dā'ūd* al-Baṣīr. Later he made the pilgrimage in the company of his father and took the opportunity to hear the lectures of the learned men in the two holy cities. After his return from the pilgrimage he made his first journey to *Constantinople*, where he found several teachers of outstanding merit, among whom he mentions *Ibn 'Abd al-Ghani*, *Muṣṭafā* ibn 'Arabī and the Jewish Rabbi *Dā'ūd* under whom he studied mathematics and the books of *Euclid*. His principal master, however, was *Sa'd* al-Dīn b. *Ḥasan*, and when the latter died and his other teacher soon followed him in death, *Constantinople* became devoid of men of learning. He had meanwhile gained favour and received the post of *Qāḍī* of the province of *Rūmelī* and rising in rank he became *Qāḍī* of *Üsküb* under *Sultān Murād*, who finally appointed him to the same office in *Saloniki*. These offices enriched him considerably and he was ultimately sent as *Qāḍī 'Askar* to *Egypt*. This post, however, he did not hold for long as through intrigues at *Constantinople* he was dismissed. This decided him to make another journey to *Constantinople* and on travelling there he passed through *Damascus* and *Ḥalab*, in

both of which cities he was entertained by the men of learning. His expectations in Constantinople were not fulfilled and he gave vent to his anger in the literary outburst which he entitled *al-Maḥāmāt al-Rūmiya*. Instead of making matters easier for himself he incurred the hatred of the Muftī Yahyā b. Zakāriyā and was ordered to leave the city immediately. As an acknowledgment of his worth as a scholar he received the appointment of an ordinary Kāḍī at Cairo, but he seems to have devoted his remaining years to study and the composition of his works. He died in Cairo on Tuesday the 12th of Ramaḍān 1069 (3 June 1659). Al-Khafādjī enumerates most of his works in his autobiography, many of them of considerable size, while he himself tells us that many of his treatises were never collected in book-form. His most extensive work is a commentary upon the *Tafsīr* of al-Baiḍāwī which he entitled *ʿInāyat al-Kāḍī*, and which has been printed in Cairo in four large volumes. The work follows the usual tedious method of explaining almost every word, and for traditions and explanations he adduces the statements of a large number of other authors who have treated upon the same subject. The same is the case with his second largest work, a commentary upon the *Shifāʾ* of the Kāḍī ʿIyād, entitled *Nasīm al-Riyāq*, which we have seen, he studied under Ibrāhīm al-ʿAlkamī. Here again he quotes all accessible literature dealing with the biography of the Prophet, giving the various authorities who have recorded the same traditions. Neither of these works contain anything original, because the subject did not call for anything new. All that was required of the author was to bring together every detail on his subject he could find in the works on hand. This work has also been printed in Constantinople 1267 A.H. in four volumes. Of an entirely different nature are his two biographical works: *Khabāya ʿl-Zawāyā fi mā fi ʿl-Riḍāl min al-Bakāyā* and *Raiḥānat al-ʿAlibba wa-Nuḥbat al-Hayāt al-Dunyā*. The titles prepare us for the style in which these two books are composed, the evil influence of the *Yatima* of Thaʿlībī and the *Kharīda* of ʿImād al-Dīn is in both works apparent; we get instead of biographies an exuberance of verbosity without any noteworthy information and in most cases we can only infer that the persons named lived during, or shortly before, the time of the author, but the arrangement according to countries gives us the information where the persons lived. For biographical details both works are useless. We get however a fair amount of contemporary poetry to enable us to judge to what miserable depth the art of rhyming had sunk. While the first named work exists only in manuscript, the *Raiḥāna* has been printed three times in Cairo (1273, 1294 and 1306), which shows us that the work is appreciated in Egypt. The most valuable portion of this work is an autobiography of the author (in which he has omitted to state when and where he was born) and the *Maḥāmāt al-Rūmiya* which is directed against the learned men of Constantinople. The autobiography has furnished the material for the account of his life above and in the work of al-Muḥibbī. Of more value are his *Ṭirāz al-Maḥālis* and his *Shifāʾ al-ʿAlil*. The former is a work of the class called *amālī* in 50 sessions (*maʿjīs*), and he tells us in the introduction that Ibn al-Shadjarī, Ibn al-Hādīb, al-Kālī or even Thaʿlab would acknowledge its excellence if they

were able to see the book. Its value consists in having preserved extracts of older works now apparently lost or undiscovered. It is interesting to find him quote from the *Kitāb al-Maʿānī* of al-Uḥṣnāndānī (printed in Damascus 1340), the *Milal* of Ibn Ḥazm, the *Fihrist* of Ibn Nadīm or the *Ansāb* of al-Zubair ibn Bakkār, considering how rare manuscripts of these books are. The book is in fact a curious collection of odd information from all kinds of sources. Apparently there are two editions of this book, one Cairo 1284 and a second without date printed in Tanṭa. The *Shifāʾ al-ʿAlil fi mā fi Kalām al-ʿArab min al-Dakḥil* is, as indicated by the title, a work dealing with words of foreign origin in the Arabic language. The author has used for this purpose the *Muʿarrab* of al-Djawālīqī [q.v.] and similar works, but is not content with explaining, or simply mentioning, words of foreign origin, as he also gives ample specimens of vulgar errors in correct Arabic speech. Closely resembling this book is a commentary on the *Durrat al-Ḥawwāṣ* of al-Ḥarīrī, which has been printed together with the *Durra* at Constantinople, in 1299. In this work he not seldom corrects al-Ḥarīrī and frequently gives useful additional information and this work together with his *Ṭirāz* are probably the best of his compositions. His *Diwān* is mentioned by al-Muḥibbī and has actually been preserved in manuscript in Copenhagen, but my knowledge of his poetry is confined to what al-Muḥibbī quotes or he himself cites in his own work. It is not of a high standard, but his whole works are typical of his period and vividly reflect what we may expect from his contemporaries.

Bibliography: al-Muḥibbī, *Khulāṣat al-Aḥḥār*, i. 331—343; Brockelmann, *G.A.L.*, ii. 285. (F. KRENKOW)

KHWĀFĪ KHĀN (MUḤAMMAD HASHIM NIZĀM AL-MULKĪ), historian; his title of Khwāfī Khān was given him by Muḥammad Shāh and is derived from a family connection with Khwāf, a district of eastern Persia, famous for its distinguished men. He was a son of Khwādja Mir a confidential servant of Murād Bakhsh, youngest son of Shāh Djahān. The place and date of his birth are not known, but it seems probable that he was born in India, and a statement in his history (i. 739) implies that his birth took place about 1664. The statement is that 74 years after the death of Shāh Djahān's minister. Sa'd Allāh, he was 52 plus the age of discretion (14?). In other words he was 66 Muḥammadan years old in 1728 (1066 + 74 = 1140 A. H.). His father was Khwādja Mir, a confidential servant of Shāh Djahān's youngest son, Murād Bakhsh, and was severely wounded at the battle Samōgarh. Khwāfī Khān possibly, like Bernier's friend Dānīshmand, began life as a merchant, or as an official's clerk, and it was in one of these capacities that he visited Bombay in 1693—94 and had an interview with an English official (ii. 424, and Elliot-Dowson, vii. 350). He served under Awrangzēb, Bahādur Shāh and Muḥammad Shāh in the Deccan and in Guḍjarāt, and was long stationed at Surāt. He also lived at Aḥmadābād, which he defends against the strictures of Dja-hāngir, and at Rahūrī, in Siwdjī's country, and in the beginning of Bahādur Shāh's reign he was governor of Campānir (i. 77). Probably he ended his days at Ḥaidarābād in the service of Āṣaf Djāh Nizām al-Mulk (hence our author's title of

Nizām al-Mulkī) about 1732—33. He was an intimate friend of Shāh Nawāz, the author of *Ma'āthir al-Umarā'* (who was also a Ḥaidarābādī officer) (v. iii. 680 of the Bibl. Ind. ed. of that work, and Khwāfī Khān, ii. 678).

Khwāfī Khān wrote a history of the Indian branch of Timūrid dynasties, and called it *Muntakhab al-Lubāb* (the Choice Compendium). It is a standard work and is much admired, especially by Orientals, for its style, and its accuracy and impartiality, though it is often too grandiloquent for western taste. Still, it is by far the most human and interesting of native histories of India, with the doubtful exception of Badā'uni, and ought to have been translated long ago. After an introduction beginning with Turk b. Yaphet, and describing the origins, etc., of the Tartars and Mongols, it gives short biographies of Timūr, his third son, Mirān Shāh, and the descendants of the latter, who were the emperor Bābur's ancestors. These are followed by a history of the emperors of Āgra and Dihlī, beginning with Bābur, of whom there is a tolerably full account, and ending with the beginning of the 14th year of Muḥammad Shāh. Bābur conquered India in 1526, and the 14th year of Muḥammad Shāh was 1732, so that the history covers a period of over 200 years. The last ten years of the history are given in a very abridged form. The most valuable parts of the work are the accounts of Shāh Djahān and Awrangzēb, for both of whom the author had a high admiration. The history has been published in the *Bibliotheca Indica* (2 vols), but the edition is not complete, for it wants the first part or volume. This last, however, is very rare, and perhaps does not exist in its entirety. There is only a portion of it in the British Museum. The author refers to it in vol. i. p. 49 of the printed edition. Khwāfī Khān also wrote a history of the minor Muḥammadan dynasties of India, but this too has disappeared, though a small portion is preserved in MS. in the India Office Library (Ethé, *Cat.*, N^o. 407). It was apparently of little value, being mainly an abridgment of Farishtā.

The charm of Khwāfī Khān's history consists in his digressions and his frequent use of his own observations, and of information derived from his father and brother. He is a somewhat bigoted Muḥammadan, and he is too favourable to Shāh Djahān and Awrangzēb. Thus he slurs over Awrangzēb's treacherous capture and subsequent execution of his younger brother, Murād Bakhsh. The capture he represents as a clever manoeuvre (it certainly was to the public advantage), but he is evidently half-ashamed of it, for he declines to give the particulars. In his account of Murād Bakhsh's attempt at escape, and his trial and execution, which he got from his father, he does not plainly set down Awrangzēb's responsibility, and continues to pay him a compliment for his generosity in rewarding the man who declined to prosecute Murād for the murder of his father. He also deals lightly with Shāh Djahān's conduct to Khusrāw, and to his competitors for the throne, and says nothing about his debaucheries. Still he is far more honest than Abu 'l-Faql. His accounts of Shēr Shāh and Djahāngir are very fair, and in the latter of them he has a very interesting account of Nūr Djahān. He says he got it at Sūrāt in 1695—96 from a very old man, who as a child had accompanied Nūr Djahān's father on his

journey from Persia to Afghānistān and India. Khwāfī Khān too, though, like Tacitus, he may tell us too much about emperors and their wars, does not omit the more interesting subject of plague, and famine, and of internal administration.

Bibliography: Elliot-Dowson, *History of India*, vii. (which contains a very full abstract, by Prof. Dowson, of the 2nd volume of Khwāfī Khān); Colonel Lees, *Materials for the History of India* (Hertford 1868), p. 57 sq.; there is a manuscript translation of vol. i. by Major Gordon in the British Museum (Add. 26, 617).

(H. BEVERIDGE)

KHAFĪF, the eleventh metre in Arabic prosody, containing three 'arūd and five qarḥ:

	<i>Fā'ilātun mustaf'ilun</i>			
I	{	<i>fā'ilātun</i> ..	n	<i>fā'ilātun</i>
		" " " ..	n	<i>fā'ilā</i>
II	{	<i>fā'ilā</i> ..	n	<i>fā'ilā</i>
		" " " ..	n	"
III	{	<i>mustaf'ilun</i> ..	n	<i>mustaf'ilun</i>
		" " " ..	n	<i>mustaf'il</i>

All the feet lose their second quiescent letter when the last quiescent letter of the preceding foot is retained and vice versa. The foot *fā'ilātun* used as first qarḥ is often changed to *fālātun* (= *maf'ulun*) by *tash'īth*. (MOH. BEN CHENEB)

KHAIBAR, an oasis on the road from al-Medina to Syria, 100 miles from al-Medina. Doughty, who stayed in Khaibar from November, 1877, to March, 1878, describes Khaibar as a group of wide, well-watered valleys, which lie together like a palm leaf on the edge of the lava region (Ḥarra) and all run into one main valley. These valleys are gashes in the lava-field, beneath which lies sandstone which, wherever it crops out, has a burned and discoloured appearance. The oasis lies 2,800 feet above sea level and Doughty puts its population at about 1,000 souls. The bottoms of the valleys are covered with rushes, the springs have a slightly sulphurous taste and are surrounded by incrustations of salt. In spite of its many palm trees, the land has an uninviting aspect and great stretches of ground lie untillied. The commanding height of al-Ḥiṣn, illustrated by Doughty on p. 104, consists of a great basalt rock, which rises out of the Wādī Zaidiyya, like an erratic block. The modern settlement is built on its south side. The length of the walled platform of the citadel is 200 paces and the breadth 90. The floor is deep mould, which may be partly of the old clay buildings that have melted away upon the uneven rock. In digging, potsherds, broken glass, eggshells and horse-dung are brought to light. Two ancient pyramids of clay bricks, the lower parts of which are cased with stone, enclose an ancient covered well, which was used to supply the garrison.

The name Khaibar is said by Yaḳūt to have meant "castle" in the language of the Jews who lived there; according to Sahl b. Muḥammad al-Kātib, it took its name from Khaibar b. Kāniya b. Mahlā'il, who was the first to settle there. The ancient Khaibar, according to the old Arab geographers, lay in a very fertile district which was rich in palms and luxurious cornfields, and consisted of seven castles: Ḥiṣn Nā'im, Ḥiṣn Abi 'l-Ḥukāik, Ḥiṣn al-Shikk, Ḥiṣn al-Natāh, Ḥiṣn al-Sulālim, Ḥiṣn Waṭih and Ḥiṣn al-Katiba. Al-Bakri further mentions Ḥiṣn Waḍjida, in which there were palms and other trees and which later belonged to the Prophet Muḥammad, and the greatest stronghold

of Khaibar, Ḥiṣn al-Kamiṣ, which 'Alī b. Abī Ṭālib, afterwards Caliph, captured, the lower part of which was occupied by the mosque of the Prophet (also called al-Manzila), built after the conquest by 'Isā b. Mūsā. The spring in the fort of al-Shiḥk was called al-Hamma. The Prophet called it *Ḳismat al-Mal'ā'ika* ("the angels' share"). It was much admired for the remarkable properties of its water. Two-thirds of its water flowed away in one channel and the other third in another. Both had the same direction. If three pieces of wood or three dates were thrown into the well, two went into the channel containing two-thirds and one into the other. No one could take more than a third of the spring water out of this channel and if anyone stood in the channel which took two-thirds in order to send more water into the smaller channel, the water overwhelmed him and flowed past him so that none went back into the second channel to increase its share.

The oldest mention of Khaibar in inscriptions is in the bilingual inscription of 568 A.D. of Ḥarrān in al-Ledja, of which E. Littmann has given the correct interpretation in *Osservazioni sulle iscrizioni di Ḥarrān e di Zebed*, in *R.S.O.*, 1911/12, iv. 193 sqq. The inscription bears the date "in the year 463 [viz. of the era of Boṣra], a year after the expedition of Khaibar". According to Ibn Ḳutaiba, *Kitāb al-Ma'ārif*, ed. Wüstenfeld, p. 313, this expedition took place under King al-Ḥārith b. Abī Shamir (al-Ḥārith b. Djabala), who reigned from 528 to 569/570 A.D.; the inscription now gives as the exact date for this event the year 567 A.D. Much more serious for the history of Khaibar and its Jewish population was Muḥammad's campaign; he set out in the beginning of the year 7 A.H. (628 A.D.) with about 1600 men against Khaibar, presumably with the object of obliterating the unfavourable impression made by the treaty of Ḥudaiḇiya and of offering his followers a rich substitute for the booty they had lost. The Jews of Khaibar had apparently prepared for Muḥammad's attack, but they were not united among themselves. The population was not a solid body living together within one area, but was scattered among the surrounding valleys, where they occupied in little groups fortified houses in the midst of rich palm groves and cornfields. Every settlement had its own particular name. The valley was divided into three territories, called al-Natāḥ, al-Shiḥk and al-Katiba. This strategically unfavourable mode of settlement was from the first a disadvantage, and the position of the Khaibaris became still more precarious when their allies, the Ḡatafān, left them in the lurch, and their 4,000 auxiliaries left Khaibar for their homes. Muḥammad thus had a free hand. The advance was carried out by night and in the morning the Khaibaris found the Muslim troops confronting them; they had taken up their quarters behind the Ḥarra on the edge of the desert. It took Muḥammad about six weeks to conquer the whole district of Khaibar. Every strong house, every fortified place had to be besieged and stormed, frequently after heavy fighting. The castle of al-Natāḥ was the first to be attacked; it resisted for over a week. In revenge for the stubborn defence, Muḥammad had the splendid palm-trees around it cut down. 400 were destroyed before the politic Abū Bakr put a stop to further devastation. Al-Shiḥk was next stormed. The successes of the Muslims had already much weakened the

strength of the defence. Treachery had placed al-Natāḥ in the hands of the Prophet, and as engines of war had also been captured, in the use of which a Jewish traitor instructed the Muslims, the resistance of the Jews diminished considerably so that the other strongholds fell more quickly. The last bulwark of the defence, al-Katiba, fell almost without resistance. The Jews were sentenced to lose all their property and were left with their wives and children and allowed to till the soil which they had previously owned. Half of the harvest had to be handed over to Muḥammad. This tribute continued to be paid until the Caliph 'Umar b. al-Ḳhaṭṭāb drove the Jews out of Arabia. Later, however, the Jews returned in certain numbers to Khaibar. Benjamin of Tudela says that in 1173 A.D. a Jewish colony, 1150 strong, which must have formed a closed community, lived in Khaibar. Not too much stress need be laid on his statement. Burckhardt, who saw Khaibar at the beginning of the sixth century, mentions that the Jewish community once settled here had entirely disappeared.

KHAIBAR PASS, the northern route between Afghānistān and India, leading from Kābul to Peshāwar. The pass runs from Dakka to Djamrūd and is about thirty-three miles long, its centre lying in 34° 6' N. and 71° 5' E. Its highest point, Landī Kotal, is 3,378 feet above sea-level.

Alexander the Great probably sent the division of his army under Hephaestion and Perdikkas through the Khaibar, while he himself followed the northern bank of the Kābul river and crossed the Kūnar valley into Bādjāwr and Sawād. Maḥmūd of Ghazna used the pass only once, when he marched to meet Djaipāl in the Peshāwar valley. The Amīr Timūr used it when invading India in 1398 and when retiring in 1399.

Bābur invaded India by the pass in 1525 and Humāyūn, after capturing Kābul, on his return from exile, traversed it. It was the route regularly used by Akbar and his successors between the Pandjāb and Kābul, and Djalālābād, first fortified by Humāyūn, was named after Akbar. The pass was held in Mughal times, as now, by the Afridis, a turbulent tribe extremely jealous of foreign encroachment, and in the reign of Akbar their hostility was accentuated by the establishment in this region of a heretical and fanatical sect, the Rawshaniyas [q.v.], who commanded the adherence of the Afridis, Yūsufzais, and other tribes. In 1586, on the death of Mirzā Muḥammad Amin, ruler of Kābul and younger brother of Akbar, Rādjā Mān Singh, marching to take possession of Kābul in the name of the emperor, was obliged to force the pass, an operation which was performed with

difficulty, and the suppression of the Rawshaniyas cost much blood and treasure. In 1672 the tribes attacked Muḥammad Amin Khān Awrangzībi, governor of Kābul, in the pass, annihilated his army of 40,000 men and captured the women and children and the imperial treasure and elephants.

Nāḍir Shāh, advancing by it to attack Nāṣir Khān ṣūbādār of Kābul under the Mughal government, was opposed by the tribesmen, but led his cavalry through Bāzār, took Nāṣir Khān by surprise, and overthrew him near Djamrūd. Aḥmad Shāh Durrāni and Shāh Zamān used the pass on several occasions when invading the Panḍjāb.

The British first used the Khaibar Pass in 1839 in the attempt to establish Shāh Shujā' in Afghānistān, and have since used it on several occasions, more than once suffering disasters in traversing it.

By the treaty of Gandamak (1879) between the British and the Amīr Ya'qūb Khān, the control of the pass was left to the former, who have exercised it latterly by maintaining an experienced political officer for the pass, at whose disposal are the Khaibar Rifles, a corps of militia composed of Afridis under British officers. The arrangement has not been entirely satisfactory, but was probably the best that could be made with so turbulent and treacherous a tribe.

KHAIR AL-DĪN, an important Turkish architect of the time of Sulṭān Walī Bāyazīd II (1481—1512). As a result of the habit of Turkish historians of mentioning favourably every pious founder, writer of chronograms, and calligrapher, but only exceptionally giving the name of the creator of a masterpiece of architecture, or even giving any biographical notice of him, Khair al-Din's activities are veiled in obscurity. It is certain, however, that he is a historical personality. He is said to have been the son of the architect Ustād Murād. His masterpiece is the Bāyazīd Mosque, a vigorous piece of architecture, in Constantinople (built between 1501 and 1507) (on which see Ewliyā, *Siyāhat-nāma*, Stambul 1314, i. 142; Sa'd al-Dīn, *Taḍj al-Tawārīkh*, Stambul 1279, ii. 211; von Hammer, *Constantinopolis und der Bosporos*, Pest 1822, i. 402; Skarlatos Byzantios, *Konstantinopolis*, Athens 1890, i. 421).

The popular Turkish view of the importance of Khair al-Din, who is considered the real founder of Ottoman architecture and is approached by none of his predecessors (Elyās b. 'Alī, Mehmed al-Maḍjūn, Mūsā, etc.) or his successors (M. Kāsim, Kamāl al-Dīn) down to Sinān [q. v.], the greatest of Ottoman architects and one of the greatest of the world's architects, is confirmed by his masterpiece, the Bāyazīd Mosque.

The scheme of two half-domes supporting the

principal dome is modelled, it is true, on the Aya Sofia, but dominated by another conception and deliberately developed further. Pious legends are associated with the building.

There is also a little mosque by him which bears his name, not far from the *türbe* of the Grand Vizier Sinān Pasha at Parmaḳ Kapusu. His tomb is in front of this *türbe*.

(TH. MENZEL)

KHAIR AL-DĪN (BARBAROSSA), the famous Turkish corsair and Beylerbey of Algiers and brother of 'Arūdj [q. v.]. In spite of the statement to the contrary by Haëdo, it is he who is referred to by the epithet Barberousse (Barbarossa, Aenobarbus) in the diplomatic correspondence of the French court. Born at Metellin about 888 (1483) he was at first a pirate under the command of his brother and acquired a great reputation for skill and bravery. When 'Arūdj set out on his expedition against Tlemcen he gave his brother the governorship of Algiers, which he had just taken. When the news of the death of 'Arūdj arrived, Khair al-Din was unanimously chosen by his companions to succeed him. But he soon found himself in a very critical position. The towns of Cherchell and Tenès had rebelled; the Kabyls of Ibn al-Kādī, king of Kuko, deserted him; Abū Ḥammū, king of Tlemcen, had invaded the Chelif valley; finally the Algerians, tired of the cruelty of the Turks, were only waiting an opportunity to throw off the yoke. Thus feeling unable to cope with all his opponents with the forces at his command, Barbarossa sought the help of Selim, Sulṭān of Constantinople. He paid homage to him for the lands conquered by his brother and promised to pay him tribute. The Sulṭān, who had just conquered Egypt (1517), eagerly seized this opportunity of placing the shores of the Western Mediterranean under his sway. He accepted the homage of Khair al-Din and gave him the ranks of Pasha and Beylerbey (cf. the article BEG). At the same time he sent 2,000 men with artillery to Algiers and authorised the enrolment of volunteers, to whom he granted the rights and privileges of the Janissaries [q. v.]. 4,000 Turks or Levantines thus came to serve under Barbarossa and formed the *odjak* or militia of Algiers.

The arrival of these reinforcements enabled Khair al-Din to meet the dangers which threatened him. A conspiracy of the Algerians who had agreed with the tribesmen to set fire to the fleet and massacre the Turks was put down and the heads of the ringleaders fixed on the gates of the Pasha's palace. A Spanish force under Ugo de Moncade was repulsed. The Christians landing at the mouth of the Ḥarrash (al-Ḥarāsh) had taken up their position on the heights of Kudyat al-Ṣābūn and began to bombard the town. Barbarossa succeeded in drawing them out of their entrenchments by attacking their ships drawn up on the shore and forced them to re-embark (1519). In the east, on the other hand, he was less fortunate. A Tunisian

army was advancing on Algiers. He set out against that and met the enemy in Kabylia on the territory of the Flissat Umellil. In the middle of the battle, the Sultān of Kūko, secretly won over by the Ḥafṣid Sultān, deserted and turned against the Turks. The latter were cut to pieces and Barbarossa, with his road to Algiers barred, had to take refuge in Djidjelli [q. v.]. During this time the Kabyls laid waste Mitidja and occupied Algiers, while Cherchell and Tenès again revolted (1520).

Taking refuge in Djidjelli, Khair al-Dīn began to reconstitute his army and to gather reinforcements. He resumed his old trade of pirate and from 1520 to 1525 he ravaged the coasts of the western Mediterranean, amassing considerable booty and gathering numerous adventurers around him. He was soon strong enough to seize Collo (1521), Bône (1522) and Constantine. He also secured the help of the natives of Little Kabylia by making an alliance with 'Abd al-'Aziz, chief of the Banū 'Abbās, rival of the Sultān of Kūko. Thus he was able in 1525 to resume the offensive against Ibn al-Kādi. Defeated at the Wādī Bugdura and again at the pass of the Banū 'Ā'isha, the latter was killed by his own soldiers. Mitidja and Algiers were reoccupied by the Turks, the rebel chiefs of Tenès and Cherchell were put to death and the inhabitants of Constantine, who had in 1527 expelled their kaid and massacred the Turkish garrison, severely punished. Finally, Ḥusain, who had succeeded Ibn al-Kādi, tendered his submission and agreed to pay an annual tribute (1528).

The capture of Peñon, a Spanish stronghold built on an islet within cannon-shot of Algiers, completed the restoration of Turkish power. In the beginning of May, 1529, Barbarossa began the bombardment of this fortress, the garrison of which the Spaniards had neglected to strengthen; it was taken by storm on May 27 when there were only 25 unwounded defenders left. Khair al-Dīn had the governor, Don Martin de Vargas, put to death and ordered the outer walls of Peñon to be razed to the ground. The debris were used to build a mole joining the island to the mainland. This jetty protected the roadstead from the west winds and enabled the corsairs to leave their ships in shelter which they had previously been obliged to draw up on shore during bad weather. This created the harbour of Algiers, a refuge and base for operations for the Barbary fleets. Disturbed by this new success of Khair al-Dīn, the Spaniards tried to secure a landing place on the coast by taking Cherchell, but the expedition led against this town by Andreas Doria ended in failure (1531).

Now definitely installed in Algiers, Barbarossa set himself to increase still further his military forces by organising, alongside of the Janissaries, whose insolence and insubordination rendered them dangerous, bodies of troops personally devoted to him. He formed a guard of 500 renegades, for the most part Spaniards, raised 7,000 to 8,000 Greeks and Albanians, enrolled Kabyls, and entrusted the command of this new force and of his artillery to *ra'is*, his old companions. He thus found himself able to undertake an expedition against Tunis, with the inhabitants of which he had long had secret negotiations. By taking this town he wished to anticipate the designs of the Spaniards and secure himself the control of all the eastern shore of Africa. The Sultān, to whom he had communicated his plans, gave him the required au-

thorisation and sent him auxiliaries. Leaving the government of Algiers to his *khalifa*, Ḥasan Agha, Barbarossa entered Tunisia, seized La Goulette (Aug. 16, 1534) and from there advanced on Tunis. Mūlay Ḥasan, who tried to stop him, was defeated in a battle fought near the gate of al-Djazira, and had to flee (Aug. 18). The Turks entered Tunis and plundered the town. The rest of the kingdom submitted without resistance.

Barbarossa's success was, however, of short duration. In the month of June, 1535, Charles V appeared on the coast of Tunis. On July 14th the Spaniards captured La Goulette and on the 20th became masters of Tunis. The Christian slaves, whom Khair al-Dīn had refused to massacre, burst their chains and joined the attackers. Fearing he might be surrounded by the enemy, the Beylerbey fell back on Bône, where he found his fleet, which he had sent there on receiving news of the preparation of the Spanish expedition. From there he sailed for the Balearic Islands, sacked Mahon and brought back to Algiers 6,000 captives and considerable booty.

A little later, Khair al-Dīn went to Constantinople by order of Sultān Suleimān, who in 1533 had appointed him *Kapudan pasha* and wished to entrust him with the direction of the naval campaign against Charles V and his allies. He had not to return to Algiers, where authority was exercised in his name by a *khalifa*. At Constantinople Barbarossa devoted himself entirely to his new office. He reorganised and increased the Turkish fleet and took an active part personally in the naval war. In 1537 he ravaged the coasts of Apulia, tried unsuccessfully to take Brindisi by surprise and took part in the siege of Corfu. Not having been able to capture the latter place, he turned his attention to the Venetian possessions in the Aegean Sea and occupied the islands of the Dodecanese. The following year he completed the conquest of the Archipelago by taking Sciotos, Scyros and Carpathos; he then made a descent on the island of Crete where he burned two towns and 80 villages. In the Ionian Sea he gained two victories over Andreas Doria, at Preveza and St. Maura. In 1539, with the help of his lieutenants, Ḥasan Corso and Dragut, he recaptured Castelnuovo in the Gulf of Cattaro and Malvasia and Nauplia in the Morea. The Venetians were forced to submit to concluding a truce with the Porte.

These successes secured Barbarossa a position of preponderating influence in Constantinople. Honoured by the friendship of the Sultān, he persuaded Suleimān to continue the war in the Western Mediterranean. He was also decidedly in favour of the French alliance. From 1534 he had been in correspondence with Francis I; after the conclusion of the treaty of Baghdād, he was the confidant of the ambassadors of the most "Christian King" and leader of the French party in the Grand Diwān. Charles V endeavoured to win him over to his cause by secretly offering to recognise him as sovereign of the whole of North Africa on payment of a small tribute. Barbarossa, while pretending to lend himself to the Emperor's plans, at once revealed them to the Sultān. The disastrous end of Charles V's expedition to Algiers (1541) still further increased Khair al-Dīn's prestige, although he had taken no share at all in the defence of the town.

Hostilities, suspended since the truce of Nice (1538), began again between Francis I and Charles

V (1541). Barbarossa was given command of the Turkish fleet, which was to co-operate with the French forces. In 1543 he operated along the Italian coasts, took Reggio, ravaged the coasts of Calabria, then, after joining the Duc d'Enghien at Marseilles, laid siege to Nice. The town of Villefranche, where the Turks landed, was taken and destroyed. Nice was occupied but the castle could not be taken. The arrival of Doria's fleet and the Marquis del Vasto's army forced the Turks to withdraw. A portion of their fleet wintered at Toulon while the rest went along the Catalan coast and sacked Palamos and Rosas. The peace of Crespy (1544) ending the war, Khair al-Din returned to the Levant, pillaging the islands and shores of Tuscany and the Kingdom of Naples.

After this campaign, Barbarossa retired to Constantinople. He had great wealth in this town, including several palaces on the Bosphorus.

He died on July 4, 1546, at the age of 63, and was buried in the mosque which he had built at Büyükdere (see the art. DERE). By his will he ordered all his slaves under 15 years old to be liberated and left the others, 800 in number, to the Sultān as well as 30 armed galleys. The rest of his wealth was divided between his nephew and his son Ḥasan, whose mother was a Moresco, and who on three different occasions filled the office of governor of Algiers (see the art. ḤASAN PASHA, above, ii. 281).

Barbarossa was not only a successful corsair and a remarkable soldier; he also possessed certain of the qualities of a statesman, an indomitable resolution which enabled him to surmount the greatest difficulties, and a very accurate sense of the conditions on which the establishment of a permanent state in Barbary depended. He understood that Turkish rule, being restricted to the coast, naturally tended to be precarious; he therefore tried to make himself master of the interior. His ambition was to unite in one vast state, of which he would be the sovereign, the whole of North Africa. If circumstances did not permit him to realise this plan, at least he finished the work begun by 'Arūdj, and he may be regarded as the real founder of the Regency of Algiers.

KHAIR AL-DĪN PASHA. [See ÇENDERELI].

KHAIR AL-DĪN PASHA, a statesman of the time of 'Abd al-Ḥamid II. He was of Circassian origin, but spent his early years in Tunis, where he rose to important offices as a result of his brilliant abilities. He ultimately became *bash müdür*. His great aim was to achieve a closer relationship with Turkey, which was recognised in a firmān of Sultān 'Abd al-'Aziz. As a result of a quarrel with Şadiḳ Pasha, then Wali of Tunis, he left the Tunisian service and retired to Paris. In 1294 (1877) 'Abd al-Ḥamid summoned him to Constantinople and appointed him president of the commission on financial reforms and later of the Council of State. In the difficult period after the loss of the Russo-Turkish war he was appointed Grand Vizier in 1295 (1878), the eighth in the short period 'Abd al-Ḥamid had been reigning.

Khair al-Din was very liberal in his views and endeavoured to further the reform movement now beginning by introducing improvements, especially in the administration of justice, and tried to strengthen the Grand Vizier's power as much as possible in opposition to 'Abd al-Ḥamid's wish to make the Grand Vizier a mere instrument for the execution of instructions given by the Yildiz Kiosk. He brought upon himself the opposition of the 'ulamā', who would only allow the Grand Vizier the right of presiding at the council of ministers. After only eight months of office he was dismissed. He died in Constantinople in 1307 (1889) at the age of nearly 70 and was buried in Aiyūb. He bore the reputation of being reliable, fearless, steadfast and liberal. He wrote an Arabic work entitled *Aḳwām al-Masālik fī Mu'rifat Aḥwāl al-Mamālik*, said to have also been translated into Turkish and French.

(TH. MENZEL)

KHAIRĀBĀD is a town in the District of Sitāpūr, United Provinces, India. Population (1901), 13,774. It was formerly a place of importance, and is said to have been founded by one Khaira, a Pāsi, in the xth century. It is, however, more probable that the name was given by Muḥammadans to an older town on the same site; and it has been identified with Masachhatra, an ancient holy place. A number of temples and mosques are situated here, some of them dating from the reign of Akbar, but none is of much

interest. It has been a municipality since 1869. Trade has suffered owing to the rise in importance of Sitāpūr, but there is a daily market, and a small industry in cotton printing survives.

At the time of Akbar the *Sarkar* of Khairābād consisted of 22 mahals or parganas, but many of these lay in the present districts of Kheri and Hardoi. This pargana consisted of the Southern portion of the country lying between the Gond and Zarayan rivers. It was bounded on the North by Hargram, on the east by Lakarpūr and Biswan, on the west by Sitāpūr and Ramkot, on the South-east by Machhrehta, and on the South-east by Pirnagar. The whole of the Southern half of the pargana is a high lying tract with a high soil and good natural drainage producing in favourable seasons fine crops of wheat. North of the road from Sitāpūr to Khairābād and from the latter to Biswan, the land lies low, the soil being stiffer and liable to flooding from numerous jhils and water-courses. However the cultivation is generally poor, the majority of the tenants belong to the inferior cultivating classes, the holdings are large, the cattle are wretched; many of the landlords are heavily in debt and means of irrigation are deficient.

Bibliography: H. R. Nevill, *District Gazetteers of the United Provinces of Agra and Oudh*, xl. 125, 126; Hunter *Imperial Gazetteer*, xv. 207. (M. HIDAYET HOSAIN)

KHAIRPŪR, a state in Sind, laying between 26° 10' and 27° 46' N. and 68° 20' and 70° 14' E. The state has no separate history until the fall of the Kalhora dynasty of Sind in 1783, when Mir Faṭḥ 'Alī Khān Tālpur, a Balūč chief, established himself as ruler of Sind. Subsequently his nephew, Mir Suhrāb Khān Tālpur founded the Khairpūr branch of the family. His dominions at first consisted of the town of Khairpūr and its environs, but he enlarged them by conquest and intrigue until they extended to Sabzalkot and Kashmor on the North, to the Djaismal desert on the East, and to the borders of Kačch Gandāva on the West. About 1813, during the troubles attending the establishment of the Bārakzai dynasty in Kābul, the Mirs withheld the tribute which they had hitherto paid to the rulers of Afghānistān and became virtually independent, but jealousy between Rustam, who had succeeded his father Suhrāb in 1811, and his brother 'Alī Murād, contributed to the crisis which led to British intervention. In 1832 the individuality of the state as a political entity was recognised by the British government, which secured for itself the use of the Indus and the roads of Sind. The Mirs of Sind were loth to permit the passage of British troops through their dominions during the first Afghān war, but 'Alī Murād of Khairpūr supported the British policy, and after the battles of Miāni and Daba, his state retained its political existence.

(T. W. HAIG)

KHAIRULLĀH EFENDI, an important Turkish historian. Born in Constantinople, of a family which had over 160 years unbroken service with the Sultān, the son of the famous 'Abd al-Hakḥ Efendi (d. 1270 = 1853/1854, a theologian and physician, who was thrice *Ser-i*

Atibbā and from 1269 bore the honorary title *Ra'is al-'Ulamā*), he began by following in his father's footsteps and adopted a theological career, his first office being Mollā of Smyrna (1258=1842). Later he turned to science, medicine and education. In 1265 he became a member of the Board of Education, the Agricultural Council and second president of the Academy of Sciences (*Endjümen-i Dānīsh*), president of various learned bodies, and filled high offices in the newly formed Ministry of Education, was for long head of the School of Medicine, till in 1281 (1864) he was sent as ambassador to Teherān, where he died suddenly in 1283 (1866).

His sons are 'Abd al-Hakḥ Hāmid, the most important poet and dramatist of the new Turkey, and 'Abd al-Khālīk Naṣūhī, who have both served their country as ambassadors and envoys.

Khairullāh left a large number of historical, geographical, medical, scientific and agricultural works, the latter of which are mainly translations; some of them have been printed, like the *Mes'ul-i Hikmet*, *Bait-i Dihkāni*, his journey to Europe (*Auropa seyāhat-nāmesi*). But his importance rests on his work as a historian. Besides the *Wakāyī-i Miṣriye*, he wrote a history, planned on a grand scale, of the Ottoman empire entitled *Devlet-i 'Alīye-i 'Othmāniye Tārikhi*, which began to appear almost at the same time as the excellent 12 volume history by the historian of the empire, Aḥmed Djewdet [q.v.], which covers the period 1774—1826.

Khairullāh Efendi aims at giving the whole of Turkish history in one continuous work. He is the first Turkish historian to attempt to deal with Turkish history in its place in the world's history, in contrast to the method hitherto in vogue among Ottoman annalists of limiting themselves entirely to Turkish sources and affairs; he was actually the first to succeed to some degree in producing a *Tārikhi-i 'Umūmī*, a world history. With the exception of von Hammer-Purgstall's *Geschichte des osmanischen Reiches*, it is almost entirely French sources that he uses, as is obvious from the fact that he always writes foreign names as they are pronounced in French. At the same time he not infrequently draws upon hitherto not fully utilised Turkish sources.

A special volume is devoted to the introduction and to the early history of the Ottoman empire, the period before the reign of 'Othmān I. The further work is planned to have a volume to the period of each Sultān. At the same time a survey of contemporary Muslim and Christian rulers is always given. The treatment of the material is no longer annalistic but pragmatic. In comparison to the inflated style of early historians, his language is simple, clear and intelligible. His history is also meritoriously distinguished from those of his predecessors by the absence of bias and the lack of any fanatical hatred of non-Muslim culture and conditions.

Of his history, 15 volumes in all appeared (1271—1281 = 1853—1864), from 'Othmān I to the time of Aḥmed I (1603—1617), when death put a stop to his work. 'Alī Shewḳī, inspector in the *Divān-i Ahkām-i Adliye*, then tried to finish the book, of which Khairullāh had written barely half; but only three further volumes, 16—18, appeared (1289—1292 = 1872—1875) bringing the work to the time of Sultān Ibrāhīm (1639—1648).

Bibliography: *Khairullāh's* history itself, i. 2; xvi. 3; Ahmed Rif'at, *Rawḍat al-'aziziya*, lithogr., Constantinople 1282, p. 181 and 205; Djemāl al-Din, *'Othmanī Tarih ve-Müverrikhleri*, Constantinople 1314, p. 125; Sāmī, *Kāmūs al-'Aṭam*, iii. 2274; Thuraiyā, *Sidjill-i 'Othmānī*, ii. 319; v. AL-KHAIYĀT, YAḤYĀ B. GHĀLIB ABŪ 'ALĪ, an Arab astrologer, pupil of Māshāllāh, often mentioned in Christian writers of the middle ages under the name of ALBOHALI. The exact dates of his birth and death are unknown but the latter may be put with some certainty between 210 and 230 (825—844). Of his works there still survive: *Kitāb Sirr al-'Amal* ("the book of the secret of action") dealing mainly with the formulation of astrological questions etc. (in Berlin); *Kitāb al-Mawālīd* ("book of births") (in Oxford and Cairo(?)). The book on births was translated into Latin by Plato of Tivoli (1136) and later again (1153) by Joh. Hispalensis; the latter translation was printed in Nürnberg in 1546 with the title: *Al-bohali Arabis astrologi antiquissimi ac clarissimi de iudiciis nativitatum liber unus antehac non editus. Cum privilegio D. Ioanni Shonero concessio*. In place of Albohali simply we find in MSS. also Albohali Alghihac, Alboali Alchait, Albenahait, etc.

Bibliography: *al-Fihrist*, p. 276; Steinschneider, in the *Biblioth. Mathem.*, 1890, 2nd Series, vol. iv. 69—70; Wüstenfeld, *Die Übersetzungen arabischer Werke in das Latein. seit dem 11. Jahrh.*, 1877, p. 41—42; H. Suter, in the *Abhandl. z. Gesch. der mathem. Wissensch.*, x. 9—10. (H. SUTER)

KHĀKĀN, Arabic transcription of the Turkish regal title KAĞHAN. We find this title already borne by the rulers of the earliest people who called themselves "Turk" (vith cent. A.D.) and it had been taken by them from their predecessors, the "genuine Avars" or the Zoan-Zoan of the Chinese (Kiessling in Pauly-Wissowa, *Real-encyklopädie*, viii. 2587, s. v. HUNNI; also among the so-called Pseudo-Avars, cf. e. g. *Fragm. Hist. Graec.*, iv. 233). In one of the oldest inscriptions, that of Tonyukuk (W. Radloff, *Die alttürkischen Inschriften der Mongolei*, 2nd Series, St. Petersburg 1899), we find *Kan* alongside of *Qaghan* with the same meaning, perhaps only the result of a contraction of *Qaghan*. Later a distinction was made between *Kan* or *Khān* and *Qaghan* or *Khākān* and *Khākān* used in the meaning of "Khān of Khāns", like the Persian *Shāhānshāh*; this we find as early as the fourth (xth) century in Abū 'Abd Allāh al-Khwarizmi, *Mafātih al-'Ulūm*, ed. van Vloten, Leiden 1895, p. 120; the word *Kān* which appears in the Mongol period and was not used later has the same significance. *Khākān* is still regarded as the Turkish national title *kar-ēxoxān* and has been used quite recently by champions of the nationalist idea in Turkey in preference to *Sulṭān* and *Khālifa*.

(W. BARTHOLD)

KHĀKĀN. [See FATH 'ALĪ SHĀH].

KHĀKĀNĪ (AFḌAL AL-DIN IBRAHĪM HAQĀ'IKĪ, surnamed *Khākānī*), a Persian poet, born at Gandja (Elisavetpol) in 500 (1106—1107), the son of a carpenter, 'Alī, and a Nestorian wife whom he had purchased from a slave-dealer. His grandfather was a weaver. His uncle Kāfi b. 'Uthmān, who was his benefactor, was a physician and druggist. He was taken charge of by him when his father, sunk in poverty, abandoned him. Trained in the school of Abū 'l-'Ulā, the latter accepted him as his son-in-law and obtained from the *Khākān* Manūčīhr permission to give him the *takhalluṣ* of *Khākānī*. Later they quarrelled most bitterly and exchanged scathing epigrams (between 538 and 540). It was then that the poet quitted his native town to go to Bākū where the *Shīrwānshāh* Akhsatān, son of Manūčīhr, was settled. Obtaining, not without difficulty, permission to perform the pilgrimage to Mekka he was well received on his return by the governor of Mosul, Djemāl al-Din, which earned him the disfavour of his patron and imprisonment in the fortress of *Shābirān*. Retiring to Tibriz after the death of his wife, he died there probably in 595 (1200) and was buried in the cemetery of Surkh Āb. Although the majority of his biographers say that his name was Ibrāhīm, it should be noted that his father called him Badil "the substitute" because he had come to replace the great mystic Hakīm Sanā'ī.

The *Tuḥfat al-'Irāqān* = "Gift to the two 'Irāks", a poetical description of his journey to Mekka and back, was autographed at Agra by Mirzā Abū 'l-Hasan (1855). His *Diwān* entitled *Khulliyāt-i Khākānī* was lithographed at Lucknow in 1293—1295 (2 vols.); it is arranged in the order of subjects: — religious and moral poems, panegyrics, poems with refrains, funeral elegies, short mystical pieces, epigrams, satires; 44 *qaṣīda*'s were annotated at the beginning of the xth (xvth) century by Muḥammad b. Da'ūd of Shādi-Ābād (= Mandū, capital of Malwa in India).

Bibliography: N. von Khanikof, *Mémoire sur Khâcâni*, in the *J. A.*, 1864, Series 6, vol. iv. 137 and v. (1865), p. 296; Muḥammad 'Awfī, *Lubāb al-Albāb*, ii. 221; Dawlat-Shāh, *Tadhkirat al-Shu'arā'*, p. 78; J. von Hammer, *Gesch. der schönen Redekünste Persiens*, p. 125; Riḍā Qulīkhān, *Madjma' al-Fuṣṣṭā'*, i. 200—213; Djāmī, *Nafahāt al-Uns*, p. 707; Sprenger, *Cat. of the MSS. of the King of Oudh*, p. 461; *Mélanges asiatiques*, iii. 114; Ivanow, *Descriptive Catalogue As. Soc. Bengal*, Calcutta 1924, p. 201.

(CL. HUART)

KHĀKĀNĪ, a Turkish poet of the second half of the xvth century. His proper name was Muḥammad Bey and he was a descendant of Āyās Pasha [q. v.] who was Grand Wazīr under Suleimān I. His life was not eventful; according to *Sidjill-i 'Othmānī* he was *mutafarrika* and *sandjak-bey*. *Khākānī* owes his fame to a not very long *māthnawī* called *Ḥilya-i Sharīfa*, written in a tripodic *ramal*-metre. This poem is a paraphrase of an Arabic text known as *al-Ḥilya al-Nabawīya* containing a traditional account of the prophet's personal appearance; each of the enumerated features is commented on by the poet in twelve to twenty *bai*'s. According to Nāḍī the poem has acquired the same degree of popularity as the *Mawlid-i Sharīf* of Suleiman Čelebi. It was printed in Constantinople in 1264 and almost the whole

of it is incorporated in vol. iii. of Diyā Pasha's *Kharaḥāt* (Constantinople 1291). As Khākānī states at the end of his poem, it was completed in 1007 (1598—1599); at that time he had already attained a great age. The poet Djewri (d. 1065) wrote a *naẓīra* to the *Hilya*. Of other poems by Khākānī — he is said to have composed a *Diwān* — are only known a mathnawī called *Miftāḥ al-Futūḥāt* an a *ghazal*, both in a Gotha MS. (Cat., p. 171). He died in 1015 (1606—1607) and is buried in the cemetery of the mosque of Edirne Kapı.

Khākānī is a striking figure in the transition period of Ottoman poetry after Bākī, which is characterised by a growing taste for religious subjects.

(J. H. KRAMERS)

KHĀL (A.), maternal uncle. The *khāl*, although, according to the traditional patriarchal family law in Arabia, not actually considered a relative of his sister's son, was in popular regard equal to the latter's father and his father's relatives. It usually took a good deal of effort to fight on the side of one's paternal relatives against those of one's mother, and to avenge the death of paternal relatives also on one's *khāl*'s. Special stress was generally laid on the noble blood of one's *khāl*'s because the sister's children in particular were considered to inherit all noble or ignoble traits of character of their *khāl*'s.

The Muslim law, which, following the old Arab family law, paid most attention to paternal relationship, however forbids (on the authority of Sūra iv. 27) the *khāl* to marry his sister's daughter because the blood-relationship is too close.

The word *khāl*, which often has the more general meaning of "maternal ancestor", does not seem to go back to one of the original Semitic names of relationship.

(TH. W. JUYNBOLL)

KHAL'A. [See **KHIL'A**.]

KHALADJ, a Turkish tribe; the Turkish name was probably *Qalač* (see below). As early as the fourth (tenth) century we find the *Khaladj* living much farther south than the other Turks, in the southern part of the modern Afghānistān between Seistān and India. They are said even then to have come thither "in ancient times" (*fī qadīm al-aiyām*) (al-Iṣṭakhṛī, ed. de Goeje, *Bibl. Geogr. Arab.*, i. 254). The word is variously vocalised in Arabic manuscripts, e.g. al-Khaladj in al-Iṣṭakhṛī, p. 281 infra; *Khaldj* also in M. Longworth Dames (see the art. **AFGHANISTAN**, J. Marquart (*Erānsahr*, Berlin 1901, p. 253) connects the *Khaladj* with the *Xolādrui* of the By-

zantine sources and the *Kūlas* of the anonymous Syriac narrative of the year 554—555 and proceeds to deduce an original pronunciation *Khūladj*. In favour of *Khalač* we have two later Turkish popular etymologies, given in the legend of Oghuz Khān (cf. the art. **GHUZZ**): *kal ač* "remain hungry!" in Rashīd al-Dīn, text and translation in W. Radloff, *Kudatku Bilik*, vol. i., St. Petersburg 1891, Introduction, p. xxi., and *kal ač* "remain open!" (imperative) in the anonymous legend preserved in the Uighur character (*ibid.*, text p. 240, translation p. xii.): The *Khaladj* are never mentioned as an independent political unit but always as mercenaries or guards of foreign rulers; their leaders, like those of other Turkish guards, sometimes succeeded in founding independent dynasties, especially in India, where the pronunciation *Khildjī* for *Khaladjī* prevails (see the articles following). It is usually assumed that the Afghān speaking *Ghalzai* of the present day in the upper valleys of the Tarnak, Arghandāb and Afghasān are Afghanised descendants of the Turkish *Khaladj*. This assumption is disputed by M. Longworth Dames (cf. the art. **AFGHANISTAN** and **GHALZAI**), although he grants that the *Ghalzai* have a good deal of Turkish blood.

(W. BARTHOLD)

KHALAF B. 'ABD AL-MALIK [q. v.]. [See **IBN BASHKUWĀL**.]

KHALDĪ, the adjectival form of *Khaladj*, the name of a Turkish tribe which migrated from Turkistān at a period which cannot be precisely ascertained and settled in Western Afghānistān. From long residence in this country they were regarded, even as early as the end of the thirteenth century, when Firūz Khaldjī ascended the throne of Dihli, as Afghāns. They bore a high reputation as statesmen and soldiers, many served the early kings of Ghazni and Ghūr, and many afterwards attained to the highest rank in India, as, for instance, Muḥammad b. Bakhtiyār, the conqueror of Bengal, Firūz, just mentioned, who founded the the dynasty which reigned at Dihli from 1290 to 1320, and Maḥmūd, founder of the *Khaldjī* dynasty of Mālwa (1436 to 1531), who was descended from Nāsir al-Dīn, the eldest brother of Firūz. The Lodis, the dynasty founded by Bahlūl, which reigned at Dihli from 1451 to 1526, were a clan of the *Khaldjis*.

The late Major H. G. Raverty objected strongly, but with little apparent reason, to the identification of the *Ghilzais* with the *Khaldjis*. Their identity cannot be conclusively established, but the *Ghilzais* claim a Turkish descent and are found in the region where we should expect to find the *Khaldjis*; the corruption of the name is not unnatural among Afghāns, and if the *Ghilzais* are not *Khaldjis* it is difficult to say where the latter are to be sought, for no trace of them is found elsewhere, and there is no record of their extermination.

Bibliography: Minhādī-i Sirādī *Ṭabaqāt-i Nāsirī*, and translation by H. G. Raverty, London, 1873—1881; Nizām al-Dīn Ahmad, *Ṭabaqāt-i Akbarī*, and translation by B. Dhé (Bibl. Ind. Series, A. S. B.); Muḥammad Kāsim Firishṭa, *Gulshan-i Ibrāhīmī*, Bombay 1832.

(T. W. HAIG)

KHALDĪ or **KHILDĪ**, the dynasty of Dihli, was founded by Djalāl al-Dīn Firūz (see **FIRUZ SHĀH KHILDĪ**) of the *Ghilzā'i* or *Ghildjā'i* tribe of Afghānistān. A Turkī descent has been claimed for this tribe but they had long been domiciled in Afghānistān and were regarded as Afghāns.

Djalāl al-Dīn Fīrūz ascended the throne in Kīlōkhri on June 13, 1290, and was murdered at Karra by his nephew and son-in-law, 'Alā' al-Dīn Muḥammad, on July 19, 1296. 'Alā' al-Dīn ascended the throne in Dihli on Oct. 3, 1296, and captured the two sons of Djalāl al-Dīn Fīrūz, Arkatī Khān, governor of Multān, and Qadr Khān, who had been proclaimed emperor in Dihli under the title of Rukn al-Dīn Ibrāhīm. Having blinded his two cousins and imprisoned their mother, 'Alā' al-Dīn punished with death and confiscation those *amīrs* who had deserted his uncle for himself. He annexed Guḍjarāt, Ranthambhor, and Čitor and in a series of expeditions to the Dakhan commanded by his favourite eunuch Kāfūr Hazārdināri, entitled Malik Nā'ib, the Kingdoms of Warangal and Dvāravatipūra were added to the empire. Five rebellions which occurred early in his reign were crushed with merciless severity and vigorous laws were issued with the object of suppressing disaffection. 'Alā' al-Dīn was dissuaded from a design of declaring himself a prophet and promulgating a new religion. The most famous decrees of his reign were those by which he regulated the price of all the commodities of life and its most disgraceful act was the massacre of between twenty and thirty thousand Mughul converts to Islām, suspected of disaffection. After 'Alā' al-Dīn's death on Jan. 2, 1316, the eunuch Malik Nā'ib, having set aside Khidr Khān, the heir apparent, raised to the throne Shihāb al-Dīn 'Umar, 'Alā' al-Dīn's youngest son, a boy of five or six years of age, and attempted to blind Kuṭb al-Dīn Mubārak, the second son, but the prince corrupted the eunuch's emissaries and persuaded them to murder their master. Kuṭb al-Dīn Mubārak then assumed the regency, and, on April 1, 1316, blinded and imprisoned his young brother and ascended the throne. The new emperor gained a fleeting popularity by the reversal of all his father's harsher measures but his debauchery soon converted the love of his people into contempt. Like his father he was addicted to unnatural vice and was entirely ruled by Khusraw Khān, a vile favourite belonging to one of the scavenger castes of western India. A rebellion in Guḍjarāt was suppressed and in 1318 Kuṭb al-Dīn marched to Dewagiri, where he put to death Harpāl Dewa, son-in-law of Rāmacandra and appointed a Muḥammadan governor to Devagiri. On his return the emperor caused his three brothers, Khidr Khān, Shādī Khān, and Shihāb al-Dīn 'Umar, to be put to death, and, after scandalizing his court by indecent debauchery, proclaimed himself supreme pontiff and vicegerent of God under the title of al-Wāṭhiḳ bi-'llāh.

Khusraw Khān, who had been recalled from the Dakhan under a just suspicion of treasonable designs soon regained his master's confidence and on April 14, 1320, caused him to be murdered in the palace and ascended the throne under the title of Nāṣir al-Dīn Khusraw. His brief reign was marked by the advancement of his profligate caste-fellows and an attempt to restore the predominance of Hinduism in Dihli, but Malik Fakhr al-Dīn Djawnā fled from the capital to Multān and persuaded his father, Ghāzī Malik, governor of that province, to march to Dihli for the purpose of restoring the supremacy of Islām. Khusraw marched out to meet him but was defeated at Indarpat and captured and beheaded. On the following day, Sept. 6, 1320, Ghāzī Malik was proclaimed emperor

under the title of Ghiyāth al-Dīn Taghlaḳ Shāh.

KHALDĪJĪ (KHILDJĪ), the dynasty of Mālwa, was founded in A.D. 1436 by Maḥmūd Khildji, of the same tribe as the Khaldjis of Dihli [q. v.]. Dilāwar Khān, founder of the Ghori dynasty [q. v.], had been accompanied to Mālwa by his cousin, Malik Mughith, and on the deposition of Dilāwar Khān's grandson, Ghaznin Khān (Muḥammad Shāh), Maḥmūd offered the crown to his own father, Malik Mughith, who declined it in favour of his son. Maḥmūd's long reign was at first disturbed by rebellions on behalf of the late dynasty, fomented and supported by Aḥmad I of Guḍjarāt and the rānā of Čitor. After the suppression of these he was engaged in almost continuous warfare with Guḍjarāt, Čitor, Khandesh, Kherla, the Dakhan, Dihli and Djawnpūr, and was usually successful, except against the Dakhan. He died on May 30, 1469, and was succeeded by his eldest son, Ghiyāth al-Dīn, a mean-spirited monarch who occupied himself chiefly with the administration of his harem, for the management of which he drew up elaborate regulations, leaving the affairs of the kingdom in the hands of this advisers and, latterly, of his elder son, Nāṣir al-Dīn, whom he made his prime minister. The later years of his reign were troubled by quarrels between Nāṣir al-Dīn and his younger brother 'Alā' al-Dīn, who was supported by Rānī Khurshid, the mother of both princes. The King, too feeble to keep the peace, fell alternately under the influence of either faction until, in the autumn of 1500, Nāṣir al-Dīn captured Māndū, put his brother to death, imprisoned his mother, and seized the crown. A few months later Ghiyāth al-Dīn died, poisoned, it was suspected, at the instigation of his son. Nāṣir al-Dīn's warlike qualities found employment in the suppression of rebellions among his *amīrs*, due to his harshness and in war with the rānā Rāyamāl Simha of Čitor. His later years were disgraced by debauchery and cruelty, his victims being chiefly his most faithful servants. He nominated his second son, Shihāb al-Dīn, his heir, passing over Ṣāhib Khān, the eldest, but Shihāb al-Dīn rebelled and fled from his father's wrath and Nāṣir al-Dīn was succeeded on his death (May 2, 1511) by his third son, who ascended the throne as Maḥmūd II. Maḥmūd was brave to rashness, but possessed no other virtue and was entirely devoid of political wisdom and administrative ability. He first forfeited the allegiance of his *amīrs* by the elevation of unworthy favourites, one of whom avenged his dismissal by proclaiming Maḥmūd's eldest brother, Ṣāhib Khān, king, under the title of Muḥammad Shāh. Muḥammad, the creature of a faction, reigned nominally and intermittently from 1510 to 1515, and issued coins. The adherents of Shihāb al-Dīn, Maḥmūd's next elder brother, also rebelled and proclaimed their leader king, and on his death professed allegiance to his son, whom they styled Hūshang II. After the removal of these pretenders Maḥmūd II became a mere instrument in the hands of Mednī Rāya, a Rāḍjpūt whom he raised to the position of prime minister of the kingdom and who could command a force of 40,000 horse. He made spasmodic attempts to free himself from his ignominious

position but the result of these was to throw the Rāḍjpūts into the arms of Sangrama Simha, rānā of Čitor, and Mālwa would have become a Rāḍjpūt state but for the first apprehensions of a coalition of the neighbouring Muḥammadan states. In 1517 Maḥmūd II was compelled to implore the aid of Muẓaffar II of Guḍjarāt against the Rāḍjpūts and, having been restored to his throne, reigned as a vassal of Guḍjarāt. After his restoration Maḥmūd II, aided by a contingent from Guḍjarāt, made war against Čitor but was totally defeated and made prisoner by the rānā Sangrama Simha, Bābur's Rānā Sangā, who, from motives of policy and generosity, restored him to his throne. His ingratitude to Sangrama's son Ratan Singh and his foolish encouragement of a pretender to the throne of Guḍjarāt, where Muẓaffar II had been succeeded by his son Bahādur II, drew on him the wrath of Bahādur Shāh, who invaded Mālwa, captured Māndū, and imprisoned Maḥmūd, who was slain on April 12, 1531, by his guards, who suspected an attempt at a rescue. The Khaldjī dynasty ended with Maḥmūd II, and Mālwa became for a time a province of Guḍjarāt.

KHĀLID B. 'ABD ALLĀH' AL-KASRĪ, governor of the 'Irāk. The Kasr family to which Khālīd belonged was a branch of the tribe of Badjlā [q. v.]; his mother was a Christian. In the year 89 (707/708) or 91 (709/710) he was appointed governor of Mekka by the Caliph al-Walīd. Here he remained during the life time of al-Walīd; after the accession of Sulaimān in 96 (715), however, he was dismissed and lived in retirement until in Shawwāl, 105 (March, 724), Hishām appointed him successor of the governor 'Umar b. Hubaira and gave him the administration of the whole of the 'Irāk. He made his headquarters in Wāsiṭ. Khālīd had been brought up in the school of al-Ḥajjīdjādī, and if he was not the latter's equal in ruthlessness he was not lacking in vigour or tenacity. He did not hesitate to express his opinions freely to the Caliph, and, when Hishām was planning to exclude his nephew al-Walīd from the succession in favour of his son Maslama, Khālīd vigorously resisted this scheme. In place of winning military glory he preferred to devote himself to peaceful activities and to the economic development of his province, and during his long tenure of office peace and quiet prevailed generally in the 'Irāk. He paid special attention to the improvement of agriculture. The marshes were drained and great stretches of virgin soil made arable. With this fertile activity for the welfare of the state he was at the same time very successful in furthering his personal interests, and in time acquired immense riches, which, however, aroused the envy and dissatisfaction of the people. Other circumstances also contributed to make the doughty Khālīd unpopular. His predecessor in office, 'Umar b. Hubaira, had been a prominent champion of Kaīsī opinions. Khālīd's appointment as 'Umar's successor made the Kaīsīs regard him as an intruder who had driven 'Umar from the

position to which he was entitled, and from the first created an unsympathetic feeling against him, which in spite of his impartiality estranged him from the Kaīsīs and threw him closer to the Yamanīs. His tolerance of members of other creeds brought upon him the charge of religious indifference. To please his mother he built a church in Kūfa and granted Christians and Jews generally the privilege of building churches and synagogues, and did not hesitate to give Zoroastrians posts in the government. Khālīd was very little troubled by rebels. In 119 (737) there was a conspiracy of a few Shi'īs led by al-Mughīra b. Sa'īd in Kūfa, but it was promptly discovered and the culprits were publicly burned. In the same year a Khāridjī named Bahlūl b. Bishr preached a rebellion against Khālīd in the neighbourhood of al-Mawṣil and twice defeated the troops sent against him, but was finally overcome. About the same time a certain Wazīr al-Sakhtiyānī was active around Kūfa, where he was responsible for assassinations and incendiarism. When he fell into the hands of Khālīd he succeeded by his eloquence and his knowledge of the Kur'an in so moving the governor that the latter wished to spare him, but the Caliph was inexorable and had him executed forthwith. In the same year the Khāridjī al-Sahārī b. Shabīb collected a force and rendered the region of Djabbul on the Tigris unsafe, but was soon overcome and put to death with his followers.

Hishām could not in the long run resist the pressure of Khālīd's enemies. In 120 (738) he dismissed him and appointed as his successor Yūsuf b. 'Umar al-Thakafī, who had been for long governor of the province of Yaman. In Djumādā I (April-May, 738) the latter arrived in Kūfa. Khālīd was arrested and taken from Wāsiṭ to al-Hīra, where he was kept in prison with his family for eighteen months, and had to defend himself against charges of embezzlement. After his release in Shawwāl, 121 (Sept.-Oct., 739), he wanted to go to the Caliph but was not allowed. In the following year he settled down in Damascus. Here also he was followed by the hatred of Yūsuf but was able to live in freedom during the last years of Hishām's reign. He was again thrown into prison by Hishām's successor al-Walīd, and sold for a vast sum to his mortal enemy, Yūsuf, who had him brought to Kūfa and there tortured to death. Khālīd died in Muḥarram, 126 (Oct.-Nov., 743), and was buried in al-Hīra. According to another statement, he was dead by Dhū'l-Ḳa'da, 125.

KHĀLID B. AL-WALĪD B. AL-MUGHĪRA AL-MAKHZUMĪ, a contemporary of Muḥammad and a Muslim general. In the battle of Uḥud,

where Khālīd commanded the right wing of the Mekkan forces, and by his intervention at the right moment decided the battle in favour of the enemies of the Prophet he first displayed that brilliant talent for leadership to which in later days Islām owed so many successes. After Khālīd had gone over to Islām with 'Amr b. al-Āṣ at the beginning of the year 8 (629) he took part in the unsuccessful campaign against the Byzantines, and after the defeat at Muṭa it was with difficulty that he succeeded in bringing back the defeated army to Medina. As a reward the Prophet gave him the title of honour "Sword of God", and in the same year he took part in the entry of the Muslims into Mekka. After the capitulation of the town he is said to have destroyed the sanctuary of the heathen goddess al-'Uzzā by order of Muḥammad. He was soon afterwards sent as ambassador to the Banū Dīdhima [q.v.] and in Radjab of the next year (Oct./Nov., 630) he undertook an expedition against Ukaidir, the Christian king of Dūmat al-Djandal (see the art. DJAWF AL-SIRHĀN). At the beginning of the year 10 (summer of 631) Muḥammad sent him to Naḍrān to convert the Banū 'l-Hārith b. Ka'b to Islām, which was also done without bloodshed. In the following year he was sent by Abū Bakr against Tulaiḥa b. Khuwailid and defeated him at Buzākhā (see the art. ASAD) and next turned his attention to the Banū Tamīm who dwelled in the vicinity. One clan, which was under Mālik b. Nuwaira, was at feud with the others. When the latter submitted, Mālik also laid down his arms but was nevertheless taken prisoner and put to death and Khālīd then married his widow. When an accusation was laid before the Caliph against Khālīd he is said to have excused himself by saying that the incident was due to a misunderstanding. He said he had ordered warm clothing to be given to the prisoners and had therefore said to the soldiers: "adfi'ū asrākum" which was interpreted by the Beduins to mean "kill your prisoners". In any case Abū Bakr was satisfied with administering a reprimand to him and kept him in office in spite of vigorous protests from 'Umar. Soon afterwards Khālīd took the field against the false prophet Musailima. At 'Akrabā, on the frontier of al-Yamāma, the latter was defeated and killed, whereupon his followers submitted (beginning of 12 = beginning of 633). Khālīd was then sent against the Persians. In Rabi' I, 12 (May—June, 633), or perhaps some months later he conquered al-Hira and soon afterwards occupied the whole Euphrates area. The Byzantines are said to have finally crossed the Euphrates and to have been defeated at al-Firāḍ (Dhu 'l-Ka'da, 12 = Jan., 634) and in Muḥarram of the following year (March/April, 634) or, according to others, not till Rabi' II (June) Khālīd set out on his campaign against Syria. In Djumādā I or II (= summer of 634) the Byzantines were completely defeated at Adjnādain and retired to Damascus. Defeated again by Khālīd, they were surrounded and besieged and in Radjab, 14 (Aug./Sept., 635), Damascus had finally to surrender. About the same time Khālīd was deprived of the supreme command and replaced by Abū 'Uḃāḍa b. al-Djarrāḥ [q.v.] but continued to take part in the military operations in Syria. In the battle of the Yarmūk on Radjab 12, 15 (Aug. 20, 636), he commanded the cavalry and contributed largely to the victory of the Muslims. Ḥimṣ was recaptured

soon afterwards. Khālīd then advanced against Ḳinnasrīn and after he defeated a Byzantine army under Minās the town had to surrender and Khālīd took up his quarters here for the time. He was for a time governor of a part of Syria but was later dismissed. He died in Ḥimṣ or Medina in the year 21 (641—642). A. Müller (*Der Islam*, i. 257) has admirably described him as follows: "He was one of those characters whose military genius is the whole of their intellectual life; like Napoleon, he cared for nothing but war and did not want to learn anything else."

(K. V. ZETTERSTÉEN)

KHĀLID ZIYĀ, 'USHAKI-ZĀDE, the leading writer of prose and fiction in modern Turkish literature. Born in 1282 (1866) in Constantinople of a prominent family which came originally from the carpet town of 'Ushak — hence the epithet 'Ushaki-zāde — he spent his youth in Constantinople and Smyrna. He received his education from the Mechitarists in Smyrna. This laid the foundations of his love for and knowledge of the west. He translated industriously from the French and made literary attempts of his own. The collection called *Nākil* in 6 volumes contains stories of his own alongside of translations from the most important French writers of fiction. In Constantinople he founded the paper called *Neurūz* and published the introduction (*Medkhal*) to his never finished *Gharbden Sharḡa Siyāle-i Edebiye* (Literary Current from West to East) in Constantinople in 1303 (1888). In Smyrna he continued his literary activity with the foundation of the periodical *Khidmet* in which his novel *Sefile* and his *Menthūr Shi'rler* ("Poems in Prose") appeared in 1307 (1887); their unusual form aroused a storm of indignation until Ekrem defended them (specimens in Bikerman, *Tureckij sbornik*, St. Petersburg 1909).

In Smyrna he published in five series his *Kütük Kitāblar* which contain various literary productions, e.g. *Bir Mukhtirānīn soñ Yaprakları* ("The last Leaves of a Notebook"); *Bir İndiwādīñ Tāriḡ-i Mu'āshakası* ("The Love-story of a Marriage"); *Hikāye, Temāshā* (his *Menthūr Shi'rler* re-appeared in it) and *Mezārden Sesler* ("Voices from the Grave"), Smyrna 1307 (1889). At the same time he published a whole series of popularly written scientific treatises, with which he endeavoured to spread European learning, for example: *Ḥaml ve-Waḍ' i Ḥaml*; *Kānūn ve-Fenn-i Wilāde*; *Mebhath al-Kiḡf*; *Mebhath al-Kiyāse*; *'Ilm-i Simā*; *'Ilm-i Nudjūm*; *Ḥisāb Oyunları*; *Hikmet Oyunları*;

Būkalāmūn-i Kīmīyā; *Simiyā-i Kīmīyā*; and the anecdotal *Tuhfe-i Letā'if* (1308). It is characteristic of his versatility that he even studied Sanskrit which, however, involved him in difficulties with the ever suspicious government.

Next came the novels *Nümide* ("The Hopeless Woman"), Constantinople 1311 (1893); *Bir Ölümlün Defteri* ("The Diary of a dead Man", Constantinople 1311), still bearing the imprimatur of the Aidin censor, which has been translated into German by Ḥabīb Edib in 1918 (*Romane des neuen Orients*, Berlin), and *Ferdi ve-Shürekāsi* ("Ferdi & Co.", Constantinople 1312; dramatised by Mehmed Re'uf, Constantinople 1325).

A new period began with his taking over the editorship in 1896 of the periodical *Therwet-i Funūn* to which he with the poet Tewfīk Fikret [q.v.] gave an entirely new form. He opened the new period, which is known as the Tewfīk Fikret and Khālid Ziyā period, with his masterly novel *Māwi we-Siyāh* ("Blue and Black") (1317 second ed.; 1338 eighth ed.). In the *Edebiyāt-i Djedide Kütüb-khānesi*, a new foundation important for modern literature, appeared his next works, the novels *Bir Yazın Tarih-i* ("The Story of a Summer") as No. 3 (Constantinople 1316) and *Ashk-i Memnū* ("Forbidden Love"), No. 4 (1316; with *Māwi we-Siyāh* his best novel), and the collection of short stories *Solghun Demet* ("The Withered Wreath"), No. 8 (Constantinople 1317), from which a whole series of stories has been translated into French and German (Kaufmann, *Türkische Erzählungen*, Munich 1916; *Die Neue Türkei*, Constantinople 1908, etc.). The series ended with his *Kırık Hayatlar* ("Broken Lives").

When, as a result of an article by H. Djāhid, the paper was suppressed, Khālid wrote absolutely nothing till the revolution and confined himself to his official work as first secretary to the Tobacco Regie. After the revolution he displayed a feverish literary activity and lent his collaboration to every possible periodical. The novel *Nesli-i Akhīr* ("The last Family") in the *Şabāh* and many contributions to the *İkdam*, *Therwet-i Funūn*, *Resimli Kitāb*, *Meḥāsīn* etc. are evidence of this. At the same time for a certain period he lectured at the University of Constantinople on aesthetics and foreign literatures and wrote letters from Germany describing his travels there. His activities in this direction were interrupted by his appointment as first secretary to the palace of Sulṭān Mehmed V in 1909.

It came as a surprise when in 1918 he suddenly entered the ranks of dramatists with his *Kābūs* (1334), in which he demanded the same rights of divorce for women as for men. The play *Furūzān* (1334) is one of the adaptations of the "Francillon" of Dumas fils now so popular in Turkish literature.

A third drama, *Fāre*, is now announced as well as new collections of stories: *Bir Hikāye-i Sevdā* (1338); *Bir Shīr-i Khayāl* and *Onu beklerken*, and works on literary history: *Kenārde Qalmış* and *Eski Şeyler*.

With the poets Tewfīk Fikret and Djenāb Shēhāb ed-Dim, Khālid Ziyā is the principal founder of the modern occidentalising literature. Deliberately turning from the East, rejecting the eastern spirit and the Turkish Muslim attitude to life, they sought to create a modern literature with European affinities with the motto "art for art's sake", after the compulsion to write in Persian and Arabic forms had first been cast off by their predecessors.

With Sezāyī, Khālid is the founder of the modern literary novel. He worked especially at the short story, of which he seems to be the greatest master. He is an artist and a poet. He is marked by great sentimentality and a pessimistic outlook, which only later gave place to a more reconciled attitude. He is an acute psychological observer. But he is an absolute Westerner, a Frenchman in Turkish dress. He has not unjustly been called the Turkish Alphonse Daudet. His writings contribute little to our knowledge of the Turks. In spite of the Levantine milieu he is strictly moral. He tells a story, vividly and attractively; his style is clear. But his language is still markedly laden with Persian and Arabic words. He paid most attention to style, which owes much to him, for it is he who created the language of modern Turkish fiction.

He has taken no part in the recent nationalist development in Turkey. He has remained the old cosmopolitan.

AL-KHĀLIDĀT, full form AL-DJAZĀ'IR AL-KHĀLIDĀT, probably with allusion to the Arabic *Khuld*, the Eternal Islands, are usually called *Djazā'ir al-Sa'āda* "Isles of Bliss" by the astronomers, a translation of the Greek *Μακάρον Νήσοι* which probably came to the Arabs through the translation of Ptolemy. Al-Bakrī also knows the Latin name *Fortunatae Insulae* in the form *Fortūnātash*. They are the Canary Islands. Al-Bērūnī and al-Idrīsī speak of six islands, al-Makḳarī of seven, and al-Idrīsī mentions two by name: *Masfahān* and *Laghūs*; according to Dozy and de Goeje, the former corresponds to the modern Tenerife, the latter probably to Gran Canaria. According to al-Bērūnī, they are nearly 200 parasangs (600 miles) from the mainland, while al-Makḳarī says that on a clear day they are visible from Salā.

The meaning of the name given by al-Bakrī points to the flourishing vegetation of the islands. "Trees and shrubs bring forth all kinds of pleasant fruits without it being necessary to plant or tend them, and the soil yields grain instead of weeds

and valuable fragrant herbs instead of thorns". On Masfahān as well as on Laghūs there was a high pillarlike building (*ṣanam*) of hewn stone, a hundred ells high and crowned by a figure of brass pointing backwards with his hand to the high seas. In Masfahān this red column stood on a round hill; the column on Laghūs could not be climbed. These were regarded as warnings to shipping to sail farther to the west (al-Maḳḳārī says that each of the seven islands had a similar column; according to him, they were idols [*aṣṇām*] in the form of men. He distinguishes the *Djazā'ir* al-Sa'āda from the *Djazā'ir* al-Khālīdāt and says that the former were north of the latter and the first of them is Britain).

Among legendary features of the Arab descriptions of the islands we may mention the following. Since in Ptolemy and the Arab geographers who follow him the longitudes are calculated from the meridian of one of these islands (cf. the older European calculation from the meridian of Terro), it was thought that there was a race of astronomers living on the island; according to al-Maḳḳārī the "Christian Magicians" came from the *Djazā'ir* al-Sa'ādāt, but, as he includes Britain among them, he is apparently thinking of the Druids of the Celts. *Dhu 'l-Karnain* [q. v.], i. e. Alexander the Great, is said to have reached the Khālīdāt. The Ḥimyarite As'ad Abū Karib is said to have built the column in Masfahān and he also is given the epithet *Dhu 'l-Karnain*. The column of Laghūs is said to have been built by another South Arabian of the legendary past, Tubba' *Dhu 'l-Marāṭhid*; his tomb is said to exist there in a temple of marble and brilliantly coloured glass. The stories regarding "terrible wild beasts" on the island of Laghūs given by the author of the "Book of Marvels", which al-Idrīsī hesitates to repeat, are probably the same as those given by al-Kazwīnī on the authority of Abū Ḥamid al-Andalusī in his description of the Western Sea. There is also a description of a column on an island called *Madjma' al-Tura'*.

We may assume that there was trade (indirect) between the Canary Islands and Arabia even in the days of the ancient Arabs, if 'andam "dragon's blood" came from *Dracaena Draco*; probably, however, it came from another (Indian) plant.

KHALĪFA, "successor, vicegerent", title of the supreme head of the Muslim community, the *Imām* [q. v.], as successor or vicegerent of the Prophet (*khalīfat rasūl Allāh*).

I. The word appears, frequently both in the singular and the plural (*khalā'if*, *khulafā'*) in the *Qur'ān*; in the latter case, the persons referred to are called "successors" as entering into the blessings enjoyed by their forefathers (e.g. vi. 165; xxiv. 54; xxvii. 63, used of the righteous; vii. 67, 72, of the idolatrous tribes of 'Ad and *Thamūd*); the singular is used of Adam (ii. 28), either as successor

of the angels who lived on earth before him, or as representative of God, and of David (xxviii. 25). "We have made thee a *khalīfa* in the land; then judge between men with the truth, and follow not thy desires, lest they cause thee to err from the path of God." In none of these verses is there any clear indication that the word was intended to serve as the title of the successor of Muḥammad. Muslim historians commonly assert that it was first so used by Abū Bakr; it is doubtful, however, whether he ever assumed it as a title (Caetani, *Annali dell' Islām* II A. H., § 63 n. 1). But from the reign of 'Umar, it has been the common designation of the *Amīr al-Mu'minin* [q. v.]. The designation *khalīfat rasūl Allāh*, "successor of the apostle of God", implies assumption of the activities and privileges exercised by Muḥammad, — with the exception of the prophetic function, which was believed to have ceased with him; the later phrase, *khalīfat Allāh*, "vicegerent of God", implies a bolder claim, and is said to have excited the indignation of Abū Bakr, but it was used as early as 35 A. H. by Ḥassān b. Thābit in an elegy he wrote on the *Khalīfa 'Uthmān* (ed. H. Hirschfeld, xx. 1. 9), and it became quite common under the 'Abbasids and later princes (Goldziher, *Muhammedanische Studien*, ii. 61).

In the course of Muslim history, however, the term *khalīfa* has not been confined to such exalted reference. As early as the first century of the *Hidjra*, it was used in the Aphrodito papyri for the ἀποκρισιάρχος or agent at the capital through whom the local official of the finance department made payments of taxes (*Greek Papyri of the British Museum*, vol. iv, pp. xxv. 35; C. H. Becker, *Islamstudien*, i. p. 257). It has frequently been used as a personal name (see Index to *Ṭabarī*, etc.). In the religious orders, especially among the *Kādiriya*, the *Khalīfa* is the delegate of the *Shaikh* of the order and is invested with a certain amount of his powers and represents him in countries remote from the parent *zāwiya*. Among the *Tidjāniya*, the *Khalīfa* is the inheritor of the spiritual power (*baraka*) of the founder of the order, to whom alone the title *Shaikh* is applied (O. Depont and X. Coppolani, *Les confréries religieuses musulmanes*, pp. 194—195, Alger 1897; L. Rinn, *Marabouts et Khouan*, p. 78, Alger 1884).

In the Mahdist movements, the *Khalīfa* is the successor of the Mahdī; Mīr Dilāwar was thus *Khalīfa* of Saiyid Muḥammad Mahdī (ob. 910 A. H.) the founder of the *Mahdawis* [q. v.]; 'Abd Allāh was the *Khalīfa* of Muḥammad Aḥmad the Mahdī of the *Sūdān*; and the son and successor of Ghulām Aḥmad *Kādiyānī* (s. i. p. 206) is so described by his followers at the present day. Humbler persons have also received this designation, e.g. in the household of the Emperor Bābur, *khalīfa* denoted a woman who exercised surveillance over other women-servants, (Gul-badan Begam, *Humāyūn-nāma*, translated by A. S. Beveridge, p. 136). In more modern times, the word *khalīfa* was commonly applied in Turkey to any junior clerk in a public office (C. M. d'Ohsson, *Tableau général de l'Empire Ottoman*², vii. 271), and is still a title of respect for an assistant teacher in a school. In Morocco it indicates the deputy of the governor of a city (B. Meakin, *The Moorish Empire*, p. 224). In modern India it is used even of such insignificant persons as a working tailor, a barber, a fencing master or a cook (H. A. Rose, *Glossary of the*

Tribes and Castes of the Punjab, ii. p. 490. Lahore 1911). In Togo and neighbouring parts of W. Africa, *alfa* (= *khalīfa*) denotes a Muslim teacher or even Muhammadans generally (*Die Welt des Islams*, ii. p. 200).

Bibliography. In addition to the works already quoted, see Goldziher, *Du sens propre des expressions Ombre de Dieu, pour désigner les chefs dans l'Islam* (R. H. R., xxxv., 1897); D. S. Margoliouth, *The sense of the title Khalīfah* (A Volume of Oriental Studies presented to Edward G. Browne, p. 322—328).

II. As a distinction can be drawn between the history of the *Khilāfa*, or of the political institution of which the *Khalīfa* was the head, and the theories connected with it, and as the former was chronologically prior, it is proposed here to deal with it first.

I. History. The immense wealth and power acquired by the early successors of Muḥammad, through the conquest of such provinces of the Roman Empire as Syria and Egypt, together with the dominions of the Persian king, raised them to a status and a dignity which gave to the humble title they bore a new significance; so even before the Arab conquests had reached their limit, the *Khalīfa* had become one of the most powerful and wealthy monarchs in the world. As *Amīr al-Mu'minīn* [q.v.] he was commander of these conquering armies and so he described himself on his coins; as *Imām* [q.v.], he took the foremost place in public worship and delivered the *Khuṭba* [q.v.] in the mosque; as *Khalīfa* he claimed from his Muslim subjects some of the reverence that had previously been paid to the founder of their faith. The civil war that broke out in the reign of 'Alī b. Abī Ṭālib laid the foundation for those rival theories as to the qualifications of the *Khalīfa*, which took definite shape in political and sectarian doctrines. Under the Umayyads [q.v.] the religious associations of the office of the *Khalīfa* were not emphasised, though many of them kept up the practice of leading the public worship, for (with the exception of 'Umar b. 'Abd al-'Azīz [q.v.]) religious considerations appear to have had little weight with them, and it was mainly in Medina that the foundations of Muslim dogma and the systematisation of the *Shari'a* [q.v.] were laid, with little encouragement from the *Khalīfa* in Damascus. The claim of the descendants of 'Alī to the leadership of the Muslim world found expression in the formation of the *Shi'a* party [q.v.], but for some generations their efforts met with no political success. The 'Abbāsids [q.v.] came into power largely through their pretended support of Alid claims, and largely too through their professions of religious zeal. In Baghdād the *Khilāfa* took on a new character; the *Khalīfa* became a generous patron of the 'ulamā' and laid emphasis upon his function as protector of the religion of Islām, and under his fostering care the capital took the place of Medina as the chief centre of theological activity, and the great schools of law (see the art. *FIQH*) received definite shape. The *Khalīfa* was no longer regarded as a mere secular monarch, as many of the Umayyads had appeared to be in the eyes of devout Muslims, and the awe with which he was regarded was enhanced by the elaboration of court etiquette and ceremonial. The Umayyads, especially in their early days, had generally been readily accessible to their subjects; Mu'āwīya [q.v.] had preserved in a great

measure the frank, familiar manners of an Arab chief of pre-Islamic times, and moved among other Arab chiefs as *primus inter pares*. But in the new capital, the traditions of the Persian monarchy reasserted themselves, the 'Abbāsīd sat on his throne in solemn majesty, surrounded by his guards, the executioner with drawn sword by his side. At the same time he emphasised the religious aspect of his office by wearing the mantle of the Prophet, and his relationship to the Prophet was reiterated in official documents and in the lucubrations of eulogists and court flatterers.

From the 9th century onwards, the direct control of the *Khalīfa* over the administration weakened in consequence of the increasing delegation of power to the Wazīr [q.v.] and the growing elaboration and efficiency of the government offices (v. art. *LIWĀN*). About the same period began the decline of the temporal power of the *Khalīfa*, in consequence of the break-up of the empire and the rise of independent principalities in the various provinces, until at last his authority hardly extended beyond the precincts of the city of Baghdād. Concurrently with this decline of his temporal power, increasing stress was laid on his position in the religious order, as *Imām* [q.v.] and as the defender of religion, and the persecution of heretics and of the adherents of non-Muslim faiths increased. By the year 946 all effective power had passed out of the hands of the *Khalīfa*, and there were to be seen in Baghdād three personages who had held this high office, but now deposed and blinded were dependent for their livelihood upon charity. From this period until 1055 the *Khalīfa* for the time being was but a puppet in the hands of the Būyids [q.v.] and the Seldjūks [q.v.] successively. But in spite of his entire lack of administrative authority, men could not forget the great position once held by his ancestors, and the impotent *Khalīfa* was still regarded by theorists as the source of all authority and power in the Muslim world. Accordingly, there were to be found independent rulers who sought from him titles and diplomas of appointment, e.g. Maḥmūd of Ghazna [q.v.], when he renounced his allegiance to the Sāmānid prince in 997, received from the *Khalīfa* recognition of his independent position, together with the titles Yamin al-dawla, Amin al-milla; and about a century later, Yūsuf b. Ṭāshfin, the founder of the Almoravid dynasty of Spain, received the title of Amīr al-Muslimīn from the *Khalīfa* Muḥtādī. When in 1175 Saladin [q.v.] assumed the sovereignty of Egypt and Syria, he was confirmed in this rank by the *Khalīfa* Mustādī, who sent him a diploma of investiture and robes of honour. The founder of the Rasūlīd [q.v.] dynasty in the Yaman, Nūr al-Dīn 'Umar, likewise asked the *Khalīfa* for the title of Sulṭān and a diploma of investiture as his lieutenant, and Mustansīr in 1235 sent a special envoy with the required document. This same *Khalīfa* had in 1229 responded to the request of Ilutūmish [q.v.], the Turkish ruler of Northern India, for the title of Sulṭān and for confirmation in the possession of his dominion; and succeeding kings of Dihlī continued to put the name of Musta'ṣim, the last *Khalīfa* of Baghdād, upon their coins for more than thirty years after this unfortunate prince had been put to death by the Mongols.

In contrast to this recognition of the *Khalīfa* in Baghdād as the legitimate source of authority,

is the establishment of two rival *Khilāfats*; in 928 'Abd al-Rahmān III of Spain assumed the title of *Khalifa*, which continued to be borne by his descendants; these Umayyads of Spain, like their predecessors in Damascus, were Sunnīs; but the Fātimids of Egypt, whose founder styled himself *Khalifa* first in Mahdiyya in 909, were Shī'īs, and were serious rivals to the 'Abbāsids in Baghdād until the destruction of their dynasty by Saladin in 1171.

In 1258 Hulāgū [q. v.] captured Baghdād and put to death the *Khalifa* Musta'sim, who perished leaving behind him no heir. The catastrophe was without parallel in the history of Islam, and for the first time the Muslim world found itself without a theoretical head whose name could be mentioned in the *Khuṭba* in the mosques on Fridays. Two members of the 'Abbāsīd family, who had escaped the massacre in Baghdād, took refuge one after the other with the Mamlūk Sultān of Egypt; the first, an uncle of Musta'sim, was invited by Baibars [q. v.] to Cairo, and was there installed with great pomp as *Khalifa* in 1261. Baibars is said to have conceived the idea of re-establishing the 'Abbāsīd dynasty in Baghdād and left Cairo with a large army, but after he had reached Damascus he provided the *Khalifa* with only a small body of troops, which was destroyed by the Mongols on its way through the desert, and nothing more was ever heard of the *Khalifa*. The second claimant arrived in Cairo in 1262 and was similarly installed as *Khalifa*, but no attempt was made to repeat the rash experiment of regaining Baghdād, and the *Khalifa* was kept a virtual prisoner in Cairo, though treated with outward marks of respect. For more than two centuries and a half, his descendants one after another continued to hold this shadowy office in Cairo, dependent on the bounty of the Mamlūk Sultān, who found the *Khalifa* useful as lending a show of legitimacy to his rule. Each new Sultān was ceremoniously installed by the *Khalifa*, to whom he in his turn paid allegiance. But not a single one of them (with the exception of Musta'in, who was made the plaything of rival political factions in 1412 and for six months was styled Sultān) ever exercised any function of government or enjoyed any political power. Maḳrīzī [q. v.] describes the *Khalifa* as spending his time among the nobles and officials, paying them visits to thank them for the dinners and entertainments to which they had invited him (*Histoire d'Égypte*, ed. E. Blochet, p. 76).

The rest of the Muslim world outside Egypt for the most part ignored the existence of the 'Abbāsīd *Khalifa* in Cairo. From the 13th century there had been Sunni *Khalifa* in the Maghrib, and from time to time various princes in the eastern lands of the Muhammadan world assumed this title, Seljūks, Timūrids, Turkomans, Uzbegs and Ottomans.

But a small number of independent princes, desiring to legitimize their claim to the obedience of their subjects, asked for formal recognition of their position and a grant of titles from the *Khalifa*, e. g. the first two princes of the Muzaffarid dynasty in southern Persia (1313—1384); Muḥammad ibn Tughlaḳ (1325—1351) and his successor on the throne of Delhi, Firūz Shāh (1351—1388); even Bayazīd I [q. v.] is said to have applied in 1394 to the 'Abbāsīd *Khalifa* in Cairo for a formal grant of the title of Sultān

(v. Hammer, *Gesch. d. Osman. Reiches*², i. 195), but doubt has been cast upon the accuracy of this report. For, from the latter part of the 14th century, when after the conquest of Adrianople, Philippopolis etc. his father, Murād I, was styled "the chosen *Khalifa* of God" (Firidūn, i. 93, l. 22), it became common for the Ottoman Sultāns, as for other contemporary Muhammadan potentates, to claim for themselves the *Khilāfa* and to find this claim recognised by their subjects and their correspondents in other lands. The qualification of belonging to the tribe of *Kuraish* was ignored and sanction was sought for the usage in such verses of the *Kur'an* as xxxviii. 25: "We have made thee a *Khalifa* on the earth", and this and similar verses (e.g. vi. 165; xxv. 37) are constantly quoted in the diplomatic correspondence of the period. So when Selīm [q. v.] made his victorious entry into Cairo in January, 1517, and made an end of the 'Abbāsīd *Khilāfa*, by transporting the last representative of it, Mutawakkil, to Constantinople, he had already been accustomed to the use of the title *Khalifa* as applied to himself, and to his ancestors for a century and a half. The legend that Mutawakkil made a formal transfer of his dignity to Selīm was first published by Constantine Mouradgea d'Ohsson in 1788 (*Tableau général de l'Empire Ottoman*, i. 269—270, ed. 8^{vo}., Paris, 1788—1824). None of the contemporary authorities who record the conquest of Egypt make any mention of such a transference of the office, and after the death of Selīm, Mutawakkil was allowed to return to Egypt and was *Khalifa* there until his death in 1543. For the next two centuries, there were only two Muhammadan potentates whose extent of territory and power could add dignity to the title of *Khalifa* (in contrast to the indiscriminate use of it by insignificant princes) namely, the Ottoman Sultan and the Mughal Emperor in India. With the fall of the Mughal empire in the 18th century, the Ottoman Sultan became manifestly the greatest figure in the Muslim world; but even his power was being threatened by his aggressive neighbour on the north, and after the war with Russia (1768—1774) he was obliged to surrender territories on the north shore of the Black Sea and recognise the independence of the Tartars of the Crimea. Catherine II claimed to be the patroness of the Christians of the Orthodox Church dwelling in Ottoman territories, and the Ottoman plenipotentiaries who negotiated the treaty of Kučuk Kainardji in 1774, took advantage of the title of *Khalifa*, to make a similar claim for the Sultan, and get inserted in the treaty a clause asserting the religious authority of the *Khalifa* over the Tartars who had ceased to owe him allegiance as a temporal sovereign. From this period onwards, it became a common error in Christian Europe to regard the *Khalifa* as the spiritual head of all Muslims (just as the Pope is the spiritual head of all Catholics), and to credit him with the possession of spiritual authority over his co-religionists, though they might not owe him civil obedience as Sultān of Turkey. There is reason to believe that this widespread error in Christian Europe reacted upon opinion in Turkey itself. Particularly in the reign of Sultan 'Abd al-Hamid II (1876—1909), emphasis was laid on his position as *Khalifa*, and in the Constitution promulgated at the beginning of his reign it was affirmed that "H.M. the Sultan, as *Khalifa*, is the protector of the Muslim religion." He appears to have sent emissaries

to different parts of the Muhammadan world to encourage reverence for his own person as *Khalīfa*, and his efforts met with a certain response, since thoughtful Muhammadans (and especially those whose minds were disturbed by the growing control of European Powers over the affairs of the Muhammadan world) recognised that Turkey was the only independent Muslim power left, which was of any account in the civilised world. But the despotic and reactionary character of 'Abd al-Ḥamid's government, his cruel suppression of all liberal movements and all efforts for constitutional reform, alienated the more enlightened sections of his own subjects, and when he was deposed in 1909, the affairs of Turkey passed under the control of a body of men who had little sympathy with the Islāmic spirit and realised the impossibility of reconciling an autocracy that claimed to be based on divine revelation with modern constitutional methods of government. In November, 1922, Turkey became a republic and abolished the Sultanate, leaving the *Khalīfa* shorn of all temporal power; but it had not become clear what were to be the functions of the new *Khalīfa* before, in March, 1924, his office was abolished altogether.

In the above account, attention has been confined to the historic Sunni *Khilāfa* which has played the most important part in Muhammadan history. The two other Sunni *Khilāfats*, that of Spain and that of the Maghrib, have been only of local importance, and did not inspire loyalty in any other parts of the Muhammadan world; nor has the assumption of the title *Khalīfa* by some of the princes of Java been recognised except by their own subjects.

Among the *Shī'īs*, the attempts made from time to time to secure for the Alids a position of power and independence, met with but scant success, and the *Fātimids* [q.v.] of Egypt represent the only *Shī'ī* *Khilāfa* of any importance. In Persia the establishment of the *Ṣafawid* [q.v.] dynasty in 1502 did not succeed in making *Shī'ism* the State religion in Persia until long after the doctrine of the hidden *Imām* had become a cardinal doctrine of the *Shī'a* faith in that country.

Bibliography: An enumeration of the sources for the history of the *Khilāfa* would comprise the major part of the historical literature of the whole of the Muhammadan era. For the Arabic sources F. Wüstenfeld, *Die Geschichtsschreiber der Araber und ihre Werke*, and C. Brockelmann, *Geschichte der arabischen Literatur* may be consulted. Among the more important sources may be mentioned: Tabarī, *Annales*; Ibn al-Athīr, *Chronicon*; al-Suyūṭī, *Ta'rikh al-Khulafā'* and *Husn al-Muhādḍara*; al-Makrizī, *al-Sulūk li-Ma'rifaṭ Duwal al-Mulūk* (partly translated by Quatremère in *Histoire des Sultans Mamlouks*); al-Makkarī, *Nafḥ al-Ṭib*; *Chroniken der Stadt Mekka*, ed. F. Wüstenfeld; Rashid al-Dīn, *Ḍiyā' al-Tawārikh*; Aḥmad Firūdū Bey, *Munsha'āt al-Salāṭīn*; Muṣṭafā Ṣabrī al-Tūkārī, *al-Nakir 'alā munkiri 'l-ni'mati min al-dīni wa 'l-khilāfati wa 'l-umma*, Bairut, 1924. Among European writers, Caetani, *Annali dell' Islām* (Milano, 1905 sqq.); G. Weil, *Geschichte der Chalifen*, 5 vols. (1846—1862); A. Müller, *Der Islam im Morgen- und Abendland* (1885, 1887); W. Muir, *The Caliphate*; J. von Hammer, *Geschichte des Osmanischen Reiches*; A.

de la Jonquière, *Hist. de l'empire ottoman*, 2nd ed. Paris 1914; *Oriente Moderno* (Rome 1921 sqq.); C. A. Nallino, *La fine del così detto Califato ottomano* (*Oriente Moderno*, iv. 137 sqq.); R. Hartmann, *Wesen u. Ende des osm. Chalifats*, Leipzig 1924; H. Ritter, *Die Abschaffung des Kalifats* (*Arch. f. Politik und Geschichte*, ii. 343 sqq., Berlin 1924).

2. Political Theory. As stated above, the theory of the *Khilāfa* was largely an outgrowth from the political circumstances of early Muhammadan history, but speculation has elaborated many forms of the doctrine that have failed to secure for themselves expression in actual historical facts. Al-Shahrastānī (ed. Cureton, p. 12) says that no article of faith has given rise to such bloodshed and contention in every period of Muslim history as this. (a) The orthodox Sunni doctrine first found expression in the *Hadīth*, which emphasised preeminently two essential characteristics of the *Khalīfa*; one, that he must be of the tribe of the *Quraysh* (*Kanz al-'Ummāl*, iii., N^o. 2983; vi., N^o. 3452, 3469), and the other, that he must receive unhesitating obedience, for whosoever rebels against the *Khalīfa*, rebels against God (id. iii., 2580, 2999, 3008). This claim on obedience to the despotic power of the *Khalīfa* as a religious duty was impressed upon the faithful by the designations that were applied to him from an early date, — *Khalīfa* of God, and Shadow of God upon earth. The first systematic exposition of the generally accepted doctrine is found in Māwardī's *al-Aḥkām al-Sulṭāniya* (ed. R. Enger, Bonn 1853; Cairo 1298, 1327; trans. E. Fagnan, Alger 1915). Māwardī insists upon the following qualifications in a *Khalīfa*: — membership of the tribe of *Quraysh*, male sex, full age, good character, freedom from physical or mental defects, competency in legal knowledge, administrative ability, and courage and energy in the defence of Muslim territory. In spite of the fact that the office became hereditary in two families successively, the *Umayyad* and the 'Abbāsīd, Māwardī maintained that it was elective, and was at pains to reconcile the doctrine of election with the historic fact that from the reign of Mu'āwiya (661—680) [q.v.] almost every *Khalīfa* had nominated his successor. The fiction of election was preserved in the practice of *bai'a* [q.v.], the taking of the oath of allegiance, first by the nobles of the court and then by the general assembly before whom the new *Khalīfa* was proclaimed. The functions of the *Khalīfa* were defined by Māwardī as follows: the defence and maintenance of religion, the decision of legal disputes, the protection of the territory of Islām, the punishment of wrongdoers, the provision of troops for guarding the frontiers, the waging of *jihād* [q.v.] against those who refused to accept Islām or submit to Muslim rule, the organisation and collection of taxes, the payment of salaries and the administration of public funds, the appointment of competent officials, and lastly, personal attention to the details of government. About three centuries later Ibn Khaldūn [q.v.] approached the subject in a more critical spirit and discussed the institution of the *Khilāfa* in his *Mukaddima* (chap. 25—8), written between 1375 and 1379; he faced the facts of history and recognised that with the disappearance of the Arab supremacy there was nothing left of the *Khilāfa* but the name. His account of the origin and purpose of the institution agrees with that given by

Māwardī; the Khalifa is the representative (*nawīb*) of the Prophet, the exponent of the divinely-inspired law (*sharī'a*), and his functions are the protection of religion and the government of the world; he must belong to the tribe of the Kuraish, and possess the other personal qualifications laid down by Māwardī. But there were other legists who frankly faced the fact that force had taken the place of theory in the Muslim world, and worked out a constitutional theory accordingly; of such writers Badr al-Dīn Ibn Djamā'a (ob. 733 = 1333) is a typical example; in his *Tahrir al-Ahkām fī Tadbir Millat al-Islām* (K. K. Hofbibl., Wien 1830), he lays it down that the Imām may obtain his office either by election or by force; in the latter case allegiance must be paid to an Imām who by force of arms seizes the office, and such usurpation is justified in consideration of the general advantage and unity of the Muslim community gained thereby (foll. 7—8). Another school of legists abandoned all such attempts to justify the fluctuating course of Muslim history and based their doctrine on the Ḥadīth that the Khilāfa endured for only thirty years, i.e. up to the death of 'Alī (*Kanz*, iii., N^o. 3152); this was the view of al-Nasafi [q. v.] (ob. 537 = 1142) (see *al-Akḥād*, ed. Cureton, London 1843, p. 4), and it was adopted by the great Turkish jurist, Ibrāhīm Ḥalabī (ob. 1549), whose *Multaḥa 'l-Abḥur* became the authoritative code of Ottoman law. (b) The Shī'ī theologians made the doctrine of the Imamate a cardinal principle of faith; they laid stress on legitimacy, and confined the office of the Khalifa not merely to the Kuraish but still further to the family of 'Alī; with the exception of the Zaidīya [q. v.], they rejected the doctrine of election, and held that 'Alī was directly nominated by Muḥammad as his successor and that 'Alī's qualifications were inherited by his descendants, who were pre-ordained by God for this high office. Muḥammad is said to have communicated to 'Alī certain secret knowledge, which was in turn handed on to his son and was thus carried on from generation to generation; each Imām possesses superhuman qualities which raise him above the level of the rest of mankind, and he guides the faithful with infallible wisdom, and his decisions are absolute and final. According to some, 'Alī owed this superiority to a difference in his substance, for from the creation of Adam a divine light passed into the substance of one chosen descendant in each generation and has been present in 'Alī and in each one of the Imām's that succeeded him. The sectarian development of Shī'a doctrine was considerable, see art. ITHNĀ 'ASHARIYA, ISMĀ'ĪLIYA, SĀFIYA, ZAIDIYA. (Bibliography: al-Shahrastānī, *Kitāb al-Milāl wa 'l-Nihāl*, p. 108 sqq.; Ibn Khaldūn, *Prolegomenes*, i. p. 400 sqq.). (c) The antithesis of Shī'ī doctrine was taught by the Khawāridj [see KHARIDJITES], who so far from confining the office of Khalifa or Imām to any one tribe or family, held that any believer was eligible, even though he were a non-Arab or even a slave; they further separated themselves from other Muslims in maintaining that the existence of an Imām is not a matter of religious obligation and that at any particular time the community can fulfil all the obligations imposed upon them by their religion, and have an entirely legitimate form of civil administration, without any Imām being in existence at all; when, under special circumstances, it may

be found convenient or necessary to have an Imām, then one may be elected, and if he is found to be in any way unsatisfactory, he may be deposed or put to death (al-Shahrastānī, *op. cit.*, i. p. 85 sqq.).

All the above classes of political theory found expression in some form or other of actual political organisation, but there were also statements of the doctrine of the Khilāfa that never emerged out of the sphere of speculation, especially those elaborated by thinkers of the Mu'tazila school e.g. that the office of Imām should not be filled during periods of civil war but only in times of peace; that no one could be Imām except with the unanimous consensus of the whole Muslim community (al-Shahrastānī, *op. cit.*, p. 51; Goldziher, *Hellenistischer Einfluss auf mu'tazilitische Chalifats-Theorien*, in *Der Islam*, vi. 173—7).

KHALĪFA SHĀH MUḤAMMAD, author of a collection of letters in Persian, entitled *Djāmi' al-Kawānīn* or *Inshā'-i Khalīfa*, written while he was a student at Kānnūdj and collected by him at the request of his friends in 1085 (= 1674/5); it is much appreciated in India, and has been printed several times.

Bibliography: Rieu, *Cat. of Pers. Mss. in the British Museum*, i. 414.

AL-KHALĪL, the ancient Hebron, so called after the "friend of God" (θεοφιλέ), Abraham (see the art. IBRĀHĪM), a town in South Palestine (also called Habrūn, Habrā or Masjdīd Ibrāhīm). It lay in an exceedingly fertile valley between the heights of the Djabal Naṣra (? reading uncertain) noted especially for its richness in fruits. According to a widely disseminated legend, Muḥammad is said to have granted the four districts Habrūn, al-Marṭūm (so Yāqūt, ii. 194; in Nāṣir-i Khusrav, *Safar-nama*, ed. Kawiani 1923, p. 46, 14; Maṭlūn, varr. Maṭlūn, Maṭūn; in al-Kāḷkashandī, *Subḥ al-Aṣḥā*, ed. Cairo, xlii. 120, 6; al-Ruṭūm), Bait 'Ainūn (i. e. Αἰνών, St. John's Gosp., iii. 23 etc., Khirbet Bēt 'Enūn) and Bait Ibrāhīm as a fief to the oil and lamp-dealer Tamīm b. Aws al-Dārī, a convert to Islām, and to his descendants. To Tamīm al-Dārī is traced the custom of having lamps continuously lighted in the mosque (Clermont-Ganneau, *Rec. d'Arch. Orient.*, viii. 216—220). Al-Khalīl is still regarded as the *wakf* of the Tamīmīs. There is no doubt, however, that the alleged letter of the Prophet to Nu'aim b. Aws al-Dārī, the brother of Tamīm, is a later forgery intended to confirm the claims of the Tamīmīs (Caetani, *Annali dell' Islām*, II/i. 298, 9 A. H., § 69).

Our only information regarding the history of the town in the early centuries A. H. comes from a few scanty Frankish sources of which the most important is the full account of the examination of the sepulchral caves by Christian monks in the year 1119/1120 (publ. by Riant in the *Recueil des Hist. des Croisades, hist. occid.*, v. 302—316). According to this (p. 309), the Jews showed the Arab invaders the entrance to the sanctuary, which had been walled up by the Byzantines, and in return they received permission to live on in peace in al-Khalīl and to build a synagogue before the entrance to the "Abramium". When the Byzantine church was turned into the *Masjdīd Ibrāhīm* cannot be exactly ascertained; the first information regarding the mosque is given by al-Iṣṭakhīrī and Ibn Ḥawkal in the tenth century (not the eighth, as wrongly stated by Le Strange, *Palestine*, p. 309, and Vincent, *Hébron*, p. 160). According to al-Muḥaddasī, who is the first to give us a more detailed description of al-Khalīl, Abraham's tomb was covered over by a dome built in Muslim times (according to Muḍjir al-Dīn, translated by Sauvaire, p. 11, it was already done under the Umayyads). The tomb of Isaac was in a part covered over (*mughaffā*) and Jacob's was on the opposite side. This writer is also the first to mention the rich endowments which were given to the sanctuary by pious princes from remote lands, and the hospitable reception and provision of oil and lentils which the Tamīmīs in the hospice gave to pilgrims, but he thought for purely religious reasons it better to abstain from them. The Maghribī theologian al-'Abdarī of Fās (d. 737 = 1336) later denounced the eating of these lentils (which were known as *'adas khalīlī*) and

issued a warning against praying inside the mosque (instead of in front of it), as the exact site of Abraham's grave was not known; he is particularly rigorous against the dances associated with the "parade-music of Khalīl" (from which comes the name *khalīliya* for a band intended for parades), which one could see every day in the sanctuary (Goldziher, *Z.D.P.V.*, 1894, xvi. 115—120; cf. also Schreiner, *Z.D.M.G.*, liii. 51 sqq.).

Half a century before the beginning of the Crusades Nāṣir-i Khusrav visited the town (1047), which in those days lay on the north side of the Ḥaram only; in his journal he gives a minute description of the sanctuary. According to him, a gate was first made in the middle of the north-(east) wall by the Fātimid Caliph al-Mahdī (918 A.D.); the Ḥaram had previously been inaccessible. The covered part of the sanctuary (*maḥṣūra*), which contained the graves (cenotaphs) of the patriarchs, was richly decorated and provided with numerous niches (*miḥrāb*).

After the capture of al-Khalīl by the Crusaders, Godfrey de Bouillon granted the seigneurie of Hebron in 1100 to Gérard d'Avesnes (d. 1102). He was followed by Hugo de Rebègue, Rohardus (Rorgius), Galterius Mahomet and lastly Baldwin, in whose time (in 1119) the graves of the patriarchs were discovered (see above). He and his successors were apparently simply governors of Hebron and were at first under the King of Jerusalem, and later, from about 1155, under the Lord of al-Karak. In 1168 Hebron was made a bishopric.

'Alī of Herāt, who visited Jerusalem and al-Khalīl in 567 (1171/1172), says that he made the acquaintance of a Christian knight in Bait Laḥm, who had once visited the sepulchral caves of the patriarchs, when a boy of thirteen, with his father; these, he said, were afterwards restored by command of King Bardawil (Baldwin II) by a knight named Djufri b. Djurdj (Godfrey, son of George). It was perhaps at King Baldwin II's instigation that the buildings around the Ḥaram arose, in which the formerly flat roof of the *maḥṣūra* was replaced by a system of arches with sloping roofs (Vincent, *Hébron*, p. 166).

After the battle of Ḥaṭṭin, al-Khalīl again passed into the hands of the Arabs. According to a supposition of Muḍjir al-Dīn (ed. Bülāḳ, p. 56 below; transl. Sauvaire, p. 16), which is not quite improbable (cf. Vincent, *op. cit.*, p. 242—250), the *minbar* which stands beside the niche (*miḥrāb*) in the Ḥaram and, according to a still extant Kūfic inscription, was originally donated by the Fātimid Caliph al-Mustanṣir in 484 (1091/1092) for the martyrion (*Mashhad*) of al-Ḥusain b. 'Alī in 'Asḳalān, was brought to al-Khalīl by order of Salāḥ al-Dīn (apparently in 588 = 1192 after the razing of the walls of 'Asḳalān) and put up in the Ḥaram (van Berchem in the *Festschrift Eduard Sachau gewidmet*, Berlin 1915, p. 298—310; Vincent, *Hébron*, p. 219—250). After the death of Salāḥ al-Dīn, al-Khalīl passed to al-Nāṣir Da'ūd of al-Karak; it was, it is true, taken from him with other towns in 1244 by the armies of the Sultān al-Ṣāliḥ Aiyūb but he recaptured it next year with the help of the Khwārizmīs.

To this period belong two full descriptions of the Ḥaram, that of Abu 'l-Fidā' Iṣḥāk al-Khalīlī, whose account written in 1351 was copied by al-Suyūṭī (1470) and Muḍjir al-Dīn (1496), and

that of Ibn Battūṭa, who visited al-Khalil in 1355. The latter defends (as al-Iḍrisi had done previously [Z.D.P.V., viii. 127]) the correctness of the location of the tombs of the patriarchs (which others doubted, like his countryman al-ʿAbdarī; see above). Iṣḥāk of Hebron quotes, giving a number of intermediate sources, the story handed down by an attendant of the mosque of Abraham, Muḥammad b. Bakrān al-Khaṭīb (c. 320 = 932), which is already found in shorter forms in ʿAlī Harawī. In it a benefactor of the sanctuary, Abū Bakr al-Uskāfī, relates how by his own request he was taken down into the sepulchral cave, to reach which he had to descend 72 steps. The details of the story, however, are obviously invented; the same Muḥammad b. Bakrān is responsible for the fantastic "translation" by a learned *Shāikh* of Halab of a still extant Greek inscription (Mader, *Altchristl. Basiliken*, p. 135, note 3; Vincent, *Hébron*, p. 160 sq.).

The Mongols took the town in 1260 but were driven out by Baibars the same year. When Sulṭān, the latter visited al-Khalil in May, 1266. Jews and Christians were then strictly forbidden access to the Ḥaram (Röhrich, *Gesch. d. Königr. Jerusalem*, p. 929). In 1267, by command of Baibars, the mosque was rebuilt and in 1268 the town (al-Makrizī, transl. Quatremère, ii. 48, 51); this can only refer to quite unimportant structural alterations at the Ḥaram (Vincent, *op. cit.*, p. 190). Qalāʾūn (1279—1290), as we learn from his inscriptions in al-Khalil, also had decorations and facings for the walls made at different parts of the Ḥaram.

Mudjir al-Dīn gives us some further information regarding the embellishment and structural alterations in the sanctuary. The viceroy (*nāʾib*) of Syria, Tankiz, Abū ʿl-Fidāʾ's contemporary, had the four inner façades of the masjid covered with marble in 732 (1331/32) (van Berchem, *Z.D.P.V.*, 1896, xix. 111 sq.). Considerable alterations took place under Sulṭān Barqūk at the instigation of Shihāb al-Dīn Aḥmad al-Yaghmurī, governor of Jerusalem and al-Khalil and guardian of the two sanctuaries. In 796 (1394), besides the erection of a new *miḥrāb* for Mālikis in the Women's Mosque, a new door was put on the west side of the former Byzantine church immediately behind the tomb of Abraham and another in the west wall of the Ḥaram (in the so-called "Wall of Solomon"), the latter near the Maḳām of Joseph. This sanctuary had been built by Sulṭān Nāṣir Ḥasan (1347—61) beside the mediaeval Kalʿa (the later Madrasa). Its entrance lay opposite the "well of the eunuchs" (*Ain al-Tawāshī*). Al-Yaghmurī had a dome built over the Maḳām which was similar to those over the tombs within the Ḥaram. In the reign of Sulṭān Muḥammad al-Nāṣir (1293—1341), the Amīr Sandjar al-Djāʾulī had already built the mosque against the north-east wall of the Ḥaram in 718—720 (1318—1320), which is called Djāʾulīya after him, into the rocky sides of the Djabal Djāʾabira. The Mamlūk Sulṭāns al-Malik al-Ashraf, Ināl (859 = 1454) and al-Zāhir Khosh-kadam (867 = 1462/63) were also benefactors of the Ḥaram and of the Djāʾulīya Mosque.

We know nothing further of the history of al-Khalil and the architectural history of its Ḥaram after 901 (1496) when Mudjir al-Dīn wrote his book; probably building in the Ḥaram had finished about this time. From the 400 years of Turkish rule (1517—1917) we only possess a few inscriptions of the years 1008 (1599/1600) to 1313 (1895/1896,

of ʿAbd al-Ḥamid, in Vincent, *op. cit.*, p. 206, fig. 79), apart from the notices by western travellers.

The modern al-Khalil consists of the seven quarters Ḥaret el-Shēkh (scil. Shēkh ʿAlī Bakkā), Ḥ. Bāb el-Zāwiye, Ḥ. el-Qazzāzin, Ḥ. el-ʿAkkābī, Ḥ. el-Ḥaram, Ḥ. el-Mushārīka and Ḥ. el-Kiṭūn. It lies in the Wādī ʿl-Khalil between the hills of el-Rumaide, on which lay the ancient town, and Dahr Abū ʿl-Rummān in the south-west and the Djebel Djāʾabire in the north-east.

The number of its inhabitants was 17,000 in 1922, of whom 1,500 were Jews. Of the buildings in al-Khalil, the Ḥaram is by far the most important. As a result of the fanatical suspicions of the people so far only a very few Europeans have managed to make a brief visit to its interior. It was not till the week from Jan. 26 to Febr. 2, 1920, that, after some preliminary work by Major Richmond, the French archaeologist L. H. Vincent and Capt. E. J. H. Mackay were able to make a more detailed archaeological investigation and to survey the system of buildings. The tombs of the patriarchs, said, according to old tradition, to exist under the Ḥaram, have so far not been explored.

AL-KHALIL B. AḤMAD B. ʿAMR B. TAMIM AL-FARĀHĪDĪ AL-AZDĪ, Arab grammarian and philologist, a native of ʿUmān, died at al-Baṣra, aged 75, between 170 and 175 (786 and 791).

He studied Islāmic traditions and philology with Aiyūb al-Sakhtiyānī, ʿĀṣim al-Aḥwal, al-ʿAwwām b. Ḥawshab, etc. On the advice of his master Aiyūb he abandoned the Abāḍī doctrine for Sunnī orthodoxy; he was very pious and lived in poverty. Among his pupils may be mentioned Sibawaih, al-Aṣmaʿī, al-Naḍr b. Shumail, al-Laiṭh b.

al-Muzaffar b. Naṣr, etc. All the biographers agree in attributing to him the discovery of Arabic prosody and its rules; and in spite of several other attempts made, it is his system that still holds sway to-day. However, there has only survived to us of his works on the subject the specimen verses reproduced in various treatises.

Al-Khalīl was also the first to compile an Arabic dictionary: *Kitāb al-ʿAin*. He seems to have followed the alphabetical order of the Sanskrit grammarians which begins with the gutturals and goes on to the labials: 'ain, ḥā', hā', khā', ghain, kāf, kāf, ḍīm, shīn, ḍād, ṣād, sīn, zā', ṭā', dāl, tā', zā, dhāl, *thā'*, za'y, lām, mīm, fa', nūn, wāw, alif (hamza), yā'. It has been asserted that al-Khalīl is not the author of the *Kitāb al-ʿAin* but his pupil al-Laith; others say that al-Naḍr compiled it on lines drawn up by his master or that he finished it. We may believe that these are only attempts to minimise the fame of al-Khalīl. In any case all that survives of this dictionary is the synopsis *Mukhtaṣar* made by the learned Spanish lexicologist, Abū Bakr al-Zubaidī (Berlin, *Verz.*, No. 6950—6952; Madrid, *Bibl. Nac.*, No. 5; *Bibl. de la Junta*, Nos. 35 and 49; Constantinople, *Köprülü*, No. 1574; *Les manuscrits arabes de l'Escurial*, Derenbourg, No. 569, 570, 571).

Other works attributed to al-Khalīl have survived but their authenticity, at least in their present form, is suspect: 1. *Kit. fī Ma'nā 'l-Hurūf*, *Cat. Cod. Arab.*, i. 81; Berlin, No. 7015/7016; 2. *Kit. Sharḥ Sharf al-Khalīl*, fragment Berlin, No. 6909; 3. *Kit. fihī Djumlat Alāt al-l-rāb*, Aya Şofya, No. 4456; 4. Fragment on the conjugation of the verb, *Bodl.*, i., No. 1067, 4.

(MOH. BEN CHENEB)

KHALĪL B. IṢḤĀK B. Mūsā B. Shu'ayb, Abū 'l-Mawadda Ḍiyā' al-Dīn, known as (Ibn) al-Djundī, commonly called Sidi Khalīl in Algeria, a great Mālikī jurist of Egypt, died in Cairo on Rabī' I 13, 776 (= Aug. 22, 1374), according to others in 767 or 769.

He studied under Ibn 'Abd al-Hādī, al-Rashīdī and notably 'Abd Allāh al-Manūfī. Born of a Ḥanafī father, he adopted the Mālikī school at the instance of al-Manūfī. On the latter's death in 749 (1348) Khalīl devoted himself to teaching and lectured at the al-Shaikhūniya school.

He also saw service in the victorious guard and in this capacity took part in the capture of Alexandria from the Christians in 767 (1365—1366).

He later lived retired from the world and devoted himself to study and works of piety. He made the pilgrimage to Mekka and spent some time in Medina.

From the legal point of view Khalīl, like his model Ibn al-Hāḍib, represents the school of law a little affected by Shāfi'ism formed by the fusion of Egyptian and Maghribi tendencies in the Mālikī school. His *Mukhtaṣar*, in spite of its conciseness which verges on obscurity, is the manual of law which has been and still is most studied in Algeria. It was printed in Paris in 1855 and again and again till 1883; in 1900 a new edition was brought out in Paris by G. Delphin. E. Fagnan has published *Concordances du Manuel de droit*, Algiers 1889, based on the edition of 1883. Dr. Perron has given a substantial translation in which he has combined the text and the commentary: *Précis de jurispr. musulm. ou Principes de législ. musulm. civile et relig. selon le rite malékite*, Paris 1848—1854. Several partial translations have appeared since: Sautayra and Cherbonneau, *Du Statut personnel et des successions*, Paris 1873—1874; Seignette, *Code musulman par Khalil, rite malékite*. — *Statut réel*, Constantine 1878; Fagnan, *Le Djihad ou Guerre Sainte*, Algiers 1908; do., *Mariage et répudiation*, trad. avec comment., Algiers 1909. — Among other works by Khalīl b. Iṣḥāk are mentioned: 1^o. *al-Tawḍīḥ*, commentary on the *Mukhtaṣar* of Ibn al-Hāḍib, Algiers, *Bibl. Nat.*, Nos. 1077—1084; 2^o. *Kit. al-Manāṣik*, *Brit. Mus., Cat.*, No. 259, ii., *Bibl. Khéd.*, *Fihrist*, iii. 184; 3^o. *Manāḥib al-Shaikh 'Abd Allāh al-Manūfī*, biography of his teacher, *Bibl. Khéd.*, *Fihrist*, v. 159; 4^o. *Ḍaḥl al-Muwadḍiḥāt wa-Tarīfuhā*, *Bibl. Khéd.*, *Fihrist*, vii. 278.

(MOH. BEN CHENEB)

KHALĪL, AL-MALIK AL-ASHRAF ṢALĀḤ AL-DĪN, was the second son of Sulṭān Ḳalā'ūn; his oldest brother is said to have been poisoned by him. As he lay under this suspicion and was also of an immoral and irreligious life (he was accused of pederasty and of drinking wine in Ramaḍān), Ḳalā'ūn could not bring himself to sign Khalīl's appointment as heir-apparent. Nevertheless he was regarded as successor to the throne and acclaimed Sulṭān on Ḳalā'ūn's death in 689 (1290). His first official act was to dismiss the high officials of his father's court with whom he was on bad terms and to prosecute them and appoint his favourites to important posts. But he continued his father's foreign policy, the goal of which was the destruction of the Crusaders in Syria, and again took up the plan of besieging 'Akkā. After

careful preparations he advanced with such superiority against the town that, in spite of a brave defence and help from Cyprus by sea, it could not hold out for long. The town itself was first taken, then the strongly fortified towers of the Knights which formed a kind of donjons within the town. The male inhabitants were put to death and the women and children deported to Egypt; but the women were later permitted to go to Cyprus. The other towns still in possession of the Crusaders offered no resistance worth mentioning. Saidā (Sidon), Tyre, *‘Athlith*, Haifa and Bairūt fell. The last named alone had surrendered so that it was not destroyed like the others. The Christian inhabitants who did not migrate had to pay poll-tax. Rejoicings were held for a month in Damascus and the Sultān's name became celebrated as that of the final liberator of Syria for all time. Khalil afterwards planned a campaign against the Tatars in the Trāk, but he contented himself with the occupation of their fortress Kal‘at al-Rūm. The king of Armenia, who felt himself threatened, ceded him several towns to secure peace. Khalil also carried out his father's plans for the fortification and development of the Syrian cities; in the citadels of Aleppo, Ba‘albek, Damascus and the great mosque of Tripoli we find him named as the builder.

He was after his fashion fanatical; for example he demanded that the Christian officials in Damascus should adopt Islām; those who refused were fined up to 1,000 dinārs. He was personally hated by those around him for his evil life and his cruelty. He treated contemptuously even the highest officials, like his Atabek Baidarā. The high dignitaries therefore could stand him no longer and conspired against his life in 693 (1293) and took advantage of a hunting expedition in Upper Egypt to murder him. This able and energetic prince thus only ruled four years. As he left only two daughters, the throne passed to his younger brother Muḥammad [q. v.].

KHALİL EFENDI ZĀDE, MEHMET SA‘İD EFENDI, one of the ‘ulamā’ of the time of Sultān Mahmūd I (1730—1754). He was the son of Birgili Khalil Efendi who was twice Kādī-askar of Anatolia. He studied under his father, then passed through the usual Madrasa course and beginning as mollā of Yeni-şehir in 1135 (1722—1723) ascended the various steps of the ‘ulamā’ hierarchy to the highest office. He was appointed *Shāikh al-Islām* in 1162 (1749) but was dismissed within ten months in 1750 on account of his stern and unyielding disposition and banished to Brusa where he died in 1168 (1754/55) and was buried near Amīr Sultān.

He was regarded as a learned man, ready with his pen, and well fitted for all the claims of his office. Besides a commentary, he left the Turkish translation of a part of the history of ‘Aini († 762). Of his sons and grandsons several were notable theologians.

KHALİL PASHA, name of three Turkish Grand Viziers.

1) ÇENDERELİ **KHALİL PASHA** in the reign of Murād II, vide ÇENDERELİ.

2) KAİŞARİYELİ **KHALİL PASHA**, Grand Vizier under Aḥmad I and Murād IV. He was an Armenian by birth, born in a village called Ruswān in the neighbourhood of Kaışariya (Münadjjim Bashi; the statement of the *Sidḥill-i ‘Othmānī*, ii. 286, that he came from Mar‘ash is incorrect). The date of his birth is not given but must be about 1560. Having been educated at court as *lê Oghlan*, he entered the corps of the falconers and became *doghandji bashi*, in which capacity he was in Sultān Muḥammad's II immediate entourage during the Hungarian campaign of 1596. In 1016/1607 he became Agha of the Janissaries and fought bravely under the Grand Vizier Murād in the campaign against the rebels in Anatolia. Next year Khalil was appointed *Kapudan Pasha* as a successor of Hāfiz Aḥmad Pasha [q. v.]. In this office he was very successful and captured many Maltese and Florentine ships, especially in 1018/1609, when he took, in a battle with the Maltese near Cyprus, a big and famous galleon, called by the Turk *Kara Djehennem* (in Europe known as “the red Galleon”). This success procured him the rank of *wazīr*. From the end of 1020/1611 to 1022/1613 he was replaced as *Kapudan* by Öküz Muḥammad Pasha, who had become a *dāmād*, but the latter, having been defeated by the Spanish when convoying Egyptian ships to Constantinople, Khalil was made Grand Admiral a second time. In 1023/1614 he went on an important expedition, first raided Malta, and then went to Tripoli in Africa, where he captured and killed a usurper called Safar Dā‘ī. During his admiralship Khalil displayed much diplomatic activity in trying to form a confederation against Spain with Holland and Morocco. Therefore he encouraged the Dutch to enter into relations with the Porte and became a powerful protector to the first Dutch ambassador Haga who arrived in 1612. Ever afterwards he showed himself a friend of the Dutch interests, although the planned confederation did not materialise.

In Muḥarram 1026/January 1617 he was appointed Grand Vizier in succession to Öküz Muḥammad Pasha, who had been unsuccessful in the war against Persia and to the disappointment of the latter's *Kā'im maḳām* Atmakdji Zade. In February of that year he showed his liberal-mindedness by protecting the Christian ambassadors in the capital against an attempt of the ‘ulamā’ to impose the *kharāj* on them. In the same year the Austrian envoy Count Czernin after the failure of his negotiations left Constantinople and in Ramaḍān [September] preliminaries were signed with Poland at Busa. Khalil, however, seems to have been more interested in entertaining good relations with Venice, Holland, France and England and pacifying the Algerian corsairs. He did not play a prominent part in the course of events, when after Aḥmad's I death (23 Dhu ‘l-Ka‘da 1026/22 Nov. 1617), Muṣṭafā I was placed on the throne and three months afterwards replaced by ‘Othmān II (1 Rab. I 1027/26 Febr. 1618). In the beginning of 1618 he took command of the army sent against Persia. The vanguard of the Turkish army was defeated in the plain of Sarāw, but Khalil, marching against Ardebil, induced the *Shāh* to

negotiate a peace treaty, which was signed on the same plain (6 Shawwāl 1027/26 Sept. 1618) on the same conditions as the former treaty. On his return to the capital he was dismissed from the office of Grand Vizier and had even to take refuge with the great Shaikh Maḥmūd of Skutari, one of whose adepts he was (1 Šafār 1028/18 Jan. 1619). Sulṭān 'Oṭmān reproached Khalil, that he had not helped him to succeed to the throne immediately after Aḥmad's death, but, on the intercession of Shaikh Maḥmūd the ex-Grand Vizier was appointed Ḳapudan Pasha a third time. With an interruption of six months in 1621 he occupied this position successfully. In May 1622 'Oṭmān II was murdered by the Janissaries and Muṣṭafā restored. During the reign of terror of the Janissaries and their chiefs that followed, Khalil did not sympathize with them and even refused three times the Grand Vizierate offered to him by al-Wālide Sulṭān (5 Febr. 1623). Two months before, he had been the object of a hostile demonstration by the Janissaries who accused him of protecting their enemy Abāza Pasha [q.v.]. Still he had great influence and protected in December 1622 the Polish ambassador against anti-Polish demonstration. But after Mere Ḥusain Pasha had become Grand Vizier, he was dismissed from the office of Ḳapudan Pasha and banished to Malghāra, where he went in April 1623, not without opposition, especially from the Sipāhis, for he was the most popular of the then living viziers. Abāza Pasha, who in Erzerūm had rebelled against the Government claiming revenge for 'Oṭmān's death, was a former protégé of Khalil's, who, as Ḳapudan, had given him the command of a galley and, as Grand Vizier, had appointed him governor of Mar'ash; his rebellion, however, was contrary to Khalil's advice. Three years after the removal of Muṣṭafā (4 Dhu 'l-Ḳa'da 1032/30 Augustus 1623) and the succession of Murād IV, when Abāza's rebellion continued, it was due to this fact, that Khalil was appointed a second time Grand Vizier — in accession to Ḥāfiẓ Aḥmad Pāshā [q.v.] — in a large assembly in presence of the highest 'ulamā', as it was hoped that he would succeed in pacifying his former client (Dec. 1626). Three days afterwards he crossed the Bosphorus, visited his old friend Shaikh Maḥmūd, and reached Aleppo in March 1627. In July the army went to Diyār Bekr. At first an expedition was sent against Akhiskha, threatened by the Persians, while Khalil tried to obtain Abāza's submission and collaboration in this enterprise. But Abāza, fearing an ambush, declined and, having at first adopted a conciliatory attitude, he massacred the Janissaries at Erzerum. Khalil was obliged to march against him and began in September the siege of Erzerum. After 70 days, however, in November, an extremely severe winter began. The army was obliged to retreat to Tokat with heavy losses occasioned by snow and cold. This campaign was the cause of Khalil's dismissal; he returned to Constantinople, where he kept his position as vizier (1 Shīa'bān 1037/6 April 1628). In the next year (1039/1629) he died.

Khalil Pasha is praised by European as well as by the Turkish authors for his moderation and love of justice. His personality contrasts favourably with the other Turkish statesmen of his time, nearly all of whom died a violent death. He is described as a religious man which accounts for his friendship with Maḥmūd of Skutari;

he also built in Constantinople a mosque in the neighbourhood of the mosque of Muḥammad Fātiḥ. There exists an anonymous biography of Khalil Pasha, the Tārikh-i Khalil Pasha or Ghazā-name-i Khalil Pasha. The MS. used by von Hammer is now in the National Library at Vienna (Flügel, *Die Arab. Pers. u. Türk. Handschriften der K. K. Hofbibliothek in Wien*, ii. 253, 254).

3) ARNĀND KHALİL PASHA, Grand Vizier under Aḥmad III. He was an Albanian from Elbaṣān, born about 1655, and had entered the Bostāndji corps where his elder brother Sinān Agha was Bostāndji Bashī. Having served some time in Baghdād, he returned to Constantinople as Khāzaki and became Bostāndji Bashī in 1123/1711. In Muḥarram 1128/January 1716, when the war against Austria was in preparation, he was appointed Beyerbey of Erzerūm and sent to Nish to fortify this place. Six months later Khalil became Beyerbey of Diyār Bekr and in Sha'bān (1st July 1716), when the Grand Vizier Dāmād 'Alī Pasha [q.v.] had entered Belgrade for the Austrian campaign, he became commander of that town. Dāmād 'Alī having been killed in the battle of Peterwardein (Aug. 5, 1716), the Sulṭān appointed Khalil Grand Vizier, while the Sulṭān's favourite and future Grand Vizier Dāmād Ibrāhīm [q.v.] became his Ḳā'im Maḳām. The latter, however, was by far the more influential. After Temesvár was lost (13 October) a mutiny was feared and the army returned to Adrianople. In the next year the campaign was reopened and Khalil marched to Belgrad, where the Austrian army under Eugen of Savoy was already awaiting the Turks. In the battle of Belgrade (16 Aug. 1717) Khalil was completely beaten, which was due for the greater part to his own incapacity and his bad advisers. Belgrade was occupied by the Austrians and the Turks retired to Nish. Khalil was dismissed in October 1717 and had to hide himself for two years, after which he was restored in the Sulṭān's favour. From 1133—1140 (1721—1727) he was banished to Mytilene, then he was given successively the command of several towns in Greece and Crete and died in 1136/1733. He is described as a mild, pious man, but seems to have had so little reputation, that the European historians writing on the battle of Belgrade were not aware of his existence.

Bibliography: Tārikh-i Rāshid, Constantinople 1282, iv. 264, 282 sq., 352 sq., 362 sq.; Dilāwar Zāde 'Omar Efendi, Dhail Ḥadiqat al-Wuzarā', Constantinople 1271, p. 24—26; Sidjill-i 'Oṭmāni, ii. 292; Hammer, *Geschichte des Osm. Reiches*, Pest 1831, vii. p. 210—220. (J. H. KRAMERS)

KHALİL SULTĀN, a ruler of the Timūrid dynasty, grandson of Timūr, son of Mirān-shāh and Suyūn-beg Khānzāda, grand-daughter of the Khān of the Golden Horde, Özbek; born in 786

(1384), died Wednesday, Rādjab 16, 814 (Nov. 4, 1411), reigned in Samarqand 807—812 (1405—1409). His education was entrusted to Timūr's eldest wife, Sarāi Mulk Khānum. He is said to have distinguished himself on Timūr's India campaign (1399) when only 15 years of age; he also took part in the so-called "Seven Years" (actually only 802—807 = 1399—1404) war in the west; in 1402 Timūr gave him supreme command in the east "on the frontier of Turkestan". In 1404 he aroused the wrath of his grandfather by his runaway marriage with a woman of low rank, Shād Mulk, but was pardoned and in the same year during the preparations for the campaign to China appointed leader of the right wing mobilised in Tāshkent and the surrounding country. After the death of Timūr on Feb. 18, 1405, the army acclaimed him as sovereign and he entered Samarqand on Rāmādhān 16, 807 (March 18, 1405). The title of Khān was given to Timūr's minor great-grandson Muḥammad Djahāngīr, son of prince Muḥammad Sultān who had been designated Timūr's successor but had died before him. Khalil Sultān held out in Samarqand till 1409 but his rule was nowhere recognised outside of Mā-warā'-al-Nahr; to the north of this region, on the Sir Daryā, he had to fight continuously against rebellious generals. The Tatars of the Golden Horde who had conquered Khwārizm in Rādjab, 808 (Dec., 1405—Jan., 1406), extended their raids up to Bukhārā. Khalil Sultān was generally victorious in open battle against his enemies; even Shāh Rukh's final triumph was not so much won by military successes as by intrigues and skilful diplomacy (including negotiations with the 'ulamā in Bukhārā, at the head of whom was Muḥammad Pārsā). In the spring of 1409, when Shāh Rukh's army was ready for battle in Bādghīs and Khalil Sultān's in Shahr-i Sabz (Kash), a rising again broke out in the north under the leadership of the Amir Khudāyād; Khalil Sultān was forced to leave his army and attack Khudāyād but could only take 4000 men with him. On Dhū'l-Ka'da 13, 811 (March 30, 1409), he was taken prisoner north of Samarqand by Khudāyād and taken to Samarqand; later he was taken to Farghāna and his wife, who was left behind, was cruelly treated by Shāh Rukh; in the end he went to Otrār and through the intermediary of the Amir Shaikh Nūr al-Din concluded a treaty with Shāh Rukh by which he renounced his sovereignty over Mā-warā'-al-Nahr and received the town of Rayy in exchange where he lived till his death. His wife was also restored to him and on her husband's death put an end to her own existence. On account of this happening, which was embellished with all kinds of romantic touches by his contemporaries, Khalil Sultān is called a "sentimental shepherd" by A. Müller (*Der Islām im Morgen- und Abendland*, Berlin 1887, ii. 315; Khalil Sultān is wrongly described there as the son of 'Umar Shaikh), a description which hardly fits the able young prince whose military skill was undoubted; his devotion to his wife and the magnanimity which he showed to all his enemies, even to traitors, were, as a matter of fact, in complete contrast to the characters of the other members of his dynasty and the manners of his time.

Bibliography: W. Barthold, *Ulugbeg i ego wryemya*, Petrograd 1918, Index (with references to the sources, for the most part still in manuscript). (W. BARTHOLD)

KHALİLĪ, Ottoman poet and mystic of the time of Sultān Mehmed II, belonged to the neighbourhood of Diyārbakr and came to Iznīk to study theology where he formed an attachment for a youth and so succumbed to this homosexual passion then so prevalent particularly in the most cultured circles that he entirely abandoned his studies and gave expression to his woes in a book which is known as the *Firkat-nāma* ("book of separation"). The title *Firkat-nāma* is equally well known, which Sehi gives first and which is also the title of a book by Qāḍī Ḥasan b. 'Alī of Monastir. The poem, which reminds one of the *Hewes-nāma* of Dja'far Čelebi (d. 1514) with its sincere unaffected verses, bears witness to Khalilī's deep passion faithfully described. The book was finished in the year 866 (1461/62). It is written in epic and lyric metres, a varied alternation of *mathnavī* and *ghazal*. Many biographers of poets interpret the poem as purely Šūfī, which does not seem to be correct.

Khalilī died in 890 (1485) as superior of a monastery in Iznīk. His *Diwān* has not yet been printed. A number of his poems are contained in the *Djāmi' al-Negā'ir* compiled by Ḥādjdī Kamāl in 918, according to Brusallī Tāhir.

Bibliography: Laṭīfī, *Tedhkere*, Constantinople 1314, p. 147; Sehi, *Tedhkere*, Constantinople 1325, p. 64; Brusallī M. Tāhir, *Othmanlī Müellifleri*, Constantinople 1333, ii. 159; Sāmi, *Kānūs al-ʿĀlām*, Constantinople 1308, iii. 2060; v. Hammer, *Geschichte d. osm. Dichtkunst*, i. 225; Gibb, *A History of Ottoman Poetry*, ii. 379; Pertsch, *Katalog der türkischen Handschriften in Gotha*, p. 370, N^o. 377. (The Berlin manuscript of the year 1485 is contemporary with the poet). (TH. MENZEL)

KHALK (A.) is the term applied in the Qurʾān (Sūra ii. 159; xl. 59; lxvii. 3) to God's creative activity, which includes not only the original creation *ex nihilo* but also the making of the world and of man and all that is and happens. The verbal forms *khalaka* and *khalakna* are of the most frequent occurrence.

Among the most beautiful names of Allāh in the Qurʾān (cf. Sūra lix. 24) are *al-Khālīk* (Sūra vi. 102, et passim), *al-Khālāq* (Sūra xv. 86; xxxvi. 81), *al-Bārī* (besides Sūra lix. 24 only ii. 51) and *al-Muṣawwir*. Epithets like the Almighty, the All-knowing etc. are also applied to the Creator. Their meaning is as a rule clear. The only obscure expressions are (cf. H. Grimme, *Mohammed*, ii. 44, 47) "Allāh created *bi'l-hakk*" (Sūra xvi. 3; xxxix. 2—7; xlv. 39; xlvii. 2) or as "*al-Hakk*" (Sūra xxii. 5 sq.). If we are justified in supposing gnostic speculations in the Qurʾān it may be recalled that in the Gnosis objectified or personified truth coalesces with higher reality (cf. St. John's Gospel, xiv. 6; also S. v. d. Bergh, *Die Epitoma der Metaphysik des Averroes*, p. 218 sq.).

Allāh is the Creator of all things (Sūra vi. 101 sq., et passim). He creates what He will (Sūra xxxvi. 82, et passim) but the Qurʾān describes at greatest length the creation of man from dust, earth or clay, drops of semen and congealed blood (Sūra xv. 15 sqq.; xxii. 5; xxiii. 12 sq., et passim) and the resurrection of the dead on the day of judgment, a new creation not more wonderful than the first creation (Sūra ii. 26, et passim). How important the creation of man is, is evident from Muḥammad's coming forward (in Sūra xcvi. 1,

generally regarded as the earliest revelation) in the name of his Lord "Who created, created man from congealed blood". Everything on earth was created for man (Sūra ii. 27, et passim), especially the animals (Sūra xvi. 5). The same thing is shown in the stages of the creation; it is regarded as taking place from the lowest upwards. In six days the world was completed, the earth first in two days, all that is in it in two more days and in the last two days the world of the seven heavens. Allāh is only formally called the Creator of heaven and earth (Sūra vi. 101, et passim) and it is announced as a secret (Sūra xl. 59) that the creation of heaven and earth is greater than the creation of man, i. e., according to the usual explanation, heaven and earth were created out of absolutely nothing but man was made from dust.

There is no creator but God. He is the One (Sūra xiii. 7, et passim; Sūra xliii. 14 is no exception). He has begotten no children, only created things and beings, none of whom are like Him (Sūra cxii.). But passages like Sūra xv. 29, xxxviii. 72, where it is said that Allāh, after forming man, breathed of His spirit (*rūḥ*) into him, make the difference between the Creator and creature appear less rigidly marked.

The creation of man is above all a mark of divine power or, in so far as that which has been created is useful to man, of divine goodness. Reference to the harmony of the heavens (Sūra lxxvii. 3) and the beauty of the human form (Sūra lxiv. 3) are rare. Finally we may mention that God created all things after one *ḡadar* (Sūra liv. 49 sq.; *ḡadar* is here perhaps a synonym for *amr*?) and heaven and earth "for a definite period" (Sūra xli. 2) i. e. probably to the last day.

The earlier traditions added very little to this (as Prof. Wensinck kindly informs me). Before the creation Allāh was in the clouds (al-Tirmidhī, *Tafsīr*, Sūra xi., bāb 1) and He created in darkness (do., *Imān*, bāb 18; cf. Sūra xxxix. 8). He wrote a *kitāb* before the creation (al-Bukhārī, *Tawḥīd*, bāb 55). The *ḡalam* was the first thing created (al-Tirmidhī, *ḡadar*, bāb 17). Allāh created man after his own image (Muslim, *Birr*, Tr. 115; cf. Sūra lxiv. 3; lxxiii. 8).

In the later traditions the process of creation is elaborated with speculations regarding God's throne, primeval water etc. and influenced by ideas of Hellenistic and Oriental origin regarding the manifestation or emanation of God in the world. The Neoplatonic expression put in Allāh's mouth is often quoted: "I was a hidden treasure but wished to be known and therefore I created the world". Knowledge (*ʿilm*) or intelligence (*ʿaql*) is therefore said to have been the first creation.

Just as God's superiority over man and the world is particularly apparent from the Qurʾān, so we find throughout the theology of Sunnī Islām the distance between the Creator and the creature emphasised. In general it is concluded from the transitory character of this world that its Creator is eternal. In favour of God's omnipotence causality in Nature (cf. *Atomic Theory* in Hasting's *Encyclopaedia of Religions and Ethics*) and freedom of action on the part of man, if not absolutely denied, are suppressed as much as possible. Dījāhm [q. v.], one of the first Dījābaris, wished to define God simply as the omnipotent Creator. Ibn Ḥazm (*Kitāb al-Faṣl*, i. 39; ii. 161 sq.) asserts that one can only show with

regard to God that He is the Eternal, the Unique, the True, the Creator (*al-Awwal*, *al-Wāḥid*, *al-Ḥaqq*, *al-Khālīq*) for only by these qualities is He absolutely distinguished from this world.

But misgivings against this sharp distinction were raised, particularly under the influence of Christian dogmatics and philosophical speculation, from three sides i. e. by the Muʿtazilis, the mystics and the philosophers. The Muʿtazilis emphasised the wisdom of God in His creation much more than His omnipotence and His will. According to their teaching, God only creates what is good and man is the creator of his own actions. Nazzām said that God could only create what is good and His creating is thought i. e. not an act of volition in the proper sense. According to others, like Abu 'l-Hudḡail and Muʿammar, God's will is a kind of intermediary between the Creator and the created world. Al-Dījāḡ teaches that God cannot destroy the created world (arguing on Platonic lines, like Philo etc.).

In contrast to this estimation of the world and of human activity, mysticism appears as a depreciation of all that is worldly — but only of the material world. While the mystics regarded this world simply as a ladder to God, they could intensify their spiritual life of the soul up to the feeling of godlike creative activity (cf. L. Massignon, *La Passion d'al-Hallāj*, p. 513 sq.).

Two schools may be distinguished among the philosophers: one older, more neo-Platonic (e.g. the *Iḡhrwān al-Ṣafā*), according to which the emanation of a series of spirits precedes the creation of a temporal material world, and a second more Aristotelian school (notably Ibn Sīnā and Ibn Ruṣḡd) which makes the development of the intellectual and material world proceed by stages, but without beginning and parallel, after the first *ʿaql* has emanated from the divine being. Both schools regard God only as the first cause between Whose activity and this world there are many intermediaries.

The attitude of orthodox Islām to these tendencies developed in very different ways in course of time. The Muʿtazilī doctrine of the *ḡhalḡ al-afʿāl* could only be accepted in a modified form; a *ḡasb* (Ashʿaris) or an *ikḡtiyār* (according to al-Māturīdī) was ascribed to man instead of *ḡhalḡ*. The philosophic assumption of a world without beginning was decisively rejected, but the theory of the spheres connected with it was adopted while the spirits of the stars were interpreted as angels of heaven. It was very easy to make common cause with mysticism, which, of course, always insisted that there was no creator except Allāh. The creation of man in God's image and the breathing of the divine spirit into him were of more importance to the mystic than the creation of the physical world and of human activities (see the art. *ḡADĀʿ* and *ḡADAR*) (cf. Massignon, *op. cit.*, p. 599 sq.).

In the struggle then against the Muʿtazilīya and philosophy, the Sunnī doctrine developed — in part in alliance with mysticism — and with the greatest success in the Ashʿarī school. According to the latter, Allāh is the Omnipotent from eternity, Who can create if and when and what He will but does not need to create, Who with the creation of the material world at the same time places limits of time and space to it and every moment creates the world anew. Allāh is

also the eternally Speaking as regards the word of creation, especially the word of creation in the *Kur'ān*. If the eternalness of the word is taught contrary to the Muṭazilī view, there is hesitation, as regards the activity of creation in calling God the eternally creating, and therefore, the so-called *ṣifāt al-fi'l* (*khalk*, *raṣṣ*, etc.), which are regarded as temporal relations, are distinguished from the eternal qualities of His nature. In this respect the system of al-Māturīdī differs from the teaching of the Ash'ari school: he assumes as an eternal quality in the divine being *takwīm*, creative production. This means an approximation to the teaching of the philosophers that, because there is no cause without effect, God as the first cause created the world from eternity, and thus is really an eternal Creator, Whose being and actions are alike unalterable. Some philosophers and certainly many mystics got over the difficulty of this doctrine by the assumption that before the manifestation of His creation "the eternal Creator" was concealed in God (cf. Massignon, *op. cit.*, p. 657).

We find the bond between orthodox Ash'ari beliefs and gnostic-mystic speculation in al-Ghazālī. On the one hand he teaches quite definitely the temporal creation of the world as an act of divine freedom. After eternal but free deliberation out of pure goodness He created this world and He is creating it down to the last day. He is also the originator of human activities; man has only a *kash*. On the other hand, however, al-Ghazālī is fond of adopting mystic theories of intermediation. God and man are not simply to one another in the relation of Creator and creature. The world is divided (e.g. in *al-Maḍnūn al-Ṣaḡhir*, on Sūra xvii. 87; cf. Sūra vii. 72) into the *ʿālam al-khalk*, i.e. the material spatial world, and the *ʿālam al-amr*, the non-spatial world of the angels and the human spirits (the former in the *Iḥyā*, iv. 20 sqq., is also called *ʿālam al-mulk wa 'l-shahāda*, the latter *ʿālam al-ghair wa 'l-malakūt*). As a member of the world of spirits (*al-Maḍnūn al-Ṣaḡhir*, on the tradition that Allāh or al-Raḥmān created Adam in his own image), man in his being, qualities and actions shows similarity to God. The human will acts in his body (microcosm) like the Creator in the macrocosm. Besides the above-mentioned division into sensible and supersensual world, al-Ghazālī also gives the threefold division (*al-Durra al-fākhira*, p. 2 sqq.; cf. Sūra v. 20 etc., where there is mention of the "kingdom of the heavens and of the earth and what is between"): *ʿālam dunyawi* (= *al-mulk*), *ʿālam malakūti* and *ʿālam djabarūti* (cf. the art. *DIABARŪT*). Man thus appears as a citizen of three worlds, corresponding to the old triad: body, soul, spirit, as it was developed by gnosticism in the system of the heavenly hierarchy. On *mulk*, *malakūt* and *djabarūt* cf. *Κυρίως*, *ἄρχαι*, *ἐξουσίαι* in St. Paul, Ep. to Col., i. 16. According to al-Ghazālī, the human spirit, related to God, will survive not only this material world and the spiritual world of the angels and *djinn* but also the spiritual world of the highest angels.

In spite of the authority of this "father of the church in Islām", the development of the idea was not yet finished. Ibn Rushd then advanced against him (*Tahāfūt al-Tahāfūt*) the doctrine that the world had no beginning; many theologians (from al-Rāzī, d. 605 = 1209, onwards) followed more closely the conceptions of the so-called Aristotelians, and extreme mystics, like Ibn

al-ʿArabī, let the distinction between *al-Hakk* (the Creator) and *al-khalk* (the creature) disappear in the absolute primeval being (cf. the art. *AL-INSĀN AL-KĀMIL*).

Bibliography: There is no comprehensive work on the subject. Besides books mentioned in the text we may mention: M. Worms, *Die Lehre von der Anfangslosigkeit der Welt bei den mittelalterlichen arabischen Philosophen des Orients und ihre Bekämpfung durch die arabischen Theologen* (Beitr. z. Gesch. d. Philos. des M.A., ed. by Baemker and v. Hertling, iii. 4, Münster 1900); A. Rohner, *Das Schöpfungsproblem bei Moses Maimonides, Albertus Magnus und Thomas von Aquin*, ibid., xi. 5, Münster 1913; Tj. de Boer, *Die Widersprüche der Philosophie nach al-Gazzālī und ihr Ausgleich durch Ibn Roṣṣ*, Strassburg 1894; do., *De Wijsbegeerte in den Islam*, in the *Volkuniversiteitsbibliotheek*, xi., Haarlem 1921. See also the articles ALLĀH and ŠIFA. (TJ. DE BOER)

KHALKHA, the name of a lake and of a river flowing from it into the Buyir-Nor on the frontier between Manchuria and Mongolia. The river *Khalkha* is mentioned in the xiiith century in the "Secret History of the Mongols" (Russian translation by Palladius in *Trudī Ross, Dukhovnoi Missii v Pekinie*, iv., St. Petersburg 1866, p. 90, 91, 102 and 118 (the edition of the text promised by Pelliot has not yet appeared); in Rashīd al-Dīn, ed. Berezin, in *Trudī Vost. Otd. Russkogo Arkh. Obsč.*, xiii., St. Petersburg 1868, Pers. text, p. 216, vol. xv., ibid. 1889, Pers. text, p. 3 sq.: *Kālā*). Since the xvth century the same name *Khalkha* has been given to the north-eastern part of Mongolia (from the western frontier of Manchuria to the eastern frontier of the district of Kobdo and from the Russian frontier to the Gobi desert) and its population. Ssanang Ssetsen (*Gesch. der Ost-Mongolen*, ed. I. J. Schmidt, St. Petersburg 1829, p. 191 and 197) speaks of twelve tribes of the *Khalkha*; a distinction was made between five "nearer" and seven "remoter" tribes (*op. cit.*, p. 205, and p. 191 and 285). Geresen (full name and title Geresentse Djalair *Khun Taidji*) was considered the ancestor of all the chiefs of the *Khalkha*; he was grandson of the last ruler over all Mongolia, Dayan *Khān* (d. 1543); on the genealogy see A. Pozdniev, *Mongolia i Mongolī*, i., St. Petersburg 1896, p. 472. The four *aimak* [q. v.] into which the *Khalkha* were nominally divided (the Manchu emperors long since deprived the chiefs of any power) have taken their names from the different branches of this dynasty; they are the *aimak* (from E. to W.) of Tsentsen-*Khān*, of Tushtetu-*Khān*, of Sayin-Noyon (after 1725) and of Tsasaktu-*Khān*. Another division is also mentioned (as early as the occasion of the submission of the *Khalkha* to the Emperor K'ang-Hsi in 1691; Mongol inscription in Dolon-Nor, in text and Russian transl. publ. by A. Pozdniev, *op. cit.*, ii., St. Petersburg 1899, p. 291 sqq.): Geresen is said to have had 7 sons, wherefore the population was divided into seven divisions (*khoshun*, written *Koshūn* in Arabic); it is not known whether there was a connection between this division and the seven "remoter tribes". Since about 1585, Buddhism has been dominant among the *Khalkha*; at that date a grandson of Geresen, Abatai-*Khān*, was reigning, called Abtai *Ghalsagho Taidji* in Ssanang Ssetsen, p. 253. (W. BARTHOLD)

KHALKHĀL ("anklet"), the name of a place in *Ādhārbaīdān*. Its position nearly corresponds to 37° N. Lat. and 49° East. Long. It does not occur on modern maps, but see the map in G. Le Strange, *The Lands*, etc., facing p. 87. It was situated in the mountains which in this region were beset with fortresses. Yākūt passed through this region when he fled before the Tatars in 617 = 1220/21.

According to Ḥamd Allāh Mustawfī it was formerly a fair sized town, which in his days had sunk into a mere village with about a hundred hamlets belonging to it. It was the seat of the governors of the province, after Firūzābād had gone to ruin.

There is another place of the same name situated at the mouth of the Oxus on the Caspian.

KHALWA, KHALWATĪ, etc. [See TAṢAWWUF].

KHAMR (A.), wine. The word, although very common in early Arabic poetry, is probably a loanword from Aramaic. The Hebrew *yain* has in Arabic (*wain*) the meaning of black grapes. The question has been fully treated by I. Guidi in his *Della sede primitiva dei popoli semitici in Memorie della R. Acad. dei Lincei*, series iii., vol. iii. p. 603 sqq.

Arabia and the Syriac desert are, in contradistinction to Palestine and Mesopotamia, not a soil fit for the vine; there are, however, exceptions, among which may be mentioned al-Ṭā'if (see H. Lammens, *Ṭā'if*, p. 35 sqq., *M. F. O. B.*, viii. 146 sqq.), Shībām and other parts of Yaman. Wine, probably of an inferior quality, is also mentioned in Madīna (see below). Usually, however, it seems to have been imported from Syria and 'Irāk; in early Arabic poetry the wine-trade is chiefly connected with Jews and Christians, who pitched their tent (*ḥanūt*, also a loanword from Aramaic) among the Beduins and provided it with a sign denoting its character. In it little orgies were held, in the company of female singers who often also belonged to the establishment. The wine was kept in jars or skins, provided with a mouth-piece which was closed by means of a string.

In the days of Muḥammad the people of Mekka and Madīna used to indulge in drinking wine as often as an occasion offered itself, so that drunkenness often became a cause of scandal and of indulgence in a second vice, gambling, which together with wine, incurred Muḥammad's condemnation. Tradition has not refrained from describing how Ḥamza b. 'Abd al-Muṭṭalib, Muḥammad's uncle, in a fit of drunkenness mutilated 'Alī's camels (Bukhārī, *Sharḥ*, bāb 13; *Khums*, bāb 1; Muslim, *Ashriba*, Trad. 1, 2; *Maḡhāzī*, bāb 12; Abū Dā'ūd, *Kharāj*, bāb 19). And the commentaries on the Qur'ān relate how Muḥammad's companions held drinking-parties which caused them to commit faults in ritual prayer (see al-Ṭabarī, *Tafsīr* ad Sūra xiv. 44; Muslim, *Fadā'il al-Sahāba*, trad. 44; cf. 45; Aḥmad b. Ḥanbal, i. 185 sq.).

The prohibition of wine was not on Muḥammad's programme from the beginning. In Sūra xvi. 69 we

even find it praised as one of the signs of Allāh's grace unto mankind: "And of the fruit of palm-trees, and of grapes, ye obtain an inebriating liquor, and also good nourishment". But the consequences of drunkenness manifesting themselves in the way just mentioned are said to have commoved Muḥammad to change his attitude. The first revelation giving vent to these feelings was sūra ii. 216: "They will ask thee concerning wine and gambling (*maisir*). Answer, in both there is great sin and also some things of use unto men: but their sinfulness is greater than their use". This revelation, however, was not considered as a prohibition. As people did not change their customs and the order of prayer happened to be disturbed in consequence thereof, a new revelation was issued, viz. Sūra iv. 46: "O true believers! come not to prayers when ye are drunk, until ye understand what ye say" etc. But neither was this revelation considered as a general prohibition of wine, until Sūra v. 92 made an end to drinking: "O true believers! surely wine and *maisir* and stone pillars and divining arrows, are an abomination, of the work of Satan; therefore avoid them, that ye may prosper".

This sequence of revelations regarding wine is the accepted one among the traditionists and commentators of the Qur'ān (see Aḥmad b. Ḥanbal, *Musnad*, ii. 351 sq.; Ṭabarī, *Tafsīr*, v. 58 ad sūra iv. 46).

The prohibition of wine may, however, also be looked upon from a wider aspect, as Islām is not the only monotheistic religion which has taken a negative attitude towards wine. It is well known that, according to the Old Testament (Numbers vi. 3 sq.) the Nazarite who had wholly devoted himself to Yahwe, had to abstain from wine and spirits, just as the priests before administering the sacred rites (Lev. x. 9). The Nabataeans, according to Diodorus Siculus (xix. 94, 3), likewise abstained from wine and one of their gods is called in their inscriptions "the good god who drinks no wine". Likewise, the abstention from wine belonged to the rule of many Christian monks. All this has its roots in remote Semitic antiquity which ascribed a demoniac character to wine and spirits. The same is true for music, especially singing, which is also prohibited by Islām. It is not improbable that negative feelings of this kind may have worked together with the motives mentioned above, to induce Muḥammad to prohibit wine.

The prohibition of the Qur'ān has been taken over by the doctors of the law; all *maḏḥḥab's*, and also the Shi'a, call wine *ḥarām* and the wine-trade is forbidden. For an exposition of the Shāfi'i view, see al-Nawawī, *Minḥādī*, ed. v. d. Berg, iii. 241; for that of the Ḥanafis, *Fatāwā 'Ālamgiri*, vi. (Calcutta 1835), 604 sqq.; for that of the Mālikis Zurkānī in his commentary on the *Muwaffa'* (Cairo 1280), iv. 26; for that of the Shi'a *Sharā'i' al-Islām* (Calcutta 1839), p. 404. Theology reckons the drinking of wine among the gravest sins (*kabā'ir*).

Ḥadīth has many utterances regarding this theme. Wine is the key of all evil (Aḥmad b. Ḥanbal, *Musnad*, v. 238; Ibn Mādjā, *Ashriba*, bāb 1). Who drinks wine in this world without repenting it, shall not drink it in the other world (Bukhārī, *Ashriba*, bāb 1; Muslim, *Ashriba*, trad. 73, 76—78 etc.). Cursed is he who drinks, buys, sells wine or causes others to drink it (Abū Dā'ūd,

Ashriba, bāb 2; Ibn Mādjā, *Ashriba*, bāb 6; Aḥmad b. Ḥanbal, i. 316; ii. 25, 69, 71, 97, 128 etc.). Who drinks a draught of wine on purpose shall have to drink *pus* on Doomsday (Ṭayālīsī, N^o. 1134). Prayer of him who drinks wine is not accepted by Allāh (Nasā'ī, *Ashriba*, bāb 43; Dārimī, *Ashriba*, bāb 3), and faith is incompatible with drinking it (Bukhārī, *Ashriba*, bāb 1; Nasā'ī, *Ashriba*, bāb 42, 44). It is even inadvisable to use it as medicine (Muslim, *Ashriba*, trad. 12; Aḥmad b. Ḥanbal, iv. 311, 317 bis etc.); and it is prohibited to use wine for manufacturing vinegar (Tirmidhī, *Buyūʿ*, bāb 59; Aḥmad b. Ḥanbal iii. 119, 260 bis). But times will become ever worse and there will be people who declare wine allowed (Bukhārī, *Ashriba*, bāb 6; Nasā'ī, *Ashriba*, bāb 41 etc.) and so it will be drunk by the generation of the last days (Bukhārī, *Ashriba*, bāb 1; Aḥmad b. Ḥanbal, iii. 176, 202, 213 sq.).

The prohibition of wine, although unanimously accepted, gave rise to dissensions between the juridical schools, dissensions which are reflected in *ḥadīth*, in a historical disguise. The discussions start from the question: what is wine? It is said that, when the use of wine was peremptorily prohibited, the people of Madīna poured out in the streets all that they possessed of the appreciated liquor (Aḥmad b. Ḥanbal, ii. 132 sq.; iii. 26, 189 sq., 217, 260 bis; iv. 335 sq.). Ibn 'Umar declares, on the contrary, that at the time of the prohibition, there was no wine in Madīna at all (Bukhārī, *Ashriba*, bāb 2). Anas b. Mālik (*ib.*) says that there was scarcely any wine from grapes in Madīna, when the prohibition was revealed; people used wine from *busr* and *tamr* (two kinds of dates). In another tradition (*ib.*, bāb 3) wine from *faḍikh* and *zahrw* (two other kinds of dates) is mentioned. 'Umar is represented delivering a *khuṭba* which was meant to settle the question; according to his son 'Abd Allāh he said: Wine has been prohibited by the Qur'ān; it comes from five kinds of fruits, from grapes, from dates, from honey, from wheat and from barley; wine is what obscures the intellect (*wa-l-khamr mā khāmara al-'aql*; Bukhārī, *Ashriba*, bāb 2). The question remained, whether beverages prepared from grapes in a different way, were prohibited. There was e. g. a kind of syrup. "When 'Umar visited Syria, the population complained of its unhealthy and heavy climate and they added: This drink alone will heal us. Then 'Umar allowed them to drink honey. Then they said: Honey cannot heal us. Thereupon one of the natives of Syria said to him: May we not prepare something of this drink for you? It has no inebriating power. He said: Well. Then they cooked it till two thirds were evaporated and one third of it remained. They brought it 'Umar, who put his finger into it and licked it. Then he said: This is *ṭilā'* like camels' *ṭilā'* (viz. the pitch with which they smeared their skins). Then he allowed them to drink it" (Mālik, *Ashriba*, bāb 14). According to the first chapter of the same *kitāb*, however, 'Umar punishes a man who had become drunk on *ṭilā'*. Juice from grapes, prepared by pressing them only, is considered as wine. Ṭarīk b. Suwaid al-Ḥaḍramī said to the Prophet: We have in our country grapes which we press. May we drink the juice? He said: No. This negative answer is given three times and when Ṭarīk asks whether the juice may be given the sick to drink,

Muḥammad answers: It is no medicine, it is sickness (Aḥmad b. Ḥanbal, v. 292 sq.). And not only those who drink and sell wine are cursed by Muḥammad, but also those who press grapes and have them pressed in order to drink the juice (Ibn Mādjā, *Ashriba*, bāb 6).

Another question of importance arose, in connection with spirits: Had they to be considered as wine or not? All the *madhhab*'s, except the Ḥanafīs, have answered the question in the affirmative sense. They have consequently extended the prohibition of wine, in accordance with the intention underlying it. Tradition, which is the best source for the history of the origin of several institutions, shows that the question belongs to the much debated ones. The standard *ḥadīth* which is found very frequently in the classical collections runs as follows (I pick out Muslim's version *Imān*, trad. 26, because it contains important details): „Some men of 'Abd al-Kais went to the Apostle of Allāh and said to him: O Prophet of Allāh, we are a tribe belonging to Rabī'a; between us and yourself dwell the infidels of Muḍar, so that we can only reach you in the sacred month. Tell us therefore what we have to tell our tribespeople which will open Paradise for us if we to cling to it. The Apostle of Allāh answered: I order four things and I forbid four things. Serve Allāh without associating anything with him. Perform *ṣalāt*, deliver *zakāt*, fast the month of Ramaḍān and deliver the fifth part of booty. And I forbid four things: *dubbā'*, *ḥantam*, *nuzaffat* and *naḥir*. They asked: O Apostle of Allāh, how do you know what the *naḥir* is? He said: Well, it is a palm-trunk which you hollow out; then you pour small dates into it and upon them water. When the process of fermentation has finished, you drink it with the effect that a man hits his cousin with the sword. — Now among these men there was someone who had received a blow of the sword in this way. He says: I had concealed it out of shame before the Apostle of Allāh. Then I said: But from what vessels should we drink then, O Apostle of Allāh? He answered: From leather skins, the mouthpieces of which are smeared with pitch. They answered: O Prophet of Allāh, our country teems with mice so that no single skin can be kept whole. Then the Prophet of Allāh answered: Even though the mice should eat them, even though the mice should eat them, even though the mice should eat them".

This tradition did not meet with general approval. It is said that the Anṣār or other people complained of their difficulty in finding the skins necessary for preserving drinks without their becoming fermented. Thereupon the Prophet is said to have withdrawn his prohibition, wholly or partly (Bukhārī, *Ashriba*, bāb 8; Muslim, *Ashriba*, trad. 63—66 etc.). In some versions of this tradition there occurs the restriction, that all fermented inebriating drinks remain prohibited. Innumerable are the traditions which only contain the rule: All drinks which may cause drunkenness are prohibited in any quantity (*kull muskir ḥarām kathīruhu wa-qalīluhu*) and this rule has passed into many books of *fiqh* (Bukhārī, *Maghāzī*, bāb 60; Muslim, *Ashriba*, trad. 67—75; Aḥmad b. Ḥanbal, i. 145; ii. 16 bis; iii. 38; iv. 87; v. 25 sq.; vi. 36 etc.). Of special traditions prohibiting fermented drinks may be mentioned the following. It is forbidden or disapproved of to

sell raisins if they are to be used for preparing *nabīdh* (Nasā'i, *Ashribā*, bāb 51, 52). It is prohibited to mix together different kinds of fruits so that the mixture should become intoxicating. This tradition occurs frequently; see e.g. Bukhārī, *Ashribā*, bāb 11; Muslim, *Ashribā*, trad. 16—29; Nasā'i, *Ashribā*, b. 4—17; Ibn Sa'd, viii. 360; Aḥmad b. Ḥanbal, i. 276; ii. 46; vi. 242, 292. But each of these kinds may be used separately for preparing a non-fermented drink (Muslim, *Ashribā*, trad. 81—83; Nasā'i, *Ashribā*, bāb 14—18 etc.).

It can easily be seen that the difficulty in this matter was caused by two circumstances. People were accustomed to prepare from all kinds of dates, from raisins and other fruits, drinks which only became inebriating if they were preserved a long time and probably also if they were prepared after special methods. Where was the line of demarcation between the allowed and the prohibited kind? Several collections of traditions went so far as to mention *nabīdh* among the drinks prepared by Muḥammad's wives and drunk by him (Muslim, *Ashribā*, trad. 79—89; Aḥmad, i. 232 sq., 240, 287, 320 sq., 336, 355, 369, 374; ii. 35; iii. 304, 307, 313 sq., 326, 379, 382 etc.). Abū Dā'ūd (*Ashribā*, bāb 10) and Ibn Mādjā (*Ashribā*, bāb 12) have preserved a tradition on this subject which is instructive. I translate Ibn Mādjā's version: Says 'Ā'isha: "We used to prepare *nabīdh* for the Apostle of Allāh in a skin; we took a handful of dates or a handful of raisins, cast it into the skin and poured water upon it. The *nabīdh* we prepared in this way in the morning, was drunk by him in the evening; and when we prepared it in the evening he drank it the next morning". In another tradition of the same bāb Ibn 'Abbās says that the Prophet used to drink this *nabīdh* even on the third day; but what was left then, was poured out.

All this could, however, not persuade the majority of the *faḳīh's* to declare *nabīdh* allowed; three of the *madhhab's* as well as the Shī'a prohibit the use of *nabīdh*. The Ḥanafī school, on the other hand, allows it, when used with moderation, for medicinal purposes etc.

It would take us too far to give here a detailed survey of the opinions of the *faḳīh's* of all *madhhab's*; it would be superfluous, to some extent at least, because the more important differences regard chiefly *nabīdh* only. The following rapid survey is based on the *Fatāwā 'Ālamgiri*, vi. 604 sqq. (cf. Shā'rānī's *Mizān*, Cairo 1279, p. 192 sq.).

Allowed according to the *idmāc* is every non-fermented, sweet drink.

Prohibited (*ḥarām*), according to the *idmāc*, are wine and *sakar* of every kind. As to wine there are six cases: to drink it in any quantity or to make use of it is *ḥarām*; to deny this is *kufr*; to buy, sell, present it etc. is *ḥarām*; no responsibility (*ḍimān*) rests on him who spoils or destroys wine (*mutlifsha*); whether wine is a possession (*māl*) is an unsettled point; it is *nadjis* just as blood and urine; who drinks any quantity of it is liable to punishment.

Several kinds of products prepared by means of grapes (*bādhik*, *munaṣṣaf*, etc.) are prohibited according to the majority (*amma*) of the *faḳīh's*.

Allowed, according to the majority of the *faḳīh's* are *filā* (vide supra) or *muthallath* and *nabīdh*

from dates with the restrictions mentioned above. So is juice from grapes when the process of cooking has made to evaporate two thirds. Muḥammad (viz. al-Shaibānī, q. v.) has a deviating opinion on this point.

As to the punishment of him who drinks wine, ḥadīth tells us that Muḥammad and Abū Bakr were wont to inflict forty blows by means of palmbranches or sandals (Bukhārī, *Hudūd*, bāb 2—4; *Hudūd*, trad. 35—37). Under 'Umar's caliphate, however, Khālīd b. al-Walīd reported to him that people were indulging in prohibited drinks. Thereupon 'Umar consulted the *ṣaḥāba* who advised him to fix the number of blows at eighty, a number suggested by the Qur'ān which prescribes that those who accuse *muḥṣanāt* of *zinā*, without being able to prove their accusation by the aid of four witnesses, shall be punished with eighty blows (sūra xxiv. 4).

Repeated drinking of wine, according to some traditions, was punished by death at Muḥammad's order (Abū Dā'ūd, *Hudūd*, bāb 36; Ibn Mādjā, *Hudūd*, bāb 17; Aḥmad b. Ḥanbal, ii. 136, 166, 191; iv. 93, etc.). It is, however, added in some traditions that capital punishment in such cases is not according to the *sunna* of the Prophet (Aḥmad b. Ḥanbal, i. 125, 130; cf. Ṭayālīsī, N^o. 183).

The different *madhhab's* have adopted 'Umar's view; drinking wine is punished with eighty blows; if the transgressor is a slave this number is however reduced to forty, because in the Qur'ān the punishment of the handmaid's *zinā* is fixed at half the amount of blows with which the free woman is punished (surā iv. 30). The Shāfi'ites however cling to the practice ascribed to Muḥammad and Abū Bakr; with them the number of blows is consequently forty, resp. twenty (see Zurkānī, iv. 42; Nawawī in Muslim, iv. 156).

The prohibition of wine and spirits (according to three of the four *madhhab's*) is one of the distinctive marks of the Muslim world; its consequences can hardly be overrated. This is not seriously affected by the fact that transgressors have been numerous, according to literary evidence. The praise of wine, not uncommon in pre-Islamic poetry, remained one of the favourite topics also of Muslim poets (cf. the wine-songs by Ibn al-Mu'tazz, Abū Nuwās etc.) and at the court of the Caliphs wine was drunk at revelling parties as if no prohibition existed at all (see e.g. The 1001 Nights, *passim*). Even the common people could not always and everywhere refrain from their national drink, date-wine of several kinds; the caliph 'Umar b. 'Abd al-'Aziz deemed it necessary to promulgate a special edict in order to abolish this custom (see v. Kremer, *Culturgeschichtliche Streifzüge*, Leipzig 1873, p. 68 sq.).

Wine has a special place in the literary products of the mystics, where it is one of the symbols of ecstasy. In this point they only took over the language of their Christian and non-Christian predecessors. As early as Philo of Alexandria ecstasy is compared with intoxication (see especially his *De Vita Contemplativa*). Among the Ibāhiya, language may have been a reflex of practice; but this cannot be said of Sūfi's in general, who, on the contrary, clung to the ascetic methods of the *via purgativa*. As to Ḥāfiẓ' wine- and lovesongs, it is an unsettled point whether they are merely metaphorical or not.

(A. J. WENSINCK)

KHAMS(A) (A.), the number five. This number has a magical character, from the fact that it is the number of the fingers of the hand and that it is found in certain Muslim dogmas (five foundations of belief, five religious duties, five daily prayers, prescribed by the canon). The hand stretched out with the palm open and the fingers expanded is a symbol that protects against the evil eye; in North Africa we frequently find, among Jews as well as Muslims, a hand painted on the door with the fingers spread out. Amulets in this form are made of gold and silver, called *khams*, *khoms* by the natives and "hands of Fatma" by Europeans. Thursday, the fifth day of the week, is favourable for magic rites against the evil eye and is the day chosen for pilgrimages to the tombs of famous saints to destroy the effects of the evil eye.

(CL. HUART)

KHAMSA, **KHAMSE**, the same word as the preceding, pronounced in the manner of the Arabs of the East, the Persians and the Turks; the name given to collections of five poems of which the most famous are those of al-Nizāmī, also called *Pandj-gandj* "the five treasures": *Makhzan al-Asrār* (559 = 1164), *Khusraw u-Shirīn* (576 = 1180), *Leilā u-Madjnūn* (584 = 1188), *Haft-paika* (593 = 1197), *Iskandar-nāma* (597 = 1201); of Amīr Khusraw of Dihlī: *Matla' al-Anwār* (698 = 1299), *Shirīn u-Khusraw*, *Madjnūn u-Leilā* (same year), *Ayina-i Sikandarī* (699 = 1300), *Hasht-bihisht* (701 = 1302); of Khwādjuī Kirmāni: *Rawdat al-Anwār* (finished in 744 = 1343), *Humāi Humāyūn*, *Kamāl-nāma*, *Gul u-Nawrūs*, *Djowhar-nāma*; of Kātibī, unfinished; we have the *Gulshan-i Abrār* and a *Leilā u-Madjnūn* about 838 = 1434; of Djāmī: selection from the *Haft-awrang*, and including the *Tuhfat al-Ahrār* (886 = 1481), *Subhat al-Abrār*, *Yusuf u-Zulaikha* (888 = 1483), *Leilā u-Madjnūn* (889 = 1484), *Khīrad-nāma-i Sikandarī*; of Hāfiī, probably unfinished, containing: *Leilā u-*

Madjnūn, *Haft-Manzar*, *Shirīn u-Khusraw*, *Tīmūr-nāma* (between 917 = 1510 and 927 = 1521); of Faiḍī: *Markaz-i Adwār*, *Sulaimān u-Bilkīs*, *Nal-daman*, *Haft-kishwar*, *Akbar-nāma* (1003 = 1595), unfinished; of Ḥasan b. Saiyid Faṭh Allāh: to the glory of Muḥammad and the four first caliphs (of 1038/1628 to 1039/1630). The *Khamsa-i Nāḳiṣa* of Mollā Tuḡhrā-i Mashhādī is a diatribe against five persons at the court of Golconda. The author died at the beginning of the reign of Awrangzēb (about 1069 = 1659).

Turkish poetry also contains a certain number of works of the same kind such as those of Hamd Allāh Celebī, called Hamdī, son of *Shaiḫ* Aḳ Shams al-Dīn, d. 914/1509: *Yusuf u-Zulaikha*, *Leilā u-Madjnūn*, *Mawlid-i Nabī*, *Tuhfat al-'Ush-shāḳ*, *Muhammadiya*; of Fuḍlī of Baghdād, d. 963/1556 (mentioned by Latīfī and Kīnālī-zāde, probably wrongly); of the Albanian Yahyā, bey of Dukagin, d. 983/1576: *Shāh u-Gadā*, *Yusuf u-Zulaikha*, *Kitāb-i Uṣūl*, *Gundjina-i Rāz*, *Gulshen-i Anwār*; of Muḍī of Kalkandilen, contemporary of Bāḳkī; of Bihishtī, d. 979/1572: *Wamīk u-'Adhrā*, *Yusuf u-Zulaikha*, *Ḥusn u-Nigār*, *Suḥail u-New-Behār*, *Leilā u-Madjnūn*; of Sinān b. Suleimān, surnamed Aṭā'i and son of New'i, d. 1044/1634 (really only contains four poems, the fifth being the *Diwān* of the poet): *Suḥbet al-Aḥḳār*, *Heft-khwān*, *Nafhat al-Ashār*, *Sāḳī-nāma*. The *Khamsa-i Rūmī* of Rawanī of Andrinople, d. 930/1524, mentioned by Sehi, probably never existed. That of Nergisī is in prose.

Mir 'Alī Shīr Nawā'ī has also collected under the same title five poetical compositions in Eastern Turkī (Catalogue Quaritch, Jan., 1916, p. 23; E. Blochet, *J. A.*, 1916, Series II, vol. viii. 400). The name *Khamset al-Mutahaiyirīn* is given to a biography of Djāmī in five parts (Belin, *J. A.*, 1861, Series 5, vol. xvii. 303).

Bibliography: Ch. Rieu, *Catalogue of Persian MSS. Brit. Mus.*, p. 504, 611, 615, 620, 637, 645, 652, 671, 680; E. J. W. Gibb, *Ottoman Poetry*, i. 145, ii. 8. (CL. HUART)

KHAMSA (abbreviated from *wilāyat-i khamsa* = the five provinces), the name of a province in Persia of which Zendjān is the capital; Sultāniya also forms part of it. It is a small administrative division, forming quite recently a detached district of 'Irāq 'Adjamī; it lies between the provinces of Ādharbaidjān and Qazwīn and has 11,480 inhabitants. It appears in the Budget with the following statistics: revenue in cash 819,880 krāns, in cereals 10,540 kharwār (of 649 lbs.), in straw 9,000 kharwār; value of payments in kind 978,638 krāns. Local expenditure, including the remissions of taxation, 19,129 krāns. The five towns which gave the name of this district are Abbar, Farum, Qhēlab, Arman-khāne and Zerzīn-Ābād. The country is inhabited by the nomad tribe of Afshār.

Bibliography: [E. Dupré], *Voyage en Perse*, ii. 213—214; Jaubert, *Voyage en Arménie*, p. 197; G. Curzon, *Persia*, i. 437, 480.

(CL. HUART)

KHĀN (T.), a Turkish title; originally a contraction of *Qaghan*, Arabic *khāḳān* [q.v.]; in this meaning *Kān* occurs alongside of *Qaghan* as early as the Orkhon inscriptions of the viiith century A.D.; cf. the Tonyuḳuk inscription in W. Radloff, *Die alttürkischen Inschriften der Mongolei*, 2nd Series, St. Petersburg 1899, p. 3, and

the quotations in the glossary, p. 93. In the Muslim period the word *Khān* seems first to appear towards the end of the 1vth (xth) century on the coins of the Illek-Khāns [q. v., ii. 465] and particularly in the vth (xith) century in the texts relating to this dynasty (cf. the quotations *loc. cit.*) Not till the Mongol period is a distinction made between the *Qaghan* or *Qān* as supreme ruler and the *Khān* as ruler of a separate portion of the whole empire.

In course of time *Qaghan* and *Khān* were completely ousted from the popular language by *Khān*. In the last centuries before the Mongol conquest, the Turkish *Khān* like the Arabic *Malik* and the Persian *Shāh* was used as a princely title in contrast to the supreme title *Sultān*, *Sultān* only retaining the meaning in Western Asia and Egypt. In Central Asia in the various kingdoms into which the Mongol empire broke up *Khān* was the real sovereign title and *Sultān* the title of each individual member of the dynasties descended from Čingiz Khān. In the administrative system of the modern Persian kingdom founded by the Šafawids the *Sultān*, as governor of a smaller district, was under the *Khān*, who was governor of a large province. (W. BARTHOLD)

KHĀN DJAHĀN LÖDĪ. An Afghān favourite of the emperor Djahāngir [q. v.], who called him his son (*farzand*). His original name was Pir Khān, and he was a son of Dawlat Khān and descended from the Dawlat Khān Lōdī, who was supreme in the Pandjāb when Bābur entered India. Pir Khān first had the title of Salābat Khān, and afterward that of Khān Djahān. When Djahāngir died, he behaved badly, made the mistake of not recognising Shāh Djahān, and of not even answering his autograph letter, and sold the Balāghāt of the Deccan to Nizām al-Mulk. The result was that he was superseded by Mahābat Khān, and though he got another appointment, and came to court, he was no longer a favourite, and became apprehensive that he would be arrested. So he fled at night from Agra with his family and dependents. He was pursued and attacked at the Cambal, and many of his people were killed. He continued his flight towards the Deccan, but eventually was killed in Central India in the fourth year of the reign of Shāh Djahān, to whom his head was sent.

Bibliography: *Tārīkh-i Khān Djahān Lōdī*; Djahāngir, *Memoirs*, transl. by A. Rogers and H. Beveridge, i. 87 etc.; Elliot-Dowson, *Hist. of India*, v. 67, vi., vii.; *Ain-i Akbarī*, transl. Blochmann, p. 502; *Rādashāhnāma*, i. (Elliot-Dowson, vii. 20); *Khawāfi Khān, Muntakhab al-Lubāb*. (H. BEVERIDGE)

KHĀN KHĀNĀN, "Lord of Lords", a title given by the Dihli emperors to their highest officer. It corresponds to the Turkish *Beglerbeg*. It was in use in Bābur's time, the title having been given to Dilāwar Khān, son of Dawlat Khān. The most famous *Khān Khānān*'s were Akbar's ministers, Bairām and his son 'Abd al-Rahīm. — *Khān Dawrān*, "Lord of the age", and *Khān Djahān*, "Lord of the world", are similar titles. (H. BEVERIDGE)

KHĀN-I DJAHĀN MAKBŪL KHĀN, originally a Hindu by name Kunnū or Kattū, became a Musalmān on entering the service of Muḥammad b. Taghlaḳ [q. v.], who gave him the title of Kawām al-Mulk and made him governor of Multān; he afterwards became *nā'ib wazīr* and dis-

tinguished himself by his administrative ability; on the accession of Firūz Shāh Taghlaḳ [q. v.], he was raised to the position of *wazīr* and enjoyed the confidence of his royal master for 18 years until his death in 770.

Bibliography: *Shams-i Sirādj 'Afif, Tārīkh-i Firūzshāhī*, (Bibl. Ind.), Calcutta 1888—1891, p. 62 sqq., 211 sqq., 394 sqq.

KHĀNA (P.), house (from the root *khān*, "to dig", aspirated form from *kan-dan*); hence: "local, a square on a chessboard". It is found in numerous combinations such as *Kitāb-khāna*, *kutub-khāna*, "library"; *mihter-khāna*, "regimental band"; *ṭabl-khāna*, "kettledrum band", in the time of the Mamlūk Sultāns of Egypt; *top-khāna*, "arsenal of artillery", *ab-dest-khāna*, "water-closet", etc. and is also found in Anglo-Indian hybrids such as *gym-khāna*, "sports meeting" in which *gym* is an abbreviation for *gymnastics* (Yule, *Hobson-Jobson*, s.v.).

(CL. HUART)

KHĀNBALĪK (usually written Khān Bālīk), the "Khān's town", the name of Pekin as capital of the Mongol Emperors after 1264 in Eastern Turkī and Mongol and afterwards adopted by the rest of the Muslim world and even by Western Europe (*Cambaluc*, variants in S. Hallberg, *L'Extrême Orient dans la littérature et la cartographie de l'Occident*, Göteborg 1906, p. 105 sq.). According to Rashīd al-Dīn (ed. Berezin, *Trudi Vost. Otd. Arkh. Obsht.* xv., Persian text, p. 34), Pekin (Chinese then Čungdū, i. e. the middle capital) was called Khānbālīk even earlier by the Mongols, apparently as one of the chief towns of the Kin dynasty (cf. the art. ČINGIZ KHĀN). As everywhere in the Mongol Empire, Muḥammadans enjoyed considerable prestige in Khānbālīk also. Maḥmūd Yalawāḥ b. Muḥammad al-Kh̄wārizmī (W. Barthold, *Turkestan* etc., i. 139), who died there in Rabi' I, 652 (April 21—May 20, 1254), was several times confirmed in office as governor of North China (Rashīd al-Dīn, ed. Blochet, p. 85 and 309). On the assassination of the vizier Aḥmad Fanāketī in 1282 and the events that followed see *ibid.*, p. 508 sqq.; Marco Polo, ed. Yule-Cordier, i. 415 sqq. On the town and its situation on the Imperial Canal cf. Rashīd al-Dīn, ed. Blochet, p. 455 sqq.; on the distances between Khānbālīk and other towns by the land routes see Waṣāf, ed. Hammer, p. 24, Indian ed., p. 12; *N. E.*, xiii. 225 sq. (al-Umarī); Sharaf al-Dīn Yazdī, *Zafar Nāme*, Indian ed., ii. 219 sq. The name Khānbālīk for Pekin was also retained after the decline of the Mongol empire in Central and Western Asia and also in Europe. On the five months' sojourn (Dec., 1420—May, 1421) of the embassy of Sultān Shāh Rukh in Khānbālīk see *N. E.*, xiv. 320 sqq.; the original narrative, which survives in one MS. only (Elliot 422 in Oxford, Bodleiana = *Zubdat al-Tawārīkh* of Ḥāfiz-i Abrū, f. 390b sqq.), has so far not been fully investigated (brief account in W. Barthold, *al-Muzaffariya*, p. 27; *M. I.*, p. 107). There was a mosque in Pekin even in those days. Khānbālīk is mentioned as late as the early years of the xviiith century in an anonymous history written in Kāshghar (*Zap.*, xv. 251). In the reports of the Russian Ambassadors of the xviith century, the form Kambālīk (with variants) is used, under Western European influence (Ju. Arsenyew, *Puteshestviye . . . ruskago poslanmika Nik. Spafariya*, in the *Zap. Geogr. Obsht. zu old. etnogr.*, x., vip. 1,

Index. Spafari (embassy 1675) is the first to write *Piezīn*, under the influence of the North Chinese pronunciation; this pronunciation also explains the names in the modern literature of Central Asia for Peking (Bačīn or Bādjīn) (e.g. *Tārīkh-i Amāniya*, p. 24; cf. *Zap.*, xvii. 0188 sqq.).

Bibliography (besides the references in the text): Ch. Schefer, *Notices sur les relations des peuples musulmans avec les Chinois, depuis l'extension de l'islamisme jusqu'à la fin du XV^e siècle, Centenaire de l'École Or. Viv.*, Paris 1895, p. 1—43.

(W. BARTHOLD) **KHANDAK** (P., A.), ditch, moat. On the etymology of the word see A. Siddiqi, *Studien über die Persischen Fremdwörter im klassischen Arabisch* (Göttingen 1919), p. 73; it was taken over by the Syriac speaking population of Northern Mesopotamia in early times, as it appears already in the *Book of the Himyarites* (first half of the vith cent.; ed. Moberg, p. 30, l. 14) in the form *Kandaḳ*. Consequently it may be an Aramaic loanword in Arabic. Tradition, however, connects its first use in the latter language with Salmān al-Fārisī [q. v.], who, it is said, advised Muḥammad to protect Madīna in the year 6 A. H. against its beleaguers by digging a moat, a means of defence hitherto unknown in Arabia but usual in Persia.

The episode of Madīna's beleaguering in that year has ever since been connected with the term *khandak* or *aḥzāb* (allies). The *sīra* as well as other historical works give different reports concerning the extension of the moat and the part of the town it was meant to protect. Still it may be taken as probable that it started from the marketplace and the hill called *Sal'*, and from there extended chiefly to the North and North-East, partly also to the South.

The digging of the *khandak* is often mentioned in tradition because Muḥammad himself took part in the work (Bukhārī, *Ḍjihad*, b. 33, 34, 161; Muslim, *Ḍjihad*, trad. 125—130 etc.). He is said to have hewn a large stone-block in pieces, so that flashes of light emanated from it which shone into various parts of the world (Ibn Sa'd iii./i., 59 sq.). Several lines of poetry in *radjaz* uttered by him or his companions during the work are recorded, amongst them the well-known *du'ā* in behalf of Muḥādjirūn and Anṣār. For further information see *MADĪNA*, MUḤAMMAD.

Al-Khandak is also the name of several places; see Balādhuri, *Futūḥ*, ed. de Goeje, p. 85; Yāqūt, *Mu'djam*, s. v.

Bibliography: Sprenger, *Das Leben und die Lehre des Mohammed*, iii. 207 sqq.; Grimme, *Mohammed*, Münster 1892, i. 106 sq.; Caetani, *Annali dell' Islām*, A. H. 5, 21—43; A. J. Wensinck, *Mohammed en de Joden te Medina*, Leiden 1908, p. 26 sqq.

(A. J. WENSINCK) **KHWĀNDAMĪR**, Persian historian. His real name was Ghīyāth al-Dīn, and he was the son of Khwādja Hamām al-Dīn b. Khwādja Djalāl al-Dīn b. Khwādja Burhān al-Dīn Muḥammad Shirāzi. The historian Mīr Khwānd [q. v.] was his maternal grandfather, and Nizām al-Dīn Sulṭān Aḥmad Ṣadr was his maternal uncle. His father was for many years the minister of Sulṭān Mahmūd of Samarḳand, who was Bābur's paternal uncle. Khwāndamīr must have been born about 1475, and probably in Herāt, where his maternal grandfather lived. The *Haft Iklim*, however, enters him under Bukhārā.

His grandfather Mīr Khwānd seems to have been originally an inhabitant of Balkh. He entered the service of Badī' al-Zamān, eldest son of Sulṭān Ḥusain, and was with him in 1502 at Pul Cīrāgh and heard him tell of his adventures after his defeat at that place by his father, five or six years before. After Sulṭān Ḥusain's death in May 1506, Khwāndamīr was with Badī' al-Zamān at Maral in northern Persia. In the spring of 1507 when there was an idea of opposing Shaibānī's advance, Badī' al-Zamān and his brother and co-king Muzaḥfar directed Khwāndamīr to go to Ḳandahār and induce Shāh Beg Arghūn to join them. He got as far as Herāt, but delay was caused by the death of Djudjak Bēgam, daughter of Badī' al-Zamān, and also by the near approach of Shaibānī, and so he did not go to Ḳandahār. He also once went on a fruitless embassy to Khusrav Shāh at Kunduz. A feeble attempt was made at Maral to encounter Shaibānī, but the princes ran away, and the gailant Dhu 'l-Nūn Arghūn was slain. The march upon Herāt followed in March 1507, and Khwāndamīr and his brother's son 'Uḥmān, who was inspector (*muhtasib*) for the city, were deputed by the inhabitants to interview Shaibānī at his camp, and to obtain terms of surrender. The nephew went and succeeded in having an interview, though he was stripped and pillaged on the way. Khwāndamīr remained in Herāt after its capture, and he has given an amusing account of how he and his friends were squeezed by the Uzbegs. He was also in Herāt when Shāh Ismā'īl defeated and killed Shaibānī and took possession of the city in 1510. But in 920 (1514) we find him in retirement at the village of Pasht or Basht in Ghardjīstān, in northern Persia (not in Georgia, as Elliot has it; see de Sacy on Ghardjīstān in *Mines de l'Orient*, i. 321), where he occupied himself in writing his books. He now attached himself to the worthless Muḥammad Zamān, eldest son of his old master, and shared his fortunes for a while, at Balkh, etc. But when Muḥammad Zamān was preparing to go to Ḳandahār, Khwāndamīr obtained leave to return to Pasht. He must have afterwards settled in Herāt, for he was there in July 1527, when he left it to go to Ḳandahār. Nor did he stay long in Afghānistān, for he went off to India in March 1528. He reached Āgra and presented himself before Bābur in September, and in 1529 accompanied him to Bengal and was with him at the *trimohini*, or junction of the Sardjū and Ganges (*Ḥabīb al-Siyar*, lith., ii. 84, end of 4th part of vol. 2). Bābur died in the end of 1530, and Khwāndamīr afterwards served his son, Humāyūn, and wrote a panegyric on the latter's buildings and devices, which he called the *Kānūn-i Humāyūnī*, or the *Humāyūnnāma* (there is a MS. of it in the British Museum), and an account of the book, accompanied by extracts, is given in Elliot's *History of India*, v. 116). It is commonly said that Khwāndamīr died in 941 (1534—1535) during Humāyūn's expedition to Guḍjarat. But Farishta's account shows that the death, caused by dysentery, occurred on the return march from Guḍjarat. This was in 942, and Khwāndamīr was alive in that year, and made a chronogram on the death of his friend and fellow-traveller, Shihāb al-Dīn, the riddle-maker (cf. Badā'ūnī, Ranking's translation, i. 450). Khwāndamīr probably died in 942 or 943 (1535—1537). At his own request he was buried in Dihli, near the tombs of Nizām

al-Dīn Awliyā and Amīr Khusrāw. His age was then probably about 60.

Khwāndamīr was a voluminous writer. His first work was the *Khulāṣat al-Akbbār* (or, the Perfection of Narratives). It was written in 905 (1499–1500) and dedicated to 'Alī Sher, whose library furnished him with the necessary materials. It is a youthful work, and naturally there is little in it that is derived from personal knowledge. It is in fact a preliminary sketch for the *Ḥabīb*, but in some places, e.g. in the account of the capture and death of Yādgar Muḥammad it is fuller than the latter work. Khwāndamīr's most valuable work, and the only one that has been printed, is the *Ḥabīb al-Siyar*. It was begun in 1521 and substantially finished in 1523–1524, though he made additions to it after visiting India. The *Ḥabīb al-Siyar* — so called after his second patron Ḥabīb Ullāh — is a General History from the earliest times down to near the end of the life of Ismā'īl Ṣafawī I. Naturally, it is chiefly valuable for the author's own time. The best parts are the lives of Sulṭān Ḥusain of Herāt and of Ismā'īl I. Incidentally, he gives much information about Shaibānī and Bābur, and his account of the latter is the best source that we have for the two great gaps in Bābur's "Memoirs". He is a conscientious author, for he wrote the *Ḥabīb al-Siyar* three times over. He is also accurate, and often writes from personal knowledge. His great fault is his style. It is turgid and rhetorical, like the *Anwār-i Suhailī* of his contemporary Ḥusain Wā'iz, and is sprinkled with tags of verse. He bestows too much praise on Sulṭān Ḥusain and Ismā'īl Ṣafawī, and he is also sometimes unnecessarily prolix. For instance, he writes with wearisome detail of the adventures of Muḥammad Zamān. The *Ḥabīb al-Siyar* has been lithographed at Tihārān and Bombay. Khwāndamīr was also the author of 7th vol. of the *Rawḍat al-Ṣafā*.

KHĀNDESH, the region bounded on the north by the Narbadā, on the east by the province or kingdom of Berār, on the south by the Adjanta Hills, and on the west by the kingdom of Guḍjarāt. It became an independent state in 1382, when Aḥmad Fārūkī, entitled Rādja Aḥmad or Malik Rādja, having joined the rebellion of Bahrām Khān Māzandarānī against Muḥammad Bahmanī I of the Dakan, was obliged to flee from that country and established himself in Khāndesh, which owes its name to him and his successors, who long eschewed the royal title and were content with that of Khān, whence their principality was known as "the country of the Khāns". The country, surrounded by powerful neighbours, was too small to be entirely independent, and its rulers owed some degree of allegiance at first to Mālwa and afterwards to Guḍjarāt, but the mutual jealousy of these two states preserved Khāndesh from absorption in either. Mirān Muḥammad I, the eleventh of the Fārūkī Khāns, was closely related to the ruling family of Guḍjarāt,

and was elevated to the throne of that kingdom in 1537, but died on his way to Aḥmadābād to assume his new dignity. His promotion encouraged his successors in Khāndesh to use the title of Shāh.

The administrative capital of the country was Burhānpūr, but the fortress of Asir afforded a safe refuge to its rulers when danger threatened. Asir was captured by Akbar in 1601 from Bahādūr Shāh, the seventeenth and last of the long line of Khāns, and when prince Dāniyāl was appointed viceroy of the Mughul Dakan, which included Khāndesh, his father bestowed upon the province, in his honour, the fanciful name of Dāndesh, by which it was known, in official records, as long as the Mughul empire lasted, though the newer name never displaced the older, and is now almost forgotten.

KHĀNFŪ, in the third (ixth) and fourth (xth) centuries the Arabic name for the most important seaport of China, the centre of trade by sea with the western Asiatic peoples. As is now generally believed, this town "is undoubtedly Canton" (cf. above, i. 842). On the other hand, it used to be urged (by J. Klaproth, *J. A.*, 1824, v. 40 bis; I. Hallberg, *L'Extrême Orient* etc., Göteborg 1906, p. 213) that Khānfū was not Canton but the Gamfu or Ganfu mentioned by Marco Polo (transl. Yule-Cordier, ii. 189, and note on p. 199) lying much farther north, the harbour of Hang-t'eu-fu. This idea is refuted by the fact that, in the Chinese annals of this period also, Canton is mentioned as the most important harbour and centre of foreign trade; in 758 A.D. Canton was plundered by Arab and Persian pirates (e.g. E. Chavannes, *Documents sur les Pou-kin (Turcs) occidentaux*, St. Petersburg 1903, p. 173). This event is not mentioned by the Arabs. Arabic sources (Abū Zaid al-Sirāfī in Reinaud, *Relation des voyages faits par les Arabes et les Persans dans l'Inde et la Chine*, Paris 1845, ii. 63 [text]; al-Mas'ūdī, *Murūdī*, i. 303; Ibn al-Aṭhīr, vii. 221) report the destruction of Khānfū by the Chinese rebel Huang-č'ao in 264 (877–878) when a great number (120,000 or 200,000) of Muslims, Christians, Jews and Zoroastrians perished. According to the Chinese annals, Canton was taken by Huang-č'ao in 879: in this connection also the importance of this town for foreign trade is mentioned (P. Pelliot in *T'oung Pao*, 1923, p. 410). The statements in Ibn Khordādhbeh (*B. G. A.*, vi. 69, text) regarding the location of Khānfū (four days' journey by sea and 20 by land from the most southerly Chinese harbour Lūkin, now Hanoi) can, as F. Hirth and W. W. Rockhill (*Chao Yu-Kua*, St. Petersburg 1911, p. 22; with support from al-Idrīsī) observe, only refer to Canton. The reading Khānfū (Chinese Kuang [č'eu] fu) is now regarded as certain although the manuscripts frequently have *k* for *f* and even de Goeje (*B. G. A.*, loc. cit.) was inclined to prefer the reading Khānkū (for Hong-Kong). According to the Arab authorities, the town brought the government 50,000 dinārs a day (about £40,000) (Reinaud, *op. cit.*, text, p. 41). After the arrival of a foreign vessel, eunuchs were sent to it by the

Emperor to pick the finest merchandise (*ibid.*, text, p. 73 *sq.*); the road between Khānfū and the capital Khumḍān (Si-ngan-fu) took two months to traverse (*ibid.*, p. 77 and 103). The prince (*malik*), i.e. governor of Khānfū, bore the title *Difū* (*ibid.*, p. 38; according to Reinaud, note 81 = ii. 27, for Chinese *Ci-fu*. See also the article CHINA, especially p. 840—842). (W. BARTHOLD)

KHĀNIKĪN, a town in the 'Irāq, on the Hulwān-ḥai. The statement that Nu'mān V, king of al-Hira, was kept here a prisoner till his death by order of his overlord, the Sāsānian Khusrāw II, suggests that there was a fortress here in the Sāsānian period. The bridge of Khānikīn must also go back to Sāsānian times; it is built of brick and plaster in several arches across the river-valley. The number of arches is said to be 24, each 20 ells wide. At the Muslim conquest a battle seems to have been fought at Khānikīn for a "day of Khānikīn" is mentioned in Ibn al-Fakīh. Under Arab rule Khānikīn was a small town, which made a poor impression on the traveller compared with the splendour of Baghdād, and was an unpretentious station on the road from Baghdād to Khurāsān. Ibn al-Mu'tazz praises the wine of Khānikīn. According to Mi'sar, a naphtha well at Khānikīn yielded a considerable revenue to the state. Lastly the Zuṭṭ were deported to (the region of) Khānikīn after their rising in lower Mesopotamia had been suppressed in 219 (834).

The place was often mentioned in recent years as a junction connecting a branch of the Baghdād railway with the railway system proposed by the Russians in Irān.

(P. SCHWARZ)

AL-KHANSĀ' is celebrated as the greatest poetess of the Arabs; her proper name was Tumādir, daughter of 'Amr b. al-Sharīd of the tribe of Sulaim, from which tribe originated among others the celebrated poet Zuhair b. Abī Sulma. Her father must have been a man of considerable reputation and wealth, for an account preserved in the *Kitāb al-Asmā* of al-Marzūqī (ed. Haidarabad, ii. 168 *sq.*) tells us that her father visited the fair of 'Ukāz with his sons Mu'āwiya and Ṣakhr in the 35th year of the Elephant and transferred some landed property at al-Wahīda in the Mikhlaḥ of Yathrib to Ma'mar b. al-Hārith, the grandfather of the poet Djamīl, and al-Asma'ī says that the document then drawn up was still in the possession of the descendants of Ma'mar in the time of the caliph Hārūn al-Rashīd. Assuming the document to be genuine (which I doubt) the brothers of al-Khansā' 15 years before the Hijra, in 607 A.D., were already old enough to take part in the affairs of their father, but the year of the Elephant was probably much earlier than the date generally assigned to it by Muslim authorities.

The earliest event in the life of al-Khansā' of which her biographers make mention is the proposal of marriage made by the aged Duraid

b. al-Ṣimma, who was killed in the year 9 A.H. The latter was bound in close friendship to her brother Mu'āwiya, both having promised to one another that the one surviving would mourn in an elegy the one who died first. Al-Khansā' was then a young girl and as the proposal came through her brother we may assume that her father was dead. It is significant for those times that the girl was permitted to consider the proposal of marriage, and after seeing Duraid her decision went against him. She even composed some verses against the rejected suitor in which she mocks him and his tribe and incidentally mentions that she had previously refused another man of the family of Badr, who is not otherwise known. After this she married a man of her own tribe of Sulaim named 'Abd al-'Uzzā (or, according to Ibn Kṭaiba, Rawāḥa b. 'Abd al-'Uzzā), who was the father of her son Abū Shadjara 'Abd Allāh, who took a prominent part in the apostasy after the death of the Prophet and did not come into al-Medīna till the reign of 'Umar. This 'Abd al-'Uzzā probably died early and al-Khansā' married another man of her tribe, Mirdās b. Abī 'Āmir, by whom she had three sons, Zaid, Mu'āwiya and 'Amr, and probably her daughter 'Amra, who was her youngest child.

There is considerable difficulty in reconciling the chronological data and to arrive at even an approximate date for the birth of al-Khansā', but as her son Abū Shadjara took a prominent part in the *Ridda* [q. v.] in the year 13 A.H. and may have been 30 years of age we may fairly assume that al-Khansā' was then between 40 and 50, probably even older. Al-'Abbās b. Mirdās, who was one of the poets of the Prophet, was certainly not her son, but the issue of an earlier marriage of Mirdās. Mirdās, an enterprising man, had attempted with some companions to cultivate some swampy ground near a spring, and as a revenge the spirits which inhabited that place contrived to kill him slowly, i.e. he most likely contracted a fever in this unhealthy place.

The turning-point in the life of al-Khansā', however, was the double bereavement, the loss of her two brothers Mu'āwiya and Ṣakhr. Mu'āwiya, in accordance with Arab custom, went out with 18 companions to make a raid upon the tribe of Murra. He had had a quarrel with a man of this tribe, Hāshim b. Ḥarmala, at the fair of 'Ukāz and after one unsuccessful attempt he invaded the land of the Murrītes in which he was slain by Duraid, the brother of Hāshim. The duty of avenging the death of his brother fell upon Ṣakhr and he succeeded in murdering first Duraid, who had slain his brother Mu'āwiya and was slowly recovering from the wound he had received in the combat; then another Sulamī killed the former's brother Hāshim. Not content with this double revenge for his brother, Ṣakhr continued his raids upon Murra till he was fatally wounded by a man of Fak'ās, an Asadī clan allied with the tribe of Murra. He lingered for a long time in his tent, apparently becoming a burden to his wife, and finally succumbed. All these events happened before the rise of Islām, but al-Khansā' lived long enough to see the final victory of the new faith and she is said to have been reproved both by the caliph 'Umar and by 'Ā'isha for her unreasonable mourning for her brothers, especially Ṣakhr. The new religion had no real influence upon her and her poems.

Fortunately several manuscripts of her elegies have been preserved and the indefatigable labours of Cheikho have put us in possession of a very complete collection of her verses. Naturally we find among the verses recorded in this edition many which have become ascribed to al-Khansā', because of her paramount reputation as a poetess of elegies, but there is no doubt in my mind that we have many poems which are perfectly genuine, especially as the tradition of the undoubtedly genuine pieces emanates from men of her own tribe from whom the poems were collected at a very early date. It is significant that in these genuine poems we find expressed the true sentiments of the *Djāhiliya*; there is no mention of a future life; only the blood of the slain demands retaliation and the despair is over and again expressed that no one can replace the departed, whose many virtues are enumerated and extolled.

Both the biography and the merits of her poetry have been critically and elaborately dealt with by Cheikho, Gabrieli and Rhodokanakis so that it is easy to get a fairly complete estimate of her life and work from these authors. Whether al-Khansā' introduced any new features into the *marthiya* or not is very difficult to say, but it is almost certain that her verses inspired many later elegists, among whom figures her own daughter 'Amra. If we contrast her verses with those of other elegists among her contemporaries — I will only mention Mutammim and Abū Dhū'aib —, we must confess that her verses do not possess the poetical beauties which are found in them, but we have in the contrary in her poems, which are also much shorter, a far more genuine mourning; on the other hand, there is a certain monotony in the repetition of the same thoughts and ideas.

Cheikho, Bairūt 1895; Gabrieli, *I tempi, la vita e il canzoniere della poetessa al-Hansā'*, Florence 1899; N. Rhodokanakis, *al-Hansā' und ihre Trauerlieder*, S. B. Ak. Wien, 1904; Coppier, *Le Diwān d'al-Khansā' trad. par le Père de Coppier*, Beyrouth 1889; al-Djumahī, *Ṭabaḳāt*, p. 48 and 51; *Kitāb al-Aghānī*, xiii. 136 sqq.; al-Tabarī, i. 1905 sqq.; Ibn Kūtaiba, *Kitāb al-Shi'r*, ed. de Goeje, p. 197 sqq.; in addition verses of and notices on al-Khansā' are found in almost all works dealing with older Arabic poetry from the *Ḥumāsa* and the *Kitāb al-Aghānī* onwards and single poems are found translated in several European anthologies of eastern verse before the appearance of the edition of the *Diwān* by Cheikho. (F. KRENKOW)

KHANSĀ or **KHINSA** — in Rashid al-Dīn, ed. Blochet, p. 489: *Khinksāi*; in Wassāf: *Khinzāi*; in the lithogr. edition (Bombay 1869), p. 21 sq.: *Khitrāi*; in the *Nuḥat al-Kulūb* of Ḥamd Allāh al-Kāzwini (ed. Le Strange, p. 10, 7, and 261, 10): *Khinsāi*; vocalised *Khansā* by Ibn Baṭṭūta (ed. Defrémery and Sanguinetti, iv. 284 sqq.) and connected with the name of the celebrated poetess [see the art. **AL-KHANSĀ'**] — a town in China, capital of the kingdom of the Sung dynasty overthrown by the Mongols, Chinese formerly King Sheu, now Hang-chōu-fu (cf. above, i. 845^a). The town is frequently mentioned in the Mongol period and described as one of the greatest commercial

cities of the world in those days; Muslim and Christian sources agree in saying there were a large number of Muslims there, as many as 40,000.

Bibliography: The Muslim sources are collected in Quatremère, *Histoire des Mongols de la Perse par Raschid-eldin*, p. LXXXVII sqq., and in Ch. Schefer, *Centenaire de l'Ecole des Langues Orientales vivantes*, p. 19 sq., 23 sq.; the Christian sources in I. Hallberg, *L'Extrême Orient* etc., Göteborg 1906, p. 425 sqq. Cf. especially the full description of "Quinsay" in Marco Polo, ed. Yule-Cordier, ii. 185—215. On the foreign colony in Hang-chōu-fu see also Hirth and Rockhill, *Chao Yu-kua*, St. Petersburg 1911, p. 16. (W. BARTHOLD)

KHĀNZĀDA BĒGAM. I. Daughter-in-law of Timūr, of high rank and much esteemed by him. She was wife of Mirān Shāh, and when he became mad, she went from Tibriz to Samarkand to report about him to her father-in-law on his return from India. She is mentioned by Clavigo and by Sharaf al-dīn Yazdi. (See Dawlat Khān, ed. Browne, p. 440).

II. Bābur's full sister and five years his senior. She was with him in Samarkand, and is said to have fallen in love with Shaibānī (see Muḥammad Ṣāliḥ, *Shaibānī-nāma*, ed. Vambéry). Bābur was obliged to allow the marriage in order to escape from Samarkand. Shaibānī divorced her aunt in order to marry her, but he afterwards also divorced her as he suspected her of favouring her brother. She had borne him one son, Khānān Shāh, who became governor of Balkh, but died young. After her divorce she married a Saiyid, Shaikh Hādī, but he, as well as Shaibānī, was killed in the battle of Marw. The emperor, Shāh Ismā'īl, sent her to Bābur. She afterwards married Mahdī (*Ḥabīb al-Siyar*, ii. 372, in account of Muḥammad Zamān). She died in Afghānistān in 1545. She had charge of Akbar, her grand-nephew, when his mother was in Persia. She seems to have been an excellent person, and was greatly respected. She delighted in the resemblance of the child Akbar to her brother Bābur (Gulbadan, *Memoirs of Humāyūn*, transl., p. 37).

(H. BEVERIDGE)

KHARĀDJ (A). The word *kharaḍj*, borrowed by the Arabs from the administrative language of the Byzantines — Greek probably: *χορμία*; see P. Schwarz, *Die Herkunft von arabisch harāḡ*, (*Grundsteuer*, in *Der Islam*, 1916, vi. 97 sqq. — originally meant the tribute in a general sense (just as did *djizya*) to which unbelievers in Muslim lands were liable. In the later *Fiḡh*-works the word *kharaḍj* sometimes still has this general meaning (see e.g. *Faṭḥ al-Karīb*, ed. van den Berg, p. 620). But by the first century A.H. *kharaḍj* — probably because it was taken to be an original Arabic word in the sense of "yield of the fields" — came to mean particularly the tax paid on landed property as opposed to the *djizya*, which was now used exclusively in the sense of "poll-tax".

When at the time of the great conquests the inhabitants of the newly acquired territory were left in undisturbed possession of their fields, it was, however, ordained that the soil should be liable to taxation. Henceforth the inhabitants were to pay a definite part of the harvest as a tribute to the Muslim treasury and remained bound to pay this *kharaḍj* for all time, even if they became converts to Islām (see the art. **FAT'**).

They had been previously accustomed to a tax of this kind in these regions under Byzantine and Persian rule and the old methods of administering it were retained by the Arabs in many details. The tribute was paid mainly in kind. Definite contributions of corn or other foodstuffs were levied on villages or in some cases on districts. The Muslim officials turned these into money. Very considerable revenues reached the Muslim treasury in this way, especially in the first century A.H.

At the beginning of the 'Abbāsīd period we find different scholars (e.g. Abū Yūsuf, al-Khaṣṣāf and Yaḥyā b. Ādam) still endeavouring to collect the traditions and legal enactments on the *kharaḍj* and arranging them in special chapters in their books. The regulations regarding the collection of the *kharaḍj* in these days were still a very important subject. But after the peoples of the conquered territories had generally adopted Islām they began gradually to drop payment of the *kharaḍj*. It was thought that with the payment of the tithe of the yield of one's fields (see the art. 'UṢḤR) enough had been done and the *kharaḍj* in the end fell everywhere into desuetude. In the later *Fikḥ*-books we therefore only find the regulations regarding the poll-tax still given in detail, while those for the *kharaḍj* are only dealt with cursorily or even not at all. Only in al-Mawardi's special work on the Muslim system of administration do we find the regulations for the *kharaḍj* still dealt with in considerable detail.

KHĀRAK, an island in the Persian Gulf, the Aracia of the classical geographers. In the Arab period the island belonged to the Persian province of Ardashīr Khurra, and it was so still described by al-Balkhī. Al-Mas'ūdī allots it more closely to Djannāba which lies opposite it on the mainland. For shipping it was an important calling-place on the way from al-Baṣra to India and also to 'Uman. Ibn Khordādhbih therefore gives a description of it. In his time Khārak was 50 parasang from al-Baṣra, had an area of a square parasang and was cultivated, yielding cereals, grapes and dates. So recently as the end of the xviiith century, Niebuhr was impressed by the subterranean works partly cut out of the rock. That there was a large number of inhabitants and that they were Muslims is shown by al-Iṣṭakhri's mention of a pulpit-mosque on the island. In Yāqūt's time there was also a place of pilgrimage in Khārak, the alleged tomb of a son of 'Alī. The pearl-fishery of Khārak is often mentioned. The pearl-beds here are very deep; it is therefore natural that complaints of a poor harvest are made but occasionally very valuable specimens are said to have been found here.

In the xviiith century, the island was for a time in the possession of the Dutch East India Co.; a certain Baron von Kniphausen planned fortifications on the island for them and built a factory behind their walls. Later a town grew up in which Arabs and Persians settled. The Dutch E. I. Co. seems to have abandoned the island at the end of 1765 as its occupation proved too costly.

AL-KHARAḲĪ, MUḤAMMAD B. AḤMAD B. ABĪ BISHR ABŪ BAKR BAḤĀ' AL-DĪN. He was brought by a Khwārizmshāh (Qutb al-Dīn Muḥammad [q.v.], 490—521 = 1097—1127, or Atsir, 521—551 = 1127—1156) to Merw and was one of the scholars at the court of this prince. He was also connected with Shams al-Dīn Abū 'l-Ḥusain 'Alī b. Naṣīr al-Dīn Muḥammad b. al-Muzaḥḥar. For him he wrote the work entitled *al-Taḥṣīr* etc. (see below). Al-Kharaḳī died in Merw in 533 (1138/39). According to al-Baihaḳī, al-Kharaḳī devoted much attention to philosophical problems as well as to astronomy.

Al-Kharaḳī treated of cosmography in two works, extant in numerous manuscripts. The shorter *al-Taḥṣīr fī 'Ilm al-Ha'ia* deals only with astronomy while the fuller *Muntahā 'l-Idrāk fī Takṣīm al-Aflāk* (on this see Hādījī Khalifa, No. 13, 124) also deals with conditions on the earth.

Very lucidly and with excellent illustrations al-Kharaḳī expounds the theory of al-Khāzin, also called Ibn al-Haitham, according to which the planets are supported not by imaginary circles but by massive revolving basins. This assumption avoids the difficulty that in the motion of a planet the ether is pressed in front of it and leaves a vacuum behind it.

Al-Kharaḳī's and Ibn al-Haitham's works were drawn upon by later Muslim astronomers and cosmographers while those of the West utilised Ibn al-Haitham's work *Fī Ha'iat al-'Ālam* in Hebrew and Latin translations.

KHĀRDJE, one of the southern groups of oases in the Libyan desert. The expression *al-Wāḥat al-Khār(i)dja* recalls the *Ὠάρις ἡ ἐκωρέω* of the Greek writers, the word *Wāḥ* being a transcription of the Coptic **ⲱⲁⲓⲁ**.

The oasis of Khārdje consists of a large valley which runs from north to south for about 100 miles and averages 12 miles in breadth. Khārdje was reached until quite recently from Esne or Farshūt; from the latter place the journey took four

days by camel. A narrow-gauge railway (100 miles) now connects Farshūt with the little town of Khārdje, the present capital of the Great Oasis. In 1910 the oasis had about 7,000 inhabitants; the principal places, besides the capital, are Bāris, Bulāk and Djanāh. Dates are the principle article of commerce in this region. There are about 70,000 date-palms which produce the best fruit in Egypt. The cultivated area is about 4500 acres, but in recent years artesian wells have been dug with the object of putting a greater area under cultivation.

It is somewhat difficult to get accurate notices of the oases in the Arab writers (see the articles BAḤRIYE, DĀKHLE; AL-FARĀFRA. None of them had visited it and their terminology varies with their informants; we feel nevertheless that the ancient tradition still survived with them, which divided the Oases of the Libyan Desert into Little (= Bahriye), Inner (= Dākhle) and Outer (= Khārdje). In the notice he gives of them, al-Maḥrizi is very hazy, for he repeats practically the same generalities for the Inner Oases as for the Outer Oases. One thing that all the geographers emphasise is the remarkable fertility of the Oases in general. Al-Ya'qūbi mentions especially the lands watered by running water at Khārdje, on which the grape and rice were grown in addition to palm-trees. This impression of great prosperity is all that one gains from the fairly long but confused text of Ibn Duḥmāk: it is crammed with names of places. Al-Bakrī distinguishes two Inner Oases and al-Maḥrizi, uses the same expression, *al-Wāḥain al-Khāridjain*, but only when he is using an official document of the reign of Ṣalāḥ al-Dīn. As a matter of fact the oasis of Khārdje may well be divided into two distinct groups.

We are badly informed as to how the oases were settled in the Umayyad and 'Abbāsīd period: one *kūra* bears the name of Abshāya (the present Minshā'a, the ancient Ptolemais-Psoi) and of al-Wāḥāt. It seems very likely that it was the oasis of Khārdje that the Nubians ravaged in 339 (= 950). Abū Ṣāliḥ mentions, for the end of the Fātimid period, the title *wālī al-wāḥāt* but in the course of a notice of the oasis of Bahriye. Under the Mamlūks, according to Ibn Faḍl Allāh, to whom al-Ḳalkashandī adds nothing, the Sultān's government was not at first represented by any official. The oases were all granted as benefices (*ikṭā'*) to officers who administered them as best they could. Later the revenues of the oases were earmarked for the Sultān's private purse.

A description of the oasis of Khārdje and more particularly of its ancient temples is given in Brugsch, *Reise nach der grossen Oase al-Khargeh*, Leipzig 1878. The Survey Department of Egypt has published a fascicule containing a topographical and geological memoir of the region (Ball, *Kharga Oasis*).

AL-KHĀRID or GHAIL AL-KHĀRID, a valley in al-Djawf in South Arabia which contains one or the few perennial streams in Arabia. According to J. Halévy, the river rises in the Bilād Arḥab near Shira' in several springs, some of which are hot and contain minerals, and flows at first through a plain bordered by low hills. About 200 yards from its source, it becomes much broader and exceedingly full of fish. The people of Shira' supply the market of Ṣan'a' with fish from the Khārid so that it is of considerable importance to them. The river also irrigates the oases of al-Djawf. The water is held back by great dams and kept for the dry season when it is led off on to the fields every day by numerous channels. The Djawf owes its rich vegetation mainly to the Khārid; it could hardly retain its verdure without this important water supply. According to E. Glaser, there is no water in the Khārid until Bait Djihaili; this place lies in the extreme north of the Bilād Arḥab. It drains the whole district of Ṣan'a', Khawlān and Sanḥān and is the most important stream of the Eastern Sarāt. In the land of Dhū Ḥusain it joins the second great wādī of this region, the Wādī Hirrān, and then flows through the whole of al-Djawf. The natives told J. Halévy that the Khārid after twisting and turning round the Balad Hamdān disappears in the sand and only reappears again in Ḥaḍramawt, a feature which the Khārid, however, shares with other rivers of Arabia.

(ADOLF GROHMANN)

KHĀRIDJITES (A., *Khawāridj*, sing. *Khāridjī*), the members of the earliest of the religious sects of Islām, whose importance lies particularly, from the point of view of the development of dogma, in the formulation of questions relative to the theory of the Caliphate and to justification by faith or by works, while from the point of view of political history the principal part they played was disturbing by means of continual insurrections, which often ended in the temporary conquest of entire provinces, the peace of the eastern part of the Muslim empire during the two last years of the Caliphate of 'Alī and during the Umayyad period, and involuntarily facilitating first Mu'āwiya's victory over 'Alī, then that of the 'Abbāsids over the Umayyads.

I. The Origins of the Khāridjī Movement.

Opportunity for the schism was given by the proposal presented to 'Alī by Mu'āwiya during the battle of Ṣiffin (Ṣafar, 37 = July, 657; cf. above, i. 284a) to settle the differences arising out of the murder of 'Uthmān, which had provoked the war, by referring it to two referees who would pronounce judgment "according to the Qur'an".

While the majority of 'Alī's army readily adopted this proposal, either because they were tired of war or because the *Ḳurrā* on "Ḳur'ān-readers" hoped there would emerge from this Ḳur'ānic judgment the justification of the furious campaign they had conducted against 'Uthmān which had ended in the latter's assassination, one group of warriors, mainly of the tribe of Tamim, vigorously protested against the setting up of a human tribunal above the divine word. Loudly protesting that "judgment belongs to God alone" (*"lā ḥukma illā li-l-lāhi"*) they left the army, and withdrawing to the village of Ḥarūrā [q.v.], not far from Kūfa they elected as their chief an obscure soldier, 'Abd Allāh b. Wahb al-Rāsibi (i. 32). These first dissenters took the name *al-Ḥārūrīya* or *al-Muḥakkima* (i. e. those who repeat the above phrase; cf. *R. S. O.*, viii. 789, note 1), which is often applied by an extension of meaning to the later *Khawāridj* also. This little group gradually increased on account of successive defections, especially when the arbitration ended in a verdict quite contrary to what the *Ḳurrā* expected (probably in Ramaḍān or Shawwāl, 37 = Febr.—March, 658); on this occasion a large number of partisans of 'Alī, including a number of *Ḳurrā* "went out" (*kharaḍja*) secretly from Kūfa (to which the army had gone during the truce) to join the camp of Ibn Wahb, who in the meantime had gone to the *Djūkhā* country on the left bank of the Tigris, to a place which commanded the exits of the roads from Fārs and the bridge-head, at which in those days stood the little village of Baghdādḥ, which later was to become the capital of the empire. The rebel camp lay along the Nahrawān canal. It is to this episode of the exodus from Kūfa that the sect of the *Khawāridj* owes its name ("those who went out"), more probably than to a general epithet describing them as having gone out of the community of the faithful, as it was later interpreted, probably at quite an early period (cf. the name of the Jewish sect of the Pharisees, which Ed. Meyer, *Ursprung und Anfänge des Christentums*, ii. 283—284, derives from the incident of their separation from the partisans of Judas Macchabeus in 163 B. C., quoting in support of his explanation the name of the *Khawāridj*). Another name given to those first *Khawāridj* (which has also been extended to their successors and seems to be the one which they gave themselves) is *al-Shurāt* (plural of *Shārī*), the "vendors" i. e. those who have sold their soul for the cause of God (this idea is found in several contemporary verses).

The extreme fanaticism of the *Khawāridj* at once manifested itself in a series of extremist proclamations and terrorist actions: they proclaimed the nullity of 'Alī's claims to the Caliphate but equally condemned 'Uthmān's conduct and disclaimed any intention of avenging his murder; they went farther and began to brand everyone infidel and outside the law who did not accept their point of view and disown 'Alī as well as 'Uthmān. They then committed many murders, not even sparing women. Little by little the strength of the *Khāridjī* army grew by the accession of other fanatical and turbulent elements, including a number of non-Arabs, attracted by the principle of equality of races in the faith that the *Khawāridj* proclaimed. 'Alī, who had so far tried to avoid dealing with the rebels, in order to avoid a war

in his rear so long as he had to face the army of Mu'āwiya, after the rupture of the preliminaries of peace was obliged to take steps to avert the growing danger. He attacked the *Khawāridj* in their camp and inflicted a terrible defeat on them in which Ibn Wahb and the majority of his followers were slain (battle of Nahrawān, Ṣafar 9, 38 = July 17, 658). But the victory cost 'Alī dear. Not only was the rebellion not at all suppressed and was prolonged in a series of local risings in 39 and 40, but 'Alī himself perished by the dagger of the *Khāridjī* 'Abd al-Rahmān b. Mulḍjam al-Murādī (cf. i. 284^a), the husband of a woman whose family had lost most of its members at Nahrawān. The tradition that a conspiracy of *Khawāridj* had aimed at killing simultaneously 'Alī, Mu'āwiya and the governor of Egypt, 'Amr b. al-ʿĀṣ, is almost certainly apocryphal.

It should be noted that the narratives of Arab historians on the origin of the *Khāridjī* movement are very confused and contradictory, and seem to have lost sight of the real connection between it and the arbitration; on the other hand the nature and date of the latter are quite uncertain. The reconstruction which is given above is that proposed by the writer of this article against the view of Wellhausen (followed by Lammens and Caetani) who thinks that the *Khāridjī* rebellion and the arbitration are independent of one another and even dates the battle of Nahrawān before the verdict of the arbiters.

II. The Wars of the *Khawāridj* under the Umayyads.

The wise and energetic administration of Mu'āwiya succeeding the feeble and vacillating rule of 'Alī prevented the agitation of the *Khāridjis* from breaking out, but it did not succeed in extinguishing it any more than it succeeded in suppressing the feelings and aspirations of the *Shī'a*. Our sources mention several risings that broke out in Kūfa and Baṣra during the twenty years of Mu'āwiya's reign (40—60 = 660—680), but they were promptly put down and only served to increase the roll of martyrs, the worship and avenging of whom became one of the features of the *Khāridjī* movement. It is at Baṣra in particular, under the governors Ziyād b. Abīhi and his son 'Ubaid Allāh, that we find most risings and suppressions of risings. These insurrections, of which the most formidable was that of Mirdās b. Udaya al-Tamīmī Abū Bilāl [q.v.], settled the tactics of the *Khawāridj*, whose raids henceforth took the form of guerilla warfare and owed their successes mainly to the rapidity — which soon became legendary — of their cavalry (the names of some of their horses are preserved in Arabic works on hippology). They mobilised unexpectedly, swept through the country, surprised undefended towns and then retired rapidly to escape the pursuit of the government troops. The centres of concentration of the *Khawāridj* were the marshy country of the Baṭā'ih around Baṣra (cf. *AL-BATĪHA*) and around *Djūkhā*, on the left bank of the Tigris, where their movement had originated, from which they could, if defeated, rapidly gain the mountainous lands of the Irānian plateaus.

It was only with the great civil war that broke out after the death of Yazīd I, that in the midst of the general disorder the *Khāridjī* movement assumed serious dimensions and contributed more than anything else to render pre-

carious the pretender 'Abd Allāh b. al-Zubair's [q. v.], hold on the territory that he had at first been able to subdue. After the fall of Ibn Zubair, it was the Umayyad governors who had to wage a hard struggle with these indomitable rebels, enemies alike of victors and vanquished. It is at this time that we begin to distinguish among the Khawāridj half political and half theological subdivisions the origin of which is not at all clear, for the tradition which makes them appear at the same time quite suddenly at Baṣra on the death of Yazid has probably altered the real succession of events. In any case we henceforth find the Khawāridj breaking out throughout the eastern part of the empire (Syria was always free from them and Africa only knew them under the 'Abbāsids) into serious rebellions at the head of which they placed individuals who have given their names to the *Azāriḳa* or *Azraḳis* [see AZRAḲITES], the *Abādīya* or (better) *Ibādīya* [see ABADITES and AL-IBADĪYA] and to the *Ṣufriya* [q. v.]. Of all these movements the most dangerous to the unity of the Muslim Empire and the most terrible on account of its ferociously uncompromising character was without doubt that led by Nāfi' b. al-Azraḳ [q. v.] which gave the Khawāridj temporary control of Kirmān, Fārs and other eastern provinces, constituted a permanent threat to the security of Baṣra and surrounding country, and which al-Muhallab b. Abī Ṣufra at first, and later al-Ḥadjdjādī b. Yūsuf only overcame — in 78 or 79 (698 or 699) —, after long years of effort which ended in the defeat and death of the last and most remarkable of the Azraḳi leaders, the valiant Ḳaṭari b. al-Fudjā'a [q. v.]. Less serious and less extensive and prolonged but quite as stubborn as the Azraḳi movement was the insurrection which was called after Shabīb b. Yazid al-Shaibānī (76—77 = 696—697), although he did not begin it but was only its most distinguished leader; it began in the high Tigris country between Mārdin and Nišibīn and its object was the conquest and devastation of Kūfa. The partisans of Shabīb, who advanced only in little bands of several hundred horsemen, but who often gathered round them large bands of malcontents, sowed terror throughout the 'Irāḳ, and having several times defeated al-Ḥadjdjādī's troops were only destroyed by the help of an army of picked troops summoned from Syria. Shabīb himself perished, drowned in the Dūdjal, while trying to reach the mountains of Kirmān; his successors caused a certain amount of trouble to the governors of Yazid II and Hishām but never again were a serious danger.

Arabia was another field of Khāridjī activity, where during the government of Ibn al-Zubair between the years 65 (684/685) and 72 (691/692) their leaders Abū Ṭālūt, Nadjba b. 'Amir and Abū Fudaik captured in succession Yamāma, Ḥadramawt, Yaman and the town of al-Ṭā'if, and were only restrained by religious scruples from taking the holy cities. They were only destroyed after the intervention of al-Ḥadjdjādī, but they left the seeds of future movements, especially in the eastern part of the peninsula.

Owing mainly to the energy of al-Ḥadjdjādī, Khāridjism seemed definitely quelled. Another factor contributed considerably to its failure, namely the fanaticism and intolerance of the rebels, whose religious disputes ended in splitting their ranks

and sometimes resulted in the removal of their ablest leaders on the charge of having on some occasion failed to observe the absolute irreconcilableness of their principles. Another cause of weakness may be recognised in the eternal feud between the Arab element and that of the *Mawālī* which brought fatal consequences along with it, especially among the remnants of the Azraḳis after the death of Ḳaṭari b. al-Fudjā'a. But under the last Umayyads in the midst of the irreparable collapse of the central government, the Khawāridj again raised their heads, and resumed their exploits, this time not in little bands but in large bodies. While the two most serious risings of this period, those of al-Dahḥāk b. Kais al-Shaibānī [q. v.] in the Djaḏira and the 'Irāḳ and that of 'Abd Allāh b. Yaḥyā, surnamed *Ṭalīb al-Ḥaḳḳ*, and of Abū Ḥamza in Arabia (in the course of which Medina itself was occupied), ended in defeat, it is nevertheless true that the anarchy which they provoked destroyed the eastern rampart of Umayyad power and enabled the 'Abbāsīd insurrection to penetrate more easily to the heart of the empire.

Under the 'Abbāsīd Caliphs, the Khāridjī movement may be said to be practically extinct in the 'Irāḳ and adjoining regions. Except for a few local risings, promptly suppressed, Khāridjism no longer presented any serious danger and only survived as a religious sect, without, however, any remarkable vitality or wide dissemination. In Eastern Arabia, on the other hand, in North Africa and later on the eastern coast of Africa, one of the principal branches of the Khawāridj, that of the Ibādīya (Abādīya), played an important part in politics, and even after this role was ended it continued to be of importance from the religious point of view. It survives in our day with its dogmas, its rites and its special laws (cf. IBADITES and AL-IBADĪYA).

III. The political and religious theories of the Khawāridj.

The Khawāridj, who, as we have seen, never had any true unity of military and political action, did not have either a uniform body of doctrines. Their teachings seem to us like the particular views of a number of independent sub-sects (the collections of *milal* number not less than a score including principal and subsidiary together), some of which represent theological schools as well as political movements of a collectivist character, while others confine themselves to expressing differences of individual opinions among the theorists of the sect. One article is common to all: it is that which treats of the question of the Caliphate, a question which has been the starting point of all the religious divisions in Islām. On this question the Khawāridj are opposed equally to the legitimism of the Shī'a and the quietism of the Murdji'a. On the one hand they assert what Wellhausen aptly calls their "non-conformity" i. e. the obligation on believers to proclaim illegitimate and ipso facto deposed the *imām*, who has gone off the right path (this is how they justify their abandonment of 'Alī after his acceptance of the arbitration); on the other hand they declare every believer who is morally and religiously irreproachable to be capable of being raised by the vote of the community to the supreme dignity of the imāmate "even if he were a black slave". The result is that each of their leaders has been re-

cognised by them as *Amir al-Mu'minin* although none of them had, among other things, the qualification of *Qurayshī* birth. Consequently the only other caliphs besides their own that they recognise as legitimate are Abū Bakr and 'Umar (the latter is particularly venerated by them); 'Uthmān only during the first six years of his reign and 'Alī till the battle of Siffin.

Another capital article of *Khāridjī* heterodoxy is the absolute rejection of the doctrine of justification by faith without works. They push their moral strictness to the point of refusing the title of believer to anyone who has committed a mortal sin and regarding him as a *murtadd* (apostate); and their extreme wing, represented by the Azrakīs, says that he who has become an infidel in this way can never re-enter the faith and should be killed for his apostasy along with his wives and children. Of course all non-*Khāridjī* Muslims are regarded as apostates. Here we have the principle of *isti'rād* (religious murder) which we find applied from the beginning of the *Khāridjī* movement, even before it had been formulated in theory, and which found its completest application during the war of the Azrakīs. This ferocious principle forms a strange but not illogical contrast with the spirit of tolerance shown by the *Khawāridj* to non-Muslims and which in some of their schools goes so far as to recognise as equal to Muslims in every way those Jews or Christians who will pronounce the *shahāda* with the modification: "Muhammad is the Apostle of God to the Arabs and not to us." The tendency to the levelling of the Arabs and the *Mawālī* (which was already a result of their attitude to the problem of the imāmate) was pushed so far by one of the theorists of *Khāridjī* doctrine, Yazīd b. Abī Anīsa (founder of the *Yazīdiyya*), that he says that God will reveal a new *Qur'ān* to a prophet among the Persians and that he will found a new religion for them, divine in the same sense as Judaism, Christianity and Islām, which will be no other than that of the *Ṣābi'ūn* mentioned in the *Qur'ān*.

The same Puritanism which characterises *Khāridjism* in its conception of the state and of faith is found in its ethical principles: it demands purity of conscience as an indispensable complement to bodily purity for the validity of acts of worship; one of their sects goes so far as to remove *Sūra xii.* from the *Qur'ān* (*Sūra Yūsuf*) because its contents are worldly and frivolous and make it unworthy to be the Word of God. If, on the other hand, they seem to be less strict than the orthodox in the punishment they inflict on adulterers, for whom they do not allow stoning, this is due simply to the fact that they do not recognise the authenticity of the famous verses added by 'Umar to the primitive text of the *Qur'ān* (cf. Nöldeke—Schwally, *Gesch. d. Qur'āns*, i. 248—252).

Outside of general principles and a few particular cases, the law and dogmatics of the *Khawāridj* are not known to us in their totality except for the *Ibādīya*, whose survival to the present day has preserved in its integrity their religious tradition. The *Ibādīya* represents (as does the *Ṣufriya* on the other side) a comparatively moderate school and their present views, in dogma as well as law, have been to some degree influenced by other Muslim schools. Attention has recently been drawn (C. A. Nallino, *R. S. O.*, vii. 455—460) to the very close connection between the dogmatics of the

Ibādīya and of the *Mu'tazila*. It may also be supposed that it was the latter which, in certain points at least, received a stimulus from *Khāridjism*. What seems beyond doubt is that, as Wellhausen points out, *Khāridjism* played a very important part in the development of Muslim theology either directly or by the impetus which it gave to reflection on the problems of the faith.

Although *Khāridjism* seems to us an essentially popular movement in its origins, we must be careful not to think of it as devoid of intellectualism. On the contrary, the very radicalism of its theories must have exercised an attraction on many cultivated minds, much as similar doctrines have done in other times and countries. It is particularly at the time of the early 'Abbāsids, under the influence of and at the same time in opposition to the refined and sceptic culture of the period, that we find many scholars and men of letters who were thought to cherish *Khāridjī* views, without this preventing their frequenting high society and enjoying the favour of the court. The best known of these *Khawāridj* *sub rosa* was the famous philosopher Abū 'Ubaida Ma'mar b. al-Muthannā [q.v.], regarding whose fanaticism, in conversation at least, a rather piquant anecdote is recorded by Ibn Khallikān (i. 107 of the 1310 edition; the poetic quotation should be corrected from the *Amālī* of al-Murtadā, iii. 88—89). Poetry and eloquence were also cultivated among the *Khawāridj*, which is explained by the fact that the majority of their leaders, especially in the early days, belonged to the Beduin element in the military camps of Kūfa and Baṣra. Collections were compiled of the *khutab* pronounced by the *Khāridjī* leaders, and what survives of them, besides giving an excellent idea of their views, gives us a fairly high opinion of their oratorical talent. We also possess numerous fragments of their poetry (which had also been collected in particular *diwāns*), especially of those of 'Imrān b. Ḥiṭṭān [q.v.] (who is at the same time considered one of the founders of the *Khāridjī* *fiqh*). A long list of *Khāridjī* orators, poets and jurists was prepared by Djāḥīz, *Bayān*, 1313 A. H. edition, i. 131—133, ii. 126—127.

The wars of the *Khāridjīs* had been recorded from the beginning of Arabic historiography in several works which have not come down to us in their entirety; we know, however, the substance of the more important among them, the authors of which were Abū Mikhnaf, Abū 'Ubaida and al-Mada'īnī from the extracts which have been preserved in the historical sources given below.

(G. LEVI DELLA VIDA)

KHẒĀRİZM or **KHĪWA**, a country on the lower course of the Āmū-Daryā [q. v.]. Being a fertile delta area, *KhẒārizm* must from the earliest times have been of importance for the development of civilisation in Central Asia; in spite of the objections made by Nöldeke (*Z. D. M. G.*, lvi. 434 sq.), J. Marquart's view (*Ērānshahr*, Berlin 1901, p. 155) that "the much contested Airyanem-waeḏō, the home of the Awestā, is identical with *KhẒārizm*", has much in its favour. According to Herodotos (iii. 117), the valley of the river Akēs, which was of international importance, before Persian rule belonged to the *KhẒārizmīs*, from which it may be deduced that the ancient *KhẒārizm* was even then of some importance in the history of Central Asia. According to Hekataios (Fragm. 172 and 173), the land of the "Chorazmians" lay east of Parthia; the capital is called Chorasma (Χορασμία). According to Herodotos (vii. 66), Parthians and Chorasmiens formed one division in the army of Xerxes under a common leader. Whether, as Herodotos (iii. 93), says, Chorasma was combined to form one satrapy not only with Parthia but also with Sogdiana and Aria, is more than doubtful.

In the time of Alexander the Great the *KhẒārizmīs* were no longer subjects of the Persians but had a king of their own; how and when the Persian yoke was cast off is not known. According to Arrian (iv. 15, 4—5), Alexander received in Bactria in the spring of 328 a visit from the Chorasman king Pharasmanes, who appeared with a train of 1500 horsemen. The latter is said to have claimed that his territory stretched to the west as far as Colchis on the Black Sea. Curtius (viii. 1, 8) only mentions an embassy from the Chorasman king, whom he calls Phrataphernes.

Nothing is known of the later political history of *KhẒārizm* down to the eighth century A.D., and the geographical situation is equally uncertain. According to Ptolemy, the Chorasmiens lived on the east bank of the Oxus, which corresponds to the situation of the later capital *Kāth* [q. v.] or

Kāth (the modern ruins of *Shaikh 'Abbās Wali*); on the other hand the oldest Chinese name (given in the "Annals of the Earlier Han") for *KhẒārizm*, Yue-Kien, suggests the town of Gurgāndj (now Kunya-Urgenč). According to the native tradition given by al-Birūnī (*Āthār*, ed. Sachau, p. 35), Fir or Fil, the citadel of *Kāth*, was not built till 616 of the Seleucid era (304 A.D.). The statements of al-Birūnī and the later notices lead to the conclusion that the later Muhammadan idea (Ibn al-Athīr, ed. Tornberg, ix. 267) of an ancient *KhẒārizm* in the Balkhān near the Caspian Sea is not in keeping with the facts.

What al-Birūnī tells us about the beginnings of civilisation in *KhẒārizm* 980 years before the Seleucid era (1292 B.C.), of the coming of Siyāwush and the founding of the rule of his son Kai-Khusraw 92 years later (i. e. 1200) and regarding the descent of the local dynasty from this hero of the national epic is, of course, quite legendary. His statements regarding the genealogy of this dynasty cover the period from 304 to 995 A.D. We are told what princes ruled in the time of Muhammad's mission, and which was installed by Kutaiba b. Muslim after the conquest of the land about 93 (712). The son of this ruler is called Shāwushfar. In the Chinese annals of the Tang dynasty (T'ang-shu) an embassy sent to China in 751 by Shao-she-fen, the king of *KhẒārizm*, is mentioned (E. Chavannes, *Documents sur les Turcs occidentaux*, St. Petersburg 1903, p. 145); this agreement confirms the reliability of al-Birūnī's account; very improbable on the other hand is what he tells us (*op. cit.*, p. 36, 2 and p. 48, 13) of the massacre of scholars and priests and the burning of books. His references to the calendar and the festivals of the *KhẒārizmīs* show that in *KhẒārizm* down to the viiith and among the Zoroastrians to the xith century A.D. a very ancient Irānian culture had survived. These Zoroastrians were at that time (i. e. in 1000 A.D., when the *Chronology* was written) no longer zealous adherents of their faith, and had only some knowledge of the external rites of their religion. Besides Zoroastrians there were also Christians in *KhẒārizm*; the latter belonged not to the Nestorian Church like most Christians in Persia and Central Asia, but were Greek Orthodox (Melkites; cf. al-Birūnī, *op. cit.*, p. 288, 15). Adherents of other religions, e.g. Jews, are not mentioned, although *KhẒārizm* appears in the well known "list of cities" (on which see *Grundr. d. iran. Phil.*, ii. 118, and Marquart, *Ērānshahr*, p. 7) as a foundation of prince Narses, son of Yezdegerd I (399—420) and his Jewish wife. Whether, as K. Inostrancev, (*Žurn. Min. Narodn. Prosveshch.*, 1911, No. 2, p. 293 sq.) assumes, the *Aḥbār* mentioned by al-Ṭabarī (iii. 1237, 17) were Jews is, to say the least, doubtful (cf. the expression *Aḥbār al-Naṣārā* in al-Ṭabarī, i. 840, 14). An idea of the Irānian dialect spoken in *KhẒārizm* may be gathered from the expressions relating to the calendar, names of festivals, etc., given by al-Birūnī; a few words are quoted in other sources, like *ghāw khowāra*, meaning "cattle-food" in al-Iṣṭakhṛī, p. 301; *pevend* meaning "bread" in Yāqūt, ii. 488, 15, from Ibn Faḡlān. *KhẒārizmī* is described by the Arabs as a particularly unintelligible language for the inhabitants of other countries (al-Iṣṭakhṛī, p. 304 below; al-Mukaddasī, 335, 9). In the vth (xith) century written documents in this language still existed (al-Baihaḡī, ed. Morley, p. 842).

In the history of the conquest, mention is made, in addition to the strongly fortified capital (like al-Bīrūnī, al-Ṭabarī also mentions three fortresses) of the town of Hazārasp and of Khūmdjird not mentioned again later, where a brother of the king ruled. After the conquest, according to al-Bīrūnī, only the regal title (*shāhiya*) remained in hereditary possession of the native princes; the real power (*wilāya*) was sometimes in their hands and sometimes in the hands of others. In 110 (728) mention is made of a rising of the people of Kurdar (near the Sea of Aral) (al-Ṭabarī, ii. 1525). In Gurgāndj (Arabic Djurdjāniya) arose a separate kingdom independent of the Khwārizmshāh; nothing is known of the genealogy of these chiefs and the origin of their rule. The statement of Ibn Faḍlān, misunderstood by Yāqūt (ed. Wüstenfeld ii, 484, 13) only shows that Gurgāndj no longer belonged to Khwārizm by 922. In 385 (995) the ruler of Gurgāndj, Ma'mūn b. Muḥammad, succeeded in overthrowing the old dynasty, placing its lands under his rule and thereby restoring the political unity of Khwārizm. The title Khwārizmshāh passed to the ruler of Gurgāndj.

Ma'mūn died in 387 (997); he was succeeded in turn by his two sons, 'Alī and Ma'mūn II; an Arabic inscription of the latter has been found in the ruins of Gurgāndj (recording the erection of a minaret) of the year 401 (1010/11) (published by N. Katanow, *Zapiski vost. otd. arkh. obsch.*, xiv. 115 sqq.). The rebellion of this king's army when he had Sulṭān Maḥmūd's name introduced into the *khutba* on the latter's demand, his assassination and the resultant conquest of Khwārizm by Maḥmūd in Ṣafar, 408 (July, 1017), are fully dealt with by al-Baihaḳī (ed. Morley, p. 838 sqq.) following a lost work of al-Bīrūnī (cf. W. Barthold, *Turkestan* ii. 289 sqq.). Rule over Khwārizm, with the title of Khwārizmshāh, passed to Alūtūntāsh, who was appointed by Maḥmūd; on him and his sons to the fall of this dynasty in 432 (1041) see the article ALŪTŪNTĀSH. The victor, Shāh Malik, ruler of Djand, was overthrown two years later by the Seldjūk prince (this is the right pronunciation in Maḥmūd Kāshghari, *Dirwān Lughāt-i Turk*, i. 397; the Arabic spelling Saldjūk does not correspond to the Turkish pronunciation) Čaghri Beg [q. v.]. Khwārizm remained under the sovereignty of the Seldjūk dynasty till the death of Sulṭān Sandjar (q. v.), in 552 (1157) with a few interruptions during the reign of this.

A new dynasty was founded in Khwārizm in the last years of the xith century A. D. by Kuṭb al-Dīn Muḥammad [q. v.] to whom the administration of the country had been entrusted, first by the governor of Khurāsān and later by Sulṭān Sandjar. On his son Atsız, the founder of the power of his house, see the article. Atsız remained till his death, in name at least, the vassal of Sulṭān Sandjar and had also to pay tribute to the Karā-Khitāi [q. v.]. Under the next rulers Īl-Arslān (1156--1172), Tekesh (1172--1200) and Muḥammad (1200--1220) Khwārizm gradually attained the position of a great power. The last ruler of Persia of the Seldjūk line, Toghrul, fell in battle against Tekesh in 590 (1194). Henceforth the Khwārizmshāh could regard himself as the successor of the Seldjūk Sulṭāns in their dominion over Western Asia, and even assert such claims against the caliph himself. The yoke of the Karā-Khitāi was only finally cast off by Muḥammad's victory over the last Gürkhan in 607 (1210).

Muḥammad's empire stretched from the right bank of the Sīr-Daryā to the mountain passes between Irān and the Tigris valley; in the south his suzerainty was acknowledged even in the Arabian peninsula (in 'Umān). The capital of Khwārizm was in those days one of the most splendid cities of the east. The country was probably already turkicised by then; we find geographical place names in Turkish mentioned, e. g. the Šu-Karā canal (Ibn al-Athīr, xii. 122) or Karā-Šū (*Ṭabaḳāt-i Nāṣiri*, transl. by Raverty, p. 474).

The rise of Khwārizm, for the first and last time in the history of the country, to the position of a first-class power is probably connected with the development of its wide trading connections, already mentioned as early as al-Isṭakhri (*B. G. A.*, p. 304 sq.). Muḥammad's attempt to utilise these commercial connections for his political advantage led to a war between him and Čingiz Khān (q. v.) and the fall of his empire. Gurgāndj, abandoned by all the members of the dynasty, fell in Ṣafar, 618 (April, 1221), after a stubborn defence; the whole population is said to have been massacred or drowned in the waters of the Āmū-Daryā.

After this, Khwārizm belonged for over 140 years to the kingdom of the Golden Horde, only the southern parts with Kāth and Khiwa belonged to the Čaghatai empire (q. v.). Gurgāndj, called Urgenč by the Mongols and Turks, was rebuilt on another site a very few years after the conquest (Ibn al-Athīr, ed. Tornberg, xii. 323), and is described in 1333 by Ibn Baṭṭūṭa (ed. Defrémery and Sanguinetti, iii. 1 sqq., and in 1340 by Balducci Pegolotti (in H. Yule, *Cathay and the Way Thither*, ii. 279 sqq.) as a populous and splendid commercial town; it was probably the most important emporium on the land route from Eastern Europe to Eastern Asia. Arts and learning flourished in keeping with its economic prosperity; in this respect Khwārizm was "the rendezvous of the most distinguished men in the world" (*maājma' a'yān-i dīhān*, in 'Abd al-Razzāk Samarḳandī, *Maṭla' al-Sa'dain*, MS. of the University of St. Petersburg, N^o. 157, fol. 73a). The teaching of the Mu'tazilis brought to Khwārizm in the vth (xith) century (cf. I. Goldziher in *Islam*, iii. 220 sqq.) had numerous adherents there as late as the second half of the viiith (xivth) century, when there had long been no Mu'tazila left in Western Asia. (On the Mu'tazila in Khwārizm cf. Ibn Baṭṭūṭa, iii. 8, and Ibn 'Arab-shāh, Cairo 1285, p. 18; there also on the excellence of the musicians of Khwārizm). The buildings of this century surviving in the ruins of Old Urgenč are among the finest in Central Asia, notably the tomb of Turā Beg Khānīm (mentioned by Ibn Baṭṭūṭa, iii. 4, 9, 14), wife of the governor Kuṭlu Dumur. The Aḳ Sarāi in Kāsh at a later date was built for Timūr by Khwārizmi craftsmen (*ustādān-i Khwārizmī*; see *Maṭla' al-Sa'dain*, f. 73b).

Shortly after 1360 there arose in Khwārizm an independent dynasty known as Šūfi of the family of the Kungrat. These rulers struck small anonymous gold coins bearing only the inscription *al-mulk lillāhi*. The earliest of these coins are of the year 765 (1363/4), the latest of the Khāns of the Golden Horde of 762 (1360/1). The founder of the line, Ḥusain Šūfi, took Kāth and Khiwa from the Čaghatai, whereupon Timūr declared war on him; only after several campaigns did Timūr

succeed in 1379 in conquering KhẒārizm. During the wars between Timūr and Tokhtamīsh the KhẒārizmīs were allied with the latter; coins were struck in KhẒārizm as early as 785 (1383/4) with the name of this Khān. In 1388 KhẒārizm, where Tokhtamīsh had left a prince of his own house and a representative of the native dynasty, Sulaimān Šūfī, was reconquered by Timūr. The capital Urgenč (frequently, like Kāth before it, called KhẒārizm after the country), was sacked and levelled to the ground, and barley sown on its site. KhẒārizm never recovered from the blow. In 1391 Timūr had a part of the town in the "Kaān's quarter" (this quarter was considered the property of the Čaghatai Khāns) rebuilt but the town remained limited to this quarter.

In the ixth (xvth) century KhẒārizm was sometimes in the possession of the Khāns of the Golden Horde and sometimes under Timūrids. A member of the native dynasty, 'Uthmān b. Muḥammad Šūfī, is mentioned in 868 (1464) as a vassal of Khān Muṣṭafā. The town of Wazīr was founded by this Khān below Urgenč, but KhẒārizm seems at this time to have lost any importance in the social and economic life of Central Asia. Under the Timūrid Sulṭān Husain, Čin Šūfī is mentioned as governor of KhẒārizm; in 911 (1505) the country passed to Shaibāni, the founder of the Özbek kingdom in Mā warā' al-Nahr (cf. the art. БУХАРА).

In the year 916 (1510) after Shaibāni had fallen in the battle of Marw, KhẒārizm became united to Persia for a short time; soon afterwards the Persian governor was driven out by Sharif Šūfī, but the latter could not hold out against the Özbek conqueror. A separate branch of the line of Djūči, only remotely connected with the conquerors of Bukhārā and Samarkand, now established themselves in KhẒārizm (according to Abu 'l-Ghāzī, ed. Desmaisons, St. Petersburg 1871/74, text p. 197, as early as the year of the Sheep = 1511; the year of the Hidjra as given there is certainly wrong). The rule of this dynasty lasted till 1106 (1694/5). Only two rulers of Bukhārā, 'Ubaid Allāh b. Maḥmūd in 1538 and 'Abd Allāh b. Iskandar [q. v.] in 1593 and 1595/98, above, succeeded in incorporating KhẒārizm in their kingdom for short periods. Civilisation among the Özbeks in those days was in KhẒārizm at an incomparably lower level than in Mā warā' al-Nahr. It is a significant fact that the Khān Abu 'l-Ghāzī (1645/63) had to write the history of the land himself as none of his subjects had the necessary education to do so (Abu 'l-Ghāzī, text, p. 2). Even the holders of the most important civilian offices in the state, the vizier (later called *Mehter*) and the *Kush-begī*, were only allowed to attend ceremonial gatherings standing, while the military leaders and *shaikhs* had definite seats allotted to them (*ürün*). This ancient home of civilisation had become a brigand state; as a result the caravan road through Central Asia lost almost all importance, as may be judged from the report of the only west European to visit KhẒārizm at the time, the Englishman Anthony Jenkinson (1558). The name of the country had previously been transferred to the capital (first to Kāth, then to Urgenč); now the country is usually called after the capital, first Urgenč, later KẒiwa.

KẒiwa (Khiva) (older form KẒiwaḳ; the pronunciation KẒiwa mentioned by Yāqūt is also in keeping with the spelling of the geographers of

the ivth [xth century]), was probably, like Kāth, a pre-Muḥammadan settlement. In Yāqūt's time the people of KẒiwa were Šāfi'īs, while the KhẒārizmīs as a rule were elsewhere Ḥanafīs. Pahlawān-Atā Maḥmūd (d. 722 = 1322) whose tomb is mentioned by Abu 'l-Ghāzī (text, p. 260) is still regarded as the local saint of KẒiwa. KẒiwa first appears as capital in the second half of the reign of 'Arab Muḥammad (1603—1623); when the left arm of the river dried up (cf. above, i. 342^b), Urgenč must have become gradually deserted; in 1645 a new Urgenč arose about 20 miles N.E. of KẒiwa; the inhabitants of the old commercial city were settled there, and their descendants made the new Urgenč the most important centre of trade in KẒiwa. A new Wazīr arose at a later date farther down the river, also on the left bank. The ancient capital Kāth on the right bank had also to be abandoned on account of the drying up of the channel that affected it. The Khān Anūsha (1663—1687) had the modern Kāth or Kat rebuilt on the left bank of the river about 20 miles below New-Urgenč. In the year 1092 (1687) the Šāhābād canal was made by order of the same Khān, one of the most important canals of modern KẒiwa (after of the conquest Meshhed the Khān had taken the title Šāh). In the xiiith (xviiith) century the principality of the Khān of KẒiwa is frequently called Besh-Kal'a ("five fortresses"); the names of the towns which make up the five are differently given. The "island" (Turk. *Arāl*, i. e. the delta area proper of the Sea of Aral, which takes its name from them; cf. i., 420) is also separated politically from KẒiwa.

After the extinction of the dynasty the Inaḳ (i. e. the senior of the tribe and military chief) of the Kūngrat tribe was generally the real ruler. The throne was occupied by descendants of Čingiz Khān, summoned from the steppes; their rule was only nominal and with a few exceptions they were soon sent back home again and replaced by another prince; 'Abd al-Karīm Bukhārī (ed. Schefer, Paris 1876, text p. 79) calls this custom "playing at khāns" (*khānbāzi*). Peter the Great's attempt to subject KẒiwa to his rule had no success. Nādir Šāh conquered KẒiwa in 1740 but the Khān whom he installed there could not hold his throne. From the same period we have several descriptions of KẒiwa also by Western Europeans (G. Thompson among others in Hanway, *An Account of the British Trade on the Caspian Sea*, London 1762, i. 240), and Russians (Gladšew and Murawin, *Geograf. Izv'estiya* (1849 and 1850). In 1740 the military officer Nazimov made a plan of the town of KẒiwa (*Geogr. Izv.*, 1849, to p. 200). In 1842 T. Fr. Basiner surveyed the modern town (*Naturwissenschaftliche Reise durch die Kirgisensteppe nach Chiwa = Beiträge zur Kenntnis des russ. Reiches*, vol. xv., St. Petersburg 1848, p. 120): the difference between these plans is very considerable and suggests that the town had a very different appearance about 1842 from what it had a century earlier, and perhaps was not even on the same site. This is connected by Sawelyew (*Geograf. Izv.*, 1849, p. 167 sq.) with the alleged destruction of KẒiwa by Nādir Šāh; but it can be proved that the town was on the same site as before in the years immediately following 1740. In 1747 a medrese of 'Arab Muḥammad Khān is mentioned. On the other hand KẒiwa was almost completely destroyed shortly before 1770 by the continual raids of the

Turkomans (of the Yomut tribe); only 40 — according to another account, 15 — families are said to have been left (MS. of the Asiatic Museum, 590 ob. f. 55b). In 1770 the Ināk Muḥammad Amin succeeded in conquering the Turkomans and restoring the prosperity of the town and country. The destruction of the old and the foundation of the new *Khiwa* ought probably to be connected with this event.

In 1804 the Ināk İltüzër, the grandson of Muḥammad Amin, assumed the title of *Khān*. When he fell in 1806 in the war against *Bukhārā*, his brother and successor Muḥammad Raḥīm (1806—1825) again placed a Čingizid on the throne for a short time, but in the very same year took the title of *Khān* for himself. By the subjection of the Aral country in 1811, the political unity of *Khwārizm* was restored and was only broken for a brief period again by rebellions. In 1822 the Turkomans in Marw rebelled against *Bukhārā* and submitted to the *Khān* of *Khiwa*. Under Muḥammad Raḥīm's son Allāh Kulī (1825—42) the principality of *Khiwa* attained its greatest extent. It stretched from the mouth of the Sīr Daryā in the Sea of Aral (about 46° N. Lat.) to Qal'a-i Mawr on the Kushk (35' 30"). The ancient Urgenč was restored in the same reign. The Russian campaign against *Khiwa* in 1839—40 was unsuccessful, but the *Khān* had soon afterwards to fulfil all the demands of the Russian government, although *Khiwa* at this time entered into negotiations with England. In the official history of *Khiwa* the English appear as a "section of the Russian people whose land lies north of the Russian Empire" (MS. of the Asiatic Museum, 590 ob. f. 369b). During the following years *Khiwa* had to fight against *Bukhārā* (to 1845) and against the Turkomans. The *Khān* Muḥammad Amin (Madamin, 1846—55) fell fighting against the latter in 1855, as did his successor 'Abd Allāh in the same year. To the time of Muḥammad Amin belongs the most important building in modern *Khiwa*, the blue minaret over 160 feet high (picture in Fr. v. Schwarz, *Turkestan*, Freiburg i. B. 1900, p. 205). Saiyid Muḥammad Raḥīm *Khān*'s reign (1864—1910) saw the conquest of *Khiwa* by the Russians (1873) provoked by the intrigues of the government of the *Khān*. Only a portion of his former possessions (west of the Āmū-Daryā) was left to the *Khān*, and even in these he was to consider himself the "obedient servant of the Emperor of all the Russians." The *Khān* of *Khiwa* was later given the title of "Highness" but his position was never equal to that of the Emir of *Bukhārā* (cf. above, i. 783a). Saiyid Muḥammad Raḥīm and his successor *Khān* Asfandiyār (1910—1918) several times appealed for help to the Russians against the Turkomans. During the negotiations between Russia and the Turkomans of Marw, *Khiwa* made an attempt to act as intermediary (1881—83) in the hope that Marw would not be united to Russia direct but handed over to the *Khān* of *Khiwa* as a vassal of Russia. During the fighting of the Revolution period, *Khiwa* has again been ravaged several times by the Turkomans. After the deposition and assassination of the *Khān* Asfandiyār by the Turkoman Djunaid *Khān*, Saiyid 'Abd Allāh (1918—1920) was chosen ruler; after the deposition of this *Khān* and the banishment of Djunaid, a "Republic of *Khwārizm*" was founded, only nominally allied to Russia.

Khiwa in the sixth as in the xvth or xviih centuries was again a nest of robbers, but nevertheless, in contrast to those earlier centuries, more was done than in *Bukhārā* for the promotion of culture and social progress. The development of the country was facilitated by the building of great canals; there were more bridges on the main roads than elsewhere in Turkestan. *Khān* Saiyid Muḥammad Raḥīm founded a splendid library and made it also accessible to Russian students. The history of the country which was compiled for the government before the Russian conquest surpasses in fullness and reliability anything written in *Bukhārā* or *Khokand*. Little has yet been done by the Russians for the exploration of the country, its history and its present conditions, although many features have survived there which may be looked for in vain elsewhere in Turkestan. In place of the villages in a street usual in Turkestan, the landowner's house stands in the middle of his piece of ground as was usual among the original inhabitants of Turkestan, the Tadjik. The driver (*arbakesh*) sits in the vehicle itself as in *Kashghar* and not on the horse as in Tashkent, *Khokand*, etc. The canals are given in the Turkish dialect of *Khiwa* as among the Turkomans the obviously Aryan names *arna* and *yap* ("great and little canal"); the buildings surviving among the ruins of old Urgenč are among the oldest and most beautiful in Turkestan and have not yet been fully described.

Nacionalnostei*, 1923, No. 1, p. 181 sqq.); W. Barthold, *Turkestan*, vol. ii., St. Petersburg 1900, esp. p. 141 sqq., 289 sqq., 345 sqq.; do., *Nachrichten über den Aral-See und den unteren Lauf des Amu-darja*, transl. by H. von Foth (Leipzig 1910; in *Quellen und Forschungen zur Erd- und Kulturkunde*, ed. by Dr. R. Stübe, vol. ii.); do., *K istorii orosheniya Turkestana*, St. Petersburg 1914; do., *Sobitiya pered khivinskim pokhodom 1873 goda po razskazu Khivinskogo istorika*, in *Kaufmanskiy Sbornik*, Moscow 1910, p. 1 sqq. On the histories mentioned there (especially following the MSS. of the Asiatic Museum, 590 ob and 590 od) composed by order of İltüzër and his successors cf. also *Mélanges Asiatiques*, x. 278, where also the titles are given. The first work, *Firdaws al-Ikbāl*, was begun by Shīr Muḥammad, called Mu'nīs, by order of İltüzër and interrupted by the death of the *Khān* in 1806, when the author had not yet come down to Nādir Shāh; the work was afterwards being continued by order of Muḥammad Raḥīm *Khān* down to 1812; the author was then ordered to translate the *Rawdat al-Safā* of

Mirkhwānd into Turkish and died in 1244 (1828/9) before the completion of this work. The history of Khiwa was not resumed till 1255 (1839/40) by order of Allāh Kūlf by the nephew of Mu'nis, Muḥammad Riḍā, called Āgahī; the history of the country was afterwards brought down to 1872 by this same Āgahī under different titles (each reign being dealt with in a separate work).

(W. BARTHOLD)

AL-KHWĀRIZMĪ, MUḤAMMAD B. Mūsā; in al-Tabarī (ed. de Goeje, iii. 1363) al-Khwārizmī is still called al-Madjūsī (the descendant of a magien) and al-Kuṭrubullī (living in or coming from Kuṭrubull, a district west of the Tigris near Baghdad).

The accounts of his life are very scanty and unreliable in as much as we do not know in many cases whether the references are to him or to Muḥammad b. Mūsā b. Shākīr (cf. H. Suter, *Nachträge zu "die Mathematiker"* etc., in *Abhandl. zur Gesch. der math. Wissensch.*, 1902, xiv., note 19, p. 158). We do not know the year of his birth and the date of his death is uncertain. According to H. Suter, he died between 220 (835) and 230 (844); according to C. A. Nallino, after 232 (846/847). He flourished in the reign of al-Ma'mūn, was one of his astronomers and probably took part in the measuring of the degree in his reign. He used to retire into al-Ma'mūn's library to study. According to al-Tabarī (*op. cit.*), al-Khwārizmī was one of the astrologers whom al-Wāthiq sent for in his last illness to foretell the result of it. They promised him a long life but he died soon afterwards. Al-Khwārizmī's labours were devoted to mathematics, geography, astronomy and history. He wrote a *Kitāb al-Ta'rikh* which is given as a source by al-Mas'ūdī and al-Tabarī probably took from it a passage about an event in the reign of al-Ma'mūn in 210 (825/826) (see C. A. Nallino, *al-Huwārizmī* etc., p. 12). His works, which are in part important and original, reveal in al-Khwārizmī a personality of strong scientific genius.

The writings of al-Khwārizmī were composed before the period of great activity in translating from the Greek, although al-Ḥadīdjādī was his contemporary for part of his life. In his achievements in algebra therefore al-Khwārizmī is particularly dependent on the work of the Hindus, Persians and the school of Gundīšāpūr. Greek sources were secondary for him. It was probably rather different with astronomy and geography. A list of the writings of al-Khwārizmī is found in the *Fihrist* of Ya'qūb al-Nadīm (p. 275) and in Ibn al-Kifī (p. 286). In the *Fihrist* Sanad b. 'Alī comes immediately after al-Khwārizmī. Karpinski (*op. cit.*) believes, probably rightly, that the works entitled *al-Ḥisāb al-Hindī*, *al-Djām' wa 'l-Tafrīk* and *al-Djabr wa 'l-Mukābala* attributed to Sanad are really by al-Khwārizmī.

His most important mathematical work is the so-called Algebra, *Ḥisāb al-Djābr wa 'l-Mukābala* (according to J. Ruska "Processes of Calculation for Integration and Equation"). Here we have not an algebra in our sense but an introduction to applied arithmetic based on numerous examples worked out. At the same time the book contains very varied matter: *a.* processes of integration and equation, the simplest forms of equations; *b.* surveying and mensuration; *c.* testamentary regulations for division of inheritances. The book was translated into Latin by G. of Cremona, R. of Chester and others (see *Bibliography* under Rosen and Kar-

pinski). Through misunderstandings and corruption of the name al-Khwārizmī arose the words which ended in our "algorithm", which means any recurring method of calculation that has become a rule.

There are references to Arabic commentaries by Sinān b. Faṭḥ (Suter, N^o. 149), 'Abd Allāh b. al-Saidanānī (Suter, N^o. 152), Abu 'l-Wafā' (Suter, N^o. 167). Rosen further mentions (*op. cit.*, p. xiv.) a certain al-Muzaiḥafī. — The influence of our work was very considerable; it is later mentioned as such by Abu Kāmil Shudjā' b. Aslam (Suter, N^o. 81) and the examples used by him, such as $x^2 + 10x = 39$, continually recur, e.g. in Abū Kāmil, al-Karkhī, Umar al-Khaiyāmī, and of Christian writers we find Leonardo of Pisa, for example, influenced by al-Khwārizmī.

There also survives, but only in a Latin translation, an arithmetical work by al-Khwārizmī, *Algorismi de Numero Indorum* (ed. by Bald. Boncompagni in *Trattati d'arimetica pubbl. da B. B. Noma*, 1857, N^o. 1). J. Ruska has shown that it corresponds to the *Kitāb al-Djām' wa 'l-Tafrīk* (perhaps we should add *bi-Ḥisāb al-Ḥind*, i. e. "the Book on Addition and Subtraction after the Indian Fashion", or "with Indian Numerals"; cf. J. Ruska, *op. cit.*, p. 18).

Muḥammad b. Ibrāhīm al-Fazārī had translated the *Siddhānta* into Arabic. It was called "the great *Sindhind*" (on which was the *Siddhānta* in question cf. H. Suter, *Die astronomischen Tafeln* etc., p. 32). Al-Khwārizmī prepared two editions of this *Sindhind*; perhaps also earlier a synopsis of it. The book of tables that resulted he called, as Ibn Yūnus tells us, *Fī Zīdj* (see C. A. Nallino, *al-Battēnī Opus*, i. 157). Like all *Zīdj*-books it contains not only tables (*djadwal*) but also an astronomical introduction of some length, a kind of theoretical astronomy.

This excellent book of tables was edited and republished by Maslama al-Madjrītī, as Ibn Abī Uṣaib'a (ii. 39) mentions. This version may be the basis of the Latin translations. In the book we have trigonometrical tables in which the word *gaib* = *djaib* is always used for "sine", while it only occurs occasionally in the later *Thābit* b. Qurra (cf. H. Burger and C. Kohl, *Axel Björnbo, Thabits Werk über den Transversalensatz*, in *Abhandl. zur Gesch. der Naturwissensch. und Medizin*, 1924, vii. 5). It is therefore possible that the word was introduced into al-Khwārizmī by Maslama (cf. C. A. Nallino, *al-Battēnī Opus*, i. 154). — Al-Khwārizmī probably dealt with the appearance of the new moon in another work (cf. C. A. Nallino, *op. cit.*, i. 269). Yāqūt mentions (*Mu'djam*, i. 161, 10) Muḥammad b. Mūsā al-Khwārizmī as *Ṣāhib al-Zīdj* ("author of the book of tables") à propos of a statement regarding the size of the earth; but no such statement is given in the *Zīdj*.

Al-Khwārizmī composed two books on the astrolabe: *Kitāb al-'Amal bi 'l-Aṣṭurlāb* ("On the Manner of Using the Astrolabe") and *Kitāb 'Amal al-Aṣṭurlāb* ("On the Art of Making the Astrolabe"). Neither has survived either in Arabic or Latin. In al-Farghānī's book *Fī Ṣan'at al-Aṣṭurlāb bi 'l-Handasa* ("Making of the Astrolabe with the Help of Geometry"), Berlin MS., Catalogue, N^o. 5790) many astronomical problems are solved with the help of the astrolabe; the section begins with the words: "Muḥammad b. Mūsā al-Khwārizmī says . . ." (cf. J. Frank, *Die Verwendung des Astrolabs nach al-Khwārizmī*, in *Abhandlungen zur Gesch. der Natur-*

wiss. und Medizin, 1922, iii. 1—32; see also C. A. Nallino, *op. cit.*, vol. i., p. xlix.).

We know nothing about his book on sundials (*al-Rukhāma*) except that he wrote one.

Al-Kh̄wārizmī also dealt with astrological questions from the practical side; for example, according to a story of Abū Ma'shar, he investigated how far the conjunction at the time of Muḥammad's birth indicated his future as a prophet (Ḥamza al-Isfahānī, *Tārīkh*, ed. Gottwaldt, Lib. vii., Ch. iv. (text), p. 153 sq.; transl. p. 123).

Al-Kh̄wārizmī further prepared an atlas of maps of the heavens and the world at the instigation of al-Ma'mūn, probably with other scholars. To this belongs the *Kitāb Šūrat al-Ard* ("The Work on the Shape of the Earth") preserved in manuscript in Strassburg, or, as Abū 'l-Fidā' calls it, *Kitāb Rasm al-Rub' al-Ma'mūr* ("The Book of Drawing of the Inhabited Quarters of the Globe"). C. A. Nallino has already shown that this is the text that accompanied the maps. In preparing the maps — in the two editions — Ptolemy's *Geography* was used but edited and enlarged in a very independent way.

C. A. Nallino edited the book in an Italian translation and a very full investigation of the geographical data, particularly with reference to Ptolemy's data. H. von Mīk then dealt very thoroughly with the book and edited, translated and annotated the part dealing with Africa (*Mitt. d. K.-K. geogr. Gesellsch. in Wien*, 1915, xxxviii. 152 sqq., and *Denkschr. Ak. Wien*, philos. Kl., 1916, lix., N^o. 4). He also prepared a map based on al-Kh̄wārizmī's statements (cf. J. Ruska, *Neue Bausteine zur Geschichte der arabischen Geographie*, in *Geogr. Zeitschr.*, 1918, xxiv. 77—81).

Bibliography: H. Suter, *Die Mathematiker und Astronomen der Araber und ihre Werke*, N^o. 19, in *Zeitschrift für Mathematik und Physik*, 1900, x., N^o. 19, and particularly the supplement, *ibid.*, 1902, xiv. 158—160; M. Cantor, *Vorlesungen zur Geschichte der Mathematik*³, 1907, i. 700 sqq., and other works on the history of mathematics. — *The Algebra of Mohammed ben Musa*, ed. and transl. by Fr. Rosen, 1831, xvi., transl. p. 208, text p. 122; *Robert of Chester's Latin Translation of the Algebra of 'Al-Khowarizmi*, ed. L. Ch. Karpuski, *University of Michigan Studies*, Humanistic Series, New York 1915, vol. xi.; J. Ruska, *Zur ältesten arabischen Algebra u. Rechenkunst*, in *S. B. Ak. Heid.*, 1917, N^o. 2, p. 125, and the review by E. Wiedemann in *Berliner Philologische Wochenschrift*, 1919, xxxix. 48—53; H. Suter, *Die astronomischen Tafeln des Muhammed ben Musa al-Kh̄wārizmī etc.*, Copenhagen 1914, in *Kgl. Danske Vidensk. Selsk. Skrifter*, Series 7, Historisk og filosofisk Afd., iii. 1. The trigonometrical tables are publ. by A. A. Bjørnbo, *Al-Chwārizmī's trigonometriske Tavler*, in *Festskrift til H. G. Zeuthen*, Copenhagen 1909; *Al-Huwwārizmī e il suo rifacimento della geografia di Tolomeo*, in *Memorie della Classe di Scienze morali etc.*, 1894, ii. 1^a. C. A. Nallino in his edition of al-Battānī has given much information on al-Kh̄wārizmī (cf. Index). (E. WIEDEMANN)

AL-KH̄WĀRIZMĪ ABŪ 'ABD ALLĀH MUḤAMMAD B. AḤMAD B. YŪSUF (al-Makrīzī, *Kh̄itāt*, Būlak 1270, i. 258, still calls him al-Balkhī), lived in the second half of the ivth (xth) century. The oldest encyclopaedia of the Muslims comes from his pen,

namely the very important *Mafātīh al-'Ulūm* ("Key of the Sciences"; ed. by G. van Vloten, Leiden 1895); he dedicated it to Abū 'l-Ḥasan 'Ubad Allāh b. Abī 'l-'Utbi, a vizier of the Sāmānīd Nūh II (366—387 = 976—997) at whose court in Naisābūr he lived. He was probably born in Balkh. As is evident from his book he had an administrative office. As a result of his residence in Khurāsān, he was particularly well acquainted with the conditions prevailing in the East. His book, which was highly thought of by the Arabs, is of great value for our knowledge of the most diverse subjects. These are dealt with concisely.

In the field of mathematics etc. al-Kh̄wārizmī certainly used translations from the Greek, such as the works of Euclid, Nicomachus, Hero, Philo etc. He very rarely mentions his sources.

The work is divided into two *maḳāla*'s. The first deals with the *shari'a* and allied branches of knowledge, *fiḥh, kalām*, prosody, history. The second deals with philosophy, logic, medicine, arithmetic, geometry, astronomy, music, mechanics (*al-hiyāl*, clever inventions), *al-kimiyā*.

Bibliography: Brockelmann, *G.A.L.*, i. 244. Of the sections in *maḳāla 2* medicine has been dealt with by E. Seidel, *Die Medizin im Kitāb Mafātīh al-'Ulūm*, in the *S. B. P. M. S. Ergl.*, 1915, xlvii. 1—79. Cf. also E. Wiedemann, *Beiträge VI, Zur Mechanik u. Technik bei den Arabern*, in the *S. B. P. M. S. Ergl.*, 1906, xxxviii. 1—56; *Beiträge X, Zur Technik bei den Arabern*, *ibid.*, 1906, xxxviii. 307—357; *Beiträge XIV, Über die Geometrie u. Arithmetik nach den Mafātīh al-'Ulūm*, *ibid.*, 1908, xl. 1—64; *Beiträge XVIII, Astronomische Instrumente*, *ibid.*, 1909, xli. 33—35; *Beiträge XXII, Stücke aus den Mafātīh al-'Ulūm*, *ibid.*, 1910, xlii. 303—322; *Beiträge XXIV, Zur Chemie bei den Arabern*, *ibid.*, 1911, xliii. 72—113; *Beiträge XXVII, Geographische Stellen aus den Mafātīh al-'Ulūm*, *ibid.*, 1912, xlv. 37—40; *Beiträge XLVII, Über die Astronomie nach den Mafātīh al-'Ulūm*, *ibid.*, 1915, xlvii. 214—242; *Beiträge LVII, Definitionen verschiedener Wissenschaften und über diese verfasste Werke*, *ibid.*, 1918/1919, l/li. 1—22; *Beiträge LXVI, Zur Geschichte der Musik*, 1922/1923, *ibid.*, liv/lv. 7—22.

(E. WIEDEMANN)

KH̄WĀRIZM-SHĀH, the title of the ruler of Kh̄wārizm [q. v.] found already in existence at the Arab conquest (cf. e. g. al-Ṭabarī, ii. 1237 sq.). The same title was borne in the Muslim period by the majority of the kings and governors of this country, although the founder of the last dynasty, Ittūzar Khān (1804—1806), was content to describe himself on his coins (which were never issued) as "heir of the Kh̄wārizm-shāhs" (*wārith-i Kh̄wārizm-shāhān* ('Abd al-Karīm al-Bukhārī, ed. Schefer, p. 80). This is probably the only case in Central Asia of a title retaining its significance from the pre-Muḥammadan period down to modern times. The only source for the genealogy and order of succession of the pre-Muḥammadan Kh̄wārizm-shāhs is the "Chronology" of al-Birūnī [q. v.]. The legendary Kai-Khusraw (cf. above, ii. 638) is there (ed. Sachau, p. 35) given as the founder of the dynasty. He is said to have begun his reign 92 years after the first settlement of the land which took place in the year 980 before Alexander i. e. before the Seleucid era (i. e. 1292 B. C.). The references to individual rulers, their names and

genealogical succession cover the period from 616 *anno* Alex. (304 A.D.) to the end of the dynasty in 385 A.H. (995 A.D.). Of these rulers Shāwushfar, whose father was a contemporary of the conqueror Kūtaiba b. Muslim, is certainly identical with the ruler Shao-she-fen, mentioned by the Chinese, who sent an embassy to China in 751 A.D. (E. Chavannes, *Documents sur les Tou-Kiue occid.*, p. 145); on the other hand the Khwārizm-shāh 'Abd Allāh b. Ashkāh mentioned by Ibn al-Athīr (ed. Tornberg, viii. 310) under 332 (943/944) is not named in al-Birūnī's genealogy. We have coins of the years 348 (959/960) and 366 (976/977) of the Khwārizm-shāh Aḥmad b. Muḥammad, the father of the last prince of this dynasty, Abū 'Abd Allāh Muḥammad (see A. Markow, *Inventarnyĭ Katalog Musulm. monet. Imp. Ermitaža*, p. 295 and 975).

The northern part of Khwārizm with its capital Gurgāndj [q. v.] was politically separate from the kingdom of the Khwārizm-shāhs, a fact which is not mentioned by the Arab geographers, and was therefore not known to Yāqūt, so that the references in Ibn Faḍlān [q. v.] were not understood by him (Yāqūt, *Mu'djam*, i. 484, and Baron Rosen in *Zapiski*, xv. 59). The Amir of Gurgāndj, Abū 'l-'Abbās Ma'mūn b. Muḥammad, succeeded in conquering the southern part of Khwārizm and transferring the title of Khwārizm-shāh to himself and his house (385 = 995). He thereby became the founder of the second dynasty of the Khwārizm-shāhs. Ma'mūn died in 387 (997) and was followed in turn by his sons Abū 'l-Ḥasan 'Alī and Abū 'l-'Abbās Ma'mūn II. To the latter belongs the foundation inscription (mentioned above, in vol. ii. 184) at Gurgāndj of the year 401 (1010/1011) in which he is described as Khwārizm-shāh. On the negotiations between Ma'mūn and the Ghaznawid Maḥmūd (see above, ii. 155) and the murder of Ma'mūn II by his soldiers (Wednesday, middle of Shawwāl, 407 = March 20, 1017) see W. Barthold, *Turkestan* etc., ii. 289 *sqq.*, following al-Baihaḳī, ed. Morley, p. 838 *sqq.* His young nephew, Abū 'l-Ḥārith Muḥammad b. 'Alī, was elected to succeed Ma'mūn but by Ṣafar, 408 (July, 1017), Khwārizm was incorporated in Maḥmūd's empire and the dynasty ended. The title Khwārizm-shāh then passed to the Amir Altūntāsh, appointed governor of Khwārizm by Maḥmūd, and there arose a third equally shortlived (to 1041) dynasty. On Altūntāsh and his two sons cf. above, i. 322 *sqq.* Although after the death of Altūntāsh (1032) the title Khwārizm-shāh was transferred to Sa'īd, son of Sulṭān Mas'ūd b. Maḥmūd, and Hārūn b. Altūntāsh was only to govern the land as his representative (*khalīfat al-dār*) (al-Baihaḳī, p. 439), Hārūn is called Khwārizm-shāh by the same historian in another passage (p. 499).

Towards the end of the fifth (xth) century a governor of Khwārizm with the title Khwārizm-shāh is again mentioned, namely Ikinī b. Koçkar (cf. W. Barthold, *Turkestan*, ii. 346; J. Marquart, in *Abh. Gött.*, New Series, vol. 13, i. 48 *sqq.*). The same title was given about 490 (1097) to his successor Kuṭb al-Dīn Muḥammad b. Anūsh-tegin (Ibn al-Athīr, x. 181 *sq.*; al-Djuwainī, *Tārīkh-i Djihān-Gushā*, ed. Mirzā Muḥammad, ii. 3), the founder of the fourth and most brilliant dynasty of Khwārizm-shāhs. On the foundation of the power of this house by Atsız see this art. Under Takash (1172—1200) and Muḥammad (1200—1220) the dynasty assumed the position

of a great power after conquering Persia and Central Asia — a position with which the title Khwārizm-shāh was no longer commensurate. Takash calls himself on his coins Sulṭān, son of the Khwārizm-shāh, and Muḥammad Sulṭān, son of the Sulṭān; but outside his empire even Muḥammad continued to be called the Khwārizm-shāh (cf. e.g. Yāqūt, *Mu'djam*, i. 249, 21 [where the genealogical statements are wrong], and iii. 234, 13; on the relations of Muḥammad with Čingiz Khān and the resultant destruction of the empire cf. ČINGIZ KHĀN; on Djalāl al-Dīn and the final fall of the dynasty [628 = 1231] cf. above, i. 1004).

The governors of Khwārizm under the Mongols do not seem to have borne the title Khwārizm-shāh, nor the princes of the house of Šūfi, whose independent rule (founded not before 762 = 1360/1361 and not later than 765 = 1363/1364; cf. *Bull. de l'Acad.* etc., 1921, p. 212) only continued a short time (till the conquest of Khwārizm by Timūr in 781 = 1379); but later several governors of Khwārizm of this house are mentioned at a later date including Čin Šūfi, under whom the land was conquered by the Özbek in 911 (1505), and Sharif Šūfi, who, according to Haidar Rāzi (cf. above, ii. 218), ruled in Khwārizm for a short time (about 917 = 1511) (W. Barthold, *Swiedeniya ob Aral'skom Morie* etc., p. 89; in the German edition, *Nachrichten über den Aral-See* etc., p. 58, the pertinent remarks are omitted). On the other hand the Amir Shāh Malik, governor for the Sulṭān Shāh Rukh b. Timūr in Khwārizm from the end of 815 (1413) to his death in 829 (1426), is called Khwārizm-shāh in the *Mudjmil-i Faṣṣḥi* (MS. formerly in the possession of the Institute for Oriental Languages; cf. *Collections Scientifiques* etc., iii. 111 *sqq.*, now in the Asiatic Museum, p. 737). He was followed as Khwārizm-shāh by his son Našir al-Dīn Sulṭān Ibrāhīm, who was driven from his capital by 834 (1431) by the Özbek under Abū 'l-Khair (cf. above, i. 95 *sq.*).

The title Khwārizm-shāh is sometimes given in historical documents and literary works to the Özbek rulers of Khiwa; but they themselves seem to have laid no claim to it. Abū 'l-Ḡhāzi (cf. above, i. 86 *sq.*) only gives the title Khwārizm-shāh to the dynasty destroyed by the Mongols (ed. Desmaisons, p. 137); otherwise he (p. 277) only uses the expression Khwārizm-shāh as the personal name of one of his brothers. Even when Anūsha, son and successor of Abū 'l-Ḡhāzi (1663—1687), took the title "Shāh" after the conquest of Meshhed, the word Khwārizm was not added to the title.

Bibliography: Mirkhond, *Histoire des sultans du Kharezm*, ed. by Deffrémery, Paris 1842; al-Djuwainī, *Tārīkh-i Djihān-gushā*, part ii. (Gibb Memorial Series, XVI/ii.); W. Barthold, *Turkestan* etc., Chap. III. (W. BARTHOLD) **KHARLUKH.** [See KARLUK].

KHARPÜT, a town in Turkish Armenia, built on a rock to the north of a great plain in the area bounded by the west and south by the Euphrates, in the north by the Murād Şu and in the east by the chain of the Armenian Taurus; the site of the town itself lies in the Antitaurus. From the time of Diocletian this territory formed part of the Armenian districts incorporated in the Roman Empire and from the time of Justinian to the Roman province of „Fourth Armenia“ which occupied the banks of the Arsianias (Murād Şu) and which the earliest Arab geographers still

knew under this name. This district is often reckoned to belong to the old Armenian province of Sophene. Hübschmann wished to identify it with the district of Anzitone (Arm. Handzit²; Arabic Hinzit, Yāḳūt, iv. 993). The identification of Kharput with *Καρπατιοκέρβας* (should be *Ἀρκατιοκέρβας*, *Z.D.M.G.*, xxxi. 449) capital of Sophene (Strabo, xi. 527) previously suggested by Ritter could then no longer be maintained. Lehmann-Haupt, however, has come back to the older view (p. 513). In any case the town can be regarded as identical with „Ziata Castellum“, the capture of which by the Persians is mentioned by Ammianus Marcellinus (xix. 6, 1). Arab writers still know the town by the name of Ḥiṣn Ziyād (Yāḳūt, ii. 276) probably with assimilation to the well known Arab proper name; in the same way in Syriac we find the forms Ziyāt (Land, *Anecd. Syr.*, ii. 61, 4) and Ḥisnā dē Zāid (Barhebraeus). The form Kharput is of Armenian origin; it comes from the Armenian Kharberd (or Karberd), which probably contains in any case the Armenian word *berd* meaning „castle“, although the first element cannot be accurately identified. The Arabs write Khartabirt (Yāḳūt, ii. 417). The form Kharput (vulg. Arm. K'arp'ut') is found as early as the xth century in the Byzantine author Cedrenus (ed. Bekker, ii. 419, 13) in the form *Χάρπουτς*. This is the present Turkish name but in the time of Ewliyā Çelebi the taxation registers still had Ḥiṣn (sic) Ziyād. Among the popular etymologies given by Ewliyā we find *Khar-but* i.e. „ass-idol“, which the Christians are said to have once worshipped there and which is said to be buried in a monastery on the island in the Lake of Göldjik to the east of the town. Lastly the Greek historians of the Crusades call the town Quart-Pierre (William of Tyre) and by other forms. According to al-Dimashki (ed. Mehren, p. 190) Ḥiṣn Ziyād was the name of the castle only and Khartabirt that of the town.

The town is not mentioned in the three first centuries of Islām. Lying as it did on the frontier between Armenia and Byzantium it must have frequently changed hands. Its situation must then, as later, have kept it in a position of more or less dependence on Diyār-Bakr. In the fourth century Khartabirt was still under the Greeks. In 367 (977/978) the Ḥamdānid Abū Taghlib driven out of Mesopotamia by ʿAḳud al-Dawla was able to make a stand in Ḥiṣn Ziyād where his brother-in-law a vassal of the Byzantines supported him (Ibn al-Aṭṭir, viii. 510; Weil, *Gesch. der Chal.*, iii. 25). In the sixth century we find the Urtukids in possession of the town but it is not clear from whom they took it; in 500 (1106) a certain Muḥammad b. Djubuk al-Turkmāni is mentioned as lord of Ḥiṣn Ziyād (Ibn al-Aṭṭir, x. 296). But a little later we find it the residence of the Urtukid Balak [q. v.] b. Bahrām b. Urtuk who in 1122 imprisoned there the Crusaders Joscelin and Waleran and in the following year King Baldwin in addition. Some months later (Rab. I 517 = May 1123, according to Ibn al-Aṭṭir), the Armenians succeeded in the absence of Balak in taking the castle and liberating the prisoners. But Balak returning soon afterwards regained his residence (Radjab 23, 517 = Sept. 16, according to Kamāl al-Din), and Baldwin again fell into his hands. On this occasion the great tower of the fortress was thrown down (*Rec. Hist. des Crois.*, Doc. Arm., ii. 133). Balak was succeeded in the lordship of Khartabirt by the Urtukids of

Ḥiṣn Kaifā; an inscription of Fakhr al-Din Kara Arslān [q. v.] dated 561 (1165/1166) was found in 1899 in the court of the great Mosque (cf. van Berchem, in *Abh. G. W. Gött.*, N. F., ix., No. 3, p. 142 sqq.). After the death of Nūr al-Din, son of Kara Arslān, in 581 (1185/1186) his brother ʿImād al-Din Abū Bakr seized the fortress and founded a collateral line of the Urtukids there, which continued there under the suzerainty of the Aiyubids and later of the Seldjuks of Rūm. The frontier with the lands of the latter was formed by the Euphrates after the extinction of the Danishmandids of Malatya. During this period Khartabirt was captured for a brief period by the Sultān of Khwārizm (in 625, Djuwaini, *Djihān-Gusha*, ii. 180) then by the Mongols, after their capture of Āmid (1230) but soon afterwards in 631 (1233/1234) took place the conquest by ʿAlāʾ al-Din Kaikubād, a conquest which had been foretold to him by the mother of Ibn Bibi (Houtsma, *Recueil de t. rel. à l'hist. des Seldj.*, iv., p. VII, 194). This writer (p. 210) mentions a certain Šu-Bāshī of Khartabirt who helped to drive out the Khwārizmis. But as van Berchem has shown, the Urtukid line must have existed down to the xivth century though it is not clear if they remained at Kharpūt (van Berchem, *op. cit.*). In the troubled period that followed the decline of the Seldjuks, Kharpūt seems to have been included in the lands of Qādī Burhān al-Dīn of Siwās who took refuge there about 800 (1397) during his fight against Kara ʿOḥmān of the dynasty of the Ak-Koyunlu (Sa'd al-Din). According to Ewliyā Çelebi, Timūr himself was not able to take the town until his return from Asia Minor; after Timūr it was the Dhu 'l-Qadr dynasty that held Kharpūt most frequently. Uzun Ḥasan took it from them temporarily in the reign of Malik Arslān (858–870); it was at this time that Josapha Barbaro visited Kharpūt (*Viaggi*, Venice 1545, p. 48 sqq.). In 913 (1507) Shāh Ismāʿil took the town but soon lost it to Bīḳīklī Muḥammad, general of Selīm I who took Kharpūt after his reconquest of Diyār Bakr in 921 (1515) (Rustem Pasha, *Ta'rikhī*, ed. Forrer, p. 43; Ewliyā Çelebi). Henceforth the town was included in the Ottoman empire as capital of a sandjak in the eyālet of Diyār Bakr (Ḥādjīdī Khalifa, *Djihānnamā*, p. 439). The sandjak-beys were usually Kurds.

At the beginning of the sixth century these governors moved their residence from Kharpūt to the little town of Mezere lying in the plain quite near the hill of Kharpūt to the S.W. Mezere is written Mez'ere, as if it were an Arabic word but it seems to be mentioned as early as by Ptolemy in the form *Μαζέρα* (Hübschmann, *o. c.*). In the reign of ʿAbd al-Medjīd, Rashid Pasha, after a journey of inspection in Kurdistan suggested Mezere as the capital. He had barracks built there. Under ʿAbd al-ʿAziz, Mezere definitely became the residence of the governor and Kharpūt-Mezere became officially known as Ma'mūret al-ʿAziz in honour of the Sultān. This name, which was given it by the Wālī Ismāʿil Paşa was next extended to the whole sandjak and in 1296 (1879) Ma'mūret al-ʿAziz became the name of a new wilāyet formed in that year with Kharpūt-Mezere as its capital. The wilāyet was composed of the sandjaks of Kharpūt-Mezere (including the old province of Sophene as a merkez-kaḳā) and beyond the Euphrates the kaḳās of ʿArabgir, Eghin and

Kabān Ma'den, and those of Malaṭia and Dersim.

The rock of Kharpūt rises to a height of about 1200 feet above the surrounding plain. The upper part is occupied by a mediaeval castle, at one time Balak's residence. The castle has only one gate: its walls have several inscriptions not yet published (Lehmann-Haupt). The town itself is also a fortress (*dīsh kal'a*) but its ramparts have been for long neglected. Ewliyā mentions the Ulu Djāmi⁶ as the largest mosque and also an Arslānī Djāmi⁶, it is probably the latter that has the inscription mentioned above. The population of Kharpūt-Mezere was estimated about 1900 at 28,000 inhabitants (in 1835 Brant had put it at 9,000) with a majority of Muslims (Turks and Kurds) and a considerable minority of Armenians. There was an important American mission there which took an especial interest in Armenians of whom a great many had become Protestants. There were also Syriac Christians. The Armenians of Kharpūt suffered very much from the massacres of 1895 and during the war of 1914—1918 so that the Armenian element must now be very small. Ewliyā Čelebī says the principal industry was saddle-making. The town is also noted for its manufacture of silks but the cultivation of silk in the districts has diminished (Cuinet). The surrounding plain is well watered and very fertile and contains a large number of villages; at the beginning of the sixteenth century there was even talk of overcrowding. The nearest port is Kéresūn [q.v.] but the great road to Şamşūn via Siwās and Amasia is more used. The roads to Diyār Bakr and Malaṭia are also very old.

(L. MASSIGNON)

KHARRŪBA (the seed of the carob-tree, *Ceratonia Siliqua* L.), synonymous with *ḳirāṭ*. This term is frequently found on Egyptian glass weights

of the first and second centuries A. H. usually to give the weight of a copper coin (e. g. *ḳirāṭ* of 25, or 30 or 35 *kharrūba* etc.). The weighing of well preserved glass weights gives an average weight of 0.196 gr. (3 grains) for the *kharrūba*, i. e. rather more than a gold *ḳirāṭ*. In Tunis the word was applied to a copper coin down to quite modern times. For further information see the article *ḲIRĀṬ*.

(E. V. ZAMBAUR)

KHĀRSĪNĪ (KHĀRČĪNĪ) is given as the seventh metal by many cosmographers etc. in addition to the usual six, gold, silver, copper, iron, lead and tin; it is called mercury by the alchemists. As is evident from the statements of al-Birūnī [q.v.] and al-Rāzī, the famous physician and alchemist, Arabs were not acquainted with it itself but at most with articles made from it, and perhaps even these they only knew by hearsay: mention is made especially of hard arrow-heads, harpoons, looking-glasses, and bells made of *khārsīnī*. The mineralogist al-Ḡhaffārī connected it with a meteorite. According to W. Hommel (*Ztschr. f. angewandte Chemie*, xxv. 100 [1912]) it is certainly not zinc, as has been suggested, but a hard lead, i. e. a composition of lead, a good deal of antimony and small quantities of ores, copper, iron and tin. This composition possesses the physical qualities ascribed to *khārsīnī*. The Arabs, however, credit it with further marvellous (including healing) powers. In the *ʿAin-i Akbarī* (transl. Blochmann, i. 40) *Ahenshīnī* is given as a synonym of *Khārsīnī*. (Cf. E. Wiedemann, *Beiträge z. Gesch. der Naturwiss.*, v. 403; xxiv. 80, 86 sqq., in *Sitz.-Ber. der Physik. Medizin. Soc. in Erlangen*, xxxvii. 1905; xliii. 1911; further literature is also given there and a series of references to manuscripts).

S.*, Erlg., xxxvii. 1905, p. 388; do., *Beiträge*, xxiv. *Zur Chemie bei den Arabern*, do., xliii. 1911, p. 86. Further literature is given in these articles and a number of notes added.

(E. WIEDEMANN)

KHARTABIRT. [See KHARPŪT].

KHARTŪM (A.), "an elephant's trunk" (descriptive of the narrowing spit of land between the two rivers), name of the capital town, seat of government, trade centre of the 15 provinces of the Sūdān and residence of the Governor General, who holds his appointment under the British Government with the approval of the ruler of Egypt, is situated on the left or south bank of the Blue Nile, which joins the White Nile about one mile down stream; it has a river frontage of two miles, is 1250 feet above the level of the Mediterranean, in 15° 36' N. Lat. and 32° 32' E. Long.; by rail it is 432 miles from Port Sudan on the Red Sea, and by rail and river it is 1345 miles from Cairo.

Across the river (here about 700 yards wide) is Khartūm North (population 16,000) with the dockyard, civil prison and military barracks. Omdurman is some two miles down stream on the left bank of the Nile proper, with a population of 60,000.

Before the conquest of the Sūdān in 1819 by the Khedive Muḥammad ʿAlī of Egypt, Khartūm was a small native village off the main road from the north to Sennār. This road, leaving the Nile at Shendi 100 miles north of Khartūm, led direct

to Soba, across the desert, and then southwards along the right or east bank of the Blue Nile.

Khartūm was selected as their base by the Egyptians on account of its position at the junction of the two principal waterways. It became the capital town in 1823, but building in brick was not begun until 1839; as the centre of government and trade activities it became also the centre of the slave traffic.

In 1862 Sir Samuel Baker left Khartūm to discover the sources of the Nile, and again in 1870 he went south to attempt to stop the slave trade, in response to pressure put upon Egypt by the Powers in Europe, and to open up the territories of the South. Here too came General Gordon in February, 1874, on his appointment as Governor General of the Equatorial Provinces, a post he vacated in October, 1876. With considerable reluctance he returned in February, 1877, to be Governor General of the Sūdān, but resigned in December, 1879, in despair of effecting any improvement in the administration. When the Mahdist rebellion broke out, Gordon once more returned, in February, 1884, to be Governor General, and taking an active part in the defence of the town against the Dervishes he met his death on the steps of his palace on January 26, 1885, the British relief force arriving two days afterwards, too late to be of any assistance.

Khartūm was abandoned by the Dervishes in favour of Omdurman, and was re-occupied after the defeat of the Dervish forces on September 2, 1898, by the British and Egyptian armies under Lord Kitchener. On the re-conquest of the Sūdān the rebuilding of the town was at once commenced, a new palace of three stories being erected on the foundations of the old one, and in the extensive gardens still flourishes a rose tree known as Gordon's from its association with him.

Khartūm has been reconstructed on a plan designed by Lord Kitchener with a view to future development and military requirements. A series of barracks for native troops have been built at intervals along the old earth works used during the siege. The barracks of the British garrison are situated at the east end of the town, fronting the Blue Nile and adjacent to the bridge which carries the railway line from the north into Khartūm. This railway runs southward along the Blue Nile for 170 miles, and then turning west eventually crosses the White Nile and passes through the gum gardens into Kordofan.

The river front of Khartūm extending for some two miles, with its conspicuous fringe of date palms, a distinctive landmark in the flat and treeless country, is reserved for official buildings and residences, with few exceptions. An embankment wall along a considerable part of it protects the bank from erosion by the river, which rises during high Nile to some 30 feet and has a swift current. Along this wall runs a continuous tree-shaded public road bordered on the inner side by well kept gardens. Behind are situated the banks, the headquarters of the trading companies, shops, the native market, and residences; further inland the building regulations are relaxed to enable Europeans and better class natives to occupy less expensive houses. The poorer natives live in villages outside and to the south of the line of encircling barracks. A fine mosque, inaugurated by the ex-Khedive ʿAbbās Ḥilmi in December, 1901, was built of local stone with funds from Egypt.

The Anglican cathedral was consecrated in January, 1912, by the bishop of London. There is a Greek church, a Coptic church, a Roman Catholic church in the Austrian Mission, a temporary church in the American Mission, and other places of religious worship. Gordon College, built and endowed with funds raised by Lord Kitchener, provides advanced education for natives of the Sūdān in Muḥammadan law and houses a training school for schoolmasters, as well as instructional workshops. There is a government elementary school and various mission schools. A first class civil hospital affords medical and surgical help for patients from all parts of the Sūdān and has a high reputation amongst the inhabitants. There is a small zoological garden. Electric light was first used in 1906 and an excellent water supply laid on in 1909; steam tramways and ferries are now being taken over (1925) by a group of English firms who will also build a bridge to Omdurman.

The population of Khartūm, about 23,000, is mixed. British and Greek subjects form the largest European groups. Syrians and Egyptians have migrated from the North, but the great majority of the inhabitants consists of natives of the Sūdān, Arabs from the northern provinces and Blacks from the South.

Bibliography: Lord Edward Gleichen, *The Anglo-Egyptian Sudan*, London 1904; E. A. Wallis Budge, *The Egyptian Sudan*, vol. ii., chap. xiv., xix., London 1907; *The Sudan Almanac*, Khartum 1925. (P. R. PHIPPS)

AL-KHASHABĀT (plur. of *al-khashaba*, pole), was the name given to the light-houses in the Persian Gulf near ʿAbbādān: they are mentioned in al-Kh̲wārizmī's *Mafaṭīḥ al-ʿUlūm* (ed. v. Vloten, p. 124) as columns placed in the sea, on the tops of which lamps were lit at night. According to Nāṣir-i Kh̲usraw (*Safar-nāme*, ed. Schefer, text p. 90, transl. p. 246), they consisted of four columns of teak which rose 60 feet above the sea; there was a platform on the top with a little house for the watchman. The latter lit the lamps which were surrounded by glass to shelter them from the wind. They served as guides to the ships and were also used to signal the approach of pirates. Places at which these light-houses stood are given in *Bibl. Géogr. Arab.*, iv., *Gloss.*, p. 225, and in E. Wiedemann, *Über Leuchtfeuer bei den Muslimen*, *Arch. f. Gesch. d. Naturwissensch. u. d. Technik*, ii. 1909, 151—4, and A. Mez, *Die Renaissance des Islāms*, 1922, p. 479. (E. WIEDEMANN)

KHASHABĪYA, "club-men", was originally an abusive name for the Mawālī [cf. the art. MAWLĀ] of Kūfa, who were armed with clubs (*khashab*, sing. *khashaba*) and formed the main part of the followers of al-Mukhtār [q. v.] and took the field under his generals, for instance Ibrāhīm b. Mālik al-Ashtar (Ibn Kutaiba, *Kit. al-Maʿarīf*, ed. Wüstenfeld, p. 300; Ibn Rosta, *al-Aʿlāq al-Nafisa*, B. G. A., vii. 218; al-Ṭabarī, *Tārīkh*, ed. de Goeje, ii. 684, 16, 1798, 4 sq.; *al-Aghānī*¹, v. 155, 17 sqq.; al-Masʿūdī, *Murūj al-Dhahab*, Paris 1861—77, v. 226, 8 sq., 227, 7 sqq.; do., *al-Tanbīh*, B. G. A., viii. 313, 4 sqq.; Muṭahhar b. Ṭāhir al-Makdisi, *al-Badʿ waʾl-Tārīkh*, ed. Huart, v. 133, 10—12; Ibn al-Athīr, *al-Kāmil*, ed. Tornberg, iv. 207, 11; Maḥd al-Dīn Ibn al-Athīr, *al-Nihāya fī Ghārīb al-Hadīth*, Cairo 1311, i. 294 infra; L. A., i. 340, 10 sqq.; T. A., i. 234, 25 sqq.).

The troops which marched upon Mekka by al-

Mukhtār's order and released Muḥammad b. al-Hanafīya [q. v.], who was imprisoned by 'Abd Allāh b. al-Zubair [q. v.], are called *Khashabiya* (al-Ṭabari, *op. cit.*, ii. 693, 4 *sqq.*; Ibn Sa'd, *Ṭabaḳāt*, ed. Sachau, v. 74, 16 *sqq.*; cf. 76, 15; Ibn al-Athīr, *al-Kāmil*, iv. 206 *sq.*). They themselves apparently called their cudgels *kāfir-kūbāt* (from Persian *čub*, wood, club) "clubs for unbelievers" (al-Ṭabari, *op. cit.*, ii. 694, 15; Ibn al-Athīr, *op. cit.*, iv. 207, 7 [variant]); these weapons are afterwards found also with the partisans of Abū Muslim [q. v.] (al-Dīnawarī, *al-Akhbār al-Ṭiwāl*, ed. Rosen, p. 359, 20 *sqq.*; *al-Aghānī*, iv. 93, 21; cf. G. van Vloten, *Recherches etc.*, *Verh. K. Ak. Amst.*, Afd. Letterk., i., N^o. 3, 1894, p. 67), and in the civil war in Baghdād in 251 (865) they were distributed among the plebs (al-Ṭabari, *op. cit.*, iii. 1586, 13, 1587, 4, 1589, 7; Ibn al-Athīr, *op. cit.*, vii. 99, 5; al-Djāhiz, *Ṭhalāth Rasā'il*, ed. van Vloten-de Goeje, p. 11, 9, mentions the *kāfir-kūbāt* as weapons of the Turks.

The remark in Ibn al-Athīr's chronicle (*op. cit.*, iv. 207, 13) that the liberators of Ibn al-Hanafīya bore cudgels in order to avoid the use of swords in the *ḥaram*, is as improbable as is the interpretation which connects the name *Khashabiya* with the wood piled up by Ibn al-Zubair beside the prison of Ibn al-Hanafīya with the threat to have him and his fellow-prisoners burned.

With reference to a ḥadīth of 'Abd Allāh b. 'Umar in which the performing of the *ṣalāt* behind the *Khashabiya* is mentioned, the latter name was explained as denoting people who reverently kept the pole or tree-trunk (*khashaba*) on which Zaid b. 'Alī [q. v.] had been executed. But, as Madjid al-Dīn Ibn al-Athīr (*loc. cit.*) observes, this explanation is chronologically untenable.

According to an observation made by Ibn Ḥazm (*al-Faṣl fi 'l-Mīlāl wa'l-Ahwā' wa'l-Niḥāl*, MS. Leiden 480^b, f. 138^b infra; cf. I. Friedländer, *The Heterodoxies of the Shiites according to Ibn Ḥazm*, New Haven 1909, i. 63, note 1), the *Khashabiya* regarded the bearing of iron weapons as not allowed till the expected Mahdī had appeared.

The fact that "Revenge for al-Ḥusain!" (*yā la-ṭhā'rāt al-Ḥusain!*, e. g. al-Ṭabari, *op. cit.*, ii. 694, 14) was the rallying cry of the *Khashabiya* possibly tended to supplant this name by *al-Ḥusainiyya*, which is graphically only slightly different; the latter is, however, to be retained in places like Ibn 'Abd Rabbihi, *al-Ikd al-Farid*, Cairo 1317, i. 190, 17 *sq.*, and Ibn Badrūn, *Sharḥ Kaṣīdat Ibn 'Abdūn*, ed. Dozy, p. 187, 12—14).

Thus *al-Khashabiya* was another name for the Kaisāniya [q. v.] and then was applied to the adherents of the doctrines which were current among the latter, like that of the return (*radj'a*, q. v.) and that of metempsychosis (*tanāsukh*, q. v.). The poetical representative of these doctrines, Kuthayyir, is called a *Khashabi* and is said to have been gained for the *Khashabiya* by the poet Khindif al-Asadi (*al-Aghānī*, viii. 33, 16, 20—24, 34, 20; xi. 47, 22 *sq.*, where *Khindif* is to be read instead of *Khandaḳ*).

According to Muḥammad b. Aḥmad al-Khwarizmi (*Mafatih al-'Ulūm*, ed. van Vloten, p. 29, 5 *sq.*), the name *al-Khashabiya* was used for a group of the Zaidiya [q. v.] known as *Ṣurkhābiya* after a certain Ṣurkhāb al-Ṭabari of whom nothing seems to be known; it might be possible to think of one of the Ṣurkhāb who played a part in Ṭabaristān in the time of Ḥasan b. Zaid [q. v.] (cf. Ibn Is-

fandiār, Engl. transl. by E. G. Browne, Gibb Mem. Ser., vol. ii., Leiden-London 1905, Index) It must be left undecided whether they were called *Khashabiya* after their weapons or perhaps on account of Kaisāni doctrines which asserted themselves among them. The same statement occurs in Abu 'l-Ma'ālī, *Bayān al-Adyān*, in *Chrestomathie persane*, ed. by Ch. Schefer, i. (P. E. L. O. V., 2nd Ser., vii., Paris 1833), p. 157, 18 *sq.*, where *Ṣurkhāb* is to be read instead of *Ṣ-rhūt*.

According to a statement given on the authority of al-Laith (apparently Ibn al-Muzaḥaffar), *al-Khashabiya* was also the name of a section of the *Djahmiya* [cf. the art. *DIJAHM B. ŠAFWĀN*], which maintained that Allāh does not speak and that the *Kur'ān* is created (*L. A.*, i. 343, 9; *T. A.*, i. 234, 25).

AL-KHAṢĪBĪ. [See IBN AL-KHAṢĪBĪ].

AL-KHAṢĪBĪ, ABU 'L-'ABBĀS AḤMAD B. 'UBAID ALLĀH B. AḤMAD B. AL-KHAṢĪB, a vizier. After the deposition of Abu 'l-Kāsim al-Khākānī in Ramaḍān 313 (Nov. 925) (see IBN KHĀKĀN, 3) al-Khaṣībī, who at that time was secretary to the mother of the Caliph al-Muḥtadir, was appointed vizier. But as he neglected his official duties and made himself generally hated for his extortions, he was deposed on the advice of the chief of police Mu'nīs in *Dhu 'l-Kāda* 314 (Jan. 927) and 'Alī b. 'Isā (see IBN AL-DJARRĀḤ, 2) appointed in his place. Till the latter could reach the capital, 'Ubaid Allāh b. Muḥammad al-Kawādhī acted as his deputy. In 318 (930/931) the other vizier Ibn Makhīad [q. v., 2] entrusted al-Khaṣībī with the government of Fārs and Kermān.

Al-Khaṣībī was also the name of the vizier who succeeded Muḥammad 'Ubaid Allāh in *Dhu 'l-Ḥijda* 321 (Dec. 933) and held office till the deposition of the Caliph al-Kāhir; in Ibn al-Athīr (viii. 195) and Ibn Khaldūn (iii. 394) however, his name is given as Abu 'l-'Abbās Aḥmad b. 'Ubaid Allāh b. Sulaimān al-Khaṣībī. Al-Khaṣībī died in 328 (940).

(K. V. ZETTERSTĒEN)

KHĀṢṢEKĪ (Arab. *khāṣṣa*: "private" with Turkish suffix *ki*), a term applied to anything belonging to the domains, service or the palace of the Sultān of Turkey. The *Khāṣṣekī* were the guards of the serail, a body of 300 junior officers chosen among the *bostandji*; 60 of them formed part of the imperial retinue, as a bodyguard; they wore a uniform of red cloth, were armed with a dagger (*ghaddārē*) and carried a baton in the hand; their commander was the *bash-khāṣṣekī*. The *khāṣṣekī-āgha* was the lieutenant of the *bostandji*.

bashi. The *khāṣṣekī-bashi*, who is not to be confused with the preceding, was an officer of the corps of *baltadji* and acted as receiver general of the revenues that came from the pious endowments of Mecca and Medīna. He wore a large bonnet of red cloth.

Khāṣṣekī was the title given to the Sultān's favourite. In the early days of the monarchy down to Aḥmad III (1115 = 1703), the wife of the Sultān who gave birth to a prince was honoured with the title *khāṣṣekī-sultān*, while those who only had daughters were called *khāṣṣekī-kādin*. In 1075 (1647), contrary to the rule followed by the house of 'Othmān, the debauched Sultān Ibrāhīm, seven of whose concubines had the title *Khāṣṣekī*, married one of the latter, Telli-Khāṣṣekī, and she received the name *Shāh-Sultān*.

Khāṣṣekī-djāmi' "mosque of the favourite", at Constantinople, built by Khurrem-Khāṣṣekī (Roxelane) in 945 (1538) with fountains, soup-kitchen (*'imāret*), a school founded in 946 (1539) and a hospital built in 957 (1550). The building originally had only one dome; a second was added by Aḥmad I. in 1201 (1612). These edifices are in the Awret-Bāzārī (*Forum Arcadianum*) at Stambul. The *Khāṣṣekī* hospital at the present day is reserved for women.

Hellert, x. 74. (CL. HUART)

KHATA' (A.), a mistake, which is made in thought (speech) or action — a fault which one has is called *'aib* —, the opposite of *ṣawāb*, the correct; hence in the field of knowledge: error; in that of action: omission, failure, all this, of course, unintentional; from the last meaning develops that of wrong which one commits, transgression; whether this is to be regarded as unintentional or — as in *khata'a* and *khil'* — deliberate (sin) is a disputed point with the lexicographers. *Khata'* and *khil'* (the latter is found only in the *Kānūs* so that it is hardly classical) are synonymous (or phonetic variants?). *Khata'* is sometimes regarded as an infinite of *khata'a* used as a substantive (which it originally was and still is), sometimes as a substantive from *akhṭa'a* (which it has become through linguistic usage), and sometimes as belonging to both. The lexicographers have the most diverse opinions regarding the more accurate definition of the meaning of these two verbs, within the sphere of ideas above outlined. *Khata'* and *khata'* are exceedingly rare in classical poetry (e.g. Abu 'l-ʿAtāhiya, ed. 1888, p. 120, 1: "sin" [parallel with *dhanb*]; also *Qur. an*, xvii. 33: "sin", as a variant of *khil'*; iv. 94: "transgression"); more frequently only the verbal forms *khata'a* and *akhṭa'a* are used as synonyms.

The use of *khata'* as a technical term is in keeping with the general use of the word; the principal uses of it are as follows:

1. Error in logic (opposite *ṣawāb*), synonymous with *bāṭil*, the "invalid" (opposite *ḥaqq*); the former pair of concepts ought to be used in questions of *idjtihād* [q. v.] and the latter in questions of *i'tikād* [q. v.]; this may be the result of the corresponding use of the word in the *Qur'an*, so

that Islām and the other religions are contrasted with one another in *ḥaqq* and *bāṭil*, opposite views in the *furū'* of the *fiqh* (see the article *FIQH*), as *ṣawāb* and *khata'*; but there is only one verb for each, *aṣāba* and *akhṭa'a*, which points to the artificiality of this distinction, and in reality the rule is often not observed; in other branches of learning also *khata'* and *bāṭil* are used promiscuously, as indeed are *ṣawāb* and *ḥaqq* also. The works which deal with the *uṣūl al-fiqh* (see the art. *UṢŪL*) discuss the question whether the *mudjtahid* [q. v.] *muṭlak* can err. In the orthodox community the opinion has prevailed that the *mudjtahid* can err and in cases of difference of opinion only one can be right at a time, and a tradition is even cited on this point; the Mu'tazilis [q. v.] asserted that every *mudjtahid* is right, and even celebrated orthodox teachers held this view, e.g. Abū Yūsuf, Muḥammad b. al-Ḥasan al-Shaibānī, Ibn Suraidj, al-Muzanī, al-Ash'arī and his school, al-Bākillānī, al-Ghazālī; Abū Ḥanīfa adopts a middle view. The champions of the orthodox view believe, in keeping with this, that Allāh has already come to a definite decision before every *idjtihād* and that the correctness or otherwise of the decision of the *mudjtahid* results from its agreement or not with that of Allāh; those of the Mu'tazila assume either different decisions by Allāh which coincide with those of the individual *mudjtahid*'s and are valid for them and their *muḥallid*'s [q. v.], so that all differing decisions of the *mudjtahid*'s are equally justified, or they consider one decision more justified than the others and believe that Allāh has taken no decision in such cases but "if He did do so", would express quite a definite one: this supposed decision by Allāh is then compared with those of the *mudjtahid*'s and the *mudjtahid* who agrees with it is considered in the right in every respect; but those which differ from it are considered in the right with respect to the basis, the *idjtihād* (*ibtidā'an idjtihādan*), as the *mudjtahid* has endeavoured with all his power to find the decision, in the wrong with respect to the result, the decision itself (*intihā'an ḥukman*). The representatives of the orthodox view, who are essentially in close agreement with this form of the Mu'tazilī view, make the same distinction (the opinion is rejected that the *mudjtahid* who makes a mistake is completely in the wrong); the other Mu'tazilī view, however, is in sharp contrast to this. But this difference only exists in questions of the derivation of legal rules from the *uṣūl al-fiqh* (*fi 'l-shar'iyāt*) and only in the case when no clear decision is given in the *uṣūl*; if there is one, but it has not been regarded by the *mudjtahid*, he is, of course, wrong. In the domain of the *uṣūl al-dīn*, of *kalām* [q. v.], particularly in reasoned deductions (*fi 'l-aḳliyyāt*), according to the general consensus, only one view can be right in a case of differences of opinion. Only a few Mu'tazilis, as whose representatives Abū 'l-Ḥasan 'Abd Allāh al-Anbarī and al-Djāḥiẓ are cited, asserted that here also in dogmatics every *mudjtahid* (the word is used in a wider sense, meaning everyone who does all in his power to solve a problem) is right; while al-Anbarī adds so long as he can be still described as a Muslim, and al-Djāḥiẓ without limitation. Tradition on this point is no longer certain, as is apparent in differences in detail and in a certain irresolution; in this Mu'tazilī teaching, however, — as in the polemics regarding the *mudj-*

tahid fi 'l-*ṣhar'iyāt* — the other meanings of *khaṭa'* come into consideration so that it is doubtless correctly explained that by "being right" is not meant agreement with the actual facts, but that the *mudjtahid* has duly fulfilled the task imposed on him and therefore cannot be punished (while according to the orthodox consensus every non-Muslim is doomed to the pains of hell eternally), that that to which his *idjtihad* leads him is the right for him by Allah's decree itself. This ambiguity in terminology must have contributed to the ambiguity in tradition. That, taken purely logically, several differing views could be right at the same time has never been asserted. — The *mudjtahid* in the wrong is not punished for his error and is not considered as being in a religious error (*ḡalāl*), but is regarded as excused and is rewarded as he has done everything that is demanded of him if he has really used all his energy for the derivation of the legal rule; if he has not done this he is punished for his error; others say that every error of a *mudjtahid* is a sin; but this view is rejected. All this holds only of the *mudjtahid*'s of the Sunnis; those of the "twelver" *Shi'is* are infallible.

2. Unintentional action (opposite '*amd*'); this use comes from *Ḳur'ān*, iv. 94 sq. (cf. the art. *ḲATL*, section i. 1; passages like ii. 286 and xxxiii. 5 may have also influenced); this is of interest here in so far as it is illegal; it may be more accurately defined as an act contrary to law, in which the intention of committing an illegal act is lacking, while the action itself may be deliberate; any negligence is left quite out of the question in the juridical appreciation. The *Mu'tazilis* asserted that one could not be punished by Allah for it, for punishment is only conceivable for a deliberate illegal act; orthodoxy on the contrary teaches that, while *khaṭa'* is not a sin (*iṭhm*), any negligence, however, is something deliberate, and the *khaṭa'*, as its result, is liable to be punished (it is regarded as belonging to the '*awārid muktasaba*, happenings only indirectly intended, in themselves not deliberate, for which man can equally be made responsible); but Allah in his mercy will overlook the punishment in the next world; the *khaṭa'* is thus considered as an ameliorating — often even exonerating — circumstance in the infliction of punishment in this world (*shubha*; q. v.); it cannot be punished by *ḥadd* [q. v.]. But not all of Allah's rights are dropped: anyone who, contrary to the prohibition, kills an animal in the *ḥaram* [q. v.], the sacred territory of Mekka, whether with '*amd*' (deliberately) or from *khaṭa'* (unintentionally), has in the opinion of all four *madhhab*'s [q. v.] to make the prescribed atonement; Dāwūd al-Zāhiri alone in this case also considers *khaṭa'* as an excuse. This is doubtless connected with what is ultimately a pre-Islāmic idea, that Allah has an especial right of ownership to the *ḥaram*, its plants and animals (cf. Gaudefroy-Demombynes, *Le Pèlerinage à la Mekke*, p. 7, 10). It follows that an unintentional infraction of this right of property is to be atoned for like an intentional one; (the substance of this is also found in the following difference of opinion: Mālik and Aḥmad b. Ḥanbal do not require a special compensation if the animal has an owner — who, of course, must be compensated — i.e. does not belong to Allah; Abū Ḥanīfa and al-Shāfi'i demand it in every case, so that they extend their area of ap-

plication). In *khaṭa'* there also is a full liability for any injury done to another; here *ḳiṣās* [q. v.] is a special case: its application is excluded when *khaṭa'* is present; instead the *diyya* [q. v.] is to be paid and the *kaffāra* [q. v.] to be performed. For further details see the article *ḲATL*, Section i. 5, 6, where the variations of *khaṭa'* in the meaning of an unintentional act are given. From them it will be seen that this terminological use of the word is based on the two meanings "error" (in the case of *khaṭa'* fi 'l-*ḳaṣd*) and "failure", "accident" (in the case of *khaṭa'* fi 'l-*fi'l*) and is no more uniform than the uses dealt with under 1.

Indica, Old Series, i. 401 sq.; Dschordschāni, *Definitiones*, ed. G. Flügel, p. 104; for further details the works on *Uṣūl* and the *Fiqh*-books are indispensable. See also the art. *ḲATL*.

(J. SCHACHT)

KHAṬĀ'Ī, (the "sinner"), pseudonym (*takhalluṣ*) of Shāh Ismā'il [q. v.]. Of his Persian poems we only know so far the single verse quoted in the anthology compiled by his son Sām Mirzā [q. v.] and some other lines. On the other hand his Turkish *Divān* is known from several manuscripts, although these are rather scarce and differ considerably.

E. G. Browne (*Persian Liter. in Modern Times*, p. 12—13) has discovered the curious fact that the founder of the Safawi kingdom wrote mainly in Turkish while his rival Sulṭān Selim used Persian for his poems. *Khaṭā'ī* is now rightly regarded as one of the precursors of the literature of the Turkish dialect of Ādharbāidjān. His language, however, judging from the oldest Paris manuscript, is rather artificial; alongside of the true Ādharbāidjāni vocabulary we find parallel forms from Eastern Turki: *gālürüm/gälürmām*, the accusative of stems in consonants: in -i/-ni.

From the point of view of poetry, *Khaṭā'ī*'s work is only mediocre; his images are banal and his lyrical themes monotonous. On the other hand the autobiographical allusions are very interesting in which Ismā'il poses as avenger of the blood of his father or as protector of the "family hearth" (*khanadān*) of Ardabil, fulminates against his enemies of Shīrwān, extols the bravery of his *ghāzī*, *akbā* and *ārān*, and puts forward very bold mystical claims. He identifies himself with 'Alī and the imāms and goes on to proclaim: "I am that *agens absolutus* (*fā'il-i muṭlaq*) of whom they talk; the sun and the moon are in my power; my being is truly *domus Dei* (*bait Allāh*); to prostrate thyself before me (*sudjūd*) is thy duty morning and evening".... "I am absolute reality (*ḥaḳḳ*).... I am the pearl in the sea of truth (*ḥaḳīqa*)."

The place occupied by *Khaṭā'ī* in the beliefs of the Ahl-i Ḥaḳḳ (*vulgo* 'Alī Ilāhī [q. v.]) is very important. *Khaṭā'ī*'s verses are frequently quoted by adepts of the sect. The litany known as *Ḳuṭb-nāma* enumerating the successive manifestations of the divinity runs as follows: "In (the person of) *Khaṭā'ī* it spoke Turkish and became the *pir* of Turkeṣtān", where this geographical term is said to mean Ādharbāidjān inhabited by Turks.

The *Khaṭā'ī* *avatar* of Shāh Ismā'il is important for the study of the occult doctrine of the Ṣafawis

which deviates far from the Shī'a canon. It throws a new light on the esoteric foundations of the political power of the Ṣafawīs (cf. the sources like the *Ṣafwat al-Ṣafā*, *Silsilat al-Nasab-i Ṣafawiya* and the history of the youth of Ismā'īl I published by Sir E. D. Ross in *J.R.A.S.*, 1895, p. 249-340).

Von Hammer (*Gesch. d. osm. Dichtkunst*, ii. 18) mentions a mysterious dervish sōfī KHAṬĀ'Ī (d. 936/1529) who had gone to Persia to receive from the hands of Shāh Ismā'īl the *Diwān* of Djalāl al-Dīn Rūmī which the Ṣafawī monarch had taken to Persia. V. Hammer quotes four verses from it in translation.

Bibliography: Tuḥfa-i Sāmī: MS. of the Bibl. Nat. of Paris, Persian Suppl., N^o. 1492, f. 17 r.; cf. also S. de Sacy, *N.E.*, ix., Paris Anno 7, p. 278. The MSS. known of Khaṭā'ī's Turkish *Diwān* are as follows: 1. Bibl. Nat., Turkish Suppl., N^o. 1307 (83 ff.): 253 *ghazal*'s, *mathnawī* fi 'l-munādīāt (24 *bait*'s), another *mathnawī* identical with that in London (18 *bait*'s), a heroic *mathnawī* (60 verses in *mutakārib*); the MS. was written in 948, i. e. 18 years after the death of Shāh Ismā'īl; 1 bis. *Ibidem*, suppl. turc., N^o. 995 (the former Schefer-collection), goes back to the xviiith Cent., Contains on 64 leaves: in Turkish 205 *ghazal*'s, 9 quatrains, *mathnawī*'s (one of them the *Nasihat-nāma*?), moreover one *ghazal* and some *bait*'s in Persian; 2. Brit. Museum: Or. 3380 "apparently of the xviiith century"; cf. Rieu, *Cat. Turk. MSS. in the British Mus.* London 1888, p. 205 sq.: the *mathnawī* *Nasihat-nāma* (168 *bait*'s) and the *ghazal*'s (ff. 10^b—83); 3. Asiatic Museum of Leningrad: Or. 297, copied in 1036, contains the *mathnawī* 'Ashik wa-ma'shūk and the *ghazal*'s; 4. Preussische Staatsbibliothek: Or. Fol. 209, written in 1077, only contains 34 *ghazal*'s (204 *bait*'s); cf. Pertsch, iv. (Pers. Handschr.), sub N^o. 18; 5. Shaikh Ḥusain Zāhidī, *Silsilat al-Nasab-i Ṣafawiya*, ed. E. G. Browne, Berlin 1334/1922, p. 68—72: 4 poems of Khaṭā'ī glorifying the 12 imāms; 6. Yūsuf-beg Wazīrof, *Adharbāidjān Adūbiyatina Bir Nazar*, Sтамбул 1337, p. 27—31, quotes 6 *ghazal*'s of Khaṭā'ī taken from MSS. belonging to the Library of the 'Alī Emiri Efendi; the author also mentions the complete works (*Kulliyāt*) of Khaṭā'ī, printed at Tabriz (?) but unobtainable.

Gibb, *History of Ottoman Poetry*, iii. 106; V. Minorsky, *Materiali*..... *sektī 'Alī-Ilāhī*, Moscow 1911, p. 108—110; do., *Notes sur la secte des Ahli-Hakk*, in *R. M. M.*, 1922, p. 57, 86.; according to Babinger, *Zur Gesch. der Ṣefewijje*, in *Isl.* xii., 1922, p. 233, the MS. of Constantinople is preserved in the 'Umūmiya-library; cf. 'Alī Emiri Efendi, *2ārikh wa-edebiyat madjmu'asi*, i. 29.

(V. MINORSKY)

KHAṬAK. The Khaṭaks are a Paṭhān tribe belonging to the Karlāni division of the Afghāns, and live in the North-West Frontier Province of British India and adjacent localities. Their origin is much disputed (see the art. AFGHĀNISTĀN, above, i. 150). At the beginning of the Muḥammadan era they occupied the Sulaimān Range and the northern part of the plains between these mountains and the Indus. The history of the Khaṭaks was written by Khushḥāl Khān [q. v.], a renowned chief of the tribe in the time of the emperor Awrangzēb. Akora, Shāhbāzgarh, Kālabāgh and Makhad are their chief seats. They are warlike and for centuries have been at feud with their neighbours and with

one another; active, industrious and good cultivators, they are also great carriers and traders. The Khaṭaks are all Sunnis and speak the western dialect of Pashto.

Bibliography: See the art. KŌHĀT.

(R. B. WHITEHEAD)

KHĀTAM, KHĀTIM (A.) (*P. muhr*), seal, signet, signet-ring, the impression (also *khatm*) as well as the actual seal-matrix; it is applied not only to seals proper, engraved in incuse characters with retrograde inscriptions, but also to the very common seal-like objects with regular inscriptions of a pious or auspicious character; for the latter which are amulets and further readily distinguished from seals by the absence of a personal name see the article TALISMĀN; indeed anything with an inscription stamped upon it may be called *khātām*. Here we are only concerned with seals in the strict sense of the word. The word *khātām* is said by Nöldeke, *Mandäische Grammatik*, p. 112 to be of Aramaic origin, and in this he is followed by Fraenkel, *Aram. Fremdw.*, p. 252, who also recognises a loan word in *ḥarkas*, seal-clay.

The part played by the signet-ring in the east cannot be better illustrated than by the following quotation from Lane (*Modern Egyptians*,⁵ 1860, p. 31). Describing the dress of a Muslim Egyptian he says:

"On the little finger of the right hand (it is allowable to wear it on a finger of the left hand) is worn a seal-ring (*khātīm*), which is generally of silver, with a carnelion, or other stone, upon which is engraved the wearer's name; the name is usually accompanied by the words "his servant" (signifying "the servant, or worshipper, of God"), and often by other words expressive of the person's trust in God, etc. The Prophet disapproved of gold; therefore few Muslims wear gold rings: but the women have various ornaments (rings, bracelets, etc.) of that precious metal. The seal-ring is used for signing letters and other writings; and its impression is considered more valid than the sign-manual. A little ink is dabbed upon it with one of the fingers, and it is pressed upon the paper; the person who uses it having first touched his tongue with another finger, and moistened the place in the paper which is to be stamped. Almost every person who can afford it has a seal-ring, even though he be a servant".

The use of seals dates from remote antiquity in the east and they have never been supplanted by the spread of a knowledge of the art of writing and the use of the signature as has happened in the west. In the east the seal takes the place of the signature and it is the former that gives validity to a document even if the latter is also used. The seal is also much used as a guarantee that property will be kept intact and thus takes the place of locks and keys. Goods are simply roped up in a packet and the knots sealed with the owner's seal, a plan which to Chardin, for example, appeared more reliable than the western system owing to the practical impossibility of counterfeiting a seal. It is also used to stamp property as a mark of ownership (e.g. books and bindings) and in this way corresponds to a coat of arms in the west. The possession of another person's seal is evidence that the latter has delegated his authority. There is abundant evidence of these usages in the east from very early times. Pharaoh, for example (Gen. xli. 42), gives Joseph his signet,

as a sign of authority, just as the Sultan of Turkey did his grand vizier. Jezebeel (I Kings, xxi. 8) forges a letter in Ahab's name and seals it with his seal to give it validity. The books of Esther and Daniel give similar examples of the power of the Persian king's seal. Herodotos (i. 195) tells us that every Babylonian carried a seal and the abundance of seals, usually cylindrical in form, that have survived from ancient times in Mesopotamia, illustrates this statement. Seals of the Sassanian period still exist in large numbers, whether made for mounting in rings or pierced for suspension. In South Arabia also the Himyarites have left us numerous specimens of their signets.

No seals of the pre-Muḥammadan Arabs are known. The earliest Arab seals come from Egypt with papyri and belong to the period soon after the conquest. Whether we accept or not the story that only seventeen men in Mecca could write in the time of Muḥammad, we must suppose that seals were in common use in this important commercial centre as in other parts of the east. Tradition in any case has a certain amount to tell about the Prophet's *khātām*. Al-Bukhārī, *Ṣaḥīḥ* (Bulāḡ 1926), vii. (*libās*) p. 48, says that the Prophet wished to write to the Byzantines. He was told they would not read his letter unless it had a seal so he adopted one of silver with the inscription *Muḥammad rasūl Allāh*. According to al-Mas'ūdī, he adopted this ring in Muḥarram of the year 7 A.H. The Prophet is also said to have originally worn a *khātām* of gold, but gave it up when he forbade the wearing of gold rings and silk and brocade (Bukhārī, *loc. cit.*). Women did not observe the prohibition of gold rings and 'Ā'isha for example wore them (*ibid.*). The Prophet wore his signet on his right hand and used to take it off when he went to the privy (al-Tirmidhī *Ṣaḥīḥ* (Bulāḡ 1242), vol. i., *libās*, p. 324). Opinions differ as to the proper hand and finger for the ring and there is no established rule. Later stories illustrate the Prophet's disapproval of metals other than silver for signet-rings. He is reported to have said that a brass ring savoured of idolatry, that an iron one was emblematic of souls condemned to eternal fire, while words could not express his horror of a gold ring; meeting the wearer of one, he cast upon him a terrible frown and turned away as if he had encountered a dog or an infidel. The Prophet's seal was handed on and used by his successors, who had however also their own seals, until 'Othmān lost it in a well at Aris, or in Zemzēm, or according to others in the Tigris near Moṣūl. The Prophet's interdiction has been generally observed and it is exceedingly rare to find signet-rings of the more precious metals or mounted with the more valuable precious stones, upon which there was no embargo.

The earliest known seal of a Muslim is that of 'Amr b. al-Āṣ, conqueror and governor of Egypt whose signet was a bull (Rainer, *Führer*, etc. No. 556). Whether this is due to local influence or the representation of an animal was not unusual with the pre-Muslim Arabs it is impossible to say. Other Arab seals bearing animals are known of this period, but the rigorous avoidance of images of living things was soon applied to seals also, for we soon find seals in Egypt of the Muslim type, although as late as 88 A.H., we find the governor Kurra b. Sharīk using a wolf (Rainer, *Führer*, No. 593). The seals of Abū Hāim b.

Yahyā (No. 572) and of the head of the Treasury Rāshid b. Khālīd "who trusts in God" (No. 577) are already of the style that became stereotyped. A notable seal from Egypt is that of the tax-collector Nājīd b. Muslim which bears his name in Greek and Arabic (No. 589). Bilingual seals are again found in Syria and Asia Minor in the tenth century (cf. Schlumberger, *op. cit.*, and Halil Edhem, *op. cit.*). Here also under Byzantine influence we find double sided impressions of seals in lead (*bullae*); of these the most notable is that of the Kakoyid 'Alā al-Dawla of 430 A.H. with a horseman on the obverse (Halil Edhem, No. 30). Another remarkable seal from the same region is that of the Hamdānīd Muḥammad b. Sa'd al-Dawla Abu 'l-Ma'ālī Sharīf with obverse a bust of St. Theodore and his name in Greek characters (*op. cit.*, No. 31).

The materials of these early impressions are the same as in later times, a special kind of clay (*ḡarkas*), or lead, appended by cords to the documents as in the mediaeval west also. When the seal is stamped on the documents itself, it is done with a special thick kind of ink and the paper is moistened before receiving the impression; red wax is also used where the climate permits it. As in mediaeval Europe, there are instances recorded in the east of bullae of the precious metals, silver and even gold for very special occasions (Reinaud, *op. cit.*, i., p. 112).

Charles White (*op. cit.*) deals very fully with the use of seals among the Turks and the guild of engravers in Constantinople. The latter have, he says, a special quarter in the bazaar called after them *hakaklar çarshi*. The members of the guild are Muslims (in contrast to the dealers in stones who are usually Jews) of fair education conversant with Arabic, Persian and Turkish. A few can decipher the Kufic character. Their training is a long one. Apprentices after a good education take lessons from the best calligraphers of the day and then serve seven years with a master-engraver. When their indentures have expired, they become journeymen (*kalfa*), until they can acquire a business of their own and be admitted into the guild as master-members (*usta*), the number of whom is limited to fifty. Their shops are regularly searched by the police lest they be tempted to put their skill to illegal uses such as the engraving of false coin-dies. Such great care is taken to ensure the genuineness of a seal that the trade are forbidden to engrave two seals exactly the same for the same person. When a seal is lost the owner has some trifling alteration made in the new one, such as a change in an ornament or the date, so that the forgery can be detected if his first seal should fall into evil hands.

The Stambul engravers date the origin of their art in the time of the Caliph 'Othmān and say the first engraver was a certain Muḥammad al-Hidjāzī who engraved seals for 'Othmān and 'Alī bearing their names with the additional epithet *'abd Allāh*; the rings were of silver and the stones bloodstones.

White's account of the seals of the Sultān and dignitaries of the Ottoman empire follows d'Ohsson. The Sultān has three seals of different sizes all of emerald set in gold with the same inscription, the *tuḡhrā* [q. v.] and a religious legend. The first is a small seal always carried by the Sultān and handed to his secretary as required. The second is somewhat larger and is entrusted to the grand

treasurer of the harem, who uses it for all matters relating to the harem — the Mughal Emperor Akbar similarly had a special seal for all documents relating to the harem. — The third imperial Ottoman seal is the seal of state confided to the grand vizier of the day, who is supposed to keep it in his bosom day and night. The head of each department of state has also his own seal for matters relating to his office.

Persons of distinction do not usually wear signet-rings on their fingers. Great dignitaries have a confidential seal bearer (*muhurdār*) who carries the signet in a small bag in his breast pocket and produces it when required inked for the stamp or clean if wax is used. People of humble rank carry their seal in the breast pocket or suspended round the neck. The impression of the signet stands for a signature although for documents of importance the latter is also necessary. In the case of the Sulṭān, the seal used and the presence or absence of the signature vary with the importance of the document, as does the format of the latter.

Chardin's account of the seals used by the Shāh of Persia is similar. There are three seal-keepers (*muhurdār bashi*) but they only affix the seals, which are kept in a box in the palace sealed with the king's own seal. Friday is the usual day for sealing documents; the *muhurdār* prepares the seal and the paper and makes the impression on a sign from the Shāh who does not usually do it himself. There are three great seals, used for military, civil and foreign affairs, and two small seals used for the palace accounts etc. The same inscription is in the centre of the three large seals, *bandah Shāh wilāyat Sulaimān ast 1080* (A. H.); the small seals have *dīn* in place of *wilāyat*. One of the large seals has a quatrain round it and another has the names of the 12 Shī'ā Imāms. At the king's death his name is erased and that of his successor engraved on it. Of the general use of seals Chardin observes that it would not be easy to steal one as they are worn round the neck and only taken off in the bath; they are also worn on rings. It is rarer to find a seal counterfeited than a signature in Europe. The seal engravers used a drill and a small wheel with emery.

Abu'l-Faḍl in the *Ā'in-i Akbari* devotes a special chapter to the Emperor's seals, which are used in the three branches of the government — "indeed every man requires them in his transactions". (Here we may note that English officials in India in the xviiith and xixth centuries found it necessary to have a seal with their names in Persian characters).

At the beginning of his reign, Akbar had a circular seal bearing his name and those of his ancestors back to Timūr in the *rik'ā* characters; later he had a simpler one with his name only in the *nas' talik* character. The former was at first used for letters to foreign kings and the latter (known as *uzuk*) for home affairs but the distinction was not maintained. A second seal used for judicial business was lozenge-shaped (*mihirābi*) and bore an appropriate verse in praise of justness, round his majesty's name. For other business a small square seal with the legend *Allāhu Akbar, jalla jalalulu* was used and the harem as already stated had its own special seal.

The great figures of Muslim tradition had of course their seals. That of Sulaimān b. Da'ūd is particularly famous and plays an important part in many of the stories of his miraculous exploits.

It was held in particular awe by the dīnn. Djamshīd, the Solon of Persia, according to Sa'dī, was the first person to wear his signet on the left hand. In Firdawsī's story of Sapor II's escape from captivity in Rūm, he reveals his return by sending an impression of his signet to the grand mobed.

Coming to more historical periods, we have a record of the seal inscriptions of all the early caliphs (e. g. in Maṣ'ūdī, *Kitāb al-Tamīh*, under each caliph; collected by Hammer-Purgstall and von Murr); specimens of the seal impressions of several early Caliph still exist; (cf. Halil Edhem, *op. cit.*). Timūr's seal bore his special mark, three small circles arranged in a triangle, and the motto *rasti rusti* and an impression still exists in the Bibl. Nationale (de Sacy, *op. cit.*). Joinville mentions a ring of "moult fin or" bearing his signet which was among the presents sent to St. Louis by the Shaikh Djibāl. Specimens of the seals of Sulṭāns of Turkey and other high Turkish dignitaries are given by Hammer-Purgstall (*op. cit.*). Of these the most remarkable is the original seal of Sulṭān Muṣṭafā II of 1106 A. H. found on the battle field of Zenta (1697) where its bearer, the Grand Vizier Elmas Mehemed Pasha, was killed. A special medal was struck by the Austrians to commemorate this trophy. The *tuḡhrā* is a feature of the imperial Turkish seals; it is said to be an imitation of the impression of the hand, because Urkhān's sign-manual was the impress of his hand in red ink. Timūr is also said to have used this primitive signature, but we know that he was not illiterate. The *tuḡhrā* is also traced back to the Prophet himself.

Muslims have followed the example of the Prophet in having simple inscriptions on their seals. Sometimes the name alone is used, sometimes it is accompanied by a brief pious inscription, often indicative of humility; if the owner have the name of a person mentioned in the Qur'ān, the reference is frequently worked into the seal inscription. The name is given in a simple form and titles are as a rule avoided in keeping with the general modesty of the signet; for examples of legends see Reinaud and Hammer-Purgstall; in later times in Persia and India seals became much more elaborate and the seal of a minor official of the Moghul court of the end of the xviiith century often has several lines of bombastic inscription and forms a striking contrast to the seal for example of the great Sinan Pasha, five times Grand Vizier of Turkey with its modest inscription "O God Thou art full of mercy, pardon poor Sinān, son of 'Alī'".

The commonest materials for rings are silver or copper; and if a stone is mounted in it with the seal, it is one of the less valuable stones, cornelian, garnet, jacinth, agate, coral; the turquoise is not uncommon and one often sees them carved as amulets with inscription inlaid with gold. When not worn on a ring the seal is mounted on a handle and carried in a bag; sometimes the stone itself is pierced for suspension and worn round the neck. The shapes of Arab seals vary, oval is naturally the commonest but they are also square, hexagonal or octagonal; round is not common except for the largest sizes.

The art of the seal engraver was at its best, like that of calligraphy, in the xviith and xviiith centuries. Its decline in the xviiith was followed

by the practical extinction of the art in the sixth. The names of few celebrated engravers have been preserved. Altun at the court of Timūr was reckoned a master of his art. Abu 'l-Faḍl gives the names of four masters of the craft at Akbar's court, each of whom was a specialist in a particular branch.

KHATH'AM, an Arab tribe (the name is triptote although in several European editions of Arabic texts we find it wrongly vocalised as a diptote). They inhabited, at least from the sixth century A. D., the mountainous territory between al-Ta'if and al-Nadīrān along the caravan route from Yemen to Mekka. Historiographical theory on the migrations of the tribes which is bound up with their genealogical systematisation, makes them settle at the time of the separation of the sons of Ma'add, in the mountains of al-Sarāt [q.v.], from which the Azd are said to have driven them at the time of the migration of the South Arabian tribes after the bursting of the dam of Ma'rib, to the lands they occupied in historical times (al-Bakri, *Mu'djam*, ed. Wüstenfeld, p. 28, 38, 41—42 = Wüstenfeld, *Die Wohnsitze u. Wanderungen d. ar. Stämme*, Abh. G. W. Gött., xiv. 39, 53, 58 = *Mufaḍḍaliyyāt*, ed. Lyall, p. 113—114, following Ibn al-Kalbī; Yāqūt, *Mu'djam*, ed. Wüstenfeld, i. 464; ii. 326—327; Wüstenfeld, *Register z. d. genealog. Tabellen*, 130—131). According to this theory the Khath'am (like the Badjila [q.v.] who figure everywhere as their brethren) were part of the Ismā'īli tribes, their descent being Khath'am b. Anmār b. Nizār (Ibn Hishām, *Sira*, ed. Wüstenfeld, p. 49, 15—50, 2; Ibn Kūtaiba, *Ma'arīf*, ed. Wüstenfeld, 50, 18; [Pseudo-]Balkhi, ed. Huart, iv. 110—111, who all attribute this view to "the genealogists of the Muḍar"). But another theory connects them with

a branch of the Saba' according to the genealogy: Aftal, surnamed Khath'am b. Anmār b. Irāsh b. 'Amr b. al-Ghawth (the latter is also the father of the Azdi tribes) or more simply Khath'am b. 'Amr b. al-Ghawth (Ibn al-Kalbī, *Djamharat al-Ansāb*, MS. of the Escorial, fol. 44r, 119v, who is followed by Ibn Duraid, *Ishṭikāk*, ed. Wüstenfeld, p. 302, 1—2; Ibn Kūtaiba, p. 50, 19—20; Ibn Hishām, p. 50, 3—5; *Aghānī*, xv. 151; Wüstenfeld, *Geneal. Tabellen*, 9, 13; Hamdānī, *Djazīrat al-'Arab*, ed. Müller, p. 116, 11, gives the isolated genealogy: Khath'am b. Rabi'a b. 'Amir [?] and Ibn Kūtaiba, p. 50, 16 makes Anmār the son of Saba', cf. Reiske, *Primaе lineae*, p. 133). These contradictory statements seem to indicate that, like so many other tribes, the Khath'am do not represent an ethnic unit but rather a confederation of clans of different origins. This seems also to be deducible from the etymology of their name, which connects it with the verb *takhath'ama* "to smear oneself with blood" on the occasion of a pact of alliance (on this custom cf. J. Pedersen, *Der Eid bei den Semiten*, p. 21—22, 25—26 and the authors he quotes). Other etymologies which make Khath'am the name of a mountain or of a camel are not worthy of consideration (Ibn al-Kalbī, fol. 120r = Ibn Duraid 302, 2—3, 304, 6 from below; *Hamāsa*, ed. Freytag, 72, 375; *Lisān*, xv. 56). In any case we always find the Khath'am associated with tribes of the south either in alliances made on the occasion of expeditions (e.g. *al-Aghānī*, ix. 17; xii. 47 sq.; xviii. 35—36) or during the *ridā* (al-Ṭabari, de Goeje, i. 1985 sq.), or latterly in the grouping of the tribes stationed in the military camps of Baṣra and Kufa (al-Ṭabari, i. 2495, 3174; ii. 122; but ii. 1382, 1—5, we find them also grouped with the Kināna, Kais 'Ailān, Muzaina and even Kuraish, all tribes of the north under the general denomination *Ahl al-'Alīya*. It seems that at this time [101 A. H.] the territorial principle had prevailed over the ethnic one). Their principal clans were the Shahrān, Nāhish and Aklub, the latter according to the South Arabian genealogy was of another origin (Aklub b. Rabi'a b. Nizār) and was late in entering the tribe (cf. al-Bakri, p. 53 ult.—54, 9).

We have no authentic information on the Khath'am for the remote period in the history of the Arabian peninsula (the identification proposed by Blau, *Z.D.M.G.*, xxii. 658; xxiii. 561, note 6 with the Ἀδραμίται *Adramitae* of Uranios and Pliny who are to be distinguished from the Χατραμωτίται of Ḥaḍramawt, is quite untenable). From the sixth century we find them inhabiting along with other tribes of diverse origins, the districts of Bisha, Turaba, Djurash, Tabāla; this last was the centre of the cult of the God *Dhu 'l-Khalasa* (on him see Wellhausen, *Reste*², p. 45—48), whom the Khath'am like the Badjila, Daws, Bāhila etc. worshipped (Yāqūt, i. 791; ii. 461, 703; iv. 62, 567 [= *Aghānī*, xi. 152], 578, 17 sq., where there are numerous references to the neighbours of the Khath'am and to the assignation of the part of the territory of Bisha at the end of the first century A. H. to some members of the Omayyad and Hāshimī families; Hamdānī, 135—136; Ibn al-Kalbī, *Kitāb al-Asnām*, 34 sq.).

Among the numerous guerilla wars in which the Khath'am were involved (cf. *Aghānī*, vii. 119; xii. 47, 51—52; xiv. 25; xviii. 35—36; *Naḳā'id*, ed. Bevan, 46; Yāqūt, ii. 735, 16; iv. 56, 16—17;

Hamdānī, 170, 21), the best known is that of Faif al-Rih in which their chief Anas b. Mudrik (or Mudrika) allied to the greater part of the Maḡhbiq, defeated the Banū 'Āmir b. Ṣaṣ'a'a commanded by 'Āmir b. al-Tufail [q.v.] who lost an eye in the battle (*Naḡā'id*, 469—472; Ibn al-Aṭṭar, ed. Tornberg, i. 474; *ʿIqd*, ed. 1293, iii. 102—103; *Diwān* of 'Āmir, ed. Lyall, Introd., p. 82—83, Nos. x., xi. [= *Mufaḡḡaliyāt*, N^o. cvi.], xii., xix., xxv., xxvii., Suppl., Nos. 1, 19). Anas b. Mudrik famous also as a poet was the hero of another enterprise of the Khath'am like that against the Banū Dījusham (*Aghānī*, ix. 17) and that in which he killed the famous poet-brigand Sulaik b. Sulaka (*Hamāsa*, 415—416; *Aghānī*, xviii. 137—138; Ibn Qutaiba, *Kit. al-Shi'r*, ed. de Goeje, 217). The biographical notes on Anas, who lived for several years after the introduction of Islām, have been collected by the author of this article in Caetani, *Annali dell' Islām*, x. 499—500 (year 40 A.H., § 347).

The position of the lands of the Khath'am enabled them to play a part in the Abyssinian expedition against Mekka. They tried to oppose Abrahā's advance but beaten by him, they were forced to guide the enemy's army as far as al-Tā'if (see the sources collected in Nöideke, *Gesch. d. Pers. u. Araber*, p. 206—217). The spread of Islām at first left them indifferent (no heed need be paid to the story in al-Ṭabarī, i. 1079—1080, of the Khath'amī *kāhina* of Tabāla, Fāṭima bint Murr, who saw a "divine" light on the face of 'Abdallāh b. 'Abd al-Muṭṭalib, the future father of the Prophet. The only interesting feature of the story is the epithet Judaising, *Mutahawwidu*, conferred on the *kāhina*). Their first relations with Muḥammad were certainly hostile (Wāḡidī, transl. Wellhausen, 387; al-Ṭabarī, i. 1730—1731), but they ultimately sent him an embassy and recognised him and accepted a letter from him which declared all the blood-feuds previous to Islām abolished (Ibn Sa'd, i. 2, 34, 78; *Annali dell' Islām*, ii. 330, year 10 A.H., § 28, cf. also § 23, p. 326—327). On the death of the Prophet, only a section of them rebelled (*Annali*, ii. 573—574, 581, 585, year 11 A.H., § 87—88, 98 104). The destruction of the sanctuary of Dhū l-Khalasa by 'Abdallāh b. Dījafir al-Badjalī must have broken their resistance along with that of other tribes who were grouped round this turbulent centre (al-Ṭabarī, i. 1985 sq.). During the wars of conquest we find them in the army of Syria (Ibn 'Asākir in *Annali*, iii. 588, year 15 A.H., § 66a, cf. also al-Ṭabarī, i. 3287, 11, 3408, 2—17) as well as in those of the 'Irāq (al-Ṭabarī, 2188, 11—12), and as we have seen, they formed part of the tribes quartered at Baṣra and Kūfa.

Several Khath'amī women were married to Qurayshis. One of them played rather an important part in the early history of Islām: Asmā' bint 'Umais is one of the first women converted to the faith of Muḥammad, who took part in the emigration of the first Muslims to Abyssinia. She was successively the wife of Dījafir b. Abī Ṭālib, Abū Bakr and 'Alī, which gives special prestige in Muslim tradition (Ibn Sa'd, viii. 205—209 and cf. *Annali dell' Islām*, x. 231—236, year 38 A.H., §§ 269—292). Her sister Salmā was the wife of Hamza b. 'Abd al-Muṭṭalib (*Annali*, loc. cit., § 285, Ibn Sa'd, viii. 209); a daughter of Anas b. Mudrik, Asmā', was the wife of Khālīd

b. al-Walīd (Ibn Ḥadjar, *Iṣāba*, Cairo, viii. 6, N^o. 39; *Annali*, ix., year 37 A.H., § 412; x. 499).

The Khath'amī poets were few in number; the most notable is Ibn al-Dumaina (*Aghānī*, xv. 151—157; Ibn Qutaiba, *Kit. al-Shi'r*, p. 458—459, etc.), who flourished probably at the end of the first or at the beginning of the second century A.H. and who is famous for the sanguinary revenge he took for his wife's unfaithfulness.

Bibliography (besides works quoted in the article): Ibn al-Kalbi, *Dījamharat al-ansāb*, MS. of the Escorial, fol. 124^v—127^r, of which Ibn Duraid, *Ishṭikāḡ*, ed. Wüstenfeld, 304—306 and *ʿIqd*, ed. 1293, ii. 78—79 are résumés.

(G. LEVI DELLA VIDA)

KHAṬṬA (plur. *khaṭāyā* and *khaṭi'āt*), sin, synonymous with *dhanb*. The root *kh-t'* has the meaning of stumbling (in Hebrew: Proverbs, xix. 2), committing an error (*akhṭa'a* is said e.g. of the bowman whose arrow misses the aim); see the art. **KHAṬA'**. The definition of *khaṭi'a* is "a sin committed on purpose"; that of *khi'* (see Sūra xvii. 33) simply "a sin", whereas *iḥm* is applied to heavy sins. Probably these theological distinctions belong to the Islāmic period only; it seems doubtful whether the pagan Arabs were acquainted with the term *khaṭi'a* at all. It occurs in the *diwān* of ʿKais b. al-Ruḡaiyāt, ed. Rhodokanakis, N^o. 18, vs. 3, p. 129, in the sense of fault, defect (kind communication from F. Krenkow). It is only in accord with the general character of the Qur'an that this book does not contain an elaborate theory of sin; frequent are, however, the passages in which the consequences and forgiveness of sins is spoken of. Allāh, *al-Raḥmān al-Raḥīm*, through the preaching of His Apostles and Prophets, calls men unto forgiveness of sins (Sūra xiv. 11; xlv. 30; lxxi. 4, 6). Who avoids heavy sins and immoral deeds will find plenty of forgiveness with his Lord (Sūra liii. 33), who forgiveth sin and accepteth repentance (Sūra xl. 2); He is the best of forgivers (Sūra vii. 154); He forgiveth sins totally (*djami'an*; Sūra xxxix. 54).

This is the general aspect of forgiveness of sins in the Qur'an. Further details are also given. When Mūsā says: "O my Lord, I have wronged myself (*zalamtu nafsī*), forgive me", Allāh forgives him (Sūra xxviii. 15; cf. Sūra xxxviii. 24 [Dā'ūd], etc.). But he who dies as an infidel or as a polytheist will not find forgiveness (Sūra iv. 51, 136; xlvii. 36); *kufr* [q.v.] is forgiven, however, when it is done away with (Sūra viii. 39). But he who "is enveloped" by his sin will remain in Hell for ever (Sūra ii. 75).

This is a mild view; it agrees, on the whole, with the position of Judaism and Catholicism on this point. But it is not to be forgotten that Allāh remains free: "He spareth whomsoever He pleaseth and punisheth whomsoever He pleaseth" (Sūra iii. 124).

The mild attitude regarding sinners taken by the Qur'an is kept on by Islām. Yet the doctrine of sin, the distinction of light and heavy sins as well as their punishment were the object of serious controversy in early Islām.

The distinction between light (*saḡḡā'ir*) and heavy (*kabā'ir*) sins could be maintained in accordance with passages from the Qur'an such as Sūra xlii. 35, where the term *kabā'ir* is already used. Christian dogmatics have certainly exercised influence, as may be seen from the doctrine of the (seven)

capital sins which occurs in Ḥadīth: "The Apostle of Allāh said: Avoid the seven capital sins (*mū-bīkāt*). When he was asked what they are, he answered: Polytheism, sorcery, killing those who may not be killed except for a lawful reason, spoiling the possessions of orphans, usury, fleeing from battle against the enemy, and abusing heedless, faithful *muḥṣanāt*" (Muslim, *Imān*, trad. 144; al-Bukhārī, *Waṣāyā*, bāb 23). In other enumerations of the capital sins there are deviations from this scheme; theology and ethics maintain the view that there are sins heavier than those enumerated in the tradition just mentioned. Al-Nawawī in his commentary (i. 170) cites a passage from Abū Muḥammad b. 'Abd al-Salām the contents of which are the following. Whosoever wishes to know whether a sin belongs to the class of the light or to that of the heavy ones may compare its character with the character of the capital sins. If it is lighter than the lightest of capital sins, it belongs to the light ones; in other cases it belongs to the heavy ones. Who e.g. disdains his Lord or throws the Qur'ān into the mire has committed one of the heaviest sins, though the law does not characterise it as such. Likewise, if a man should lay hold on a woman in order to give his companion opportunity to violate her, or if he should detain a man in order to give his companion to kill this man, such a deed would bear a much more sinful character than the spoiling of the possessions of orphans, though the latter figures among the capital sins. In the same portion of his commentary al-Nawawī speaks of the strongly deviating opinions concerning the distinction between light and heavy sins. He cites the saying of Ibn 'Abbās: "Everything which Allāh has prohibited, when perpetuated, is a heavy sin." And other theological authorities have said: "Every action contrary to the law is a heavy sin with a view to Allāh's Majesty." Yet the great majority of the theologians are unanimous in making a distinction between light and heavy sins. Although they recognise the view just mentioned to be right with respect to Allāh, yet there is a gradation with a view to sins considered by themselves. Accordingly the law calls light sins those which are atoned by the five ṣalāts, by the Ramaḍān-fast, by the ḥajj, etc. But how can light sins be distinguished from heavy ones? Several answers on this question are given. According to one view, every sin which is mentioned in connection with Hell, with Allāh's anger, curse or punishment belongs to the heavy ones. Another view: Every sin committed without signs of fear or circumspection or with levity belongs to the heavy ones; but sins due to slips of the tongue, to a relaxed control of the passions and the like are to be reckoned among the light ones. Such contradictory definitions induce Abū 'l-Ḥasan al-Wāḥidī to state that there are certain sins that are called heavy by law, others that are called light, and others that are not provided with either of these epithets. Prudence therefore commands men to avoid all sins lest he prove to have committed one of the heavy ones. — The *ulamā'* say: Persevering in committing light sins makes them heavy; and on the authority of 'Umar and Ibn 'Abbās the sentence is handed down: "No sin is heavy if forgiveness is asked, no sin is light if the transgressor perseveres in it." Thus far al-Nawawī.

This theory concerning light and heavy sins and their forgiveness, which may be called representative

of the views of orthodox Islām, was not shared by two sects of so divergent tendencies as the Khāridjis [q. v.] and the Mu'tazilis [q. v.] were. Both hold the position that the consequence of heavy sins will be eternal punishment. This position is connected with the question concerning the relation existing between faith and works. While orthodox Islām, theoretically at least, emphasises the value of faith, these sects lay stress upon works as the criterion of a man being faithful or not; their most consequent opponents in this respect were the Murdjis [q. v.]. The line of distinction which orthodox Islām draws between Muslims and Kāfirs was removed to the right by the Khawāridj and the Mu'tazila, so as to add to the damned also the Muslims who were guilty of heavy sins. The echo of the fervent debates between the parties is still heard in the commentaries on the Qur'ān. Al-Baiḍāwī comments upon Sūra ii. 75 (see above): The "envelopment" mentioned here can only refer to Kāfirs; consequently those who have committed heavy sins do not fall under the verdict of this verse.

Verses like Sūra xxxix. 55: "Allāh forgiveth sins in their totality" and Sūra ii. 284: "He forgiveth whomsoever He pleaseth and He punisheth whomsoever He pleaseth", prove that punishment of sins is not necessary and that heavy sins are also pardoned (Fakhr al-Dīn al-Rāzī, *Mafātiḥ al-Ghaib*, ii. 82). Al-Baiḍāwī (see also Fakhr al-Dīn al-Rāzī, v. 455): "It is not true that for the forgiveness of sins *tawba* [q. v.] is necessary; this is only required for *shirk*" [q. v.]. Still, however strong this assertion may be, Fakhr al-Dīn al-Rāzī does not fail to declare in his commentary on Sūra xxxix. 54: "Perhaps He will pardon sins in general and perhaps He will punish in Hell for a time and pardon afterwards".

Al-Zamakhsharī, who was a moderate Mu'tazilī, combats such views. Commenting upon the words "He pardoneth whomsoever He pleaseth" (Sūra iii. 124) he remarks: "On account of *tawba*, for He is not disposed to grant forgiveness except to those who repent". And he fulminates against the interpretation of the verse which is put into the mouth of Ibn 'Abbās: "He granteth heavy sins to whomsoever He pleaseth and He punisheth whomsoever He pleaseth on account of light sins"; words, indeed, to bring a Mu'tazilite to despair.

As is to be expected, the orthodox view or heavy sins being pardonable is also to be found in Ḥadīth. The Prophet said: "Jibril visited me and cheered me with the assurance: Any member of thy community who dies confessing Allāh's unity will enter Paradise". I said: "Even if he has committed adultery and theft?" He said: "Even if he has committed adultery and theft?" (Muslim, *Imān*, tr. 153). Al-Nawawī remarks in his commentary on this tradition: "This is a *locus probans* for the opinion of the Sunnites that those who have committed heavy sins will not suffer everlasting punishment in Hell and that they will be taken back from Hell if they have entered it; and that they finally will enter Paradise and remain there for ever." All this is elaborately treated in the traditions on intercession (see the article *SHAFĀ'A*) where it is stated anew that Muḥammad intercedes also on behalf of grave sinners and that through his intercession they are allowed to leave Hell.

Innumerable are the traditions in which Muḥammad mentions forgiveness of sins on account

of good works of every kind. In some of these traditions the qualification occurs: "except heavy ones"; this clausula represents the common orthodox view (see above) that light sins are repaired by good works of every kind, that heavy ones require *istighfār* and that *shirk* requires *tawba* [q. v.]. *Shirk*, polytheism, is consequently the heaviest sin; the lightest is the so-called *ḥadīth al-naḥs*, i. e. sinful thoughts which do not issue into reality; it is even said that no account of these thoughts is taken in the computation of sins on the Day of Resurrection. The idea is expressed in the following tradition: "The Apostle of Allāh said: Allāh does not take into account what the members of my community think as long as they do not pronounce it or carry it out" (Muslim, *Imān*, tr. 201—208). This tradition, which also occurs in other forms, is another proof of the mild attitude taken by orthodox Islām towards sin, an attitude which forms a counterbalance against the severe doctrine of *ḥadar* [q. v.]. The tradition just mentioned and the attitude from which it arises are the more remarkable because Muslim theology is very strict in matters regarding the intention (cf. the art. *NIYA*). On the other hand, scrupulousness regarding sinful thoughts is highly praised. Once Muḥammad's companions said to him: "We find in our inner self thoughts which we would have scruples to pronounce." He said: "Do you find them really?" They answered: "Yes". Then he said: "This (scrupulousness) is pure faith" (Muslim, *Imān*, tr. 209). In this connection also the following *ḥadīth* may be mentioned. "Anas said: Verily, you do things which, in your eyes, are more insignificant than a hair is thick; but in Muḥammad's lifetime we considered them as capital sins" (al-Bukhārī, *Riḥāḥ*, bāb 32). Finally one tradition must be mentioned which could be called a step in the direction of the attitude of Khāridjis and Mu'tazilis regarding heavy sins. "The Apostle of Allāh said: Who commits fornication is not a believer at the same time, nor is he who steals or drinks wine" (Muslim, *Imān*, tr. 100; cf. tr. 101—105; cf. al-Bukhārī, *Hudūd*, bāb 1, 6, 20 etc.). Al-Nawawī in his commentary is anxious to prove that the words "is not a believer" do not imply a total, but only a partial lack of faith, and he states that "the *idīmā'* of the people of the truth" is that those who commit fornication, theft, murder or any sin considered as one of the *kabā'ir*, except *shirk*, are not for this reason infidels; no, they are believers lacking in faith; if they repent, their punishment is abolished and if they die persevering in heavy sins they are left to Allāh's pleasure: if He pleaseth, He forgiveth them and maketh them enter Paradise at once, and if He pleaseth, He punisheth them and maketh them enter Paradise afterwards. — Similar views and their opposite lie also at the bottom of the much debated question whether faith is liable to increase and diminution.

In ethical and mystical literature we find a more systematic and elaborate classification of sins; cf. Abū Ṭālib al-Makkī, *Kaṭ al-Ḳulūb*, i. 85 sq.; al-Ghazālī, *Iḥyā'*, vol. iv., book i. (on repentance). Abū Ṭālib recognises four classes of sins, a division which was borrowed from him by al-Ghazālī. Those of the first kind are called *rabbūbiyya*, sins such as haughtiness and pride, boasting, arrogance, love of praise, love of life, ambition, despotism;

those of the second class are called satanic (*shaiṭāniyya*); it comprises such sins as envy and deceit; those of the third class bear the epithet of "animal" sins (*bahimiyya*); these are avidity, covetousness, rage and lust; the fourth class comprises those sins which remind of the nature of the beasts of prey (*sabū'iyya*), such as wrath, fighting and murder.

Al-Ghazālī rejects the view of those who do not recognise a practical difference between light and heavy sins. He mentions the enumerations of heavy sins varying between four and eleven, and cites Abū Ṭālib al-Makkī's view that "there are 17 heavy sins, four in the heart, to wit: polytheism, persevering in sin, despair of Allāh's compassion, and *لِسَانٌ مَكْرَهٌ*; four in the tongue, to wit:

false witness, abusing the *muḥṣan*, false oath, and sorcery; three in the belly: drinking water and intoxicating drinks, spoiling the goods of orphans, and usury; two in the genitals: fornication and pederasty; two in the hands: murder and theft; one in the feet: fleeing from battle; one in the whole body: disobedience regarding one's parents.

The mystics, notwithstanding such classifications, see sin in a more general light. It is man as such who is a sinner. It is necessary for him to know Allāh in His highness and to know himself in his baseness. For the soul is like a mirror disfigured by rust, which has to be cleaned and polished, so as to be able to reflect the higher world. This polishing process dominates the life of the mystic and gives rise e. g. to the *muḥāsaba*, the daily examination of one's self with a view to sins committed and to the means to avoid them in future (*Iḥyā'*, vol. iv., book viii.; cf. Asin Palacios, *La Mystique d'al-Ghazālī*, M.T.O.M., vii. 90 sq.). It is this consciousness of sinfulness which lies at the root of the mournful attitude of the mystics and which has inspired so many sayings expressing their fear to appear before Allāh after death (cf. R. Hartmann, *Al-Kuschairī's Darstellung des Sūfismus*, p. 11 sq.).

Two deviating attitudes regarding sin taken by the mystics have still to be mentioned: that of the *Ibāḥiyya* and that of the *Malānatiyya*. The former have turned their back to the *via purgativa* of the mystic and maintain that the fetters of law and morals have no longer to be borne by him who participates in true mystic life. For a full description see the art. TAṢAWWUF. — The *Malānatiyya* [q. v.], on the other hand, start from the conception that the mystic has to avoid all that may confer on him the praise of mankind and their admiration. They therefore do not shun actions which expose them to general reproof or disdain, actions which in their case are not the outcome of their indulging in sinful inclinations and which, without the purpose of incurring blame, would loose nothing of their sinful character.

(A. J. WENSINCK)

KHAṬĪB (A.), plur. *khaṭābā'*, was, among the ancient Arabs, the name for the spokesman of the tribe. The *khaṭīb* is therefore often mentioned along with the *shā'ir*, the poet (Ibn Hishām, *Sira*, ed. Wüstenfeld, p. 934, 1 from below, 938, 5 from below; Yāqūt, ed. Wüstenfeld, iv. 484, 11 sq.), and, like the *kāhin* and the *saiyid*, was one of the leaders of the tribe. The character and significance of his office is clearly explained by Djāhiz, *Kitāb al-Bayān wa'l-Tabyin*, Cairo 1332, vols. 1—3. The distinction between *khaṭīb* and *shā'ir* is not

absolutely definite but practically is that the *shā'ir* uses the poetic form while the *khaṭīb* expresses himself in prose, often, however, also in *saḍī'* (cf. *Djāḥiẓ, op. cit.*, i. 159); his speech is introduced with *anmū ba'dū* (al-Ḥariri, ed. de Sacy, 1822, p. 42). According to *Djāḥiẓ*, there were a few *khuṭabā'* who were also *shu'arā'* (i. 27). In the *Djāḥiliya* the *shā'ir* is said to have been more highly esteemed than the *khaṭīb* but when the numbers of poets gradually increased and the latter's art declined and they became beggars, the *khaṭīb* obtained more prestige (i. 136; iii. 227). The *khaṭīb* is also associated with the story-teller, the *kāss*, and with the *aṣṣāb al-akhbār wa 'l-athār* (*Djāḥiẓ*, i. 167 sq. and passim); the office was sometimes hereditary in the same family. The *khuṭabā'* did not form a gild or caste; they were the men who had the ability to be spokesmen. They appear not only at the head of a *wafd* to negotiate as representatives of their tribe, as we know from the *Sira* (cf. Goldziher, *Abhandl. zur arab. Philol.*, i. 20), but, like the poets, they were also the leaders in the war of wits with the enemy (*mufākhara*). The *khaṭīb* had to, be able to extol the glorious deeds and the noble qualities of his tribe and to narrate them in perfect language and to be able likewise to expose the weaknesses of his opponents. He had therefore to be *faṣīḥ* and know how to employ *balāgha* and in this way to overcome his opponents (cf. *The Mufaḍḍaliyāt*, ed. Lyall, xci. 22 sq., xcvi. 9; al-Kuṭāmī ed. J. Barth, xiv. 20; Ibn Kays al-Ruḳaiyāt, ed. Rhodokanakis, *S. B. Ak. Wien*, 1902, xlv. 19; *Kāmil*, ed. Wright, 20, 15 sq.). Lampoons give the following characteristics of a poor *khaṭīb*: his pronunciation is bad, he turns too and fro, stammers, coughs, strokes his beard, twists his fingers, a sign of cowardice (*Ḥamāsa*, ed. Freytag, p. 650, verse 5; *Kāmil*, ed. Wright, p. 20, 7, 9 sq.). It is in keeping with the character of the ancient Arab *khaṭīb* that he is included among the fighting knights and nobles (al-Kuṭāmī, *op. cit.*; *Djāḥiẓ*, i. 134, 8 sq., 172, 11), indeed, *khaṭīb* itself is used as a name for a brave warrior (*Djāḥiẓ*, i. 129). When the *khaṭīb* makes a public appearance his insignia are lance, staff or bow (*al-makhṣir*), just as a man taking an oath carries tokens of masculine honour; he often strikes the earth with it (cf. al-Kuṭāmī, xxvii. 6; Labid, *Dirwān*, ed. al-Chālidī, 7, 15 [p. 27], 9, 45 [p. 45]; *Djāḥiẓ*, i. 197 sq., iii. 3 sqq., 61 sq.).

In the earliest days of Islām the *khaṭīb* retained much of his old character. "The prophet came forward as a *khaṭīb*" after the conquest of Mekka (Ibn Hishām, ed. Wüstenfeld, p. 823, 3 from below) and spoke publicly with ceremony and authority. But the *khuṭba* now became solely an address to the Muslims, not a part of the war against the enemy and *mufākhara* was no longer part of the activities of the Muslim *khaṭīb*. But it is quite in keeping with the nature of early Islām and with that of the Arab *khaṭīb* that the ruler himself was spokesman and that he not only made edifying speeches from the *minbar* as *khaṭīb* but also issued orders, made decisions and pronounced his views on political questions and particularly questions of general interest. This was the case under the first four caliphs and the Umayyads (cf. *Djāḥiẓ*, i. 190), and the governors appointed by them also acted as *khuṭabā'* (e.g. al-Ya'qūbī, ed. Houtsma, ii. 318 infra); *Djāḥiẓ*, i. 179 middle, etc.); the local

governors appointed by the latter were also entrusted with the control of the *minbar* and of the *ṣalāt* (al-Ṭabari, ii. 929, 11 sq.). Diatribes against and curses on the enemy were part of their *minbar* speeches, e.g. the curses on 'Alī and occasionally on Ṭalḥa and al-Zubair (*Djāḥiẓ*, i. 165). *Khaṭīb* was therefore still synonymous with "leader"; a poet of the *Khawāridj* says: "There will be no peace so long as there is a *khaṭīb* from Ṭhāḳif on the *minbar*'s of this world" (*Djāḥiẓ*, iii. 135). An inheritance from the ancient Arab spokesman is the staff or lance which the Muslim *khaṭīb* holds in his right hand during the *khuṭba*, a custom which provoked the scorn of the Persians (*Djāḥiẓ*, iii. 135.). But the close connection between the *khuṭba* and divine service gave the Muslim *khaṭīb* a specifically religious character. After the conclusion of the wars of the first generations, this element became more predominant and in the time of the 'Abbāsids, as early as Hārūn al-Rashīd, the caliph left it to the *kādīs* to deliver the sermon at the service while he himself was simply a listener (*Djāḥiẓ*, i. 161). But in theory the leaders of divine service in the great mosques are representatives of the caliph (cf. Ibn Khaldūn, *Muḳaddima*, Cairo 1322, p. 173).

The Egyptian Fāṭimids still occasionally preached themselves (behind a veil), namely 3 times in the month of Ramaḍān and at the great festivals (Ibn al-Taghribirdī, ed. Juynboll, ii. 482—486; ed. Popper, p. 331 sqq.; al-Makrizī, *Khiṭaṭ*, Cairo 1334, ii. 322, 327, 329). On this occasion his highest dignitaries stood on the steps of the *minbar* (*op. cit.*, p. 327, 329), while on the other hand the *ra'īs* of a district often stood on the *minbar* if the *khaṭīb* was preaching, a custom which testifies to the original high rank of the *khaṭīb*, but was later condemned by strict authorities on morals (Ibn al-Hādīdj, *Kitāb al-Madkhal*, Cairo 1320, ii. 74). Special *khuṭabā'* were everywhere appointed. There were three of them in Cairo during the earlier Fāṭimid period (for the 'Amr, Ibn Ṭulūn and al-Azhar mosques); cf. al-Makrizī, *Khiṭaṭ*, ii. 348, 6; as a rule it seems to have been the honorary office of a *kāḍī*; cf. *op. cit.*, p. 224, 8 infra. On the *'Id al-Ghadrī*, a special *khaṭīb* pronounced the *khuṭba* on a *minbar* with 9 steps in the sanctuary of Ḥusain in Cairo, while the chief *kāḍī* conducted the *ṣalāt*; the *khaṭīb* on this occasion was given a silk robe and 30 or 50 *ḍinārs* (al-Makrizī, *Khiṭaṭ*, ii. 224 sq.). On other occasions also the *khaṭīb* received a robe of honour (*op. cit.*, ii. 387 infra). The *khaṭīb* usually was also the conductor (*imām*) of the Friday *ṣalāt* at which he preached and, according to Abū Ḥanīfa and a tradition of Mālik, he must actually do so unless there were special reasons for a deviation from the rule. The daily *ṣalāt*'s are as a rule conducted by other *imām*'s (al-Māwardī, *al-Aḥkām al-Sultāniya*, ed. Enger, p. 181, 3 from below). According to al-Shāfi'ī and Mālik, the Friday service with *khuṭba* can only be held in one mosque in each town, if the size of the town does not make it impossible, while Abū Ḥanīfa has no such rule. The *khuṭba* was therefore delivered, for example, in Cairo after the end of the Fāṭimid period in the Ḥākim mosque only, because Saladin appointed a Shāfi'ī chief *kāḍī*. This state of affairs was altered by Baibars when he appointed a Ḥanafī chief *kāḍī* (al-Makrizī, *Khiṭaṭ*, iv. 53). Abū Ḥanīfa on the other hand allows divine service

in which a *khaṭīb* takes part only in a large town (*miṣr*), in which the ruler or his deputy is present in person. The other schools are less rigorous on the point. But the Imām-*khaṭīb* of the Friday service is, according to the other schools also, in theory the representative of "the highest Imām". Several Imāms can be chosen, if necessary with their exact functions defined. According to al-Māwardī (p. 172), the Sultān appoints the imāms of the larger mosques, in keeping with the theory of their representative character. But, according to al-Kāḷkashandī (*Ṣubḥ al-Aṣḥā*, Cairo, iv. 39), each mosque under the Mamlūks had its own *khaṭīb* while the Sultān only concerned himself with the larger mosques. The office of *khaṭīb* of the important mosques was a very distinguished one. Thus, according to Ibn 'Abd al-Zāhir, the Shāfi'ī chief qāḍī himself was *khaṭīb* of the great mosque in the citadel of Cairo (cf. P. Ravaisse, *Zoubdat kachf el-mamālik*, 1894, p. 92) and it was regarded as a special distinction, anxiously coveted, when Saladin after the conquest of Jerusalem chose the qāḍī Muḥyi al-Dīn Abu 'l-Ma'ālī to act as first *khaṭīb* in the Aḳṣā mosque (Shihāb al-Dīn, *Kitāb al-Rawḍatayn fī Akḥbār al-Daw-latayn*, Cairo 1288, ii. 108 sqq.). The document confirming his appointment under the Mamlūks is further evidence of the *khaṭīb*'s dignity (cf. al-Kāḷkashandī, *op. cit.*, ii. 222—225; al-'Umari, *Kitāb al-Ta'rif bi 'l-Muṣṭalah al-Sharīf*, Cairo 1312, p. 126 sq.). He is the natural authority to whom new converts announce their conversion to Islām (Ibn al-Hādjdī, *Kitāb al-Madkhal*, p. 76); the people touch his robe *li 'l-tabarruk*, etc. (al-Sha'rānī, *Kitāb al-Mizān*, i. 169). According to al-Māwardī (p. 185), the *khaṭīb* ought preferably to wear black clothes, according to al-Ḡhazālī, white, while the first mentioned would be *bid'a* (*Iḥyā'*, Cairo 1322, p. 131, 10 f. b. sqq.). His insignia are *al-'ūdāni*, the "two things of wood" i. e. the *minbar* and the staff or wooden sword which he has to hold in his hand during the sermon, according to the Fikh books also. According to the law of 1911 applied to al-Azhar, art. 59, every one who has passed through the second of the three divisions of the institute can become a *khaṭīb*. While in al-Azhar itself only one *khaṭīb* is appointed (al-Zaiyātī, *Ta'rikh al-Azhar*, Cairo 1320, p. 207), there were in 1909 in the mosque of the Prophet in Medina 46, in Mekka 122 *khaṭibā*, besides their deputies. They enjoy certain foundations and the office is on the whole hereditary (al-Batanūnī, *al-Riḥla al-Hidjāsiya* 2, Cairo 1329, p. 101, 242).

Beside the official *khaṭīb*, the *wā'iz* exercised the function of an edifying preacher, when he pleased (cf. A. Mez, *Die Renaissance des Islāms*, 1922, p. 318 sqq.).

AL-KHAṬĪB AL-BAGHDĀDĪ, ABU BAKR AḤMAD B. 'ALĪ B. THĀBIT, known as al-Khaṭīb al-Baghdādī, was born on the 24th Djumādā II, 392 (1002) at Darzidjān, a large village on the west bank of the Tigris below Baghdād. The son of a *khaṭīb* (preacher), he began his studies very early and spent his youth travelling in search of ḥadīth. In this way he visited Baṣra, Nishāpūr, Isfahān, Hamadān and Damascus. Finally settling in Baghdād, he held the office of a *khaṭīb* there and this was the origin of the name al-Khaṭīb al-Baghdādī by which he is known to posterity. His profound erudition in the matter of tradition gained him great fame and authority in his new abode; one of his biographers says that preachers and teachers of tradition used to have to submit the traditions they had collected to his expert opinion before quoting them in their sermons and in their lectures. On the other hand al-Khaṭīb seems to have suffered from the hostility of the Ḥanbalis, who were numerous and powerful in Baghdād at this period. His preference for the Shāfi'ī-school, after having been at first a Ḥanbalī, his theological opinions which were quite uncompromising in their Ash'arism, attracted to him the hatred of the pupils of the Imām Aḥmad who were enemies of all bold theological speculation. He succeeded however in spite of the opposition of the Ḥanbalis and thanks to the protection of the Caliph al-Kā'im and the vizier Ibn al-Muslima in opening a course of lectures on ḥadīth (*imlā'*) in the mosque of al-Manṣūr. It seems, that retaining a bitter resentment for the enmity shown him, al-Khaṭīb never lost an opportunity in his lectures and writings of making malicious insinuations against Aḥmad b. Ḥanbal and the Ḥanbalis and even attacking them openly. He was on this account accused by later generations of *ta'assub* (legal and theological bias) and there is a body of polemical literature against him (cf. Hādjdji Khalifa, iii. 632). When the successful rebellion of al-Basāsiri brought about the ruin of Ibn al-Muslima, al-Khaṭīb fled to Damascus; arrested by order of the Fātimid governor, he only narrowly escaped execution by a precipitous flight to Ṣūr and Aleppo. Returning to Baghdād after the Saldjūks had restored order there, al-Khaṭīb, "ḥāfiẓ of the east", died there a year later on Monday 7th Dhu 'l-Hijjā 463 (1071) in the same year as Ibn 'Abd al-Barr, the "ḥāfiẓ of the west". He was buried in the presence of a vast concourse beside the tomb of the venerated Bishr al-Hāfi.

Al-Khaṭīb's work was considerable: according to his biographers about a hundred treatises. The most celebrated of his works is the *Ta'rikh Baghdād*, a repertory of scholars of tradition living in Baghdād; the geographical, topographical and historical introduction, which precedes the biographical collection has been abbreviated and partly published and translated into French by G. Le Strange (*A greek Embassy to Bagdād in 917*, *J. R. A. S.*, 1897, p. 35—45); edition of the text . . . ; mention should also be made of his *Kifāya fī ma'rifat uṣūl 'ilm al-riwāya* and his *Taqyīd al-'ilm*, on which see the

analysis by Ahlwardt in *Verzeichniss der arab. Handschriften der König. Bibliothek zu Berlin*, ii. 1039, and 1035; a list of other works by al-Khaṭīb from the *Mir'at al-Zamān* of Ibn al-Djawzī is given by Salmon, p. 8—10, and could be utilised with the aid of the following corrections: N^o. 2: *al-Djāmi' li-akhlāk al-rūwī wa 'l-sāmi'* (instead of *li-akhlāf*); N^o. 4 *al-Mottaṭīf wa 'l-muṭṭarīf* (instead of *wa 'l-muṭṭarīf*); N^o. 10 *al-Faḥīh wa 'l-mutaṭṭaḥīh* (instead of *wa 'l-mutaṭṭaḥīh*); N^o. 20 *Man ḥadatha fanasiya* (instead of *fanasa*); N^o. 26 *al-Taṭṭīl li-muḥam al-marāsīl* (instead of *al-taṭṭīl*; work on the *ḥadīth murāsīl*); N^o. 32 *al-Idjāza lil-ma'dūm wa 'l-maḥḥūl* (instead of *al-idjāza*; work on *idjāza* granted to an individual unnamed or not yet born); N^o. 33 *al-Bukḥatā'* (instead of *al-naḍīlā*; cf. Rieu, *Supplement to the Catalogue of arab. MSS. in the British Museum*, N^o. 1132) and *al-Aṣmā' al-mutaṭṭaḥīya* (opposed in logic to the *asmā' moshakkika*); N^o. 41 *al-Muḍīḥ* and *al-kunūt* are two distinct works (instead of *al-Muḍīḥ wa 'l-kunūt*).

Bibliography: Brockelmann, *G. A. L.*, i. 329; Salmon, *L'introduction topographique à l'histoire de Bagdad d'Abū Bakr Aḥmad ibn Ṭhābit al-Khaṭīb al-Baghdādī*, Paris 1904; Goldziher, *Muham. Studien*, ii. 154, 183, 184; Biographies of al-Khaṭīb are given in Ibn Kḥallikān N^o. 33; *Ṭabaḳāt al-ḥoffāz* xiv. 14; a long account of him is given in the *mir'at al-zamān* of Ibn al-Djawzī (MSS. of Paris 1506, p. 131, 132). (W. MARÇAIS)

KHATM (A.) or **KHAṬMA**, the technical name for the recitation of the whole of the *Qur'ān* from beginning to end. It is an infinitive from *khatama*, which is derived with the meaning "to end, to conclude" from the foreign word *kḥātam*, "seal, seal-ring" (Fränkel, *Die aramäischen Fremdwörter im Arabischen*, p. 252), because the seal was affixed at the end of a document. The complete recitation of the *Qur'ān* is, especially if it is done within a short time, a meritorious achievement, e.g. in 8 nights, as Ubayy b. Ka'b is said to have done (Ibn Sa'd, iii.ii. 60, 23; cf. on 'Uthmān *ibid.*, iii/i. 53, 3). It is related of Sulaimān al-A'mash (in Lane s.v.) that he accomplished the *khatma* soon after 'Uthmān's edition and soon after that of Ibn Mas'ūd. For a dead man the reciters were asked to recite the *ḥir'at al-khatamūt* (e.g. in the 1001 Nights in the story of the merchant Ayyūb and his son). In Egypt the *khatma* was used as an entertainment for guests. In modern Mekka the so-called *iklāba* is celebrated when a boy has read through the whole of the sacred book (the ceremony after the half or one third is called *isrāfa*). In South Arabia a *kḥātam* is presented to one who has recited the whole book for the first time.

KHAṬṬ, pl. *Kḥuṭṭ* (the poet al-'Adjādī also uses the form *akḥṭāf*), meant originally a straight furrow or line dug into the ground or a line drawn in the sand by a stick or with the finger. The word is frequently used for the digging of a grave, because the latter was long and straight. Then it was used for the meaning of laying out a settlement with lanes or streets (*kḥiṭṭa*). Finally it has the meaning of a line ruled on paper or parchment, and a line of writing.

This latter meaning is probably derived from the earlier meaning of the lines which a diviner (*ḥāṣṣ*) drew in sand and from which he prognosticated the happy or unlucky issue of an undertaking about which he was consulted. For this purpose the diviner accompanied by an acolyte drew with utmost haste, so that he could not possibly remember the number, a quantity of lines in the sand. Then he slowly wiped out two lines at a time, while the acolyte recited the words: "Ye two sons of 'Iyān, hasten with the explanation!" If in the end two lines remained it was a sure sign of success, while one line meant disappointment. This being ancient priestcraft was prohibited by Islām, but another mode of divining survived for a long time and may be practised to the present day. The diviner in this art of *kḥaṭṭ* made only three lines in the sand and then used corns of barley or date-stones which he slung upon the lines, and from the way they fell upon the lines he prognosticated the good or evil result of the enterprise (cf. Ibn al-Aṭhīr, *Nihāya*, i. 303; *Lisān*, ix. 157—158).

Further *kḥaṭṭ* means essentially "handwriting" i.e. the Arabic script with its development and various styles; so we find it used in a verse of Imru' al-Kais (ed. Ahlwardt, 63, v. 1): "Like the writing of the Psalter on Yamanite palm-leaf". Similarly 'Abd Allāh b. 'Anama (*Mufaḍḍalīyāt*, ed. Lyall, 114, v. 5.) says: "Just as the ink is moved about in the writing from the inkstand". Later poems contain the mention of *kḥaṭṭ* for writing more frequently and the verse of the Islāmic poet al-Shammākh (ed. Cairo, p. 26, 7) may suffice: "As in Taimā a Jewish rabbi writes Hebrew with his right hand and then draws straight lines across (the parchment)". From this verse it becomes clear that not only Arabic writing, but any script is named *kḥaṭṭ*.

In modern language the word *kḥaṭṭ* is used for manuscript copies of books in opposition to printed books. The history of the development of the Arabic script need not be enlarged upon here as the subject has been dealt with in an earlier article (cf. the art. *ARABIA*, above, vol. i.). The secretaries (*kātib*, q.v.) developed a science about the correct formation of the letters, while necromancers in their turn invented a science by attributing special virtues to certain combinations of letters (cf. Ṭashkōprū Zāda, ed. Ḥaidarābād, i. 75—80; al-Kalkashandī, *Ṣubḥ al-Aṣḥā*, iii. 2—171, and elsewhere; and for the supposed mystical interpretation of writing principally the books of the Ḥurūfis). Cf. further the art. **KHAṬṬ-I HUMAYŪN**.

(F. KRENKOW)

AL-KHAṬṬ, a strip of coast on the Persian Gulf. The Arab geographers are not agreed as to its exact extent. While Yāḳūt limits the name to the coast of al-Baḥrain and 'Umān, which is also apparent from the mention of al-Ḳaṭīf, al-'Ukair and Ḳaṭar, al-Bakrī says definitely that al-Kḥaṭṭ is the whole coast between 'Umān and al-Baṣra on the one side and Kāzima and al-Shīhr on the other. This difference of opinion is probably the result of the variation in extent of 'Umān and al-Baḥrain in the wider sense of these terms in course of time.

There are in any case authors who allot al-Kḥaṭṭ to either the one or the other territory. Al-Kḥaṭṭ in Aḥmad b. Muḥammad al-Herawī, for example,

is simply a collective name for the villages in 'Umān, while Ibn al-Anbārī uses al-Khaṭṭ as the name for the coast of al-Bahrain. In contrast to these wide applications of a fairly general term there is a narrow one, according to which al-Khaṭṭ was a particular settlement on the coast which belonged to the 'Abd al-Kais. A. Sprenger has adopted this view, which was held by al-Balādhuri amongst others, and there is much in favour of locating al-Khaṭṭ preferably in the Gulf of al-Bahrain. The place was in any case noted as a market for the famous Khaṭṭi lance-shafts imported from India and sold to the Beduins. The name al-Khaṭṭ seems to be old. If A. Sprenger is right in connecting it with "regio Attene" and "Chateni" in Pliny, *Nat. Hist.*, vi. 28, 147, and the "Atta vicus" in Ptolemy, the name dates back to long before the Muḥammadan period.

KHAṬṬ-I HUMĀYŪN, "imperial rescript", an ordinance referring to reforms in the organisation of the Ottoman empire, promulgated by the Sultāns. The expression was primarily applied to the Sultān's fiat written by the sovereign himself at the head of the document; later when the charge of the *tughrā* [q. v.] was left to an official called *nishāndji*, the term was wrongly extended to the whole document itself. The expression is synonymous with *khaṭṭ-i sherif* but the usage in Ottoman administrative law is to apply the latter only to the *khaṭṭ-i sherif* of Gülkhāne, a constitutional charter granted by Sultān 'Abd al-Madjid (Shāhān 26, 1255 = Nov. 3, 1839), while the former is generally applied to the *khaṭṭ-i humāyūn* of the first third of *Djumādā II*, 1272 (Feb. 18, 1856). The latter addressed to the grand vizier Muḥammad Amin 'Alī Pasha had been obtained by the united action of French and English diplomatists at the end of the Crimean War. By this document, the Sultān acknowledging that his subjects were united among themselves by cordial bonds of patriotism (*waṭandāshi*, an expression that appears for the first time here but did not catch on) declared he would maintain the guarantees promised by the charter of Gülkhāne for the security of persons and property without distinction of class or cult, as well as the privileges and immunities enjoyed by non-Muslims: he accorded authority to repair churches and other buildings belonging to the various communities, put an end to the use of insulting appellations in administrative documents (for example of the term *ri'āyā*, applied to tributaries); proclaimed all his subjects eligible for public offices; instituted mixed tribunals composed of Muslims; announced the coming codification of penal and commercial law, and better organisation of the police, the application of recruiting to non-Muslims with the right of buying oneself out, the reorganisation of the provincial councils,

the right of foreigners to possess landed property, reforms in the levying of taxes, the making of banks, roads and canals. This law remained in force until the constitution of Midḥat Pasha in 1876.

KHAṬṬ-I SHARIF. [See KHAṬṬ-I HUMĀYŪN]. **KHAṬṬĀBIYA**, name of a sect reckoned among the Shi'ite extremists (*ghulāt*), called after Abu 'l-Khaṭṭāb Muḥammad b. Abi Zainab al-Asadi al-Adjda', who is said to have asserted the immanence (*ḥulūl*) of the deity in the Imām *Dja'far al-Šādiḳ* (83—148 = 702—765) and afterwards in himself. He obtained a following in al-Kūfa, where he was attacked by 'Isā b. Mūsā, who was governor for some years till 147 = 764/765; he armed his followers with stones, reeds and knives, assuring them that these would prevail against the enemy's swords and lances. This promise proved deceptive; his followers to the number of seventy were slaughtered, and he himself was captured in Dār al-Rizḳ on the bank of the Euphrates, impaled, his trunk afterwards burned and his head sent to Baghdād. This disaster did not terminate the existence of the sect, some of whom maintained that neither Abu 'l-Khaṭṭāb nor his followers had been really killed, the appearance having been delusive. Their numbers are computed by the best informed writer about 300 A. H. at 100,000, their location being the Sawād of al-Kūfa and Yaman; they had, however, no power or force. There is a brief allusion to their doctrine in Ibn Kūtaiba's *Ma'arif*, which is somewhat earlier, and in the work of al-Muṭahhar b. al-Tāhir, who is some fifty years later, but they seem to have done nothing which attracted the attention of the historians. After Abu 'l-Khaṭṭāb's death his followers are said to have transferred the imamate to Muḥammad b. Ismā'il b. *Dja'far al-Šādiḳ*, and are thus to be reckoned among the Ismā'ilis.

The statements about their specific doctrines are scanty and to be accepted with caution. They held, it is asserted, that Muḥammad transferred the prophetic office from himself to 'Alī on the Day of the Pond; and it would seem that Abu 'l-Khaṭṭāb must have asserted that similar transference had taken place from *Dja'far* to himself. Both Sunnī and Shi'ī writers maintain emphatically that *Dja'far* repudiated the claims made for him by Abu 'l-Khaṭṭāb, whose relation to him seems to have been similar to that of al-Mukhtār b. Abi 'Ubad to Ibn al-Ḥanafiya.

Of his other doctrines the best attested is that he taught absolute ruthlessness in dealing with opponents. Men, women and children were all to be massacred, his argument being the same as was employed by the Azāriḳa. False witness was lawful in dealing with them. Al-Muṭahhar asserts that in consequence the evidence of members of this sect was not accepted in the courts.

The later heresiologues know far more about the sect than do the earlier. With al-Muṭahhar the Bāzighiya are a separate sect, but al-Shahrastānī makes them a subdivision of the Khaṭṭābiya. The latter writer makes another subdivision, the 'Umairiya, who figure in 'Abd al-Kāhir's work as a subdivision of the *Djanāhiya*. Al-Shahrastānī also treats the Mu'ammariya as a branch of the Khaṭṭābiya, but Ibn Ḥazm evidently regarded them as

independent. By the time of al-Maḳrīzī the number of subdivisions had reached fifty, and Abū 'l-Khaṭṭāb's father's *kunya* was variously given as Abū Thawr and Abū Yazīd, probably through misreadings of the name Zainab. The sect is charged with repudiating the whole of the moral law as well as the whole ritual of Islām. Transmigration also appears among their supposed tenets. Since the sect appears to have left no literature, it is difficult to check these statements.

Sørensen, p. 345.

(D. S. MARGOLIOUTH)

KHĀTŪN (T.), a title of Mongol empresses and princesses, and of ladies of high rank; later simply "lady". The term is an old one. As early as the sixth century of our era we see from the Chinese annals that it was given by the Tu-kiue to the wife of the Khākān; the Chinese transcription is *kho-ho-tun* (Stanislas Julien, *Notice sur les Tou-kioue* *J. A.*, Ser. ii., Vol. iii., p. 331 sqq.; date c. 553—581). It is found in the form *kātun*, in the inscriptions of the Orkhon, (cf. W. Thomsen, I.E., ii., p. 101; *ögam Ilbilgü Kātun* "my mother the queen Ilbilge", I.E. 25, p. 106 and 31, p. 108; I.N.G., p. 113, p. 164, note 54). The Chinese princesses destined for a Uighur Khākān took the title *Pikie Khātūn* after their marriage (Devéria, *Inscr. de l'Orkhon*, p. xxxiv., N^o 3). Tabari, *Annales*, knows *Khātūn* as the name of the wife of the Khākān; in the reign of the Sāsānid Bahrām-Gūr, we find one reduced to slavery in the course of an expedition (i. 866); another was won over by presents in the reign of Khusrāw II Parwiz to surrender Bahrām Čubin and repudiated for doing this (i. 1001). In the Muslim period in 280 (893) Ismā'il b. Aḥmad invaded Turkish territory and captured the king and his wife *Khātūn* (iii. 2138). The form *Kātūn* is found in the Turk. Arab. *Glossar*, publ. by M. Th. Houtsma, p. 86; from *kātūn* comes the Ottoman Turkish form *kadīn*. The Arabs have retained the form *Khātūn* and given it the plural *khawātīn*.

The form *katīn* means a married woman, wife, and is found in Kirghiz, Koman and the dialect of Kazan (Radloff, *Opit*, vol. ii. col. 284). *Kādīn* in Ottoman Turkish simply means "lady". In Egypt in the Mamlūk period it was a title borne by queens or daughters, mothers or sisters of queens (*Diwān al-inshā'*, quoted by Max van Berchem, *Corpus inscr. arabic* [M.I.F.A.O., vol. xix.], i. 247, N^o 2).

Proper names of women:

In the family of Aiyūb:

1. The mother of Sulṭān al-Malik al-'Adīl Saif al-Dīn Abū Bakr b. Aiyūb, died in 593 (1197).

2. The daughter of al-Malik al-Ashraf Mūsā, son of al-Malik al-'Adīl, died in 694 (1295); married the Aiyūbid al-Malik al-Manṣūr Maḥmūd b. Šālih (Muḥammad Dhīhni, *Mashā'ir al-nisā'*, i. 187).

In other families:

3. The daughter of al-Malik Ridwān, grand-daughter of the Salḡūḳ Tutush b. Alp-Arslān, who married the Atābeg Zangī, son of Aḳ-Sonḡor, before 523 = 1129 (Kamāl al-Dīn b. al-'Adīm, *Chronique d'Alap*, *Historiens orientaux des Croisades*, iii. 658).

4. The daughter of Djanāh al-Dawla Ḥusain, who married the Atābeg Zangī in 531 = 1157 (*op. cit.*, iii. 673).

5. The daughter of Mu'in al-Dīn Anūr, who married successively Nūr al-Dīn Maḥmūd b. Zangī in 541 (1147) and Šalāh al-Dīn in 572 (1176); she died in Dhū 'l-Ḳa'da, 581 (April, 1185) after building in Damascus the madrasa al-Khātūniya, which was later destroyed, as well as a dervish monastery (*khānḳāh*) outside the Bāb al-Naḡr (H. Sauvage, *Description de Damas*, in the *J. A.*, 1894, Series 9, vol. iv. 256, 305; v. 273; Ibn Baṭṭūta, i. 212; Abū Šhāma, *Historiens orientaux des Croisades*, iv. 51).

6. Khātūn al-Safariya, grand-mother of the Salḡūḳ Sulṭān Maḥmūd II, mother of Sulṭān Sandjar, died at Merw in 515 (1121) (Ibn al-Aṭhīr, x. 419); the Persian historians know her as Turḳān Khātūn (Ḥamd Allāh Mustawfī, *Tārīkh-i Gusīda*, ed. and transl. Gantin, i. 259; ed. Browne, p. 444, 458). She got the name Safariya from the fact that she was asked in marriage during the campaign of 471 (1078).

7. Khātūn al-Iṣma, daughter of Malik-Šāh, married in 502 (1108) the Caliph al-Mustaḡhir Billāh (Ibn Khallikān, iii. 445).

In the majority of these cases the real proper name has been forgotten by the historians; only the title has survived. (CL. HUART)

KHAWARNAḲ, a place situated about a mile east of Naḡjaf [q. v.] in Mesopotamia. Inhabited at first by the tribe of Iyād, a palace was built in it by the Laḡhmīd chief Nu'mān (after 418 A.D.) for his Sāsānian suzerain. It was there that Farwiz heard the news of the defeat of Dhū Ḳār. The palace was enlarged and used by the early 'Abbāsids. It was in ruins in the xvth century. The pre-Muḥammadan Arab poets frequently quote Khawarnāḳ as one of the "30 wonders of the world", along with the neighbouring castle of Sadīr (perhaps Uḡhaidīr, q. v.). Khawarnāḳ is also celebrated for having given rise to the proverbial expression "the reward of Sinimmār", the Greek architect who had built it and was executed by Nu'mān. The name Khawarnāḳ seems to be of Irānian origin (*hu-varna* "with a beautiful roof" according to Andreas or *Khawarnāq*, "place of feasting" according to Vullers) although Ibn Djinī connects it with the Arabic *Ẕazīrīṣ* and Nöldeke with a Rabbinical Hebrew word meaning "arbour, plantation".

Meissner, *Eine Reise von Babylon nach den Ruinen von Hira und Huarnaq* in *Sendeschriften der Deutschen Orient-Gesellschaft*, 1901, N^o 2, p. 19. (LOUIS MASSIGNON)

KHAWLĀN, 1) the name of a South Arabian tribe. This tribe is mentioned as early as the south Arabian inscriptions Glaser, 1076, 18 sq. and Halevy, 585, 11 sq. (חַוְלָן); there

is a reference to its territory (ארץ חול) in the inscription Glaser, 119, 5 and a clan of the name is mentioned in Glaser, 204, 3. All these passages justify the suggestion that the tribe of *Khawlān* was already settled in this region in the first millenium B.C. where it still — in part at least — dwells in the land between *San'a* and *Mārib*, which al-Hamdānī calls *Khawlān al-ʿālīya* and which with *Dhī Djurra* was one of the great granaries of the Yemen, where durra, barley and wheat in particular flourished exceedingly. The *Khawlān* tribe now belongs to the great tribe of *Bakil* which can put about 80,000 armed men in the field. The traveller E. Glaser explored this tribe's country in 1885/1886. The Arab genealogists give as the eponymous hero of the tribe *Khawlān* b. 'Amr b. Mālik b. al-Hārith b. Murra b. Udad b. Zaid b. 'Amr b. Ḡharib b. Zaid b. Kahlān b. Saba'. Some say the ancestor was *Khawlān* b. 'Amr b. al-Hāf b. Kuḏā'a, after whose ancestor they are also called *Khawlān Kuḏā'a*. The distinction between the *Khawlān al-ʿālīya* and the *Khawlān Kuḏā'a* is, however, not genealogical but rather regional; for the former also belong — at least according to *Nashwān* — to *Kuḏā'a*. The distinction comes from the fact that originally the whole tribe of *Khawlān* was settled in *Mārib* and *Širwāh* but in the course of time a portion of them migrated to the highlands east of *San'a* and received the name *Khawlān al-ʿālīya*, while the remainder stayed in *Mārib* and not till a later date did a new migration take place to the region of *Ṣa'da*, which is still the most important town of the northern *Khawlān* territory. As early as C. Niebuhr's time there were two districts of this tribe which were, as they still are, under independent *Shekhs*. The last named according to Niebuhr 4 days journey from the port of *Ḥālī* halfway between *San'a* and Mecca, which according to E. Glaser extends W. and N. W. of *Ṣa'da*, is *Zaidī*. *Hamdānī's* statement is worthy of note, that here pure Arabic was spoken only in the highlands while in the valley and al-*Qadd* a kind of jargon was the usual lingua franca. The name *Khawlān* in this particular area is still associated with two other features, the peak of *Khawlān* ('*Urr Khawlān*'), a mountain top, which can be seen from the *Djebel Tukhlā*, and *Bait Khawlān*, the name given to the summit of the *Djebel Ḥaḏūr*. In *Khawlān* of *Ṣa'da*, Niebuhr only mentions the villages of *Akabat el Muslim* ('*Akabat el-Muslim*'), *Heidān* (*Haidān*), *ed-dāhhr* and *Suk ed sjumma* (*Sūk al-Djum'a*). The goldmine at *Kuḏā'a* which belonged to the *Banū Ma'mar* b. *Zurāra* b. *Khawlān*, probably — with other considerations — induced A. Sprenger to connect *Khawlān* with the Biblical *Hawila*. Niebuhr also had already done this. In *Khawlān* of *San'a* Niebuhr mentions the villages of *Beit Roedsje* (*Bait Rādjiḥ*), *Tanaejm* (*Tan'im*), *Beit el Kibsi* (*Bait al-Kibsi*), *Beit el-Naum*, *Seijān* (*Seyān*), *Suradsje* (*Zurādja*) and *Berres* (*Barrāsh*). In *Shā'bān* of the year 10 A. H. (Nov. 631 A. D.) envoys of the *Khawlān* appeared before *Muḥammad* in al-Medina and professed *Islām* on behalf of their tribe. They were instructed in the teaching of *Islām* by the Prophet himself and promised to destroy their idol 'Amm Anas, then received the usual gift of honour of 12½ ounces of silver and returned home. After the death of the Prophet they at first joined the general movement of apostacy, but *Ya'la* b. *Munya*

whom the Caliph *Abū Bakr* sent against them with an expeditionary force, succeeded in regaining them for *Islām* in the course of the year 11 A. H. (632 A. D.). Politically they were on closer terms with the government in al-Medina than the other tribes of the Yemen, which was probably the result of their relations with the Persian rulers in *San'a*. They afforded shelter to the two Persian princes *Djushaish* and *Fairūz* who were driven out of *San'a* by the rebellion of the Arabs under *Ḳais* b. 'Abd *Yaghūth* b. *Makshūh* and supported them till help came from al-Medina.

Members of the tribe of *Khawlān* after their lands were finally opened to *Islām* after the subjection of the Yemen in 13 or 14 A. H., played an important part among the Southern Arabs who took part in the conquest of Egypt and settled here. We frequently find *Khawlānis* in important positions in Egypt; in Old Cairo (al-Fustāt) they gave their name to a quarter, and the name generally is not rare in the papyri and on Arab tombstones in Egypt.

2) the name of a village near Damascus. One of the most distinguished of the companions of the Prophet is buried there, 'Abd al-Rahmān b. *Mishkam* *Abū Muslim al-Khawlānī*.

(ADOLF GROHMANN)

KHAYĀL, MİR MUḤAMMAD TAḲĪ, of Aḥmad-ābād in Guḡjarāt, author of a collection of tales in 15 volumes entitled *Būstān-i Khayāl*, composed in Persian prose between 1742 and 1756, at the

request of his patron, Nawwāb Rashīd Khān, or, according to one MS., for the two brothers, Nawwāb Rashīd Khān and Nawwāb Muḥammad Ishāq Khān, sons of Dja'far 'Alī Khān (Nawwāb of Bengal, 1757—1761 and 1763—1765); an account of the contents of this work, which is made up partly of historical legends and partly of fantastic fairy tales, is given by Ethé, *Cat. of Persian MSS. of the Bodleian Library*, N^o. 480. Khayāl died in 1173 (= 1759—60).

Bibliography: Ethé, *Grundriss d. iranischen Philologie*, ii. 342.

KHAYĀL-I ZILL, also called ZILL-I KHAYĀL, shadow-play. The shadow-theatre which combines the mimic art with music, painting and poetry and which with its transparent figures made of painted leather is able to produce on the linen sheet illuminated from behind an illusion which means much more to the contemplative Oriental than our realistic coarser art of the stage, seems, as far as we know, to have come from China to the West. It certainly does not originate in classical antiquity.

The earliest notices available to us refer to India where, however, the shadow-theatre is now extinct. The Javanese *wayang*, which works with predominantly Indian materials, is, however, a proof of its former existence there.

The Turks seem to have received it from the Chinese through the intermediary of the Mongols. In any case points of contact can be established between the Chinese shadow-play and Islām.

From China and India the road to the Muslim lands lay through Persia. Among the Persian poets we find numerous passages referring to the shadow-theatre, but they give very little definite information about the play. In modern Persia the shadow-play survives in the *Kešīl Pehlevān*.

The shadow-play was highly developed very early in the Arabic sphere of culture, notably in Egypt. The shadow-plays of the physician Muḥammad b. Dāniyāl (d. 1311) are the only remnants of dramatic poetry of the Arab middle ages that have survived to us at all.

The shadow-play attained a very high development and popularity among the Turks. The borrowing of the Turkish play from the Egyptian in spite of many resemblances cannot be well assumed, as the Turks had evolved at least as early as the xiiith century a word of their own for shadow-play: *ḡabarçuk*, if the meaning "puppet of the Chinese shadow-play" for *ḡabarçuk* given by Houtsma in *Türkisch-Arabisches Glossar*, Leiden 1894, p. 43 and 87, is correct, but it seems exceedingly doubtful; for the word which still survives in Eastern Turki as *ḡawurdjak* and *ḡoghurdjak* has no reference at all to the shadow-theatre.

The shadow-play in Turkeṣtān etc. seems — if it ever existed at all — to be quite extinct and to have been completely replaced by the puppet-play: *ḡol ḡurçak* and *čadyr khayāl*.

Among the Ottoman Turks it is called *Ḳaragöz* [q. v.] and down to recent times, when the cinematograph began to offer deadly competition to it, was the most popular entertainment in Ramaḡān, not only for the women and the lower classes but had also a great attraction for many of the upper and educated classes and even for many Sultāns. Wherever the Turkish element is large enough to ensure a shadow-player some sort of a livelihood, the shadow-play is to be found.

The play spread from Turkey to non-Turkish lands. It seems to have established itself with special firmness among the Greeks and down to quite modern times (notably in Athens, the Piræus and Salonika). In the same way it was very popular among all classes in Rumania.

(TH. MENZEL)

KHAYĀLĪ, properly MEḤMED BEY, also known as BEKĀR MEMĪ, an important Turkish poet of the time of Sulaimān the Great. Like the poet Uṣūlī he belonged to the little Rumelian town of Wardar Yenidjesi. Like *Sheikh Ghālib*, he was precocious and developed his poetic talent very early. As a boy he was in the service of the Haiderī dervish and mystic Baba 'Alī-i Mest, by whom he was introduced into mysticism which left traces in many of his poems. In the wanderings of his master, he came with him to Constantinople where he was removed from the influence of this dervish by the intervention of the authorities.

His poetical abilities ultimately won him the favour of the Defterdār Iskandar Çelebi and then that of the Grand Vizier Frenk İbrāhīm Pasha, who introduced him into the circle of poets around Sultān Sulaimān. The Sultān granted him his favour and confidence: he became one of the intimates of the Sultān, the highest honour that could be attained by an Ottoman poet. After the execution of his patrons (Iskandar was hanged in Baghḡād in 1535 and İbrāhīm strangled in the Serai in 1536), with the declining influence of the once powerful poet-favourites, Khayālī fell upon evil days, as he had never been able to save the presents and other tokens of favour with which he had been overwhelmed, but he was finally given a *saḡḡak* by the Sultān and the title of Bey. He died in 964 (1556—1557) in Adrianople where he was buried.

Khayālī, who was of an amiable friendly character and throughout his life retained a dervish-like humility and frankness, just as he retained his membership of the Haiderī order, was one of the best poets of his time. None of his contemporaries surpassed him in poetic vigour and diction. His language is, however, now antiquated. He only worked in the lyric field (*ḡazal*, *ḡasida*). Careless of the fate of his work as of this world's goods, he left the task of arranging his strongly mystical poems into a *dīwān* to another. His son 'Umar Bey (d. 1010) was also a poet.

KHAZAR, a people of uncertain origin; on their relation to the Bulghār and the rise of the Khazar state see above, i. 786, where also the alliance between the Khazar and the Byzantines in the war against Persia in 627 is dealt with. In spite of the successful issue of the war for the Byzantines it is not recorded that their empire was increased at the expense of Persia; but the Caucasian lands taken at this time by the Khazars were not reconquered by the Persians and the Khazars were only deprived of them by the Arabs. Al-Balādhurī's statement (ed. de Goeje, p. 194) that the old capital of Arrān, Ka'walak, Arab. Kābala (cf. the art. ARRĀN), was also called Khazarān is important. On the ravaging of the countries of the Caucasus by the Khazar cf. A. Manandian, *Beiträge zur albanischen Geschichte*, diss. Leipzig 1897, p. 39 sqq., following Moses Kalankatuāci; *ibid.*, p. 30 sq., from the same source, on the alleged conversion of the Huns, i.e. the Khazars, to Christianity by the Albanian bishop Israel in the time of the Armenian Catholikos Sahak III (677—703); in this connection we are given some information regarding the pagan conceptions of the Khazars and the worship of their supreme deity Tengri-Khān. The "capital of the land of the Huns" there mentioned, Varačan or Varadjān, is, according to Marquart (*Osteuropäische und Ostasiatische Streifzüge*, Leipzig 1903, p. 16), identical with Balandjar, where, according to al-Mas'ūdi (*Tanbih*, ed. de Goeje, p. 62, 16), in earlier times the capital of the Khazars was, according to Marquart on one of the streams that form the Kōi-su (Sulak). Al-Ṭabarī relates the conquest of Balandjar and the fortresses in this region by the Arabs in the year 104 = 722/723 (ii. 1453) or 105 = 723/724 (ii. 1462). In the account of the campaign of 111 = 729/730 (Ibn al-Athīr, ed. Tornberg, v. 117) al-Baiḍā' (the "white city") is first given as the capital; according to Marquart, this is a translation of the name given in the earliest Arabic source (Ibn Rusta, ed. de Goeje, p. 139, 14; al-Gardīzi in W. Barthold, *Očer o počezke v Srednyuyu Aziyu*, St. Petersburg 1897, p. 95) for the west side of the later capital Itil (at the mouth of the Volga); Marquart proposes to read the name Sarīghshar (Turk. "yellow city"). According to Ibn al-Athīr (v. 160), Marwān b. Muḥammad advanced as far as al-Baiḍā' in 119 = 737. Ibn al-Athīr only records the flight of the Khazar king from this town; according to al-Balādhurī (p. 207), he concluded peace with Marwān and declared himself ready to adopt Islām, whereupon Marwān confirmed him in his kingdom. A section of the Khazars was settled by Marwān between the river Samūr and the town of Shābirān (cf. above, i. 943). In spite of this, Arab rule was not firmly established on the Volga nor even in Daghestān [q.v.]; even in the ivth (xth) century the rule of the Khazars reached almost up to the walls of Derbend (cf. the article DAGHESTĀN). The Khazar kingdom was able to assert itself as a great power against the Byzantine Empire as well as the Caliphate. The emperor Constantine V Copronymus (741—775) married

a Khazar princess; the Emperor Leo IV (775—780), the son of this marriage, was known as "the Khazar". About the same time the governor of Armenia, Yazid b. Usaid al-Sulamī, is said to have married a daughter of the Khazar king at the request of the Caliph al-Manṣūr (754—775) (al-Balādhurī, p. 210). The Armenian Levond (Russian translation by K. Patkanyan, St. Petersburg 1862, p. 92; cf. Marquart, *op. cit.*, p. 5) connects the invasion of Georgia and Armenia by the Khazars in 147 (764/765) with the death of this princess; the leader of the Khazars is given by him as Raḍj Tarkhān; in al-Ya'qūbī (*Turikh*, ed. Houtsma, ii. 446) Rās (in the MS. Ḥalis) Tarkhān, in al-Ṭabarī (iii. 328, 9) Astarkhān al-Kh'wārizmī. There was therefore a Kh'wārizmī at the head of the Khazar force that invaded Muslim lands while at a later date in the body-guard of the Khazar king there were Muslim soldiers from Kh'wārizm, who had bargained for the right "to remain neutral whenever the Bey of the Khazars waged war against Muslims" (Marquart, *op. cit.*, p. 5, from al-Mas'ūdi, *Murūdj al-Dhahab*, ii. 10). The frontier provinces of the caliphate were raided by the Khazars for the last time in the reign of Hārūn al-Rashīd in 183 (799); this invasion also is said by al-Ṭabarī (iii. 647 sq.) to have been brought about by the failure of a proposed matrimonial alliance between the daughter of the Khazar king and the Barmecide Faḍl b. Yaḥyā (cf. above, i. 665 and ii. 36).

It was in the reign of Hārūn also that, according to al-Mas'ūdi (*Murūdj*, ii. 8), the conversion of the Khazar king (the Khākān) and of the nobles to Judaism took place; cf. the discussion of the sources in Marquart, *op. cit.*, p. 5 sqq., and the alleged letter of a contemporary and subject of "King Joseph", since published by S. Schechter (*The Jewish Quarterly Review*, New Ser., iii. 181 sqq.; following him, P. Kokowcow, *Žurn. Min. Nar. Prosv.*, 1913, Nov., p. 150 sqq.). We have again later an account of the conversion of the Khazars to Christianity (the missionary journey of the Slav apostle Constantine or Cyril between 851 and 863; cf. Marquart, *op. cit.*, p. 13 and 22) and two reports of their conversion to Islām. According to Ibn al-Athīr (viii. 418), the Khazars and later their king were converted to Islām in 354 (965) when they had to defend themselves with the help of the Muslim Kh'wārizmis against an attack by a Turkish people; this story, which we find as early as Ibn Miskawih (H. F. Amedroz and S. Margoliouth, *The Eclipse of the Abbasid Caliphate*, Oxford 1920—1921, text ii. 203, transl. v. 223), is undoubtedly taken from the lost work of Ṭhābit b. Sinān and we must agree with Fr. Westberg (in *Žurn. Min. Nar. Prosv.*, 1908, March, p. 6) in referring it to the known campaign of Svyatoslaw (cf. above, i. 789). What al-Muḥaddasī, ed. de Goeje, p. 361, 1, tells us about the adoption of Islām as a result of the campaigns of al-Ma'mūn does not refer, as Marquart (*op. cit.*, p. 3 and Index) supposes, to the Caliph but, as a comparison with al-Muḥaddasī, p. 288, 19, shows, to the ruler of Gurgāndj (Arab *Djurdjāniya*) and afterwards (after 995) of all Kh'wārizm, Abu 'l-'Abbās Ma'mūn b. Muḥammad. In neither case is the story of the change of religion historical. Al-Balādhurī's story (p. 203; Marquart, *op. cit.*, p. 413) of the rebuilding of the town of Shamkhor (Arabic *Shamkūr*) with the name al-Mutawakkiliya by Boghā the Elder [cf. BOGHĀ AL-KABİR] is more important;

he is said to have settled Khazars there who had come to him "from an inclination towards Islām".

The danger which threatened the Khazars as a result of the movements of peoples in the 10th century caused the embassy to the emperor Theophilus (829—842) and the building of the Khazar fortress of Sarkel on the Don by the Greek Petronas. This story in Constantine Porphyrogenetos (*De admin. imperio*, Chap. 42) is connected by Marquart (*op. cit.*, p. 28) with Ibn Kusta, p. 143, r. Ibn Kharrādādhbeh's story (ed. de Goeje, p. 162 sq.) of the alleged mission of Sallām al-Tarjūmān is quoted by Marquart (*op. cit.*, p. 476) as proof that "the Khazars were on friendly relations with the Caliphs at this time," but it should be pointed out that the Caliph there does not communicate direct with the Tarkhān, king of the Khazars, but through the intermediary of several Caucasian princes. About 240 (855/856) the Canark' (Arab. Ṣanariya), who had fled before Boghā, applied for assistance to the kings of the Byzantines, Khazars and Slavs (al-Yaḥṣūbi, *Ta'rikh*, ii. 598; transl. in Marquart, *op. cit.*, p. 413 sq.). The attitude of the Khazar ruler was equivocal on the occasion of the raid made by the Russians on the lands on the Caspian Sea recorded by al-Mas'ūdī (*Murūdj*, ii. 18 sqq.; new transl. in Marquart, p. 330 sqq.). Various suggestions have been made regarding the date which is not definitely given; according to Westberg, *Žurn. Min. Nar. Pros.*, Febr., 1908, p. 386, the raid did not take place till 925 but this is probably too late. The Russians were allowed a passage through Khazar territory on condition that they gave half their plunder to the Khazar king; on the way back they were fallen upon and almost wiped out — with the approval of this ruler who "could not prevent it," although he had informed the Russians of the danger awaiting them — by his Muslim mercenaries and the inhabitants of Itil, Muslim and Christians. Whether the more important Russian raid of 332 = 943/944 (cf. the art. BAR-DHA'A) was undertaken by agreement with the Khazars or against their will is not recorded. According to al-Mas'ūdī (*Murūdj*, ii. 22), the Khazars had no ships; on the other hand, according to Hilāl al-Ṣābi (ed. Amedroz, p. 217 infra), the dams built at Derbend [q. v.] were intended as a defence against the ships (*marūkib*) of the Khazars.

The relations between the Khazar empire and the Byzantine must have been affected by the persecutions of the Jews under the Emperor Romanus Lacafenus (919—944); the only direct evidence of this is in the document of doubtful origin published by S. Schechter (cf. above). The reception in the Khazar lands of many Jews driven out of the Byzantine empire at this time is also mentioned by al-Mas'ūdī (*Murūdj*, ii. 8 sq.). To about the same time belongs the *Risāla* of Ibn Faḍlān (cf. i. 820 and ii. 398) — probably the only Muslim description of the Khazar kingdom and its capital Itil by an eye-witness; the *Risāla* may be taken as the source of al-Iṣṭakhṛī (p. 220 sq.) and Ibn Ḥawḳal (p. 278) and also of al-Mas'ūdī; cf. the reference to Ibn Faḍlān in Yāḳūt, *Mu'djam*, ed. Wüstenfeld, ii. 436, 20. The information there given on white and black Khazars (*ḥarā khazar*), the nominal rule of the *Khāḳān* and the actual rule of the viceroy (his title is variously given), on the seven judges etc., has been several times cited since Frähn (*Veteris memoriae Chazarorum*, St. Petersburg 1832, in *Mém. de l'Acad. des Sciences*,

vol. viii.). The most important source of revenue was the import and export of foreign goods; the land is said to have produced no wares of its own (Ibn Ḥawḳal, p. 283, r. adds: "with the exception of isinglass.") Even the material for clothing was not prepared in the land itself but imported from Gurgān, Tabaristān, Ādharbāiḡiān and Rūm. Judaism was the predominant religion because the *Khāḳān*, the viceroy, the prince of Samandar in Daghestān who was related to the latter, and the high officials all professed it; in numbers, however, the Jews were less than the Muslims and Christians. In Itil there were over 10,000 Muslims, a principal mosque with a lofty minaret and 30 mosques. In the year 310 (922/3) the king received a report that in a Muslim country a synagogue had been destroyed (the name given in Yāḳūt, ii. 440, 2, is not clear; cf. Marquart, *op. cit.*, p. 4 and 477 sq.). He therefore had the minaret destroyed and the *mu'adhdhin* killed. He left the mosque itself unharmed for fear that all the synagogues in Muslim lands should be destroyed.

On the extent of Khazar power in what is now Russia, on the campaign of Svyatoslaw and its consequences see above, i. 789. Earlier (in the ninth century) even Kiev was subject to the Khazars; in this connection the author of the oldest — composed about 1095 (according to the critical edition by A. Shakhmatov, Introduction, p. xxiii.) — Russian Annals observes that in his time the Khazars were under the rule of Russian princes (A. A. Shakhmatov, *Poist' vremennikh let*, Petrograd 1916, p. 17). In any case it is evident from the annalists that they did not consider the Khazar kingdom destroyed even by Svyatoslaw's campaign; in the legend of the attempts by the adherents of various religions to convert prince Vladimir, "the Khazar Jews" are also mentioned as foreigners not subject to the Russians (*ibid.*, p. 104). The original home of the Khazars on the lower Volga and in Daghestān was not conquered by the Russians at this time; the subjection of the Khazars mentioned by the annalists can only refer to a part of the Crimean peninsula and the peninsula of Taman' opposite it, where lay the Russian principality of Tmutarakan' first mentioned in 1022. This region may well have been the "Khazaria" which was conquered by a fleet sent by the Emperor Basil II in alliance with the Russians in January, 1016; its leader is called Sven, Greek Sfengos, said to have been a brother of "King" Vladimir (according to Cedrenus, 464; Migne, *Patrol. Graeca*, vol. cxxii.); the Khazar king (*arkhān*) of this region was Georgios Tzulos, apparently a Christian (Tzulos is the Turkish title *Çar*). In 1022 the ruler of Tmutarakan' was Mstislav, a son of Vladimir (Shakhmatov, *op. cit.*, p. 186); in the next year Mstislav, in alliance with the Khazars, undertook a campaign against his brother Yaroslav. The Khazars are mentioned for the last time as neighbours of Tmutarakan' and intervening in the civil confusion in this principality in 1083 (*ibid.*, p. 253). The Muslim sources give us no information regarding the end of the Khazar kingdom. Ibn al-Athīr (ix. 279) makes the Kurd Faḍlān, ruler of Gandja [q. v.], make a raid on the Khazars in 421 (1030) and be attacked and slain by them on the way back. This was Faḍl b. Muḥammad, of the Shaddādid c. nasty; cf. above, i. 461 and ii. 129^b and see E. Schau, *Ein Verzeichnis muhammedanischer Dynastien* (Abhandl. der preuss. Akad. d.

Wissensch., 1923, philol.-hist. Kl., N^o. 1, N^o. 22). According to Marquart, this is the last mention of the Khazars in Ibn al-Aṣṭūr and in history generally (W. Bang and J. Marquart, *Osttürkische Dialektstudien*, in *Abhandl. der kgl. Gesellschaft d. Wiss. zu Göttingen, phil.-hist. Klasse*, N. F., vol. xiii., N^o. 1, Berlin 1914, p. 56). But a raid from Qazvin against the Khazars is very improbable on geographical grounds; the Khazars are probably mentioned here in error for the Georgians or Alans, as in al-Būḥārī in *Rec. des textes rel. à l'hist. de l'Asiejoudes*, ed. Husnima, II, 31, 12. Similarly (connection with the Qaraz or Kipčaks) is probably to be explained the mention of the Khazars in *Kutāb* about 1175 (cf. above, I, 943). In the 12th and 13th centuries the town and country of Sakān (s.v.), or Sakān are mentioned north of the Caspian Sea, probably on the Volga. J. Marquart, *op. cit.*, agrees with the suggestion of Fr. Westberg (*Bull. de l'Acad. des Sciences*, St. Petersburg 1899, p. 291) that Sakān is the site of the former Kazar capital but rejects the view of the same scholar that the Sakān are simply the Khazars under another name. According to Abū Ḥāmid al-Ġarnāṣī (in Dorn, in *Mil. Antiquae*, vi, 710), the distance between Bulghār and Sakān was 40 days' journey; on the other hand Sakān in the 10th (10th) century in Masʿūdī *Kaṭiḡhān* (*Diwān Luḡāt al-Turk*, Constantinople 1333 = 1914—1915) is identified with Suwār, only two days' journey from Bulghār (cf. above, I, 728). (W. BARTHOLOD)

AL-KHĀZINĪ, ABŪ DJĀFAR AL-KHURĀSĪNĪ (al-Bīrūnī adds the name Muḥammad b. al-Ḥusain; we sometimes find al-Khāzinī instead of al-Khāzin), born about 349 (960), was, according to his contemporary, one of the greatest Muslim astronomers. He belonged to Khurāsān and conducted observations for Abū 'l-Faḡl Ibn al-'Aṣūd († 359 = 969/970), a vizier of Rukn al-Dawla (326—366 = 932—976). He was better known by the kunya Abū Djāfar than by his own proper name. Like most students of mathematics, he dealt with all its branches.

In arithmetic he dealt with numerical problems and solved a problem found in Archimedes which leads to a cubic equation (see E. Wopke, *L'Algèbre d'Omar al-Khayyāmī*, p. 239; cf. also *Hādīdī Khalifa*, N^o. 396); he also wrote a commentary on the first part of the tenth book of Euclid which deals with division (*Hādīdī Khalifa*, N^o. 1070). *Cod. Leiden* N^o. 992 contains two problems from his book of tables of planets.

Cod. Leiden N^o. 1014 gives a geometrical problem: on one connected with the problem of parabolæ of G. Jacob and E. Wiedemann, *Zu Omar-ḥ-Chayyām*, in *Islam*, 1912, III, 56.

One of Abū Djāfar's principal fields of research was astronomy. In the *Kitāb al-Ālāt al-Aḡṣṣa al-Raḍīya* he gave a description of marvellous instruments of observation (*Hādīdī Khalifa*, N^o. 1122 and 9887). This work is also mentioned by al-Akfānī, *Irshād al-Kāfī* and in Ibn Khaldūn's *Prolegomena* (French transl., I, 111; cf. E. Wiedemann, *Beitr. IX: Zu der Geschichte der Astronomie*, in the *S.B.P.M.S. Erlangen*, 1906, xxxviii, 190). The same book probably also deals with an instrument for measuring the altitude of the sun (J. Frank, *Über zwei astronomische Instrumente*, 2. *Das Instrument mit dem Dreieck* (von al-Khāzinī), in the *Zeitschr. für Instrumentenkunde*, 1921, xli.

199 sq.) and a ring 8 ells (about 13 feet) in diameter with which, according to al-Nawawī, he ascertained the obliquity of the ecliptic for Ibn al-'Aṣūd with the help of a number of scholars. He found it smaller than his predecessors had done (*Cod. Leiden, Catalogue*, N^o. 1060, fol. 52).

Mention is often made of a work highly praised by Ibn al-Kifī, "The Book of Tables of Planes" (*Zidj al-Safā'ih* for the astrolabe), which consists of several *maḥālāt* with a long introduction. In it, according to al-Bīrūnī (*al-Āthār al-Bāḡiya*, p. 326; *Chronology*, p. 322), there is most probably an explanation of the progressive and retrograde movement of the spheres. It is perhaps a part of this work that is mentioned by al-Bīrūnī (*Kitāb al-Istifāh* etc., *Cod. Leiden, Catalogue*, N^o. 1066, fol. 69) as "On the Differences in the Ascensions (*maḥālāt*) for Equal Arcs etc.". Possibly it is identical with the work quoted by Naṣīr al-Dīn in his *Kitāb Shahl al-Kaṭīf* ("Book on the Figure of Transversals") viz. *Maḥālāt Djuwīya Ma'il al-Muḥīl al-Djuwīya wa 'l-Maḥālāt fi 'l-Kurat al-Mustakīma* ("partial investigations into some of the partial inclinations and of the *maḥālāt* in the sphaera recta") (*Traité du quadrilatère*, ed. and translated by Alex. Pacha Caratheodory, 1891, text p. 115, transl. p. 150).

The following were probably mainly theoretical cosmological works: 1. *al-Mudkhal al-Kabīr fi 'ilm al-Nudjūm* ("the great introduction to astronomy") (see al-Bīrūnī, *al-Āthār al-Bāḡiya*, p. 202; *Chronology*, p. 133); in it Abū Djāfar also discussed questions of chronology and gives methods of determining the sign of Muḥarram. 2. *Sirr al-'Ālamīn* (*Hādīdī Khalifa*, N^o. 7140). In one of these two writings Abū Djāfar probably dealt for the first time with Ibn al-Haiṭham's theory of the structure of the world mentioned by al-Khiraḡī. In it he apparently relied on the hypotheses of Ptolemy, which Ṭhābit b. Qurra had translated (cf. *Hādīdī Khalifa*, N^o. 13,124). Abū Djāfar also evolved a form of the world which differs from that with the excentric sphere and the epicycle; in it the distance between sun and earth is always the same in spite of the difference in its rotation. He thus gets two regions on the earth, a northern and a southern which do not differ in heat and cold (al-Bīrūnī, *al-Āthār al-Bāḡiya*, p. 259; *Chronology*, p. 249).

Like almost all astronomers, Abū Djāfar also dealt with astrology; he was learned in the doctrine of *tasyīr*.

Abū Djāfar was also interested in philosophical problems, as is evident from a commentary on the beginning of the work of Aristotle on the heavens by a certain Abū Zaid al-Balkhī, who wrote it to Abū Djāfar (Ibn al-Kifī, p. 40, 5).

Bibliography: H. Suter, *Die Mathematiker der Araber*, etc., N^o. 124; Yaḥyā al-Nadīm, *al-Fihrist*, p. 266 and 282; Ibn al-Kifī, p. 396. (E. WIEDEMANN)

AL-KHĀZINĪ, ABŪ 'L-FATH 'ABD AL-RAḤMĀN AL-MANṢŪR AL-KHĀZINĪ (AL-KHĀZIN), flourished about 500 A.H. (end of the xith and beginning of the xiith century). A pretty full account of him is given in the work of a certain al-Baiḥaqī (see below) and isolated references are given in his "Sindjari Tables" (*zidj*) and his *Kitāb Mizān al-Hikma*. Al-Khāzinī was a Greek slave brought up in the service of 'Alī al-Khāzin al-Marwazī in Merw and received an education in geometrical and philoso-

pical knowledge worthy of his talents which enabled him to compose the books mentioned below.

He later became associated with the Sultān of Khurāsān, Mu'izz al-Dīn Abū Ḥārith Sandjar b. Malik-shāh b. Alp Arslān (511–552 = 1117–1157; he had previously been governor of Khurāsān for the twenty years 491–511). Al-Khāzinī enjoyed the favour of this prince and his nobles; at the same time his style of life remained as exceedingly simple and modest, as that of al-Birūnī.

Two works of his are known and have survived:

1. *Al-Zīj al-Mu'tabar al-Sindjarī*. This book of tables gives statements of the positions of fixed stars for the year 509 = 1115/1116 and also for oblique ascensions and time-equations for the latitude of Merw (37° 40'), which was in Sandjar's kingdom. This work was used by C. A. Nallino in his *al-Battēnī Opus Astronomicum*; cf. e.g. vol. i, p. lxvii., and the Index.

2. *Kitāb Mīzān al-Ḥikma* (finished 515 = 1121/1122); its contents are discussed in the articles AL-KARASŪN and MĪZĀN. Al-Baihaḳī says that he rediscovered the book; a passage from it is mentioned in a manuscript in the India Office.

Bibliography: Zāhir al-Dīn Zaid al-Baihaḳī, *Tārīkh Ḥukamā' al-Islām* (Berl. MS.; Ahlwardt, Catalogue, No. 10,052), contains the life of al-Khāzinī (E. Wiedemann, *Beitr. XX, Einige Biographien nach al-Baihaḳī*, No. 103, in the *S.B.P.M.S. Erlg.*, 1910, xlii. 73); H. Suter, *Die Mathematiker und Astronomen der Araber*, No. 293 and Appendix, p. 226. A considerable part of the *Kitāb Mīzān al-Ḥikma* is published by N. Khanikoff, *Analysis and Extracts of the Book of the Balance of Wisdom* etc., in *J. A. O. S.*, 1859, vi. 1–128. Other parts have been edited by me in *Beitr. XV, Über Bestimmung der Zusammensetzung von Legierungen*, in the *S.B.P.M.S. Erlg.*, 1908, xl. 105–132; *Beitr. XVI, Über die Lehre vom Schwimmen, die Hebelgesetze und die Konstruktion des Qarasŭn*, *ibid.*, 1908, xl. 133–159. Here also the parts published down to the present day are discussed again; also *Beitr. XXXVII, Über die Stundenuhre*, *ibid.*, 1914, xlv. 27–38; *Beitr. XLVIII, Über die Wage des Wechsels von al-Chāzinī und über die Lehre von den Proportionen nach al-Birūnī*, *ibid.*, 1916, xlviii. 1–15; E. Wiedemann, *Über die Kenntnisse der Muslime auf dem Gebiet der Mechanik und Hydrostatik, in Archiv für Geschichte der Naturwissenschaften*, etc., 1910, ii. 394–398; do., *Über den Wert von Edelsteinen bei den Muslimen, in Isl.*, 1911, ii. 345–358. (E. WIEDEMANN)

AL-KHAZRADJ is the name of the tribe who with their brother-tribe al-Aws were occupying the region of al-Madīna and farther north to Khaibar and Taimā' at the time of the beginning of Islām. On account of the important part which they played in the successful rise of Islām both tribes are designated by the honorific name of *al-Anṣār* "the Helpers". It is the unanimous statement of genealogists and Arab antiquarians that the Khazradj, together with the Aws and the Ghassānids in Syria, migrated from South-Arabia at a very early date and as the reason for their emigration from their ancient homes is given the bursting of the dam at Ma'rib the exact date of which cannot be determined; it can be approximately dated in the fifth century of the Christian era. The genealogies of the divisions of the tribe

are fairly well established because the different clans were registered in the *Dirwān* introduced by the second caliph 'Umar b. al-Khaṭṭāb, as they were entitled because of their help to Islām to the second category of pensions allotted by the *Dirwān*. As regards the earliest names in their pedigree: al-Khazradj b. 'Amr al-'Anḳa' b. Tha'laba b. 'Amr Muzaikīya, which they share with al-Aws, we may be more sceptical. When the tribes of al-Aws and al-Khazradj in their migration reached Yathrib, which later received the name of Madinat al-Nabī, they found settled there a number of Jewish tribes among which the Banū Qainuḳā', Quraiza, the Naḍir and nearly twenty more clans are known by name. The latter possessed in Yathrib and its neighbourhood over 70 castles, named *Āṭam* (plur. of *uṭm*), which formed one of the distinctive features of the city and which granted the inhabitants a measure of security not known in any other town of Arabia. If we had not the repeated affirmation of Arab antiquarians that these buildings were constructed by the Jews, we might think that they were built on the model of similar buildings in the Yaman and introduced by the immigrants. The Khazradj settled at first on the outskirts of the town like the Aws, but as their numbers increased more rapidly than the resident Jewish population* of the town, they soon asserted their power and made themselves masters of some of the *āṭam*. The immediate cause of their first war with the Jews is stated to have been that a prince of the Jewish family Zuhra, named al-Kaiṭun, intended to enforce the *jus primae noctis* with a bride from the tribe of al-Aws for which the prince was slain by the brother of the bride. (That the name al-Kaiṭun is fictitious is apparent; it is nothing but the Greek word *κοιτών*). The consequence was that the allied tribes asked and received help, either from the Ghassānids in Syria or from Yamanites from South-Arabia, and by treachery murdered many of the most prominent Jews. Being now in possession of a large portion of the town, the allied tribes fell out among themselves. The peculiar formation of the town, consisting of a number of detached settlements with the castles among them, made it possible for such warfare inside the township to continue for a long time, and as neither al-Aws nor al-Khazradj were very numerous, each in turn made alliances with the nomadic tribes in the country surrounding Yathrib. The Khazradj were stronger in numbers and to equalise this the Aws made alliances at various times with the tribe of Sulaim and were generally also assisted by the Jews; it was only after the fight at al-Bu'āth in which the Khazradj were heavily defeated that something like equilibrium prevailed in Yathrib. However, the intermittent fighting between the two tribes and murders, with the consequent retaliation, continued. The momentous change was brought about by the Hīdjra of the Prophet from Mekka to Yathrib where he arrived at the suburb of Qubā' on Rabi' I 12 (Tuesday, June 29, 622) and engaged the hitherto antagonistic tribes to assist him in his struggle against his fellow-citizens of Mekka. We get a fair estimate of the number of fighting men in each of the two tribes by the list of participants in the battle of Badr, for Ibn Sa'd in his *Ṭabaḳāt* (vol. III/ii.) gives us the names of 63 members of the tribe of al-Aws and 175 names of those drawn from al-Khazradj. With the whole community accepting Islām, the Jewish

element in Yathrib soon lost all importance and the clans of Kuraiza and al-Nadīr were practically exterminated. Though the early converts from Mekka were always held in higher estimation, the Anṣār during the remainder of the Prophet's life were the mainstay of his power and it was not unnatural that upon his death, when he had not appointed a successor, the Khazradj felt by their numerical superiority that they were destined to be heirs of the State created by the Prophet and it was only due to the timely interference of 'Umar that the choice for the ruler of the State did not fall upon Sa'd b. 'Ubāda. That the latter felt that he had been unjustly deprived of a position which was rightly his is proved by his irreconcilable attitude after his rejection and his removal from al-Madina to Ḥawrān, where he died in the year 15 (637).

The Khazradj were divided into a number of clans of very unequal numerical strength at the time of the Prophet. The most numerous were the Banu 'l-Nadīdjār, while the other clans were approximately in the following order: al-Ḥārith, Djusham, 'Awf and Ka'b. It was also from the ranks of the Khazradj that the poets of the Prophet derived their origin, namely Ḥassān b. Thābit [q.v.], Ka'b b. Mālik and 'Abd Allāh b. Rawāḥa. During the rule of the Umayyads, descendants of the early followers of the Prophet continued to hold prominent positions and most of them were strong supporters of the Umayyads with the notable exception of al-Nu'mān b. Bashīr [q.v.] who as governor of Ḥimṣ unsuccessfully took the side of 'Abd Allāh b. al-Zubair and lost his life. We also find numbers of the tribe of al-Khazradj among the early settlers in Egypt and the descendants of 'Abd Allāh b. Rawāḥa were for centuries men of note in Muḥammadan Spain; they were settled principally in Saragossa in the North. If we come to consider the large amount of immigrants from al-Madina and the South of Arabia to Egypt we may not be far from the truth in assuming that the language of the Khazradj, from their South-Arabian origin, had also influence upon the Arabic dialect of Egypt and that they pronounced the letter *ḍīm*, unlike Eastern Arabs, hard like *g*.

AL-KHAZRADJĪ, Dīyā' al-Dīn Abu 'l-Ḥasan Alī b. Muḥammad b. Yūsuf b. 'Aṭf al-Khazradjī al-Sā'idī, belonged to a family which was originally native to Granada; he was born at Baigha (Priego de Córdoba) about 590/1194, and established himself at Alexandria where he often met Ibn Rashīd (who mentions him in his *Rihla*) and where he died in 626 (1128—1129) or 627, or, according to others as late as 650 (1252—1252). One of his commentators, al-Zam-

mūrī, says that he was born at Fās, travelled in the East and died at Ceuta in 610. This error on the part of Zammūrī is due to his taking our Khazradjī for another person of the same name whose biography is to be found in Ibn al-Kāḍī's *Djadhwat al-Iktibās*, p. 298. al-Khazradjī's work on metre, under the title *al-Rāmiza al-shāfiya fī 'Imai al-Arūd wa 'l-Kāfiya*, consists of 96 ṭawil-verses. It discusses metre and feet as well as the syllables of which the latter are composed. Then the author gives a description in which he treats the component parts and their modifications at the beginning and the end of hemistichs, as well as changes allowed or not. Then he describes different kinds of verses and finally rhyme, rhyming letters and mistakes in this field made by the poets. Like all handbooks of this kind, it cannot be utilised without a detailed commentary; this applies especially to the technical lines 8—12, 16, 27—29, 52—76. Of the many commentators of this poem may be mentioned Abu 'l-Kāsim al-Futūḥ al-Zammūrī (flourished about 750), lith. ed. Fās; Abu 'l-Kāsim Muḥammad b. Aḥmad, known as al-Sharīf al-Gharnāṭī, died in Sha'bān 760 (June—July 1359); Badr al-Dīn Muḥammad, known as al-Damāmīnī, died at Kalbirja in Sha'bān 727 (June—July 1424), not in 856, as Freytag says; printed at Cairo 1303, Muḥammad b. Marzūq al-Ḥafid, from Tlemcen, died on Sha'bān 24, 842 (Febr. 9, 1439); 'Alī b. Muḥammad al-Bastī with the surname of al-Kalāṣādī, died at Badja (Beja) in Tunisia in Dhu 'l-Ḥijja 891 (December 1486); Zakāriyā al-Anṣārī, died in 926 (1519—1520), lith. ed. Alexandria 1288, printed at Cairo 1303; Aḥmad b. 'Alī al-Balawī, died in 938 (1531—1532). The first edition of the poem was published by Guadagnoli, in his *Breves arabicae linguae institutiones*, Rome 1642, p. 286—299; it has further been printed in different *maḍmūnāt*. I have published an edition with a French translation, historical introduction and commentary: *La Khazradjyah*, Algier 1902.

KHEDIW (KHEDIVE). The Persian word *khadīw* or *khidw* meaning "lord" is one of the titles occasionally given to Muḥammadan rulers since the Middle Ages (cf. the xvth century Turkish historian 'Alī, *Kunh al-Akhbār*, Constantinople, v. 17). This title was conferred in 1867 by the Ottoman Sultān 'Abd al-'Azīz on Ismā'īl Pasha, the viceroy of Egypt. Though, since the *firman* of 1841, the function of Pasha of Egypt was already hereditary in the family of Muḥammad 'Alī, Ismā'īl desired a title indicating that his rank was higher than that of the other Ottoman governors with the title of Pasha. During the preliminary negotiations Ismā'īl proposed the title of *al-'Azīz* (cf. Kur'an, xii. 30), but for several reasons (e.g. the occurrence of this word in the Sultān's own name) the title of *Khadiw* (in official documents *Khadiw* Miṣr; the form *al-Khadiwī* is also often found) was chosen, which had been used already by Muḥammad 'Alī (see below 2, and Dicey, *The Story of the Khedivate*, p. 58). The term Khedive is, however, generally applied to all members of the dynasty founded in Egypt by Muḥammad 'Alī, until the establishment of the English protectorate over Egypt in

1914. The new ruler then assumed the title of Sulṭān, which was replaced by that of Malik after the protectorate had been abolished on February 28, 1922. The title of Viceroy often applied to the Khedives in European literature was already used in Muḥammad 'Alī's time.

The following members of the Khedivial dynasty have ruled Egypt under the suzerainty of the Sulṭān of Turkey:

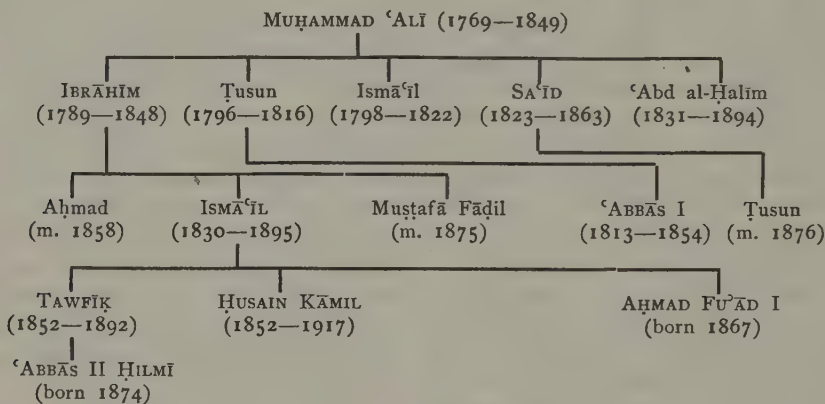

Muḥammad 'Alī	1805—1848
Ibrāhīm	1848 (June—November)
'Abbās I	1848—1854
Sa'id	1854—1863
Ismā'il	1863—1879
Tawfiq	1879—1892
'Abbās II Ḥilmi	1892—1914.

They were succeeded by:

Ḥusain Kāmil, Sulṭān, 1914 (Dec. 19)—1917 (Oct. 9).

Aḥmad Fu'ād, Sulṭān from 1917 to 1922, King (as Fu'ād I) since 1922 (March 16).

Genealogical tree of the most conspicuous of the numerous members of this dynasty:

The *firmān* of 1841 regulated the order of succession according to seniority in Muḥammad 'Alī's family; by the *firmān* of 1866 this regulation was replaced by the right of primogeniture limited to the descendants of Ismā'il Pasha. A decree of April 13, 1922, has recently settled the order of succession of the kings of Egypt.

Though really of Albanian origin, the Khedives have always been regarded in Egypt as "Turks", nor can they be said to have become a really national dynasty. The remark has been made that its various members have exhibited as many different types of character (Hasenclever, *Geschichte Aegyptens*, p. 199). The first five of them ruled with the absolutism of Oriental despots, but after the English occupation they had much less opportunity of developing an attitude of their own. The ties which bound this dynasty to Turkey always have remained strong enough to make it possible that, soon after the Turkish revolution of 1909, an Egyptian Prince, Sa'id Ḥalīm Pasha, could become Grand Vizier in Constantinople.

During the khedivial period Egypt has been what is generally called "europeanised", viz. a great many technical, juridical, economic and social institutions have been introduced. The same thing

has happened, during the same period, to other Muḥammadan countries and with the latter Egypt shows the common feature that the models after which the western institutions have been fashioned were nearly all French. But the particular form of the europeanisation of Egypt — its revival under a nearly independent dynasty, the marvellous development of its economic productivity and its weakening to a point which brought the country under the control of a European Power — was quite different to the corresponding process in Turkey, Algiers and other Muḥammadan lands. At the same time Egypt has remained the chief centre of Muḥammadan civilisation and education and its rapidly increasing population now amounts to half the Arabic-speaking world (Massignon in *R. M. M.*, lvii. 75 *sqq.*). The main point of view from which in the following lines the condition of Egypt since the beginning of the nineteenth century will be traced is the way in which this Muḥammadan country has reacted to the process of "europeanisation" and the results which have been the outcome of it.

1. Political History.

We can distinguish four periods before the war of 1914: 1. from the French expedition to the final installation of Muḥammad 'Alī (1798—1805), 2. Muḥammad 'Alī's reign until the end of his period as one of the Great Powers (1805—1841), 3. up to the English occupation (1841—1882) and 4. the occupation period until the English protectorate (1882—1914).

One of the chief motives for the French expedition against Egypt was the wish to prevent England from such an enterprise. During the eighteenth century France's commercial interest in Egypt had always been far more important than England's, but since this country had concluded a commercial treaty with the usurper 'Alī Bey [q. v.] and obtained in this way admittance for British vessels into the Red Sea for the Indo-Egyptian trade, the interference of England in Egyptian affairs had become a political danger. The geographical position of the country has destined it to become the first object of European political interests, as soon as the consolidation of colonial power in India could no longer be content with the sea route as the only line of communication. In France the idea of taking possession of Egypt had been

discussed throughout the eighteenth century, but the traditional good relations with Turkey had been one of the reasons that prevented its execution. Finally it was due to the initiative of Napoleon Bonaparte, seconded by Talleyrand, that the French Directoire decided in favour of the expedition on March 5, 1798. As to Turkey, the unusually energetic measures taken by the Porte in 1768 against 'Alī Bey proved that, even at Constantinople, there had been a presentiment of the coming events. In Egypt itself nothing indicated that a foreign invasion by a European power was seriously apprehended.

The French fleet, consisting of about 400 ships and a landing-force of 35,000 men, commanded by Bonaparte, landed near Alexandria on July 2, 1798. Alexandria was occupied without difficulty and the French immediately began their march on Cairo. The resistance organised by the Mamlūk Beys Murād and Ibrāhīm near Embābe on the Nile was soon broken in the battle of the Pyramids and on July 24 the capital was occupied. Murād Bey fled to Upper-Egypt and Ibrāhīm into the Delta. The panic that for a moment had overcome the inhabitants of the capital soon disappeared, but they were far from showing confidence in the French "liberators" and "friends of Islām", as the French soldiers had been styled in a proclamation. Bonaparte soon had to adopt more severe and more Oriental methods against revolts of the populace. A month after the landing the destruction of the French ships in the bay of Abū Kīr by Nelson (August 1) completely changed the character of the French enterprise and was the first of the blows struck by England, resulting in the final evacuation. The Porte, though reluctantly, declared war on France in September, but not before the middle of the next year (1799) did Turkish troops appear in Egypt. In the meantime the French had established a regular administration in the country. The Egyptians, however, maintained their ironical attitude towards the actions of the French, as well towards their zealous respect of local religious customs as towards the scientific investigations of the scholars accompanying the expedition. Besides, they soon were disappointed when they saw that the French also demanded the payment of land-tax, and the Muhammadan majority naturally did not like to see that the foreigners made a large use of the native Christians (Copts, Greeks, Syrians) as subordinate officials. On October 21, 1798, a rather serious revolt broke out in Cairo, which was only suppressed on the following day after a bombardment of al-Azhar. In order to prevent the invasion of a Turkish army, Bonaparte undertook in February, 1799, his famous expedition to Syria. Having failed to take 'Akka, defended by Djazzār Pasha [q. v.], he had to retreat in May. A month after his return the first Turkish troops (among whom was Muḥammad 'Alī as an officer in the Albanian corps), transported by English ships, landed at Abū Kīr (July 14, 1799). They were utterly defeated and on August 2 Bonaparte took their last refuge, the fortress of Abū Kīr. After Bonaparte's departure (August 22) the French maintained themselves another two years under Kléber (murdered in June, 1800) and Menou, but in August, 1801, their last resistance was broken by the allied English and Turks and they had to evacuate Egypt.

Apart from the immediate political results — the destruction of the Mamlūk power and the return

of Egypt to Turkey —, the results of the scientific work of the French expedition (centralised in the "Institut Egyptien" founded by Bonaparte on August 21, 1798, in Cairo, v. Bréhier, *L'Égypte de 1798 à 1900*, p. 65—80) published in the eight folio volumes of the *Description de l'Égypte* (cf. the *Bibliography*) were enormous. The researches on the "present state of Egypt" constitute the basis of all European knowledge of modern Egypt (e.g. the elaborate researches made by Lepère on the possibility of a canal between the Mediterranean and the Red Sea). The immediate influence, however, of the French on the cultural development of Egypt was almost nil. The gap between Eastern and Western civilisation was too wide to allow of any tangible results during the first period; this impression is given very strongly by reading al-Djabartī's account of the foreign occupation.

After the departure of the French army, a struggle began between the Turkish authorities and the Mamlūk Beys who wanted to regain their ancient power. The Mamlūks were protected by the English; after Murād Bey's death their most important leader became 'Uḥmān Bey Bardīsī. The Turks on the other hand naturally wished to take advantage of the opportunity to fasten their grip on the country, but their administrative methods and the inability of the successively appointed *wālīs* to withhold their own troops from mutiny, for want of money, gave to Bardīsī and his party a temporary advantage. His protectors, the British, had left Egypt in March, 1803, but one of his chief supporters was Muḥammad 'Alī with his Albanian regiment. His aid enabled Bardīsī and the old Ibrāhīm Bey to maintain themselves in Cairo, while the *wālīs* of the Porte exercised authority only in certain parts of the Delta. A last Turkish *wālī*, Khurshīd Pasha, could reside for some time in the Cairo citadel, but finally Muḥammad 'Alī, by his ever increasing influence, removed him.

After the rather negative results of the foregoing five years the second period proved to be of enormous importance for the country. From a political point of view the most notable effect of Muḥammad 'Alī's reign was that he gave Egypt a dynasty of its own. Although what Muḥammad 'Alī did for the country was only a means of realising his own ambitions, the history of Egypt has been deeply influenced by his measures. He unchained forces which determined its destiny and settled the fate of the dynasty itself. They may be summed up as follows: firstly, the mobilisation of the national forces of the Egyptians themselves and secondly the introduction of European instructors and European methods. From a cultural point of view it may be remarked that from the beginning of Muḥammad 'Alī's reign until the English occupation Egypt was much more exposed to Ottoman-Turkish influences than was ever the case before; personal and independent as the régime of the viceroy may have been, the administrative methods and the taste of himself and his surroundings were impregnated by the traditions of the Ottoman Empire (as an instance may be cited the so called Alabaster Mosque built by Muḥammad 'Alī in the Citadel of Cairo in Constantinople style). The great expansion of Muḥammad 'Alī's power between 1833 and 1840 was one of the natural historical consequences of Egyptian political power which always has implied the annexation of Syria (see the art. EGYPT); Muḥammad

‘Alī’s Great Power policy itself, however, was not very important for Egypt. The conquest of the Sūdān was of far more direct and future profit for the country. In 1841, at the end of this period, closed by the Imperial *firmān* of Rabi‘ II 2, 1257 (May 23, 1841), Egypt’s international position was quite changed. To outward appearances it had become again a Turkish province, but in reality the fact of the intervention of four great European Powers (except France) showed the beginnings of political dependence upon Europe and especially upon England. The occupation of ‘Aden by the British in February, 1838, was already a clear symptom of the new situation. Muḥammad ‘Alī was always fully aware of this fact (Cromer, *Modern Egypt*, i. 16). He remained himself a staunch friend of France, though this friendship proved to be of little avail to him. But as long as he reigned he was able to avert foreign intervention from Egyptian internal affairs; it is for this reason that he never gave his consent to the piercing of the Suez Isthmus.

The last years of Muḥammad ‘Alī, and the short reign of Ibrāhīm [q. v.], belong, with the reigns of ‘Abbās, Sa‘īd and Ismā‘īl (cf. these articles), to the third period. During this period Egypt became more and more detached from the Ottoman Empire and it was drawn more and more into the sphere of European politics and economics. No territorial expansion took place except in the South (Abyssinian war in 1872; acquisition of Sawākin and Muṣawwa‘ from the Porte in 1865). Egypt’s relations with Turkey in this period were rather of a personal character, inasmuch as the Khedives sought to gain special favours from the Sultāns in return for an increase of the tribute. But whenever the Ottoman government tried to exercise real influence on Egyptian affairs — as in the beginning of ‘Abbās’s reign — the results were illusory. Even the Sultān’s prohibition of Ismā‘īl’s contracting new loans without his assent could easily be ignored. The Egyptian army was only theoretically a part of the Turkish army (Egyptian troops, however, participated in the Turkish wars against Russia) and it was only due to special circumstances, that, in 1879, the Sultān had an opportunity of deposing Ismā‘īl. In the interior the viceroys reigned with unlimited autocratic power after the traditional Oriental fashion. With the exception of ‘Abbās, who showed himself an enemy of Western civilisation — especially in its French form —, they encouraged the introduction of European arts and sciences and institutions. The result was that Egypt became soon more “europeanised” than any other Muḥammadan country. It is well known that all these works, far from increasing the prosperity of the country, brought about its financial ruin. The cause has to be sought not so much in the proverbial but much exaggerated prodigality of Ismā‘īl as in the system that prevailed in the execution of the reforms. This system was based on the careless Oriental administrative methods, the disastrous effects of which were doubled by the readiness shown by the Europeans in granting financial facilities. Moreover, many of the European agents were no more than unscrupulous adventurers, whose only aim was to get an enormous indemnity for alleged breaches of contract by the Egyptian government. A great many public works remained uncompleted

on account of difficulties of this sort. The first result was an ever increasing floating debt (the first beginnings of this disastrous development are very clearly depicted by von Kremer, ii. 28). The main difficulties, however, were brought about by the different loans contracted in Europe by Sa‘īd and Ismā‘īl (1862, 1864, 1866, 1868, 1872); they grew to an extent which cost Ismā‘īl his throne. The greater part of the bondholders of the debt were French and, to a less degree, British. So France and England, the ancient rivals in Egyptian affairs, became the leaders of the foreign intervention; representatives of both these countries took part in the “Dual Control” over the revenues and expenses of Egypt since 1876, interrupted only by the period in which an Englishman and a Frenchman were ministers (August 28, 1878—April 5, 1879). France’s financial interests were unquestionably the greater, but England was already by far the more influential by its trade and by its political situation; moreover the British occupation of Perim in 1857 and of Cyprus in 1878 strengthened England’s position considerably. Still, up to the English occupation of 1882, Egypt’s formal relations towards other countries were nearly those of an independent state, limited only by the capitulations and, since 1876, by the mixed jurisdiction (see 2). The Khedive, since 1873, was able to conclude treaties with other powers (except purely political); at the opening of the Suez canal (1876), Ismā‘īl was treated as the equal of the European sovereigns who came to attend the ceremonies. As the European personnel in the Egyptian administration increased, however, the influence of the French and English consuls became gradually considerable.

The condition of the people of Egypt had become more favourable in the beginning of this third period, especially after the abolition of the state monopoly. But the *fellāḥ*’s profited little by the favourable economic circumstances and, especially after 1876 when the heavy and ruinous taxation began which was the only means whereby the government could meet its obligations, there began a period of profound misery which was only to end towards 1890. This unsatisfactory situation was one of the causes of the first nationalist movement. This movement had originated in the indigenous middle classes, which had already come into existence under Muḥammad ‘Alī; by European as well as Oriental influences (Djāmāl al-Dīn Afghānī) these classes had gradually become an important factor in social life, although, for the time, orthodox religious circles still stood aloof, as the modernist views of the first nationalists and their sympathy with freemasonry were antipathetic to them. The nationalists criticised Ismā‘īl’s financial policy, his favourisation of European elements in the country and his predilection for the Turco-Circassian class to the detriment of the native Egyptians. The treatment of the indigenous element in the army especially had excited their indignation (the armies sent to the Sūdān and against Abyssinia in 1875 consisted exclusively of *fellāḥ*’s). Public opinion began for the first time to manifest itself in 1877. In that year the nationalists published some newspapers (a. o. *Miṣr* and *al-Waṭan*) and the device of *Miṣr li ‘l-Miṣriyīn* was heard for the first time. Notwithstanding repressive measures, the nationalist papers published sharp criticisms of the government;

a special subject of their criticisms was the participation of Egyptian troops in the Turco-Russian war. The "coup d'état" of April, 1879, which caused the fall of the ministry of Nūbār Pasha with the two European ministers was the first palpable result of the nationalist action (it seems even probable that the nationalists encouraged the deposition of Ismā'īl) (M. Sabry, *La Génèse* etc., p. 160). A still more serious consequence was the movement in the army against the Turco-Circassian officers, which finally led to open revolt and, as a consequence, the occupation of the country by British troops.

This military movement, the revolution of 'Arābi and his friends, opens the fourth period of modern Egyptian history. In the two preceding years, after the accession of Tawfīk Pasha [q. v.], the new Khedive and his ministers had tried to execute a more or less nationalist programme, but, when 'Arābi had come with his claims of army reforms, the convocation of parliament and of a constitution, they soon came to look on foreign intervention as the only possible salvation. Thus the absence of a really strong and able power in the country — for 'Arābi's party was weak through inexperience and incompetence — had made possible the intervention of England. The chief cause which made it desirable for England to get a strong position in Egypt was the geographical situation of this country on the route to India. This desirability had much increased since France had taken possession of Algiers and Tunis and after the opening of the Suez canal, which it was in England's interest to keep free from powerful foreign influence. The development of Egyptian affairs had provided it with an excuse for an armed intervention. France, whose political interests were less engaged, shrank back from the responsibility at the last moment; Egypt's history after 1882 shows how England has assumed this responsibility.

Theoretically, the international position of the country remained unchanged after the occupation; Egypt now enjoyed a double suzerainty, a financial tutelage, a threefold jurisdiction, a foreign military occupation and was the scene of the clash of two civilisations. The British policy had in the first place to face what Lord Cromer calls "Internationalism", meaning by this term the intervention of other powers, especially France, in Egyptian administrative affairs on the basis of former agreements. Only in 1904, the year of the Anglo-French agreement, did England practically get a free hand in Egypt. The man under whose direction the position of the English was consolidated in the Nile valley was Lord Cromer, British Consul-General from 1883 to 1907. Notwithstanding his comparatively modest official function, Cromer became the most powerful man in Egypt. He governed by the system of "governing the governors of Egypt"; his chief aids were the British advisers in the different ministries. It certainly was an advantage for Egypt that its interests had now become to a large extent identical with those of England. Thus England succeeded by a new loan guaranteed by the great Powers and by very severe measures in the interior in putting the finances on a sound base, so that in 1904 the power of the "Caisse de la Dette" could be considerably limited, so as to give back to Egypt its financial liberty. The public debt, it is true, was not much less in 1914 than in 1882, but the

economic prosperity of the country had greatly increased (see 3). As to Turkey, its influence on Egyptian affairs became ever less. The sending of Ghāzī Aḥmad Mukhtār Pasha in 1885 as Turkish High Commissioner had no political results, though the unofficial panislamic propaganda carried on by the Pasha was considerable at the time. The Sultān's attempts in 1892 and in 1906 to assert his authority on the Sinai peninsula were complete failures. During the Turco-Italian war England did not even allow Egypt to send troops to Tripoli. On the other hand Turkey could not sympathise with the nationalists, the Young Turks (many of whom had found an asylum in Egypt during the Ḥamidian régime) after 1908, even less than Sultān 'Abd al-Ḥamid. France's opposition to the English occupation was more influential on account of the strong French sympathies in the country. After 'Abbās Hilmi's accession a revival of French cultural influence took place, against which the English occasionally had to take measures (deposition of Nūbār Pasha in 1894). It was from France that, until 1904, the nationalists always hoped for support. The position of the Khedives was of no political influence; 'Abbās Hilmi was no more successful in his nationalist attitude in the first years of his reign than later on in his entertaining good relations with Constantinople.

The Sūdān, the possession of which had been most important for Egypt's prosperity and its international position, theoretically was, like Egypt, a province of the Ottoman Empire; by a *fīrmān* of 1841 Muḥammad 'Alī had been granted the governorship over these regions "without hereditary rights". Under Ismā'īl the Sūdān had been governed for Egypt by English governors (Baker and Gordon). But, since the revolt of the Mahdī Muḥammad Aḥmad [q. v.] and especially the taking of Khartūm (January 26, 1885) had interrupted the Egyptian domination, the Sūdān affairs were entirely directed by British policy; the same is true of the reconquest; the nominal chief of the Egyptian army was the Khedive, but after the reorganisation of this army in 1883 all higher ranks were occupied by British officers. After the reconquest (1898) the English policy did not allow the return of the Sūdān to Egypt; by the Anglo-Egyptian treaty of January 19, 1899, an Anglo-Egyptian condominium was established in the Sūdān. In this treaty the rights of the Porte were not taken into account and the Khedive, though the Sultān's vassal, acted as an independent sovereign. The consolidation of the British power in the Sūdān, on the other hand, has strengthened considerably England's ascendancy over the Nile valley.

After 'Arābi's defeat the nationalist movement was crushed for the moment and until the end of Lord Cromer's days it never became again a political factor of importance. During that time a new generation grew up and found a leader in the young Muṣṭafā Kāmil Pasha [q. v.; died on February 10, 1908, at the age of 34], who founded in 1899 the paper *al-Liwā'* and became in 1907 the first president of the National League (*al-Hizb al-Waṭani*). This second generation of nationalists stood likewise under French cultural influence. Intellectually they were much better equipped than their predecessors; when they began their renewed campaign of "Egypt for the Egyptians", they showed much moderation and rejected revolutionary ideas. After Lord Cromer's replacement

by Sir Eldon Gorst (1907—1911) the attitude towards the nationalists became one of the chief problems of British policy. In 1906 the incident of Denshawai had proved that anglophobia was still widely spread and, though the culprits were punished in an exemplary way, the new British representative adopted a much more conciliatory attitude towards the nationalist aspirations. But this new policy had not the desired results; in 1909 freedom of the press had to be restricted again and al-Azhar had to be closed for some time on account of the anti-English demonstrations of the students. Then happened on February 20, 1910, the murder of the Coptic Prime Minister Būtros Ghālī Pasha (one of the members of whose cabinet was Sa'd Zaghālūl) by a young Muḥammadan nationalist. This event brought about a breach between the Christian and the Muḥammadan element, in the nationalist party, which soon threatened to lead to serious disorders. In the same year the General Assembly rejected the prolongation of the Suez canal concession after 1968. So, with Gorst's retirement and his succession by Lord Kitchener in 1911, the British policy made place again for a stronger rule which lasted until the declaration of the English protectorate over Egypt on December 18, 1914. Next day 'Abbās Ḥilmī was declared to be deposed and replaced by his uncle Ḥusain Kāmil as Sulṭān. A *fatwā* of the Shaikh al-Islām of Constantinople declared the new ruler to be a traitor to the cause of Islām whom it was obligatory to fight and who deserved death (text in Jacob, *Hilfsbuch für Vorlesungen über das Osmanisch-Türkische*, ii., Berlin 1916, p. 46).

During the war Egypt was merely a link in the strategic organisation of the British Empire. From November 6, 1914, the country was at war with Turkey, but the defence of Egyptian territory was only in British hands. The sittings of the Assembly were suspended and martial law was proclaimed. The result of the war was the definite loosening of the ties with Turkey by the Treaty of Lausanne (May 25, 1923), to which Egypt, however, was no party. A much more important consequence of the war was the renewed growth of nationalism. Several causes had combined to incite opposition against the British protectorate, such as the heavy requisitions imposed on the people and the growth of the number of British officials. The Wilson principles too stimulated the Egyptians to claim political independence. The nationalists, this time, were supported by a much greater part of the population than before; the Copts had joined them again and even the circles of al-Azhar encouraged the nationalist propaganda. Its leader became Sa'd Zaghālūl Pasha, before the war Minister of Justice and at that time known as a man of moderate political views. The indifference, however, which the Egyptian claims met in London caused the Egyptians to abandon moderate measures. A struggle of three years followed between them and England in which nationalists made use of disturbances (breaking-up of railways, anti-European outbreaks), passive resistance (strikes, boycotting of the Milner mission) and the discrediting of the English administration. The British used military force (martial law was maintained) and deportation (Zaghālūl twice); at the same time Bolshevik agitators and partisans of the return of the former Khedive 'Abbās Ḥilmī

were at work. Finally the English government changed its attitude; it declared the British protectorate abolished and recognised Egypt as a sovereign and independent state (February 28, 1922). The settling of some important points, however, remained reserved (e.g. the defence of Egypt and the Sūdān question). Though by this attitude on the part of the English government the difficulties seemed to have been solved, this was not the view of the nationalists. The events after February, 1922, have shown that the struggle between the claim to full independence and British intervention in Egyptian affairs has in no way become less violent and less dangerous for the peaceful development of the country.

2. Government and administration.

After the departure of the French the number of Mamlūk Beys had been completed again to twenty-four, but the shock their government system had undergone by the occupation had deprived it of all power of resistance against the strong will of Muḥammad 'Alī. The French occupation had lasted too short a time to permit the establishment of new governmental traditions. For tax-collecting the French had been compelled to make use of the existing institutions; their chief innovation was the creation of a *diwān* in Cairo composed of ten *shaiḫ*'s (with careful exclusion of representatives of the Mamlūk class) to look into matters of government. Bonaparte was provided with a Ketkhudā (Kikhya in Egyptian Arabic), as had been the custom with the Turkish pasha's before.

As has always happened before when Egypt got a strong ruler, the government system of Muḥammad 'Alī became again extremely centralised. All feudal powers were abolished (massacre of the Mamlūks), the only great vassal being the viceroy himself who reigned in the name of the Sulṭān. The character of his reign was still very Oriental and very "Turkish" at the outset. But the way in which this absolutism collapsed was no longer Oriental; Egypt did not fall back again into the hands of a number of feudal chiefs. For the country became ever more interwoven with European interests, which at last, though allowing the survival of the Khedivial dynasty, put the government into the condition of a constitutional monarchy, in which, however, the check to absolutism was not formed by a representative body of the people, but by the representative of a European government.

The relation of vassaldom towards the Porte has in practice never bound the hands of the viceroys in matters of interior administration, not even since the *firmān* of May 23, 1841, the dispositions of which have theoretically formed the base of Egypt's juridical international position up to 1914 (Turkish text in Aḥmad Luṭfī, *Tārīḫ-i Dewlet-i 'Alīye-i 'Oṭmāniye*, Constantinople 1302, vi. 140; French text in Noradounghian, *Recueil*, ii. 335). Its provisions for the interior administration are only: the application of the *Khāṭ-i Sherif* of Gülkhāne (1839), the paying of a tribute from the revenue (fixed at 80,000 purses in a separate *firmān* of the same date and raised to 150,000 purses or 750,000 Turkish pounds in 1866), the coinage in the Sulṭān's name, the reduction of the army to 18,000 men (this limitation was removed in 1873), the viceroy being authorised to

confer military grades up to the rank of colonel, and the prohibition of the construction of men-of-war without special permission. The *firmān*'s after 1841 only contained slight modifications and the one of June 8, 1873, resumed all former dispositions. The *firmān*'s granted to the Khedives Tawfiq and 'Abbās Hilmi on their accession contained nearly similar prescriptions.

Muhammad 'Ali's general government was made up of a system of *diwān*'s and *madjlis*'s (the members of which were appointed by himself), forming together the central government. The most important was *al-Diwan al-Khidiwi* in the citadel of Cairo, presided over by the *kikhyā*; it was at the same time a supreme court of judicature (Lane, i. 130). Besides there was a *Madjlis al-Mashwara* (general government), a *Madjlis al-Djihādiyya*, a *Madjlis al-Tarakhāna*, a *Diwān al-Tudjdjār*, etc. All these bodies had occasionally juridical and executive power. The *shar'ia* jurisdiction was exercised by a Hanafite *qādi*, sent every year from Constantinople, in the *mahkama* of the capital. There was also a council of '*ulamā*', but this more national element, which had exercised a considerable influence in the time of the French occupation, soon lost its influence under Muhammad 'Ali. The number, the names and the attributions of the different *diwān*'s were, however, far from stable (see Zaidān, *Mashāhīr al-Sharā*, i. 24). Sa'id Pasha changed three of the *diwān*'s into ministries (*wizāra*) under a *wa'iz*, viz. the ministries of Foreign Affairs, Finance and War, and the place of the *Kikhyā* was taken by a kind of chancery called *Ma'iya*; the working system of these bodies was still very imperfectly organised (cf. the description by von Kremer, ii. 9 *sqq.*). Ismā'il created the Ministries of Interior, Marine, Public Instruction ('Ali Mubārak Pasha), of Public Works and of Commerce (1876), the central direction being given by a *Madjlis Khushūsi*. The *wakf* administration did not yet form an independent ministry. Although in the beginning this Khedive succeeded in keeping a strong hand on government, the different personalities of the ministers began to exercise influence; especially towards the end of his reign, when for a short period even two Europeans were members of the cabinet of Nubār Pasha. At the same time a number of high European officials in Egyptian service had obtained influential positions in different departments. In 1866 Egypt had been granted a kind of representative body (*Madjlis Niyābi*, opened November 25, 1866) elected by the communes, but as this germ of an Egyptian Parliament only possessed a limited power of advice and was convened only once a year, it did not yet play a role in the government. Only after 1879 did this *Madjlis* become a real parliament "with an opposition".

The constitutional régime inaugurated by Ismā'il in 1878 by his declaration that henceforward he would reign by the means of responsible ministers did not last long. After his deposition it was hoped that the Khedive Tawfiq — who gave a constitution on February 7, 1882 — would be able to work with his parliament, but these hopes were annihilated by the 'Arābi revolution. England, after the occupation, interfered in government matters through the mission of Lord Dufferin, whose well known report was presented in February, 1883. It was followed in May of the same year by a new Organic Law, which restored the full legis-

lative power to the Khedive, instituted a legislative council of 30 members and a general assembly which was an enlargement of the first body but with very limited powers. This system worked for 30 years; it enabled the English to direct the government of Egypt by means of "advisers" in the different ministries. In 1913 the two bodies mentioned became one single legislative assembly with consultative function, consisting of the cabinet ministers, 66 elected and 17 nominated members; this assembly, however, did not meet, after martial law had been proclaimed in 1914. Finally, after the declaration of Egypt's independence (February 28, 1922), a commission of 30 members was charged with the elaboration of a constitution, which was promulgated by the king on April 19, 1923. This constitution has established in Egypt a representative parliamentary, monarchical government. In outward appearance almost everything that could suggest that Egypt had ever had any other than European traditions had vanished.

Muhammad 'Ali's reorganisation of the provincial administration began in 1813 and consisted of a reduction of the number of provinces (see the art. EGYPT, § 2a) and the establishment of a highly centralised administration. In 1840 the number of provinces (*mudiriya*) was only seven: Buhaïra, Manūfiya, Daqahliya, Sharkiya (besides the governorships of Cairo and Alexandria) in Lower Egypt, and Banī Suwaif (including Faiyūm), Minyā and Isnā in Middle and Upper Egypt. Each province was governed by a *mudir*; it was subdivided in *markaz*'s each under a *ma'mūr*, these again into *kism*'s under a *nāzir*, these again into *nāhiya*'s under a *shaikh al-balad* (whose title and function were taken over from the preceding period). In each *nāhiya* there was an official called *khawli* for agricultural matters, a *ṣarrāf* for the tax collecting and a *shāhid* or *ma'dhūn*, who was a deputy of the *qādi*. The *mudir*'s were always "Turks". The *khawli*'s and the *ṣarrāf*'s were all Copts; most of the other officials were indigenous Muhammadans. Under Muhammad 'Ali's two successors the centralising control slackened and abuses entered freely. Then Ismā'il proceeded to a new division of Egypt into three great sections: Al-Baharī, with the *mudiriya*'s Buhaïra, Dja, Qalyūbiya, Sharkiya, Manūfiya, Gharbiya and Daqahliya; al-Wuṣṭāni, with Banī Suwaif, Faiyūm and Minyā, and al-Sa'id [q. v.] with Asyūṭ, Djirdja, Kenā (Kenneh) and Isnā (Esne). Besides these, there were the governorships (*muḥāfaẓa*) of Cairo, Alexandria, Damiyāt, Rashid (Rosette), al-'Arīsh, Port-Said, Suwaï (Suez) and Sawākin. The existing subdivisions were maintained; only over each *nāhiya* there was put an '*umida*, who was to be assisted by the *shaikh al-balad*; both were chosen by the inhabitants. The function of *khawli* was abolished on account of the greater agricultural autonomy granted to the provincial representative bodies (cf. 3). Each *markaz* and each *mudiriya* got such a *ha'i'a niyābiya* composed of notables. It was after the fashion of these bodies that in 1866 the *Madjlis Niyābi* was created in Cairo (see above). A no less important innovation was the replacement of "Turkish" *mudir*'s by native ones; it was some time before the population became accustomed to obeying high officials chosen from their midst. The administrative system described is maintained in its main features up to the present day.

As in former centuries, the administrative system was closely connected with the land policy. Muḥammad 'Alī abolished nearly all full property of the soil. All arable lands were distributed by his cadastral administration (*ruḥnāme*) among the *fellāh's* (each getting 3—5 *feddān*), who were to be only usufructuaries. They could in no way dispose of the soil and had to pay *kharādj*; their land was called *kharādjī*. The taxes were collected by officials (see above) and the tax-farming system (*iltizām*) was abolished. The former tax-farmers were indemnified by being allowed to keep as usufruct the tax-free ground (called *ūsiya*) which they had already possessed under the Mamlūks, and by an annual rent. In course of time this *ūsiya* land has returned to the public domain as *kharādjī* or has become full property (*milk*). Also other kinds of exceptional private property (*rizka*) entered gradually the category of *kharādjī*. A new kind of lands were those called *ib'ādīya*, uncultivated grounds given by Muḥammad 'Alī to notables and high functionaries for them to cultivate. The *ib'ādīya* were free from taxes and could not be sold. Under the same conditions large properties were granted as *shiflik's* (from Turkish *ışflik*) to the members of the viceregal family and some high functionaries; these became under Ismā'il the great *dā'ira* administrations. Now all the categories of land enumerated have gradually become full property. The limitations to the property rights of holders of *kharādjī* lands have been abolished by different laws, especially the *muḥābala* law (see below). So there has been an evolution from a state in which nearly no private property existed at all to the present situation where *milk* property has become the rule. Foreigners have officially been allowed to possess landed property in Egypt only since the Turkish law of June 10, 1867, but Muḥammad 'Alī had already given *ib'ādīya* lands to several foreigners; still the portion of Egyptian soil actually possessed by Europeans is rather small. The Egyptian property law is now to be found in the Egyptian and the Mixed Civil Codes. As to the original *wakf* land, a considerable part of it had been confiscated by Muḥammad 'Alī and now belongs to the *milk* category.

The financial administration of Egypt is better known than any other branch of government through the elaborate investigations made by European experts, beginning with the report of Mr. Cave in 1876. The collection of the chief revenue, the land-tax (cf. 3), always brought with it many abuses, especially the collection in advance under Ismā'il in order to meet the exigencies of the public debt. The *muḥābala* law of 1871, changed many times and abolished in 1880, was a curious example of financial policy, as it exempted those who paid six years in advance for ever from the half of their future tax obligations. Another important branch of revenue, the custom duties, were still farmed to *multazim's* in the beginning of the 19th century. Since European officials have been introduced in the financial administration, these revenues have come in more regularly. A feature of financial administration under Ismā'il has also been the amalgamation of the administration of the Khedive's own domains (*dā'ira saniya*) with that of the government.

The first impulse to the reorganisation of jurisdiction was given by the institution of

the mixed tribunals in 1876, obtained by Nubār Pasha after laborious negotiations with the powers. As in Egypt the jurisdiction of the foreign consulates had increased far beyond the limits laid down by the capitulations — as a result of the inefficiency of indigenous jurisdiction — a reform had become an imposing necessity. After the creation of the mixed jurisdiction, consular jurisdiction was limited to processes between foreigners of the same nationality and penal jurisdiction over each consul's nationals. The mixed judges were to be Egyptian officials, but as the majority were subjects of the different western states possessing capitulations and as the mixed tribunals were given competence to judge even the Egyptian government, they assumed the character of a foreign power in the government, a very clear symptom of Egypt's „europeanisation". On the other hand a serious resistance of the Porte had to be overcome, as Turkey did not like to see the official establishment of so independent a jurisdiction in one of her provinces. By a *firmān* of 1872 (Noradounghian, iii. 340), however, the authorisation was given by the Sultān. Seven years after the institution of the mixed tribunals there were organised new indigenous tribunals after the same pattern, by the decree of June 4, 1883, replacing the jurisdiction of the administrative authorities and their *divān's*. The codes applied by the two kinds of jurisdiction are nearly identical and fashioned chiefly after the French codes. The new indigenous codes were likewise published in 1883 (the penal code and the code of criminal instruction were renewed in 1904). On the penal code that existed under Sa'id Pasha and was a very confused compilation, see von Kremer, ii. 52—66. The jurisdiction of the personal statute of Muḥammadans is reserved to the *maḥkama's* of the Hanafite *madhhab*, which were reorganised by a decree of 1897 (and later on again in 1909 and 1910). There exists, however, a codification in articles of the Hanafite law on marriage, tutelage and successions, made for the information of the judges of the mixed courts; a French translation of this compilation, in 647 articles, has been inserted in the recent edition of *Egyptian Codes and Laws* by J. Wathelet and R. G. Brunton (Brussels 1920). The Arabic text was published in Cairo in 1917. Qadri Pasha, late minister of Justice, had also codified, for educational purposes, the dispositions of Hanafite law concerning property and obligations (Arabic edition, Cairo 1909), but, unlike the Turkish Medjelle, these codifications of Muḥammadan law have no exclusive authority with the Egyptian *maḥkama's*.

The different Christian communities have their own jurisdiction in matters of personal statute.

3. Economic Development

The great economic creations of Muḥammad 'Alī were the introduction of cotton cultivation and his monopoly system. These, supported by his highly centralised government system, procured him the means of pursuing his vast political schemes. In itself the economic system was quite Oriental, but, in two ways, it brought about relations with Europe. Firstly the viceroy sought to apply European methods and for that purpose brought European experts to Egypt, secondly the products of agriculture were sold to Europe and the commercial relations with Europe thus created had again most important consequences after the monopoly

system had been given up under 'Abbās I. Free commercial relations then developed between the European buyers and the Egyptian cultivators, nearly always by the intermediary of other elements. This change, however, was accomplished under conditions which have proved highly prejudicial to a sound and independent development of the country. Firstly European ideas of credit were introduced into a country that before had known only very limited credit operations. The European merchants and their auxiliaries began to give large advances on the payment for the expected crop; the inevitable consequence was that the peasants got into debt and that the merchants lost their money. Here we see, on a lower plane, exactly the same symptoms that brought about the heavy debt burden of the state itself, due to exaggerated confidence in the prosperity of the country. The Egyptians evidently did not know how to use credit, as their economic traditions had not made them acquainted with the accumulation of capital. Secondly the imports from Europe brought wares of a kind of which the population stood in no great economic need, but which were nevertheless bought in large quantities. In the first place mention may be made of cotton manufactures that came chiefly from England. So, notwithstanding the increased production, the country was not able to enrich itself; on the whole the population remained poor and in debt, as was the treasury. But indissoluble economic and financial ties had been formed with Europe and particularly with England. A glance into the import and export trade about 1850, as given by von Kremer, is enough to show how much England was commercially interested in Egypt and explains why it was England which, when the financial and economic crisis came, undertook the most active intervention resulting in the military occupation. After 1882 Egypt became economically still more dependent on England by the extension of cotton cultivation, though, on the other hand, English control prevented the country from falling back again into a state of unproductiveness. So here again we see how the work of Muḥammad 'Alī created possibilities the profits of which, as in so many other Muḥammadan countries, have not been reaped by Egypt's population itself.

A thorough investigation of the Europeanisation of Egyptian economics has not yet been written (as was done e. g. for Turkestan by Reinhold Junge in his book *Das Problem der Europäisierung orientalischer Wirtschaft, dargestellt an den Verhältnissen der Sozialwirtschaft von Russisch-Turkestan*, Weimar 1915). So, after the foregoing sketch, we shall point only to a few prominent features and figures.

Egypt has not only remained an almost exclusively agricultural country, but it has developed its agrarian character to an extent which has surpassed all former estimates. In the Mamluk time the country had produced scarcely enough wheat for its own livelihood; it was Muḥammad 'Alī who, in his typical centralising way, gave a start to the reawakening of Egypt's productive power.

The cardinal point was the care for good irrigation, very much neglected in the previous centuries. The French had only had time to make a thorough study of the existing canal system; then Muḥammad 'Alī took up the problem ener-

getically. He wasted many thousand lives in the improvement and digging of new canals, the best known of which is the Maḥmūdīya canal from Alexandria to the Rosette arm of the Nile. His irrigation works not only brought about a territorial extension of agriculture, but he created for the first time the possibility of perennial irrigation by canals containing water during the whole year. Besides, he entrusted the control of all irrigation works and the distribution of the water to special officials (the *khawāṣṣ*'s, see 2), leaving no liberty to the peasants themselves. This canal digging activity was continued by Ismā'īl (the Ibrāhīmīya canal in Upper Egypt and the Ismā'īliya canal, linking the Nile with the Suez canal). In his reign the centralised control of irrigation was superseded by the local and provincial councils, acting under the supervision of government engineers, but at the same time abuses in the water distribution by the local authorities became frequent. This situation only improved when, after 1882, English officials were charged with the control. Care for the irrigation became one of the first principles of the English administration; from the loan of 1884 an amount of £ 1,000,000 was reserved for this purpose, while all other expenses had to be reduced for lack of money. The results of this policy have entirely fulfilled the expectations. It was also by English engineers that the barrage of the Nile near Dīrā — already begun under Muḥammad 'Alī by French engineers — was finished. This work was followed by the famous dam of Aswān (finished in 1902 and raised in 1912), which had already more than agricultural significance, as it made it possible to hold up, within a certain measure, the water necessary for the irrigation of the country below. The same applies to an even greater extent to the huge dams projected after the war in the Blue and the White Nile above Kharṭūm for the irrigation of the Sudān (the first was opened in 1926); during the post-war disturbances in Egypt England's power over the Nile waters became one of its most powerful means of coercion in the struggle with the nationalists. In Egypt itself the irrigation administration is now almost entirely in the hands of Egyptian officials. Apart from the care for banks and dykes the *fellāḥ*'s themselves still apply for the greater part the primitive irrigation methods of the *sāḫīya* and the *shādūf*, while only on the larger estates modern machines have been introduced.

Besides the care for irrigation, the cultivable soil has also been extended enormously by Muḥammad 'Alī's land policy (see 2). Further, he exercised by the monopoly system a decisive influence on the direction in which agriculture has developed. He succeeded in centralising the entire production in his own hands and of disposing of it freely; the peasants were no more than day-labourers who were obliged to sell their products at fixed prizes to the government and to pay likewise their taxes in kind. Notwithstanding this prevention of all personal initiative — made still worse by the *corvées* and the conscription — the viceroy was able to force the agriculturists to produce larger quantities and so to increase the surplus destined for export. Wheat always had been the chief agricultural product of Egypt; in 1821 Muḥammad 'Alī introduced cotton cultivation not without having to overcome the passive

resistance of the population. At first there was planted an indigenous wild cotton (Mako); in 1828 Sea Island seed was introduced. This cultivation soon developed to an enormous extent; the area of the cotton land increased proportionally much more than that on which cereals were grown. The difference was, however, that the bulk of the cotton crop was destined for export and the cereals — wheat, barley, maize (*durra*) and rice (in the Delta) — for home consumption. After the abolition of the monopoly system the same development of agriculture prevailed and after the occupation the English — for many years previously already the chief purchasers of cotton — increased the cotton cultivation to a still larger extent. Between 1883 and 1908 the cotton growing area was doubled (from 800,000 to 1,640,000 *feddān*); cotton then covered a larger area than cereals. After that time a period of stagnation set in; during the war the cultivation of cereals had even to be encouraged (in 1919 the proportion was: cotton 1,573,000 *feddān* and wheat 1,274,000 *feddān*); it was even forbidden to plant more than one third of the cultivable area with cotton.

Another agricultural product introduced by Muḥammad 'Alī was hemp, which had to provide the cordage for the ships of his fleet. Sugar-cane was likewise a new product, and was first planted by Ismā'īl on his domains in Upper Egypt (since 1867). This crop has not produced such remarkable results as the cotton. Among the ancient crops flax has much decreased; so has the formerly flourishing tobacco culture, which was entirely prohibited in 1890. After the war, experiments have been made to introduce this crop again.

Apart from the produce in kind, agriculture provides also important revenues to the treasury in the form of the land tax. This tax has always constituted the bulk of the government revenue and has weighed heavily on the *fellāḥ* class. Muḥammad 'Alī levied the land tax in kind; those who failed to pay for more than three years lost the land granted to them. Afterwards the *fellāḥ*'s had to pay cash and under Ismā'īl they were often obliged to have recourse to usurers in order to fulfil their tax obligations; sometimes the government itself called in the aid of money-lenders to that purpose (as in 1878; Cromer, i. 38). Later the Agricultural Bank rendered the same services, the results of which was in many cases sale of property by decrees. The so called "5 *feddān* law" of 1912, prohibiting the pledging and sale by decree of landed property of less than 5 *feddān* has proved to be only a partial improvement.

Industry remained of as little importance to Egypt as in previous centuries. The petty native industries (spinning and weaving looms, pottery, forgery, etc.), just as they had developed under mediaeval conditions, still existed in the beginning of the 19th century. Muḥammad 'Alī included these too in the monopoly system; those who worked on their own account were punished in a drastic way (Lane, i. 149). At that time the ancient guild organisation still existed, although it had decayed considerably after the Turkish conquest (see Thorning, *Türkische Bibliothek*, xvi. 80). During the 19th century, however, the competition of the imported European wares caused a still greater decline; in 1880 the guilds were officially abolished, though up to the present day this archaic form

of production has survived. Among the new industries should be mentioned the factories for sugar crushing in Upper Egypt and the flourishing cigarette industry in Alexandria (since 1873), which now works only imported tobacco. Cotton is but little worked in Egypt itself; there exist, however, spinning factories (Filature Nationale d'Egypte). Nearly all new industries (also brewing, soap, confectionery, rice peeling mills) are in the hands of Europeans. They first employed European workmen, who have now been gradually replaced by natives. The latter have already learned the European forms of syndicalism.

The traffic possibilities have kept pace with the economic development. Next to the ancient traffic route, the Nile and its arms, the new big canals have rendered possible the extension of inland navigation. The Suez Canal, though lying entirely on Egyptian territory, has hardly any importance for the Egyptian trade. During its execution (1859—1869) Egyptian labourers were employed and the viceroy, Sa'īd Pasha, by furnishing half of the capital of the society, had created, at least for his dynasty, the possibility of future profits. But after Ismā'īl had been obliged to sell, in 1876, his shares to the English government, the now considerable profits of the exploitation are of no benefit to Egypt. As, after 1968, the canal has to return again to Egypt, the Egyptians have done what they could by refusing in 1910 the prolongation of the concession. Besides, the canal has put Egypt under other international obligations. The Suez canal treaty of October 29, 1883 (ratified by England in 1904), declares the canal to be open in peace and in war time to all kinds of ships and charges with the control of its execution the representatives at Cairo of the different contracting countries. But England, as occupier, has always taken all measures for the defence of the canal, especially during the war, when a Turco-German offensive was threatening from that side. After the declaration of Egypt's independence the defence of the canal has remained one of the points of dispute between England and Egypt. In the overland traffic railways now take by far the first place, as the canals make other land routes superfluous. Railway building was begun under 'Abbās Pasha in 1852 and in Ismā'īl's reign the greater part of the Delta system and in Upper Egypt the line up to Aṣyūt were completed. Only after the occupation was this last line continued up to Aswān, but between Aswān and Wādī Ḥalfā, where the extensive Sūdān system begins, there is no railway communication. During the war a line was built to al-Ḳantara on the Suez canal which communicates with the other new line coming from Yāfā. The Egyptian railways have been subjected until 1904 — as a consequence of the financial difficulties — to a special international administration. Since Ismā'īl's reign the railway service is managed by Egyptian officials and engineers.

If, finally, anything proves clearly the new orientation of Egypt's economic — and in consequence cultural — orientation, it is its foreign trade. The commercial relations which the country still possessed in the beginning of the 19th century were the remains of the great transit-trade of Indian products that had flourished in the Middle Ages, but was limited at the time to the products of the Sūdān and South Arabia. Under Muḥammad

'Ali's system of government trade or monopoly, Egypt, for the first time since antiquity, began to produce again for export. This system, however, gave much offence, as well to the Muhammadans who were treated less favourably by the victors than the European merchants, as to these merchants themselves. England even concluded in 1838 a commercial treaty with Turkey directed against the economic policy of Muhammad 'Ali. Under Sa'id Pasha the export of cereals was still more important than that of cotton, but since his successor cotton has been leading; at that time it was particularly the civil war in America that had caused a great increase of the cotton export of Egypt. Since the middle of the century the chief purchaser of raw cotton has been England, which country, accordingly, was then already the most interested in the maintenance of cotton cultivation. By the development after 1882 Egypt has become, after America and India, the chief cotton exporting country of the world. The export figures are easily ascertainable in the literature on the subject; they are based chiefly on the custom-house statistics of Alexandria. Not so well known, however, is the manner in which trade has developed since the abolition of the monopoly system. Probably the foreign purchasers used mostly the services of intermediary agents, Syrians or Copts. It seems that methods were often adopted which had a detrimental influence on the development of trade, especially as in the form of advances to the peasants or the purchase in advance of the crops too great risks were taken, with the consequence that both producer and buyer suffered loss. The export of cereals has been much less constant than that of cotton (between 1910 and 1920 the proportion was about 1:9); there have been years (as in the war) when wheat had to be imported. Among the exported industrial products sugar and cigarettes are the most important.

The import from abroad consisted and consists for the greater part of cotton goods and textiles from English factories, next coal (from Turkey), iron, tobacco, machinery. After England the chief importers before the war were Turkey, France and Austria (clothes and fezes). These European imports soon became indispensable to the population and have contributed in a large measure to the material side of Europeanisation.

It is clear that, since the beginning of Egypt's commercial development, England's part in it has been greater than that of any other country. Before the war this part was 37% while in 1919 it was nearly 60%. With a few exceptions, the Egyptian trade has always shown a favourable balance of trade. It is difficult to determine how the country has profited by this circumstance. A great part must have been used for the public debt obligations. In any case the riches which have flowed into the country have found a very unequal repartition: for the peasant class is still poor and indebted. And next to the rich landed proprietors (especially the Turco-Egyptian Pasha-class; see 4) the Europeans too are in a more favourable position, as the capitulations liberated them from all taxation, while the import tax allowed by the capitulations was never more than 8%.

The inland trade too was monopolised under Muhammad 'Ali; he forced the *fellāḥ's* to buy from him at high prizes the grain which they had been obliged to sell at a much lower rate. For

Sa'id's time the inland trade has been described amply by von Kremer (ii. 212 sqq.). Here, notwithstanding the intrusion of European commercial methods, many ancient features have still been conserved. A special mention should be made of the *bāzār* system, which is still very lively (as at Cairo in *Khan al-Khalili*), though the old charm of *bāzār* life and the quality of the wares are no more what they used to be.

4. Population

The rapid growth of the population of Egypt since the beginning of the 19th century clearly proves that the conditions of life have considerably improved. From the time of the French occupation to Sa'id's reign the population has nearly doubled (from 2,460,000 to 4,476,440), if the estimates can be relied upon. The increase has continued in the same proportion until the end of the century (in 1882: 6,813,919 and in 1897: 9,734,405), to diminish a little after that time, the figures being 11,287,359 for 1907 and 12,750,918 for 1917. As the cultivable surface is comparatively small (33,607 K.M.², according to R. M. M., liii. 119), the density of population is considerable.

Actually about 92% of this population constitutes the homogenous indigenous basic element whose tongue is Arabic. To it belong the cultivating class (the *fellāḥ's*) and the native townsmen. About 93% of these are Muhammadans; the other are Christian Copts (854,778 in 1917). The non-indigenous element is composed of Turks, Oriental Christians and Jews, and Europeans. As in other Muhammadan countries the differentiation of religion and race corresponds to an analogous differentiation in social function.

The *fellāḥ's*, the real native stock, live in villages situated on the Nile and on the canals in much the same primitive conditions as centuries ago. Muhammad 'Ali's economic measures impoverished them extremely and since the days of Isma'il the *fellāḥ's* have often been the object of the commiseration of European authors on account of the heavy taxes imposed upon them and the brutal and abusive methods of the tax collectors. But the steady increase of the population in those days proves that, hard as their plight may have been, conditions of life were more favourable to them than in foregoing centuries. The Egyptian peasant always has shown a traditional aversion to tax paying, if not urged by the *kurbāsh*, while, on the other hand, their inability to accumulate capital has kept them as a whole in an inferior condition. When Muhammad 'Ali began to form *fellāḥ* regiments, their dislike to military service made them often try to escape by self-mutilation; still the *fellāḥ's* have proved good soldiers if conducted by able officers e.g. in the Sudan campaign of 1897.

During the 19th century the settled population of several parts of Egypt still reckoned themselves to belong to Arabic tribes. The lowest class of agriculturists have no property at all and work as labourers on the larger estates. Next come the smaller proprietors (under 50 *faddān*). The best situated is the class of the *shaiḫ al-balad's* (see 2), the "squirearchy", as Lord Cromer calls them.

The khedivial period has been most important for the indigenous element, as it has allowed them gradually to take a larger part in the public life and the administration of the country. In the

previous centuries the natives had supplied almost exclusively the ranks of the 'Ulamā'; since Muḥammad 'Alī — who still only admitted the "Turks" to higher positions — a kind of middle class had begun to be formed, and under Sa'īd — who has the reputation of having been a friend of the *fellāḥ* — their rise in the ranks of the army and the civil administration was encouraged. So towards the end of Ismā'il's reign something like a public opinion (for the greater part turcophobe; see 1) was born. Some of the most conspicuous representatives of this native Egyptian intellectual class were 'Alī Pasha Mubārak [q. v.] and the mathematician Maḥmūd al-Falaki [q. v.]. One of the concessions to the indigenous element was also the substitution of Arabic for Turkish as the official language under Sa'īd Pasha. These beginnings of nationalist development, however, had mainly been stimulated by European influence and had no root at all in the conscience of the masses (see 1). Only the revived nationalism of the 20th century seems to have been understood by larger classes of the population. The *fellāḥ*'s, however, have been only reached by nationalist propaganda as far as they live in the neighbourhood of the towns.

The four orthodox Muḥammadan rites are officially organised. The dominant *madhhab* is that of al-Shāfi'i and a part of the inhabitants of Upper Egypt are Mālikites. As, however, since the Turkish conquest, jurisdiction has always been exercised according to Ḥanafī law, the latter *madhhab* is now nearly always followed in all not purely ritual actions. The *ḥaǧǧ* obligation has been performed during the last years by an average of 16,000 Egyptians. Besides the official Sunnī festivals there are celebrated a number of local festive days according to the ancient Coptic calendar, which has survived as the agricultural calendar of the *fellāḥ*'s. The celebration of these days has corresponded from time immemorial to the annual return of certain natural occurrences, in the first place the movement of the Nile. Very famous was the big festival of the opening of the Khalidj in Cairo [q. v.] in August. Many feasts have been connected with Muḥammadan saints whose *mawlid*'s are celebrated (e.g. Shaikh Ḥasan al-Badawī in Tanṭā, Shaikh Baiyūmī in Cairo). The number of *mawlid*'s is immense; many saints are even anonymous. Most places where they are venerated must be pre-Islamic holy places. A very full description of Egyptian popular religion and local uses is to be found in the *Khīṭaṭ Djadīda* of 'Alī Pasha Mubārak (esp. part viii—xvii; cf. Goldziher in *W. Z. K. M.*, iv. 351). The most wide-spread mystical congregations are mentioned in the same work (iii. 129; also *R. M. M.*, liii. 123). Since 1550 these congregations are under the authority of the Shaikh al-Bakrī who, since 1811, is at the same time Naqīb al-Ashraf.

The "Turkish" element of the population, though numerically far inferior to the indigenous, has occupied the foremost place throughout the period of Muḥammad 'Alī's dynasty. The dynasty itself was the chief representative of this class, together with the high officials in the army and the administration. They were the bearers of Turkish political and cultural tradition, but, as to their origin, were composed of all non-Arabic elements of the Ottoman Empire. Those of Circassian descent were already numerous from the Mamluk period on-

wards. Until the English occupation the number of "Turkish" families was occasionally supplied from other parts of Turkey. Apart from being the ruling class, the Turkish Pashas were also, by the favour of the viceroys, the great land proprietors (see 2). Many of these "Turks", however, have become acclimatised in Egypt (Cromer calls them Turco-Egyptians) and have shown sympathy with the nationalist movement. The Prime Ministers Sharif Pasha [q. v.] and Riyād Pasha (in the days of the 'Arābi movement and immediately afterwards) are typical instances of this kind. The "Turkish" grantees have been for two or three generations the most europeanised part of the Egyptian Muḥammadans and appear to be for the greater part agnostics.

The nomads inhabiting Egypt are now about 600,000 in number. They consist of pure Arabs in the Sinai peninsula, in the Delta and in Upper Egypt. The Berber tribes of the Lybian desert have been arabicised, except those living in the Siwā oasis. Autochthonous tribes in Upper Egypt are the 'Abābde and the Bedjā (see these two articles). During the khedival period the government has always been strong enough to protect the population against the raids of these Beduins.

Muḥammadan is also the negro element whose social position is that of slaves. Slavery had been an acknowledged institution in Egypt up to 1877, when, by an Anglo-Egyptian convention, the slave trade was forbidden on Egyptian territory. A new slavery convention of 1895 made interference with personal liberty a criminal offence, and art. 3 of the constitution of 1923 guarantees individual liberty to all Egyptian subjects. Practically slavery subsisted much longer and may not yet have wholly disappeared. The severe measures against the slave trade, however, have made the import of fresh slaves from the Sūdān nearly impossible. Most of the negro slaves were females; the other were eunuchs. The influence of negro blood on the racial characteristics of the Egyptians during the 19th century is still noticeable. White female slaves (*mamlūk*) were still imported in the first half of the century from the Caucasus and from Abyssinia.

Of the other foreign Muḥammadans the alumni of al-Azhar form a noticeable part. Muḥammadans from North Africa and Syria are the most numerous among them; occasionally they enter the corps of the Egyptian 'ulamā'. The Shi'ites only consist of a small Persian colony in the towns, amongst whom even Behā'is are to be found.

The call for the emancipation of Muḥammadan women in Egypt was raised at the end of the 19th century by Kāsim Amin (d. 1908), an Egyptian of Kurdish extraction, who in 1899 by his book *Tahrīr al-Mar'a* and, some years later, his *Al-Mar'a al-Djadīda* (dedicated to Sa'īd Zaghlūl) raised strong opposition and equally strong sympathies. Feminism has also been defended by Muḥammadan women themselves, as Malak Ḥifnī Nāṣif (born 1886; she wrote *Nisā'iyāt* under the pseudonym of Bahīṭat al-Bādiya). It was likewise strongly supported by some very able Christian Syrian women (see *Oriente Moderno*, v., No. 11). A result of this movement was the progress of female education (see 5 and Martin Hartmann, *Die Frau im Islam*, Halle a. S. 1909).

The Copts (see the art. KIBṬ), with the exception of the Coptic remnants in Upper Egypt, form a lower

middle class living for the most part as handicraftsmen in the towns and supplying the government with lower administrative functionaries. Lane estimated their number to be 150,000; so that their proportional increase has been greater than that of the Muḥammadans. With the latter the Copts — though Christians — have many institutions in common, such as circumcision and the veiling of women; the formerly obligatory dark colour of the turban and clothes has only been maintained by the Coptic clergy. In Muḥammad 'Alī's time the lower technical functionaries in the provincial administration were Copts (see 2). Other notable Copts of his time were quite influential — as they had been likewise in the days of the Mamlūks —; such were Mu'allim Djirdjis al-Djawhari (d. 1811) and Mu'allim Ghālī (d. 1821). They held the function of *ra'īs al-kuttāb*, but at times had to suffer from the Pasha's despotic rule. Dj. Zaidān gives their biographies after a *Ta'rikh al-Ummat al-Kibīyā* by Ya'qub Bey Nakhla Rūfilā. Būtros Ghālī Pasha (born 1847, murdered 1910) was the first Coptic Minister. His assassination put an end to the collaboration of the Copts with the Muḥammadan nationalists (see 1). Asyūt is nowadays the great Coptic cultural centre.

The Armenian community in Egypt is small and consists for the most part of shop-keepers. In the 19th century some notable Armenians have occupied high positions in the government. The most conspicuous are Boghos Bey, a former tax farmer who became a councillor to Muḥammad 'Alī (*Mashāḥir al-Sharḥ*, i. 226), and Nūbār Pasha, several times prime Minister before and after the English occupation. These intellectual Armenians have been an important medium for the spread of French cultural civilisation.

Syrian Maronite Christians (*Ashwām*) have been in Egypt since the Mamlūk time; in Ismā'il's time they became the most useful element in the reorganised administration by their knowledge of languages and their aptitude for assimilating European procedure (Cromer, ii. 217). They hardly ever entered the higher offices. Other Syrians have immigrated to make their fortune by trade, and sometimes to be ruined again as a consequence of the economic difficulties of the time. A typical instance of this kind is Amin Shamīl (1828—1897; biography in *Mashāḥir al-Sharḥ*, ii. 169); he was a Syrian immigrant, gained and lost enormous wealth in the cotton trade and ended his life as a prolific writer and publisher adapting himself to circumstances in a remarkable way. Syrians are to be met everywhere as the promoters of modern intellectual life in Egypt, as publishers, journalists and authors; they are found likewise among the first nationalist propagandists (e. g. Salim al-Naḥḥāsh; see the *Bibliography*). Some of their characteristics have made them, as a class, especially hated by Muḥammadans.

The Greeks form a transition to the European element. Their significance for Egypt is exclusively economic; an enormous commercial activity is displayed by the Greeks in Alexandria. Greeks of the lower classes are everywhere to be found in Egypt as *baḥḥāl's* and occasionally as usurers. As elsewhere in the former Turkish Empire the Greeks in Egypt keep to their particular Greek form of western civilisation.

The Jews are half natives and half foreigners; their number towards the end of the century

was about 30,000. They nearly all live in Cairo and Alexandria and are largely engaged in banking business. They played a part — not unlike that of the Syrians — in the first nationalist manifestations of 1877. One of them, James Sanua, with the pseudonym Abū Nazzāra, founder of the first Arabic theatre in Cairo, published in 1877 a kind of paper in vulgar Arabic in which he criticised the Khedive. Subsequently he was expelled (Sabry, *La Génèse* etc., p. 127). Since 1840 there have been Jewish schools in Cairo.

The steady increase of the number of Europeans is more a consequence than a cause of Egypt's "europeanisation". Many Europeans are only foreigners by their passport and constitute the well known class of Levantines, prospering under the immunities still granted to them by the capitulations. The Europeans who have served the Egyptian government in the execution of reforms and technical works have belonged to different nationalities: French (de Séves—Sulaimān Pasha, the creator of Muḥammad 'Alī's *niẓām*-troops; Clot Bey, the organiser of the medical school; Ferdinand de Lesseps, and others), Swiss (Dor Bey and Münzinger), Austrian (Slatin Pasha in the Sūdān; Blum Pasha, financial adviser under Ismā'il) and English (Baker and Gordon as governors of the Sūdān). An influential class is formed by the foreigners who, though theoretically Egyptian officials, hold or have held functions in institutions such as the mixed tribunals and the Debt Administration, and especially the high British officials in the ministries and other departments (after the occupation). The cultural influence of the English cannot be said to have been considerable as yet. Even the knowledge of the English language is less wide spread than that of French, in accordance with the traditional preponderance of the French form of European civilisation in the country. Lastly, mention has to be made of the numerous European adventurers who came to Egypt in the days of Sa'īd and Ismā'il and, by pretended schemes of commercial or technical enterprises, tried to extort money from the too careless viceroys.

5. Education, Science and Literature

Education continued during the 19th century along the traditional Muḥammadan line, while, on the other hand, a European system of education was introduced by Muḥammad 'Alī. It has not yet been possible to fuse the two systems into a whole.

The ancient Arabic *kuttāb* have continued to exist all over the country until the present day, without any government control (except as far as they were paid from *wakf's* administrated by government) until the law of 1876, which introduced arithmetic. The other pole of religious Muḥammadan instruction is represented by al-Azhar [q. v.], which institution, after having been neglected by Muḥammad 'Alī, has been an object of the solicitude of the later Khedives. In 1924 the number of students at al-Azhar was given as 10,287, of whom 9,758 Egyptians (lecture delivered in August, 1924, by Muḥammad Abū Bakr Ibrāhīm on *The University of al-Azhar*, published at Cairo). Other mosque universities organised on similar lines as al-Azhar are those of Alexandria, Ṭantā, Dasūk and Dimyāt. Besides, there exists in Cairo a special school for the training of ḳāḏīs.

In 1924 the government took some measures for gradually bringing about an equalisation between the diplomas of al-Azhar and the government schools (*Oriente Moderno*, v., N^o. 2).

Elementary and secondary schools exist among the Christian communities, in the first place the Copts.

Muhammad 'Ali introduced European education, mainly in order to provide the military officers and the officials of his army manufactories with the necessary technical knowledge. One of the means followed was the so-called "Mission Egyptienne" (*al-Ba'athāt al-'Ilmiya*) to Paris. It began in 1826 with the sending of 40 young Egyptians but was abandoned about 1870. Its results were not as satisfactory as was hoped, chiefly on account of the military régime to which the students were subjected and that did not cultivate their individual and social independence. Still, some prominent Egyptians have owed their education to this institution. Apart from the purely military schools founded by Muhammad 'Ali in Cairo and Alexandria (to which native Egyptians were not admitted), he created in 1825 the Medical School, under direction of Clot Bey. In 1836 a *Madjlis al-Ma'arif* was instituted, in which French cultural influence was predominant. At the same time about 50 elementary and secondary schools were opened all over the country (the latter modelled after the French lycées); they were more specially intended for the instruction of the Egyptians themselves and the language of instruction was Arabic, but often strong coercive means were necessary to induce parents to send their children to school. 'Abbas I closed all schools, according to Dor, not as a reactionary measure but with the intention of reorganising and reopening them. Under Sa'id the Medical School was opened again by Clot Bey, but under Ismā'il a great many new colleges and educational establishments were created, most of them in Cairo (one of the best known is the lycée *Dār al-'Ulūm*). The leading spirit was 'Ali Pasha Mubārak [q. v.], then Minister of Public Instruction. To him also is due the already mentioned law of November 8, 1867, which distinguished primary, secondary and advanced schools and started from the principle of unifying all Egyptian public instruction into one whole. Still, though the educational activity of this time may have spread much technical knowledge, this "inoculation" (Dor) of western science affected only a small minority of the population. Moreover, the educational methods did not encourage free individual development, and owing to the lack of money — which caused many schools to be closed at the end of Ismā'il's reign — the native teachers received very insufficient salaries. The result was a considerable enlargement of the gap separating the mass of the illiterate population from the Turco-Egyptian and Egyptian intellectual classes. This circumstance is to be regarded as one of the causes of the failure of the first nationalist movement. During the first decades of the English occupation little was done for the spreading of education (see Cromer, ii. 524 sqq., and Vollers' critical remarks in *Historische Zeitschrift*, 1909, p. 79 sqq.). Two girls' schools were opened about 1875, but the real progress of the education of Muhammadan girls has only begun since the end of the century (see 4.) At the present time there exist for these girls *kuttāb's*, government schools and private schools (these for the greater part in Alexandria).

The Egyptian University (*al-Djāmi'a al-Miṣriya*) was founded at Cairo in 1908 by means of large subscriptions and gifts and was started under the presidency of Prince Ahmad Fu'ād Pasha, afterwards King. During its first years' only courses on literary and historical subjects were organised, given by Egyptian and European teachers and by European Orientalists expressly invited to that purpose (the lectures have been published at Cairo). This University has sent in the first years groups of young Egyptians to different European Universities with the object of appointing them after their return university teachers in Cairo. In 1924 this university passed under government administration; since that time several projects have been elaborated for the extension of its organisation and activity (*Oriente Moderno*, v. 110, 434). As was to be expected, the new university has encouraged research the results of which have not seldom been in strong opposition to the spirit of orthodoxy prevailing in al-Azhar.

Apart from the already mentioned educational establishments the many foreign schools, among which the missionary schools — first American Missionary school in Cairo in 1855 — in Cairo and Alexandria, sometimes subsidised by the government (as under Sa'id Pasha), have equally exercised an influence on the intellectual education of the Egyptian upper classes.

The introduction of printing into Egypt is closely connected with the educational programme of Muhammad 'Ali; the printing-press which the French had brought with them for their own use has left no traces. About 1821 the first printing office was founded in Būlāk; it began to produce Arabic and Turkish books for the newly opened government schools. Already in these first years began also the important activity of printing and publishing classical works of the Arabic, Turkish and, to a less extent, Persian literature. One of the first works printed seems to have been the grammatical treatise *al-Adjrūmiya* (in 1239/1824; see Zenker, *Bibliotheca Orientalis*, i., Leipzig 1846, p. 19), used in al-Azhar (von Kremer, ii. 285). The greatest printing activity of this kind began about 1850, not without encouragement from Europe; this productivity, to which so many European library catalogues bear witness, has been, however, more to the profit of European Oriental studies than to the scientific and literary development of Egypt itself (Brockelmann, *G. A. L.*, ii. 471). The same can be said of the "Bibliothèque Khédiviale" founded in 1870 by 'Ali Pasha Mubārak. The origin of printing in Egypt is also connected with that of the press, since in 1828 the official newspaper *al-Wakā'ir al-Miṣriya* began to be printed on another press in the Citadel. About 1875 the printing office at Būlāk (belonging to the *Dā'ira Saniya*, as were also the paper factories at Būlāk) was still the most important; besides this establishment there were a few private printing and lithographic shops in Cairo and Alexandria. After 1876, however, printing has gained enormous importance by the services it rendered to the then beginning development of the Arabic press, mainly by the initiative of energetic Syrians and under the influence of the first nationalist movement.

On the Arabic press — which was to be more important for the intellectual development than the printing of books — see the art. DJARIDA (especially on the press movement of 1878: M.

Sabry, *La Génèse* etc., p. 127). The great Muḥammadan political paper *al-Muʿayyad* ceased to exist in 1915, while *al-Muḥattam* and the nationalist organs have continued (*R. M. M.*, liii. 124).

The religious Muḥammadan Arabic literature, so far as it is a continuation of the tradition of previous centuries, has produced only a few remarkable figures and those only in the first half of the 19th century, the most conspicuous being al-Baḍjūrī (q.v., d. 1861). A very important branch of Muḥammadan literature was, however, the literary activity of Muḥammad ʿAbduh [q.v.] and his school, who initiated a theological modernism in Islām. While following the methods of old Islāmic science but with independent interpretation of the holy texts, they tried to prove that Islām is still a living world religion and in no way opposed to modern civilisation. A great many of Muḥammad ʿAbduh's articles have appeared in the review *al-Manār* (published since 1897 by the Syrian Saiyid Rashid Riḍā). Though obviously these modernist views — styled by Goldziher "Kulturwahrheitsismus" — have originated under the influence of the introduction of modern civilisation, it cannot be said to have come under the influence of western thought itself. It has met with strong opposition from the conservative circles of al-Azhar, the press organ of which is *al-Afṭāk*.

Poetry (as literary form) has never abandoned the classical Arabic forms and, though several poets have earned renown in their time (e.g. *Shaiḫ* Muḥammad Shihāb al-Dīn, 1787—1858; see von Kremer, ii. 294), modern Egypt does not seem to have produced a generally acknowledged famous Arabic poet.

The other branches of literature have abandoned by a more or less gradual process the old forms and the old style for Western literary methods, the models of which had been made accessible by an extensive activity in translation. The first works translated were French scientific books for Muḥammad ʿAlī's schools; since Saʿīd Pasha's reign a great many European scientific and belletristic works have been translated; e.g. the translation of French historical and geographical works by Rifāʿa Bey al-Taḥṭawī (1801—1872) have much contributed to the spread of knowledge of European literary methods. Prose writing has seldom been used for the composition of novels and plays after European fashion. But there has sprung up an extensive semi-scientific literature on political and social questions, to which belong e.g. the works of Muṣṭafā Kāmil and the other nationalist literature; also the treatises on feminism mentioned in 4. This literature has been published partly in the daily press and the numerous periodicals, partly in books; a large part has been contributed by Syrians and Jews.

In contemporaneous historiography the work of al-Djābartī [q.v.] holds a prominent place; it was composed in the traditional style of historical writing. Later books on Egyptian history, such as Farīd Bey's history of Muḥammad ʿAlī and Ilyās al-Aiyūbī's history of Egypt under Ismāʿīl (see the *Bibliography*), follow the methods of European historiography and use European sources. The same applies to the important historical and biographical works of the Syrian Djirḍī Zaidān. In ʿAlī Pasha Mubārak's *Khīṭaṭ Djādīda* we may see — as was the intention of the author — a continuation of the typical Egyptian tradition of

Khīṭaṭ-literature; next to Lane's *Modern Egyptians* it is a chief source of information on Egypt and its population in the 19th century. We may include in the same class the various descriptions of travels, particularly those on the pilgrimage to Mekka, as the work of al-Batanūnī (see Lammens in *R. M. M.*, N^o. xxxviii) and the account of different *ḥadīdī*'s (1901, 1903, 1904, 1908) by Ibrāhīm Rifāʿat Pasha al-Liwāʾ in his book *Mirʾat al-Ḥaramain* (2 vol., Cairo 1344/1925).

It should not be left unmentioned that all through the 19th century a considerable popular literature has continued to exist in the vulgar dialect, in the poetical form of *mawālī* and *saḍjāl*'s and in the form of prose ballads or *siyar*, describing the deeds of ancient Arab more or less Egyptianised heroes as Abū Zaid, ʿAntar and others. An endeavour to introduce the vulgar Arabic of Egypt into literature was made by Muḥammad b. ʿUṭhman Djālīl, who translated, between 1880 and 1890, some works of Racine and Molière into Egyptian Arabic; they, however, found no favour with the educated public. An unsuccessful propaganda has been made about 1896 by an American for the introduction of the Latin alphabet to be used for a new popular literature in one of the vulgar dialects of Egypt. Even Orientalists such as M. Hartmann were convinced at the time that an undertaking of this kind might succeed (*Z. A.*, 1898, p. 277 sqq.).

The ancient Oriental shadow-plays, that have continued a waning existence in Egypt up to the present day, have been studied by Prüfer and Kahle. In their present form these shows were revived by the Algerian Ḥasan Kaṣḥkaṣh in the second half of the 19th century (see the art. *KHAYĀL-1 ZILL*). The occurrence of the Turkish Kara-Göz play is mentioned by Lane (ii. 113).

KHIḌR. [See **AL-KHADIḌ**.]

KHIḌR BEG, an Ottoman scholar and poet, the first judge of Constantinople. He was born on the first of Rabīʿ I, 810 = 6th Aug. 1407 at Siwriḥiṣār, the son of the local judge Djalāl al-Dīn and belonged to a famous family which traced its descent from Khodja Naṣr al-Dīn. On the conclusion of his studies, which he conducted mainly under Mollā Mehmed Yekān, whose daughter he afterwards married, he became a judge in his native town and later *Muderris*. He was next appointed professor in Brussa, then judge in Ainegöl and finally called to a teaching appointment in Adrianople and after the capture of Constantinople was appointed its first judge. His sons were the *Mufti* of Brussa, Aḥmad Paṣha (d. 901 = 1495, buried with the Zeinilis in Brussa), Sinān Paṣha [q. v.] and Yaʿkūb Paṣha, judge of Brussa (d. 891 = 1486; buried in the mosque of Mollā Fenānī), all three distinguished for intellectual gifts and considerable literary attainments. KHIḌR Beg himself was a great authority on Muslim learning and had a wide knowledge of the literature of the three great languages of Islām. He composed a homiletic poem in *baṣīṭ* verses, *al-Nūniya fī 'l-Akḥā'id* [Sambul 1258, 32 fol. (cf. *J. A.*, Ser. iv., Vol. iii., 1854, p. 222)] which has been often commented upon (e.g. by Daʿūd b. Muḥammad al-Karṣī, Cairo 1297, 87 fol.) and a number of other, mainly poetical works. KHIḌR Beg died in 863 = 1458/1459 in Sambul where he was

buried in the Eiyüb cemetery. He founded the little mosque of Hādījī Kadīn; cf. Hāfiz Husein, *Hadīkat al-Djawāmi*, i. 85, sq. (with biogr. notes), cf. thereon J. v. Hammer, *G. O. R.*, ix. 62, No. 158. On his tomb cf. *Hadīkat al-Djawāmi*, i. 218, 7. The village of Kādīkōi, opposite to Stambul on the Asiatic side, where Mollā Khidr Beg had great estates, still bears his name ("the judge's village").

KHIDR KHĀN, Saiyid, of Dihli, founder of the Saiyid dynasty (1414—1451), was the son of Malik Sulaimān, adopted son of Mardān Dawlat, one of the *amir*'s of Firūz Tughluḳ. Khidr Khān succeeded to Mardān Dawlat's fief of Multān, but was expelled in 1396, during the usurpation of Nuṣrat Shah at Dihli. When Timūr invaded India in 1398 Khidr fled into Mewāt, but after the capture of Dihli waited on the conqueror and received from him a grant of the fiefs of Multān and Dipāl-pūr, where he remained independent during the remainder of the troubled reign of Maḥmūd Tughluḳ. On Nov. 12, 1405, he defeated and slew, on the banks of the Satlajī, Mallū (Iḳbāl Khān), Maḥmūd's minister, who was attempting to recover Multān, and having extended his territory towards Dihli, formed a party in the capital. In 1412 he unsuccessfully besieged Maḥmūd in Dihli, but returned in 1414, after Maḥmūd's death, and besieged Dawlat Khān Lōdī who had been acknowledged by the *amir*'s at Dihli as their leader, but surrendered the city on discovering a plot to admit the besiegers. On June 4, 1414, Dawlat Khān was imprisoned in Hīṣār-i Firūza and was shortly afterwards put to death.

Khidr Khān refrained from the use of the royal title and contented himself with that of *Rāyāt-i 'Alā* ("the Exalted Standards"). He is said to have remitted tribute to Timūr's son, Shāh-ruḳh, to whom he owed allegiance.

He first recovered the revolted provinces of Katehr (Rohilkhand) and the Gangetic Doāb, and in 1416 he asserted his authority in Gwalior, suppressed a rebellion of Turks under Taḡhān Ra'īs in Sirhind, and relieved Nāgawr which was besieged by Aḥmad I of Guḍjarāt. In 1417 he completed the suppression of the rebellion of the Turks and in 1418 and 1419 was engaged in restoring order in Katehr. In the latter year a rebel who pretended to be Sārang Khān, Khidr's ancient enemy, who had expelled him from Multān, appeared in Mātiwāra, but was defeated near Rūpar and fled to the mountains, and in 1420 was put to death by Taḡhān Ra'īs. Later in the same year it was again found necessary to send an army into the Doāb and Katehr, and Taḡhān rose in rebellion in the Sirhind district. In 1421 Khidr Khān led an expedition into Mewāt and to Gwalior, whence he returned by way of Itāwa. Here he fell sick and returned to Dihli, where he died on May 20, 1421.

Ranking; Muḥammad Kaṣīm Firīšta, *Gulshan-i Ibrāhīmī*; Edward Thomas, *Chronicles of the Pathan Kings of Dehli*. (T. W. HAIG)

KHIL'Ā (an Arabic word derived from *khala'a* "to divest oneself of one's robe"), a robe from the wardrobe of the sovereign, which he no longer wears and which he bestows, as a gift, on the person whom he wishes to honour (synonym *tashrif*, pl. *tashārif*, Ibn Khallikān, transl., iv. 117; Abu 'l-Fidā', *Annales*, v. 80; Maḳrīzī, *Khiṭāt*, quoted in *Histoire des Mamlouks*, part. 4, p. 70, note 1, 8; Shihāb al-Dīn, *Masālik al-Aḥṣār*, in *N. E.*, xiii. 376). This garment is of course rich and sumptuous and of great value. It is also given as a sign of investiture to an official. Sometimes a sum of money is given instead. Thus it was that in Turkey the name *khil'at-beha*, "the price of a robe of honour", was formerly given to a certain sum of money distributed to the officers of the Janissaries on the Sulṭān's accession (Barbier de Meynard, *Dictionn. turc.*, i. 709). The kings of Persia used to send a robe by a special messenger to governors of provinces whom they wished to honour and who wore it on special occasions. In return the latter treated the messenger handsomely and heaped presents upon him. In Central Asia these are made of cloth of gold of the Indies, of Kashmīr shawls, of silk of all colours. At the distribution, the individuals who receive this favour put on the *khil'a* (Pers. and Turk *khāl'at*) over the clothes they are wearing.

In Egypt, under the Mamlūks, these robes of honour were arranged in classes (*menāile*, *meritebe*), according to the rank of the individuals for whom they were intended, and who formed three classes, (1) men of the sword, (2) men of the pen, i.e. officials in the civil service, (3) scholars. A sword enriched with gold was added to the present, taken from the *silah-khāne* (arsenal) and a horse fully caparisoned, covered with a *kunbūsh* (Pers. *kun-pūsh* covering) of gold and brought from the *rikāb-khāne* (royal stables). Fuller details will be found in the *Masālik al-Aḥṣār* quoted by Quatremère in *l'Histoire des Mamlouks*, part. 4, p. 72 sqq., note and in Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923, p. lxxix. sqq. — On the use of these robes as a sign of authority cf. G. Meloni, *Alcuni temi semantici*, in *R. S. O.*, iii., 1910, p. 533 sqq.; F. W. Buckler, *Two instances of Khil'at in the Bible in Journal of Theological Studies*, xxiii. (1922), 197 sqq. — For India, especially Lakhnaw, see Mrs. Meer Hassan Ali, *Observations on the Musulmans of India* (1832; 2nd ed. 1917), p. 149; F. W. Buckler, *The political theory of the Indian Mutiny in Transactions of the Royal Historical Society*, v. (1922), 81 sqq.

KHILĀFA. [See **KHALĪFA**.]

KHILĀL. [See **SIWĀK**.]

KHILDJĪ. [See **KHALDĪJĪ**.]

KHIRKA (A.), "rag", hence "a mystic's coarse woollen robe", because it was originally made up of pieces (synonym *murakka'a*). "It is the inner

flame (*harḥa*) which makes the Ṣūfī" said al-Hudjwiri "not the religious dress" (*khirka*). This dress was the outward sign of the vow of poverty taken by the Ṣūfī; it was originally as a rule blue, the colour of mourning. Certain mystics, however, did not like to wear a special costume, saying that if a distinctive mark of this kind was adopted for God's sake, it was useless, for God knows best what is; and if it is for the people, one cannot escape from this dilemma — either the vocation of the dervish is true and then it is pure ostentation, or it is pretended and it is hypocrisy. Nevertheless the distinctive dress was generally adopted. It could not be obtained by the novice until the expiry of the three years necessary for his education. The investiture of the *murīd* with the *khirka* by his tutor (*Shaiḫ*, *Pir*) had a ceremonial character. "The donning of the robe", says Suhrawardī in the '*Awārif al-Ma'ārif*', "is the tangible sign that the man is entering upon the way of truth, the symbol of his entrance upon the mystic path, the sign that he is abandoning himself and putting himself entirely in the hands of the *Shaiḫ*". There are two kinds of robe: *khirkaṭ al-irāda* (robe of good-will), which one asks from the *Shaiḫ*, being fully conscious of the duties which this investiture imposes on one and of the passive obedience to which one condemns oneself in accepting it; and *khirkaṭ al-tabarruk* (robe of benediction) given ex officio by the *Shaiḫ* to persons whom he thinks it would be useful to cause to enter upon the mystic path, without their fully realising the significance of the investiture. The first is naturally much superior to the second and distinguishes the true Ṣūfis from those "who only resemble them in external appearance." (E. Blochet, *Études sur l'ésotérisme musulman* in *Muséon*, X, 1909, p. 176 et suiv.).

Vereinswesens* (*Türkische Bibliothek*, xvi.), index; S. de Sacy, *Pend-nameh*, p. lxiii.; *N. E.*, xii., 305; Cl. Huart, *Konia, la ville des derviches tourneurs*, p. 204. (CL. HUART)

KHIRKA-I SHERIF, the "noble mantle", the name given to the mantle of the prophet (v. BURDA) venerated as a relic and kept in Constantinople. The day for visiting it is a fête day (the 15th Ramaḍān of each year). It was formerly kept in a special chamber of the serai, where it was preserved in a chest of medium size covered by a green velvet cloth with a broad fringe of gold and silver. The ceremony of the pilgrimage was performed in the following manner. On the appointed day the ministers, the *ulamā*, the generals of the Janissaries and of the other troops, notified on the evening before by letters carried by the *čaush*, assembled before midday prayer in front of the gate of bliss (*Bāb al-Sa'āda*), the second gate of the serai; the ministers and the *ulamā* seated themselves on the right, the soldiers on the left and awaited the arrival of the grand-vizier. The latter, as soon as he had been informed of the arrival at Āyā-Sofyā of the *Shaiḫ* al-Islām, brought by the *Ra'īs al-Kuttāb*, proceeded thither with the functionaries of the Porte. Together they all performed midday prayer and proceeded thereafter to the imperial palace.

After having passed by the '*arḍ-oda-sy*' and having obtained permission to proceed, the pro-

cession entered the chamber of the *Khirka-i sherif*. The first and the second imām of the *Sultān* seated themselves before the chest containing the relic and each recited an '*ushr*' (tenth) of the *Qur'ān*. The *Sultān* in person opened the chest and authorised those who were with him to place their forehead (*yüz sürmāk*) on the relic, first the grand vizier, then the *Shaiḫ* al-Islām and the other dignitaries, after which each one returned to his place, where he remained standing. The *shaiḫs* (heads of religious orders) placed themselves before the chest, said prayers (*du'ā'*) and placed their foreheads on the relic. They went out with the same ceremony and mounted their horses outside the *orta-kapū* (the middle gate). This fête was an occasion for distributing pastries called *baklava* to the Janissaries and to the other troops.

The relic is a mantle with large sleeves, a white mohair camel. After the reception was finished, the grand vizier and the general of the *silihdār* wiped it with a piece of muslin (*dūlbend*) and gave this muslin to their followers. Then they washed in a goblet of gold the spot where the forehead had been placed and dried the wet spot by fumigations of aloes and of ambergris.

In 1265 (1849) the mantle was moved to a mosque specially built for it by the *Sultāna Wālide*, the mother of the *Sultān* 'Abd al-Madjid. This monument called *Khirka-i sherif dāmī'i* stands in Stambul in the Yeñi bāghçe quarter, to the west of the mosque of Fātiḥ on the south slope of the fifth hill. Situated in the middle of a large garden enclosed by a railing of iron, it is a type of construction unique in Constantinople and marks the tendency to follow European models; for it is the application of ironwork to the construction of religious buildings. It is an elegant octagonal building surmounted by a cupola and flanked by pavilions to which it is joined by glass galleries. A beautiful border of iron runs along the roof. A fluted minaret supports a light balcony of hammered iron.

KHITA. [See *ḲARA KHITĀI*].

KHITĀN (A.), circumcision. According to the *Lisān al-'Arab*, s.v. *kh-t-n*, the term is exclusively used in connection with the circumcision of males, whereas in the case of females *khafā* is the proper word. If this statement should be exact, the expression *al-khitānāni* "the two circumcised parts" (viz. that of the male and that of the female) would be a dual *a potiori*. This expression occurs in the tradition "If the two circumcised parts have been in touch with one another, *ghusl* is necessary" (Bukhārī, *Ghusl*, bāb 28; Muslim, *Haid*, trad. 88; Abū Dā'ūd, *Tahāra*, bāb 81, 83).

Some words connected with the root *kh-t-n* denote the father-in-law, the son-in-law, the daughter-in-law (*khatan*, *khātana*), or marrying (*khutūna*). Some of these words must have belonged to the primitive Semitic language, as they occur also in the same or cognate forms in North-Semitic languages. We shall have to discuss the relation between this class of ideas and circumcision below.

Circumcision must have been a common practice in early Arabia. It is mentioned, not in the *Qur'ān*, but in old poetry (I am indebted to F. Krenkow's

kindness for references to the *Dirwān* of the Hudhali's, to Farazdaq and other poets) and in *ḥadīth*. The early language has also a special word for "uncircumcised" (*aghral*, Hebrew *arel*).

In *ḥadīth* it is said that Ibrāhīm was circumcised in his 80th year (Bukhārī, *Anbiyā'*, bāb 8; Muslim, *Faḍā'il*, trad. 151). This tradition is based on the Biblical report. Ibn Sa'd has preserved a tradition according to which the patriarch was already circumcised at the age of 13 (*Ṭabaḳāt*, i/i. 24).

This tradition is apparently a reflex of the practice of circumcision in the first centuries of Islām. We may confront it with the statements concerning Ibn 'Abbās' circumcision in *ḥadīth*. According to some traditions (Aḥmad b. Ḥanbal, i. 273) he was 15 year old when Muḥammad died. In other traditions it is said that he was already circumcised at that time (Bukhārī, *Istī'dhān*, bāb 51; Aḥmad b. Ḥanbal, i. 264, 287; Ṭayālīsī, N^o. 2639, 2640).

Circumcision is mentioned in *ḥadīth* in the story of the Emperor Heraclius' horoscope (Bukhārī, *Bad' al-Wahy*, bāb 6). Heraclius read in the stars the message of "the king of the circumcised". Thereupon an envoy of the king of Ḥassān arrived who reported the news of Muḥammad's preaching of Islām. This envoy appeared to be circumcised himself and he informed the Emperor of the fact that circumcision was a custom prevalent among the Arabs.

It is further recognised in *ḥadīth* that circumcision belongs to the prae-Islamic institutions. In the traditions which enumerate the features of natural religion (*al-fiṭra*), circumcision is mentioned together with the clipping of nails, the use of the toothpick, the cutting of moustaches, the more profuse length of the beard etc. (Bukhārī, *Libās*, bāb 63; Muslim, *Ṭaharā*, trad. 49, 50; Tirmidhī, *Adab*, bāb 14 etc.). Perhaps circumcision of females is implicitly understood here. In a tradition preserved by Aḥmad b. Ḥanbal (v. 75) circumcision is called *sunna* for males, honourable for females. Circumcision of females is also testified by the nickname *ibn muḳattī'at al-buḡūr*, i. e. "son of the woman who circumcised females", which is given some Makkans.

There are differences between the several *madh-hab*'s concerning rules for circumcision. Instead of giving a survey of the different views it may be sufficient to translate the passage al-Nawawī in his commentary on Muslim, *Ṭahāra*, trad. 50 (ed. Cairo 1283, i. 328) has devoted to the subject, also because it contains a description of the operation.

"Circumcision is obligatory (*wādjib*) according to al-Shāfi'ī and many of the doctors, *sunna* according to Mālik and the majority of them. It is further, according to al-Shāfi'ī, equally obligatory for males and females. As regards males it is obligatory to cut off the whole skin which covers the *glans*, so that this latter is wholly denuded. As regards females, it is obligatory to cut off a small part of the skin in the highest part of the genitals. The sound (*ṣaḥīḥ*) view within the limits of our school, which is shared by the large majority of our friends, is that circumcision is allowed, but not obligatory in a youthful age, and one of the special views is that the *walī* is obliged to have the child circumcised before it reaches the adult age. Another special view is, that it is prohibited to circumcise a child before

its tenth year. The sound view according to us, is that circumcision on the seventh day after birth is *mustaḥabb* (commendable). Further there are two views regarding the question whether in the "seventh day" the birthday is included or not".

The treatment of circumcision has not a prominent place in the books of law. More important, however, is the value attached to it in popular estimation. "To the uneducated mass of Muslims" says Snouck Hurgronje "as well as to the great mass of non-Muslims, both of whom pay the greatest attention to formalities, abstinence from pork together with circumcision, have even become to a certain extent the criterium of Islām. The exaggerated estimation of the two precepts finds no support in the law, for here they are on the same level with numerous other precepts, to which the mass attaches less importance" (*De Islam*, Baarn 1912, p. 30; *Verspr. Geschriften*, i. 402; cf. iv/i. 377). In Java circumcision is generally considered as the ceremony of reception into Islām and therefore sometimes called *njelamaké-salam* ("rendering Muslim"). Apart from this term many other words denoting circumcision are used on Java (*o. l.*, iv/i. 205 sq.).

In Atchīn circumcision of infidels only is considered as the ceremony of reception into Islam (Snouck Hurgronje, *The Achehnese*, i. 398). The importance attached to circumcision appears also from the tradition according to which Muḥammad was born circumcised (Ibn Sa'd, *Ṭabaḳāt*, i/i. 64). In North Africa a child born with a short foreskin is considered as a blessing (Doutté, *Merrâkech*, Paris 1905, p. 353).

At Makka, where the rite is called *ṭahār*, children are circumcised at an age of 3—7 years, girls without festivities, boys with great pomp. On the day preceding that on which the rite will be performed, the boy who is clad in heavy, costly garments, is paraded through the streets on horseback, several footmen walking on both sides in order to prevent him from falling and to refresh him by means of a perfumed handkerchief. He is preceded by men with drums and duffs who accompany the *dhikr*'s sung by others. Nearest to the boy goes an elderly black handmaid of his father's, bearing on her head a brazier burning with charcoal, resin and salt. The second part of the procession is formed by the boy's poorer comrades, equally on horseback. The procession passes through the main streets during the time of *ʿaṣr* and comes back to its starting-point a little before sunset. The female members of the family pass the evening with their friends; the party is enlivened by female singers.

Next morning, at sunrise, the barber performs the operation. The foreskin is pressed together by means of a thong, the boy lying on his back, while his mother tries to divert his attention by sweets. A plaster is applied to the wound which usually is healed in a week. The operation is followed by a breakfast for the nearest relatives. It is to be observed that Ḥaḍramites who still cling to their native customs, circumcise their children on the 40th day after birth (Snouck Hurgronje, *Mekka*, ii. 141 sqq.).

In Egypt boys are circumcised at the age of about five or six years. Before the operation the boy is paraded through the streets. Often the train is combined with a bridal procession in order to lessen expenses; in this case the boy and his

attendants lead the procession. He is dressed as a girl, in a gorgeous manner. The kerchief is used to cover a part of his face in order to avert the evil eye. As in Makka he is preceded by musicians. The foremost person of the procession is usually the servant of the barber (who performs the operation), who bears his *haml*, a case of wood of a semi-cylindrical form, with four short legs; its front is covered with pieces of looking-glass and brass, and its back with a curtain. It is to be noted that the Copts also circumcise their boys (Lane, *Manners and Customs of the Modern Egyptians*, Chapter on Infancy and Education).

D'Ohsson in his *Tableau de l'empire ottoman*, Paris 1787, i. 231 sqq., describes circumcision as practised in Turkey under the heading "Circumcision, *sunnetlik*", a designation which is also reflected in the word *sunnet-dji* for the barber who performs the operation. It takes or took place in the presence of the imâm of a mosque who accompanies the ceremony with prayers for the preservation of the child, who is usually 7 years old when he is circumcised. Plate 20 of d'Ohsson's work shows children dressed for the ceremony, plate 21 adorned victims which are slaughtered at this occasion. Parties for relatives, friends and poor people as well as the procession are also mentioned.

The circumcision of the imperial princes used to give occasion to the displaying of great pomp. Long before the appointed day intimation was sent to the high dignitaries of the empire, sometimes even to the other courts of Europe. D'Ohsson gives a translation of Murâd's III letter of invitation to the dignitaries on the occasion of the circumcision of the crownprince.

In North Africa children are circumcised at ages varying between the 7th day after birth and 13 years, by the barber who makes use of a knife or a pair of scissors. According to Dan, as cited by Douâté, *Merrâkech*, p. 351, at Algier a stone knife was used for the operation. Nowadays this custom seems to be no longer known. It reminds us of Joshua v. 2 sqq. where it is said that the Israelites at their entering the Holy Land were circumcised by means of stone swords or knives; some populations of the Dutch Indies also use a stone knife of the operation (Wilken, p. 212). In North Africa as well as in Egypt often several boys are circumcised together, the father of the richest bearing the expenses of the ceremony.

On Java circumcision of boys is often combined with the *khatm*- or *kataman*-ceremony. On the different designations of circumcision used in this part of the Archipelago cf. Snouck Hurgronje, *Verspreide Geschriften*, iv/i. 206. The age at which boys are circumcised varies in the different parts of Java; among the conservative populations it is higher (14—15 years) than in circles which are in closer touch with Muslim law (10 years or younger). Before the preparations begin, the boy is taken to the tomb of his father or ancestors, where flowers and incense are offered and prayer is performed. Then a portico (*tarup*) is made before the house or *pendopo*, and a small room (*kobongan*) is prepared where the operation is to take place. In or before this room several objects and dishes are placed which have a symbolical or ritual meaning. These preparations are concluded by a religious meal at which several dishes are

offered to several categories of awe-inspiring beings.

Festivities such as *wayang*, *tayuban*, *djagongan* precede or follow the ceremony. The *djagongan* always takes place in the preceding night and follows upon *kataman*, the recitation of some chapters of the Kur'ân by the boy.

On the day preceding circumcision a procession is held in which the boys are either conducted by their relatives, or are placed in a kind of cars which have the forms of *naga*'s or other animals. They wear the bridegroom's dress, and are hung with gold and diamond ornaments, the visible parts of the body being besmeared with *borèh*. It occurs also that the boy wears the *hadjdji*'s dress. Just as in North Africa poor parents have their sons circumcised together with those of well-to-do people, who bear the expenses.

The boy has to keep quiet for some days before and after the operation and to abstain from hot dishes as well as to beware of any action which is considered to be unlucky in this time. Before the operation he is bathed with the recitation of a great many prayers and formulas. Then he is placed on the lap of an elderly person, usually a *santri* who has many children, a circumstance which is expected to exercise a wholesome influence on the boy's marriage. For further details see Snouck Hurgronje, *Verspreide Geschriften*, iv/i. 205 sqq.

Girls are not always circumcised on Java. The ceremony is called *sunu* (*sunna*), whereas the Sundanese denote it by *gusaran* "filing of teeth"; a fictitious filing of teeth takes place the day before circumcision. Girls are circumcised on Java at an age varying between 2 and 8 years. During the last decades the ceremony has been, covered under a mysterious veil in some circles. Parents, however, who cling to the *adat*, do not share this tendency.

In Atchin boys are usually circumcised by the *mudêm* (probably = *mu'adhdhin*) at the age of 9 or 10 years, immediately after finishing their Kur'ân study. The operation (for details see Snouck Hurgronje, *The Achehnese*, i. 399 sq) consists in a complete circumcision; in some parts of Java it is rather an incision. The boy here also has to diet himself. In Atchin the ceremony is not usually accompanied by festivities. But in many cases the latter take place in consequence of vows connected with circumcision. The father of the boy vows, e.g. to arrange a *Rapa'i*-performance or to visit a sacred tomb. In this case the boy, dressed as a bride, is conducted to the tomb, sometimes on horseback, where his head is washed and a religious meal given.

Girls are circumcised in Atchin soon after the *peutron* (the ceremony of taking the child from the house into the open air for the first time), consequently at a very young age. The operation is performed without any further ceremonies; even the father does not know when his daughter is to be circumcised.

Circumcision is a rite practised by many peoples, primitive peoples of the present time as well as those mentioned in ancient literatures, the Egyptians, the Arabs, the Israelites, the Edomites, Moabites and Ammonites (see Jeremiah, ix. 25).

In the Indonesian Archipelago it was already practised before the rise of Islâm in that part of

the world (cf. G. A. Wilken, *De besnijdenis bij de volken van den inaischen Archipel in B.T.L.V.*, Ser. iv., vol. x., p. 166, 180 sq. = *Verspreide Geschriften van G. A. Wilken*, iv. 206, 220). The facts mentioned above may be arranged in certain groups.

a. Among many peoples females as well as males are circumcised. We must consequently start from the view that the rite was not originally applied to one of these classes to the exclusion of the other. It may be observed that among some Muslim peoples girls are circumcised at a younger age than boys and with less or hardly any festivities; often the circumcision of females is covered with a veil of mystery; sometimes no males are allowed to assist at it (Wilken, *Verspr. Geschriften*, iv. 238).

b. The rite is sometimes repeated (Wilken, *loc. cit.*, p. 207). In the Muslim world we have the instance of Malaysians who in their country were not circumcised in the way prescribed by religious law and submit to the operation a second time when arriving at Djidda for the pilgrimage (Snouck Hurgronje, *Mekka*, ii. 312).

c. Children are circumcised at ages varying between the 7th day after birth and the 15th year. It is consequently a rite which may take place in any period of childhood and which is often indeed combined with other rites peculiar to childhood such as the first cutting of the hair ('*akika*', cf. Douté, *Merrâkech*, p. 351), the filing of teeth, the conclusion of the study of the Qur'an. As we have seen above, there are linguistic features pointing to a relation between circumcision and marriage. These features, valuable as matter-of-fact evidence, are supplemented by reports of travellers. In Central Arabia, it is said (e.g. Batanūnī, *Rihla*, p. 213, note), there are tribes among which the operation is applied to adult young men, in a painful and dangerous way; the bride of the patient stands opposite him during the operation; if he utters a cry of pain the projected marriage is abandoned (Snouck Hurgronje, *Mekka*, ii. 141). From a note to the passage just referred to, it may, however, be seen that the author doubts whether any of the travellers' reports is based on eyewitness; according to him they are handed down by townspeople. Be this as it may, the relation between circumcision and marriage appears also from the Javanese custom of placing the boy who is operated, on the lap of a *santri* who has many children (see above and Wilken, *loc. cit.*, p. 225).

d. Another group of characteristics is evidence of a relation between circumcision and the transition into a tribal or religious community, e.g.: the boy's being conducted to the tomb of his father or of one of his ancestors (see above); the circumcision of several boys at one time (cf. also Wilken, *loc. cit.*, p. 220); the value attached to circumcision as the ceremony of reception in to the Muslim community; cf. the Old Testament designation of circumcision as the "token of the covenant" (Genesis xvii.; see also Wilken, *loc. cit.*, p. 227).

e. Many accessory rites express the intention to avert danger: the boy's being dressed as a girl, the use of the handkerchief, the burning of charcoal and salt; the drums and duffs; the recitation of *dhihr's* and prayers; possibly the displaying of charity and the slaughtering of victims may also be viewed in this light.

In the literature on the subject different views regarding the origin, the original signification and the gradual extension and modification of the rite are to be found. For several reasons it seems unnecessary to review these opinions here. An exception may, however, be made for Wilken, who bases his opinion partly on that of Ploss, and for van Gennep (*Les rites de passage*, Paris 1909, espec. the fourth chapter).

According to Ploss the rite was meant as a surgical operation, serving to remove or to prevent phimosis, as it was believed that this anatomical deviation and perhaps the foreskin in general, was an impediment to the sexual function. Consequently the operation could take place at any age before marriage. Ploss' theory seemed to find support in the reports of some travellers (Wilken, *loc. cit.*, p. 224 sqq.). Wilken combines this view with an extension in the religious direction. If the aim of circumcision was the promotion of fecundity, the rite became a religious one, because begetting children was a precept of religion among many peoples.

Ploss' and Wilken's theories do not regard, as may be seen from the short *resumé* just given, the circumcision of females. According to Wilken the rite is in this case originally nothing but a surgical operation serving to prevent abnormal deviations of the genitals.

These theories are open to several objections. The conjecture of a different meaning of the rite in the case of males and females, can only be admitted if a common explanation appears to be impossible. Further the rite is practised among peoples who do not know of a connection between sexual intercourse and the birth of children. Another objection regards Ploss' and Wilken's method as such. It may be observed that an enquiry into the origin and development of widely spread rites such as the one in debate, has scarcely ever led to satisfactory results, because such rites, if they may have originated from one clearly definable idea at all, sooner or later have become receptacles of other more or less cognate ideas, a process which has covered them under such a mass of tangle-wood that it is no longer possible to find a thread of evolution.

During recent years ethnologists have, therefore, given up the genetic method, in order to return to the descriptive one, hoping thus to be able to set the important sides of the rites in the best light. This method has been applied to sacrifice by Hubert and Mauss, to circumcision by van Gennep.

In his *Rites de passage* van Gennep has shown that a great many rites may be described as rites of transition from one state of life into another one. Circumcision must be placed on the same level with the first shaving of the hair ('*akika*'), the filing of teeth, with initiations of various kinds, etc.

This point of view accounts for many of the features of circumcision mentioned above. It accounts for the fact, that children are submitted to the operation at ages varying between the seventh day after birth and the beginning of the manly age or the time of marriage; that females as well as males are circumcised; that the rite is sometimes repeated; that it shows a deeply rooted connection with marriage; that it is considered as the act of reception into a religious community;

that it is sometimes preceded by a bath; that processions take place, which show a striking similarity with bridal processions and so on.

(A. J. WENSINCK)

KHĪWA. [See **KHĀRIZM**.]

KHLOṬ, an Arab tribe of North western Morocco. Its name in literary Arabic *Khulṭ* has become *Khloṭ* in the vulgar dialect by regular metathesis, but the primitive form of the word is found in the adjective *Khulṭī* fem. *Khulṭiya*.

The *Khloṭ* who came into North Africa with the Hilālī invasion in the fifth (eleventh) century formed a part of the group of mixed Arab elements, known as *Djusham* from the name of the ancestor of one of them. According to Ibn *Khal-dūn* and other Muslim historians, the *Khloṭ* were the Banu 'l-Muntafiq. In Little Africa, the *Djusham* spread through Central Maghrib, settled there and took part in all the fighting which devastated Barbary. After the Almohad conquest, they tried to rebel but were cruelly put down. A little later, the Banū *Ghaniya*, rivals of the Almohads, had no difficulty in getting them as allies after the taking of Bougie [q. v.]. But the Almohad Caliph al-Manṣūr, victorious over his enemies, punished their Arab allies and transported the *Djusham* and *Riyāh* Arabs to Morocco to the coast of the Atlantic. The *Riyāh* were settled in al-Habaṭ and al-*Gharb*, the *Djusham* in al-Tāmesnā (the present *Shawia*), a country which had been empty since the extermination of the schismatic Berghwāta by the Almohads. Al-Manṣūr thought he would settle these tribes permanently and make them auxiliaries for the *djihād* in Spain. His attempt was doomed to failure.

Under the successor of al-Manṣūr, the intrigues of the Almohad *Shaikhs* found excellent allies among the *Djusham* (*Khloṭ* and *Sufyān*) and the jealousy between the *Khloṭ* and *Sufyān* aggravated the internal dissensions still further. In 621 (1224 A.D.) the *Khloṭ* took the side of the pretenders al-Ma'mūn against the Caliph al-ʿAdil supported by the *Sufyān*. In 625 (1228) al-Ma'mūn was proclaimed Caliph. In 630 his son al-Rashīd succeeded him but he was forced to take strong measures against the chiefs of the *Khloṭ* on account of their robberies and other misdeeds. The *Khloṭ* rebelled and took the side of the pretender Yahyā b. al-Nāṣir. The *Sufyān* made their peace with al-Rashīd. They attacked the *Khloṭ* on the banks of the Umm al-Rabi' and wrought terrible carnage among them. The *Khloṭ* in return proclaimed as Caliph the pretender Ibn Hūd from al-Andalus. But al-Rashīd pursued and routed them, took their chiefs prisoners and beheaded them (635 = 1237/1238). Weakened and compelled to submit, the *Khloṭ* took part in the expeditions of the Caliphs but their rivalry with the *Sufyān* was not extinguished and proved fatal to the Almohads. In 646 (1248) at the siege of Tamzesdekt held by the Ziyānid pretender Yaghmorāsan, the rivalry resulted in the death of the Caliph al-Sa'īd and the defeat of the Almohads.

The rise of the Marinids in Morocco again made the *Khloṭ* feel the hand of the conqueror. Sulṭān Abū Thābit took steps to punish them for their brigandage (707 = 1308), but he used their help to destroy the power of the *Riyāh* Arabs. The *Khloṭ*, installed in the latter's territory, in *Azghār* and in *Habaṭ* formed part of the *makhzan* [q. v.]

of the Sulṭāns of Morocco, contracted matrimonial alliances with these rulers and furnished them with governors of provinces, ambassadors and councillors. Vassals of the Marinids, the *Khloṭ* passed into the service of the Banū Waṭṭās, their successors. It is even claimed that intermarriage between them and Bū Hassūn, the last Waṭṭāsīd Sulṭān, prevented them from taking the side of the Sa'dian *Sherifs* on the latter coming to the front.

The Sa'dian *Sherifs* at first had no dealings with the *Khloṭ*, in spite of the importance of this tribe which, according to Leo Africanus, could put into the field 12,000 horsemen and 50,000 foot-soldiers. But the important part played by *Khloṭ* in the Moroccan victory over the Portuguese at Wādī *Makhāzin* made them admit them partially into the *Makhzan* of the *Sherifs*. But the plundering and undisciplined spirit of the *Khloṭ* made them dangerous to any regular authority. During the decline of the Sa'dian dynasty, the marabout pretender al-ʿAiyāshī [q. v.], who wished to make them take the field against the Christians of Larache' could not subdue them and was assassinated by them in 1048 (1638/1639).

Under the Filālī *Sherifs* the *Khloṭ* took the side of the petty chiefs of Northern Morocco who had made themselves independent under cover of the *djihād*. Mūlāy Ismā'il and his successors after conquering them deprived the *Khloṭ* of their position as a *makhzan* tribe and encouraged the settlement in this region of heterogeneous Arab elements, the *Tliḳ* and *Badāwa* groups who could only disturb and weaken the older occupants of the land. At the present day these groups have each their *kā'id*s who keep a jealous watch on one another; any attempts made by the *Khloṭ* against the Moroccan authorities have for a long time been uniformly unsuccessful.

The territory occupied by the *Khloṭ* is now about 50 miles in length from N. to S., and 20 in breadth from E. to W. It is bordered on the N. near *Aṣila* by the Wādī *Salem*, the tribe of Banū 'Arūs and the Wādī 'Aiyāsha; on the E. by the tribe of Banū *Gorfet*, and of *Ahl Ṣarīf*; in the S. E. by the *Djabal Ṣarṣar*; in the S. by the *Gharb*. In the W. from *Aṣila* to Larache, the *Khloṭ* are cut from the Ocean by the narrow territory of the *Saḥal*; from Larache they stretch along the Atlantic as far as the marshes of *Mar-dja Zarka*.

Bibliography. One could quote here all the works dealing with the history of N. W. Africa from the second Arab invasion. M. M. Michaux-Bellaire and Salmon in *Archives Marocaines*, iv., v., vi., Paris 1905-1907, have given a very full account of the territory, ethnography, administrative organisation, political position and divisions of the *Khloṭ* in their article on *Les Tribus Arabes de la vallée du Lekkus*.

(A. COUR)

KHODABENDE. [See **ULJĀITU**.]

KHŌDJA (Pers. *Khwādjā*), name of a community of dissenting Muslims, mainly to be found (a) in the *Pandjāb*; (b) in *Sindh*, *Kāčh*, *Kathiāwār* and the Western Coast of India; (c) in *Zanzibar* and on the East Coast of Africa; (d) in scattered groups under the name of *Mawālīs* or *Mawlā's* in the Hindu *Kūsh* region and the North-west frontier of India, in *Afghānistān*, in the *Khānates* of Central Asia, in the hilly districts of Eastern Persia and in the Persian Gulf District.

The numbers enumerated in India at the Census of 1921 (*Census of India 1921*) were:

Province	Male	Female	Total	Census of India 1921
Bombay. . . .	30,703	27,925	58,628	1/ii ¹⁶
Pandjāb. . . .	45,629	41,852	87,481	1/ii ¹⁶
Kāshmir State	2,536	1,705	4,24	XXII/ii ¹⁰
British India	76,332	69,777	146,109	1/ii ⁵⁵

The Pandjāb Khōdjas do not own allegiance to H. H. the Āghā Khān, but hold religious beliefs similar to those held by the Bombay Khōdjas (*Census of India 1901*, xvii. 150 sq.). They are, like the Bombay Khōdjas, converted Hindus, who are mainly engaged in commercial occupations, keep accounts in Hindī and follow Hindu customs. Allied to them are the Parāṭas of whom there are about 4,000 in the Pandjāb. The Pandjāb Khōdjas derive their origin from Ḥādjdī Saiyid Ṣadr al-Dīn, who came in the 15th century as an Ismā'īlī preacher from Khurāsān and lies buried in Trinda Gorgedj in the Pēshkāri of Gōthcāni in the Bahāwālpūr State. He presented his doctrines to the Hindus in a form which would appeal to their Hindu traditions. He is reputed to have been the author of the *Das-Avātār*, in which the incarnations of Viṣṇu are described as leading to Islām. The first nine incarnations are treated as a Hindu would treat them. The tenth incarnation (Skr. *niṣkalangka*, "unspotted") which the Hindus expect in the future is described as having materialised in the unrevealed Imām of the Ismā'īlis. Both the *Das-Avātār* and Ṣadr al-Dīn's hymns are used up to the present day by the Pandjābī Khōdjas as well as by the Āghā Khān's Indian followers and their offshoots in East Africa. For practical guidance the Pandjāb Khōdjas look to fakirs of the Qādiriya and Čishtiya sects and other Pirs, whose religious beliefs are not, however, necessarily identical.

The Khōdjas of the Bombay Presidency and their offshoots in East Africa form a much better organised community and are in direct touch with H. H. the Āghā Khān. Their religious ideas are in origin the same as those of the Pandjāb Khōdjas, but their living contact with the Imām in the person of the Āghā Khān has isolated them from the influence of Muslim religious orders. Secessions have taken place from their ranks from time to time, but notably in the seventh decade of the 19th century, when a section of them attempted to declare the whole community Sunnī, and more recently, in 1901, when a small number under the leadership of men educated on Western lines declared themselves to be Ithnā-Ash'ariya [q. v.] Shi'is (what may be called the orthodox school of the Shi'a faith). They have built a separate mosque and made a separate burial ground in Bombay (called the Ārām Bāgh), but they maintain social intercourse with the main body of the Bombay Khōdjas.

The Khōdjas are mainly governed by customary law. The Bombay High Court has held (1847) that the Muslim law of succession does not apply to them and that, as under Hindu law, their females are excluded from immediate succession (Sarjun Meer Ali's case; cf. Sir Erskine Perry, *Cases Illustrative of Oriental Life and the Application of English Law to India*, London 1853, p. 110).

The Bombay Khōdjas have a tradition of an

earlier preacher than Pir Ṣadr al-Dīn, viz. one Nūr Satāgur or Pir Sat Gur Nūr who is supposed to have lived in the 12th or 13th century of the Christian era. About 1594 A. D. their Imām Āghā 'Abd al-Salām wrote in Persian for the guidance of the Indian Khōdjas a book called the *Pandiyād-i Djawān-mardi*, which in its old Sindhi form is revered as the 26th in the list of Khōdja Pirs or saints (cf. with this the personification of the Sikh scripture as the Granth Ṣāhib).

The marriage, divorce and funeral customs of the Bombay Khōdjas are different from the general law and customs of Islām. The marriage customs show traces of archaic Hindu ceremonies. The actual *nikāḥ* ceremony used until recently to be celebrated by Sunnī qādis. A marriage certificate in due form is issued in Guḍjarātī, with the names of the four archangels, Djibrā'il, Isrā'il, 'Azrā'il and Mika'il, in the four corners. No divorce is permitted without the *djāmā'at*'s sanction, and the *djāmā'at* usually requires the consent of both parties. A second wife is not allowed in the life-time of the first without the *djāmā'at*'s sanction, which is, however, usually granted if Rs. 2,000 are deposited for the first wife's maintenance. A curious custom followed on the approach of death is that of *samarikhānta* or the sprinkling of holy water to the reading of the *Das-Avātār*.

The organisation of the community is in the form of a complete fiscal centralisation round the sacred person of the Āghā Khān, but of complete congregational independence in administrative matters, including even questions of excommunication. Every congregation has its own *djāmā'at-khāna* (pronounced in Guḍjarātī *djūmāt-khānūn*), which is both a meeting house and a mosque. The officers are the *mukhī* (headman, treasurer, chairman) and the *kāmaḡia* (secretary, accountant). They are sometimes appointed by the Āghā Khān, but are frequently elected. Offerings for the Imām are collected through them; these comprise the fixed *Dasandh* or tithe (the Momnas split from the community in the 16th century and mainly on their refusal to pay this) and various minor dues on special occasions, either recurring (as the festival of the new moon) or occasional (as the rites of birth, marriage, burial, etc.).

Very little is known of the present day organisation of the followers of the Āghā Khān in Persia, Central India, or in the North-West Himalayan frontier. In point of doctrine they keep to the pure Ismā'īlī [q. v.] doctrine [see the art. ISMĀ'ILĪYA] of the Nizārī branch, as opposed to the Musta'ali branch of the Egyptian and Arabian Ismā'īlis and of the Bohoras of India, who are derived from them.

(transl. D. Shea and Anthony Troyer, Paris 1843, ii. 397—451). (A. YUSUF ALI)

KHODJA EFENDI, SA'D AL-DIN B. HASAN DJAN B. HAFIZ MUHAMMAD B. HAFIZ DJAMAL AL-DIN AL-ISFAHANI, usually called *Khodja* (Sa'd ed-Din) Efendi, a famous Ottoman historian and Shaikh al-Islām. He was born in 943 (1536—1537) in Stambul, the son of a certain Hasan Djan who had immigrated from Persia and served as a chamberlain to Sultān Selim I during the last seven years of his reign. Hasan Djan told his son all sorts of anecdotes of the life of the Sultān which Sa'd al-Din worked into a *Selim-nāme* and then added it as an appendix to his famous history (ii. 221—401) (cf. Pertsch, *Türk. Hss. Berlin*, p. 241, N^o. 212; Flügel, *Die ... Hss. ... in Wien*, ii. 210, N^o. 987; thereon J. v. Hammer, *G. O. R.*, ii., p. vi. 10; ii. 634; ix. 203, 59 and his *Lettere sui mss. orientali in Bibliotheca italiana*, xlii. [1826]; the *Selim-nāme* was translated (without the introduction) into German by H. F. v. Diez, *Denkwürdigkeiten aus Asien*, i. 256—302 [Berlin 1811]). Sa'd al-Din studied law, became an 'ulemā' early, in 963 (1555/1556) *mulāzim* of the famous jurist Abu 'l-Su'ūd [q.v.], in Muḥarram 981 (1573/1574) tutor (*khodja*, whence his popular name, the one by which he is still generally known) to the heir-apparent Murād, then governor of Maghnisa. On the accession of Murād III in Dec. 1574 he remained his trusted adviser and retained the rank of *Khodja-i sultānī*, tutor to the Sultān, under Murād's successor Mehmed III. In Sha'bān 1006 (1598/1599) he became Shaikh al-Islām and died in this office two years later in Stambul on 12 Rabi' I, 1008 (Oct. 2, 1599), just as he was preparing to celebrate the birthday service (*mewlūd*) in the Aya Sofia. Four of his five sons, some of whom attained high rank (Mehmed [cf. *Sidjill-i 'othmānī*, iv. 144] and Mehmed As'ad [cf. *ibid.*, i. 330 sq.] became Muftis, 'Abd al-'Azīz [cf. *ibid.*, iii. 338] and Šālih [cf. *ibid.*, iii. 200 sq.] kādī 'asker, Mas'ūd died young as "guardian" [cf. *ibid.*, iv. 365 sq.], bore their father's coffin to Aiyūb, where he was buried in the school for the recitation of the Qur'ān.

Sa'd al-Din was the author of the famous Ottoman history known as the *Tādī al-Tawārikh*, which although not written by the imperial command (S. was not the so-called imperial historian, *Wak'a Nūwīs*, cf. also *Mitt. zur osm. Gesch.*, i. 241), is still generally regarded as an authoritative source for Ottoman history and not only consigned all earlier chronicles of the house of 'Othmān, called *Tewārikh-i Al-i 'Othmān*, to oblivion, but even made them appear contemptible (cf. Hādjdjī Khalifa, *Kashf al-Zunūn*, ii. 112, N^o. 2158 and J. H. Mordtmann in *Isl.*, x. 160). The work dealt with the history of the imperial Ottoman house from its foundation to the death of Selim I (d. 21. ix.

1520), copying from the earlier historians and written in a style often bombastic and extravagant. The work which was finished in the reign of Selim II (1566/1574) and was strictly speaking intended as a supplement to the Persian *Mirāt al-Adwār wa-Markāt al-Akhbār* of Mušliḥ al-Din Muḥammad al-Lāri (d. 979 = 1571), which Sa'd al-Din translated into Turkish (MS. in Vienna, cf. Flügel, ii. 80, N^o. 845), was disseminated and read in numerous manuscripts until it was made generally accessible in a printed edition in 1279 (1861) in two large volumes (586 and 619 pp., large 800, cf. *J. A.*, 1863, ii. p. 262). MSS. of the book often beautifully produced (e.g. one in the Vatican) are common in European libraries. The most important and most useful for a future critical edition may be mentioned: Berlin, N^o. 213; Dresden, N^o. 386; Leiden, Cat., iii. 27; London, Rieu, *Cat. Turk. MSS.*, p. 51^b sqq.; Mailand, Ambrosiana, N^o. 243; Munich, N^o. 76—81; Oxford Uri, *Cat.*, N^o. 1. and 4; Paris, N^o. 63—70; St.-Petersburg, Univ.-Bibl., N^o. 1 and 2; Cat. von C. Salemann and V. v. Rosen, p. 21; Rome, Vatican, a splendid MS. formerly belonging to the Swedish Queen Christina (cf. J. v. Hammer in *Bibl. ital.*, xli. 35, 115 and P. Horn in *Z.D.M.G.*, li. [1897], p. 45 sq.); Uppsala, N^o. 245; Venice, Bibl. Naz. Marciana, N^o. 30, 85, 3 and 134; Vienna, Nat.-Bibl., Flügel, ii. 244; Konsular-Akademie, A. Krafft, *Die ... Hss. d. or. Ak.*, N^o. 263. — The book found early recognition in the west and parts of it have been frequently translated: cf. W. Seaman, *The Reign of Sultan Orchan*, London, 1652; V. Bratutti, *Chronica dell' origine e progressione della casa ottomana composta da Saidino Turco*, part. i., Vienna 1649, part. ii., Madrid 1652 (cf. *W. I.*, vii. [1919], p. 110 and *Isl.*, xii. [1922], 228 sq.); *Saad ed-Dini Annales Turcici usque ad Muram I. Turcice et Latine curā Fr. Kollar*, Vienna 1755, fol.; incomplete, cf. Pertsch, *Türk. Hss. Berl.*, p. 243, note and *W. I.*, vii. [1919], p. 125 sq.); parts transl. by J. H. Garcin de Tassy in *J. A.*, iv. 347; viii. 306, 340; ix. 153; *The Capture of Constantinople*, ed. E. J. W. Gibb (with a biography of Sa'd al-Din), London 1879.

A MS. of a French translation of the *Tādī al-Tawārikh* was prepared by Antoine Galland in 1710; the MS., the first volume of which seems to be lost, is preserved in the Bibliothèque Nationale Paris as MS. anc. fds. fr. 6074.

Sa'd al-Din's son, Mehmed As'ad Efendi, is said to have continued the history written by his father; cf. Brūsālī Mehmed Ṭāhir, *'Othmānī mü'ellifleri*, ii. 22 sq.; *İlmiye Sālnāmesi*, Stambul 1334, p. 426 sqq.

(with specimens of MSS. and *Pençe* of Sa'd al-Din; his two

sons Mehmed and Mehmed As'ad, *ibid.*, p. 426 sq. resp. 436 sq.); preface to the edition of the *Tađi al-Tawārikh*; also Gibb, *History of Ottoman Poetry*, i. 164, 165, 205—208 and his *The Capture of Constantinople*, London 1879, preface.

(FRANZ BABINGER)

KHODJA ILI. [See **ҚОДЖА ИЛИ**]

KHOI (in Arabic *Khowaiy*), a town in Persia in the province of Ādharbāidjān, on a plateau 70 miles W.N.W. of Tabriz; population from 20,000 to 30,000. Its territory is irrigated by a water-course which rises in the mountains of Salāmās and flows into the Aras; the town is surrounded by gardens which produce, amongst other fruits, figs, and a superior quality of pears called *paighambari*, "pears of the Prophet". At the present day cotton is cultivated in the neighbourhood. The bazaars are large and busy. In former days a material called *Khoidjīya* was manufactured there. Now socks of knitted or woven wool are made here. The present defences (earthworks) were built at the beginning of the 19th century by General Gardane's expedition. The town was in part destroyed by the earthquake of 1842. It was near Khoi that Shāh Ismā'īl I lost the battle of Cāldirān against Sultān Selim I in 920 (1514).

(CL. HUART)

KHOĶAND, Arab. *Khuwākand*, later written *Khūkand* (which is given a popular etymology, *khūk* + *kand* = town of the boar), a town in Farghāna, cf. above, ii., p. 64, 66 where see also for the other spellings and the foundation of an independent Özbek kingdom with *Khōkand* as capital in the twelfth (eighteenth) century. The accession of the first ruler *Shāhrukh* was followed by the building of a citadel; another citadel later called *Eski Urda* was built by his son, 'Abd al-Karīm (d. 1746). 'Abd al-Karīm and his nephew and successor İrdānā Bī 'are several times mentioned in the history of the Atalīk Muḥammad Raḥīm, afterwards *Khān* of Bukhārā (d. 1759, cf. i., p. 782; Muḥ. Wafā Karminagī, *Tuḥfat al-Khānī*, M. S. of the Anat. Mus., c. 581b, especially fol. 33^b sq., 145^b sqq.). When the Kalmuḥ empire was destroyed and the frontiers of the Chinese empire advanced up to Farghāna (1758), İrdānā also was forced to acknowledge Chinese suzerainty; the Chinese records on this matter are cited by J. Klaproth, *Magasin Asiatique*, i. (1825), pp. 81 sqq. from the *Tai ts'ing yi t'ung chi*. İrdānā later was a member of a coalition of Muhammadan rulers of Central Asia, which applied to Aḥmad *Shāh* Durānī (cf. i., p. 169, 202 sqq.), the ruler of Afghānistān, for help against China. The alliance had no further results, although Aḥmad *Shāh* in 1763 appeared in Turkeṣtān at the head of an army and occupied the territory between *Khōkand* and Tāshkend (at the same time an invasion of the land of the Kara-Ķirgiz was made from *Khōkand*, Klaproth, *op. cit.*, p. 83), but he had soon to retire again on account of the claims of his enterprises on other

directions. 'Abd al-Karīm's grandson, Nār Buta Beg (probably reigned 1188—1213 = 1774/5—1798/9, cf. L. Zimin in *Protokol' Turk. Kruška Lyub. Arkheologii*, xviii. 102, and Walidow, *ibid.*, xx. 112 sq.), was also nominally under Chinese suzerainty. To the early years of this reign belongs the journey of the Russian sergeant, Filipp Yefremow, who was taken prisoner by the Ķirgiz in 1774 and sold in Bukhārā and in 1782 returned to Russia via India and England. According to his *Travels* (F. Yefremow, *Stranstrovaniye v Bukharii, Khiwie, Persii w Indii* ² (St. Petersburg 1794, p. 59 sq.)), Nārbuta was already entitled *Khān* "by the Chinese," was allied with China and at enmity with Bukhārā. No mention is made of prominent buildings in the capital (the Medrese Mīr was built in the reign of Nārbuta); on the other hand, a high pillar (apparently a minaret), said to be over 280 feet high in the market-place in Marghinān, is described. According to Filipp Nazarow (see below), this "tower" was visible for a distance of 50 versts (over 30 miles).

Nārbuta's two sons, 'Alim and 'Omar, are the real founders of the state and city of *Khōkand* as we later know it. The chronology of these reigns (1213—1237 = 1798/1799—1821/1822) is not sufficiently established; even the year in which 'Alim was assassinated and 'Omar raised to the throne is variously given in the sources. According to the *Ta'rikh-i Shāhrukhī* (ed. Pantusow, p. 106) 'Omar died in the year 1237 = 1821/1822 (in the cyclic reckoning the year of the horse = 1822 is given); according to Nalivkin (Russ. original, p. 101; French translation, p. 124), who here follows another source (the *Muntakhab al-Tawārikh* of Hakīm *Khān*), 'Alim was not murdered till the spring of 1232 (i.e. 1817, not 1816 as in Nalivkin); on the other hand Nalivkin himself in another passage (Russ. orig., p. 185; French transl., p. 228) puts the building of the chief mosque of *Khōkand* by 'Omar *Khān* in 1231 (1815/1816). The Russian interpreter Filipp Nazarow, who was in *Khōkand* in the winter of 1813/1814, calls the ruler of *Khōkand* Amir Walliami (*Zapiski o niekotorykh narodakh Sredney Azii*, St. Petersburg 1821, p. 50 sqq.). This is probably for *Walī al-Ni'amī*, not *Walī Miyani*, as in Klaproth, *op. cit.*, p. 43. The ruler at this time was only twenty-five years of age; this statement can only refer to 'Omar, not to the much older 'Alim; according to 'Abd al-Karīm al-Bukhārī also (ed. Schefer, p. 102), this embassy and the cause of it (the murder of the *Khōkand* envoy by a Russian soldier in Petropawlowsk) both took place in the reign of 'Omar *Khān*. According to 'Abd al-Karīm, p. 99, 'Alim had already been killed in 1224 (1809), which cannot be right, as we have a document of his dated *Djuma'dā I*, 1225 (June 1810) (*Protokol' Turk kruška, Lyub. Arkh.*, iii. 165, sq.). The change of ruler must therefore have taken place between 1810 and 1813.

In the oldest known document of his reign, dated 1213 (1798/1799), 'Alim still regards himself as the representative of an un-named *Khān*; later he appears as an independent ruler with the title *Khān* or Amir; after the conquest of Tāshkend, his power was as great as that of the Amir of Bukhārā. In 'Omar's reign in 1814 (so Nazarow; not so late as 1819, as in Nalivkin, Russ. orig. p. 110 sq.; French transl., p. 134 sq.), the town of Turkeṣtān with the parts of the Ķirgiz steppes

belonging to it was incorporated in the kingdom of *Khokand*. 'Omar thereupon took the title of *Amir al-Muslimin*. There were several wars with *Bukhārā* regarding the possession of *Ura Tūbe* in the reigns of both 'Ālim and 'Omar. The town indeed remained a bone of contention between the two states right down to the Russian conquest. The memory of these hostilities is said still to survive in the children's game "*Ura Tūbe is mine*" (*Žizn' Nacionalnostey*, i., 1913, p. 195).

'Omar's domestic policy was quite different from that of his predecessor. Like many other Central Asian rulers 'Ālim had made up his mind to break the power of the *Özbeg* families and therefore surrounded himself with mercenary troops from the highlanders of *Qarātegin*, *Darwāz* and other lands (*Tārīkh-i Shāhrukhī*, p. 42 sq.). The war against the nobles was, as frequently elsewhere, combined with a war on the clergy, especially the dervish orders; the historians on this account describe 'Ālim as a godless tyrant (*gālim*); on the other hand they praise the piety and justness of 'Omar, who was put on the throne by 'Ālim's murderers. 'Omar built the present chief mosque of *Khokand*, which is also used as a medrese and therefore is known as *Medrese-i Dīāmī* (picture in Fr. v. Schwarz, *Turkestan*, Freiburg i. B., 1900, p. 224). 'Omar was also fond of poetry and wrote poems himself under the pseudonym (*takhallus*) *Amir*; verses by the *Khān* himself, his officials and favourites were collected in a special anthology (afterwards printed) entitled *Madjmi'at al-Shu'arā* by M. Hartmann in *Mitt. des Seminars f. Orient. Sprachen*, vii., Westas. Stud., p. 87 sqq. It was probably 'Omar who founded the town of *Shahr-i Khān* (west of *Andijān*); the great canal, led to it from the *Qara Daryā*, *Shahr-i Khān Sāi*, is now 110 versts (nearly 75 miles) long; the area watered by it is about 6,000 square miles. The irrigation of *Farghāna* was completely altered by the excavation of this canal.

'Omar's son and successor, *Madali* (properly *Muhammad 'Alī*), was twelve at his accession (according to others fourteen). During the first half of his reign, the state of *Khokand* reached its greatest power and extent. In the south the districts of *Qarātegin*, *Darwāz*, and *Kulāb*, which now belonged to *Bukhārā*, were all conquered; in the north-east taxes were levied on the *Qara Kirgiz*, on the Great and on a part of the Central Horde of *Qazak Kirgiz*; the *Khān*'s representatives even appeared among the tribes of the Great Horde which led a nomadic life on the other side of the *Ili* [q.v.]. The rebellion of *Khodja Djahāngir* in *Kashgharia* (1826), which received support from *Khokand*, met with no success; nevertheless the officers of the *Khān* were allowed by the Chinese government to collect taxes in the "six towns" (*alī? shahr*): *Aksū*, *Üsh Tūrfān*, *Qashghar*, *Yangishahr*, *Yārkand* and *Khotan*. Like *Khokand*, where one of the largest medreses bears the name of *Madali Khān* (picture in N. P. Ostroumow, *Islamovedeniye*, Tashkend 1914, p. 185), *Tashkend* attained considerable prosperity; from 1835 the *Beglerbegi* of *Tashkend* was given the administration of all the northern provinces of the kingdom; a memorial of this period is the great *Beglerbegi Medrese* (picture, *op. cit.*, p. 188). The excavation of the great *Khān Harīk* canal in the region of *Tashkend* also belongs to this period (*Protokol' Turk. Kruška Lyub. Arkh.*, iii. 175).

In spite of the great extent of his kingdom, the authority of the *Khān* was not firmly established; his vicious life and cruel rule had aroused general discontent. *Naṣr Allāh*, *Amir of Bukhārā* [q.v.], is said to have been asked by people in *Khokand* itself to put an end to the rule of this blood-thirsty and godless tyrant. The *Khokand* army was completely defeated; the capital itself was taken by the enemy (for the first time since the foundation of the kingdom); *Madali* was killed while trying to escape (1258 = 1842). The conquerors were driven out again in the same year and *Shīr 'Alī*, a cousin of 'Ālim and 'Omar, was placed on the throne; but down to the Russian conquest domestic peace was never restored for any length of time. The reigns of *Shīr 'Alī* (1842—1845) and his sons *Khudāyār* (1845—1858 and 1865—1875) and *Mallā* (1858—1862) and several short-lived rulers were a period of continual confusion and bloody fighting, notably between the *Özbegs* of the *Qipčāk* tribe and the "Sarts", i. e. the native population. *Khudāyār*, who was still a minor, was raised to the throne by *Musulmān Kul*, the chief of the *Qipčāk*; the *Qipčāk* drove the Sarts out of their houses in the capital and took possession of the canals in the country; the Sarts were only allowed the water necessary for their fields on payment of a fixed sum. In 1269 (1852) *Musulmān Kul* was overthrown by *Khudāyār* and put to death; the land again passed to the Sarts. *Mallā* then relied on the support of the *Qipčāk* and restored to them the lands taken by the Sarts. Banished pretenders usually took refuge in *Bukhārā*. Under these circumstances *Naṣr Allāh* was able to advance as far as *Khodjande* in 1275 (1858), his successor, *Muẓaffar*, in 1279 (1862) and again in 1282 (1865) to occupy *Khokand* itself. The struggle against foes at home and abroad was waged with medieval cruelty. *Madali*'s father-in-law, *Muhammad Sharif Atālf*, governor of *Tashkend*, was bound to a horse's tail by order of *Khān Shīr 'Alī* and dragged across the steppes; after the capture of *Ura Tūbe* by *Khudāyār* in 1265 (1848) a tower of skulls (*kelle-minār*) was erected of the heads of the enemy killed.

In spite of all this, the kingdom retained its former extent down to the Russian conquest. The Russian troops had been in contact with the troops of the *Khān* of *Khokand* since 1850 on the upper course of the *Sīr Daryā*, about two hundred miles from the mouth and in the north-east since 1860 between the *Ču* [q.v.] and *Ili*. All these regions were still under the governor of *Tashkend*, who was also responsible for the maintenance of agriculture; the governor *Mirzā Aḥmad* (1853—1858) is said to have carried out irrigation works from the town of *Turkestan* to the valley of the *Ču*. It was only shortly before the Russian conquest in 1865 that *Tashkend* passed into the possession of the *Amir of Bukhārā*. From 1866 the kingdom of *Khokand* became limited to *Farghāna* and remained nominally independent within the boundaries of the latter, even after the treaty with Russia in 1868. To this period belongs the digging of the *Ulugh Nahr* canal (Middendorf, *Einblicke in das Ferghana-Thal*, St. Petersburg, 1881, Appendix, p. xxi) and several buildings (the *urda* or palace of the *Khān*, frequently reproduced, e. g. in Fr. v. Schwarz, *Turkestan*, p. 412, and better in W. Masalskiy, *Turkestanskiy Krai*, St. Petersburg, 1913, p. 701 and 703; the

Medrese Hākim Ayin and M. Sulṭān Murād Beg, built by the mother and the brother of the Khān, reproduced in M. Ostroumow, *Islamovedeniye*, p. 184) were erected at this time.

After the deposition of Khān Khudāyār by a popular rising and the new troubles thereby provoked, the remainder of the kingdom was incorporated in Russia as the "territory of Farghāna". Khokand still continued to be the largest town (113,636 inhabitants, according to the census of 1911) under Russian rule and the most important trading centre in the territory; the newly founded town of New Marghelān, later Skobelew, now called Farghāna, was the residence of the governor. The last time Khokand played a part on the political stage was in 1917, when an "autonomous government of Turkestan" was formed there; in the next year the victory of the Red Army put an end to it.

KHOLT. [See **KHLOT**].

KHOMAIR (KHUMIR). A people of northern Tunis. Khumiria has as its boundaries, to the north the Mediterranean sea, to the west the Algerian frontier, to the south the Wādī Ghezala, a tributary of the Medjerda, to the east the country of the Nefza and the Chiahia. The area of this region is about 350 square miles. It is a country with a very hilly surface, occupied by a mountain mass stretching as far as Algeria. Although the average altitude hardly exceeds 3,000 feet, these heights cut by deep ravines and steep gorges, give to the country a very rugged aspect. Khumiria is for the natives "the mountain" par excellence, *Djebel Djebaliye*. The sandstone formations which constitute nearly everywhere the subsoil are favourable for arboriculture. The forests of cork-oak and of Zean-oak occupy here an area of a hundred thousand hectares. The rainfall here reaches 66 inches a year. The water filtering through the sand-stone reappears on reaching the impenetrable marl as springs and flows towards the valley of the Medjerda and especially towards the Mediterranean. Agriculture can scarcely be practised except in the alluvial plains of Ṭabarḳa. Everywhere, besides, a border of dunes stretches between the coast and the forest, and partly arrests the waters coming from the interior. Deposits of zinc, of lead, and of iron have been recognised at different points.

The population of Khumiria is about 6,500 individuals. The natives called Khumir or Khumair are divided into 4 tribes: Khumir of Ṭabarḳa, Atafta, Tadmaka, Sellūl. The rearing of animals, oxen, sheep, and goats is their means of livelihood. Only those who live around Ṭabarḳa devote themselves to agriculture. The women manufacture coarse cloth, and household utensils in common pottery. Lastly numbers of natives are employed by the administration for the exploitation of the forests of cork-oak. The Khumirs are settled, or half settled. They live in huts or *gourbis* of branches, usually situated on the slopes of the mountains or in the neighbourhood of the river. Some of them have retained the use of tents. Near Ṭabarḳa there is also a small colony of Zwāwa, the descendants of Kabyls of the Bougie district, settled at this place in the xviith century by the Bey Ḥamūda. They cultivate vegetables and fruit, live in stone houses, and enjoy a comfort much in excess of the other natives. The Europeans, who are few in number, are found in the centres of 'Ain Draham [q.v.] and Ṭabarḳa [q.v.].

The Khumir may be regarded as the descendants of the Ṣanhādja, who occupied the northern coast of Tunis and of the province of Constantine at the time of the Muslim conquest. This primitive stock has been reinforced by other Berber elements, driven from the centre towards the north after the Hīlālī invasion, and finally mixed with Arab blood. In spite of their Berber origin, the Khumir have for a long time been arabicised. They have given up the use of the Berber language which has only left traces in their dialect and have given themselves an Arab descent. They claim, indeed, as their ancestor, a certain Khmis b. Amor, of Arab origin, whose descendant Sidi 'Abd Allāh b. Djemāl, is said to have established himself near 'Ain Draham. According to another tradition this personage is said to have attached himself to the tribe of the Ḥmir or Ḳmīr, who at the time of the conquest, had passed from 'Irāk into the extreme Maghrib, from which 'Abd Allāh is said to have migrated into Tunis some centuries later. The different Khumir tribes are said to be descended from the sons of Sidi 'Abd Allāh, whose "Marabout" is still at the present time the religious centre of this district. Twice a year in spring and in autumn, a much frequented *Zerda* is celebrated there. It has also been held that the Khumir had for a long time inhabited the south of the Regency under the confederation of the Shabbia, and that after the destruction of this confederation in the xviith century they fled for refuge into the mountains of the north.

In the shelter of their forests and of their mountains, the Khumir retained until the end of the nineteenth century an almost complete independence. Their political organization was very rudimentary. They did not possess Ḳādis and their disputes were brought before the *djama'a*. The tribes were often at strife with one another; they, however, sometimes formed federations to combat the populations of the valley of the Medjerda, or to resist the attacks of the Beys. The latter, under whom they nominally were, never could make them pay the taxes. Installed in the island of Ṭabarḳa, the soldiers and the officials of Tunis found themselves forbidden access to the country. The Zwāwa settled on the coast by Ḥamūda, in order to prevent the incursions of the mountaineers, were content

to receive the pay which was granted to them, but refrained from entering into conflict with their dangerous neighbours. The *Khumir*, on their side, lived mainly by brigandage at the expense of the Tunis tribes, or of the Algerian tribes of the frontier. The Beys of Tunis showed themselves powerless to put down these depredations. Acts of violence multiplied under the government of Muḥammad al-Ṣaddok. Thus the French government decided in 1881 themselves to punish the guilty ones. This was the origin of the Tunis expedition which aimed at the establishment of the French Protectorate. The operations against the *Khumir* were very brief. At the end of the month of April, 1881, a column from Algeria under the command of General Delebecque penetrated into *Khumiria* from the west, while a detachment disembarked at Ṭabarḳa; on the 8th May the column occupied the marabout of Sidi 'Abd Allāh b. Djemāl and, on the 13th, 'Ain Drahām. By the end of the month the conquest of the *Khumir* was achieved. The construction of a fortified post at 'Ain Drahām assured the final pacification of the country. Since then the most complete tranquillity has never ceased to reign, and *Khumiria* is to-day the region of Tunis where the fewest thefts and crimes of violence are committed.

KHORĀSĀN (Country of the "rising sun", from *kūhr* "sun" and *āsān* "rising"; P. Horn, *Grundriss der iran. Etymologie*, No. 23; *Grundr. der iran. Philologie*, vol. i., 2nd part, p. 176; *Wis a Rāmīn*, p. 119; cf. Yāqūt, s. v.; opposed to *khorbarān* the "west"), a vast country to the east of Irān, comprising the lands situated to the south of the Āmū-daryā (Djihūn) and to the north of the Hindū-kush (Paropamisus), but embracing also politically Mā-warā' al-Nahr (Transoxiana) and Sidjīstān (Sakastana). Under the Sāsānids *Khorāsān*, classified under the fourth clime, was part of Ērānshahr; it was administered by a *ispahbadh*, who held the title *pādshōspān* and by four *marzbpān*, each governing a fourth of the territory: 1. Merw-*Shāhadjān*; 2. Balkh and Tokhāristān; 3. Herāt, Būshandj, Bādāghīs, Sidjīstān; 4. Transoxiana (Ibn Khordādhbih, p. 18). This province yielded a revenue of 37 million dirhems. To the Arab geographers this country had for its boundaries on the east, Sidjīstān and India (including Wakhkhān), on the west the desert of the Ghuzz and Djurdjān; on the north Transoxiana (Mā warā' al-Nahr) and on the south-west the desert of Persia, and the canton of the Kūmis ('Irāk-adjami). The principal towns were: Naisābūr, Merw-*Shāhadjān*, Herāt, Balkh; other towns: Tūs, Nasā, Abiward, Sarakhs, Asfizār, Bādāghīs, Djūzadjān, Bāmiyān; Ghardjīstān and Tokhāristān were also included amongst them. At the present

time the province of this name includes less than half of ancient *Khorāsān*; the rest of the country, to the east of a line starting from Sarakhs in the north and running directly to the south and passing half way between Meshhed and Herāt, belongs to Afghānistān; the region which extends from Merw to the Oxus is Russian territory. Meshhed has remained the capital of this shrunken province. The chain of mountains which runs along the southern border is from 11,000 to 13,000 feet high. Water is scarce in this province. The country offers the appearance of a group of oases, watered by intermittent rivers and by wells situated along their subterranean course. The population is sparse and mixed.

At the time of the Muslim conquest Herāt, Bādāghīs and Būsheng were put under the authority of a chief whom Balādhuri (p. 405, i, 12) calls 'Aẓīm "the great". Herāt in particular was in the territory of the Ephtalite Huns (*Haīṭal*, Balādhuri, p. 403, 15; Ṭabari, I, 2885) so that the last Persian territory to the north was marked by the town of Marw al-rūdh, under the command of a *Marzbān* called Bādāhām. In the year 31 (651-652) an army, which set out from Fārs and from Khuzistān, and was put under the orders of Dāghāk b. Ẓais whose surname was al-Aḥnaf, by the command of 'Abdallāh b. 'Amir b. Kuraiz, invaded *Khorāsān* by way of Fahla (Pahlaw whence the Parthians originally came), conquered Tokhāristān and brought about the capitulation of the inhabitants of Balkh (cf. Sebēos, p. 137). According to Ibn Kūtaiba (Muḳaddasī, p. 293), the inhabitants of this province were converted very quickly to Islām; at all times arrogant and unruly, they often rebelled against the central authority. During the civil war between 'Alī and Mu'āwiya, the Arabs were driven from Naisābūr (Ṭabari, i. 3249, 3350; Balādhuri, p. 408) and the Chinese installed a Turk as governor of Tokhāristān; 'Alī sent Khulaid b. Ka's in 37 (657) to bring the inhabitants of Naisābūr to submission (Dinawarī, p. 163).

As soon as Mu'āwiya was the undisputed master of the Empire, he appointed 'Abdallāh b. 'Amir b. Karaiz governor of Basra and bade him reconquer *Khorāsān*; the latter in the year 42 (662) named Ẓais b. al-Haiṭham as his lieutenant, but in the year 43 (663) he sent 'Abd al-Rahmān b. Samura, who had already governed Sidjīstān under the Caliph 'Othmān, to reconquer Balkh and Kābul. The first of these two towns was retaken in the year 51 (671) by al-Rabi' b. Ziyād. In the year 90 (708) the Tarkhān Naizak of Bādāghīs rebelled, took the yabghū (*djaghū*) of Tokhāristān prisoner but in the following year was conquered by Kūtaiba b. Muslim and put to death.

It was in *Khorāsān* that Abū Muslim and the 'Abbāsīd propaganda recruited the troops which overthrew the caliphate of the Omayyads. A *ḥadīth*, without doubt made up after the event, claims that the Prophet declared: "When you see the black flags coming from *Khorāsān*, go to meet them, for in their midst you will find the Mahdī" (Muṭahhar b. Ṭāhir al-Maḳḍisī, *Livre de la Création*, ed. Huart, ii. 156). An attempt was made to find in this an indication of the coming of the resurrection; but even by the time of this author it was explained by the revolt of Abū Muslim (*op. cit.*, ii. 157). The internal disputes between the insurgent Arabs had for a long time fomented disorder; the Azd representing the Yemenites, the Tamīm and the 'Abd al-Ẓais of the race of Moḳar

fought for supremacy; the first seemed to triumph with the family of al-Muhallab, which remained for a long time in power. Naṣr b. Saiyār had called the attention of the Damascus caliph to the 'Abbāsid movement without obtaining reinforcements. When Abū Muslim, gathering around him the Shī'is, established a camp not far from Merw, he was then able to intervene successfully in the battle fought by Naṣr in the streets of this town against Ibn al-Karmānī and to put Naṣr to flight (130 = 748). The whole country was soon afterwards conquered.

Khorāsān really recovered its independence with the foundation of the Tāhirid dynasty by Tāhir b. al-Ḥusain, nominated in 205 (820) governor of the eastern regions by the Caliph al-Ma'mūn. It was joined to his possessions in Sijdīstān by 'Amr b. al-Laith al-Ṣaffār in 283 (896), then it was annexed to Transoxiana by Ismā'il al-Sāmānī in 287 (900); it was occupied by the Sulṭān Maḥmūd b. Subuk-takīn al-Ghaznawī in 384 (994). Toghrilbek the Seldjūk seized Naisābūr in 429 (1037) but the inhabitants revolted in 430 (1038) while the Sulṭān Mas'ūd reconquered Khorāsān, but only for a short time, because Toghrilbek finally conquered the Ghaznawid sulṭān in the following year. On the death of the Sulṭān Sandjar in 552 (1157) the Ghuzz recommenced their incursions and devastated anew the country, a part of which recognised the authority of Albeh al-Mo'ayyad, the slave of Sandjar [q.v.]. Anarchy and brigandage favoured the expeditions of the Khwārizmshāh and of the Ghūrids, and the country finally remained in the hands of the former. The conquests of Činghiz-Khān completely destroyed their independence in 617 (1220).

At the death of the Mongol Khān Abū Sa'īd in 736 (1320), Khorāsān saw the dynasties of the Kert and the Serbedār [q.v.] give a certain life to the country up to the time of the campaigns of Timūr (783 = 1381). It was the centre of the empire of his son Shāh-Rukh. Shaibek-Khān Özbek conquered it in 913 (1507) after disputing its possession with Shāh Ismā'il I. With the exception of Naisābūr and of Meshhed, it was incorporated into Afghānistān by Aḥmad Shāh Abdālī after the death of Nādir-Shāh about the year 1160 (1747). In 1249 (1833) Kāmraṇ defended Herāt against Abbās Mirzā, the son of Faṭḥ 'Alī Shāh, who was supported by Russia and concluded with England, who had sent an expeditionary force to occupy the chief towns of Afghānistān, a treaty which was signed by Lieutenant Pottinger. In this treaty he recognised the sovereignty of Shāh Shudjā' [q.v.]. From this time Khorāsān has remained in two sections, the boundary of which starts from the Hari-rūd at Sarakhs and runs from the north to the south, on the east side of the Persian province of Sijdīstān as far as Lake Hāmūn.

KHORĀSĀN (BANU), a Tunisian dynasty. The establishment of the Banū Khorāsān in Tunis was a consequence of the Hīlālī invasion. Irritated because the Zirid Sulṭān al-Mu'izz did not protect them against the brigandage of the Arabs, the inhabitants of Tunis in 451 (1059) asked the Ḥammādid sovereign of al-Ḳal'a to send them a governor. This prince chose for this office 'Abd al-Ḥaḳḳ b. 'Abd al-'Azīz b. Khorāsān, a personage originally from Tunis according to certain authors, but belonging, according to Ibn Khaldūn, to a Ṣanhādji tribe. 'Abd al-Ḥaḳḳ gained the support of the inhabitants by his good administration, and succeeded in putting an end to the plunderings of the Arabs by signing a treaty with them. But he had to fight the Zirids who wished to recover Tunis. Besieged by Tamīm b. al-Mu'izz, he was forced to recognise him as sovereign. On his death (488 = 1095) his power passed to his son, 'Abd al-'Azīz, and after him to his grandson, Aḥmad. This prince was, according to Ibn Khaldūn, the most notable representative of his dynasty. He put to death his uncle Ismā'il, got rid of the council of *shaiḳhs*, which 'Abd al-Ḥaḳḳ had associated with him in the government, and ruled as an absolute monarch. He surrounded Tunis by a fortified wall, and concluded a treaty with the Arabs, to ensure the provisioning of the town and the security of travellers. He constructed for himself a palace and surrounded himself by men of letters. The Zirids, however, had not disarmed. They supported Muḥriz b. Ziyād, the chief of the Arabs, who were installed in the ruins of Carthage, which Aḥmad had attacked and obliged the governor of Tunis to submit to their demands (510 = 1116/1117). Four years later the Ḥammādids, not wishing to allow their authority to be lessened for the benefit of the Zirids, came in their turn to besiege Tunis. Aḥmad saw himself forced to recognise the sovereignty of the Sulṭān of Bougie. He kept, however, the government until 522 (1128). At this time he was deprived of power, imprisoned at Bougie and replaced by a Ḥammādid official. After an interval of twenty years, the Tunisians having expelled their governor, the Banū Khorāsān regained their power. 'Abd Allāh b. 'Abd al-'Azīz was chosen by them as Amīr (543 = 1148/1149). He died in 552 (1157) while the Almohads besieged the town. His nephew 'Alī b. Aḥmad replaced him, but at the end of five months, had to capitulate and make his submission to 'Abd al-Mu'min. Sent to Marrākesh with all his family, he died during the journey.

KHORSĀBĀD, the name of a place noted for its Assyrian excavations, situated on the plain to the northeast of Mosul, at a distance of 12 miles (5 hours by caravan) from the town and eight miles from the Tigris at the south west of the foot of the Djabal Maḳlūb, and on the left bank of the Khawser. At this place the village of Khorsābād was situated in the year 1843; inhabited by the Shabak [q.v.] it was the village that Botta, the first explorer bought, and transplanted the inhabitants to another place in the plain, so that

he might be able to begin excavating. Khorsābād is mentioned by Yāqūt as Khurstābād, a village with good irrigation. The form given by Yāqūt would seem to be in opposition to the derivation from Khorsūbād, which is supported by Oppenheim. Yāqūt mentions in this neighbourhood a town in ruins, which he calls Šarūn, a dependency of Nainawā (Nineveh) where it was believed treasures were to be found. Šarūn ought very probably to be corrected to Šarghūn, the form under which the name of the Assyrian king Sargon II (who died in 705 B.C.), the founder of this Assyrian capital, has survived.

The village was situated on the highest summit of a group of artificial mounds. The excavations were begun in 1843 by Botta, French Consul at Mosul, and were continued and completed from 1851—1855 by Place. The Assyrian town, Dūr-Sharrukin, was in the shape of a rectangular parallelogram with corners facing the four points of the compass. The palace of Sargon was on the southwest side, and the great temple was built on both sides of the northwest wall of the town. The antiquities which were discovered were transported to the Musée du Louvre in Paris.

KHOSRAW. [See KHOSREW, KHUSRAW, KHUSRŪ, KISRĀ.]

KHOSREW, MOLLĀ, a famous Ottoman jurist, whose real name was Mehmed b. Firāmurz b. ʿAlī. M. Khosrew according to one statement was of Turkoman (tribe of Warsak) descent and born in the village of Qarḡhūn (half way between Siwās and Tokat), according to others, however, he was of "Frankish" descent and the son of a "French" nobleman who had adopted Islām. According to Saʿd al-Dīn his father was of Romaic (Rūm) descent. Khosrew became a pupil of the famous disciple of Taftazānī, Burhān al-Dīn Ḥaidar of Herat (cf. *Islam*, xi. 61 and Saʿd al-Dīn, *Taʿdī al-Tawārīkh*, ii. 430), and received a teaching post in the Shāh Malik medrese in Adrianople; in 848 (1444) he became kāḍī of Adrianople and later Kāḍī-asker of Rumelia. On the death of Khiḍr Beg [q.v.], the first kāḍī of Constantinople, he succeeded him and was at the same time müderriş at the Aya Şofia. Feeling hurt at Mollā Kurānī [q.v.] being promoted over him, he went to Brusa in 867 (1462) and built a medrese there. In 874 (1469) he returned to Sтамbul by command of the Sulṭān, became Shāikh al-Islām and died there in 885 (1480). His body was taken to Brusa and buried in the court of the mosque founded by him. He also founded a mosque in Sтамbul, which bears his name (cf. Hāfiẓ Husein, *Hadīkat al-Diawānī*, i. 201; J. von Hammer, *G. O. R.*, ix. 87, No. 428).

Mollā Khosrew was a celebrated jurist, many of whose pupils became famous in after life. He also attained a wide reputation as an author. His two most important works are the often annotated *Durar al-Hukkām fī Sharḥ Ghurar al-Ahkām* on the principles of legal practice, written in 877—883 = 1473—1477 (printed Cairo 1294 and

1305), also a dogmatic work *Mirḳāt al-Wuṣūl fī ʿIlm al-Uṣūl* (printed Cairo 1262 and Sтамbul 1304). On others works by him cf. J. von Hammer, *G. O. R.*, ii. 589 sq. and Brockelmann, *G. A. L.*, ii. 226 sq.

KHOSREW BEG, also called GHĀZĪ KHOSREW, Ottoman governor of Bosnia.

Khosrew was the son of the governor of Bosnia (869/870), later of Skutari (Albania) Naşūh Beg, who had married a daughter of Bāyezid II in 894 (1489) (cf. *Die altsman. anonymen Chroniken*, ed. by F. Giese, Breslau 1922, p. 122, 5, l. col.; cf. also J. v. Hammer, *G. O. R.*, ii. 302, and *Sidjill-i ʿothmāni*, iii. 555, s.v. Naşūh Beg). He is therefore sometimes called Sulṭānzāde. Thanks to his connections, Khosrew Beg was appointed governor of Bosnia at quite an early age in 924 (1518) and then transferred in 927 (1521) in the same capacity first to Skutari (Albania), later to Semendria (Smederovo, Serbia). In 932 (1525) Khosrew returned to Bosnia, was later temporarily disgraced, dismissed, but restored again to office. He lived in Serajevo [q.v.] where he died in 948 (1541/1542) and was buried in the mosque built by him in 937 (1530). One of GHĀZĪ KHOSREW's sons was called Maḥmūd.

GHĀZĪ KHOSREW BEG attained fame for his numerous conquests in the frontier lands of Turkey, notably in Bosnia; but he also ravaged Hungarian territory with his raiding parties (cf. J. von Hammer, *G. O. R.*, iii. 189), when he plundered and occupied the country round Eszék and Požega. Ewliyā Čelebi gives the number of his conquests as 170 fortresses, no doubt with the usual exaggeration. GHĀZĪ KHOSREW however is still more famous, especially in his own district, for his rich endowments which Ewliyā Čelebi probably with less exaggeration puts at 300. In Serajevo alone his charitable foundations are very numerous. Besides the mosque which bears his name, he built opposite it a medrese, also baths for men and women and a bezezān with 90 roofed shops, a *taşlu-khan* with 60 roofed store-rooms. In a foundation grant (*wakf-nāme*) of the year 938 (1531) the various foundations are detailed. The property which Khosrew left for the maintenance of his buildings and for public kitchens was enormous. In money, gold and silver vessels and jewels alone, it amounted to 3,000,000 dirhems, an enormous sum for those days, which although the foundation has been reduced in course of time to less than a quarter of its former size, still yielded an annual income of £ 2,500 a few decades ago. The estates and the house-property of the endowment still exist. Khosrew Beg therefore created for himself in Bosnia a permanent memorial of gratitude and remembrance in the hearts of the people, who everywhere revere him as a saint and great benefactor.

Bibliography: Ewliyā, *Seyahetnāme*, v. 441; *Wissenschaftliche Mitteilungen aus Bosnien*, i., Wien 1893, 503 sq.; C. v. Peez, *Die ottomanischen Statthalter von Bosnien* (ibid., ii. 344 sqq.), based on the *Sālnāme* of Bosnia for 1295, gives the tenues of office by *Khosrew Beg* as 924/927 and 938/949 and his successor Hasan or Mikhālzāde [q. v.] Mehmed. — The splendid letter of renewal, yards long (*Mukarrer-nāme*) of Sultān Osman II for the foundations of Ghāzī *Khosrew Beg* dated Dhu 'l-Kāde 1027 (1618/1619) is in the Sächsische Landesbibliothek in Dresden (cf. H. O. Fleischer, *Catalogus codd. mss. orr.*, Leipzig 1831, p. 47, N^o 320, 2) and still awaits editing and publication; Rifāt, *Dawḥat al-Mashā'ikh*, Stambul, n. d., p. 8 sq.

(FRANZ BABINGER)

KHOST. There are two places of this name in Afghānistān. One is in the Oxus basin, near Andarāb, in what is now called Afghān Turkistān, and is on the borders of Badakhshān. It lies S.E. of Balkh, S.S.E. of Haibak, N. of Kābul and Čarikār, and at the back of (i.e. north of) the Hindu Kush mountains. The place seems little known, and is seldom marked on the maps, but was of importance in old times. Yāqūt (Barbier de Meynard's translation) calls it "le chef lieu d'un petit pays fertile et boisé", and it is several times mentioned in Bābur's Memoirs. He spells it *Khwāst*, and it seems to be identical with the *Khūst* of Kazwīnī and the *Khāsh*t of other writers. In S. Zain's translation of Bābur's "Memoirs" it is called *Khost-i Badakhshān*. Two of Bābur's daughters were born at *Khost*, one of his chief wife Māham, and the other of Dildār Bēgam. Evidently Māham was closely connected with *Khost*. Her brother Muḥammad 'Alī Taghai was a Mirzazāda of *Khost*, and Bāyazīd Biyāt in his Memoirs, called the *Tārīkh Humāyūn* (I. O. MS. No. 223 of Ethé, p. 26a), mentions that Humāyūn (Māham's son) visited his maternal grandparents at *Khost*. We also find Bābur making special mention of the place when referring presents from India (see the *Tabaqāt-i Bāburi* of his ecclesiastical judge S. Zain, who notices that the people of *Khost* were distinguished for piety). This seems to point to Māham's family, for she was descended from the famous saint Aḥmad Dījam. Yāqūt says that *Khost* was the birthplace of an early traditionist (Barbier de Meynard, p. 219). Ibn Battūta also speaks of the many cells of religions in the Hindu Khush. It is probable that *Khost* has been ruined by the Turcomans and Uzbeks. For references to *Khost* see Guy Le Strange, *The Lands of the Eastern Caliphate*, p. 410 and 417, *Tārīkh-i Rashidi*, translation, p. 103 and note, Vambéry's *Shahbānīnāme*, Canto 63, p. 360, and *Khawāfi Khān*, i. 615, where there is an account of Dījagat Singh and his Rājipūts gaining a victory over the Uzbeks at *Khost*, and of their erecting a wooden fort there, as timber was plentiful. See also *Bādshāhnāma*, ii. 463; the year was 1645 (1055 A.H.).

The other *Khost* is a valley in the S.S.E. of Afghānistān, and borders on the Peshāwar district. The inhabitants are warlike and have given trouble by making raids into British territory. See Raverty's *Notes on Afghanistan*, p. 75; Clement Markham in *Proceed. Geog. Society* for 1879, p. 49; the *Official Report of the Second Afghan War*, London 1908, and *The Times* of March 28, 1914.

There is a third *Khost* in Balōčistān, 35

m. E. of Quetta, which is the seat of a coalfield (*Imperial Gazetteer of India*, iii. 138 and vi. 306). *Khwāst* in Persian means an island, and so may have the same import as Andarāb.

(H. BEVERIDGE)

KHOTAN, a town in Chinese Turkestan. In the oldest Chinese records (from the 2nd cent. A. D.) the town is called Yu-tien for Yotkan; this is the name still given to the ruins of the pre-Muḥammadan town, the most eastern part of which lies 5 miles west of the modern town. Later the name is written K'iu-tan and Ho-tan (cf. E. Chavannes, *Documents sur les Toukine [Turcs] occidentaux*, St. Petersburg 1903, p. 125). The Indian name Kustana or Kustanaka "breast of the earth" in Chinese transcription Kiu-sa-tan-na is explained by Sir Aurel Stein, *Sand-buried Ruins of Khotan*, 1903, p. 402, as a learned etymology of the native name. On the ruined site of Yotkan and its surroundings cf. especially M. A. Stein, *Ancient Khotan*, 1907, p. 190 sqq. As Stein shows, old Buddhist places of worship are now revered as the tombs of Muslim saints. The oldest dated Buddhist monument found by Stein is of the year 269 A. D. (*Sand-buried Ruins*, p. 405); but Buddhism must have been disseminated in *Khotan* much earlier. The oldest documents and writings are in an Indian dialect in which Stein now, in contradiction to his earlier opinion, sees not the language of the native population but a literary language which arose under the influence of Indo-Scythic dominion (M. A. Stein, *Ruins of Desert Cathay*, 1912, i. 290 sq., 386 sq.). Later we find instead of this in *Khotan* and east of it the native Aryan language called "language II" by E. Leumann, which is Iranian in grammatical structure but has a vocabulary much influenced by Sanskrit, cf. *Z. D. M. G.*, lxi. 648 sqq. and especially E. Leumann, *Zur nordarischen Sprache und Litteratur*, Strassburg 1912, p. 29 (the language seems "an almost indianised Iranian just as English is a romanised Germanic"); whether this language had already been driven out by Turkish in pre-Muḥammadan times, is not certain. In contrast to *Kāshghar* and the northern part of the modern Chinese Turkestan, *Khotan* is not mentioned in the *Hudūd al-'Ālam* (MS. of the Asiatic Mus., f. 14a) in the description of Turkish tribes and their lands, but under China; the town was in the frontier-land between China and Tibet and was under the rule of a separate prince who called himself "suzerain of the Turks and Tibetans" (*'aẓīm al-turk wa 'l-tubet*). On the other hand according to Gardīzī (in Barthold, *Öljet o piezdkie v Srednayuyu Aziyu*, p. 94) the town of Kai (?) fifteen days' journey from *Khotan* on the road to China was under the rule of the (Turkish) Tughuzghuz. According to Gardīzī the people of *Khotan* were Buddhists but he also mentions a Muslim cemetery north of *Khotan* and two Christian churches in the town itself (neither Christian nor Manichaean relics have so far been found in the ruins).

Islām spread much later in *Khotan* than in *Kāshghar* and was brought thither by force of arms. Ibn al-Athīr gives as the conqueror of *Khotan* Kaḍr Khān Yūsuf who died in 423 (1032) of whom we have coins struck in *Kāshghar* and Yārkand from the year 404 (1013—1014) (A. Markow, *Inventarniy Katalog* etc., p. 192 sq.). *Khotan* like *Kāshghar* was later under the rule of the *İlek-Khāns* (cf. above, ii., p. 465) and the *Qara*

Khitai (ii., p. 738); on the conquest of the country by Küclük, the ruler of the Naiman and the persecution of Islām instituted by him, see ii., p. 739. According to *Djuwainī* (*Ta'rikh-i Djihān Gushā*, ed. Mirzā Muḥ. Ḳazwīnī, i. 49 and 52 sqq.) he had the Imām 'Alā al-Dīn *Khotanī* nailed to the door of his medrese. Nothing was known of this martyr by the time of Haidar Mirzā (cf. ii., p. 232 sq.); his tomb was also unknown (*Ta'rikh-i Rashīdī*, transl. E. D. Ross, p. 298). There was therefore no native historical tradition in *Khotan*; the references to *Khotan* in the Arabic and Persian geographical works are extremely scanty; even the site is wrongly given by Sam'ānī (D. S. Margoliouth, *Gibb Mem. Series*, f. 189b) and by Yāqūt (ii. 403) who follows him.

In the xiiith century *Khotan* according to Marco Polo (ed. Yule-Cordier, i. 188 sqq.) was under the rule of the Emperor of China, not like Yarkand under the rule of prince *Ḳaidū* (cf. above, i., p. 848). *Khotan* later seems to have regularly shared the political history of *Kāshghar* and other towns of this region, belonged like *Kāshghar* in the xviiith century to the state of the *Khodja's* (saints), had to submit to Kalmuck and later to Chinese rule, after the events of 1280 (1863—1864) to the rule of the invader Ya'qūb Beg and returned after his death (1877) to its allegiance to China. On a history composed in *Khotan* quite recently (finished on 18th Sha'bān 1311 = Feb. 24, 1894) dealing with events since 1280 (1863) cf. *Bulletin de l'Acad.*, etc., 1921, p. 209; and see also the section on the *Khodja* of *Khotan* in the *Ta'rikh-i Emeniyi*, ed. Pontusow, p. 161 sqq.

In the modern town the silk industry, much cultivated here from the earliest times, still survives. The number of inhabitants is very variously given; according to Kornilow, *Kashgariya*, Tashkent 1903, p. 275 only: 15,000; according to G. and P. Sykes, *Through deserts and oases of Central Asia*, London 1920, p. 246: 50,000.

Hartmann, *Chinesisch-Turkestan*, Halle 1908, p. 93 sq. — On the rule of saints in Islām and the relation of *Khotan* to this see M. Hartmann, *Der islamische Orient*, Berlin 1905, i., p. 195 sqq. and index. (W. BARTHOLD)

KHUBAIB B. 'ADĪ AL-ANṢĀRĪ, one of the first martyrs of Islām. The main features of his story common to all versions are as follows: After the battle of Uḥud (on the chronology see below) a small body of ten of the Prophet's followers was spied out and surrounded between Mecca and 'Uṣfān by 100 (or 200) Liḥyānis who belonged to the Hudhail. The leader of the hard-pressed little band, 'Āṣim b. Thābit al-Anṣārī (according to others the leader was al-Marḥad), proudly refused to yield. He and six others were killed whereupon *Khubaib*, Zaid b. al-Dathina and a third surrendered; the latter fell a victim to his stubbornness and the two former were taken to Mecca and sold. *Khubaib* fell into the hands of the Banu 'l-Hārith b. 'Āmir b. Nawfal b. 'Abd Manāf who on the expiry of the sacred period took him out of the Haram to al-Tan'im, bound him to a stake and killed him with lances (*ṣabran*) in revenge for al-Hārith whom *Khubaib* had killed in the battle of Badr. Before he was tied to the stake, *Khubaib*

asked for time to perform two rak'a's which was a *sunna* for martyrs, comparable to the last prayer of Christian martyrs. *Khubaib* is said to have recited two verses at the stake to the effect that he as a Muslim martyr cared nothing about the treatment of his body as Allāh was able to bestow his blessing even upon his severed members. *Kunūt* formulae uttered by him besides these verses have also been handed down in which he appealed to Allāh for vengeance on his enemies. Those present are said to have shown great trepidation at this curse of the dying man; it is related that Abū Sufyān hurriedly pressed the little Mu'āwiya to the ground to protect him from the consequences of the ill-omened words; and Sa'īd b. 'Āmir used to fall into long swoons whenever he thought of the scene.

A comparison of the accounts shows discrepancies and idealising features. Before his death 'Āṣim prayed to Allāh asking him to communicate news of the event to his Prophet in Medina, which actually happened. His corpse was protected by a swarm of bees so that the enemy could not reach it and later it was carried away by a deluge of rain. According to al-Wāḳidī, p. 155, however, Muḥammad received news of the event at the same time as that of Bī'r Ma'ūna; and according to Ibn Hishām, p. 641, it was not 'Āṣim but *Khubaib*, who prayed to Allāh asking him to cause Muḥammad to be informed. — According to al-Zuhri and 'Urwa (see the latter's brief account in al-Wāḳidī, p. 156) the ten men were sent out as a *sariya* to spy upon the Meccans; according to Ibn Hishām, p. 638, al-Wāḳidī, p. 157 and Ibn Sa'd, II/i. 39 sq.; III/ii. 33 sq. ten teachers of religion, who were on their way to a tribe to instruct them, were treacherously placed at the mercy of the enemy by their guides. This story is too much like that which has been woven round the drama of Bī'r Ma'ūna, which happened at the same time. Al-Wāḳidī tells us under the year 6 A. H. that *Khubaib* was not yet at that time a prisoner among the Meccans (p. 227). The only certain chronological statement that can be made is that the event took place after the battle of Uḥud as 'Āṣim fought there. In the official *Sīra*, the incident is recorded under the name Yawm al-Radjī' and put by Ibn Hishām in the year 3 and by al-Wāḳidī in 4 A. H.

The figure of the protomartyr *Khubaib* lent itself readily to embellishment. The daughter of al-Hārith (according to others Māwiyis, a client of Hudjair b. Abi Ihāb) in whose house he was kept a prisoner, saw him one day eating grapes, although these could not possibly be obtained in Mecca. — When his martyrdom approached, he asked for a knife with which to remove the hair on his privy parts (as was usual in such cases); the woman sent a little boy with it to him, but became terrified at the thought of his possible revenge; when *Khubaib* noticed her terror, he calmed her with the assurance that no such cruelty need be feared from him. — The verses above mentioned, which he is said to have uttered at the stake have grown in Ibn Hishām to a whole poem. The same author (p. 644 sqq.) gives the laments for him. For how his corpse was taken from the *Ḳuraish* and swallowed up by the earth, see Ṭabari, i. 1436 sq. = *Isāba*, i. 862.

Bibliography: al-Zuhri's or Abū Huraira's tradition in Aḥmad b. Ḥanbal, *Musnad*, ii. 294

sq., 310 sq. and in al-Bukhārī, *Djihād*, B. 170; Ibn Ishāq's version, p. 638 sqg., goes back to 'Aṣim b. 'Umar b. Qatāda; al-Wakīdī, transl. Wellhausen, p. 156 sqg. (cf. 226 sq.) compiled the whole story from various sources; Ibn Sa'd, *Kitāb al-Tabakāt*, ed. Horowitz, II/i, 39 sq.; ed. Sachau, III/ii, 33 sq.; al-Diyārbekrī, *2'arikh al-Khamis*, Cairo 1203, i. 454 sqg.; Ibn Haǧǧār, *Iṣāba*, i. 860 sqg.; Ibn al-Athīr, *Uṣd al-Ghāba*, ii. 111 sqg.; Caetani, *Annali dell' Islām*, Anno 4, § 7, 8; Anno 6, § 2; Tabari, ed. de Goeje, i. 1431 sqg., who gives the two main versions.

(A. J. WENSINCK)

KHUDĀWENDIGĀR (r.), derived from *Khudāwend*, signifying master, lord, prince, and often used in literature to denote God. In the history of the Ottoman Empire this word was: 1) the surname of the Sultān Murād I (1360—1389, q. v.) and 2) the name of the sandǧak and later of the wilāyet of which Brūsa was the capital.

The earliest Ottoman chroniclers do not yet give this surname to Murād I (generally called Sultān Murād Ghāzī, see e. g. Anonymous Chronicle, ed. Giese). It does not appear until the xvth century (Iḍris Bidlisī, Sa'd al-Dīn; see von Hammer, *G. O. R.*, i. 107). But the title of *Khunkīār* is found amongst the earliest historians (v. 'Aṣhīk Pasha Zāde, *2'arikh-i*, Constantinople 1332, p. 68) and is generally considered as an abbreviation for *Khudāwendigār* ('Āli, *Kunh al-Akhḥār*, v. 16; *Ferheng-i Shu'arī*, s. v.; Sāmi, *Kāmus-i Tūrki*, i. 589; Nāǧī, in his *Lughat*, derives it however from *khunuk-ār*, "bringing happiness"; see also *J. A.*, 2nd Series, xv. 276, 572). The title of *Khunkīār* is given to all the Ottoman Sultāns, at least until the xvth century, along with that of Pādīshāh. The historian Ibn Iyās says that the Egyptians were amazed at this strange title borne by Selim I (see Barthold in *Isl.*, vi. 393). But *Khunkīār* is also given as a title to several great men of religion and mystics, especially to Djalāl al-Dīn Rūmī, who is often called Mollā *Khunkīār*. The title of *Khunkīār* derived from *Khudāwendigār* seems then to belong to the same category as that of Pasha, which is probably derived from Pādīshāh (see Giese in *Z. S.*, ii. 262) that is to say both these titles originated in the atmosphere of mysticism which surrounded the origins of the Ottoman Empire. The surname of *Khunkīār* in its primitive and literary form *Khudāwendigār* then became attached more especially to Murād I (see however below), in the same way as the words pasha and pādīshāh have each had their special development. *Khunkīār* (Constantinople pronunciation *hünkār*) is also found amongst geographical names such as *Khunkīār Iskelesi*, etc.

2) After the conquest of Brūsa by Orkhān, the town with its surrounding districts, was given as a sandǧak to Prince Murād Beg; 'Aṣhīk Pasha Zāde, p. 43, says that the sandǧak was called after him, Beg Sandǧaghī. But the later historical tradition had it that the sandǧak and later the wilāyet of which Brūsa became the capital, were called *Khudāwendigār* after the surname of its first governor (see Ḥaǧǧidī Khalifa, *Djihān-Numā*, p. 656). Ewliyā Čelebi, however, says that from his time (1640) Brūsa was the capital of the eyālet of Anadolu and the residence of the governor (*hākim*) who bore the title of *Khudāwendigār* (Const. ed., ii. 10). It is then probable that the origin of the geographical name *Khudāwendigār*

does not go back exclusively to Sultān Murād I, but that it is derived from a title borne by the high official who had his head-quarters at Brūsa. The religious buildings in the town of Brūsa bearing the name of *Khudāwendigār* such as the Dǧāmi'-i *Khudāwendigār* or Ghāzī *Khunkīār* Dǧāmi'si (Ewliyā, ii. 14; Cuinet, *La Turquie d'Asie*, iv. 127) and the Medrese-i *Khudāwendiyē* (Ewliyā, ii. 17) are however connected with Murād I.

(J. H. KRAMERS)

AL-KHUDJANDĪ, HĀMID B. AL-KHIDR ABŪ MAḤMŪD died about 391 (1000). He lived in al-Raiy in the time of the Buyid Faḥr al-Dawla (366—387 = 976—997); he gave the latter's name to the sextant (not the sextant in our sense) which he made (*al-suds al-faḥrī*). This consisted of two parallel perpendicular walls A and B 12 feet apart, which reached 30 feet above the earth and 30 feet below it (reckoning an ell at 18 inches). At the south end and perhaps also at the north end of the south wall was a dome with an orifice. Around the latter a sextant with a radius of 60 feet was described, which was formed by the carefully polished surface of a wall erected between the two walls. The sextant reached from 30 feet below the earth's surface to the latter and every 10" was marked. The rays passing through the orifice were caught on a white plane which moved along the circle. The greatest altitude of the sun was thus obtained. Al-Khudjandī calculated with the sextant the plane of the ecliptic in 384 (994). As cloudy weather prevailed, the observations which were made in the days before and after the culmination of the sun in Cancer and Capricorn had to be approximated for the calculation of the ecliptic. By careful calculation and interpolations, it was successfully done. The plane of the ecliptic proved slightly different from earlier calculations at 23° 32' 21". This figure differs by 13¼ minutes from the true value then in use. From al-Bīrūnī we learn in the *Mas'ūdī Canon* that al-Khudjandī's value was falsified by the fact that the instrument used for one of the two calculations had been damaged. Al-Khudjandī explains at great length that, as the astronomical values are variable, there is no fundamental reason against a variability of the plane of the ecliptic also.

Al-Khudjandī also constructed the instrument called *al-āla al-shāmila*, "the comprehensive instrument" (cf. J. Frank, *Über zwei astronomische arabische Instrumente*, *Zeitschr. für Instr. Kunde*, xli., 1921, p. 193—200). It is a universal instrument, filling the place of both astrolabe and quadrant, but at first could only be used for one latitude. Hibat Allāh b. al-Ḥunain al-Baḍī' Abu 'l-Kāsim al-Aṣṭurlābī made it applicable to all latitudes (cf. Ibn al-Kiṭīfī, p. 339 and H. Suter, N° 278).

KHULK. [See **AKHLĀK.**]

KHULM, name of a place, situated 2 *marhala* (10 *farsakh*) to the East of Balkh, on the road to the frontier of Badakhshān. Ibn Khurdābih calls the station halfway between Balkh and Khulm Walārī. A. Burnes reckons a distance of 40 miles from Khulm to the ancient city of Balkh; the mediaeval geographers give the following distances from Khulm to Simindjān, Waralīz (or Warwālīz) and Bahār respectively: 2 days (Iṣṭakhri and Muḳaddasī; acc. to Yāqūt: 5 days); 2 days; 6 *farsakh* (Ibn Khurdābih; the extract from Ibn Dja'far's *Kitāb al-Kharāj* gives 7 *farsakh*, and notes besides 3 *farsakh* from سواحی to Khulm).

The height of the place is said to be 1,800 feet above the sea (Ritter, *Erdkunde*, viii. 11). The river of Khulm, Āb-i Khulm or Khulmrūd seems to be the Artemis of the ancients (Pauly-Wissowa, *Realenz.* 2, ii. 1305). Ibn Khurdābih (p. 33) mentions a *nahr al-Dirghām* in the neighbourhood of the town; can this be the same as the Khulmrūd? The fall of the river of Khulm amounts to 60 feet in each mile. On the upper course of this river the village of Duāb is situated; the stream itself runs to the West of and parallel to another water-course, the Ghurī, to join the Oxus after passing Haibak and Khulm. Herewith may be compared the description in Burnes' *Travels* (iii. 176): "Heibuk and Khooloom stand on the same rivulet, the water of which is dammed up on certain days, and allowed to run on others. The gardens on its banks are rich and beautiful, and among the fruit-trees, one again meets the fig, which does not grow in Cabool".

The town of Khulm is reckoned by the geographers to Tukhāristān, or, in a wider sense, to Khurāsān (cf. Yāqūt, *Mu'djam*, iii. 518: Tukhāristān is *min nawāḥi Khurāsān*). al-Idrīsī seems to consider Khulm as a locality belonging to Badakhshān (*Géographie d'Édrisi* . . . par P. A. Jaubert, 1836, i. 474). The town belonged to the "*mudun laisat bi 'l-'izām*" (Yā'qūbī, ed. de Goeje, p. 288); its dependencies were numerous (Muḳaddasī); we find mention of Kharūrāndj (Yāqūt) and "Muzar" (Burnes; Mazār?). The climate is, according to the mediaeval authorities healthy, but breezy during the summer; the place was inhabited by Arabs from the Azd, Tamim and Kais, who had settled there at the time of the conquest. Two theologians, Abu 'l-'Awdjā Sa'īd and 'Uthmān al-Khalilī were, according to Yāqūt, natives of Khulm.

As regards pre-Islāmic times, it has been supposed, that the Aornos mentioned by Arrian, *Anab.*, iii. 29, was in the neighbourhood of Khulm, but this cannot be proved (comp. *Grundriss der Iran. Phil.*, ii. 474, ann. 5; Pauly-Wissowa, *Realenz.* 2, i. 2659). Next, the Chinese traveller Hiuen Tsiang mentions the kingdom of Hu-lin (Khulm): it measures, according to his account, ± 800 *li* in circuit; the circumference of the capital is 5 to 6 *li*. There were more than 10 Buddhist monasteries, and above 500 monks. To the West of Hu-lin was Fo-ho (Balkh); but, though this identification seems to be correct, the transscription, according to Watters, "seems to require an original like Bokhar or Bokhara, the name of the country which included Balkh". Comp. S. Beal: *Si-yu-ki: Buddhist Records of the Western World* (Popular Edition), i. 43; Th.

Watters: *On Yüan Chwang's Travels in India* (1904), i. 106, 109. Later, Khulm sometimes is mentioned during the struggles which the Muslims waged against the Turks of Central-Asia, e. g. in the year 90 (708/709), in the war of Qutaiba b. Muslim with them; in 119 (737), when Asad b. 'Abdallāh was in the field against the Khākān, the latter tried in vain to take the town. Khulm is also met with in the assessment-list of 'Abd Allāh b. Tāhir of the years 211/212 (826/827—827/828): it is noted there for the sum of 12,300 *dirham*. On these data comp. Marquart, *Erānsahr*, p. 82, 218 sq., where the authorities are given. In 268 (881/882) the rebel Ahmad b. 'Abdallāh al-Khudjastānī, after beating the army of Abū Talha, the general of 'Amr b. al-Laith at Sarkhas, defeated him a second time near Khulm (Ibn al-Athīr, vii. 209).

In the beginning of the sixth century, Khulm is described as having a mixed population consisting of Tadjik's, Uzbegs and Kābuli's. Under the reign of Kiliḍj Ali Beg (an Uzbek prince of Balkh, nominally tributary to the crown of Kābul), the town, then an important place, was liable to be harassed by the nomads of its neighbourhood. Because of this, the seat of government, which seems to have been at Khulm, was transferred to the locality of Tāsh Kurgān, situated on a distance of ca. 4 English miles from it. When Moorcroft visited these regions (1824), another calamity also had befallen Khulm. The year before, Murād Beg, the prince of Kunduz, had forced the inhabitants to migrate to Kunduz, such compulsory removals being not uncommon during his reign. Since that time, Khulm proper has decayed, and its place has been taken by Tāsh Kurgān. This Muḳammad Murād of Kunduz had held a command of minor importance under 'Ali Beg, but after the death of the latter, Murād attained so much power, that he became in reality an independent ruler in the regions north of the Hindū Kush. New Khulm (Tāsh Kurgān) had, at the time Burnes travelled there some 10,000 inhabitants; it was the frontier town of Murād's state. The sons of 'Ali Beg, in their turn, had become vassals of Murād, and reigned in his name over the district, whose capital was Khulm, and which contained moreover Haibak, Ghurī, Andarāb, Taliḳān and Hadrāt-Imām.

KHUMĀRAWAIH B. AḤMAD B. ṬULŪN, born in 250 (864) was appointed by his father Aḥmad his deputy in Egypt as early as 269 (882). Before his death, while on a campaign in North Syria, Aḥmad at the request of his generals, designated Khumārawaih as his successor and died shortly after in Dhu 'l-Ḳa'da 270 (May 884). His older son 'Abbās had previously rebelled against him and was regarded as cruel and untrustworthy. On his deathbed Aḥmad had shown an inclination to make peace with Muwaffaḳ, the all-powerful brother of the reigning Caliph al-Mu'tamid; the latter had readily considered the proposal. The negotiations however were interrupted by Aḥmad's death, for only his great prestige had induced his enemies to consider peace negotiations on a basis of his appointment as governor in Egypt and Syria. When the negotiations fell through, two partisans of the Caliph, Ibn Kindādī, who had previously been appointed governor of Damascus, and Abu 'l-Sādī, the governor of Northern Mesopotamia, went with their troops to Syria and sought Muwaffaḳ's support, which he promised them. The governor of Damascus joined them and handed over Antioch, Aleppo and Ḥims to Ibn Kindādī. Khumārawaih now sent troops to Syria who put down the rebellion in Damascus and advanced as far as Shaizar [q. v.] on the Orontes. The winter forced the two parties to go into winter quarters. Al-Muwaffaḳ's son Aḥmad now arrived in Syria in command of the Caliph's army. Aḥmad along with Ibn Kindādī attacked the quarters of the Egyptian army, inflicted a severe defeat on them so that they fled to Damascus; driven out of this city they retired to Ramla. Aḥmad however now quarrelled with the Caliph's two generals and was left with only 4,000 men. Khumārawaih had in the meantime reached Ramla from Egypt with a large army (70,000 men it is said). The armies met on Shawwāl 16, 271 (April 6, 885) in the famous battle of al-Ṭawwāḥin (north of Jaffa). Khumārawaih, who had never been in battle before, did not resist for long but fled back to Egypt with the majority of his army. Aḥmad's troops then fell upon the camp and were plundering it when a body of Egyptian troops that had been kept in reserve attacked them. Aḥmad thought that Khumārawaih had returned with his troops and fled precipitately to Damascus. When the governor shut its gates against them, the troops went on to Tarsus in Southern Asia Minor. A great part of the army had already been taken prisoner and carried off to Egypt. On this occasion Khumārawaih showed his extraordinarily fair and peaceful character. He gave the prisoners the choice of returning to the 'Irāḳ without a ransom or of settling in his kingdom. Aḥmad returned to Mesopotamia.

One of his own generals rebelled against Khumārawaih but was defeated by him, as he had now regained his personal courage and he was also able by his bravery to conquer Ibn Kindādī who had taken up arms against him. He now began negotiations with Muwaffaḳ and in 273 (886) was recognised for a period of 30 years as governor of Egypt, Syria and the marches against Asia Minor and Armenia for a trifling tribute. In 273—277 (886—890) there was again fighting between Khumārawaih and rebel governors, which ended in Khumārawaih being also recognised as suzerain of Mesopotamia. In Raddjāb of the year 279 (Oct. 892) the Caliph al-Mu'tamid died and was suc-

ceeded by Muwaffaḳ's son Aḥmad, with the title al-Mu'taḍid. The latter confirmed Khumārawaih in his office and the latter became ambitious to be closely related to the Caliph. He offered him his daughter as a daughter-in-law, but the Caliph married her himself. To attain his end Khumārawaih had to make enormous financial sacrifices. The dowry of the princess is said to have been £ 50,000. On this occasion the contrast between the rich provincial governor and the poverty of the central government which represented the Caliph was striking. It was impossible for the latter to collect money from the provinces as the independent governors kept all the revenues for themselves and paid only a moderate tribute to him. It is related that when the princess came to Baghdad, the Caliph and his chief eunuch sought for candlesticks in order to receive her in a fitting manner. The chronicler records that he could only collect 5 silver and gold plated candlesticks and then heard that the princess was accompanied by 150 servants each of whom carried a gold and silver plated candlestick. He then said to the chief eunuch: "Come let us go and hide ourselves, lest we be seen in our poverty". The princess Kaṭr al-Nadā was noted for her wit and beauty and must have ruled the Caliph as the anecdotes show. Once when the Caliph entered her room, she said: "Alas, my father is dead". Asked how she knew, she said: "Hitherto when you came to me, you sunk on your knees and touched the earth with your forehead to greet me, but now you say simply "good day".

Khumārawaih's extravagance in daily life and on the occasion of the wedding of his daughter naturally did great harm to the finances of the lands he governed. As an example of the boundless extravagance, which he displayed in the maintenance of his court and in the erection of costly buildings, the palace is mentioned, in the court of which he erected a basin of quicksilver supported by pillars, to alleviate his insomnia. He lay on cushions, filled with air on the surface of the quicksilver, and tied to the pillars, and was gently rocked to sleep by their motion on its surface. It was a particular misfortune for Egypt that Khumārawaih fell a victim to a plot while still young. He learned that his favourite wife was deceiving him with one of his servants and the latter, to escape punishment, resolved to kill his master. He and several conspirators fell upon him and killed him. On the whole he procured a period of peace for his lands. Egypt itself was spared from war during his reign. Nevertheless as a result of his extravagance the country was so injured that his sons who followed him steadily lost power. The family of the Ṭulūnids had ceased to reign by 292 (905).

Becker, *Beiträge zur Geschichte Ägyptens*, ii. 149—153 and 182—192; also Ibn al-Aṭhir, *Kāmil*, vii., passim, s. Index; Weil, *Geschichte der Chalifen*, ii. 432—434, 468, 481; Quatremère, *Mémoires géographiques et historiques sur l'Égypte*, Paris 1811, ii. 462—473 (translation of the chapter al-Ḳaṭā'ī' from the *Ḳhiṭaṭ* of Makrīzī, where details of his life are given and Ibn Khallikān, transl. de Slane, i. 498—500). (M. SOBERNHEIM)

KHUMBARADJĪ, in Turkish "bombardier", a body of regular troops formerly in the Ottoman army. It was composed of 300 men provided with military fiefs; the Count of Bonneval becoming the chief (January 24, 1732) with the title of *Khumbaradjī-bāshā*, in the reign of Sultān Muṣṭafā III, began to enlarge it by 300 paid men. The force was increased to a thousand men by Sultān Selim III, latterly it was commanded by an Englishman named Ingliz-Muṣṭafā. It was disbanded in the reforms. This body was included in the *kapu-kullī*, "slaves of the Porte", and thus attached to the personal service of the Sultān. It was part, as one would say to-day, of the Imperial Guard.

KHUMIR. [See **KHOMAIR**.]

KHURDĀDH (P.), the name of the third month of the movable Persian solar year, also the name of the sixth day of each month. The 6th *Khurdādh* as the day on which the name of day and month were the same was called *Khurdādhgān*. To distinguish the day *Khurdādh* from the month of *Khurdādh*, the former was called *Khurdādh-rūz* ("day of *Khurdādh*") and the latter *Khurdādh-māh* ("month of *Khurdādh*").

(M. PLESSNER)

KHURRAM (P. "joyful"), the name of the favourite (*khāṣṣekī*) of the Ottoman Sultān Sulaimān I, the Legislator, better known in European historians by the name of Roxelana. She was a slave of Russian origin ("altra donna di nation Rossa, giovine non bella ma grassia") in the report by Piero Bragadino [1526], Marini Sanuto, xli.), who was the mother of three sons, Sultān Selim II, princes Murād and Muḥammad and one daughter, Mihrimāh Sultāne. She was anxious to secure the succession to the throne for her eldest son and is accused of having brought about the execution (960 = 1553) of Muṣṭafā, eldest son of Sulaimān by a Slav girl. It was owing to the superiority of her brain and character that she was able to remain the Sultān's trusted adviser till her death in 965 (1558); but her genius for intrigue urged her to crimes; she brought about the overthrow and execution of two grand viziers, Ibrāhīm Pasha and Aḥmad Pasha. Her son-in-law, Rustam Pasha, by birth a Croat, was through her efforts appointed grand vizier in 951 (1554). She was buried in a türbe specially built for her in the court of the Sulaimāniya Mosque in Constantinople. Several pious foundations and charitable buildings were built or instituted at her expense in Constantinople; these were the imperial mosque, the hospital, and the school of the *Khāṣṣekī* in the Awrat Bāzār quarter.

Khurram-Bēgum was the name of the wife of Mirzā Sulaimān, son of Khān Mirzā, son of the Timūrid Sultān Abū Sa'īd, ruler of Badakhshān, died at Lahore in 997 (1589).

Khurram is also the name of an alleged king of

Djurdjān, hero of the *Ilāhi-nāme* of Farīd al-Dīn 'Attār and of its imitation the *Khairābād* of Nābī (Gibb, *Ottoman Poetry*, iii. 370 sqq.).

Mirzā *Khurram* was the proper name of the Mughal Emperor Shāh Djahān [q.v.] which he bore before his accession in 1037 (1628).

Pahlawān *Khurram* Khurāsāni, a general of the Muzaffarids, contributed to placing Shāh Shudjā' on the throne; appointed governor of Iṣfahān, after the deposition of Sultān Zain al-'Abidin, he held office till his death (Ḥamdullah Mustawfī, *Tarikh-i Guzida*, ed. Browne, i. 701, 712, 721; Defrémery, *Mémoire sur la dynastie des Mozaffériens*, p. 41, *J. A.* [1844—1845]; Khondamir, *Ḥabīb al-Siyar*, iii., part. 2, p. 32).

Bibliography: Pečewi, *Tarikh*, ed. 1283, i. 425; Ḥafiz Ḥusain Efendi d'Ūwānsarai, *Ḥadiqat al-Djawāmi'*, i. 17, 101; J. von Hammer, *Hist. de l'emp. ott.*, Fr. transl. v. 329, 486, 538; vi. 99, 483; xviii., p. 19. (CL. HUART)

KHURRAMĀBĀD, capital of the province of Lūristān with 6,000 inhabitants, situated in 33° 32' N. Lat. and 48° 15' East Long. (Greenwich) about 4700 feet above the sea-level between Iṣfahān and Kirmānshāh on the river of the same name. On an isolated ridge of rock between the town and the river lie the ruins of a castle Diz-i Siyāh, "black castle", in the middle ages the residence of the governor, with annexes called Falak al-Aṣlāk which at the beginning of the sixteenth century were the residence of the governor of Lūristān. At the foot of the old castle is the modern residency, built about 1830 with commodious courts and gardens. Opposite the town are the ruins of the ancient *Samha* with a monolith, the inscription on which dates from the time of Maḥmūd, grandson of Malik Shāh. The town was visited by J. Rich and H. Rawlinson. The town is not mentioned by the older Persian geographers; on the other hand Yāqūt and others knew two places of the same name near Ray and near Balkh.

Bibliography: C. Ritter, *Asien*, vol. ix. 2, p. 207—209; Yāqūt, *Mu'djam*, ed. Wüstenfeld, ii. 426 sq.; Barbier de Meynard, *Dict. de la Perse*, p. 206. (J. RUSKA)

KHURRAMĪYA, a sect whose name is derived by Sam'āni from the Persian word *khurram* "agreeable", on the ground that they regarded everything that was agreeable as lawful; but it is more likely to be derived from *Khurram*, a district of Ardabil, where the sect may have arisen. According to Mas'ūdi, *Murūūj*, vi. 186, they came into prominence after the execution of Abū Muslim of Khorāsān in 136 A.H., but while some of them denied that he was dead and foretold his return "to spread justice in the world", others maintained the *Imamate* of his daughter Fāṭima, whence they got the names *Muslimiyya* and *Fāṭimiyya*. One Sanbadh started a rebellion in Khorāsān, demanding vengeance for Abū Muslim, but this was suppressed within seventy days. They are next heard of in the reign of Ma'mūn, when Bābak the *Khurramī* rebelled against the Muslim government and entrenched himself in *Badhḥ* (sometimes in the dual *Badhḥān*) "a village between Ādharbāidjān and Arrān"; he maintained himself from 201 till 223, when his fortress was taken by Afshīn, an officer of Mu'tasim; he was himself captured and sent to Sāmarrā, where he was tortured to death, displaying marvellous fortitude under torture (*Nishwār al-Muḥāḍarat*, p. 75). His daughter was taken into

Mu'tasim's harem (*Irshād al-Arib*, i. 369,7). Many odes of both Abū Tammām and Buhturī are devoted to eulogizing the conquerors, who are said to have served the cause of Islām. In Mas'ūdi's time (332), members of the sect were to be found in Raiy, Ispahān, Ādharbāidjān, Karadj, Burdj, and in Masabadhan. Shortly before Mas'ūdi wrote, some fortresses held by them were stormed by 'Alī b. Buwaihi (afterwards 'Imād al-Dawla, 321 A.H.; Miskawihī, i. 278); and about 40 years later they were in possession of some fortresses in the neighbourhood of Tiz and Mukran, which they surrendered to 'Aqūd al-Dawla's agent, 'Abid b. 'Alī (*ibid.* ii. 321).

The best account of their doctrines seems to be that furnished by Muṭahhar b. Ṭahir, who states that he had met members of the community in their homes, Masabadhan and Mihirdjan-kadhaḳ. It is as follows (*Livre de la Création*, ed. Huart, v. 30): "They are divided into various sects and sorts, but all agree on "return" (i.e. transmigration), asserting, however, that names and bodies are changed. They maintain that all the Apostles, though their codes and religious systems differ, are inspired by one spirit; that revelation never ceases; and in their opinion every adherent of a religion is in the right, so long as he hopes for reward and fears punishment. They do not approve of defaming such a person or harming him, provided he shows no desire to injure their own community or attack their system. They strenuously avoid bloodshed except when they are in open rebellion. They highly esteem Abū Muslim and curse al-Manṣūr for having put him to death. They frequently implore the divine favour for Mahdī b. Feroz owing to his being a descendant of Abū Muslim's daughter Faṭima. They have *Imām's* to whom they have recourse in legal matters, and Apostles who go on circuit among them, and whom they call by the Persian name *Firishlah* (Angel). Wine and liquors are in their opinion more fortune-bringing than all other things. The basis of their system is Light and Darkness. Those whom we have met in their homes Masabadhan and Mihirdjan-kadhaḳ were found by us to be most scrupulous about cleanliness and purity, and most anxious to win people's favour by spontaneous acts of kindness. Some of them, we found, permit promiscuity where the women consent, and indeed the enjoyment of anything craved by the natural mind, provided no injury results to any one therefrom".

Iṣṭakhrī (p. 203) somewhat similarly says of them "they have mosques in their villages, and they read the Qur'ān, only it is asserted that secretly they hold no religious dogma but lawlessness" (*ibāha*). Probably then they differed from the Sunni Muslims in their theory of the *Imamate*, which they supposed to be inherent in the family of Abū Muslim, whereas their practice of promiscuity (if true) was similar to the *Shi'ī mut'a*; further in believing in the continued existence of Abū Muslim and in supposing his daughter to inherit his rights they resembled various *Shi'ī* groups.

Since the member of the sect who attracted most attention was Bābak, we should have expected to learn something of his doctrine, and indeed a special history of this person by Wākīd b. 'Amr al-Tamīmī is quoted in the *Fihrist*; it is a string of fables, translated by Flügel in *Z.D.M.G.*, xxiii. 531 foll. This writer agrees with Ṭabari in assigning

him a predecessor named Djāwidān. 'Abd al-Kāhir (*al-Farḳ bain al-Firaḳ*, p. 252) asserts that the followers of Bābak make the founder of their religion a prince of theirs who lived in pre-Islāmic times, called Sharwin, whose father was of the Zandj, whereas his mother was the daughter of a Persian king. This would seem to be another form of a story told by Ibn Isfandiyyār (transl. E. G. Browne, p. 237) that one Sharwin of the house of Bāw (called by Ṭabari, iii. 1295, 5: Sharwin b. Surkhāb b. Bāb) was the first person who took the title "King of the Mountains". He adds that they have a feast on their mountains which is marked by gross licentiousness; but for all that they ostensibly maintain the ceremonies of Islām. The attempts made to connect them with the old Persian Mazdakites are probably without historical basis. (D. S. MARGOLIOUTH)

KHURSHĪD II, *isphabdh* of Ṭabaristān, the last prince of the line of Djilān Shāh which ruled this province for 116 years; he was the son of Dādh Mihr b. Farrukhān and had the title of Farshwād Marzbān; he was descended on the female side from the Nahābida (Arm. *nahapet* "patrician") of Sūl and reigned from 122 to 150 (740—767). His paternal uncle, Sārūya, the regent of the kingdom, wished to hand over the power to him when he attained his majority; he was prevented from doing so by a conspiracy amongst his own sons, and Khurshīd was not able to reign until he gained a victory over his cousins at Kaṣr-i Dādūkān, between Tammīsha and Sārī. He repaired the castle of Kisa and built a fortress called Se dile (cf. Sadir near Hira); he established a market around the latter and built a caravanserai. After the assassination of Abū Muslim, Sombādh handed over his treasures to the care of Khurshīd when he rebelled against the Caliph al-Manṣūr. After his defeat he wished to take shelter with Khurshīd but he was assassinated on his way by one of the cousins of Khurshīd, Ṭūs, in revenge for an insult. The Caliph demanded that the treasure should be surrendered to him but Khurshīd refused, consenting however to pay tribute. Thinking of the large sums that Ṭabaristān might yield him, al-Manṣūr determined to conquer it; the town of Āmul surrendered; Khurshīd placed his women and children in the fortress of 'Ā'isha Kargili Diz, called by the Arabs Kal'at al-Ṭāk, "the citadel of the vault", while he himself went to raise troops in Gilān and Dailam; the garrison of the fortress having been decimated by plague gave itself up to the invaders. Khurshīd in despair poisoned himself and Ṭabaristān passed under the sway of Islām. The date given by Ṭabari and Ibn al-Athīr, 141 (758), is wrong. The last coinage known of Khurshīd II belongs to the year 148 (765) corresponding to the year 114 of the era of Ṭabaristān.

KHURYÂN-MURYÂN, the name of a group of islands in the bay of the same

name on the south coast of Arabia, consisting of Ḥellāniya, Ḳarzawit (Ḳarzawt or Aḳarizawt), Sōdā (Suwaidiya), Djebelīya and Ḥāsikī. The first of these alone is inhabited; but the number of dwellers on it has greatly diminished in spite of the facts that the inhabitants of Sōdā had all migrated to it. Vegetation on Ḥellāniya is also scanty; a few marine shrubs, some scattered tamarisks and mimosas here and there enliven the monotonous landscape. In the centre of the island a peak rises to a height of 1,510 feet above sea-level; in front of it in the west lies a high plateau. The water is usually brackish, the best being found in a well dug by European sailors. The same is true of Suwaidiya. Djebelīya is quite waterless and desert and inhabited only by sea-fowl so that the island possesses extensive deposits of guano. Djebelīya was once inhabited as a few tombs on it show. The most westerly island of the group is Ḥāsikī, which is only 20 miles from the coast and is commanded by two peaks 400 feet high; it also is devoid of water and vegetation but occupied by numerous flocks of pelicans and goosanders.

This group of islands which was early identified with the so-called seven successive islands of Zenobios, formed the frontier mark between the kingdom of the Parthians and the kingdom of Ḥaḍramūt, so that the Parthian frontier should be located in the innermost corner of the Khūryān-Mūryān Bay or in about 56° 45' E. Long. (Greenwich). The inhospitality of the land made the inhabitants dependent on the sea and they naturally became a race of fishermen. Idrīsī (d. 1164) already knows that the inhabitants of the Khūryān-Mūryān islands, who were then politically under al-Shihr, were very poor in winter and only managed to make a moderate livelihood in the sailing season. They used to sail to 'Umān, 'Aden and the Yemen. Their main source of revenue was tortoise shell which they traded to the Yemenis and occasionally very beautiful amber, for which they sometimes got very high prices. Idrīsī calls the bay containing the islands Djawn al-Ḥashīsh (Bay of Herbs). It was the Portuguese who first directed the attention of Europeans to the islands. In 1503 the Khūryān-Mūryān islands were discovered by Alfonso d'Albuquerque. As the Curia-Muria islands they continually appear in Portuguese sources, while Suwaidiya appears as Sodīé Ḥāsikī as Asquīé and Ḳarzawit as Rodondo. The islands later passed into the possession of the Sultān of Maṣṣāḥ, who ceded them to the English on July 14, 1854.

(ADOLF GROHMANN)

KHUSHḤĀL KHĀN, warrior and poet, forebear of poets, father of fifty-seven sons, was the famous chief of the Khataḳ [q. v.] tribe of the Pathāns during the reigns of the Mughal emperors, Shāh Djahān and Awrangzēb. Born in the year 1022 (1613), he succeeded his father as chief in 1050. His father's fief was confirmed to him by Shāh Djahān together with the charge of protecting the royal road from Atak on the Indus to Peshāwar. After the death of Shāh Djahān he fell under the displeasure of Awrangzēb and was confined in the fortress of Gwalior for seven years. While in captivity, he wrote many of his poems. On release Khushḥāl Khān returned to the Khataḳ country, of which Akora was the chief town, and later on we find him in alliance with the Afridis waging a determined war against the Mughals. Affairs at Peshāwar became so serious that Awrangzēb appeared on the scene in person and for about two years remained encamped at Atak. The Pathān confederacy was broken up and Khushḥāl resigned the chieftainship to his eldest son. He died in the seventy-eighth year of his age. From all accounts he was a voluminous author of poetry and prose in Persian and Pashto. His poetry is of the patriotic and popular type.

(R. B. WHITEHEAD)

KHUSHKADAM AL-MALIK AL-ZĀHIR SAIF AL-DĪN AL-NAẒĪRĪ (so called from his first master), Sultān of Egypt and Syria, reigned from 865—872 (1461—1467). He was the first Sultān to come from the Sultanate of Rūm (in Asia Minor) which however many also say of Baibars II [q. v.] and Sultān Lādjin (696—698 = 1296—1298). Purchased as a slave by Sultān Shaikh [q. v.] he was enrolled in the corps of Djāmdārs [q. v.]. Under Shaikh's son Aḥmad, who reigned only a few months, he became a member of the body-guard (*khaṣṣkī*) and only in the reign of Sultān Cāḳmaḳ [q. v.] did he become an amīr of 10 Mamlūks in 846 (1442) and *ras nawba* (leader of a company). In 850 (1446) he became commander of 1000 Mamlūks in Damascus, in 854 *Ḥādīb al-Hudūdīyāb* (president of the military court) in Cairo. Three years later under Sultān Ināl he was War Minister and in 860 (1456) he commanded an expedition against the prince of

Ḳaramān whose land he devastated most cruelly without meeting his troops. Ināl's son Aḥmad (see under INĀL) appointed him Atābeg. The Aḡrafiya (Sulṭān Aḡraf Ināl's Mamlūks) were however dissatisfied with Sulṭān Aḥmad, conspired against him and offered the throne to Dīānim, the governor of Damascus. The Ṣāhiriya (Sulṭān Ṣāhir Çakmak's Mamlūks) however preferred Khushkadam. They therefore hurried to elect the Atābeg Khushkadam Sulṭān before Dīānim's arrival, took Aḥmad prisoner and sent him to Alexandria. When Dīānim later arrived in the vicinity of Cairo, there was nothing left for him to do but recognise Khushkadam and return to Damascus. As he did not feel safe for long there he sought refuge with Ḥasan al-Ṭawil, Sulṭān of the White Sheep Turkomans, where he was murdered not long afterwards. Another influential amir of the Ṣāhiriya, the governor of Dīdda, Dīānibey, to whom the Sulṭān owed everything, was murdered by his orders. He thus deprived the Mamlūk corps of their leaders and was able to play one corps against another. The Mamlūks were also weakened by the campaigns against Cyprus, which were a result of Ināl's policy. The latter had supported king James against his sister Charlotte who in her turn expected help from the Knights of St. John of Rhodes. The governor of Tripolis was entrusted by Ināl at the end of his reign with a campaign against the Queen, but on account of the change on the Egyptian throne only engaged in it for a short time. The amīrs, who had been sent with a corps to Cyprus to support James soon returned on account of the disturbances which broke out after the assassination of Dīānibey. Only one of the amīrs with a small body of troops was left in Cyprus. The capital Famagusta had surrendered to James, who was now master of practically the whole island. He therefore no longer required the assistance of the Egyptians, who had acted arrogantly and impudently towards him. To get rid of them he had them attacked in the rear by the people of Famagusta and then fell upon them himself. To the Sulṭān he represented the massacre as a rising among his subjects, of which he was quite innocent. Queen Charlotte revealed the truth to Khushkadam to get his assistance and also gained his favour by ransoming a ship that had been captured by the Knights of Rhodes, but the Sulṭān was glad to live at peace with James, especially as the latter paid him regular tribute. He was in close alliance with his vassal, the Sulṭān of the White Sheep Ḥasan al-Ṭawil, because the latter had to rely on the help of the Egyptian Sulṭān in his continual struggle with the Sulṭān of the Black Sheep and the governors of Abulustin of the house of Dhu 'l-Gḥādir.

Ḥasan, whose relations with the Ottomān Sulṭān Muḥammad II were also not of the brightest, therefore remained faithful to Khushkadam in the midst of all the intrigues and fighting. Muḥammad II had overthrown Ḥasan's relative, the Byzantine emperor of Trebizond. Ḥasan in turn along with Khushkadam supported Iṣḥāk, ruler of Ḳaramān, who was at war with the Ottomans. He and the Sulṭān also aided the princes of Abulustin, Budāgh and Rustam, successively against their rival for the governorship, Shāh Suwār, who sided with the Ottomans (see ḲĀ'ITBEY). Although it never came to actual fighting between the two Sulṭāns, there was always a latent enmity. While Khushkadam

was able to keep the Mamlūks of his predecessors in check, his own Mamlūks committed countless outrages on the people. The Sulṭān's finances were always in a muddle; he endeavoured to secure money by the sale of offices as well as by visits to his subjects (cf. ḲĀ'ITBEY). The Sulṭān fell ill in 872 (1467) and died in ten days. He was not really a great ruler but he was able to keep Egypt at peace. During his reign Egypt was spared epidemics. He was averse to reforms and adhered strictly to the old customs in contrast to the turbulent Ḳā'itbey.

KHUSRAW. [See ANOṢHARWĀN, KISRĀ, PARWĪZ.]

KHUSRAW FIRŪZ, AL-MALIK AL-RAḤĪM ABŪ NAṢR B. ABĪ KĀLĪDĪJĀR, a Būyid. After the death in Dīmadā I 440 (Oct. 1048) of Abū Kālīdījār [q. v.] Khusrav Firūz (var. Khorrā Firūz) was recognised as Amir of the Irāk while his brother Abū Maṣṣūr Fūlādh Sutūn seized the town of Shirāz. Soon afterwards Khusrav Firūz sent an army under Abū Sa'd Khusrav Shāh, who was also his brother, against Shirāz; the town had to surrender and Abū Maṣṣūr was taken prisoner (Shawwāl 440 = March-April 1049) but released after some time. In 441 (1049/1050) he recaptured Shirāz and seized a part of al-Ahwāz but in Rabi' II of the following year (Aug.-Sept. 1050) Khusrav Firūz invaded al-Ahwāz and soon conquered 'Askar Mukram. In Muḥarram 443 (May/June 1051) al-Ahwāz was invaded by Arabs and Kurds. After they had sacked Surraḡ, they were put to flight by the troops of Khusrav Firūz. The latter then left 'Askar Mukram, because Abū Maṣṣūr in alliance with the Kurd chief Hezārasp intended to march on Tustar. Khusrav Firūz succeeded in anticipating him and when the advanced patrols met, Abū Maṣṣūr and Hezārasp had to withdraw. After a bloody battle Khusrav Firūz also took Rāmahurmuz, while Abū Sa'd took the two towns of Iṣṭakhr and Shirāz. In the meanwhile Abū Maṣṣūr had applied to the Saldjūk prince Toghrīl Beg; the latter sent him reinforcements and after a two days' battle Khusrav Firūz had to retire to Wāsiṭ (end of Rabi' II = Sept. 1051). In 444 (1052) his troops conquered Baṣra; the governor there, Abū 'Alī also his brother, saved himself by flight and went to Iṣfahān to Toghrīl Beg. Khusrav Firūz then made peace with Hezārasp. In the following year Abū Maṣṣūr again became lord of Shirāz and drove out Abū Sa'd; in Muḥarram 447 (April 1055) a Dailamī chief named Fūlādh seized the town and drove out Abū Maṣṣūr. Although Fūlādh declared he would submit to Khusrav Firūz and Abū Sa'd, they did not trust him and Abū Sa'd joined with Abū Maṣṣūr and marched on Shirāz. After a long siege Fūlādh had to fly, and the two brothers occupied the city in the name of Khusrav Firūz. In the same year the Būyid dynasty was overthrown. Under the pretext of making the pilgrimage to Mecca, Toghrīl Beg asked permission to enter Baghdād, which was granted him by the Caliph al-Ḳā'im. On Ramaḍān 22 (Dec. 15, 1055) the *khutba* was read in his name and three days later he made his ceremonial entry into the capital. But as the people of Baghdād rose against the foreign troops, Toghrīl Beg in spite of the Caliph's protests had Khusrav Firūz

arrested as the alleged fomentor of the strife. He died a prisoner in the citadel of al-Raiy in 45 (1058/1059).

(K. V. ZETTERSTÉEN)

KHUSRAW MALIK. [See ii. 157^b.]

KHUSRAW PASHA, the name of two Turkish grandviziers.

1. The Bosnian Khusrav Pasha, grandvizier under Murād IV. Brought up in the imperial palace, he held the offices of *Silīḥdār* and of Agha of the Janissaries (from 1033/1624) and later in Radjab 1036 (March—April 1627) he received the rank of *Wezīr-i Kubbe-nishin*. In November 1627 after the failure of the grand vizier Khalīl Pasha [q. v.] to subdue the rebel Abāza Pasha at Erzerūm, a council called by the Sultān decided, on the proposal of the Shaikh al-Islām Yahyā Efendi, to depose Khalīl and to appoint Khusrav Pasha as his successor. The latter was a "novus homo", and his rank was not yet sufficiently high. He was therefore at first nominated wālī of Diyār Bakr and at once he left the capital. The great seal of the Empire was only sent to him when he was at Iznīk (Sha'bān 1037/April 1628). The campaign had been well planned and the new grandvizier arrived at Erzerūm before Abāza expected him. The latter surrendered after a fourteen days' siege (18th September) and he returned with Khusrav Pasha to Constantinople along with the Persian general Shams Khān who had been taken prisoner. The victorious entry of Khusrav into Constantinople (9th December) — celebrated by a *ḡaṣīda* of the poet Nef'ī — was followed by the pardon of Abāza (afterwards nominated Wālī of Bosnia) and by a period of absolute power of the grandvizier; he reigned by terror, relying for support above all on the troops of the Sipāhī and the Janissaries, to whom he guaranteed anew the pernicious privileges which, a short time before, had been abolished. At this time the young Murād IV had not yet sufficient power to counterbalance the influence of his grandvizier. The latter again left the capital — never to return — in July 1629 as *serdār* of a new military expedition, against Persia. Radjab Pasha, the future grand-vizier, remained as *Kā'im-makām* at Constantinople. The Army went to Aleppo, Diyār Bakr and Mōsul, where the inundation of the country caused by torrential rains, forced it to wait for seventy days until the end of January 1630. Great military preparations were made for the capture of Baghdād but in the meanwhile Khusrav Pasha himself marched eastwards. He crossed the two Zāb's and advanced upon Shehrizūr [q. v.] while the Kurd chiefs came and offered submission to him. Then after sending several bodies of soldiers against Lower Mesopotamia he advanced to meet the Persian general Zainal Khān who was at Hamadān. Zainal Khān tried in vain to reconquer the castle of Mihribān (on the Hamadān road) taken by Noghāi Pasha, beglerbeg of Aleppo, by the orders of Khusrav; the loss of this battle cost him his head. The grandvizier arrived in person at Mihribān on the 5th May 1630; thereafter he destroyed Hasanābād and arrived on June 10th before Hamadān. This town which had been abandoned

by its inhabitants was completely sacked. Khusrav Pasha still continued his advance as far as Derguzin (on the Kazwīn route); he then turned here towards Baghdād, the goal of the expedition. He passed by the Derteng defile and by Kaşī Shirin [q. v.] and arrived on the 6th September before Baghdād. The siege began a month later. Hādjī Khalīfa was present as a scribe in the Ottoman army and he describes the siege in the *Fedhlike* (p. 299). A general assault took place on the 9th November but had no result so that Khusrav had to retire on Mōsul leaving garrisons at Hilla and several other places. At Mōsul where he arrived on December 12th, he learnt of the capture of Shehrizūr by the Persians; soon the Turkish garrisons left in the neighbourhood of Baghdād were also put to flight. Khusrav then retreated to Mardin in order to spend the winter there; the following year was passed in inactivity, due to the indecision of the grandvizier and the discontent of the Sipāhī and the Janissaries. The *Munsha'at* of Feridūn (ii. 179—188) contains four documents issued by the Sultān and addressed at this time to Khusrav to testify that he was pleased with him and to encourage him. But at last the Sultān was convinced of the lack of capacity of the grand-vizier; he deposed him (25th Oct. 1631) and nominated in his stead the former grandvizier Hāfīz Ahmad Pasha [q. v.]. A *ḡaṣīd* was sent to go and bring back the seal of office; near Malatīa he overtook Khusrav who complied immediately and went to Tokāt. His dismissal was, however, the signal for a general revolt of the troops in Constantinople as well as in Anatolia, a revolt which very soon cost the grandvizier his life (10th February 1632) and nearly led to the overthrow of the Sultān himself. The rebellion was secretly fomented by Khusrav and Radjab, who was created grandvizier sometime afterwards. Murād then commanded Murtaḡa Pasha, wālī of Oczakow, to see to the execution of Khusrav. Murtaḡa, appointed wālī of Diyār Bakr, went to Tokāt, and took the steps necessary for overcoming the resistance of Khusrav Pasha. The latter resigned himself to his fate and was strangled on the 29th Sha'bān 1041 (March 21st, 1632). His head was sent to the capital where the rebellion could only be quelled after the execution of Radjab Pasha (18th May).

Khusrav Pasha left behind him the reputation of a man, courageous but bloodthirsty and intriguing. All opposition which he encountered was stifled in blood; the roads by which he passed were marked by a series of executions. This strategic capacity is severely criticised by Na'imā (i. 495) because he wasted his time and his troops in making minor conquests before attacking Baghdād. His name is given to a *khān* which he had built on the great road between Eski Shehir and Konya (see Taeschner, *Das anatolische Wegenetz*, i. 102 and the map).

Bibliography: The principal sources are: Hādjī Khalīfa, *Fedhlike*, p. 282—305; and Na'imā, i. 452—515; also 'Othmān Zāde, *Hādīkat al-wuzarā'*, p. 74 sqq.; Sidjill-i 'Othmānī, ii. 274 (there are errors in the dates); Pečewi, *Tārīkh*, ii. 409 sqq.; Munedjdjim Bashī, iii. 677 sqq.; von Hammer, *Histoire de l'Empire Ottoman*, Paris 1837, ix. 99 sqq.

2. Muḥammad Khusrav Pasha, a statesman and a grandvizier in the reigns of the Sultāns

Maḥmūd II and 'Abd al-Madjid. He was by birth an Abkhazian slave and served first in the *enderūn* as servant of the Ča'ush Bāshī Sa'īd. In 1206 (1792) he left the palace as *mühürdār* and *kiāya* to his compatriot Küçük Ḥusain Pasha, just appointed Kapudan Pasha. He gained promotion quickly in his military and administrative career and became in 1800 *müteşarriif* of Kara Ḥiṣār. He accompanied the Turkish fleet which in March 1801 landed in Egypt under Küçük Ḥusain Pasha and afterwards became commandant at Alexandria. In September of the same year he was appointed *wālī* of Egypt, after having been raised to the rank of *wezīr*. Khusrav Pasha made his ceremonial entry into Cairo in January 1802, and immediately began military operations against the Mamlūk beys. But his inexperience and avarice, which had caused him to dismiss his own troops, brought about his failure. The Mamlūks gained ground and the *wālī* was not able to maintain his authority over the Albanian troops, under the command of Tāhir Pasha and Muḥammad 'Alī. The latter encouraged the revolt of these troops and on the 3rd May 1803 Khusrav was forced by them to leave Cairo and to entrench himself in Damietta. At first he fought with success against the Albanian troops who were now allied with the Mamlūks, but in July 1803 the allies commanded by Muḥammad 'Alī and 'Othmān Bey Bardīsī took Damietta and Khusrav was taken a prisoner to Cairo. Meanwhile the Porte had replaced him as *wālī* by 'Alī Pasha Djezā'irli. An attempt to escape from Cairo failed. On the 13th March 1804, the Albanian troops beat the Mamlūks in their turn and Muḥammad 'Alī proclaimed Khusrav once more *wālī* of Egypt, but two days later through the influence of the relatives of Tāhir Pasha who had died in the meanwhile, the arrangements of Muḥammad 'Alī were upset. Khusrav was taken to Rosetta where he was given leave to embark for Constantinople. From this Egyptian period Khusrav always had an inveterate hatred for Muḥammad 'Alī, whom he considered, not without reason, as the principal author of his failure.

Thereafter Khusrav Pasha began a long career as *wālī* of a great number of *wilāyet*'s; from the beginning of 1812 to 1817 he was Kapudan Pasha and again from December 1822 to February 1827. During this latter period he took part in the taking of Missolonghi (April 1826). When the news of the massacre of the Janissaries reached him, he had all the Janissaries in the fleet thrown into the sea in order to show his zeal for reforms. On May 9th 1827 he became *Ser-Asker* at Constantinople, an office which he kept until 11th November 1836. During this time his power was unlimited. Although he had little education (he never learnt either to read or write) no one was more in favour with Sulṭān Maḥmūd than he, on account of his great zeal for reforms. It was he who was the first to present the Sulṭān with a body of troops trained according to the European method. Moreover as minister of police, he was able to maintain perfect order in the capital in spite of the troubled situation in the Empire. The population knew him and feared him under the name of "Topal Pasha". "He was the very genius of intrigue of Turkish officials" (Rosen). He assembled around himself a large clientèle of dependents amongst whom some gained the position of *dāmād*, for example his adopted son Khalil

Pasha. Von Moltke, sent in 1835 to Constantinople as instructor of the new Turkish troops, has given a description of the *Ser-Asker* who, by this time, had attained a considerable age. He was an old man, very active, with a red face and white hair (there is a portrait in the *Tārīkh-i Lutfi*, vol. viii., Constantinople 1328, p. 86). He had, however, a disastrous influence on the operations of the Turkish armies against the Egyptian troops of Muḥammad 'Alī. By his jealousy he thwarted the plans of the Turkish generals Ḥusain Pasha in Syria (April 1832) and Rashid Pasha (battle of Konya, 21st Dec. 1832) so that the failure of the Turks must be largely attributed to him. In the period of upheaval which followed, he took very little part in the diplomatic intrigues; he never showed a very definite sympathy either with Russian influence or with that of France. The fall of Khusrav in November 1836 was ultimately due to the influence of the conservative party, and also to the plague which had been ravaging Constantinople during these last years. He returned, however, to the head of the Government in March 1838 as chief of the cabinet with the title of *re'is-i şhurā* and *re'is-i medjlis-i wālī*; in this cabinet the young Rashid Pasha was minister for foreign affairs. This ministry continued the organisation of the civil service (*tanzimāt-i khairiye*). In 1839 war broke out anew with Muḥammad 'Alī, which led to the catastrophe of Nizib (24th June 1839). During this time Khusrav was able to maintain tranquillity in the capital even at the time of the death of Maḥmūd II, which took place on June 30th 1839. Thus on the accession of the young Sulṭān 'Abd al-Madjid, Khusrav was the person indicated to fill the office of grandvizier, an office which was re-established after having been temporally abolished. The situation of the Empire was at this time very critical because of the defeat of the army and the loss of the fleet which had gone over to Muḥammad 'Alī. During this time Khusrav was the soul of the resistance to the viceroy, his ancient enemy, but he took very little part in the diplomatic negotiations with the Powers, negotiations the object of which was to save Turkey. It was Rashid Pasha who directed foreign affairs and who took the initiative in the proclamation of the famous *Khatt-i sherif* of Gülkhāne on Nov. 2nd 1839. Khusrav was not the man to appreciate such a measure and played a very passive role during the ceremony. Little by little the intrigues of Muḥammad 'Alī at Constantinople seconded by Khalil Pasha who had become *ser-asker* succeeded in undermining the position of the grandvizier; the Sulṭān dismissed him in June 1840 and banished him to Rodosto. At the end of a year, however, the conservative influence was re-established in Constantinople, so he was recalled and he held the office of *ser-asker* again from January 1846 to December 1847. Finally he retired for good, and this, the last Turkish grandvizier of the old school, died on the 13th Djumādā II, 1271 (4th March 1855) aged nearly a hundred years, without leaving any children. He was buried in a special *türbe* at Eiyüb; at this place there is also a library which he founded. During his life-time he had amassed enormous wealth. Many of his old slaves and servants rose to positions of high dignity in the civil and military service.

KHUSRAW SHĀH. [See i. 157^b.]

KHUSRAW SULṬĀN, eldest son of Djahāngir by the daughter of Rādjā Bhagwān Dās, was born at Lahore in 1587. He was a favourite with his grandfather, Akbar, who perhaps wanted to make him his successor. He rebelled against his father in the first year of the latter's reign, was defeated and imprisoned. He made a second conspiracy in Afghānistān, and this having been detected, he was, with one interval, kept in confinement for the rest of his life. He died at Asīrgarh near Burhānpūr in the Deccan in 1622, and was in all probability murdered by Shāh Djahān. His sister had his body buried in the Khusrav Bāgh at Allāhabād. His two sons, Dāwar Bakhsh, otherwise Bulākī, and Garshāsp, were put to death at Shāh Djahān's accession. See *'Amal-i Sālih* (still in MS.), Djahāngir's *Memoirs* (O.T.F.) vols. 1 and 2, R. A. S. J. for 1907.

(H. BEVERIDGE)

KHUSRŪ, ABU 'L-HASAN AMIR B. AMIR SAIF AL-DIN MAHMŪD SHAMSĪ, born in India 651 (1253). His father was a Turk of the tribe of Lācīn, emigrated from Hazāra, near Balkh, during the reign of Djingiz Khān, to India and settled at Patyālī where he married the daughter of 'Imād al-Mulk, a great noble of the court of Dehli. Khusrū lost his father at the early age of nine and was brought up under the care of his maternal grandfather. He was very intelligent and had great love for study. He was fortunate in enjoying the favour of seven successive kings of Dehli: (1) Muḥammad Sulṭān b. Sulṭān Ghiyāth al-Din Balban (664—686 = 1265—1287); (2) Sulṭān Mu'izz al-Din Kaikubād (686—689 = 1287—1290); (3) Sulṭān Djalāl al-Din Firuz Shāh II b. Djalāl al-Din (689—695 = 1290—1295); (4) Sulṭān Muḥammad Shāh I, 'Alā' al-Din (695—715 = 1295—1315); (5) Sulṭān Mubārak Shāh I, Kuṭb al-Din (716—720 = 1316—1320); (6) Sulṭān Taghlaq Shāh I, Ghiyāth al-Din (720—725 = 1320—1324) and (7) Sulṭān Muḥammad II b. Taghlaq (725—752 = 1324—1351).

Khusrū was a pupil or votary of Nizām al-Din Awliyā' (d. 725 = 1324) for whom he had the greatest regard and sincerest devotion; and it is said that when he was accompanying Ghiyāth al-Din Taghlaq Shāh in his march to Bengal, the news of the demise of his spiritual leader reached him. On hearing it he hastened back to Dehli, gave up the royal service and distributed all he had to the poor, and took up his abode at the tomb of the saint, and died six months after in Dehli, 725 (1325).

He is the author of the following works:

(1) *Tuhfat al-Sighar*, the poems which were composed from the poet's 15th to 19th year;

(2) *Wasf al-Hayāt*, the poems which he composed from his 20th to 34th year;

(3) *Ghurraṭ al-Kamāl*, the poems which were written during the 34th to the 43rd year;

(4) *Baqiya-i-Nakīya*, select remnants or poems of old age.

Selections from the preceding four *dīwān*'s have been lithographed with the title of *Kulliyāt-i-Amir Khusrū* in the press of Naval Kishore, Lucknow.

(5) *Nihāyat al-Kamāl*, a collection of *Ghazals* (lyrical poems) and *Rubā'īs* (quatrains);

(6) *Miftāḥ al-Futūḥ*, a poetical account of the campaigns of Djalāl al-Din Firuz Shāh II during the first year of his reign, i.e. from his accession, 689 (1290), to his return to Dehli in 690 (1291);

(7) *Maṭla' al-Anwār*, a moral and religious poem, written in imitation of the *Makhzan al-Asrār* of Nizāmī;

(8) *Shirin wa-Khusrū*, an imitation of Nizāmī's *Khusrū wa-Shirin*;

(9) *Madjūn wa-Lailā*, an imitation of Nizāmī's *Lailā wa-Madjūn*. It has been lithographed, Calcutta 1244, Lucknow 1286;

(10) *A'ina-i-Sikandarī*, a counterpart to the *Iskandar Nāma* of Nizāmī;

(11) *Hasht Bihisht*, a poem on the loves of Bahram, written in imitation of Nizāmī's *Haft Paikar*;

(12) *Kirān al-Sa'dain*, a poetical account of the meeting of Sulṭān Mu'izz al-Din Kaikubād and his father Naṣir al-Din Bughrā Khān, Sulṭān of Bengal, which took place on the bank of the river Ghāgrā in Oudh, 688 A. H.; lithographed, Lucknow 1259;

(13) *Nuh Sipahr*, a poetical description of the court of Kuṭb al-Din Mubārak Shāh, with an account of the principal events of his reign;

(14) *Duwalrānī Khidr Khān*, a poem on the love adventures of Khidr Khān, son of Sulṭān 'Alā' al-Din, with Dewal Rānī, the daughter of Rāi Karn of Gujrat.

(15) *I'djāz Khusrāwī*, a work on Rhetoric, lithographed in the press of Naval Kishore, Lucknow. In 1914 an attempt was made under the guidance of the late Nawwāb Hādijī Muḥammad Ishāq Khān, the then secretary of the M. A. O. College, Aligarh (now Aligarh Muslim University) to publish well edited texts of the *Kulliyāt Khusrū*, but, owing to the death of the Nawwāb, only Nos. 9, 10, 11, 12 and 14 of the above list could be lithographed.

(M. HIDAYET HOSAIN)

KHUSŪF. [See KUSŪF.]

KHUṬBA (A.), sermon, address by the *khaṭīb* [q.v.]. The *khutba* has a fixed place in Muhammadan ritual, viz. in the Friday-service, in the celebration of the two festivals, in services held at particular occasions such as an eclipse or excessive drought. In the Friday-service it precedes the *ṣalāt*, in all the other services the *ṣalāt* comes first. A short description of the rules for the *khutba* according to al-Shirāzī (q.v., *Tanbih*, ed. Juynboll,

p. 40), one of the early *Shāfiʿī* doctors, may be given here. *a.* One of the conditions for the validity of the Friday-service is that it must be preceded by two sermons. The conditions for the validity of these sermons are the following: the *khaṭīb* must be in a state of ritual purity; his dress must be in accord with the prescriptions; he must pronounce the two *khuṭba*'s standing and sit down between them; the number of auditors required for a valid *djum'a* must be present.

Regarding the sermon itself are obligatory: the *ḥamdala*, the *ṣalāt* on the Prophet, admonitions to piety in both *khuṭba*'s, prayer (*duʿā*) in behalf of the faithful, recitation of a part of the *Qurʾān* in the first *khuṭba* or, according to some doctors, in both. It is commendable (*sunna*) for the *khaṭīb* to be on a pulpit or an elevated place; to salute the audience when directing himself towards them; to sit down till the *adhān* is pronounced by the *muʾadhdhin*; to lean on a bow, a sword or a staff; to direct himself straightway to his audience; to pray (*duʿā*) on behalf of the Muslims; to make his *khuṭba* short.

b. Regarding the *khuṭba*'s on the days of festival the same author says (p. 42) that they are like those of the Friday-service, except in the following points: the *khaṭīb* must open the first with nine *takbīr*'s, the second with seven. On the *ʿid al-ḥiṭr* he must instruct his audience in the rules for the *zakāt al-ḥiṭr*, on the *ʿid al-adḥā* in the rules for the sacrifice of this day. It is allowed to him to pronounce the sermon sitting.

Regarding the *khuṭba*'s of the service during an eclipse, al-*Shīrāzī* (p. 43) remarks that the preacher must admonish his audience to be afraid, and in the service in times of drought he must ask Allāh's pardon, in the opening of the first *khuṭba* nine times, in the second seven times; further he must repeat several times the *ṣalāt* on Muḥammad as well as *istighfār*, recite *Sūra lxxvi. 9*, elevate his hands and say Muḥammad's *duʿā* (which is communicated by al-*Shīrāzī* in full). Further he must direct himself towards the *qibla* [q. v.] in the middle of the second *khuṭba* and change his shirt, putting the right side to the left, the left to the right, the upper part beneath and keep it on till he puts off all his other garments.

These prescriptions give rise to the following remarks. C. H. Becker was the first to point to the relation between the Muḥammadan pulpit and the judge's seat in early Arabia. This explains why the *khaṭīb* must sit down between the two *khuṭba*'s; it explains also why he must lean on a staff, sword or bow; for these were the attributes of the old Arabian judge. It is not easy to see why the *khuṭba* precedes the services on Friday, whereas on the days of festival and the other special occasions *ṣalāt* comes first. *Ḥadīth* tells us that Marwān b. al-Ḥakam was the first to change this order of things by pronouncing the *khuṭba* before the performance of the *ṣalāt* on the days of festival (e. g. Bukhārī, *ʿIdain*, bāb 6 and especially the pathetic picture in Muslim, *ʿIdain*, trad. 9).

It is also said that Marwān was the first to hold the *khuṭba* on these days on a pulpit, the old custom being a service without *minbār* or *adhān*. According to other authorities (cf. Muslim, *Imān*, trad. 78, 79 and al-Nawawī's commentary) the *khuṭba* before the *ṣalāt* was an institution going back to *ʿUḥmān* or even to ʿUmar. The common opinion of traditionists is, however,

that it was an innovation due to the general tendency of the Umayyads to favour their own dynastic interests rather than those of religion. If this opinion should be right, the innovation as well as the holding of the *khuṭba* in a sitting attitude, may be looked upon as an endeavour to go back to the pre-Islamic judicial rites concerning *minbar* and *khuṭba*.

Regarding the prayer on behalf of the faithful (*duʿā li 'l-mu'minin*) it must be observed that in this prayer before the Friday-*ṣalāt* it has become customary to mention the ruling sovereign. The history of Islām is full of examples of the importance which was attached to this custom, especially in times of political troubles, the name mentioned in this *duʿā* betraying the *imām*'s political opinion or position. Though it is not prescribed by law to mention the ruler's name, the suppression of the name at this occasion exposed the *khaṭīb* to suspicion on the part of the ruler. In countries where Muslims live under non-Muslim rule, even a prayer for the worldly prosperity of the ruler may expose the *khaṭīb* to suspicion on the part of his fellow-Muslims (cf. Snouck Hurgronje, *Islam und Phonograph*, p. 13 sq. = *Verspr. Geschr.*, ii. 430 sq.; do., *Mr. L. W. C. van den Berg's beoefening van het mohammedaansche recht*, in *Ind. Gids*, vi/i. 809 sq. = *Verspr. Geschriften*, ii. 214 sq.). The custom of mentioning the ruler in prayer is found as early as the fifth century B. C. in the Aramaic papyri of Elephantine (Pap. i., line 26; cf. also Harnack, *Mission und Ausbreitung des Christentums*, i. 286).

Several of the characteristics of the *khuṭba* prescribed by the doctors of the law occur also in *ḥadīth*. The *khuṭba*'s of Muḥammad usually begin with the formula *ammā baʿdu* (Bukhārī, *Djum'a*, bāb 29). Side by side with the *ḥamdala* (Muslim, *Djum'a*, trad. 44, 45) the *shahāda* occurs (Aḥmad b. Ḥanbal, ii. 302, 343: "A *khuṭba* without the *shahāda* is like a mutilated hand"). In a large number of traditions it is stated that Muḥammad used to recite passages from the *Qurʾān* (e. g. Muslim, *Djum'a*, trad. 49—52; Aḥmad b. Ḥanbal, v. 86 sq., 88, 93 etc.). The *khuṭba* must be short, in accord with Muḥammad's saying: "Make your *ṣalāt* long and your *khuṭba* short" (Muslim, *Djum'a*, trad. 47). Just like the *ṣalāt* the *khuṭba* must be right to the purpose (*ḥaṣḍan*, Muslim, *Djum'a*, trad. 41). The audience must be silent and quiet; "who says to his neighbour "listen", has spoken a superfluous word", Bukhārī, *Djum'a*, bāb 36). The two *khuṭba*'s pronounced by the standing *khaṭīb*, who sits between them, are based on Muḥammad's example (Bukhārī, *Djum'a*, bāb 27; Muslim, *Djum'a*, trad. 33—35; Aḥmad b. Ḥanbal, ii. 35, 91, 98). During the *adhān* Muḥammad used to sit on the *minbar*; the *ikāma* was spoken when he had descended (in order to hold the *khuṭba* standing); this order was observed by Abū Bakr and ʿUmar (Aḥmad b. Ḥanbal, iii. 449 bis).

Neither the term *khuṭba* nor the verb *khaṭaba* in their technical meaning occur in the *Qurʾān*. Even in the passage containing an admonition not to abandon the Friday-service for worldly profit, it is only the *ṣalāt* which is mentioned (*Sūra lxxii. 9—11*). It would be wrong to conclude from this silence that the *khuṭba* did not yet form a constituent part of worship in Muḥammad's time. Still, it is not probable that the different kinds of service were accurately regulated from the be-

ginning. *Ḥadīth* has preserved descriptions showing that Muḥammad's *khutba* often did not have much to do with the regular sermon of later times. Abū Dā'ūd, *Kitāb al-diyāt*, bāb 13: Muḥammad had sent Abū Dījahm b. Ḥudhaifa as a collector of the *zakāt* to the clan of Laith. When a man made difficulties concerning the payment of *zakāt*, Abū Dījahm knocked him on the head. Then his clanspeople went to Madīna and laid before Muḥammad a claim on retaliation. After a discussion they agreed upon a blood-fine to a certain amount. Then Muḥammad said to them: to-night I will hold a *khutba* and propose to my people the amount you have agreed. At night Muḥammad pronounced his *khutba* saying: These men of Laith have come to me in order to claim retaliation. They did not accept several proposals, but finally have agreed to such an amount. Do you agree with it? They answered: No. Then the Muhājirūn were angry with the embassy of Laith, but Muḥammad persuaded them not to importune them. Finally they received a greater amount after Muḥammad had agreed on it with them in a second *khutba*. — This kind of *khutba* apparently is a sample of the addresses of the early Arabian rulers to their people and has scarcely anything to do with a sermon. Still, it is not possible to distinguish between the kinds, as may appear from the following traditions. In a tradition on the authority of Abū Sa'īd al-Khudrī it is said that Muḥammad on the days of festival used to open the service with the *ṣalāt*; then he pronounced the *khutba* "and his *khutba* usually consisted in the command to participate in some mission or expedition" (Aḥmad b. Ḥanbal, iii. 56 sq.). A similar statement is to be found in Muslim, *Ṭadwīn*, trad. 9: "When Muḥammad had concluded *ṣalāt* on the days of festival by the *taslīm*, he remained on his feet and turned to the sitting audience; when he wanted to send a mission or when he desired some other arrangement, he gave his orders on it; he used also to say: give alms, give alms, give alms; . . . then he went away. This state of things lasted till Marwān etc.". This is a very simple description of the service and would be a considerable support to the view that a service with a fixed order only arose long after Muḥammad's time. Yet, it must not be forgotten that the description just translated betrays the tendency to contrast the simple service of the Prophet with the highly official style introduced by Marwān, who had even a *minbar* built on the *muṣallā*. The following instance refers to the Friday-*khutba*: "Abū Rifa'a says: I addressed the Prophet while he pronounced the *khutba*, saying: Oh Apostle of Allāh, I am a stranger who wants information concerning his religion which he does not understand. Thereupon the Apostle of God abandoned his *khutba* and came to me. Then a chair was brought (it seems to me that its legs were iron); the Apostle of Allāh sat down on it and began to teach me what Allāh had taught him. Then he finished his *khutba*" (Muslim, *Ḍiḥm'a*, trad. 60). This tradition, interesting though it may seem, betrays the tendency to accentuate the absence of a *minbar*. Other traditions of this type give an equally simple picture of the Friday-service, e. g. those in Muslim's chapter, *Ḍiḥm'a*, Nos. 54—59, which represent Muḥammad pronouncing his *khutba*, when a man enters. Muḥammad at once directs to him the question: Have you performed the two *rak'a's*?

Apparently the tendency is to show that Muḥammad laid so much stress upon the two non-obligatory *rak'a's* that he even interrupted himself in his *khutba* in order to accentuate their importance.

However uncertain the value of these traditions may be, it seems not out of place to suppose that a fixed order of service on Friday and the days of festival arose only after Muḥammad's lifetime. This order reposes on three elements: the early Arabian *khutba*, Muḥammad's *sunna* and the example of Jews and Christians.

In his study on the history of Muslim worship C. H. Becker has endeavoured to establish a close connection between the services on Friday and the days of festival on the one hand, and the mass on the other. The main features of his position are the following. The first *khutba* corresponds to the first part of the mass ("Vormesse"). *Adhān* and *khutba* are an echo of the responses between the deacon and the priest who administers the mass. The obligatory recitation of the *Qur'ān* corresponds to the recitation of the scripture. Concerning the two *khutba's* he states that this duality is subject to *ikhtilāf* on the part of the *faḳīh's*; it has found its way to the service on the days of festival coming from the Friday-service. The second *khutba* corresponds to the sermon and the general prayer.

This view was combated by Mittwoch who found in the Jewish liturgy features corresponding to *adhān* and *ikāma*, to the *ḥamdala*, the recitation of the *Tora* (first *khutba*) and the recitation from the Prophets (second *khutba*). It is perhaps impossible to decide the question; probably the example of the Jewish as well as that of the Christian liturgy have exercised influence on the final constitution of the Muḥammadan service.

Instead of a history of the Muḥammadan sermon which has not yet been written, a few notices only may be given here. Muḥammad's first and second *khutba* in Madīna are in Ibn Ishāq's *Sīra* (ed. Wüstenfeld, p. 340). It may follow here in translation, not because of its being considered as genuine, but as a standard specimen. "The Apostle of Allāh praised Allāh and said: *Amma ba'du*. Oh people, provide for yourself (by good works), accept instruction. By Allāh you will be thunder-stricken and everyone of you will leave his cattle without shepherd. Then his Lord will say to him, speaking without a dragoman and without a screen: Has not my Apostle come to you? He preached to you and I provided you with money and gave you abundance. What have you provided for yourself? Then you will look to the right and to the left, without perceiving anything (which can aid you); then you will look before you, but not perceive anything besides Hell. Therefore, whosoever will be able to avoid Hell, even though it were on account of a piece of a date (given as alms), he should do it, or on account of a good word, if he should not possess a date. For good deeds are rewarded ten, nay even seven hundred times. May peace and God's mercy and blessing be upon you".

Muḥammad's last sermon is communicated in Bukhārī's collection, *Ḍiḥm'a*, bāb 29: his emotion when he preached is described in Muslim, *Ḍiḥm'a*, trad. 43. An accurate description of the Friday-service with a translation of two *khutba's* in Lane, *Manners and Customs*, Paisley and London 1895, p. 99 sqq.

A collection of sermons ascribed to 'Alī is in the former Royal Library in Berlin; among them is a *khutba* without the letter *alif*.

As the office of the *khatīb* became a regular function, the *khutba* became to the *khatīb* what a calligraphed document is to the professional scribe; the one displayed his art in flourished initials, the other in rhymed prose. Collections of sermons are often arranged following the calendar, viz. four sermons for every month and additional ones for the days of festival, the Prophet's birthday, and his Ascension; see Ahlwardt, *Verzeichniss der arab. Hss.*, iii., p. 437.

It is customary to hold the *khutba* in Arabic. This rule has often been broken in Turkey.

(A. J. WENSINCK)

KHUTTAL, a district on the upper course of Āmū-Daryā between the rivers Pandj and Wakhs, called Djaryāb and Wakhsāb in the middle ages; on the situation cf. also i., p. 339 sq. The pronunciation Khuttal is given by Yākūt (*Mu'djam*, ii. 402); for the frequently used plural form we have evidence for the pronunciation Khuttalān in the lampoon preserved by Ṭabarī (ii. 1492, 1494 and 1602) on the reverses suffered by the governor Asad b. 'Abd Allāh (d. 120 = 738). On the other hand in later Persian poetry the pronunciation Khatlān or Khotlān is required; the same pronunciation is given by the Persian lexicons (e.g. in Vullers, *Lexicon*, s.v.).

Hulbuk, the capital of the rulers of Khuttal, must be sought to the south of the modern Kulāb, according to the data given in the geographers; the largest town of Khuttal, Munk (so in the geographers; in Sharaf al-Dīn Yazdī, *Ẓafar-Nāma*, Ind. edition, i. 38: Mūnk), must have corresponded approximately to the modern Baldjwān, although we already find the latter mentioned in the *Ẓafar-Nāma* (i. 83). Yā'qūbī (*B. G. A.*, i., vii. 292) says the "largest town of Khuttal" is Wāshdjird, the modern Faizābād which really lies outside of Khuttal (west of the Wakhs). Khuttal was a district specially noted for its horses (cf. *B. G. A.*, iii. 325 infra and vi., text, p. 180).

The pre-Islāmic titles of the rulers of Khuttal, Khuttalān Shāh and Shīr Khuttalān (*B. G. A.*, text, p. 40), seem to have been no longer used in the Muslim period. The last battles of the Arab conquerors mentioned in Ṭabarī (iii. 74) are of the year 133 (750/751); the king (*malik*) of Khuttal had to leave his country and go first to Farghāna then to China. The Chinese accounts of the title granted to the king of Khuttal in 752 (E. Chavannes, *Documents sur les Tou-kiue occidentaux*, p. 168 and 216) are thus explained. A genealogy of the "later rulers of Khuttal" has been compiled by Marquart (*Ērānsahr*, p. 302); in his opinion the kingdom of Khuttal later became divided into

several small states; but in the time of the Sāmānids a ruler Aḥmad b. Dja'far is mentioned as amir of Khuttalān (Gardizi in Barthold, *Turkestan*, i. 9, account of the events of 336—337 = 947/949). Muḥaddasī (*B. G. A.*, iii. 337, 2) also mentions among the rulers from whom the Sāmānids received no taxes (*kharāj*) but only presents (*hadāya*), the amir of Khuttal.

After the fall of the Sāmānids, Khuttal belonged to the empire of the Ghaznawids (see ii., p. 154) and being on the frontiers was exposed to frequent raids from the land of the Ilek-Khāns (cf. ii., p. 465). Under Sulṭān Mas'ūd (1030—1041) claims to the suzerainty over Khuttal were made, notably by 'Alī Tegin [q. v.] (Baihakī, ed. Morley, esp. p. 348); a separate ruler of Khuttal is not mentioned at this period. On the other hand in Ibn al-Athīr (x. 22) in the account of Sulṭān Alp Arslān's campaign of 456 (1064) an amir of Khuttal who had shut himself up in his fortress (its name is not given) is mentioned; it was only after a long siege, in which the amir himself was killed, that the fortress was stormed. In another passage (xi. 155) Ibn al-Athīr tells of a campaign by the lord (*shāh*) of Khuttal, Ibn Shudjā' Farukhsāh in Rādjab 553 (Aug. 1158) against Tirmidh; this ruler is said, like the Sāmānids before him, to have claimed descent from the Sassanian Bahrām Gōr (cf. i., p. 586a). There is no further mention of a native dynasty in Khuttal after this. It probably belonged to the kingdom of the Ghōrids (ii., p. 161—164); we are definitely told this of the district of Wakhs on the lower course of the river of the same name (*Ṭabaḳāt-i Nāṣiri*, transl. Raverty, p. 426). Among the many smaller principalities into which the Ghōrid kingdom broke up, the kingdom of Wakhs is mentioned (ibid., p. 436 and 490; Nesawī, ed. Houdas, p. 39; cf. W. Barthold, *Turkestan* etc., ii. 400).

In the second half of the viii. (xiv.) century Khuttal was one of the many small Turkish-Mongol kingdoms into which Čaghatai's empire had broken up (cf. i., p. 812). In 1372 by command of Timūr the king of Khuttal, Kai-Khusraw was put to death for treacherous negotiations with Khwārizm (Sharaf al-Dīn Yazdī, *Ẓafar-Nāma*, Ind. edition, i. 243). Khuttal later was one of the dependencies of Ḥiṣār (cf. ii., p. 316); when in 903 (1497/1498) the Beg Khusraw Shāh had seized dominion over Ḥiṣār, he granted Khuttal to his brother Walī Beg (*Bābur-Nāma*, ed. Beveridge, fol. 57); Walī Beg was killed in 910 (1504/1505) by Shaibānī, the founder of the Özbeg kingdom (ibid., fol. 125b). Under the rule of the Özbegs the name Khuttal for the region was ousted by Kulāb. The district of Khuttal is mentioned as late as the *Baḥr al-Asrār* of Maḥmūd b. Walī (begun in Rabi' II 1044 = Sept.—Oct. 1634, cf. *Zapiski*, etc., xv. 233) (Ind. Office MS. 560—575, fol. 228a and 238a); the name Kulāb is already used in the history of Khān 'Ubaid Allāh (1702—1711); the work was begun in his lifetime (F. Teufel in *Z. D. M. G.*, xxxviii. 243; cf. esp. text, p. 29).

(W. BARTHOLD)

KHUZĀ'A b. 'Amr, name of a South-Arabian tribe, a branch of the large tribe of Azd. The genealogists with few exceptions are unanimous in tracing their pedigree through 'Amr, surnamed Luḥaiy, b. Rabī'a b. Ḥāritha b. Muzaikiya and they agree further that they, together with the other branches of the Azd, left South Arabia at a remote time and wandered with them to the North. When they reached the territory of Mekka, most of their kinsmen continued their journey, the Ghassān to Syria, Azd Shanū'a to 'Omān, but Luḥaiy remained with his clan near Mekka and thus separated (*inkhasa'a*) from the remainder of the tribe. The city of Mekka and the sacred territory was at that time in the hands of the tribe of Djurhum and we may fix the time approximately in the fifth century of the Christian era, though Arab antiquaries, by assigning exceptionally long lives to some of the chiefs, date their arrival near Mekka several centuries further back. According to the same antiquaries the Djurhum had allowed the sanctity of the sacred territory to lose much of its splendour and in addition by extortions from pilgrims had caused the pilgrimage to have fallen greatly into disuse. The leader of the Azd, Tha'laba b. 'Amr, had asked from the Djurhum permission to stay in the sacred territory till his foragers had found suitable pasture-grounds elsewhere. This permission the Djurhum would not grant and as Tha'laba said that he would stay, whether they allowed it or not it came to fierce fighting which lasted several days and ended in the utter defeat of the Djurhum. Only Muḍāq b. 'Amr al-Djurhumī who had held aloof from the fighting was allowed to leave the city peacefully, and founded a new settlement with his family and followers at Kanan and Haly, where his descendants still resided in the third century of the Hidjra. Having become complete masters of Mekka and the sacred territory, they permitted the descendants of Ismā'il, who were few in numbers and had taken no share in the quarrel, to remain peacefully among them. The very next year of the conquest brought epidemic fevers to the new population and according to some historians it was not till this time that the other clans of Azd migrated further afield. With a view to establishing a legal claim to the custodianship of the sanctuary, no doubt, Rabī'a b. Ḥāritha b. 'Amr married Fuhaira the daughter of 'Amir b. 'Amr b. al-Ḥārith b. Muḍāq, who had been the last ruler of Mekka, and thus he became the richest man in the city. From this latter account it becomes almost evident that the two tribes lived for some time together in Mekka and that the rise of the Khuzā'a was less violent than is generally concluded from the first account. There can hardly be any doubt that here the same process occurred as it happened continually, that the tribes outside a town by gradual pressure upon the more peaceful and prosperous town-dwellers became in time the masters of the situation, only to suffer the same fate a few generations later. Rabī'a is credited with having re-introduced the rites of the pilgrimage, especially by caring for the welfare of the numerous pilgrims who visited the sanctuary, but he is also credited with having been the first to have placed the idols round the Ka'ba and especially with having brought the idol Hubal from Hit in Mesopotamia, which with other idols still existed at the time

of Muḥammad. Rabī'a and his descendants remained custodians for a very long time (Arab historians mention 300 and 500 years — which figures must be highly exaggerated). The last ruler was Hulail b. Ḥubshiya b. Salīl b. Ka'b b. 'Amr who gave his daughter Ḥubbaiy in marriage to Kuṣaiy, the head of the small clan of Kuraish, a branch of the tribe of Kināna. Hulail when he grew old made it a practice to give to his daughter or his son-in-law the keys of the Ka'ba to perform such duties as were the privilege of the custodian of the sanctuary. When Hulail died he left his office to his daughter and his son-in-law, but when the latter wanted to claim this right, he was strongly opposed by the whole of Khuzā'a, who forcibly took the keys of the sanctuary from Ḥubbaiy. Kuṣaiy who had many friends among the Kināna who were settled in the vicinity of the sacred territory as also among the Qudā'a, came to an arrangement with his friends that at the next pilgrimage-period and upon the termination of the rites of the pilgrimage it should come to open quarrel with the Khuzā'a, and in the end it resulted in fierce fighting in which many were slain. To settle the dispute both parties agreed to submit to the judgment of Ya'mar b. 'Awf al-Kilābi. Both parties were invited to meet at the portals of the Ka'ba and when Ya'mar had ascertained the number of slain of Khuzā'a to be greater than that of the partisans of Kuṣaiy he gave judgment in favour of the latter. He was in consequence given the custodianship of the sanctuary and with it the rule of the city of Mekka, while the Khuzā'a were permitted to reside with the Kuraish in the precincts of the sacred territory. Thus the end of the rule of the Khuzā'a was also the commencement of the rule of the tribe of Kuraish [q. v.]. Another less heroic account, however, tells us that Kuṣaiy bought the custodianship from Abū Ḥubshān, the last ruler of the tribe of Khuzā'a, for a goats skin of wine; this is the account also given by Ibn al-Kalbī in his *Kitāb al-Maḥālīb*. With the advent of Islām we encounter the names of a number of persons belonging to the tribe of Khuzā'a, and as the conquest of Egypt and the West was principally accomplished by warriors recruited from Western Arabia it is not surprising that we find descendants of the tribe of Khuzā'a prominent in the newly conquered lands, especially in Spain.

That there was a great deal of confusion in the genealogies of this tribe is evident from their being at times not classed among the South-Arabian tribes at all, so e. g. the Qādī 'Iyād gives the genealogy: Khuzā'a b. Luḥaiy b. Kama'a b. al-Yās b. Muḍar, which Suhaili in his commentary of the *Sira* tries to explain by saying that Ḥāritha b. Tha'laba married the widow of his father Kama'a, who was also the mother of Luḥaiy, in which way the genealogy is correct both in deriving their origin from North and South-Arabian tribes. As regards the divisions of Khuzā'a there is a great amount of divergence, some genealogists mention the clans of Ka'b, Mulaih, Sa'd and Salīl, while other know only 'Adiy, 'Awf and Sa'd.

The great number of names of men who claimed descent from this tribe must make us believe that they were more numerous than we should conclude from the comparatively few names mentioned as companions of the Prophet, and it may be that by the time of the rise of Islām they

had gradually been pushed by the more energetic Kuraish into the surrounding country out of the precincts of the city of Mekka itself.

(F. KRENKOW)

KHŪZISTĀN, the land of the Khūz (Hussi), *Korossios* of Ptolemy, a province of Persia corresponding to the ancient Susiana, now officially called 'Arabistān, "the country of the Arabs", because its desert plains have been over-run by the nomad tribes of the Ka'b (Bedouin pronunciation Ča'b) and of the Banū Lām. The present boundaries of the province are, to the North, the mountains of the Zagros chain; to the West, the Kerkha [q. v.]; to the South, the river Djerrāhi or Tāb and a line drawn across the desert from the confluence of the Kārūn [q. v.] and of the Kerkha with the Shaṭṭ al-'Arab [q. v.]; to the East Kurdistan. The principal towns are Shushtar (Tustar of the Arabs), the seat of the governor, Dizful, Hawiza (Sūk al-Ahwāz, "the market-place of the Cosseans"), Rām-Hormuz, Muḥammara, Behbehān; the mountains are inhabited by Lūr tribes, namely Feilī, Bakhtiyārī, Kūngelū and Māmasenī.

Under the Sāsānids this province was included in those of the South (Nīm-rūz); the Christians who inhabited it formed an ecclesiastical province called Bēth Hūzayē; the capital was Bēth Lāpāt, later called Gundishāpūr. Conquered by the Arabs in the year 19 (640), it was defended by the Satrap Hurmuzān, who after the capture of Sūk al-Ahwāz (Ḥamza Isfahānī: Hudjistān-wādjār), and his defeat at Rām Hormuz by 'Otba, was besieged in Shushtar for 6 months and gave himself unconditionally to the Caliph 'Omar. It was occupied by Mu'izz al-Dawla Aḥmad b. Buwaih before the capture of Baghdād in 334 (945) and during the reign of the Mongol Ilkhān Abaqa it was given as a fief to the Atābeg of Luristān, Yūsuf Shāh I, as a reward for having saved him from a sudden attack of the Dailamis. It was for some time occupied by the Ottomans after the battle, which was lost by the armies of Shāh 'Abbās I in front of Baghdād in the year 995 (1587).

For Arab geographers Khūzistān has for its boundaries, to the West, the canton of Wāsiṭ and Dūr al-Rāsibī; to the South, the shore of the sea from 'Abbādān to Mehrūbān; to the East, Fārs and 'Irāk-'Adjamī (the boundary is marked by the Tāb); to the North, the course of the Kerkha and the mountains of the Lūr. Important towns were: Sūk al-Ahwāz (capital), Sūs, Gundishāpūr, Tustar, 'Askar Mokram, Rām Hormuz, Dawraq (later Tīb, Korkūb, Djobbī, Hīṣn Mahdī). Climate warm, air unhealthy, particularly for strangers; rivers numerous, soil fertile (dates, wheat, barley, rice, sugar-cane). Population ugly and of bad character; inhabitants quarrelsome and greedy, copper-coloured, slight figure, beard scanty, hair bushy. Probably they were the residue of the negroids who formerly were the population of the country. They still spoke at the time of the Arab conquest a peculiar language (khūzī) which was neither Indo-European nor Semitic — perhaps

it was the remains of the language of the Anzanites or Elamites; the remains of it are said to be preserved in the patois of the Dizful. After the wars with the Romans the people of Mesopotamia were transplanted there in the reign of Shāpūr I; the magnificent band of Tustar was built by the prisoners of war taken after the disastrous expedition of the Emperor Valerian. Industry developed in the country under the influence of the workmen carried off from Byzantine territory. At the present time the country is ruined; a few inhabitants maintain themselves in a few large villages; the plains provide pasture for bodies of nomads.

KIAYA. [See KETKHUḌĀ.]

KĪBLA, the direction of Mecca (to be exact of the Ka'ba or the place between the water-spout [*mizāb*] and the western corner), which has to be observed during the *ṣalāt*.

I. From very early times the direction at prayer and divine service was not a matter of choice among the Semitic peoples. There is already an allusion to this in I Kings, viii. 44 and it is recorded of Daniel (Dan., vi. 11) that he offered prayer three times a day in the direction of Jerusalem (which has remained the Jewish *kibla* to this day). As is evident from the names of the quarters of the heavens, the whole life of the Semitic peoples was turned eastwards. The Esenes prayed in the direction of the rising sun and the Syriac Christians also turned eastwards at prayer (*Ancient Syriac Documents*, ed. Cureton, p. 24, 60; *Acta Martyrum occid.*, ed. Assemani, ii. 125). It may therefore very well be assumed in agreement with the tradition that Muḥammad appointed a *kibla* at the same time as he instituted the *ṣalāt*. It is certain that in the period immediately following the Hidjra the direction taken by the Jews was also used by the Muslims. Tradition places the alteration in the *kibla* to 16 or 17 months after the Hidjra, in Radjab or Sha'bān of the year 2, probably rightly, for in this period we have the important change in Muḥammad's attitude to the Jews. Disappointed at the slight success of his preaching among the Jews of Yathrib, he began to turn more and more to the old Arabian tradition and make the religion of Ibrāhīm the basis of all monotheistic religions. The Ka'ba was brought into prominence as a religious centre and the Ḥadīdj began to be talked of as a Muslim rite. At the same time a beginning was made with the eviction of the Jewish tribes of Yathrib. The alteration in the *kibla* is a not unimportant fact in this series of events and this train of thought. The Qur'ān verses, ii. 136 sqq., refer to this: "The fools among the people will say: 'What has induced them to abandon their former *kibla*? Say: to Allāh belongs the east and the west. He guides whomsoever he pleaseth

unto the right path. Thus have we made you an intermediate community, so that ye may be witnesses for mankind while the Prophet is a witness for you. We only appointed your previous kībla to distinguish him who follows the Prophet from him who turns back on his heels. Verily this is a grievous sin from which he is free who is guided by Allāh, but Allāh will not allow your faith to be of no avail for He is gracious and kindly to man. We see how thy face turns to all the quarters of the heavens so we will cause thee to turn to a kībla pleasing to thee. Turn then thy face toward the holy *masjid*; turn your face to it wherever you are. Whatever signs thou wert to give to the people of a scripture, they will not follow thy kībla" etc.

The importance placed by Muḥammad himself upon the change is clear from these words. It is not necessary to assume with the tradition that it was brought about by scornful remarks of the Jews regarding Muḥammad's dependence on the prescriptions of their religion (so Ṭabari, ed. de Goeje, i. 1280). In other traditions, the new kībla is represented as that of Ibrāhīm (Ṭabari, *Tafsīr*, i. 378, ii. 13). Here we have a glimmering of the real truth of the matter, namely the connection with Muḥammad's new politico-religious attitude. According to one tradition (Bukhārī, *Ṣalāt*, B. 32; *Tafsīr*, Sūra 2, B. 14) the revelation of the above quoted verses from the Qur'ān was communicated to the believers in the morning ṣalāt in Ḳubā'; according to another story Muḥammad had with a portion of the community performed two rak'as of the Zuhr-Ṣalāt in a mosque of the Banū Salima, when he turned round to the direction of Mecca (Baiḍāwī, on Sūra II, 139). The mosque received the name of *Masjid al-Kiblatayn*, "the mosque of the two kīblas".

If it may then be considered established that Muḥammad and his community turned towards Jerusalem at the ṣalāt during the early years of the Hidjra, the question still remains what was his kībla before the Hidjra. In Tradition two answers are given to this question and a third deduced by harmonising the other two. According to one, Muḥammad in Mecca observed the kībla to the Ka'ba (Ṭabari, *Tafsīr*, ii. 4; Baiḍāwī, on Sūra II, 138); according to the other story the kībla had always been Jerusalem (Ṭabari, *Tafsīr*, ii. 3, 8, ed. de Goeje, i. 1280; Balādhurī, *Futūḥ*, p. 2); according to the third (Ibn Hishām, p. 190, 228) Muḥammad in Mecca was careful to have the Ka'ba and Jerusalem in a straight line in front of him at the ṣalāt. The first view is influenced by the theory of the "religion of Ibrāhīm" for al-Tibrizī also makes 'Abd al-Muttalib already know that Ibrāhīm appointed the Ka'ba as kībla (*Ḥamāsa*, i. 125). If the second opinion had not an historical basis, one does not quite understand how it could have arisen, for Tradition does not like to acknowledge Muḥammad's dependence on Jewish practice. This view is therefore, in my opinion, the most probable. It is further mentioned as a distinguishing peculiarity of Barā' b. Ma'rūr that even in the period before the Hidjra he would not turn his back on the Ka'ba (Ibn Hishām p. 294); this tradition would lose its point if the old kībla had been in the direction of the Ka'ba. Besides these traditional views, others have been put forward in recent years. According to Tor Andrae, *Der Ursprung des Islams und das Christentum*, Uppsala

and Stockholm 1926, p. 4 (cf. Buhl, *Mohammed's Life*, p. 212) the original kībla was to the east. Andrae bases his view not on the material of Tradition but on the general agreement between early Muslim and Christian religious usages. Schwally said that the Jerusalem kībla was introduced into Mecca, it is true, but not as a specifically Jewish institution, perhaps a Jewish-Christian one (*Geschichte des Qurans*, i. 175, note k).

The direction of the kībla was, or is, not assumed at the ṣalāt only and with the points of the toes (Bukhārī, *Ṣalāt*, bāb 28; *Aḥḥād*, bāb 131; Nasā'ī, *Sahw*, bāb 25; *Ṭaḥḥīḥ*, bāb 96), but also at the *du'a* (Bukhārī, *Da'awāt*, bāb 24), at the *iḥlāl* or *iḥrām* (Bukhārī, *Ḥajj*, bāb 29) and after the stone-throwing at the central Djamra (Bukhārī, *Ḥajj*, bāb 140—142); the head of an animal to be slaughtered is turned to the kībla and the dead are buried with the face towards Mecca (Lane, *Manners and Customs*, Paisley and London 1899; Snouck Hurgronje, *Verspr. Geschr.*, iv./i. 243: v. 409).

In the Ḥadīth it is forbidden to turn towards Mecca when relieving nature (Bukhārī, *Wuḍū'*, bāb 11; Muslim, *Ṭahāra*, trad. 61; Nasā'ī, *Ṭahāra*, bāb 18—20). On the question whether it is allowable in doing this to turn one's back to Mecca and thus in some parts of Arabia be facing Jerusalem no unanimity prevails (cf. Bukhārī, *Wuḍū'*, bāb 14; *Khums*, bāb 4; *Ṣalāt*, bāb 29; Muslim, *Ṭahāra*, trad. 59, 61 *sq.*; Abū Da'ūd, *Ṭahāra*, bāb 4); one should not expectorate in the direction of Mecca (Bukhārī, *Ṣalāt*, bāb 33).

The observance of a kībla is given in old traditions along with the performance of the ṣalāt and ritual slaughter as a criterion of the Muslim: The Prophet of God said: "The command has been given me to fight the people till they say: There is no god but Allāh; when they say these words, perform our ṣalāt and slaughter in our way, their blood and their property shall be inviolate for us", etc. (Bukhārī, *Ṣalāt*, bāb 28; cf. *Aḥḥād*, bāb 12). One of the terms for the orthodox community is *Ahl al-Kībla wa 'l-Djāmā'a*. In many Muslim lands the word has become the name of a point of the compass, according to the direction in which Mecca lies; thus kībla (pronounced *ibla*) means in Egypt and Palestine, south, in the Maghrib, east.

In the mosques the direction of the ṣalāt is indicated by the *Mihrāb* [q. v.]; in classical Ḥadīth, this word does not occur and kībla is used to mean the wall of the mosque towards which one turns. At a ṣalāt outside a mosque, a *suṭra* [q. v.] marks the direction. In Egypt, small compasses specially made for this purpose are used to ascertain the kībla (Lane, *op. cit.*, p. 228). — It should be noted that many mosques are not accurately but only approximately orientated (according to the *djīha*). It sometimes happens that this error has been later corrected by the drawing of lines or the stretching of threads. This is, for example, the case in many mosques of the Dutch East Indies where the faithful at the ṣalāt take their direction not from the *mihrāb* but from such indicators (information kindly supplied me orally by Prof. Snouck Hurgronje).

The laws relating to the kībla are here given very briefly only and according to the Shāfi' school as laid down in al-Shirāzī's *Kitāb al-Tanbīh* (ed. Juynboll, p. 20). The adoption of a kībla is

a necessary condition for the validity of a *ṣalāt*. Only in great danger and in a voluntary *ṣalāt* on a journey can it be neglected. But if one is on foot or can turn his steed round, it should be observed at the *ihram*, *rukūʿ* and *sudjūd*. One should turn exactly in the direction of the *qibla*, and one who is near it can do so with certainty, and one who is remote as nearly as he can judge. According to others, in the latter case only the general direction (*djihad*) is obligatory. Outside of Mecca one turns towards the *mihirāb* within a mosque; when not in a mosque one follows the direction of reliable people: only a man who is in a deserted region is allowed to ascertain the direction for himself by means of certain indications. For details of the laws see the *Bibliography*.

II. In terms of astronomical geography the direction of Mecca in any particular spot Ω is identical with the tangent, at the point Ω on the circle ΩM (fig. 1). It will form with the meridian

Fig. 1.

in Ω , i. e. the circle $P\Omega A_1 P_1$, the angle α (P and P_1 are the poles). This angle, called *inḥirāf* in Arab astronomy, gives the deviation of the direction of the gaze from the north-south line. If AQ is the equator and ϕ_1 and ϕ_2 , λ_1 and λ_2 the latitudes and longitudes of two places Ω and M , the calculation of the angle α is a problem for spherical trigonometry. This angle α has of course a separate value for every place Ω according to its geographical coordinates.

The direction of Mecca was usually marked on the dial of a horizontal sundial (*baṣīṭa*, *rukhāma*). For all places with a latitude north of and greater than that of Mecca, it runs south, southeast or

southwest which holds for by far the greater part of the Muslim world. Once during the day as a rule the shadow of the pointer falls upon the *qibla* or on its prolongation beyond the foot of the style, which is called *mikyās*, *shakhṣ* or *sharṭ*. The *muwakkkit* (caller of the hour) made this moment known from time to time by calling aloud, and in the same moment every other shadow pointed to Mecca. The shadow itself was called *zill* before the *zawāl* and *faṭ* in the afternoon. For large towns (e. g. Cairo) Muslim astronomers calculated the daily altitude of the sun for the moment at which it came into the direction of the *qibla* on its daily course.

Every *Zidj* of any size (book of tables, from the Persian *zāh*, Arabic *zīk* [chord because the tables of sines or chords were the same]) deals with the calculation of the *qibla*. Arabic literature is not very rich in special tractates dealing with the ascertainment of the *qibla*. If the difference between latitude and longitude of the place in question was not great, a method of approximation, known even to the early Arab astronomers was used which gave results, sufficiently accurate for practical purposes. We find this method already used by al-Battānī (929), Ibn Yūnus (1009) etc. The process is as follows: the difference between the longitude of Mecca and that of the place in question is counted off westwards from the Indian circle (i. e. on a horizon circle) starting from the south point and eastwards from the north point (i. e. the two equal arcs SA and NB on fig. 2) and the two points thus reached A and B are

Fig. 2.

joined by a straight line AB . Similarly the difference of the two latitudes is measured southwards from the west point and from the east and the two points thus found are joined by a straight line CD which cuts AB in K . A straight line from the centre of the circle Ω of the circle gives the direction of the *qibla*.

There are in Arabic literature numerical formulae for the finding of the angle α (*inḥirāf*) by this method of approximation. For Cairo Ibn Yūnus gives:

$$\phi_1 = 30^\circ; \quad \phi_2 = 21^\circ; \quad \phi_1 - \phi_2 = 9^\circ;$$

$$\lambda_1 = 55^\circ; \quad \lambda_2 = 67^\circ; \quad \lambda_2 - \lambda_1 = 12^\circ;$$

$$KG = \sin(\lambda_2 - \lambda_1); \quad \Omega G = \sin(\phi_1 - \phi_2);$$

$$\sin \alpha = \frac{\sin(\lambda_2 - \lambda_1)}{\sqrt{\sin^2(\lambda_2 - \lambda_1) + \sin^2(\phi_1 - \phi_2)}}$$

$$\sin \alpha = \frac{12}{15}; \alpha = 53^\circ,$$

while he finds by the exact rules of spherical trigonometry α to be $53^\circ 0' 17''$. — The Persian astronomer 'Alī Shāh Olai al-Munadjjim deals in this way with the case of Hamadān. He puts:

$$\phi_1 = 35^\circ 10'; \phi_2 = 21^\circ 40'; \phi_1 - \phi_2 = 13^\circ 30';$$

$$\lambda_1 = 83^\circ; \lambda_2 = 77^\circ 10'$$

(reckoning the longitudes from the "Fortunate Isles"); $\lambda_1 - \lambda_2 = 5^\circ 50'$. From the construction of the figure we get $\alpha = 23^\circ$, while worked out exactly by spherical trigonometry $\alpha = 22^\circ 15'$. We see then that this approximating method of calculating the direction of the kībla is very useful for small differences of latitude and longitude but of course breaks down when this is not the case. Fig. 2 gives the construction for Hamadān.

In contrast to this approximate method Ibn Yūnus in ch. xxviii. of his *al-Zīj al-Kabīr al-Hākīmī* ("The Great Hākīmī Tables", Oxford, Hunt. 331) gives quite an exact method of finding the kībla and by three different methods, of which the first is very remarkable inasmuch as the transcription of the text of Ibn Yūnus gives us in modern language the cosine and sine equation of spherical trigonometry. The author shows that:

$$\cos \Omega M = \cos X = \cos \phi_1 \cdot \cos \phi_2 \cdot \cos(\lambda_2 - \lambda_1)$$

$$\pm \sin \phi_1 \cdot \sin \phi_2$$

and

$$\sin \alpha = \frac{\sin(\lambda_2 - \lambda_1) \cdot \cos \phi_2}{\sin X} \text{ (fig. 1)}$$

If the two latitudes ϕ_1 and ϕ_2 refer to different hemispheres, the product $\sin \phi_1 \cdot \sin \phi_2$ is negative hence the double sign in the cosine equation. The other solutions go back to the division of any spherical triangle $\Omega M P$ into two right-angled triangles.

An exact and mathematically interesting calculation of the *inḥirāf* of the kībla is given by Abu 'l-Wafā' (d. 998) in his *Almaǧisī* (MS. 2494 Paris) for the city of Baghdād. He finds $\alpha = 13^\circ 49' 9'' 19''$. Abu 'l-Wafā's method of ascertaining the kībla (by the rule of the shadow) is very similar to that which had previously been made known by the Persian mathematician and astronomer al-Faḍl b. Ḥatīm al-Nairīzī (d. 922/923), except that he found for the *inḥirāf* of the kībla at Baghdād $\alpha = 29^\circ 7'$ which is remarkably far out.

A neat study of a purely constructive but exact method of ascertaining the kībla was given by the important Muslim mathematician Ḥasan b. al-Ḥusain b. al-Haitham (d. 1039). It is as follows: the circle $ABGD$ (fig. 3) with centre H is described on a horizontal wooden plane with any radius. Two diameters are drawn at right angles AG and BD . From A cut an arc AC equal to the latitude of Mecca $= \phi_2$ on the circumference of the circle, which represents the horizon of the place for which it is desired to ascertain the kībla. Similarly the arc GR at the other end of the diameter is made equal to the latitude of the place $\Omega = \phi_1$. Finally the arc $AN = \lambda_2 - \lambda_1$ indicates the difference in longitude of the two places in question. The perpendicular CT is then dropped on AH from C and with the radius HT an arc

is described from the centre H , which cuts HN in E ; EF is then drawn at right angles to AH . On the radius HR section HK is cut $= CT$ and a perpendicular to HR erected at K and KM made $= FH$. From M the perpendicular MQ is dropped on BH and FS is cut off FH so that $FS = MQ$. The angle $ESF = \alpha$ = the *inḥirāf* of the kībla.

The proof of the correctness of this construction is given in our author by transferring the area of the triangle pole — Mecca — place (Ω) in the plane of the horizon of the place Ω for which the kībla is being ascertained. The correctness of Haitham's construction can however be easily

Fig. 3.

proved as follows. If the radius HA of the circle be taken as $= 1$, the following are the successive equations yielded:

$$HT = \cos \phi_2; FH = \cos \phi_2 \cdot \cos(\lambda_2 - \lambda_1) = KM,$$

$$CT = \sin \phi_2 = HK; HL = \frac{HK}{\sin \phi_1} = \frac{\sin \phi_2}{\sin \phi_1},$$

$$KL = HK \cdot \cotg \phi_1 = \sin \phi_2 \cdot \cotg \phi_1,$$

$$ML = KM - KL = \cos \phi_2 \cdot \cos(\lambda_2 - \lambda_1) - \sin \phi_2 \cdot \cotg \phi_1,$$

$$EF = \cos \phi_2 \cdot \sin(\lambda_2 - \lambda_1).$$

It further follows from the two right-angled triangles HKL and LMQ that:

$$\frac{MQ}{ML} = \frac{HK}{HL}; MQ = ML \cdot \frac{HK}{HL}$$

$$MQ = [\cos \phi_2 \cdot \cos(\lambda_2 - \lambda_1) - \sin \phi_2 \cdot \cotg \phi_1] \cdot \sin \phi_1$$

$$= \cos \phi_2 \cdot \cos(\lambda_2 - \lambda_1) \cdot \sin \phi_1 - \sin \phi_2 \cdot \cos \phi_1.$$

Finally

$$\cotg \alpha = \frac{FS}{EF} = \frac{MQ}{EF} =$$

$$= \frac{\cos \phi_2 \cdot \cos(\lambda_2 - \lambda_1) \cdot \sin \phi_1 - \sin \phi_2 \cdot \cos \phi_1}{\cos \phi_2 \cdot \sin(\lambda_2 - \lambda_1)}$$

or

$$\cotg \alpha = \frac{\sin \phi_1 \cdot \cos(\lambda_2 - \lambda_1) - \cos \phi_1 \cdot \tang \phi_2}{\sin(\lambda_2 - \lambda_1)},$$

but the latter formula is simply the well known cotangent equation of spherical trigonometry, applied to the spherical triangle ΩPM in fig. 1. This formula at once gives the angle α . A full discussion of all possible cases of the situation of the place Ω with reference to Mecca cannot be entered into here; the author gives no numerical examples.

The ascertainment of the azimuth of the $\mathbf{\bar{q}}ibla$, as given by al-Birūnī (d. 1048) in *al-Ḳānūn al-Mas'ūdī* (Berlin, MS. Orient. 275, Maḳāla 5, chap. 6, f. 123r) is of a similar geometrical nature to the solution already given to the problem by Ibn Haitham, mentioned above, although of course much shorter. The late Arab astronomers, so far as we can judge, had made no progress beyond those of the middle ages in their $\mathbf{\bar{q}}ibla$ calculation. We know the process followed by Maḥmūd b. Muḥ. b. 'Umar al-Djaghminī (d. c. 1345) in his *Mulakhkhaṣ*; it is the approximative method already known to us. The Samarḳand astronomer Ulugh Beg used spherical trigonometry for ascertaining the $\mathbf{\bar{q}}ibla$.

To the xvth century belong two pamphlets dealing specially with the direction of Mecca, namely one by Miram Čelebi (d. 1524/1525) entitled: *Risāla fī Taḥkīk Samt al-Ḳibla* (Constantinople, Library of the Aya Sofya, 2628) and the other by Khalil Ghars al-Dīn Aḥmad al-Naḳīb al-Halabī al-Shāfi'ī (d. 1563/1564): *Fī 'Sṭikhrādj al-Ḳibla* (Cairo). These two works begin with various horizon operations (*A'māl afakiya*) such as ascertaining the four cardinal points, the azimuth etc., after which comes the trigonometrical calculation of the $\mathbf{\bar{q}}ibla$. In the first of the above mentioned treatises the already often mentioned approximative method is again explained (for the $\mathbf{\bar{q}}ibla$ of Constantinople).

In modern times the $\mathbf{\bar{q}}ibla$ has become a subject of orthographical studies. Thus J. I. Craig repeatedly mentions a "Mecca retro-azimuthal projection", the object of which is to make a map in which the true direction of the $\mathbf{\bar{q}}ibla$ can at once be read for any point on it. On such a map meridians are taken to be parallel equidistant straight lines. If one combines with this quality of retro-azimuthality accuracy in defining the distance from the centre in such a map in addition to the azimuth of the $\mathbf{\bar{q}}ibla$, the shortest distance of every place from Mecca could be read. C. Schoy has published a sketch of the map, in which of course the straightness of the meridional lines is dropped.

A table of plans with the corresponding *inḥirāf* of the $\mathbf{\bar{q}}ibla$ is given in the Gotha MS. Arab. 1483, which is a fragment of the astronomical tables of Ibn al-Shāṭir (d. 1375/1376).

Bibliography: On the $\mathbf{\bar{Q}}ibla$ in al-Battānī cf. C. A. Nallino, *al-Battānī sive Albatēnii opus astronomicum*, Milan 1903, i., chap. lvi., p. 137; J. B. Delambre, *Histoire de l'astronomie du moyen-âge*, Paris 1819, p. 57—60; C. Schoy, *Gnomonik der Araber*, Berlin 1923, p. 40—42; chap. 28 of the *Zīj al-Kabīr al-Ḥākimī* of Ibn Yūnus is translated and annotated in C. Schoy, *Gnomonik*, etc., p. 36—40; Abu 'l-Wafā' al-Buzdjānī's process, *ibid.*, p. 84—86; al-Nairizī's work: "On the Direction of the $\mathbf{\bar{Q}}ibla$ ", is translated and annotated by C. Schoy in *Sitzungsberichte der Bayer. Ak. d. Wissensch.*, math. phys. Kl., 1922, p. 55—68; and the "Essay by al-Ḥasan b. al-Ḥasan b. al-Haitham (Alhazen)

on ascertaining the direction of the $\mathbf{\bar{Q}}ibla$ ", by do. in *Z. D. M. G.*, 1921, p. 242—254. The *Mulakhkhaṣ* of al-Djaghminī has been published in a German translation by Rudloff and Hochheim in *Z. D. M. G.*, 1893 (cf. p. 37). Details of the process for finding the $\mathbf{\bar{q}}ibla$ by Ulugh Beg are given in L. Am. Sédillot, *Prolegomènes des Tables astronomiques d'Ouloug-Beg*, Paris 1853, p. 120 sqq., and on that of 'Alī Shāh etc., in do., *Matériaux pour servir à l'histoire comparée des sciences mathématiques chez les Grecs et les Orientaux*, Paris 1845—1849, i. 297. On cartographical representation of the $\mathbf{\bar{Q}}ibla$ cf. J. I. Craig, *The Theory of Map-Projections with special reference to the projection used in the Egyptian Survey Department*, Cairo 1911, and C. Schoy, *Die Mekka- oder Qiblakarte (Kartographische und Schulgeogr. Ztschr., Vienna 1917, p. 184).* (C. SCHÖY)

AL-KIBRĪT, sulphur. It is numbered by al-Ḳazwīnī among the oily bodies along with quicksilver, the various kinds of tar, naphtha and ambergris. Other writers include it among the ethers, the evanescent bodies, with the two kinds of *zurnikh* (sulphide of arsenic, orpiment, and realgar), sal-ammoniac and quicksilver.

Among the Arabs, as before them in Pseudo-Aristotle, three kinds of sulphur are distinguished, the red of fine quality, the pure yellow, and the white; the latter would be the so-called "bath-sulphur" which smells of sulphuretted hydrogen. Red, probably quite mythical, sulphur is said to be found in the west in the vicinity of the sea and to be very rare. A man possessing unique qualities is therefore called "red sulphur". Flowers of sulphur were obtained from ferrous sulphide by roasting. The important uses of sulphur are for explosives in fireworks and for the colouring of metals. One series of metals becomes black with sulphur, e. g. lead and silver; sulphur silver is used in niello inlaying; the quicksilver also becomes black at first but on being heated red (cinnabar). Sulphur had many uses in medicine (cf. Ibn al-Baitār, al-Ḳazwīnī etc.).

In its natural state sulphur is found in three forms; all these were known to the Arabs.

1. In gypsum, chalk beds etc. lumps of sulphur occur; in this form it was exported from al-Ghūr in the land of the Jordan (al-Mukaddasi, p. 184); it was also found in this form in Persia, Balūčistān and Sicily.

2. It is found in volcanoes, extinct as well as active, e. g. on Etna, Demāwend etc.

3. It is obtained from sulphur springs; for example there are hot sulphur springs at Dawraq al-Furs in Khuzistān, at which yellow sulphur is found (Guy Le Strange, *The Lands of the Eastern Caliphate*, 1905, p. 242. Information on the occurrence of sulphur in the east is given in C. Hintze, *Handbuch der Mineralogie*, part i., 1904, p. 80 and 87; B. Dammer and O. Tietze, *Die nutzbaren Mineralien*, part i., 1913, p. 93; O. Stutzer, *Die wichtigsten Lagerstätten der "Nicht-Erze"*, i. 1911, p. 251).

Among the alchemists sulphur has numerous epithets (cf. J. Ruska and E. Wiedemann, *Beitr.*, lvii., *Alchemistische Decknamen in S.B.P.M.S.*, Erl., lvi., 1924, p. 17—36). It is described as the yellow, red, or white bride, or wax. Its colouring properties procured it the name of the "colouring spirit" (*al-rūḥ al-ṣābiḡ*); the asphyxiating smell

of burning sulphur gave it the name of *al-hannāk* (the asphyxiator); it was also called the "letter of the escaped" (*ḥaid al-ābik*) i.e. of quicksilver which combines with sulphur to form solid cinnabar. Some other epithets are given in *Shams al-Din al-Dimishki* (op. cit.); e.g. "cockscorn" (*ʿarāf al-dika*); "sea-bird" (*ḥair al-bahr*), "pomegranate-seed" (*ḥabb al-rummān*), "liquid yāḳūt" (*al-yāḳūt al-dhāib*) etc. See M. Berthelot, *La chimie au Moyen-âge*, ii.; al-Tughraʾī in *Kitāb al-Djawhar al-nadīr fī Ṣināʿat al-Iksir* (Berlin, Ahlwardt's *Katalog*, No. 18361).

According to the natural philosophers sulphur is composed of atoms of water, air and earth. Mixed and exposed to great heat they become coherent and form an oil which on cooling down becomes solid.

According to the teaching of the alchemists, sulphur along with quicksilver plays the main part in the formation of the most varied substances, especially metals. Here however sulphur and quicksilver are only general terms which have nothing to do with ordinary sulphur or quicksilver.

KIBT, the Copts, the name given by the Arabs to the Christians of Egypt. According to Arab writers, the word is derived from the name of a king of ancient Egypt, *Kibt*, who is said to have been a descendant of Noah. It was thought in Europe that this word derived its origin from the town of *Coptos* or that it was a corruption of *Jacobites*. One Coptic manuscript alleges that the Greeks called the Egyptians *Koptoi* because they had their children circumcised. It is now generally agreed that the word *Kibt* is a corruption of *Aiguptios* [Kalkashandi, i. 222; iii. 413; transl. Wüstenfeld, p. 119; Makrizi, ed. Wiet, i. 69, 82; Vansleb, (*Nouvelle Relation*), p. 6; Quatremère, *Recherches sur la lang. et la litt. de l'Égypte*, p. 30—32; *Égypte*, (collection) *Un(ivers) pitt(oresque)*, iii. 104; Macaire, (*Hist. de l'Égl. d'Alexandrie*), p. 5—6; B. I. E., 1894, p. 20; Butler, *Copt. Churches*, i. 370; Lane, *Manners* 4, ii. 274; Stern, *Copt. Gramm.*, p. 1; Steindorff, *Kopt. Gramm.*, p. 2; *ibid.*, ii. 5].

The Copts and the Arab Conquest. When the Arabs conquered Egypt in 640, for nearly twelve centuries the country had been under foreign domination. Egypt had ultimately sunk to the level of a colony administered by the prefects of the Byzantine Empire. The hatred of the Egyptians for their masters, nourished by bondage, must have increased to such a degree during the Byzantine period that it restored to the natives the feeling of their lost nationality.

Under the caliphate of ʿUmar and, somewhat against his desire according to Muslim tradition, the Arab army conquered Egypt [Makrizi, ed. Wiet, iii. 143—156; v. 14—39; (Caetani), *Chron. (ograpbia)*, p. 219—220, 227—228, 240; *Rev. historique*, cxix. 273 sqq.; *Dict. (d')arch. (chrét.)*, iv. 2474—2476; *ibid.*, ii. 6]. It seems little likely that the Arab general ʿAmr b. al-ʿĀs wished to confront the Caliph with the *fait accompli* [Caetani, *Annali*, iv. 85—86; *ibid.*, i. 339; ii. 5; for the opposite view: J. Maspero, *Organ. (de l'Ég. byzantine)*, p. 9; *Rev. historique*, cxix. 309—310]. Indeed the conquest of Egypt took place at a moment when the Persians, crushed two years previously at Kādisiyya, were unable to create any diversion and when the Byzantines, cut off from Egypt by the Arab occupation of Palestine and of Syria, were unable to come to its assistance.

The Greek army in Egypt was defeated, because the rôle of police which it had played, had not prepared it for war and because, moreover, it was composed mainly of Copts. Besides, in the sixth century a certain number of high officials were of native origin. The native population, long exposed to humiliating treatment by the Byzantines, did not render them assistance in this new conflict, and the Greeks could not even count upon their neutrality [J. Maspero, *Organ.*, p. 5, 16, 42—43, 49—50, 83—84, 95; Amelineau, *Actes (d. Martyrs)*, p. 3; Rouillard, *Admin(istration) civile (de l'Égypte byzantine)*, p. 15, 164, 193; J. Maspero, *Hist. (des) Patr(iarches d'Alexandrie)*, p. 39]. The manifestations of Egyptian nationalism, which date from the fourth century, took an unexpected development after the council of Chalcedony. In the absence of a well-defined Jacobite dogma, there are good grounds for thinking that the Egyptians were Monophysites, because their bishops had founded the doctrine and Severus of Ashmūnain says that the Chalcedonian thesis had not been able to penetrate into a certain convent "because all the monks there were Egyptians" [*P(atrologia) O(rientalis)*, i. 498; cf. J. Maspero, *Hist. Patr.*, p. 16—17, 24—25, 49—51, 53; *Annali*, iv. 65—86]. In fact the Egyptians almost welcomed the Arabs as liberators. "It was no little advantage for us", writes Michael the Syrian (transl. Chabot, iii. 413; cf. also p. 222), "to be delivered from the cruelty of the Romans, from their malice, from their anger, from their cruel zeal against us and to find ourselves at peace" (cf. *Annali*, iv. 85; J. Maspero, *Hist. Patr.*, p. 250; Basset, *Mélanges (africains et orientaux)*, p. 2). The same writer (ii. 432—433), who, although late, is habitually well informed, definitely asserts that the patriarch Benjamin gave up Egypt to the Arabs in return for a promise given that the latter would give back to the Jacobites their churches. The bishop of Nikiou, always very accurate in the facts which he recounts, records strange defections amongst the native leaders, and declares that certain garrisons refused to fight against the Muslims and even rendered them assistance [Johannes of Nikiou, transl. Zotenberg, p. 357, 559—561, 563, 570, 573, 585; cf. Ibn ʿAbd al-Ḥakam (ed. Torrey), p. 58—59, 73; Eutychius (ed. Cheikh), ii. 24; Abū Ṣāliḥ, f 80; P. O., xi. 563; Makrizi, ed. Būlak, ii. 492; Macaire, p. 231—234; J. Maspero, *Organ*, 126, 131—132; Rouillard, *admin. civile*, 220 sqq., *Rev. historique*, cxix. 303—304]. Indirect evidence is also furnished by the numerous "ḥadīth" of the Prophet in which

he recommends the Muslims to treat the Copts well (Maḳrīzī, ed. Wiet, i. 99). The historical romance *Futūḥ al-Bahnasā*, also shows that the troops who resisted were mainly Greeks, that the enemy contingents comprised Arab Christian elements and that the natives were often disloyal (transl. Goltier, p. 38, 85, 89, 95, 105—106, 128—129, 154, 161).

The vanity of the Copts enabled them to find an excuse for their conduct. They already regarded Alexander, Diocletian and Theodore as their compatriots, they boasted of having received numerous prophets, they had put forward the hypothesis that Jesus must have been born in Egypt, they held that their church had been founded by Saint Mark, an assertion which remains to be proved, that their country had furnished the first martyr, before St. Stephen (J. Maspero, *Hist. Patr.*, p. 26, 108; Abū Ṣāliḥ, *fos* 20—21, 47; Maḳrīzī, ed. Wiet, iv. 2, 126; Amélineau, *Actes*, p. 13—14, 30, 38, 163 *sqq.*; *J. A.*, 1887, i. 24—26; *Dict. arch.*, i. 1098—1101). Muḥammad is believed to have ordered the Arabs to be kind to the Copts because Hagar, the slave of Abraham, and Māriya, the concubine of the Prophet, were Copts (Ibn 'Abd al-Ḥakam, p. 2—4; Suhaili, i. 12; Maḳrīzī, ed. Wiet, i. 97 *sqq.*; *Muntakhab Kanz al-'Unmāl*, iv. 270, 316; v. 310). Finally the conqueror of Egypt was predestined for his mission, because, in the course of a former journey, he had been present in Alexandria at the games in the circus and the ball, which, thrown at hazard, was to point out the future sovereign of the country, fell upon him (Maḳrīzī, ed. Wiet, iii. 125—128; *Masālik al-abṣār*, i. 241—242; this without denying the existence of such divinatory proceedings; Michael the Syrian, iii. 57; *R. M. M.*, lvi. 85; Huart, *Perse antique*, p. 60).

Another factor, the help of neighbouring Arab tribes of Egypt, also played a part, but it is impossible to estimate its value. A number of Arab tribes led a nomadic life on the coast from the Red Sea, from Sinai up to the Thebaid, and it has been noted that Strabo describes Koptos as a town under the Arabs (J. Maspero *Organ.*, p. 13, 66; Lesquier, *L'armée romaine, M. I. F. A. O.*, xli. 426—427; *ibid.*, ii. 7).

The Islamisation, its Progress and Causes. The Arabs imposed upon Egypt a treaty, of which Ṭabarī claims to give the accurate text [Ṭabarī, i. 2588; cf. Ḳalkaṣhandī, xiii. 324; *Bib. (Bibliothèque des Arab(isants))*, ii. 168—170; Lane-Poole, *Egypt (in the middle Ages)*, p. 7; Clermont-Ganneau, *R. A. O.*, v. 186—194; Butler, *The Treaty of Miṣr in Ṭabarī*], which must be compared with the similar treaties concluded in other countries [Abū Yūsuf, *Kitāb al-Kharāj*, transl. Fagnan, p. 108 *sqq.*, 195, 214 *sqq.*; Yāḳūt, i. 858; Ḳalkaṣhandī, xiii. 357—359; Sauvaire, *Hist. de Jérusalem et d'Hébron*, p. 36—41; *Annali*, ii. 349—352, 792; iii. 22—28, 221—222, 381—382, 562; iv. 40, 43, 354; v. 459—460; vii. 178, 257; *J. A.*, 1852, i. 101—102; 1894, ii. 222—223; Goldziher, *Dogme et loi de l'Islam*, p. 29—30; *Mustatraf*, Cairo 1285, i. 134—135; Mach, xii. 609—618, 674—682; *B. I. F. O. A.*, iv. 211; Muir, *Caliphate* (1915) p. 134 *sqq.*]. The Christians of Egypt were treated like the other non-Muslims (*ahl al-dhimma*) of the growing Arab Empire. They had to pay a personal tax (*ḡizya*), fixed in Egypt at two dinārs for each adult male, in recognition of which they enjoyed

the protection of the Muslims (*dhimma*). This statement is found throughout the Arab literature, but the papyri show it is inaccurate, in as much as the tax was proportionate to one's fortune (*Rev. historique*, cxix. 280). In a word, this régime was at first the prototype of the modern protectorate; the Muslim government assured the Christians of protection for themselves and for their property; those who did not receive a share in the distribution of the *diwān* were not obliged to give military service.

The treaty in Ṭabarī omits two important articles in the other treaties: the rules laid down in regard to dress and the question of religious buildings. The situation of the Christians in Egypt will be here examined in detail in chronological order, but for the sake of clearness it is better to examine these two questions separately.

The alleged edicts of 'Umar forbade the Christians to adopt in their garments and in their turbans the same colour as that of the Muslims; they had to wear a distinctive piece of material (*ghiyār*) as well as the belt called *sunṇār* (*J. A.*, 1852, i. 111, 115; Butler, *Copt. Churches*, ii. 103—104). It seems, however, that such a regulation was really much later and owes its origin to Hārūn al-Raṣhid (*J. A.*, 1894, i. 175; below ii. 169; cf. however, Lane-Poole, *Egypt*, p. 27). But the most celebrated edict, and one that is recorded by the historians of Egypt, emanated from Mutawakkil [Ya'ḳūbī, *Hist.*, ii. 594; Eutychius, ii. 59; Ṭabarī, iii. 1389 *sqq.*; Abū Ṣāliḥ, *p.* 52; Ḳalkaṣhandī, i. 256; xiii. 366; Maḳrīzī, *Bulāk*, ii. 494; Renaudot, (*Hist. patr. alex.*), p. 293—300, 608—609; Lane, *Manners*, ii. 298; Lane-Poole, *Egypt*, p. 39; Lammens, *La Syrie*, i. 137]. These measures were revived by al-Ḥakim, who made them more severe; by Badr Djamālī in 479 (= 1086); by the caliph Zāfir in an ephemeral fashion; and lastly by Shīrkūh [Yaḥya (al-Anṭākī, ed. Cheikh), p. 187, 195, 202—203; Ibn al-Aṭhīr, *s. a.*, p. 398, 411; Ḳalkaṣhandī, xiii. 359—360; Yāḳūt, *Irshād*, ii. 247; Maḳrīzī, ed. *Bulāk*, ii. 286—288, 495—496, 507; Blochet, *Hist. d'Égypte*, p. 101, note; Quatremère, *Mém. (sur l'Égypte)*, ii. 447; Wüstenfeld, *Fatimiden*, p. 189; Renaudot, p. 463, 519; *R. O. C.*, xiii. 196]. We only know of one Aiyūbid decree (Renaudot, p. 587), but in 700 (1301), Sulṭān Malik Nāṣir, at the instigation of an African, vigorously enforced the ancient ordinances [Ḳalkaṣhandī, xiii. 377—387; Maḳrīzī, *Bulāk*, ii. 489—499; Quatremère, (*Hist. des sultans*) *Mamlouks*, ii., *b.*, 117 *sqq.*; Ibn Iyās, i. 143; Renaudot, p. 602—603; Lane, *Manners*, ii. 300; Lane-Poole, *Egypt*, p. 301; 'Alī Pāsha (Mubarak, *Khifāt*), i. 32; iii. 101; J. Maspero, *Hist. Patr.*, p. 378]. The Copts however freed themselves by paying a sum annually which in 709 (1309) aroused the wrath of Ibn Taimiya (*Z. D. M. G.*, lii. 559—560). The decree was not long in force since it was necessary to revive it in 721 (1321), in 755 (1356), in 820 (1417) and in 854 (1450) [Abū 'l-Maḥāsin, ed. Popper, vii. 186; Ibn Iyās, i. 201; Sakhāwī, (*Tibṛ masbūk*), p. 306; Dozy, *Dict. des noms de vêtements*, p. 28; Quatremère, *Mém.*, ii. 246—247, 260; *Dict. arch.*, iv. 2479]. From these successive renewals it can be concluded that these regulations quickly fell into disuse (Gaudefroy-Demombynes, *La Syrie*, lxxxviii. 95). The Ottoman governors revived them once more ('Alī Pāsha, i. 57; Djabarti, French

transl., iii. 275; iv. 208—209); Muḥammad 'Alī is said to have abolished them in 1807, and it was in vain that subordinate officials attempted to re-establish them in 1816 and in 1817 (*B.I.E.*, 1900, p. 133—139; *Djabartī*, ix. 247—248, 266). The Coptic clergy have kept to the present day the custom of wearing black turbans.

The question of religious buildings received more attention from the Muslim rulers. The conditions laid down by 'Umar are Draconian: The Christians are forbidden to build any new church or any convent and it is further forbidden to rebuild edifices which had fallen into ruins (*J. A.*, 1852, i. 110; Maḳrīzī, ed. Wiet, v. 117, in 3; *ibid.*, ii. 761). In practice, in return for a money payment the Christians were allowed to repair their churches and their convents and even erect new buildings. On their settlement in the country the Muslims converted some churches into mosques; this was the regular practice under the Umayyads in the whole Muslim Empire (Caetani, *Chronographia*, p. 1065, 1175; van Berchem and Strzygowski, *Amida*, p. 51—52; Thiersch, *Pharos*, p. 212). The Christians of Egypt had earlier installed certain churches in temples of the Pharaohs (*Dict. arch.*, iv. 2455 sq.). Even when they built a completely new mosque, the Muslims took the materials from the churches, especially the columns (*P. O.*, x. 512—515; Maḳrīzī, ed. Wiet, iv. 6; Derenbourg, *Oumara*, ii. 151, n. 4); this was in the eyes of the Muslims the right of the conqueror. It seems, however, that the legal theory of "new churches" scarcely dates back to the second (viiith) century, for during the first century the Christians could build and restore as they desired (Eutychius, ii. 41; *P. O.*, iii. 268; v. 24, 42, 119; vii. 399—400; xi. 606; Abū Ṣāliḥ, fos 23, 29, 53; Maḳrīzī, *Bulāḳ*, ii. 492; Renaudot, p. 178, 179, 184; Marcel, *Égypte*, 28; Lane-Poole, *Egypt*, 26; *B.I.F.A.O.*, i. 143; *Chronographia*, p. 520, 589, 618, 758, 775, 825—826, 939; *ibid.*, ii. 8). This liberal official attitude was not in accordance with the sentiment of the mass of the people and a permit to rebuild in 117 (735) caused a riot (Maḳrīzī, ed. Wiet, v. 91). Numerous Christian buildings were demolished in the course of the struggle against the last Umayyad (Abū Ṣāliḥ, fos. 60, 78), but these were acts of war. Under popular pressure towards the year 170 (786) the governor 'Alī b. Sulaimān ordered the churches founded since the Muslim conquest to be destroyed, a measure rescinded by his successor after a consultation of jurists (Kindī, p. 131—132; Abū Ṣāliḥ, fo 23; Maḳrīzī, ed. Wiet, v. 117—118; *Bulāḳ* ed., ii. 493, 511; Lane-Poole, *Egypt*, p. 32); and building on the finest scale went on again, in spite of the protestations of the people (Eutychius, ii. 58; *P. O.*, x. 418—419, 460; Kindī, p. 554—555; Ibn Sa'īd, ed. Tallqvist, p. 32—33). With the Fātimids a great era of prosperity opened for the Coptic churches and the convents, — except under al-Ḥākim, which will be discussed later. Besides, the decision really rested with the Christians who filled the government offices (*P. O.*, iii. 387—388; xi. 561; Yaḥyā, p. 186, 229, 231—234; Abū Ṣāliḥ, fos 17, 24—25, 27, 30—37, 39, 41—42, 44, 48—50, 61—62, 66—67, 69, 78, 81—82; Ibn Muyassar, p. 79; Ibn Duḳmāḳ, iv. 78—79; Maḳrīzī, *Bulāḳ* ed., ii. 283; Renaudot, p. 370; Wüstenfeld, *Fatimiden*, p. 131; Lane-Poole, *Egypt*, p. 119, 170). More strict in regard to the Copts, the Aiyūbids began

by despoiling the churches of a part of their revenue, and while authorizing certain restorations, they did not hesitate to do away with buildings which annoyed them. Besides, the wars with the Crusaders brought about the ruin of many churches. It is from the Aiyūbid period that the ruin of the convents dates (*P. O.*, xi. 617; Abū Ṣāliḥ, fos. 7, 27—28, 33, 38—39, 45, 59, 81—82, 88, 90; Blochet, *Hist. d'Égypte*, p. 518, 559—560; Marcel, *Égypte*, p. 28; Amélineau, *Actes*, p. 222; *ibid.*, ii. 44). But the real catastrophe dates from the reign of Malik Nāṣir Muḥammad b. Ḳalā'ūn; after being withheld in 700 (1301) the mob rushed to attack the Christian buildings throughout the whole of Egypt in 721 (1321); sixty churches were demolished and according to Muslim writers many convents were henceforth deserted (*P. O.*, xiv. 459; Maḳrīzī, ed. Wiet, i. 208—209, note; *Bulāḳ* ed., ii. 511—517; Quatremère, *Mamlouks*, ii. b, 179 sqq.; Sakhāwī, p. 73; 'Alī Pāshā, i. 35; iii. 98—101; vi. 74 sqq.; Quatremère *Mém.*, ii. 225—249; Lane-Poole, *Egypt*, p. 301, 310—312; *Revue de l'Orient Chrétien*, xxii. 393; *Dict. arch.*, iv. 2476—2482; Lane, *Manners*, ii. 300—302; *ibid.*, ii. 8). Churches were again demolished in 755 (1354) and a large part of their revenues was confiscated. In the course of the ninth (fifteenth) century the regulations of the Caliph 'Umar are said to have been at different times solemnly revived (Maḳrīzī, ed. Wiet, i. 296; *Bulāḳ* ed., ii. 499—500; Sakhāwī, p. 36—40, 124—125, 145; Ibn Jyās, i. 206—207; ii. 35; *Bull. Soc. Géogr. d'Égypte*, xiii. 79; 'Alī Pāshā, i. 38; *B.I.E.*, 1907, p. 167). Under Ottoman rule the authorities permitted the restoration and even the foundation of churches, although amongst Muslim legal circles less liberal doctrines were still upheld until the beginning of the nineteenth century ('Alī Pāshā, vi. 84—85; *Djabartī*, iv. 20; v. 218; viii. 246).

After elucidating these two points, we can now review in chronological order the main events in the history of the Copts under Islām. The chief concern of the Caliph was to make no change in the administration of Egypt. He appointed a governor general sometimes the position was held by two officials, the one undertaking the political administration, the other financial; the political governor had under him two subordinates, a prefect of police and a *ḳāḍī*. The military occupation was reduced to a certain number of posts (*ribāṭ* or *māḥūz*) scattered along the Mediterranean coast and on the desert frontiers of the Delta. Under 'Abd al-'Azīz b. Marwān (65—86 = 685—705) there were 30,000 men. The country remained divided into pagarchies called *kūra*, transcription of *Χώρα*; at its head was the *ṣāḥib al-kūra*, translation of *πάγρχος*; the subordinate officials also bear Greek names; these are the *djastāl* (*αντιστάλιος*) the *māzūt*, the origin of which is not known for certain, the *gh(a)rāfis* (*γραφερός*). — Cf. Ibn 'Abd al-Ḥakam, *Gloss.*, 48, 58; Kindī, p. 418—419; Maḳrīzī, ed. Wiet, i. 114, 323; *Bulāḳ* ed., ii. 259; Michael, iii. 475; J. Maspero and Wiet, *Matériaux (pour servir à la géogr. de l'Égypte)*, p. 170—171; *Dict. arch.*, iii. 2836; *Isl.*, ii. 254—255, 361 sqq.; xv. 95—96; Bell, *Aphrod. Papyri*, xvii. sqq., xxxv. sqq., 15, 65, 78, 447; *W. Z. K. M.*, xx. 114; *Z. A.*, xx. 76; *Klio*, ix. 206—209; *B. I. F.*, xi. 155—161. — The absolute impossibility which the Arabs found of governing by means of methods of their own is sufficiently established by the papyri. The

Arab occupation lived by the institutions which it found in Egypt and allowed itself to be administered by Copts who were supervised and docile. According to the papyri and the authors, all the provincial officials were Copts during the first hundred years of the occupation until the end of the Umayyad period (*P. O.*, v. 5, 9–10, 12, 18, 48, 57, 64; Makrizi, ed. Wiet, i. 249, n. 3; Michael, ii. 475; Lane-Poole, *Egypt*, p. 15; *Annali*, v. 319–455; *Chronographia*, p. 253, 296, 758, 911, 1091, 1112, 1164; Muir, *Caliphate*, p. 167; *Pap. Schott-Reinhardt*, p. 21, 27, 37, 42; *P. E. R. Mitt.*, i. 6–7; Bell, *Aphr. Pap.*, p. xxxiii.; *Z. A.*, xx. 72–75, 77; *Isl.*, ii. 245–246, 257–258, 271, 361, 364–365, 381; J. Maspero and Wiet, *Matériaux*, p. 10–12, 172, 229; Monneret de Villard, *Scultura ad Ahnäs*, p. 23; *ibid.*, ii. 8, 12–15). The fiscal organisation was also modelled on the Byzantine, without regard for the rules otherwise laid down by the Muslim doctrine. The Christians, old men, women and children excepted, had to pay from 40 dirhams to 4 dinārs, to provide for the upkeep of the army, corn, oil, honey, cloth and to procure a lodging for a period of three days for every Muslim. The Copt officials continued to collect the Annona corn which was sent to Medina (Makrizi, ed. Wiet, i. 322–323; *Bib. d. Arabisants*, ii. 178; J. Maspero, *Organ.*, p. 112; Becker, *Beiträge z. Gesch. Ägypt.*, ii. 84–85; *Pap. Schott-Reinhardt*, p. 42 sqq.; Bell, *Aphr. Pap.*, p. xxv. sqq.; 5; *Isl.*, ii. 251–252, 271, 277–278, 282, 382, 384; J. Maspero and Wiet, *Matériaux*, p. 85; *Chronographia*, p. 241; *J. A.*, 1886, i. 440; Bourdon, *Anc. canaux, anc. sites et ports de Suez*, p. 6 sqq.; *M. I. Égypte*, vi. 20).

At the very first the Copts were happier than under the Byzantine régime; the exiled bishops with the patriarch at their head once more took possession of their sees. They lived in such peace that they played no part in the grave events in which the Muslim troops of Egypt participated — the assassination of 'Uthmān, the duel between 'Alī and Mu'āwīya, the rivalry of Ibn Zubair. The Arabs did not persecute anyone on account of his religious ideas (*P. O.*, i. 495–497; v. 12; Renaudot, p. 160; *B. I. E.*, 1885, p. 340–361; *Annali*, v. 4).

It would, however, be wrong to extend this observation to the Umayyads and especially to contrast the toleration of the Umayyads, "who did not seek to make proselytes", with the spirit of persecution which is said to characterize the 'Abbasids (*Dict. Arch.*, iii. 2829, 2841). No doubt the Jacobites had cause to rejoice at being given back the churches formerly confiscated by the Melkites; besides, although it did not compensate for the converts to Islām, the adhesion to the Monophysites must be noticed of a few Melkites, with the object of escaping the double *djizya*, which was imposed upon them by Kurra b. Sharik's principal adviser, naturally a Jacobite (*P. O.*, i. 341; Quatremère, *Mém.*, ii. 39; *Isl.*, ii. 364; *Chronographia*, p. 1091). It is, however, stated in accurate texts that the Umayyad governors were not always kind to the Copts (*P. O.*, v. 13–16, 54–57, 60–61, 68, 75–76, 86, 92, 94–95; xvi. 233–234; Abū Ṣālih, fol. 83–84; *Chronographia*, p. 1024, 1091). It is necessary to add that it was a question of taxation which became more and more severe and not of religious persecution

in the narrow sense of the word. Besides, the Copts, with very rare exceptions which will be noted, were never put in the position of having to apostacise to save their lives, and we do not find throughout the whole history of Muslim Egypt a single measure that can be compared with the persecution of Diocletian. It shows contempt for historical statements to oppose Byzantine toleration to Muslim fanaticism (*M. F. O. B.*, i. 109; Muir, *Caliphate*, p. 362–363). Finally it may be mentioned for this first period that Christian annals were compiled in the monasteries, and that the monks took good care to describe as persecutions measures which deprived them of the advantage of remaining a privileged class (Marcel, *Égypte*, p. 33).

Under the Umayyads as well as under the 'Abbasids the Christians enjoyed liberty of worship. The governors only took care to have their Coptic lessons and prayers translated for them in order to be sure that they contained no insults to Islām. The bishops were allowed to meet in councils; the government watched over these councils, especially in the case of the election of a patriarch. It enquired also into the relations which the clergy were allowed to enter into with a foreign power. The Christian writers praise the liberalism of the Caliph Hishām; but at this time the fiscal system was well established and applied without favour (*P. O.*, v. 24, 28–29, 34–37, 51, 56, 68, 73–75, 194; x. 371; Renaudot, p. 190; *Chronographia*, p. 825, 864, 952, 1337, 1340, 1472; *Rev. historique*, cxix. 283–284).

We shall now give a chronological exposition of the measures which were prescribed. In the year 70 (689) the religious emblems on the outside of the churches were destroyed. Since the monks at first had been exempt from the *djizya* many Copts assumed the robe in order to escape the tax. But these monks, according to the testimony of Byzantine authors, possessed considerable wealth. From before the year 86 (705) the monks were subjected to a tribute and forced to pay one dinār a year (*P. O.*, v. 51, where the absurd *أخصى*

must be corrected and its translation "mutilated"). This edict promulgated by 'Umar II whose tolerant spirit is specially mentioned by Christian authors, was renewed by Usāma b. Zaid, under drastic conditions. In 87 (706) Arabic became obligatory for all administrative offices. Some years later Kurra b. Sharik, whom the Muslims revile as much as the Christians, impoverished the churches to such an extent that the priests had to use chalices of glass and wooden dishes. It was the same governor who appears to have seen to it that the lower ranks of officials were Muslims, but the measure was not made general until the year 100 (718). The Caliphs Walid and Yazid II renewed in the year 95 (714) and 104 (722) the order to suppress religious emblems. In 109 (727) immediately after the first revolts of which we are going to speak, the government settled in the eastern region of the Delta 5,000 Arabs of the tribe of Kaïs. Finally in the year 112 (730) in order to obtain a better return from the taxes and following the example of what had been done in other parts of the Muslim Empire a general census of the population was taken (Tabari, tr. Zotenberg, iii. 229; Abū Yūsuf, tr. Fagnan, p. 64–65; Kindī, p. 69, 76–77; *P. O.*, v. 24, 62, 64, 67, 70–73, 101–102; xvii. 679; Michael, ii.

450; Makrizi, ed. Wiet, i. 335—336; Bülak, ii. 492—493; Renaudot, p. 190, 193, 198; Marcel, *Égypte*, p. 32—35, 37; Butler, *Copt. Churches*, ii. 38, 84; Lane-Poole, *Egypt*, p. 27; *Bib. d. Arabisants*, ii. 193—194; Lane, *Manners*, ii. 297—298; Rouillard, *Admin. civile*, p. 171—172; *B. I. E.*, 1885, p. 342, 347—349; Becker, *Beiträge*, ii. 99—100, 104, 121, 126—127; *Isl.*, ii. 363—364, 370—371; *Dict. arch.*, iii. 2829; Bell, *Aphr. Pap.*, p. xxxv. sqq.; J. Maspero and Wiet, *Matériaux*, p. 45, 76; *Chronographia*, p. 527, 826, 1088, 1164, 1265, 1284, 1286, 1310; *Rev. historique*, cxix. 278—279; J. Maspero, *Hist. Patr.*, p. 55—56, 60; *R. S. O.*, viii. 189; *C. I. A.*, *Égypte*, ii. 8; *ibid.*, § iii.).

The Copts endeavoured by every means to escape from this tax. When it was useless to take refuge in the monasteries they decided to quit the villages where they were registered and to settle in other districts where, being not so well known, they had a chance of escaping the tax. This movement of "fugitives" (φυγάδες = *ḡāliya*) was almost general and every effort was made by the government to thwart it. No one was allowed to go out of his native district without being furnished with a passport, a measure which has wrongly been represented as vexatious; the delinquents were to be branded with a red hot iron (*P. O.*, v. 64, 69—70; [Pseudo-] Denys, tr. Chabot, p. 123—124; Renaudot, p. 199, 201; Marcel, *Égypte*, p. 37; Rouillard, *Admin. civile*, p. 6, 9, 115, 171; *B. I. E.*, 1880, p. 10—11, 100; Lane-Poole, *Egypt*, p. 27; *Dict. arch.*, iii. 2829; *Isl.*, ii. 257—258, 269—270, 273—276, 279, 367—369, 378—380; *Pap. Schott-Reinhardt*, p. 40; Bell, *Aphrod. Pap.*, p. xv., xl.—i., xlvii. 57; *Z. A.*, xx. 96—97; xxii. 139 sqq.; *Chronographia*, p. 1025, 1211; *B. I. E.*, 1908, p. 107; *M.F.O.B.*, xi. 159—160).

Finally the Copts decided upon open rebellion for fiscal reasons. Blood flowed in Egypt, principally on the Delta, for more than a century. The first insurrection took place in 107 (725). Rebellions followed in 121 (739), 132 (750), 135 (752), 150 (767), 156 (773). Lower Egypt was then convulsed by risings which have nothing especially Coptic about them which — it must be said in passing — show already the numerical weakness of the Christian element. They lasted from 194 to 211 (809—826) and were a repercussion of the struggle for the Caliphate between Amīn and Ma'mūn; the chief part was played at Alexandria by the Spanish Arabs exiled from Cordova (Kindi, p. 73—74, 81, 94, 96, 102, 116, 119; *P. O.*, v. 76, 188—189; x. 427—428; Michael, ii. 500—501; Makrizi, ed. Wiet, i. 333—334; iii. 181—185, 201—207; Bülak, ii. 492—493; Ibn Rāhib (ed. Cheikhō), p. 126; Renaudot, p. 226 sqq., 251 sqq.; *Bib. des Arabisants*, ii. 191—192; Quatremère, *Rech.*, p. 153—156, 197—198, 201—212; Lane-Poole, *Egypt*, p. 29—31, 35—36; Becker, *Beiträge*, ii. 109, 115, 120; *Dict. arch.*, iii. 2829; J. Maspero and Wiet, *Matériaux*, p. 31, 42, 47, 59, 76, 99, 103, 110, 137, 209; *Chronographia*, p. 1107, 1351, 1524; Caetani, *Cron. generale*, i. 65, 88; *ibid.*, i. 32).

The Coptic risings begun under Umayyad domination cannot then be put down to any particular brutality of the 'Abbāsids; the governors of the new dynasty were led to regard the natives as rebels. The 'Abbāsids increased the burden of

taxation, but not especially on the Copts, since it was on this account that the Arabs revolted in the Delta in 78 (794), 186 (802), 191 (807) and in 214—215 (829—830). At this latter date, the Christians of the central part of Lower Egypt called Bashmūrītes, entered into the struggle. The physician Ibn Riḍwān at a later date remarked upon their ferocity and their stupidity. Their conduct scandalised the Christians themselves, and the Coptic clergy strove in vain to calm their unruliness. The Caliph Ma'mūn, at the time in Syria, was induced to come to Egypt; very liberal, he charged an ecclesiastic of his suite, the patriarch Denys of Tell-Mahrē, with the task of obtaining by kindness the submission of the rebels. The Bashmūrītes would not yield; they were crushed by Afshīn and a large number were massacred. A number of survivors, including women and children, were transported to the region of Baghdād where some of them covered themselves with glory fighting against the Zuṭṭ (Kindi, p. 190—192; Eutychius, ii. 120—121; *P. O.*, x. 486—502; Ibn Rāhib, p. 129; Michael, iii. 76—84; Makrizi, ed. Wiet, i. 203, 334, 337—340; iii. 3, n. 7, 141, 186; Bülak, ii. 494; Renaudot, p. 272 sqq., 279 sqq.; Quatremère, *Rech.*, p. 156—161, 170—174; *Bib. des Arabisants*, i. 256—257, 263; Lane-Poole, *Egypt*, p. 38; Becker, *Beiträge*, ii. 120—121; *Mitt(heilungen) P(apyri) E(rzherzog) R(ainer)*, i. 96; *R. O. C.*, xiv. 279; J. Maspero and Wiet, *Matériaux*, p. 32, 43—45). This was the last rebellion of the Copts: "From that time they were in subjection throughout all the Egyptian territory, and their power was definitely crushed. None of them had the power to revolt or even resist the Government; the Muslims were the majority in the villages" (Makrizi, ed. Wiet, i. 334—335; Bülak, ii. 1; ed. ii., p. 494; Quatremère, *Rech.*, p. 198).

Denys of Tell-Mahrē has left a very severe judgment on the Coptic clergy. He is indignant at their ignorance and rages against the simony which flourished everywhere (Michael, iii. 80; *Bibl. d. Arabisants*, i. 257—258). The Coptic bishops retorted that the simoniacal practices were necessary for the recovery of the wealth of the church, hard hit by taxation. It is a fact that one of the first 'Abbāsīd governors condemned certain bishops to work at the Arsenal because they refused to give up their sacred vessels (*P. O.*, x. 374). This policy of an excessively severe system of taxation succeeded in emptying the monasteries. It is striking to note that the monastic inscriptions cease in the tenth century (*Dict. Arch.*, iii. 2830, 2841). However in purely religious matters the government remained tolerant. The Christians were allowed to enter the mosque to bring a law-suit before the Qāḍī. In 169 (785) a Copt who had insulted the Prophet was only put to death on the reasoned opinion of the imām Mālik who was consulted at Madīna (Kindi, p. 382, 390—391).

Before the coming of the Fāṭimids there were two attempts to gain independence, which are worthy of note here; those of the Ṭulūnids and of the Ikhshīdids. Aḥmad b. Ṭulūn imprisoned the patriarch Michael III because he did not pay a fine. Here again there was no religious persecution properly so called. For this dynasty as well as that of the Ikhshīdids seems to have taken into account Christian public opinion, from which they gained support against Baghdād. It is

well known that Khumārawaih [q.v.] enamoured with art took pleasure in visiting the convents; it is reasonable to believe that the Copts knew how to profit by this. Under the Ikhshidids the influence of Christian officials appears. The government did not make peace for nothing during the popular troubles which burst forth at Fuṣṭāṭ in 349—350 (960—961) on the news of the victories of Nicephorus Phocas. On the contrary a rescript from the Caliph dated 313 (925) had already prepared a pacification throughout the whole Muslim Empire, by deciding that the *djizya* would not be imposed upon the bishops, monks and necessitous laymen. The Ikhshidids honoured by their presence the public celebrations of Christian festivals. A contemporary Muslim traveller, Maṣ'ūdī does not appear to be shocked by this (Appendix to Eutychius, ii. 292; Abū Yūsuf, tr. Fagnan, p. 188; *P. O.*, xvi. 242; xviii. 717, 779—780, 782—783, 799; Abū Ṣāliḥ, *fos* 49—50; *Maṣālik al-abṣār*, i. 363; Maḳrīzī, ed. Wiet, iv. 231; Būlaḳ ed., ii. 152—153, 494; Renaudot, p. 324; Marcel, *Égypte*, p. 83; Schlumberger, *Nicéphore Phocas*, p. 125; Lane-Poole, *Egypt*, p. 66, 85—86; Becker, *Beiträge*, i. 62).

This attitude of the Ikhshidid government is confirmed by the edict imposed by the first of the Fāṭimid caliphs, Mu'izz, who forbade these public rejoicings. This ostracism endured for only a short time and from the accession of his successor 'Azīz, Christian ceremonies recommenced with more pomp than in the past. Thus it was during the time of the Fāṭimids with an eclipse under Ḥākim. The favour which the Christians enjoyed is attested by one of their first acts, the transfer to Cairo of the office of patriarch. 'Azīz had a Christian wife whose two brothers he himself appointed patriarchs of Jerusalem and of Alexandria respectively. Being liberal, he encouraged controversies between Christians and Muslims and he refused to prosecute renegade Muslims. The resentment in Muslim circles must have been terrible. It explains and in part excuses the exasperation of Ḥākim who pursued the Christians with his hatred with the direct object of abating their growing influence (see the definite statement of Maḳrīzī, Būlaḳ, ii. 31, 495). But it must be remembered that Ḥākim was a ferocious persecutor. He threw to wild beasts the patriarch Zachariah, to whom, according to Christian chronicles, they did no harm; this act of brutality was perhaps committed at the instigation of a monk. He prohibited the celebration of Christian festivals, forbade the Christians to possess slaves, to have Muslims in their service; he seized the property of the Church and he caused a considerable number of crosses to be burnt. Then he passed on to the destruction of the churches with such rage that he is said, — but this is without doubt exaggerated by Muslim writers —, to have destroyed between the years 403 and 405 (1014—1016), 30,000 churches in Egypt and in Syria. He had decided upon the exile of all the Christians, but the decree was rescinded before it could be put into action. A measure of general dismissal of the Christian functionaries resulted in a complete check. In spite of everything the judgments of the *Synaxaire* on this Caliph are not malevolent (*P. O.*, iii. 289). Zāhir inaugurated his reign by a measure of justice authorising the Christians to return to their religion, who bewildered by the madness of Ḥākim had become

converts to Islām (for a condemnation to death see however Yaḥyā, p. 238). Under the Caliph Mustanṣir, the vizier Yāzūrī made the Christians submit to numerous vexations; he ordered the closing of the churches and the incarceration of the patriarch Christodoulos, under the pretext that the latter had instigated the King of Nubia not to pay the agreed tribute to Egypt. These incidents which were terminated by a heavy fine inflicted upon the patriarch were perhaps not quite unconnected with the fall and the putting to death of Yāzūrī. Under the Caliph 'Amir who liked to be entertained by the monks of the convent of Naḥya in the suburbs of Cairo, the tendency is to liberalism. Credits were provided in the budget for Christian ceremonies. Towards the end of his reign a monk Abū Naḍjāḥ played the part of a kind of prime minister to him; this monk who assumed the arrogance of a grand seigneur had the effrontery to go even into the mosque and insult the Muslims; this action cost him his life. Ḥāfiẓ, who like his predecessor, loved a sojourn in the monasteries, had as his vizier an Armenian Christian, Bahrām, who received the title of *saif al-Islām*, the "sword of Islām". However the Muslim councillors of the Caliph carried out all his commands. Bahrām, all powerful, made a large number of Armenians come to Egypt and contributed to the restoration of many churches. The Muslim revolt burst forth and overthrew the minister, his successor Riḍwān favoured a violent reaction against the Christians, driving them from the administration, bringing about confiscations, ordering even summary executions. But the country was to be troubled by the rivalries of ministers who fought for power with armed force and the Christians suffered from this state of affairs neither more nor less than the Muslims. It is in this sense that we must interpret a very touching Coptic document, the inscription of the jar found at Dair al-Aḏām, dated 872/1156 (*Ann. du Serv. des Antiquités*, i. 117—119; *B. I. F. A. O.*, iv. 75; *Dict. arch.*, i. 1707—1710; iii. 2866; Crum, *Coptic Monuments*, No. 8104). The incident which it commemorates should not be regarded as a persecution of the Christians, any more than we would charge the government with the plundering of the convents of Scete and the massacring of the monks by the Berbers, under the early 'Abbasids and in the time of the Fāṭimid Mustanṣir (Ibn Rāhib, p. 128; Renaudot, p. 443; Quatremère, *Mém.*, ii. 400). Churches and convents were destroyed wherever there was fighting and naturally Christian buildings were not spared in the burning of Fuṣṭāṭ by command of Shāwar [q.v.], who had a church restored at Kūṣ. The Ghuzz troops who accompanied Shirkūh quarrelled with the Fāṭimid, negro, Turk or Armenian troops and then the Copts; just as the soldiers of Shirkūh [q.v.] violated the tomb of Shenondi at the White Convent. The *History of the Patriarchs* records the execution of a monk who refused to apostatise. This can hardly be an isolated case at this time (Yaḥyā, p. 195—197, 203—205, 235—236, 239; Ibn al-Kalānisi, p. 66—68; Abū Ṣāliḥ, *fos* 25, 43, 47, 61—66, 81—82; Ibn Rāhib, p. 135—136; Ibn Muyassar, p. 71—72, 78—79, 82, 84; *P. O.*, iii. 288, 386—387; Kaḳkashandī, viii. 260; Maḳrīzī, ed. Wiet, iv. 226, 228—229, 231—234, 240; Būlaḳ ed., i. 357; ii. 286—288, 495—496, 507; Abu 'l-Maḥāsīn, ed. Popper, ii. 63, 101; Renaudot,

p. 367 sq., 381, 389—395, 399, 430, 505—507; Quatremère, *Rech.*, p. 247 sqq.; Quatremère, *Mém.*, ii. 342—345, 347—348; Marcel, *Égypte*, p. 108—109; Wüstenfeld, *Fatimiden*, p. 160, 189; *J. A.*, 1888, ii. 487—490; 1889, i. 63; 1921, ii. 105—106; Lane, *Manners*, ii. 299; Butler, *Copt. Churches*, i. 125—128, 232; Lane-Poole, *Egypt*, p. 119, 126—128, 143—144, 168—170; Becker, *Beiträge*, i. 62; *R. O. C.*, xiii. 196; xiv. 380 sq.; *Dict. arch.*, ii. 209; Derenbourg, *Oumara*, ii., fr., 266, n. 1, 306—307, 331, n. 2; Monneret de Villard, *Les couvents près de Schâg*, i. 28; *C. I. A.*, *Égypte*, ii. commentary on N° 587; *ibid.*, i. 551, ii. 572).

The Aiyūbid regime marks a contrast with that of the Fātimids. This must have applied to religious toleration as to other political problems. The new Sultāns did not take part in Christian festivals; but it would be wrong to believe that there were persecutions. Two facts, indeed, go to prove that the Copts were not oppressed. On the one hand the churches continued to be restored, and on the other, the viith (xiiith) century was the golden age of Arab Christian literature in Egypt. The Copts had kept their posts in the government service, although in 577 (1181) Saladin had forbidden them to follow the professions of secretary and physician; however the court continued to employ Christian physicians and the officials kept their positions. The double invasion of Egypt by the Franks in 615 (1218) and in 647 (1250) certainly did not increase Muslim toleration. Life was however far from being unbearable for the Christians in Egypt since the Syrian Jacobites took refuge there from the commencement of the Crusades. Besides, we may appeal the evidence of a Christian writer to show that the government kept its sangfroid and, above all, that it made, just like the Crusaders, but *mutatis mutandis*, a distinction between the Melkites and the Jacobites (*Hist. d. Patriarches*, in Blochet, *Hist. d'Égypte*, p. 555—558). One of the last Aiyūbids, Malik Kāmil [q.v.] was noted for his tolerance and his relations with Frederick II are well known. It is also known that he received at his court St. Francis of Assisi and, according to a Franciscan tradition, the Sultān became a convert and retired to die at Konya. This legend has at least the merit of showing that this sovereign left no unpleasant memories in Christian circles (Ibn Abi Ūsaib'a, ii. 82 sqq.; Maḳḳārī, Cairo 1302, i. 21; Blochet, *Hist. d'Égypte*, p. 102, 148, 309, 318, 409, 478; Renaudot, 479, 549—550; Marcel, *Égypte*, p. 160—161; *B. I. E.*, 1885, p. 359; *J. A.*, 1888, ii. 477, 481; 1889, i. 61, 72; 1902, i. 439; 1904, i. 31, n. 5; *Machr.*, xii. 487, 490; *B. I. F. A. O.*, i. 115; *C. I. A.*, *Féruasalem*, ii. 115, n. 1; *Congr. intern. de géogr.*, Cairo 1925, v. 141 sqq.; Chéneau, *Les saints d'Égypte*, ii. 65, 388 sqq.; *Bull. Comité Art arabe*, xxi. 102; Almagia, *L'opera degli Italiani per la conoscenza dell' Egitto*, i. 107—108).

The government of the Mamlūks gave the *coup de grâce* to Christianity in Egypt, which ceased to mean anything but a number of individuals. This period which extends from 648 to 923 (1250—1517) saw the completion of the ruin of the churches and the convents, the reduction of the number of Christians to the present day proportion and the disappearance of the Coptic language. The intelligent minority of the Copts not only continued to hold offices of state, but they managed the estates of the Mamlūk officers.

They were indispensable in the management of business and some Muslim writers had the courage to recognise this, while deploring their arrogance. In order to satisfy public opinion, the government from time to time decreed their dismissal, and a month after the decree, the Copts whom they found indispensable, resumed their offices. These periodic dismissals took place in 678 (1279), 682 (1283), 700 (1301), 721 (1321), 755 (1354), 822 (1419), 825 (1422), 852 (1447) (*P. O.*, xvii. 777; Ibn Fadl Allāh, *Ta'rif*, p. 63; Kaḷkaḷshandī, viii. 36; Maḳrīzī, ed. Wiet, ii. 88, 93, 110—111; Būlaḳ ed., ii. 42, 75, 85, 90, 237, 391, 497—498, 507; Quatremère, *Sultans mamelouks*, i., a, 231; ii., a, 8; b, 133, 179, 213; Abu 'l-Maḥāsīn, ed. Popper, vi. 398—400, 450, 456, 464, 468, 559, 665, 718, 724, 819—820, 823; vii. 160, 269, 272, p. 277, 587; Sakhāwī, 215; Ibn Iyās, i. 93, 201, 268; ii. 48—49, 67, 80, 171, 197, 255; 'Alī Pāshā, i. 27; vi. 40; Marcel, *Égypte*, p. 173; Quatremère, *Mém.*, ii. 223—225, 242, 247, 261—262, 288; *B. I. F. A. O.*, i. 126—127, 175, n. 4; *R. O. C.*, xiii. 196; Gaudefroy-Demombynes, *La Syrie*, cxvii.; Wiet, *Les secrétaires de la Chancellerie*, reprint from *Mél. R. Basset*, 22; *C. I. A.*, Jerusalem, i. 334—335; ii. 132; *ibid.*, i. 683, 846).

The government during normal times maintained courteous relations with the Coptic Patriarch, on whom the Mamlūk chancellery bestowed pompous titles. He forbade him to enter into secret engagements with the Negūs of Abyssinia. There were incidents in regard to this in 826 (1423) and in 852 (1448) (*P. O.*, xiv. 449—451; Kaḷkaḷshandī, xi. 85, 100, 395—405; Sakhāwī, p. 210; Abu 'l-Maḥāsīn, ed. Popper, vi. 572).

At the same time popular manifestations forced the government to take more serious measures than a simple dismissal of officials. Besides, the most severe measures were continually passed with the object of exacting a ransom; for the Christians were more especially molested at times of financial crisis for the government. One single incident stands out as worthy of attention. In 700 (1301), a date often already cited, the Mamlūk government caused the greater part of the churches to be shut throughout the whole of Egypt. It excepted the town of Alexandria, perhaps in order not to provoke foreign interference, for the Melkites also suffered by this order and two ambassadors sent by the Byzantine Emperor and the King of Aragon, obtained the re-opening of some of the churches (*P. O.*, i. 567; xii. 356, 477; xiv. 449; Maḳrīzī, Būlaḳ ed., ii. 8, 31—32, 130, 292, 399; Quatremère, *Sultans mamelouks*, ii., b. 180; Renaudot, p. 604—605; Quatremère, *Mém.*, ii. 223—224, 257; Ibn Iyās, ii. 35; Marcel, *Égypte*, 163; *J. A.*, 1887, ii. 210; J. Maspero, *Hist. Patr.*, p. 378).

The Muslim writers relate the story of the sacrifice of a virgin thrown into the Nile to obtain an abundant harvest, a custom which the Muslims had abolished (Sakhāwī, p. 12—13; Lane, *Manners*,⁴ ii. 229—230; *Bull. soc. Khédiv. de Géogr.*, vii. 158—159; J. Maspero and Wiet, *Matériaux*, p. 216—217; *Chronographia*, p. 242). It is hardly likely that the Christians had retained a human sacrifice, for which, besides, there is no evidence in classical texts (Maspero, *Hist. des peuples de l'Orient*, i. 24, n. 2; Frazer, *Adonis, Athlis, Osiris*, ii. 38—40; no analogy with sacrifices following military expeditions: Amélineau,

Actes, p. 80, n. 4). Special mention is made among the Christians of Egypt of a liturgical rite to secure the rise of the Nile (*Dict. Arch.*, iv. 2561—2562). In the Mamlūk period the Christians had still retained the custom of throwing into the Nile a little casket containing the finger of a martyr. This ceremony which gave rise to abuses, forbidden from 702 to 738 (1303—1337) was definitely suppressed in 755 (1354) and the Church of Shubrā-Damanhūr, where the festival took place in a suburb north of Cairo was destroyed (Idrīsī, *Descr. de l'Afrique*, transl. 178; *Masālik al-abṣār*, i. 361; Makrīzī, ed. Wiet, i. 292—296; Bulāḡ ed., ii. 500; Quatremère, *Sultans mamelouks*, ii., b, 213—214; Renaudot, p. 606; Sakhāwī, p. 12; Ibn Iyās, i. 206—207; *B. I. Egypte*, 1907, p. 167—168; *B. I. F. A. O.*, i. 176).

The Jacobite patriarchate in 1442 signified its adherence to the Council of Florence two centuries after a fruitless attempt at reunion with Rome attempted by the Patriarch Cyril III. The Coptic Church was united to Rome for a century and a half by very loose bonds and it appears as if the most of the people did not trouble about it, in spite of the correspondence exchanged between the Papacy and the Patriarch of Alexandria, and in spite of the Council of Memphis in 1582. In any case it was to regain the support of the Ottoman Pāshās that the Coptic Church dropped all relations with Rome (Renaudot, p. 611—612; Macarius, p. 298, 300, 303 *sqq.*, 323—326, 336; *B. I. E.*, 1904, p. 197—211; *Machr.*, x. 534—540; *Bessarione*, xxxiv. 133—161).

Under the Ottoman Pāshās, the financial administration remained largely in the hands of the Copts. Christian popular festivals, especially in the country, were held with the approval and even with the participation of the Muslim elements. This period saw the *avaries* flourish, about which the archives of the convent of St. Saviour of Jerusalem give so many particulars (Castellani, *Catalogo dei firmani*, Jerusalem, 1922). The Copts had to endure these fines inflicted on the slightest provocation, and this resulted in the closing of the churches until the fines were completely paid. The first governors exacted the payment of the special imposts due from tributaries. In the first half of the xiith (xviiith) century the assessment or the *qizya* was even increased. Then we come to a period of anarchy, where "nothing happened worthy of being recorded except irritating and arbitrary acts of the Emirs" (Djābarti, v. 208, 218). These troubles had economic reactions which affected the whole of Egypt, but it does not appear that the Copts suffered from them more particularly (Vansleb, *Relation*, p. 93, 110, 189—190; *Bib. d. Arabisants*, ii. 9—10, 12—13, 19; Marcel, *Égypte*, p. 234; Djābarti, ii. 10, 114—116; iii. 132, 157; iv. 144, 208—209, 217—221; v. 13, 23, 217—218; Savary, *Lettres sur l'Égypte*, i. 302; 'Alī Pāshā, vi. 84—85; Ch. Roux, *Les origines de l'expédition d'Égypte*, p. 41—43; *B. I. E.*, viii. 166—167).

Ryme says that on the arrival of the French, the Copts were "poor, brutalized and engaged only in the most ignoble callings"; they were "tax-collectors, spies, managers of the business affairs of the Mamlūks" (*Égypte, Un. pitt.*, ii. 27 *sq.*). Bonaparte did everything to prevent the Muslims from thinking that he favoured the Christians, who had nearly been massacred at the landing of the French. To "secure himself the friendship of

the people" Bonaparte forbade Christians to wear white turbans or to break the fast of Ramaḡān in public. After the revolt in Cairo the Muslims tried to put the blame on the Christians, who had not always been prudent. After various tergiversations the French administration created a system of taxation which "almost enabled them to do without the Copts". The latter assisted in pointing out the inconveniences of it. Besides, Copts had already been enrolled in the French army (*Égypte, Un. pitt.*, ii. 148, 152, 189, 193, 199; Djābarti, vi. 15, 26, 36, 40, 56, 58, 93, 95, 97, 119, 151, 175—178, 208, 210—211, 214, 216—217, 253, 255—256, 259, 267, 297, 306; vii. 30, 48, 220—221; *B. I. E.*, viii. 8).

The departure of the French made Muslim reprisals inevitable but an official circular ordered that the Christians were not to be molested in whom "it was excusable to have joined the French". The Copts were again employed as tax-collectors, but it must be noted that the government was still able to extort money from them, and that in 1230 (1815) the poll-tax was again levied (Djābarti, vii. 38, 42, 46—48, 52, 56, 77, 177, 300, 306, 308, 318, 320, 393, 397, 405; viii. 149, 201, 283; ix. 17, 87—89, 91, 111, 113—114, 166—167, 180, 184, 297; Macaire, p. 367—372).

This exposition shows the rapidity of the islāmisation of the Copts. The energetic suppression of the first revolts weakened the power of resistance of the Christians, who from the third (ninth) century no longer had a majority in Egypt. According to the text of the treaty made after the Arab Conquest, there were six or even eight million Christians subjected to taxation; as women, old men and children were exempt from it the lowest figure would give 24 millions as the total number of inhabitants in Egypt, which is excessive. The re-assessment of the year 112 (730) is said to have given five million Copts liable to taxation, a number which we also consider greater than the reality. In practice the poll-tax collected under Mu'āwiya (41—60 = 661—680) five million dīnārs, a figure which was reduced under Hārūn al-Rashīd (170—193 = 786—809) to four millions, and fell a little later to three millions. Besides, at the end of the first (viith) century the governors wished to put an end to the conversions which were impoverishing the Treasury, and if the Caliph 'Umar II had not been opposed to it, the new converts would have had to continue to pay the *qizya*. Anxious to adhere to Islām the Copts sometimes even tried to attach themselves to Arab tribes; a legal scandal on this point made some stir (Kindī, p. 397—399, 412—415). In this connection we may go back to the preceding paragraphs and reflect that each government measure of any importance brought about conversions en masse. We may recall the tragic visit of Marwān II, when 24,000 conversions were made, the great persecution of Hākim, the dismissals of officials under the Mamlūks; in 721 (1321) in a single day in the town of Qalyūb 450 conversions to Islām were registered. Nothing can better show the diminution in the number of Copts in the Mamlūk period than to give that in the number of episcopal sees. The Council of Alexandria in 320 brought together almost 100 national bishops; at the end of the seventh century there were still over sixty. In the xivth century there were only 40 sees (Ibn 'Abd al-Ḥakam, p. 70, 87; Euty-

chius, ii. 24; *P. O.*, v. 34, 52, 75; xvi. 233; Ya'qūbī, *Kit. al-buldān*, 339; Abū Ṣāliḥ, fos 12, 22, 26, 92; Michael, ii. 489; Maḳrīzī, ed. Wiet, i. 312, 321, 326; ii. 28—29, 94—95; Būlāk, ii. 287, 495—496; Renaudot, p. 457 sq., 509; *Bib. d. Arabisants*, ii. 184—185; Quatremère, *Mém.*, ii. 258, 444; Amélineau, *Géographie*, p. 571—577; Lane, *Manners*, i. 302; J. Maspero and Wiet, *Matériaux*, p. 192; Becker, *Beiträge*, ii. 106, 111, 116; Becker, *Pap. Schott-Reinhardt*, p. 18; *M. l. Égypte*, vi. 21—22, 77, 114; Lane-Poole, *Egypt*, p. 28; Bell, *Aphr. Pap.*, p. 167—168; *Dict. arch.*, iv. 2430, 2436; *Chronographia*, p. 910, 1226, 1243, 1418; J. Maspero, *Hist. Patr.*, p. 40, n. 5, 245; *Rev. d'hist. ecclés.*, xvii. 505—507; Moh. Abdū, *Risālat al-tawḥīd*, fr. transl., p. 125; *ibid.*, ii. 8).

The estimates of the numbers of Copts made by travellers are not to be considered very accurate (Vansleb, *Relation*, p. 15; *Egypte, Un. pitt.*, ii. 26—27; iii. 133; Isambert, *Itin. de l'Orient Égypte*, p. 34; Clot Bey, *Aperçu sur l'Égypte*, i. 167, 243—244; Lane, *Manners*, i. 27—28; ii. 273). Here are the figures from the last three official censuses:

	1897	1907	1917
Total population	8,971,761	11,189,978	12,743,402
Copts	609,511	706,322	1,026,262

The majority of the Copts are in Upper Egypt:

Total population	4,058,296	4,630,760	5,186,872
Copts	484,770	554,282	634,552

The following are the provinces containing the largest number of Copts:

Asyūt	170,662	194,955	216,414
Girgā	112,562	127,641	141,330
Minīyā	94,088	114,748	134,753
Ḳenā	53,777	58,653	68,933

In a notice on the Copts, it is necessary to indicate briefly the foreign elements which have mingled with the native population since the Arab conquest. The first conquerors settled in the country and by the beginning of the second (viith) century the Arabs of Kais were established in the eastern part of the Delta and the beginning of the next century is marked by the arrival at Alexandria of the Spanish exiles from Cordova. Upper Egypt, especially in the extreme south, kept almost intact the population which had previously inhabited it. Under the Tulūnids there were in the army 24,000 negroes and 40,000 Turks; the latter were still there under the Ikhshīdids and under the Fāṭimids, who also recruited Berbers, Greeks, Slavs, Persians, Turks and Armenians. Saladin abolished the negroes and the Armenians whom he replaced by the Ghuzz and the Kurds. The rule of the Aiyūbids and that of the Mamlūks carried on, on a large scale, continued purchases of Turkish and Circassian slaves. Egypt was thus peopled by foreign mercenaries, who, in other regions, would have prevented the native stock from remaining pure. But these foreigners were often exterminated in the course of the revolutions and above all foreigners and particularly the Mamlūks proved unfertile in the land of Egypt. When they married foreigners they had no children by them, or the children died before reaching

manhood. From their marriages with native women were born delicate children, and the race was rarely perpetuated as far as the third generation. Without insisting too much upon its importance we note in regard to this fact an Arab saying which attributes a special fecundity to Coptic women. To sum up, agreeing with Massignon and all the Orientalists, we estimate that 92% of the Egyptian population is of Coptic origin. On this particular point we know nothing so erroneous as the chapter devoted to Egypt (p. 526—528) in *Races et l'Histoire* by Eug. Pittard, *Descr. de l'Afrique*, tr., p. 193; Ibn Muyassar, p. 1—2, 34, 79; *B. I. F. A. O.*, ii. 34—36; Kalkashandī, i. 202 sqq.; iv. 67—72; Ibn Khaldūn, *Hist. des Berbères*, i. 9—10; Maḳrīzī, ed. Wiet, i. 13, n. 12, 214, n. 13; ii. 43—46; iii. 251; iv. 33, 83; Būlāk ed., ii. 4, 12, 14; Quatremère, *Mém.*, ii. 84 sq., 190—219; Wüstenfeld, *El-Makrizi's Ab-handlung üb. die in Ägypten eingewand. ar. Stämme*; Blochet, *Hist. d'Égypte*, p. 106—140; Quatremère, *Sultans mamelouks*, i. a, 40—41; ii. b, 187 sqq.; Abu 'l-Mahāsīn, ed. Popper, vii. 81—82; Volney, *Voy. en Égypte*, i. 73 sqq.; Marcel, *Égypte*, p. 234; *Egypte, Un. pitt.*, ii. 27—28; iii. 47, 103—115; *Bib. d. Arabisants*, ii. 24—25; Clot Bey, *Aperçu sur l'Égypte*, i. 158 sqq.; Lane, *Manners*, i. 31—32; Becker, *Beiträge*, ii. 192—193; Lane-Poole, *Egypt*, p. 28—29; *C. I. A.*, *Egypte*, i. 722—723; d'Harcourt, *l'Égypte et les Égyptiens*, 85 sqq.; *R. M. M.*, lvii. 12, 26, 75—77; *ibid.*, i. 1, 842; ii. 7, 44).

Summing up the stages of the islāmisation of the Copts in a few lines, we may say that the Christians were no longer in the majority by the third (ixth) century, two hundred years after the Arab conquest and it can be estimated that by the viiith (xivth) the Christians were barely, as in our times, a tenth of the total population of Egypt. It remains to account for the causes of this strangely rapid conversion of a race which had been able to recover on many occasions, whom the persecutions of Decius and Diocletian had not subdued and whom the Byzantines were never able to settle. On the part of the Muslims, however, persecutions, in the sense understood in Roman times, were extremely rare. It is undeniable that there were martyrdoms which cannot be explained away; but the vast majority of the executions ordered by the Government show a particular characteristic on which it is necessary to insist. The Muslims have never wavered on two points; the death penalty was ordered in the case of a public insult to the Muslim religion and in that of conversion from Islām to Christianity. This observation must, for Egypt, be applied to the majority of European monks martyred in Egypt; the latter were, besides, in the eyes of the government, more or less suspected of espionage. That the church should honour them as martyrs is to be expected, but it would be wrong to call this persecution. Indeed the records of Egyptian martyrs, which contain innumerable lists for the Roman period, are exceedingly poor for the Muslim period and Christian epigraphy furnishes no further light (*P. O.*, i. 633—636; iii. 436; xvi. 203—205; xvii. 578—580, 754; Abū Ṣāliḥ, fos 84—86; Maḳrīzī, Būlāk ed., ii. 493; Renaudot, p. 426—427, 564—565; Maillet, *Descr. de l'Égypte*, ed. 1735, p. 93 sqq.; Quatremère, *Mém.*, ii. 251—258; *B. I. E.*, 1885, p. 353 sqq.; *J. A.*, 1887, i. 113 sqq.; Lane-Poole, *Egypt*, p. 27—28; *B. I. F. A. O.*,

i. 114, 136—137; iv. 204; *Dict. arch.*, iii. 2829; Chéneau, *Les saints d'Égypte*, ii. 394—400; *Anal. Bolland.* xl. 101, 107, 111, above, ii. 873, 876; an article by Père Delehay, which I have not been able to consult in *Constructive Quarterly*, Dec. 1921).

The Christians of Egypt did not then become Muslims, in order to escape persecution, although this has been asserted (Amélineau, *Actes*, p. 1); nor did they go over, as had been recently but wrongly written, "to the attraction exercised by a new religion upon men wearied by the narrow formalism of their churches" (B. Michael and Moust. Abd al-Razik in transl. of *Shaiḥ M. Abdū, Risālat al-Tawḥīd*, p. lxxxiii.). It is more just to believe that Christianity "made no change in the spirit of the race, that it did not penetrate into the intimate life of individuals and that their souls never were sincerely and thoroughly Christian" (Lefebvre, *Rec. Inscr. Grecques Chrétiennes*, p. xxiv.; cf. Gayet, *Coins d'Égypte*, p. x. 128). This cannot be denied, but the true cause for conversion lay in the fiscal measures imposed upon the Christians by the Muslim law: "What the Arabs wanted was money, money, more money and yet more money" (Becker in *Isl.*, ii. 364; cf. *R. M. M.*, lvii. 77). We have seen the Copts at first enter convents, flee from their villages, foment revolts, not in an access of faith nor in order to defend their oppressed consciences, but in order to escape demands of the fiscal system. The history of the churches of Egypt under the Muslim domination is a sordid story of money; besides, at all times the Simoniac heresy was the favourite sin of the Coptic Church (Michael, iii. 80; *Bib. d. Arabisants*, i. 257—258; Abū Ṣāliḥ, fol. 31; Blochet, *Hist. d'Égypte*, p. 409, 558; Renaudot, p. 160, 325, 373, 379, 384, 396, 432, 510, 572, 578—581, 588, 590—591, 593; Quatremère, *Mém.*, ii. 444—445; *R. O. C.*, xiv. 381; J. Maspero, *Hist. Patr.*, p. 272—273).

From ancient times until the present day the Egyptians have been celebrated for their love of money, and their hatred of paying taxes. A passage in Ammianus Marcellinus, a letter of Hadrian, has often been quoted. But in regard to this miserable question of money, sufficient attention has not been drawn to one of the rules of the patriarch Peter, the Martyr; these rules imposed penalties upon apostates who were desirous to re-enter the Church; but one of them, to say the least strange, "excluded from all censure Christians who had paid not to be prosecuted and had thus at least shown their "contempt for money" (Aimé-Giron, *Légendes coptes*, p. 1 sqq.; *Dict. arch.*, i. 1102, 1105; iv. 2425, 2433; J. Maspero, *Organ.*, p. 15, 95; Clot Bey, *Aperçu sur l'Égypte*, ii. 287; Rouillard, *Admin. civile*, p. 6, 138, 165 sqq.). Thus it is that the Christians became Muslims in order to gain the benefit of an inheritance or to enjoy their property in complete tranquillity (Abū Ṣāliḥ, *fos* 39—40).

It was in the offices of state that the Copts were particularly able to enrich themselves or satisfy their passion for governmental intrigue. The Muslim historians assure us that the Copts devoured the revenues of the state and complained of the severity of their superiors in regard to accounts. It was almost with the object of not losing their lucrative posts, during the periods when the Muslims were chafing against their presence in the offices of state, that the Copts were more willing to become converts when they

had not been able by bribing their masters to obtain the withdrawal of the edict, which dismissed them from office (Yāḳūt, *Irshād*, ii. 247; Maḳrīzī, ed. Wiet, i. 335; ii. 24; Quatremère, *Sultans mamelouks*, ii. b, 179, 221; *Bib. d. Arabisants*, ii. 184, 192; J. Maspero, *Hist. Patr.*, p. 140, 178; *C.I.A.*, *Égypte*, ii. commentary on N^o. 589; *M.I.*, *Égypte*, vi. 144).

The Coptic tax-collectors "who seemed to avenge on the poor Arabs the fact that the Coptic nation alone was liable to poll-tax" used a secret system of keeping accounts in order to make themselves indispensable. It was in vain for example that Napoleon tried to do without them. Muḥammad 'Alī definitely suppressed this secret method of accounting at the same time as he imposed a check upon their embezzlements (*Bib. d. Arabisants*, ii. 19; Volney, *Voy. en Égypte*, 1825, i. 64, 176; *Égypte, Un. pitt.*, iii. 7, 160; Djabartī, viii. 240, 242—243, 248, 275—278; ix. 88—89, 121; *B.I.E.*, 1889, p. 285 sqq.; Macaire, p. 360 sqq.).

This general attitude of the Copts has not been without influence upon the verdicts of Muslim writers; for example one should read the opinions quite devoid of favouritism of the physician Ibn Riḍwān and the Spanish traveller Umaiya b. 'Abd al-'Azīz. The travellers and writers of the west are, in their turn, very severe upon the Copts. It may be recalled here that the word *Kibṭī* was even in Turkish used as an insult and applied to mountebanks (Nuḡairī, i. 293—294; Maḳrīzī, ed. Wiet, i. 193, 206—207, 213, 215; Būlāḳ ed., i. 340; Ḳāḷkāshandī, iv. 43; Quatremère, *Mamelouks*, ii. b, 247; Clot bey, *Aperçu sur l'Égypte*, ii. 132 sqq.; Lane, *Manners*, ii. 273 sqq.; Butler, *Copt. Churches*, i. 334—336; Basset, *Mélanges africains*, p. 286—287; *Actes du Congrès de Géogr. du Caire*, iv. 245—247; d'Harcourt, *L'Égypte et les Égyptiens*; Vansleb, *Relation*, p. 41—43; *R. M. M.*, xx. 125; Isambert, *Itin. de l'Orient, Égypte*, p. 153, 178—184).

One last question arises: Has this wholesale conversion of the Copts to Islām had any economic consequences? It has been said that the Muslims of Egypt were not productive, relying upon the undoubted fact that the industrial centres were largely peopled by Christians. The question is difficult to decide. It is stated that at the Mamlūk period the greater part of the native industries had perished, and special mention is made of the disappearance of centres of the weaving industry which the early historians and geographers mention: Akhmīm, Aṣhmūnain, Asyūt, Bahnasū, Dabīḳ, Damietta, Tinnis, Tūna. It cannot however be believed that a simple change of religion could make the artisans abandon their occupations, and it is necessary rather to blame, after the terrible economic crisis of the reign of the Fāṭimid Mustanṣir, the excessive and extortionate taxation of the Aiyūbids and especially of the Mamlūks. The Copts, moreover, had made themselves famous by a particular industry which has not yet completely disappeared; the ship-building yards were at the beginning of the Arab occupation prosperous to such an extent that on the establishment of an arsenal at Tunis, the governor of Egypt, 'Abd al-'Azīz b. Marwān sent 3,000 Copts there. A recent enquiry has shown how much the technical language of the boat-builders of the Nile still owed much to the ancient national language (Bell, *Aphr. Papyri*, xvi. sq., xxxii. sqq.; J. Maspero, *Organ.*, p. 56; *Z. A.*, xxii. 147 sqq.;

Rouillard, *Admin. civile*, p. 185; Bakrī, transl. p. 84; *B. I. F. A. O.*, xx. 45 sqq., 301 sqq.).

The Arabisation. The Arab occupation gave new life for a period to the Coptic language, a victory without result, since the Coptic language was to be absolutely superseded by Arabic. At first the administrative offices continued to be conducted in Greek, as we shall show in detail later on. But in regard to geographical names we see a somewhat curious nationalist phenomenon. Greek place-names, especially the capitals of pagarchies disappeared completely and were replaced by transcriptions of the former Greek names. The Greek names only remained for places founded by the Greeks (Fustāt, al-Iskandariya). This revenge of the Copts on the Greeks was final since at the present time numerous place-names are still based on the Coptic names (Cham-pollion, *L'Egypte sous les Pharaons*, i. 267, 38 sqq.). At the same time, the Scripture lessons which were read in Greek in the church services and explained in the Coptic language were henceforth only read in Coptic until Arabic commentaries became necessary. In the same way Christian epigraphy became Coptic, while it had been Greek up to the sixth century (Quatremère, *Rech.*, p. 15; *Dict. arch.*, iii. 2821).

In the year 87 (706) the governor 'Abd Allāh b. 'Abd al-Malik ordered administrative documents to be drawn up in Arabic (Ibn 'Abd al-Hakam, p. 122; Kindī, p. 58—59; Maḳrīzī, ed. Wiet, ii. 57—58; Quatremère, *Rech.*, p. 32, 290; *Bib. d. Arabisants*, ii. 196; Becker, *Beiträge*, ii. 130—131; *Chronographia*, p. 949, 1024, 1056—1057, 1110; Chassinat, *Pap. médical*, p. 6). We now give some facts deduced from an examination of papyri. The first bilingual papyrus in Greek and Arabic dates from the year 22 (643). There is another of 57 (677), the last is of 101 (719). But the protocols of these papyri remain bilingual down to 102 (720). Alongside of them are papyri written wholly in Greek of which the latest are dated 164 (780). The first papyrus composed wholly in Arabic is dated 90 (709). The Arab government readily accepted communications in Coptic but does not seem to have used it regularly (Becker, *Beiträge*, ii. 131, 145; *Pap. Schott-Reinhardt*, p. 28—29; Bell, *Aphr. Papyri*, p. xlvii, 417; *Z. A.*, xx. 68—104; xxii. 137—154; *P. E. R. Mitt.*, i. 6, 50; *Isl.*, ii. 245—283, 359—384; iii. 132—140, 369—373; iv. 87—120, 313—314; *W. Z. K. M.*, xx. 139 sqq.; *Chronographia*, p. 254, 899, 911, 951, 1112, 1181, 1226, 1623; *Rev. historique*, cxix. 276; *Corp. pap. Raineri*, iii. a, 22; b, c.—ci.). The first inscription in Arabic found in Egypt is painted on a house at Antinoë dated 117 (735) (*C. I. A.*, *Égypte*, i. N^o 513; *ibid.*, i. 388). It is probable that some Arab officials learnt the Coptic language — the case of the Ḳāḍī Khair b. Nu'aim (120—128 = 738—746) cannot have been isolated (Kindī, p. 349, note; *J. R. A. S.*, 1910, p. 778). The patriarch Michael (728—752) had a petition sent to the governor 'Abd al-Malik b. Marwān (132—133 = 750—751) written in Coptic and in Arabic (Quatremère, *Rech.*, p. 32—33); but he himself did not know a word of Arabic, for he required an interpreter to converse with the Caliph Marwān II (Quatremère, *Rech.*, p. 33; Chassinat, *Pap. Médical*, p. 6). In 145 (762) at Fustāt the Coptic language was generally understood (Ibn 'Abd al-Hakam, p. 30;

Kindī, p. 113). During his sojourn in Egypt (217 = 832) the Caliph Ma'mūn was accompanied by an interpreter, whose services were by no means unnecessary (Maḳrīzī, ed. Wiet, i. 340; Quatremère, *Rech.*, p. 43—44). The Patriarch Joseph (821—850) addressed the bishops who had become themselves his accusers in Coptic and some of the Muslims understood his discourse (*P. O.*, x. 525; Quatremère, *Rech.*, p. 34). The clergy in the ninth century had learned Arabic well, for a Muslim, who wished to be converted was instructed by a priest who expounded to him in Arabic the Coptic text of the holy scriptures (Quatremère, *Rech.*, p. 34—35). Let us note in passing a Christian stele in Coptic and Arabic, dated 625 A. M. = 909 (*Ann. du serv. des Antiquités*, xiii. 285—286). The Coptic medical papyrus published by Chassinat (*M. I. F. A. O.*, xxxii.) frequently employs Arabic terminology, transcribed in Coptic characters and in some places in Arabic script. It was written between the ninth and tenth centuries by an author who used both languages with facility and a note might even lead us to suppose that he was more familiar with Arabic than with Coptic. He frequently gives the preference to Arabic terminology over Greek or Coptic, quotes numerous Arabic physicians, and even uses an Arabic translation of Galen, although he knew Greek (Chassinat, *Pap. Médical*, p. 4). On account of certain transcriptions, Chassinat would date about this time the alchemical fragments which Stern put to the xiiith or even as late as the xivth century (*ibid.*, p. 5). But according to Muḳaddasī (about 325 = 985) the Christians of Egypt still spoke Coptic (Muḳaddasī, p. 203), which is confirmed by popular Coptic poetry of this period (*An. Bolland*, xl. 244, n. 3). The celebrated passage in Severus or Ashmūnain is well known. "I have begged the assistance of Christians who have translated for me the facts which they had read in Coptic and in Greek into Arabic, which is now spread to such an extent throughout Egypt that the greater part of the inhabitants do not know Greek and Coptic". This statement is absolutely accurate on the first point, as we possess in Coptic the biographies of patriarchs that Severus has faithfully translated (*P. O.*, i. 115; Quatremère, *Rech.*, p. 35; Ladeuze, *Cénobitisme pachômien*, p. 69; *M. R. O.*, i. 110; Chassinat, *Pap. médical*, p. 6). Thus in the fourth (tenth) century the Coptic clergy wrote in Arabic when they wished to be understood; this is especially the case in regard to Severus and Eutychius (Becker, *Beiträge*, ii. 131; *ibid.*, ii. 7). It is from the same period that an Arabic text written in Coptic characters dates (*B. I. F. A. O.*, i. 1 sqq.; Chassinat, *Pap. médical*, p. 5, 23). Besides, the Coptic language began to be corrupted; this is the case with a document relating the persecutions of al-Hakim (Quatremère, *Rech.*, p. 247 sqq.). It seems however, too much to assert that in the xivth century, or perhaps earlier, Coptic was no longer written (*Dict. Arch.*, iii. 2821). The geographer Bakrī (d. 1094) even asserts that around Tripoli in Barbary certain groups still spoke Coptic (Bakrī in Quatremère, *Rech.*, p. 293). Athanasius of Ḳūs prepared in Arabic his grammar of the Coptic language, but noted that from his time two dialects the Buhaïric and the Saidic were still used (Quatremère, *Rech.*, p. 20—21). Mawḥūb b. Maṇṣūr, the continuer

of Severus of Ashmūnain, still used biographies written in Coptic (*ibid.*, p. 37; Renaudot, p. 418). Abū Ṣāliḥ, who records a Coptic inscription dated 1043 says that in the sixth (xiith) century educated men among the clergy still knew Coptic (Abū Ṣāliḥ, *fos* 41, 45); this was so in regard to the patriarchs Cyril II (1076—1090) and Gabriel II (1132—1145) who wrote as elegantly in Coptic as in Arabic (Renaudot, p. 407, 501; Quatremère, *Rech.*, p. 292; Butler, *Copt. Churches*, ii. 84). The latter translated into Arabic the liturgical books (Michael, iii. 235; Renaudot, p. 467). The investiture of the patriarch Macarius (1101—1127) was celebrated in Greek, in Coptic and in Arabic (*P. O.*, i. 231; Renaudot, p. 488). The heretic Mark b. Kānbar (d. 1166) to spread his doctrine expounded the Holy Scriptures in Arabic from the Coptic text (Abū Ṣāliḥ, *fos* 9 *sqq.*, 14; Makrizi, *Bulāk*, ii. 496; Quatremère, *Rech.*, p. 36; Graf, *Ein Reformversuch innerhalb der Kopt. Kirche im zwölften Jahrh.*).

At the end of the xiith century a converted Jew became fluent in the Coptic language (Renaudot, p. 525; Quatremère, *Rech.*, p. 36—37). Abū Ṣāliḥ mentions that in his time at Ešnā Christians marched in front of wedding processions even Muslim ones, and chanted formulae in Saidic Coptic (f. 102; Quatremère, *Rech.*, p. 43). We have already mentioned the Coptic inscription of Dair al-Aẓām, dated 1156; we may here note that of the tombs opposite al-Aswān dated 1173 which refers to the expedition of Tūrān Shāh into Nubia (*Dict. Arch.*, ii. 2879).

These two texts support in a remarkable way a passage in Abū Ṣāliḥ who says that in 554 (1159) Coptic was still being studied (Abū Ṣāliḥ, f. 45). The story of the martyrdom of John of Phanidjōit which dates from the beginning of the xiiith century clearly marks a decline, for we find many Arabic words in it (Quatremère, *Rech.*, 401; *B. I. E.*, 1885, p. 356; *J. A.*, 1887, i. 120—121; *B. I. F. A. O.*, i. 113 *sqq.*; Chassinat, *Pap. Médical*, p. 6; *An. Bolland.*, xl. 245). The translation of the sacred books was continued and while the services were always celebrated in Coptic, the lessons were explained in Arabic (Villegier, *Observances liturgiques*, repr. from *Le Muséon*, xxxvi. 49—50, 65, 111—112). Perhaps the clergy no longer understood Coptic; the patriarch Michael V (1165—1166) was not able to read either Coptic or Arabic (Renaudot, p. 514; Quatremère, *Rech.*, p. 37—38). The latest Coptic inscriptions are of this date, those of the White Convent in the xiiith century; those of the painter Mercury, one of which is dated 1301 at the Red Convent, the other 1318 at the Convent of St. Simeon; and lastly the bilingual inscription (Coptic and Arabic) on a rock between Aswān and Kūm-Ombo, dated 1337 (*Dict. arch.*, iii. 2870—2871, 2878—2879; *J. of Theol. Studies*, v. 554—555; *M. F. O.*, v. 6, 133*; *B. I. F. A. O.*, vi. 3—4; Monneret de Villard, *Les Couvents près de Schâg*, i. 28 *sqq.*). While an ecclesiastical diploma was in 1256 prepared entirely in Arabic, an ordination diploma of 1363 was still written in Arabic and in Coptic (*Ann. du Serv. des Antiquités*, xi. 177—185; *Proc. of Bibl. Arch.*, xx. 270—276). The latest in date of Coptic manuscripts is of 1393 (Stern, *Copt. Gramm.*, p. 2). The decline is quite complete and it is clearly wrong to say that towards the end of the reign of the Mamlūk Sultāns, an order was made to close the Coptic schools and that the teaching of the Coptic language

was forbidden (*Égypte, Un. pitt.*, iii. 159). At no time indeed does such a measure seem to have been taken. We may note here that Abyssinia has "received in a very singular fashion the imprint of Arabicisation by means of the Arabic literature of the Christian Copts in Egypt" (*R. M. M.*, lvii. 95).

The celebrated passages of Makrizi are well known which declare that in the majority of monasteries of the district of Asyūf, Greek and Coptic were both known and that Coptic was still spoken. Some people naturally have been led to say that this assertion is an exaggeration. In our opinion one can go further; it is probable that Makrizi quotes on this occasion an early writer, Shābushtī for example (d. 390 = 999); it must not be forgotten that Makrizi is a compiler who often does not give his sources (Makrizi, *Bulāk*, ii. 507; Quatremère, *Rech.*, p. 42; *Dict. arch.*, iv. 2481, 2486; Lane, *Manners*, ii. 282; Steindorff, *Kopt. Gramm.*, p. 2; *R. O. C.*, xiii. 192, 194; Ladeuze, *Cénob. pakhômien*, p. 69; Chassinat, *Pap. Médical*, p. 6). — Chassinat holds that the copy of the *Theotokies*, a Coptic text written in Arabic characters, can scarcely be of an earlier date than the xivth or xvth century. It is also evidence that Coptic had been completely neglected for, in order to learn the pronunciation, it was necessary to have recourse to the Arabic alphabet (*B. I. F. A. O.*, v. 91 *sqq.*; Chassinat, *Pap. Médical*, p. 23—24).

There remain to be noted certain isolated facts which show that a few Copts, until the middle of the last century, still used the ancient national language (Vansleb, *Relation*, p. 363; Quatremère, *Rech.*, 44, 293; *Dict. arch.*, iii. 2822; iv. 2486; *R. M. M.*, lvii. 77; *Égypte, Un. pitt.*, iii. 117; *Zeitsch. f. aeg. Sprache*, xxxix. 87). — As to the care which the Coptic clergy took of their collections of manuscripts reference can be made to the work of Hyvernāt (*Rev. biblique*, x. 442—428).

In brief a rude blow was dealt to the national language from the time that the Arabs firmly established the use of their own language in government offices. The conversions *en masse* which had taken place from the first century induced the new Muslims to learn the language of the Kur'ān. Step by step the Arabs passed from the régime of a military occupation to that of a colonisation, and, doubtless, this was the principal factor in Arabicisation. The necessity of buying and selling to the townspeople forced the Copts to learn the Arabic language, and even to write it. The Coptic language survived for several centuries, losing ground in each generation, ended by quite disappearing from everyday life, being restricted to the church services and was not understood by the people at least from the viith (xiiith) century (*ibid.*, ii. 7). The *Vocabulaire* published by G. Maspero may be the latest document of spoken Coptic (*Romania*, xvii. 481—512; Chassinat, *Pap. Médical*, p. 36).

It is quite natural that a certain number of Coptic words have survived in the Arabic of Egypt, but it is wrong to think that Coptic grammar has in any way influenced Egyptian Arabic (*Z. D. M. G.*, l. 653—656; Stern, *Kopt. Gramm.*, p. 5—6; *B. I. F. A. O.*, ii. 212—216; and the authors quoted in *B. I. F. A. O.*, iv. 33—38).

Christian Literature in Arabic. Literature in the Coptic language consists almost

entirely of religious works, translations of the Old and New Testament, and Lives of the Saints for the most part translated from the Greek. This literature has been roughly handled by J. Maspero, who admits however that Greek had supplanted Coptic amongst the educated circles of the Christian population and that Egypt produced works of value in the Greek language under Byzantine rule. Coptic literature proper did not have the time to develop, and after having lived in translations, perished without producing a single original work (J. Maspero, *Hist. Patr.*, p. 17—18, 24, 27, 33, 51; *B. I. F. A. O.*, iv. 194—195).

Coptic literature, confined to the liturgy and to the moral education of the people consists of ecclesiastical works, lives of saints and of pious individuals, which were compiled in the monasteries and which we must deal with as some of them are translations or adaptations of them in Arabic. It has the faults and merits of a popular literature. The short stories of the lives of the monks in their convents, with their familiar apparitions, in which demons and even Christ appear frequently and often in a burlesque fashion, have in every way a very infantile character. In this literature always written for edification and for an uneducated class, the marvellous always plays a prominent part — the marvellous of a quite naive kind, and it is surprising to note to what extent miracles, clumsy imitations of those of the prophets, increase in the stories of the Copts (*Dict. arch.*, iii. 2820—2821; *B. I. E.*, 1885, p. 336; 1886, p. 308—309, 356; Chéneau, *Les saints d'Égypte*, ii. 142; Gayet, *Coins d'Égypte*, p. 4; J. Maspero, *Hist. Patr.*, p. 57; Ladeuze, *Cénob. pakhômien*, p. 141—145, 217, n. 1; *Anal. Bolland.*, xl. 148).

In agreement with Casanova we believe "that the Arabic translations of Coptic works were made at the time when the Fātimids who had shown favour to the Copts, reigned in Egypt, and when there was a kind of renaissance of Christian literature, a renaissance which was manifested by the number of works written in Arabic". Of all this hagiographic literature in Arabic, the *Lives* of Shenūdi, Pakhomios, Pisentios, and of Victor, son of Romanos, are the best. These are panegyrics, not chronicles or biographies. It is convenient to place here the Arabic Jacobite Synaxary, published in the fifteenth century by Michael of Mahīdj, of which a contemporary recasting has been recently republished under the title *al-Amīn al-Ṣādīq*. Certain quotations from the liturgical and ecclesiastical texts enable us to pass in review the old writers who enjoyed popularity among the Christians in Egypt. The latter translated into Arabic the canons, sermons and homilies of St. Athanasius, of St. Basil, of Ephraim the Syrian, of St. Epiphanius of Alexandria, the canons of Pope Clement, the sermons of Cyril of Jerusalem, of Gregory of Nyssa, of Gregory of Nazyanze, numerous treatises and homilies by St. John Chrysostom, treatises by St. John of Damascus etc. (*B. I. F. A. O.*, i. 20; Ladeuze, *Cénob. pakhômien*, p. 84 sqq., 116; *Anal. Bolland.*, xl. 91—113, 127—154; Haase, *Altchristl. Kirchengesch.*, p. 115).

Without producing a writer of the class of Firdawsī, the Copts have left us a history of ancient times, but it was the Muslims who wrote it: Ibn ʿAbd al-Ḥakam, in his *Futūḥ Miṣr*, Masʿūdī in his *Murūdj al-dhahab* and notably in his *Akhbār al-zamān*, later Ibn Waṣīf Shāh, so often quoted

by Maḳrīzī. We know also these legends from the *Égypte de Murtadī fils du Gaphiphe* (Murtaḍā b. ʿAfīf) and the anonymous *Abrégé des Merveilles*. G. Maspero has clearly brought out that the documentation of these works was mainly Coptic (*Journ. des Savants*, 1899, p. 69—86, 154—172, 277; *Klio*, ix. 20).

Nevertheless the Christians in Egypt produced a certain number of historians of note who do not make a bad show by the side of the Muslim annalists. They are very valuable for the history of their own country, and much use of their works has been made in this article. The first in date, Eutychius (263—328 = 877—940), in Arabic Saʿīd b. al-Batrik, the Melkite patriarch of Alexandria, wrote, besides medical treatises, a history which extends from the creation of the world to events contemporaneous with the author. Masʿūdī praises his work, in which important sources have been utilised. A continuation of his history written by one of his relatives, Yaḥyā b. Saʿīd al-Anṭākī deals chiefly with contemporary events in Egypt and in Syria. An account of the years 328—425 (940—1034) is given there. The first Jacobite is Severus b. al-Muḳaffaʿ, bishop of Aṣhmūnain about the year 985. He was a very fertile writer, since, according to Abu ʿl-Barakāt, he composed twenty-six ecclesiastical and apologetic treatises, amongst which a "*History of the Councils*" and a "*Refutation of Eutychius*" are well known. But the most precious work is in our opinion his "*History of the Patriarchs of Alexandria*" which was continued by the deacon Maḥḥūb b. Maṣṣūr (about 1087). Although an Armenian, Abū Ṣāliḥ cannot be omitted from this list, since he wrote in Egypt from native sources, especially Muslim ones. His *History of the Monasteries* contains information of every kind, geographical, archaeological, historical and ecclesiastical. With the help of this book compared with Muslim works, it is possible to estimate the favour which the Christians enjoyed at the Fātimid court. Towards the end of the thirteenth century, Ibn al-Rāhib (Abū Shākir Buṭrus) produced a general chronology which starts from the creation of the world; he also wrote a *History of the Councils* and a lexicographical work. His contemporary al-Makīn (George b. Abi ʿl-Yāsir) wrote a general history, following the method of nearly all Arab writers. So far the second part, which, after summarising Ṭabarī as a beginning, deals with events following Islām, is the only one known; in the first, the author made use of Eutychius, Agapius of Manbiḍj, and different Greek writers. Al-Makīn, an official at the court of Baibars I, a descendant of officials in the service of the Aiyūbids, died at Damascus in 672 (1274). His work was continued until the year 750 (1349) by Mufaḍḍal b. Abi ʿl-Faḍāʿil, who belonged to a family of ecclesiastical writers. His history, *al-Nahḍj al-sadiq*, which owes much to Nuwairī, is as to the part still unpublished, very like the anonymous history published by Zetterstéen, *Beitr. z. Gesch. der Mamlūken-sultane*. Lastly we must note Abū Dhakn, who wrote in the eighteenth century, a *History of the Copts* (Graf, *Reformversuch*, p. 2, 17—18, 25; *Machr.*, xii. 488—492, 495; Masʿūdī, *Tanbih*, p. 154; Ibn Abi Usaibʿa, ii. 86—87; *P.O.*, xii. 345—354; Haase, *Altchrist. Kirchengesch.*, p. 30—31, 33; Graf, *Christ-ar. Lit.*, p. 40—46; *R. O. C.*, xiv. 383;

Renaudot, p. 346—348, 367—368; Zaidān, *Ta'rikh al-adab al-'arabiya*, ii. 200; *ibid.*, iv. 187).

Besides these historians, the Arabic Christian literature in Egypt possesses philologists of the first rank. They appeared at the time when the Coptic language, no longer in everyday use, ran the risk of being no longer understood by the ecclesiastics. Nourished on Arabic culture, these writers took for their models Arabic grammarians. An analysis of all these works, grammars or "scalae" (in Arabic *sullam*), has been ably made by P. Mallon, whose conclusions are here summarised. The first in date is the Coptic grammar of Athanasius of Kūs who lived in the xth century. The *scalae* must have existed at this time for John of Semennūd, who wrote in the middle of the thirteenth century, wrote his own to take the place of the older ones, which through endeavouring to be complete were too voluminous. Confined to the liturgy, it is arranged in a detestable manner, for it classifies the words according to the order in which they occur in the sacred books; it is entitled *sullam kanā'isī*, the *scala ecclesiastica*. John wrote in addition a grammar to which he gave the name of "preface", *muḳaddima*. At the same period lived three brothers, all famous, the sons of al-'Assāl, one, Abu 'l-Faḍā'il, known for his *Collection of Canons*, the second, Abu 'l-Faraḍj, who was also an exegetist, wrote a preface, which greatly resembles in method that of John of Semennūd; the third, Abū Ishāḳ, the author of the *Sullam muḳaffa'*, a *scala* in which the words are arranged according to their rhymes after the manner of the Arab dictionaries. The grammars of Ibn Kātib Kaiṣar, of John of Kalyūb and of Ibn al-Duhairi, who lived probably in the second half of the xiiith century, are still in existence. They were immediately followed by Ibn al-Rāhib, already mentioned as a historian; his *Preface* is very inferior to the preceding ones (*M.F.O.B.*, i. 111—136; ii. 213—216; v. 57—90; Quatremère, *Rech.*, p. 20—21; Villecourt, *Observations Liturgiques*, repr. from *Le Muséon*, xxxvi. 3—4; Mallon, *Gramm. Copte*, p. 5—7; Macaire, p. 300).

The authors of these dictionaries were not the first, but amongst the whole group of lexicographers, who have just been mentioned, the great personality of Abu 'l-Barakāt b. Kabār, stands out. He was the first of Christian writers in Egypt to be known in Europe, thanks to Kircher, who published his *Sullam Kabār*, or *Scala Magna* and to Vansleb who reproduced his *Lamp of the Darkneses* in his *Histoire de l'Eglise d'Alexandrie*. These are the two chief works of this ecclesiastic whose literary activity lay in the first half of the fourteenth century. In addition he collaborated in a *General History* of the Mamlūk Emīr Baibars al-Dawādār whose secretary he was. The *Lamp of the Darkneses* is an "encyclopaedia of the ecclesiastical sciences, containing in dogma, religious history, liturgy and discipline, all that a Coptic priest could wish to know". This work contains very valuable lists; those of the seventy disciples, the patriarchs of Alexandria, the saints of the Coptic Year, and, above all, an important bibliography of Arab Christian authors (*Dict. de Théol. Catholique*, viii. 2293—2296).

The greater part of Arabic Christian literature was intended to be read to the people during the service, and its form shows signs of this. They

are somewhat analogous to the sermons of the Middle Ages, written in a macaronic style, addressed to an illiterate audience, to whom Latin was not known. Let us add to this that these works are translations from Greek and Coptic, often word for word, and that the Arabic phraseology is clumsy. But it is a matter for astonishment that the editors of Christian manuscripts have thought that they must keep faults of orthography, which the Muslim copyists as well as the Christian ones had made and have thrown the blame for them upon the author. The result has been deplorable and with only rare exceptions, the editions of the *Patrologia Orientalis* and of the *Corpus scriptorum christianorum Orientalium* are almost unintelligible. Another inconvenience is that the result has been regrettable erroneous estimates of the Christian writers (*Z. D. M. G.*, li. 453—471; *B. I. F. A. O.*, iv. 140; Amélineau, *Actes*, p. 9; *R. O. C.*, xxii. 383—384).

Bibliography for the literature: *B. I. F. A. O.*, iii. 25—68; iv. 105—221; vi. 179; xii. 47—48; *R. O. C.*, xiii. 81—89, 298—313; xiv. 174—188, 276—281, 337—356; *R. S. O.*, iv. 546 sqq.; *Dict. arch.*, i. 1200; Basset, *Mélanges africains*, p. 306—310; Galtier, *Mémoires et fragments*, p. 34—134; Hilmy, *Bibliogr. of Egypt*, i. 10, 14, 21, 24, 26—27, 35—36, 44—45, 107, 135, 144, 152, 228—229, 251, 329, 337, 364; ii. 1, 17, 24, 39, 86, 165, 228, 283—284, 296; 'Alī Pāshā, vi. 83—85; Clermont-Ganneau, *R. A. O.*, vi. 364—372.

[The author owes several essential references to the kindness of M. M. Noël Aimé-Giron and H. Munier. He expresses especially his thanks to Mr. W. E. Crum who in view of this article undertook long and fruitful researches]. (G. W.)

KIDAM is said (1) of anything which is antecedent to another in time (*taḳaddum*, opp. *ta'akhḫhur*); (2) of the temporal, newly arisen, which no time has preceded; (3) of the absolute, i.e. in its nature without beginning (*ḳidam* in this sense is usually synonymous with *azal*, *azaliya*; but some, e.g. Djili, *al-Insān al-Kāmil*, B. 30, endeavour to show that there is a subtle distinction). In the last (3) sense, according to orthodox belief, the name *al-Ḳadīm* can be applied to God alone. The question whether God's thought in relation to the (not yet) created world can be conceived as a simple relation or is a concrete part of his eternal prescience and the world is thus eternal in God was answered differently.

It was the custom in philosophical language to talk of the eternalness of the real world. If the creation of the world was not denied, an eternal creation was taught and God called the first cause and the world eternally caused as a whole. In this reasoning one could appeal to the multiplicity of meaning of the conception "eternity" in Hellenistic tradition especially to the Aristotelian distinction between *πρότερον* and *υστερον* (cf. *Categ.*, 14a, 26 sqq. and *Metaph.*, 1018b, 9 sqq.). Thus in general a distinction was made between a temporal (*zamānī*) and an essential (*dhātī*) priority and posteriority but 3 to 6 varieties were distinguished, viz: — in addition to an order of precedence in time, one in order of place (*rutba*), in rank (*sharaf*), in nature (*ṭab'*), in causality (*sababiya*) and in knowledge (*'ilm*).

KIFT (KUFT, KAFT, the old *Κοπτος*), name of a place in Upper Egypt, nowadays insignificant (according to Baedeker, *Egypt*, it has 8934 inhabitants only), situated under 26° north. lat., on the east bank of the Nile, but at a certain distance from the river, where the latter comes nearest the coast of the Red Sea. This situation explains the importance of the place in antiquity, when it was an emporium where the wares coming from India, Punt, Arabia Felix were directed to the North. Its commerce with India is still mentioned by Yāqūt who speaks also of the surrounding orchards. The territory was a *wakf* belonging to the Ashraf ('Alids) and the inhabitants were *Shītes*.

Traditions on the origin of Koptos are to be found in Makrīzī's *Mawā'iz*.

AL-KIFTĪ, *nisba* of a family of officials of pure Arab origin, several members of which filled high offices under the Aiyūbids. The honorary title *al-Kādī 'l-Awḥad* was borne by Ibrāhīm b. 'Abd al-Wāḥid, whose son Yūsuf, afterwards *al-Kādī al-Ashraf*, was born at Kift on Muharram I, 548 (March 29, 1153). He succeeded his father in the administration of his native town, but had to leave it in 572 (1176/1177) on account of the rising of a Fātimid pretender. After filling several offices in Upper Egypt, he was summoned in 583 (1187), after the conquest of Jerusalem, to Saladin's court in the field, to assist his vizier *al-Kādī 'l-Fādīl*. When, on Saladin's death, his brother *al-Malik al-'Ādil* deprived his nephew of his inheritance and occupied Jerusalem in 592 (1196), *al-Kiftī*, along with other officials, left this town in 598 (1202) and went to Ḥarrān, where he entered the service of Saladin's son *Ashraf*. But he soon decided to leave Syria and under the pretext of the pilgrimage went to Mecca, thence to the Yemen, where the Atābeg Sonḡor, the guardian of the minor Aiyūbid *al-Nāṣir*, gave him the vizierate in 602 (1205). But he soon gave up this office and died in retirement at *Dhu Djible* in Yemen in 624 (1227).

His son 'Alī, born in Rabī' I or II of 568 (winter of 1172) at Kift, followed his father and grandfather in the official service, but his inclinations were rather towards scholarship. After studying in his native town and in Cairo, he went with his father to Jerusalem, where he was able for several years to gratify his inclinations. But his father had to leave Jerusalem, and he could not have stayed much longer, certainly not till 608, as Yāqūt, *Irshād*, v. 4855, says. But the son went to Aleppo, where a patron of his, the former governor of Jerusalem and Nābulus, Fāris

al-Dīn Maimūn al-Kaṣrī, had become vizier to Saladin's son *al-Malik al-Zāhir Ghāzī*. The latter took him into his service as secretary and he received thanks for careful administration of the fiefs. After the death of his patron on Ramaḍān 13, 610 (Jan. 26, 1214), the Sulṭān appointed him his *khāzin*. Although he would have preferred to devote himself to study, he had soon to take over the reorganisation of the *Diwān*. After *al-Zāhir*'s death on *Djumādā* II 20, 613 (4th Oct., 1216), he retired into private life, but had again to return to the head of the *Diwān* in Ṣafar 616 (April, 1219) and held this office till the end of *Djumādā* II, 628 (April, 1231). He then already had the title *al-Kādī 'l-Akram al-Wazīr*, as his protégé Yāqūt tells us in his *Mu'djam al-Buldān*, iv. 152, a passage written before 624 (1227). After five years' leisure he again took on the office of vizier in 633 (1236) and held it till his death on 13th Ramaḍān, 646 (Dec. 31, 1248).

Before affairs of state entirely took up his energies, he had displayed considerable literary activity. In the *Irshād*, v. 4834, Yāqūt gives a list of his works written before 620, some, however, not quite completed by then; this list was copied almost word for word by *al-Safadī* [q. v.] in his *al-Wāfi fi 'l-Wafayāt* (ed. Fleischer, in *Abulfedae Historia antislamica*, p. 234), and *al-Kutubi* borrowed it from him with several corruptions in his *Fawā'id* 1196.

His historical works are all lost: they included a history of Maḥmūd b. Sībūktigin and his sons (*wabanihi*, in *al-Kutubi* corrupted to *wabakiyat*, not recognised by Süssheim, *Prolegomena zu einer Ausgabe der im Brit. Mus. zu London verwahrten Chronik des seldschugischen Reichs*, p. 31, No. 2) and a history of the Seldjūks from the beginning to the end of the dynasty, which must have been of considerable value. Of his works on literary history, only the posthumous work on poets with the name Muhammad has survived to us (see de Slane, *Cat. des Mss. Ar. de la Bibliothèque Nationale*, No. 3335). Of his history of the grammarians we have only the synopsis by *al-Dhahabī* (d. 748 = 1347) in the latter's autograph, see *Cat. Codd. Ar. Bibl. Acad. Lugduno-Batavae*², ed. de Goeje and Th. W. Juynboll, iii. 26, No. xlviii. The most valuable of his works for us, the *Kitāb Iḥbār al-'Ulamā' bi-Akhbār al-Ḥukamā'*, our most important source for the history of the exact sciences and Hellenistic tradition in Islām, has only survived in a synopsis by Muhammad b. 'Alī al-Zawzanī, made in 647 (1249), see *Ibn al-Qiftī's Tārīḥ al-Ḥukamā'*, auf Grund der Vorarbeiten Aug. Müllers, ed. by J. Lippert, Leipzig 1903, repr. Cairo 1326.

(C. BROCKELMANN)

KILĀB B. RABĪʿA, an Arabic tribe which was one of the principal branches of the large tribe of ʿĀmir b. Ṣaṣaʿa. Their original homes were in the Ḥima Dārīya which corresponds roughly to the country North and South of the present Wahhābi capital al-Riyāḍ. This district was considered one of the best in Central Arabia and we are told that the Kilāb occupied nine tenths of it. At a much later time than the rise of Islām they wandered North into the confines of Syria where they gained possession of the towns of Hit, Ḥalab and others and where their rulers were known as the Āl Mirdās [q. v.]. A large tribe like the Kilāb was divided into many clans and we have notices of ten larger divisions: 1) Djaʿfar b. Kilāb with four divisions: Mālik, al-Aḥwas, Khālīd and ʿUtba. 2) Abū Bakr b. Kilāb with three divisions: ʿAbd, Kaʿb and ʿAbd Allāh. (3) Muʿāwiya al-Dībāb with thirteen divisions of whom five had names used for the lizard: Dabb, Muḍibb, Dībāb, Ḥusail, Ḥisl, ʿAmr, Anas, al-Aʿwar, Zufar, Unais, Mālik, Rabīʿa and Zuhair. Shamir b. Shuraḥbīl who killed al-Ḥusain at Karbalāʾ was a member of the division of al-Aʿwar. 4) ʿĀmir b. Kilāb with four divisions: al-Aṣamm, Kaʿb (one of the principal clans of the whole tribe), Ṭarīf and ʿĀkil. 5) Rabīʿa b. Kilāb with three divisions: Budjair, ʿUbaid and Nufail. 6) Al-Aqbaṭ b. Kilāb the divisions of which are all derived through Wabr and of which seven are mentioned by genealogists. 7) ʿAmr b. Kilāb with two divisions: Nufail and Abū Awf. 8) ʿAbd Allāh b. Kilāb with three divisions: ʿĀmir, ʿAmr and al-Samūt. 9) Ruʿās b. Kilāb with three divisions: Bidjād, Budjaid and ʿUbaid. 10) Kaʿb b. Kilāb with four divisions: ʿĀmir, Wabb, Rabīʿa and Aws. The most prominent clan in the time before Islām were the Banū Djaʿfar, who were powerful enough to have under their protection for a long time the tribe of Ḡhanī and also gave support to the tribe of ʿAbs in their long struggle with the Banū Dhubyān. The most remarkable deed recorded of the tribe of Kilāb was their signal defeat of the confederate tribes of Dhubyān and Asad in the battle of Djabala, where they with other ʿĀmir tribes secured a signal victory which is reckoned as one of the three great battles in the time of paganism of which Arab authors have any record. We find them still in their old settlements in the first centuries after the Hidjra, but they were quite submissive to the governors sent to them from al-Madina or Damascus. In the year 231 Bughā al-Kabir was forced to capture 1500 of their men as they by that time had reverted to their ancient Beduin life of making predatory raids upon the neighbouring country.

Among prominent men who came from this tribe the poet Labīd [q. v.] is probably the best known, but it is astonishing how few of them are recorded as traditionists or scholars.

KILĀT-I NĀDIRĪ (strictly *Katāt*), a town in Persia (Khorāsān) on the Russo-Persian frontier to the north of Meshhed and to the north-east of Sarakhs.

It is a natural fortress perched on a spur of the Ḳara-Dāgh mountains. When Arghūn rebelled against the election of Takūdar Aḥmad as Mongol Il-khān, he took refuge after his defeat, in this fortress (680/1281), the entrance on the west side of which is still known as Darbend-i Arghūn (it is also pronounced Arghawān, probably by a popular etymology). It was besieged by Tamerlane who attacked it fourteen times without success. The conqueror withdrew, leaving troops to blockade it, and it surrendered finally after a pestilence. This was the first place which Nādir Shāh, who had begun as a brigand, made his centre of action; later he built a palace there and a treasury for the spoils of Delhi.

KILĪD AL-BAHR, a fortress and small town at the narrowest part of the Dardanelles.

The reader is referred to the article **KALEʿI SULTĀNIYE** where the fortress on the Asiatic side opposite Kilid al-Bahr is fully dealt with, and here only the minimum necessary is given. The castle of Kilid al-Bahr was planned and armed along with the Asiatic fortification in the years 1462/1463 by Yaʿqub Bey, sandjak-bey of Gallipoli, by order of Mehmed II (*Kritobulos*, ed. C. Müller, book iv., chapt. 14 and book xv., chapt. 3; cf. also: *Chalkokondyles*, ed. I. Bekker, p. 529, 19 and J. v. Hammer, *G.O.R.*, ii. 73). Suleimān the Great in 958 (1551) renewed the fortifications which had fallen into decay in the interval and they were fundamentally remodelled and extended with those of Kāleʿi Sultāniye in 1069/1070 (1659/1660). The further history of Kilid al-Bahr is practically the same as that of the Asiatic fortress of Kāleʿi Sultāniye [q. v.] 1500 yards away. The ancient picturesquely situated fortress of Kilid al-Bahr with its old round tower was strengthened in later times by the addition of the modern fort of the same name with an adjoining battery, the small earthworks of Yeñi Medjidīye and the large earthworks or Namāzgāh. Behind the old tower of the fortress lies the insignificant village of the same name on the slope of a hill, which suffered a great deal during the fighting in the Dardanelles in the Great War.

KİLİDJ ALAYI (T.), the "ceremony of the sword" also called *taḳlīd al-saif* or *taḳlīd-i ṣhem-ṣhīr*. It was the ceremony of investiture of the Ottoman Sultāns, which took the place of coronation. The ceremony generally took place shortly after the *bai'at*, or homage to the new Sultān. The latter, leaving his palace went by barge with great pomp to the faubourg of Aiyūb. Here he disembarked and went to the türbe of Abū Aiyūb al-Anṣārī [q. v.], accompanied by the Shāikh al-Islām, the Ḳāḍī 'Asker, the Grand Vizier, the Naḳīb al-Ashraf and a limited number of other high dignitaries. In the türbe the Shāikh al-Islām after a short *ṣalāt* of two *rak'a* proceeded to the ceremony of girding on the sword (in Turkish, *kīlīdj kushatmak*). After it, the Sultān returned on horseback through the town, always entering by the Adrianople gate. Tradition had it that the new sovereign should visit the great mosque and the türbes which contained the tombs of his ancestors.

This is how the ceremony is described by d'Ohsson (*Tableau de l'Empire Othoman*, i. 305 sqq.; ii. 258) and von Hammer (*Des osm. Reiches Staatsverfassung*, following Tāshrifātī Zāde Muḥammad, i. 484). This description differs little from those we have of the middle of the xviith century (Ricaud, *Etat présent de l'Empire Ottoman*, Paris 1670, p. 10, 19) and from the way in which the *kīlīdj alay* was performed in the xixth and xxth centuries. In the xixth century the part of the Shāikh al-Islām was taken by other dignitaries such as the Naḳīb al-Ashraf, in 1255/1839 at the accession of 'Abd al-Madīd (cf. Aḥmad Luṭfī, *Ta'rikh*, vi., Constantinople 1302, p. 51) and later the Čelebi Efendī of the Mewlewis at Konya (cf. Čelebi). On the last occasion on which the ceremony took place, in August 1918, after the accession of Muḥammad VI it was the Shāikh of the Sanūsīs who performed the rites (cf. the detailed description by Rūshan Ashraf, *İki Saltanat arasinda*, Constantinople 1334, p. 34 sqq.). Several Sultāns did not have the ceremony performed, such as Muṣṭafā II in 1695 and Murād V in 1876 ('Oṭhmān Nūri, *'Abd al-Ḥamid ve-dewr-i Saltanatı*, Constantinople 1327, i. 91 sqq.).

The origin of the custom of *kīlīdj alay* is obscure. Tradition, as recorded by d'Ohsson, says that Aḳ Shams al-Dīn, the holy man who discovered the tomb of Abū Aiyūb performed the ceremony for the first time in the case of Muḥammad II. But nothing of this is mentioned in the Turkish historiographers (cf. especially Ewliyā Čelebi, *Siyāhatnāme*, i. 401). These rather give one the impression that the essential part used to be the pious visit made by the new Sultān, first to the türbe of Abū Aiyūb and then to the türbe's of all the other Sultāns since Muḥammad II (cf. e.g. Selaniki, *Ta'rikhi*, p. 132 for Murād III in 1575; and Na'ima, i. 195 for Aḥmad I in 1604). The first Sultān for whom the ceremony of the sword is definitely recorded seems to be Muṣṭafā I in 1617 (Na'ima, i. 320; Pečewī, ii. 361). It must be concluded that in any case not so much importance was attached to the ceremony in the early centuries as in later times. The ceremony itself has however an ancient tradition; d'Ohsson (i. 306) makes it go back to customs followed by the Mamlūk Sultāns of Egypt, who were girt with the sword by the 'Abbāsīd Caliph. Such a ceremony is described for example by al-Ḳalkaṣhandī (*Subḥ*, iii. 265 and 280, according to Gaudefroy-Demom-

bynes, *La Syrie à l'Époque des Mamlouks*, p. 24). In Egypt the Sultān was at the same time robed by the Caliph in a black *khiṭ'a* [q. v.]; this ceremony therefore has many points of resemblance to the formalities practised by the Caliphs of Baghdād when they wished to honour and recognise the services of their great vassals, such as the Būyids and Seldjūks. Only in the 'Abbāsīd period we find no mention made of the sword (cf. Ibn al-Aṭhīr, viii. 286). It is certain therefore that the ceremony of *kīlīdj alay* rests on a very ancient tradition; it is moreover interesting to note how the Shāikh al-Islām [q. v.] here has in a way assumed the office formerly exercised by the Caliphs.

As to the sword itself, it is described by von Hammer (*l. c.*) as "the sword of the Prophet", while Aḥmad Luṭfī (*l. c.*) describes it as the sword of the Caliph 'Umar al-Fārūḳ. These statements can only be based on a pious fiction. It is further to be noted that the expression *taḳlīd al-saif* originally means putting the belt of the sword around the neck, which seems to go back to ancient Arab customs (cf. al-Shartūnī's dictionary, *Aḳrab al-Mawārid*, p. 1029). (J. H. KRAMERS)

KİLİDJ 'ALĪ PASHA. [See OCHIALY.]

KİLİDJ ARSLAN, the name of several Seldjūk rulers in Asia Minor.

1. KİLİDJ ARSLAN I B. SULAIMAN was, according to Matthew of Edessa (ch. 225), not born till after his father had overthrown Sharaf al-Dawla (478 = 1085) but this seems hardly credible as he left an eleven year old son at his death in 1107. It is certain however that he was still very young when his father fell in battle with Tutush (479 = 1086). This explains why he played a subordinate part in the war with the Crusaders, so that Christian chroniclers do not once mention his name but always talk of Solimanus or of the Sultan. Only a short time before he had returned to his father's capital Nicaea, for after Sulaiman's death the administration of Asia Minor, Antakiya, Edessa and Ḥalab was re-arranged by Malikshāh and the young KİLİDJ Arslan was taken by him to 'Irāk. After Malikshāh's death in 485 (1092) KİLİDJ Arslan was granted permission by Barkiyarūḳ to return to Asia Minor and according to Byzantine sources he married a daughter of the powerful emir of Smyrna, called Tzachas, which did not please the Greeks so that they set about — and with success it is said — estranging him from his father-in-law. When the Crusaders advanced on Nicaea, KİLİDJ Arslan had been clever enough not to allow himself to be shut up in the fortress, but took part in the battles later fought between the Turks and Crusaders, although, as already mentioned, not he but rather Turkish emirs, notably Danishmand (Tanismanus) held the command. The relationship between the Seldjūks and the Danishmandiya was already not of a friendly nature although for some time they united against the common foe. They were quarrelling about the possession of the town of Malaṭya, where an Armenian named Gabriel was ruling under the suzerainty of Tutush. KİLİDJ Arslan was actually besieging the town, when the Crusaders advanced and when he had retired for this reason Danishmand ravaged the country round the town. Gabriel therefore appealed for help to Boemund but when the latter hurried up he was taken prisoner by Danishmand and Malaṭya had to surrender to the latter (1101). The attempts of other Crusading armies

to relieve him failed and the only course left for the Christians was to purchase his liberty for a very high ransom. KİLİDJ Arslân, as the Christian chroniclers tell us, claimed a portion of the ransom for himself, which gave rise to a new quarrel with Danışmand and to the great vexation of the Muslims, who knew how much the cause of Islâm suffered thereby. When Danışmand died in 1106, KİLİDJ Arslân seized the opportunity to get possession of Malatya by a treaty. At the same time he also became master of Maiyafârikin, appeared with an imposing army in front of Edessa but when he could do nothing there he went to Harrân where he fell ill. He therefore returned to Malatya and there received an invitation from the people of Mōsul to help them in their struggle with the Seldjuks ruler Muḥammad or more accurately his general Djawali Saka'u, who at the latter's command had taken prisoner the rebellious lord of the town Djakarmish. KİLİDJ Arslân heeded the appeal and appeared in 1107 in Mōsul, established himself on the throne there and had his own name mentioned in the *khutba* instead of Muḥammad's. He returned at once, after leaving his son Malikshâh under the guardianship of an emir in the town, to resume the struggle with Djawali, who had in the meanwhile received help from Raḍwân of Damascus. On a hot summer's day (June 3, 1107) the two armies met on the bank of the Khâbūr, but it was very soon apparent that KİLİDJ Arslân had lost the day. He threw himself in his heavy armour on horseback into the river, but the horse sank beneath this burden and KİLİDJ Arslân was drowned. The body was afterwards recovered, taken to Maiyafârikin and buried there in a specially built *kubba*. His son Mas'ûd's wish to move it to Konya was not carried out.

Bibliography: See the article SELDJUKS.

2. KİLİDJ ARSLÂN II, B. MAS'ÛD, reigned from 1155—1192. In the lifetime of his father he was appointed by him lord of the towns conquered in the southeast of Asia Minor and succeeded him on his death, thrusting aside his two brothers. He also succeeded — but only after several years — in putting an end to the Danışmandid dynasty in the peninsula and securing sole supremacy for the Seldjuks. We cannot go into the details of this struggle here, but only mention that a member of that dynasty, Dhu 'l-Nûn, brought a much more dangerous enemy, the famous Nûr al-Dîn, against him. He was not on good terms with the latter even at the beginning of his reign because they could not agree about the possession of several places in the south-east of Asia Minor. Therefore when Dhu 'l-Nûn, after KİLİDJ Arslân had seized his lands appealed to Nûr al-Dîn, the latter was quite ready to take up his cause. He invaded Asia Minor with an army, occupied Mar'ash, Kaisum, Behisni, Marzabân and even Siwâs (1173) KİLİDJ Arslân then began negotiations for peace, for which Nûr al-Dîn was not disinclined in view of his continual war with the Christians but he insisted on rather harsh conditions and made KİLİDJ Arslân the reproach that he could not consider him a Muslim in view of his friendly relations with the Byzantines. But the peace was concluded, although the garrison sent to Siwâs remained there till Nûr al-Dîn's death in 1174. KİLİDJ Arslân thereupon seized all the towns which the Danışmandids had previously held, with the exception of Malatya, where a member of this dynasty held out till 1177 when KİLİDJ

Arslân was able to capture this much contested town after a four months' siege.

The relations between KİLİDJ Arslân and the Byzantines were by no means always of a friendly nature. The Turkish emirs in the frontier lands used to harass the Christians from time to time when the opportunity occurred, e.g. in 1159, when Manuel hurried back to Constantinople from Cilicia by forced marches, so that KİLİDJ Arslân, who was considered personally responsible went to Constantinople in person and was entertained in regal fashion by the Emperor (probably in 1161). Long negotiations were carried on in which the relations of the Seldjuks to the Danışmandids were also discussed. Nevertheless the conduct of the Turks continued later to give rise to many complaints and when Dhu 'l-Nûn, after his protector Nûr al-Dîn had died was in Constantinople, the Emperor Manuel, who in any case had unwillingly seen the Seldjuks obtain sole supremacy in Asia Minor to the disadvantage of the Greek policy *divide et impera*, resolved to undertake a campaign on a large scale against KİLİDJ Arslân. The latter was cunning enough to avoid a direct encounter with his impetuous and chivalrous opponent, but when the latter was encamped in Murioképhalon (Pass of Çardak) the Turks suddenly fell upon him and inflicted a disastrous defeat on the army (572 = 1176). KİLİDJ Arslân duly trumpeted this victory throughout the Muslim world as evidence of his ardent zeal for the faith, sent a portion of the booty to the Abbâsid caliph and was celebrated as a hero of the faith by poets such as Ibn al-Ta'âwîdhî. An enterprise against Niksâr at the same time in the interest of the Danışmandids was equally unsuccessful and a nephew of the Emperor Andronikos Vatalzes fell in it. Henceforth the Greeks left the Turks in peace.

Some time afterwards KİLİDJ Arslân quarrelled with the all-powerful Şalâh al-Dîn, first about the ownership of the fortress of Ra'bân, which Mas'ûd had conquered but had lost to Nûr al-Dîn. When KİLİDJ Arslân was preparing to occupy the town, Şalâh al-Dîn sent troops thither under the command of Taqî al-Dîn 'Omar b. Shâhînsâh, who drove out the Turks, because KİLİDJ Arslân had no wish to involve himself in a war with Şalâh al-Dîn for the sake of a not very important fortress (575 = 1179/1180). Soon, however, the conduct of the Ortukid of Hîsn Kaifa who had married a daughter of KİLİDJ Arslân named Seldjuḳa Khâtûn, gave rise to further disagreement between the two rulers. KİLİDJ Arslân was incensed against Nûr al-Dîn Muḥammad (the Ortukid) because he neglected his daughter for a songstress, so that Nûr al-Dîn out of fear of the wrath of his father-in-law appealed for help to Şalâh al-Dîn. The latter ordered KİLİDJ Arslân to leave Nûr al-Dîn alone and when KİLİDJ Arslân refused to do so Şalâh al-Dîn himself marched with a force on Ra'bân, but was dissuaded from continuing the war by the representations of the able perwâna of KİLİDJ Arslân, Ikhtiyâr al-Dîn Ḥasan. As to the Seldjuḳ princess, it may here be mentioned that she later came to Baghdâd and died there in 586 (1188) as we know from an epitaph which Niebuhr copied in his journal.

If KİLİDJ Arslân had good fortune in all these matters, grave disasters overtook him and his kingdom at the end of his life; firstly the passage of the Third Crusade, in which even his capital

Ḳonya was occupied in 1190, and secondly the quarrels of his numerous sons. The latter, nearly a dozen in number, if we include a few other relations, had each received from Kilġdj Arslān rule over a certain town and its territory and when their father became old and weak conducted themselves as independent rulers. One of these, Ḳuṭb al-Dīn Malikshāh, lord of Siwās, was able to arouse Kilġdj Arslān's suspicions of the Parwāna who had been Kilġdj Arslān's greatest support, and had him murdered (1183). He then forced his father to instal him as heir to the throne, and henceforth acted as if he were sole ruler. The aged Kilġdj Arslān escaped from his tyranny and sought refuge with another of his sons, and finally reached his youngest son Ghīyāth al-Dīn Kaikhusrāw at Burglu where he fell ill and died (August 1192) Ghīyāth al-Dīn had the body brought in a litter to Ḳonya, giving out that his father was ill, thinking that in this way he would himself gain possession of the Seldjūk capital, which he did do for a time (cf. the article KAIKHUSRAW). He had his father's body interred there and the tomb with inscription still exists.

Bibliographic: see the Art. SELDJUKS.

The Chronicle of Michael the Syrian is particularly important here, as the author was personally acquainted with Kilġdj Arslān.

3. KILġDJ ARSLĀN III B. RUKN AL-DĪN SULAIMĀN had homage paid him as Sulṭān after the death of his father in 600 (1203) but had to give way only a few months later to his uncle Ghīyāth al-Dīn Kaikhusrāw.

4. KILġDJ ARSLĀN IV B. GHIVĀTH AL-DĪN KAIKHUSRAW II is better known by his *laḡab* Rukn al-Dīn. He has already been dealt with in the article KAIKĀ'ŪS II (cf. ii., p. 637) down to the time when his brother, joint Sulṭān with him, sought refuge with the Greek Emperor (659=1261). Henceforth he was sole Sulṭān but the real power lay in the hands of the Parwāna Mu'īn al-Dīn Sulaimān [q. v.]. When he became inconvenient to the latter he was treacherously put to death by order of the Parwāna (664=1266).

KILLIZ, a town in Northern Syria between Ḥalab and 'Aintāb. It was apparently already known to the Assyrians, for a cuneiform inscription (Harper 1037, Brit. Mus. K. 13073, obv. 3) mentions a town *Ki-li-zi*. In the Roman period the town was called *Ciliza sive Urmagiganti* (*Ilin. Ant.*, ed. Pinder-Parthey, p. 84). It must have been quite insignificant in the middle ages; it is mentioned in the rising against the patriarch Dionysius of Tellmahre in 817 A.D. (*Killiz* should be read in Barhebr., *Histor. eccles.*, ed. Abbeoos-Lamy, i. 339, 342, 1 for *Kalaz* or *Shalaz* and in Michael the Syrian, ed. Chabot, *Chron. syr.*, iii. 23, for *Halif*). Yāḳūt calls Killiz (as he writes it) a village of the nāhiye of 'Azāz; almost all the other Arab geographers do not mention it. The modern town has about 20,000 inhabitants including 15,000 Muslims (Cuinet 1891); the Arabs still call it Killiz and the Turks *Kilis*. According to M. Hartmann, the ancient Killiz was at the modern Tarzime Khān (1 hour's journey W.S.W. of the modern Killiz) where large stones are still found; while tradition still assumes the little garden *Ilezi baghçesi* (20 minutes east of Killiz) to be the old site of the town or of a part of it, as the name Killiz is supposed to survive in Ilezi and there are traces of an old site here.

AL-KILY, the salts (alkali, soda and potash) obtained from the ashes of different plants, especially those which belong to the salsoceae and allied families; it often means the ash itself and the lye obtained from it. Among plants special mention is made of *al-ḥamḍ* which therefore cannot here be sorrel. The best ash is said to be that of *al-ḥurḍ* which is defined as *al-uṣḥnān*. Uṣḥnān originally means saltwort but now it seems to be identical with *arthrocemum glaucum* or *anabasis articulata* or *seidlitzia rosmarinus*. *Hurḍ* and *uṣḥnān* seem to be often *nomina generis*, even in old Arabic. Seetzen in several passages in his *Reisebeschreibung* (e.g. vol. iii., p. 68) mentions the obtaining of alkali but always from saline plants (the reference is therefore to soda).

Al-kily usually means sodium carbonate, soda, as the saline plants contain sodium salts. But another carbonate is also obtained, potassium carbonate (potash); for example, al-Rāzī in the *Kitāb al-Asrār* mentions a salt of ashes (*milḥ al-ramād*) which is obtained from oak ashes. In alchemical works ashes of poplar trees and figtrees etc. are mentioned. There is also a *kily al-ḥumr* (= *al-ḥumra*), wine-lees-kily or ashes from lees; it is the ash of tartar; we also have tartar = potassium carbonate (see Berggren, *op. cit.*, p. 441).

A sharp distinction between soda and potash was not possible. Different ashes yielded different amounts of both which could only be distinguished at best by the taste and therefore with little certainty. In place of *al-kily* the *Mafātih al-'Ulūm* (ed. van Vloten, p. 259) speaks of *milḥ al-kily*. According to J. J. Hess in Nejd it is called *ḍilu*, i. e. *kilw*.

On the preparation of *kily* the *Tādī* observes that certain plants are burned in a moist condition and the ashes sprinkled with water (i. e. lyed) and that this lye is precipitated to *al-kily* (probably by steaming).

Al-kily, i. e. the lye, is primarily used for washing. According to alchemical works lime can be added to this lye, it then becomes stronger and more suitable for soap-making. The ancient Egyptians, Greeks and Romans used the ashes obtained in this way for cleaning and washing and had no soap (cf. against the contrary view the very full discussion by Blümner in Pauly-Wissowa, *Real-Encyclopaedia* 2, s. v. Seife). On the other hand the Arabs made and used soap probably usually the hard soda-soap. The kali-soap made from potash is soft soap. Ibn Duraid (321=933) is the first to use the word, Ibn Abī Maṣṣūr Muwaffaq

several times in his work (composed in 968—977, *Principles of Pharmacology*; K. Kobert, *Historische Studien*, iii., 1893, p. 1—278) mentions soap (*ṣābūn*) and also the hard kind. We learn through al-Mustaʿīn that the soap (*al-raḳḳi*) made in Raḳḳa was a dry soap (read *dīaff*) like bees-wax. It was made into cubes so must have been firm (cf. Dozy, *Suppl.*, i. 847a). A full description of the manufacture of soap in Tripolis in Syria is given by L. Rawolfen (*Aigentliche Beschreibung der Reisse*, etc., Lauguigen 1582, p. 38/39). Seaweed was burned there, hard potassium soap was obtained; one could stamp it or walk upon it. Whether kali or soft soap was made or not is not certain.

Al-ḳily is also used in the manufacture of glass; it brings sand to the melting point, purifies it and makes it easily take a colour. Glass-makers (*al-naḳḳādjūn*) use it: only sodium carbonate could be used for glass-making as the glasses of potassium are very difficult to melt and part. That many ancient glasses contained potassium is natural. The *al-ḳily* obtained from *al-ḥurd* is used by the dyers and is called *ḳily al-sabbāghīn*, the *ḳily* of the dyers; the name *Shabb al-ʿUṣfur* is connected with this, the alum of saffron and the passage in the *Tādī*; it is a grain with which one treats saffron as with alum. The reason for this statement is that alum is used in many dyes as a colouring matter; this is not however the case with alkali carbonates; they are used in saffron to dissolve the dye-material which is practically insoluble in pure water.

From what has been said above it will be clear that it is not correct to call soda (alkali) after the Arabic word *al-ḳily*. Medical and other uses are discussed in al-Ḳazwīnī, Ibn al-Baiṭār etc. It should further be noted that the accurate botanical identification of the different plant-names is extremely difficult.

KIMĀK (usually written: Kimāk and wrongly vocalised: Kaimāk), name of a Turkish people on the lower course of the Irtysh. Ibn Khurdādhbih (text in *B. G. A.*, vi. 28 and 31) mentions a road thither (80 or 81 days) from Tarāz (now Awliyā Atā) or Kuwikat, seven farsakh distant, and Gardīzi (in Barthold, *Otlet o poeutiē v Srednjuju Asiju*, p. 82 sq.) fully describes another route from Fārāb (Otrāb) (via Jenikend, the modern ruins called Džankent south of the mouth of the Sfr-Daryā). According to Muḳaddasī or Maḳdisī (*B. G. A.*, iii. 274) a portion of the Kimāk at the end of

the ivth (xth) century were already dwelling in the immediate neighbourhood of the Muslim territory in Turkestan. The historical importance of the Kimāk lies in the fact that there sprang from them the later very numerous people of the Ḳipčak (called Kuman in Europe and Polovtzi by the Russians), originally only a tribe of the Kimāk. From the vth (xith) century (the mention in Idrīsī naturally comes from written sources) the name of the Kimāk disappears and is not again mentioned in the Mongol period. Cf. also J. Marquart in *Osttürkische Dialektstudien*, 1914, index, s. v. Kimāk; on the pronunciation, p. 89, note 1.

(W. BARTHOLD)

ḲIMĀR, games of chance. The Ḳurʿān prohibited games of chance, under the name of *maisir*, at the same time as it forbade wine (ii. 216; v. 92); they are, it says, a great sin. The pagan Arabs gambled a great deal, say the commentators and staked in play their families and their property. Zamakhshari interprets *maisir* by *ḳimār*, and applies this name especially to the lottery with arrows. There were ten inscribed arrows; a victim was divided into ten parts; the arrows were drawn by lot and to each of them corresponded a part; or sometimes twenty-eight parts were made, one part was allotted to the first arrow; two to the second, three to the third and so on up to the seventh; the three last arrows got nothing and paid the cost of the game. This lottery was practised chiefly in Mecca. According to a tradition of the Prophet, the prohibition also applied to *Kaʿbatain* (dice): "These accursed dice belong to the *maisir* of Persia"; and according to a tradition of ʿAlī to chess and back-gammon. According to Ibn Sīrīn, it is extended to everything in which there is a stake or a bet (*ḳhaṭar*).

As regards chess, it should be noted that certain forms only of this game, and these the less usual, necessitate the use of dice and can be regarded as games of chance; back-gammon, on the other hand, is always played with two dice (see SHAṬRANĀJ). The Persian dictionary of Vullers also classifies among the *ḳimār* horse-racing, because betting takes place on it. It was in favour in the time of Arab paganism up to the beginning of Islām and under the Omayyads. The historian Masʿūdī quotes about this a curious and ancient piece of poetry (*Murūdj*, viii. 377).

Cards are called amongst Orientals "the leaves of fate", *warāḳ al-ḳimār* or *ḳimār kiaghadi*; their origin or at least their diffusion, is more recent than that of the games which we have mentioned. The Arabs have never taken to them; but the Persians were great lovers of them and painted beautiful packs (for example a Persian pack of cards bought by Prisse in Egypt and bearing sabres, crowns, helmets and other signs, "*Magasin Pittoresque*", 1846, xiv., p. 365). The use of cards was known in Italy at the end of the thirteenth century, and spread throughout Europe during the fourteenth century. It is said without any good reason to have come from the Arabs. The use which is made of cards for fortune-telling is not without an analogy in the proceedings of geomancy, an ancient superstition in vogue in the north of Africa. We must recall in this connection the opinion of Etteila whose work is the authority on cartomancy. This student of magic attributes to the Egyptians the invention of checkered

cards, which he calls the book of Thot; this "book" composed of 78 sheets of gold bearing hieroglyphics was the only thing which escaped from the fire of the library of Alexandria in the time of 'Omar; it passed afterwards from the Arabs to the other nations, who received it at the same time as the books on philosophy. Cards are certainly connected with the Chinese games played with tablets bearing figures or symbolical or moral characters which are grouped by families; such games were known in China from the twelfth century.

The Persians have always had gaming-houses which they call *kīmār khāna* (*kīmār* is also found with the simple *k*). The new ruler of Persia, Rīzā Khān, had them closed on his accession (Nov. 1925). "This world — says the poet Sauzenī wishing to express the sentiment of the uncertainty of fate — is the gambling-house of the gods".

AL-KĪMIYĀ', alchemy.

Introductory. The name. In modern chemistry, by a qualitative analysis of the substances occurring in nature the elements composing them are ascertained and by a quantitative analysis their proportions are obtained. From these elements the substances themselves and countless others can be built up by a synthesis; this is done as a result of theoretical considerations which are based on observations. They enable the elements to be combined and their formation to be ascertained in keeping with the facts and even the structure of atoms to be investigated. These purely scientific investigations then lead to inquiries on the obtaining by technical means of practically important substances and the manufacture of corresponding new substances.

In *kīmīyā'*, alchemy, one starts off on the other hand from theories propounded *a priori* and isolated facts often wrongly interpreted and endeavours to manufacture precious metals and jewels, either by mixing in a suitable way bodies that occur in nature or by applying an elixir to them. If the study of *kīmīyā'* was at first less fruitful for the development of knowledge than that of astrology, this was because the latter was able to use the achievements of a very advanced branch of knowledge and was able to advance by means of its investigations, while this was not the case with *kīmīyā'*. It was only from its study and practice that methods of work developed and a more thorough knowledge of the substances occurring in nature and those obtained from them, was obtained; and this knowledge was later put to scientific use. It formed the starting point for the science of chemistry, especially when analytic methods of separation became more generally known.

Kīmīyā' is in Arabic not primarily an abstraction but means a substance, the means by which the transmutation of metals is affected; it is therefore synonymous with *ikṣir*. The word is usually derived from *kam-it* or *kem-it*, the black (A. Wiedemann, *Das alte Ägypten*, Heidelberg 1920, p. 14); according to H. Diels (*Antike Technik*, Leipzig

1920, 2nd ed., p. 123), it comes from *ḫūma* molten metal. In the *Mafāṭih al-'Ulūm* (p. 256) it is derived from *kamā*, to conceal, while escaped to al-Ṣafādī, it comes from the Hebrew and is composed of *kīm* and *yah*; according to him the word means that this science comes from God.

Kīmīyā' thus comes also to mean a method by which one endeavours to obtain something, e.g. in *kīmīyā' al-sa'āda*, *k. al-ghanā'*, *k. al-ḫulūb*, i.e. means by which fortune or advantage is attained or hearts are moved (Ḥādjdī Khalīfa, ed. Flügel, v. 285); in this sense it is found in the titles of works by Arab mystics.

Alchemy itself is called *ṣan'at al-kīmīyā'*, *ṣan'at al-ikṣir*, *'ilm al-ṣinā'a*, *al-ḥikma* or briefly *kīmīyā'* or *al-ṣan'a*. Other names are the science of the stone (*ḥadjjar*), of the key (*miṣṭāḥ*). It is also known as the science of the balance or of the scales (*mīzān* or *mawāzīn*); a much used work of Djābir b. Ḥayyān, one of the first in this field, is called *Kitāb al-Mawāzīn*, while one of the last prominent alchemists, al-Djildakī (d. about 1350), also wrote a work on *'Ilm al-Mīzān* (Berlin, *Verz.*, No. 4185). *Kīmīyā'* does not get this name, as might be supposed, because scales are used in it but because in its problems the relations and considerations of the right measures and proportions of the lower world, of the elementary qualities to one another and of the lower to the upper world are discussed. Only when a correct equilibrium is attained can the desired results (see Berlin, *Verz.*, No. 4185) be obtained. Just as the body is only sound when its qualities, its humours, are in the right proportions to one another, so it is with the precious metals. The alchemist is called *kīwāmī* (*kīmawī*, *kīmī*, cf. Dozy, *Suppl.*), *kīmīyā'ī* (Ibn al-Kifṭī, *Ta'rikh al-Hukamā'*, ed. Lippert, p. 188, 20), *ṣan'awī* (*Fihrist*, p. 351), *ikṣirī* (*Ā'in-i Akbarī*, text, p. 35, 14).

Alchemists and their writings. Just as in the middle ages alchemical knowledge was sought in Enoch, Homer, in the Greek myths, etc., so, according to Muslim writers, God taught Adam this science and he taught his son Seth. Abraham, Idris (here = Enoch), David, Solomon and Korah, who however had got his knowledge from Moses possessed it. Muḥammad and the Caliph 'Alī were said to have been acquainted with alchemy (E. Wiedemann, *Beitr. z. Gesch. der Naturwissenschaften*, lxiii.).

The Arab alchemists relied very often on works which were ascribed to Greek authors and as usual these included many pseudepigraphic works. We may mention Hermes Trismegistos, Ostanēs, Zosimus, Krates, Democritus, Cleopatra, Maria, Apollonius of Tyana, Aristotle, also Pythagoras, Archimedes, Euclid, Ptolemy etc. A list is given by M. Steinschneider in the *Z. D. M. G.*, i. 356 (1896). — Some of the Arabic texts ascribed to such authors have been published by Berthelot (*op. cit.*). The knowledge of these writings was probably in part disseminated through the Syrians; indeed it is recorded that the teacher of Khalīd b. Yazīd to be mentioned below was a monk named Marianus and translations were prepared for him by Iṣṭifān al-Qadīm.

In Arabic literature a large number of Muslim alchemists and their works are cited. The list is however not nearly so long as that of the astronomers and astrologers, who played a very different and scientific part and therefore were generally noticed.

The *Fihrist* probably gives most names (p. 351); according to Stapleton, al-Kāthī gives another; al-Akfānī quotes a few works with an appreciation of them; M. Berthelot (iii. 41 sq.) has given a number of names and books from *al-Wāfi fī Tadbīr al-Kāfi* of Muḥammad b. Aḥmad al-Maṣmūdī; al-Djildakī mentions those who seem the most important to him in the introduction to his *al-Miṣbāḥ fī 'Ilm al-Miftāḥ*, "Lights of the Science of the Key" (Leiden, Cod. 935); finally there are numerous references in the section *Kashf al-Zunūn* on alchemy in Ḥājjdjī Khalifa. The writings quoted at the end of it (in Flügel's ed., v. 284) are in any case those most read in his time. It is remarkable to find among them one by Ibn Sinā (*Mir'at al-Adjā'ib*, "Mirror of Wonders").

We now give a list of the best known Muslim alchemists with one or more of their principal works:

Khalid b. Yazīd, an Umayyad prince (d. 85 = 704); to him is erroneously ascribed *Firdaws al-Hikma* = "Paradise of Wisdom" (Brockelmann, *Gesch. d. arab. Litt.*, i. 67) [see below].

Djābir b. Haiyān [q. v.] who is not identical with the Geber who wrote in Latin — Berthelot distinguishes them as Djābir and Geber — is the author of numerous works; a number of them have been published by Berthelot, *op. cit.*, iii.; but according to some he was a mythical personage. J. Ruska however has shown that he was by no means mythical [see below] cf. Brockelmann, i. 240 sq.).

Ibn al-Waḥshiya [q. v.] (c. 870) wrote, in addition to *al-Falāḥa al-Nabaṭiya*, which contains some interesting information along with a good deal of nonsense, and is probably really from the pen of Abū Ṭālib al-Zaiyāt, alchemical works, which were used for example by Shams al-Dīn al-Dimashqī in his *Cosmography* (Brockelmann, i. 242).

Abū Bakr Muḥammad b. Zakariyā al-Rāzī (Rhases), the celebrated physician (c. 288 = 900), wrote, besides alchemical works the *Kitāb al-Asrār* (Brockelmann, i. 233 sq.); this is now being edited by J. Ruska.

Ibn Umail al-Tamīmī (eighth or tenth cent.) wrote the *Miftāḥ al-Hikma al-uzmā'* (cf. Leiden, *Cat.*, No. 1274; Brockelmann, i. 241 sq.).

Al-Fārābī [q. v.], the famous philosopher (d. 339 = 950), wrote: "On the necessity of the art of arts, i. e. the Elixir" (Brockelmann, i. 210 sq.).

Maslama b. Aḥmad al-Maḍrīṭī (d. 398 = 1007), also distinguished as a mathematician and astronomer, was the author of the *Ṭabaqāt al-'Ulamā'* (Brockelmann, i. 243).

Abu 'l-Ḥakīm Muḥammad b. 'Abd al-Malik al-Ṣāliḥī al-Khwarizmī al-Kāthī (c. 425 = 1034) wrote: "The Essential of the Art and the Help for the Workers", *'Ain al-San'a wa-'Awm al-Sunnā'* (s. H. E. Stapleton and R. Azo, *op. cit.*).

Mu'aiyid al-Dīn al-Ṭuḡhrā'i (d. about 515 = 1122), the famous vizier and poet often mentioned by Ibn Khaldūn (s. *Bibliography*), wrote for example the *Kitāb al-Anwār wa-'l-Mafātiḥ*, then *Mafātiḥ al-Rahma* and *Anwār al-Hikma*, Paris, No. 2414, probably also al-*Djawhar al-Munir fī San'at al-Iksir*, Berlin, No. 10361. — According to Gildemeister he was the Artephius of the west (Brockelmann, i. 247 sq.).

Abu 'l-Ḥasan b. Mūsā b. Arfa' Ra's (d. 593 = 1197?) is the author of the *Shudūr al-Dhahab*,

the "gold-spangle", which was often annotated (Brockelmann, i. 496).

Abu 'l-Kāsim Muḥammad b. Aḥmad al-'Irākī al-Simāwī (c. 700 = 1300?). From his pen comes the *al-Muktabab fī Zīrā'at al-Dhahab*, on which al-Djildakī wrote a commentary (Brockelmann, i. 496 sq.).

'Alī b. Aidamir b. 'Alī al-Djildakī's (c. 1342) writings and commentaries were much used later as is evident from the numerous manuscripts that still exist. They all move in mystically speculative channels (Brockelmann, ii. 138).

Abu 'l-Aṣḥab b. Tammām al-'Irākī (d. 762 = 1360/1361) (Brockelmann, i. 524).

Unfortunately we still lack a compilation for the alchemists such as H. Suter has prepared in masterly fashion for the Arab mathematicians and astronomers. For those who were also physicians the works of Wüstenfeld and Leclerc on Arab physicians and Arab medicines give much information. For the earliest history of Arabic alchemy it is of great importance that J. Ruska has shown that the stories of Khalid b. Yazīd b. Mu'āwiya and Djāfar al-Ṣādīq are simply legends, at least so far as they are concerned with their part as alchemists and with the latter as teacher of Djābir b. Haiyān; on the other hand Djābir b. Haiyān, as is becoming more and more evident, was in reality the great founder of Arab alchemy and al-Rāzī his most important successor (Ruska and Holmyard).

The theories of the Alchemists. The formation of minerals, following Aristotelian views (cf. e. g. the very lucid account in the *Āin-i Akbarī*, text i., p. 33—36, transl. i. 38—41 and also the writings of the *Ikhwān al-Ṣafā'*, *loc. cit.*) was imagined to be somewhat on the following lines. Under the influence of the heat of the sun watery particles rise into the heavens, which are cold and moist, out of the water which is moist and light. When they mingle with the air, which is hot and dry, vapours (*bukhār*) are formed; out of the earth which is hot and dry there arise from the same cause particles which, mixed with the air, form smoke (*dukhān*). *Bukhār* and *dukhān* thus together contain the four elemental qualities (cold, hot, dry and moist). Their mixture over the surface of the earth produces clouds, wind, rain, snow etc. and under it earthquakes, springs and minerals. The *bukhār* is regarded as the body and the *dukhān* as the soul of the substances. According to their quality and quantity different bodies are formed, including jewels; according to many alchemists the astrological constellations play a part in this. If *bukhār* predominates in the mixture, and the warmth of the sun produces a contraction after the complete mixture, quicksilver is formed, if both are present in almost equal quantities, a viscid, fatty, moist substance is formed; if this matures, particles of air emanate from it unless cold brings about a contraction. This mass is inflammable. If there is a small preponderance of *dukhān*, sulphur is formed, red or yellow, white or grey; in other cases we get *zarnīkh* and naphtha. The substances thus formed, quicksilver, which is also called the mother, and sulphur which is also called the father of the seven bodies (metals) are their sole components. Differences in the kind of body are due to differences in the purity of the components, to the mixture being made in a particular way, and to

the components affecting each other in different ways; the heat in the deposits may change, cold may supervene etc. — The components are found in the purest form and in the proper proportions first in gold and then in silver; this is less the case with the other metals, which were therefore described as diseased gold and silver; tin is considered as leprous silver and quicksilver as apoplectic silver.

When the alchemists however speak of sulphur and quicksilver, they frequently do not mean the substances usually known by this name. Thus *Djābir distinguishes* (Berthelot, *op. cit.*, iii. 207) an eastern and a western quicksilver; but what he means by these is not clear from his statement.

The opinions just outlined vary much in individual points of detail but must have been assumed in principle by all Muslim scholars, without essential alteration; for example al-Akfānī briefly defines alchemy as follows (E. Wiedemann, in the *Journ. für prakt. Chemie*, Ser. ii., vol. xxvi., 1907, p. 106): — the doctrine of alchemy is a science by which one endeavours to take their qualities from minerals and to give them qualities which they did not have.

The Arab scholars were however divided into two groups, one of which assumed the possibility of a transmutation of metals and the other denied it. The former took up the position that the metals and minerals likewise differ only in their accidental qualities, i. e. that they belong to a *naw'* and that it is possible, although difficult, with the means at man's disposal, to make the corresponding changes. To this school belong al-Fārābī and the alchemists above mentioned. As evidence for the possibility of alchemy numerous phenomena that had been observed were adduced, notably the continually asserted cases of spontaneous generation, according to which animals were produced from the most different inanimate objects (cf. E. Wiedemann, *Die Lehre von der generatio spontanea*, *Naturwissenschaftliche Wochenschrift* [N. F.], xv. 381, 1916), and the hatching of hens' eggs in incubators in Egypt, or the manufacture of glass from soda and sand, the dissolving of stone (probably with vinegar, cf. O. Rescher, *Der Islam*, 1919, ix. 120 who quotes a passage from al-Balādhuri), the manufacture of bronze from copper and *tūtīyā* burned with coal, reduced zinc oxyde, the dyeing of glass by adding various materials. From these processes bodies are frequently produced which bear no similarity to the original substances.

The opponents of alchemy regard the metals as being different in their essential qualities — as not belonging to the same *naw'*; it might be possible to imagine the transmutation of a metal in theory but it could not be carried out for fundamental and practical reasons. Ibn Sinā (*Hādījī Khalīfa*, *op. cit.*) reasons as follows: "Even if it were possible to stain silver with the colour of gold etc., in such a way that something was taken from or added to the dyed body, I do not see from this the possibility of transmutation of metals. For probably the things observed do not correspond to the fundamental qualities which settle the nature of the body but are accidental things, only necessary to characterise of the body. But the fundamental qualities are unknown; one can therefore not look for them, produce them or destroy them". Other writers emphasised that the

time available to alchemists for their researches is too short, for very long periods of time have passed in the interior of the earth during which the elements etc. were being cooked sometimes under the influence of certain constellations, until they were transformed into precious metals (cf. al-Djāhīz, who also wrote a work on *al-Kīmiyā*; *Journ. für prakt. Chemie*, loc. cit., p. 73).

One of the most notable opponents of alchemy was al-Kindī [q. v.] whom Muḥammad b. Zakariyā al-Rāzī attacked with unseemly vigour (E. Wiedemann, *Beitr. zur Gesch. der Naturwissenschaften*, i.).

Even in the xvth century and later when Muslim learning had considerably declined and it must be assumed that criticism had become much weaker, alchemy was still vigorously attacked. This is seen from a section in the *Cosmography* of al-Dimashkī (d. 727 = 1327), who devoted some time to the refutation of alchemy (ed. Mehren, text, p. 58, transl., p. 64). The ardent alchemist al-Djildakī considered it necessary to add to his commentary on *al-Muktasab* a chapter entitled: "On the possibility that the accident may disappear, which has entered into the specific kind (*naw'*) so that the body again assumes its specific kind by art, further, on the proof that the art, its practice and the certain proof for it is possible and finally on the refutation of him who ridicules it and says it is useless" (Leiden, *Cat. Or.*, iii. 204). The great historian Ibn Khaldūn (*op. cit.*) also vigorously attacks alchemy and its representatives (see Wiedemann, *Beitr. zur Gesch. der Naturwissenschaft*, i.).

This refusal to have anything to do with alchemy was largely due to the repeated failures of the alchemists, which brought scorn and ridicule on their heads, and vigorous attacks on the pernicious study of alchemy. Ibn Khaldūn observes that it was usually poor people who studied alchemy. Ibn Sinā, who denied the reality of the elixir, possessed great wealth, while al-Fārābī who believed in it was one of the most unfortunate of men and did not always have sufficient food. — 'Abd al-Laṭīf says: "Verily, most men have been ruined by the work of Ibn Sinā and by alchemy". — There are two proverbs: "Three things cannot be attained by three things, youth by rouge, health by medicine, and treasure by *al-kīmiyā*" and "He who studies astrology is not secure from poverty". To conclude, al-Ṣafādī gives very scornful remarks on alchemy and the fruitless endeavours of its followers.

The alchemists however consoled themselves with the reflection that at any rate the knowledge of alchemy had once existed but had later been lost, but it would certainly be found again (see E. Wiedemann, in the *Journ. für prakt. Chemie*, Series ii., vol. xxvi., 1907, p. 123; Ibn al-Fakīh, ed. de Goeje, *B. G. A.*, v., p. 205; Yākūt, ed. Wüstenfeld, iv. 264; al-Kāzwinī, ed. Wüstenfeld, ii. 164).

Among the alchemists we must carefully distinguish the men who were convinced of the possibility of the transmutation of metals, and went about their task in good faith and the swindlers. The serious students were in part philosophers who derived their doctrine of the elixir by pure deduction from Aristotelian views; of these the most notable was al-Fārābī. Others enlivened simple assumptions with mystic, gnostic, neo-Platonic etc. ideas and then wrote works of

which it may be said to be very doubtful whether the authors themselves understood them. As the latter admit, puzzling expressions are deliberately used, but these vary from school to school, simply, we are told, to prevent the masses and the rulers from making gold artificially, which would be very harmful. Each successive writer seems to try to surpass his predecessor in obscurity and the commentaries do not make the originals any clearer. It is often difficult to understand how intelligent beings could have written such things. They claim to have acquired their knowledge, as was indeed common among Muslim scholars, on distant journeys. The study of alchemy has had one undesirable result, in as much as the representatives of the mystic movement in Islām studied alchemy e.g. Ibn al-ʿArabī (d. 1240) who called gold and silver the "great names" (see al-Dimashqī, *op. cit.*, text, p. 51, transl. p. 56). To this school may be said to belong more or less the Pseudo-Khalid b. Yazid, Ibn al-Wahshiya, Ibn Umail al-Tamimi, Ibn Arfaʿ Ra's, al-Djildaki, Abu 'l-Kāsim al-ʿIrāqī and others. Many of these men, however, made experiments, at least, according to al-Šafādī, the Imām al-Ḥaramain (al-Djuwaini) was burned to death by a jet of flame. Another group of alchemists describe experiments in their works, but it is not always certain whether these were actually made or whether they are purely imaginary; the latter is of course always the case when a real elixir is said to have been made and its effects even described. Of this nature are the works of Djābir b. Ḥaiyān, the *Kitāb al-Asrār* of al-Rāzī, that of al-Ṭuḡhrāʾī, *al-Djawhar al-Munīr* etc., that of al-Kāthī and the Arabic writings on which are based the works of the western scholar known as Geber. Frequently as in al-Rāzī the arrangement in these books on alchemy is such that the substances and apparatus are first described and then the various experiments are detailed, arranged according to the methods of treatment like sublimation, calcination, dissolution, etc. and not as with us according to the substances investigated; we thus see what great stress was laid on method.

Whether the alchemists ever had any laboratories on a large scale with a staff of assistants is not yet known; their workrooms were probably very like those often described later, as they required special arrangements for many purposes which could only be set up in a special room. At any rate this was the case with alchemists who worked for princes, who frequently employed an alchemist just as they had a court astrologer. The unsuccessful efforts of two may here be mentioned; al-Ma'mūn (198—218 = 813—833) said to an alchemist Yūsuf Luḡwa, who had had no success: — "Alas for you: there is nothing in *al-kimiyā*." The latter replied in excuse that the druggists swindled him whereupon the Caliph declared himself satisfied. Others did not fare so well, as is shown by the story, whether true or not, that Abū Šālih Maṣnūr b. Ishāk, a Sāmānid, beat al-Rāzī so severely that he blinded him. It is more probable that, as al-Baihaqī records, his eyes were affected by the vapours which arose in the preparation of the elixir and that he had himself treated by a physician for a large fee. He thought that this was the true *al-kimiyā* and became himself a physician. Al-Ma'sūdī also talks of grave injuries caused by vapours (see E. Wiedemann, *Beitr.*

Zur. Gesch. der Naturwissenschaften, ii. 547). They resulted in loss of hearing or sight, and loss of colour in the face (in heating vitriol for example sulphuric acid escapes). Poisonous vapours are also mentioned by other writers (E. Wiedemann, *op. cit.*, xxv. 127).

Alchemical swindlers. Alongside of these alchemists who are to be taken seriously, appeared a great number of swindlers who took advantage of the credulity of high and low to make money easily. In North Africa, according to Ibn Khaldūn, it was particularly students of law and theology who used to deceive the people of the villages in this way. These swindlers either claimed they could make gold out of a definite material but without ever producing it, or they brought gold into contact with the stuff to be transmuted into the apparatus itself, or they fastened it to the lid of the crucible with wax, or they coloured ordinary metals either with sulphide or by preparing coatings for them, so that they looked like gold. A series of illuminating stories is given by al-Djawbarī (E. Wiedemann, *Journ. f. prakt. Chemie*, loc. cit., p. 82 and E. Wiedemann, *Über das Goldmachen*, etc.). One is a delightful story of how the so clever al-Malik al-ʿAdil Nūr al-Dīn Zankī (541—569 = 1146—1173) was swindled. The great Mughal Sulṭān Akbar [q. v.] fared no better when he allowed himself to be introduced to alchemy by bigotted jugglers, the Yogis, and publicly exhibited gold made by himself (Badāʾunī in Blochmann's translation of the *Ā'in-i Akbarī*, i. 201).

These swindlers naturally did a great deal of harm to the prestige of alchemists in general, so much so that according to al-Ḳazwīnī (ii. 98) they were the lowest grade of students.

Methods of solving the problem of alchemy. It was thought that the solution of the alchemical problem might be reached by one of three ways (cf. E. Wiedemann, *Journ. für prakt. Chemie*, loc. cit., p. 105, from al-Akfānī). Whether and in how far they were ever really systematically prosecuted, research has not so far been able to ascertain. The methods were the following:

1) A start is made from the view above mentioned, that all metals have arisen out of sulphur and quicksilver which were heated in the earth as described. The alchemists proceed similarly, but in place of these two bodies many others are also taken, of which they suppose that they contain the fundamental materials and endeavour to increase the heat on account of the shortness of the time available beyond that prevailing in the earth. 2) They go back to the mutual (of course quite unknown) relation of volume and weight of the components and combine the metals so that a body is formed which in weight and volume is like the desired metal. In this process heed must be paid to the balancing of the qualities. These two methods, so far as their principles are concerned, may be called scientific, although they were hardly so in practice. 3) The third method starts from the view that the ignoble metals are diseased precious ones. A remedy was prepared which was called elixir (*al-iksir*) or *al-farrār*, i.e. the fugitive (cf. E. Wiedemann, *Beitr. zur Gesch. der Naturwissenschaften*, ii. 346); it was also called from its material the "honoured stone" (*al-ḥadjar al-mukarram*); in place of the stone there

was also a "substitute (*badal*) for the stone", out of which a more deeply hidden elixir is obtained; there was also a substance similar to the stone and its substitute. The elixir etc. also contained healing virtues to a high degree.

The most fabulous stories are told regarding the elixir's power to attain desired transmutation; one *mithkāl* of elixir is said to turn 60,000, 300,000 or 1,200,000 *mithkāl* into gold, — or even as much as is between heaven and earth (cf. Hādjī Khālifā, *op. cit.*, p. 276) (cf. also the statements in O. Rescher, *Der Islam*, ix. 33).

That *kimiya'* was practised down to modern times is shown for example by the statements in Snouck Hurgronje (*Mekka*, ii. 215, and E. W. Lane, *Manners and Customs of the Modern Egyptians*⁵, London 1860, p. 264). There is also a play by Fath 'Alī Akhondzāde "The Alchemist" (cf. G. Jacob, *Türkische Volksliteratur*, Berlin 1901; see also Barbier de Meynard, *Journ. Asiatique*, Ser. viii., vol. i. [1886], p. 5).

The substances used. The substances used by the alchemists are given in their writings: varieties of the individual bodies are detailed, for example a whole series of varieties of sulphur is given and of kinds of *markashithā*, etc. In many cases we are at the same time told which are the good and which the bad varieties.

The *Mafātih al-'Ulūm* distinguishes, as is usual in other books: 1) metals: gold, silver, copper, the two kinds of *raşāş* (lead and tin), *kharşini* for *al-ḥadīd al-şinī*, usually hard lead; quicksilver is sometimes given in place of the latter; 2) evaporating substances (*rūḥ*): sulphur, *zirnikh* (realgar and oripigment), *nūshādhir* (usually sal ammoniac but also ammonium carbonate), quicksilver; 3) all other mineral substances (in the *Mafātih al-'Ulūm* called drugs).

Al-Rāzī divides the substances first into animal, mineral (*turābī*) and vegetable drugs. The mineral are divided into the 7 bodies (metals), 13 stones (including precious stones), 5 vitriols, 6 kinds of *būraḥ* (borax, salpêtre etc.), 11 salts. The animal are hairs, brains, eyes etc. Only a few vegetable substances are used by him, namely *uṣṣnān* (alkali plants) and cinquefoil, chaste-tree, (*bandjān kashī*, *vitex agnus castus*), its fruits and an antieroticum. Al-Ṭughrā'ī gives a similar division; only he divides the stones into four groups, the reason for which is not quite clear.

Al-Kāthī divides into metals and 12 stones which latter include sulphur, *zirnikh* and *nūshādhir*.

Al-Dimashqī deals successively with quicksilver, sulphur, metals and then the minerals which include mythical stones and a few drugs.

Al-Qazwīnī classifies the substances he deals with into metals, stones and oily substances.

A very peculiar division with regard to the preparation of the elixir (see Stapleton and Azo, *op. cit.*) is the following: Quicksilver, sal ammoniac etc. are spirits; sulphur, *zirnikh* etc. are souls; gold, silver, iron, *maghūsiya* are bodies. To prepare an elixir one must have 1 part of spirit, two of soul and one of body. An elixir which contains no spirit or no soul or no body is useless. Soul and spirit may however give colour even if body is absent; but this disappears on smelting. If all three are combined it is permanent.

The alchemist gives the separate substances he uses a great number of epithets (cf. E. Wiedemann, *Beitr. zur. Gesch. der Naturwissenschaften*, x. 82)

by which he refers to them in his works which makes it unusually difficult to understand them. The metals are called after planets to which they are subordinate. Mercury thus belongs to *kharşini*. In the MSS. the name is often replaced by the sign of the planet. But the metals have countless other names. For sal ammoniac we frequently find 'uḳāb (eagle).

The works on jewels, drugs etc. are of alchemical but also of purely chemical interest. A number of Arabic sources with as full references as possible are given in the articles quoted in the *Bibliography*.

Apparatus used. We know a good deal about the apparatus used by Arab alchemists. In the first place we have lists of the apparatus used, sometimes with descriptions, e.g. in the *Kitāb al-Asrār* of al-Rāzī, in the *Mafātih al-'Ulūm*, in the work of al-Kāthī, in *al-Djawhar al-Manir* of al-Ṭughrā'ī, which frequently agrees with the *Karshūnī* text published by Berthelot, *op. cit.* Information is also given in various passages, especially about distilling apparatus. The apparatus used is essentially the same as that used by the Greeks; a furnace for example is called, although perhaps without reason, the furnace of Zosimus (Gotha MS., N^o. 1349).

The apparatuses used for heating are of course numerous. Various forms and names were given to the furnaces. The draught was regulated as required; its strength was judged by a leaf thrown into its current. The bellows were used to kindle the fire, but there were also furnaces with a self-acting draught. For special purposes, such as the treatment of glass, the manufacture of precious stones, the furnace was of a suitable form. For melting either an ordinary crucible was used or one crucible above another; in the latter case the upper one was perforated in the bottom. The molten metal in the upper crucible flowed into the lower one and the slack was kept back. Tongs etc. were used to pick things up; an alchemist complains that he very often burned himself in using them but without obtaining any results. Moulds were used for casting. To hold the substances to be heated, boxes, bottles, stills, (aludel *uḥāl*) a longish pumpkin closed with a lid were used. The capital (*anbīk*, *ἀμβύξ*) was put on the still. Thus the alembic [q.v.] is made and if the still is closed at the end it is called "blind", if it is open and has a spout, still and capital together correspond to our retort and are used for distillation (*taḥḥīr*). A *ḡabila*, our receiver, is then placed over the end of the spout. Al-Rāzī and al-Ṭughrā'ī frequently point out that the vessels to be heated must be of uniform thickness and have no flaws, or they might easily burst. The kurbises etc. were heated either on an open fire or in the hot air rising from one or in the steam rising from boiling water or a water bath.

To solder and polish the places where different parts of the apparatus are joined, clay of wisdom (of philosophy *ḥīn al-ḥikma*) was used, which was made of pure fermented clay, usually mixed with finely chopped hair and salt. There are numerous recipes for its manufacture. Different kinds of clay are given the names of the planets (Gotha MS., N^o. 134). The outsides of the vessels to be heated, as was still the custom with us in the sixteenth century, were also covered with clay to distribute the heat evenly and thus diminish the danger of explosion.

To break up substances the mortar (*hāwun*) and pestle (*daqq*) were used and for grinding them a hard, flat slab (*ṣilāya*) and a grindstone (*fīhr*).

Processes used. In their experiments the alchemists used a large number of processes, which again had many variants. The following is a list, of course not quite complete, divided into eight groups; it is taken from al-Kh̄wārizmī (*Mafātiḥ al-'Ulūm*), Hādījī Khālifa and alchemical writers.

1) *Tadbir*, the treatment of bodies in general. 2) *saḥḥ*, grinding etc.; *tafṣīl*, breaking into pieces, *nisāḍj* and *tamaḍj*, mixing. 3) *ḥall* and *taḥlīl* (dissolving) are probably synonyms. These mean methods by which the body is either dissolved in our sense of the word or simply divided into very fine particles. Varieties are dissolution in corrosives, in dung (i. e. in a moderate heat), in moisture, by pounding with the pestle (*daqq*), by boiling, with the blind *anbiḥ* (i. e. at a high pressure and temperature), with cottonwool and the anvil (the substance is wrapped in a roll of cottonwool and beaten on the anvil), by dripping (*taḥṭīr*). Many alchemists distinguish the following varieties of *ḥall*: the substances are dissolved as usual or they are hung up in a sieve-like bag and the steam rising from water dissolves them (cf. al-Kāthī and al-Ṭuḡhrā'i); *taṣwīl*, suspension, by which the substance is divided into fine particles in water; *taṣkiya*, spraying, *taṣfiya* and *takhliṣ*, cleaning and filtering. 4) *ikāma*, solidifying (over the fire without anything being burned); *tashwīya*, stewing (in oil) etc. or dry; *taḥid* and perhaps also *muḥkad*, to solidify; the following varieties are given: with dryness, with the bottle, the kettle, burying (*dafn* which plays a great part generally; bottles for burying are for example mentioned), with the blind *anbiḥ*; *taḍmīd*, a kind of *taḍṣīd*, changing into bodies. 5) *sabb* melting; *istinzāl*, allowing to flow from the upper to the lower crucible. 6) *taḥṭīr*, allowing to drip, distilling and filtering; *taṣīd*, sublimating; *tardjīm* „stoning”, a kind of sublimating, 7) *taṣmī'a*, cerification, making soft like wax; *taklīs*, calcination; *taṣḍ'a*, to turn into rust; *ilghām*, amalgamating. 8) I do not know the meaning of *taṣāwī*, “balancing”; *takhniḥ*, “strangling”, which is connected with cerification.

Weighing was, of course, a process of special importance and frequently used; for it must have been very soon recognised that substances could not be mixed in any proportions one pleased. They must always occur in the proper proportions (on weighing see the article MIZĀN). Statements on the proper proportions are not very frequent. In the *Mafātiḥ al-'Ulūm* we are told that to make cinnabar, one should take 1 part quicksilver and 1 part sulphur; the proportion calculated from the atomic weights is 200:32. It should be noted however that for the reaction to take place smoothly a considerable superfluity of sulphur is necessary. Another interesting quantitative statement (Yāḳūt, ii. 139) is to the effect that 1 part of silver is obtained from 100 parts of lead in the making of litharge. Al-Kāthī gives a long list of the smallest quantities of all the different substances that the alchemists use (*op. cit.*, p. 57 sqq.).

Synthetic and analytic methods. There were no general methods to produce definite bodies; a whole series was however obtained artificially, e. g. verdigris from copper and vinegar, white of lead from lead and vinegar, cinnabar from the heating of lead, also litharge, iron rust

from iron, etc.; in these cases it was known that the substances concerned must contain the metal. It was the same when copper was obtained from minerals found in nature such as the varieties of malachite (*Dahnadj*, al-Dimashḳī, text p. 83, transl. p. 97).

There was no analysis in our sense of the term. But there were a large number of rules for the chief of police (*muḥtasib*) by which he could tell the apparently very common adulterations. Thus mineral adulterations of indigo were ascertained by burning. There are writings on this subject by Abu 'l-Faḍl Dja'far b. 'Alī al-Dimashḳī, Ibn Rassam and al-Nabarāwī (E. Wiedemann, *Beitr. zur Gesch. der Naturwissenschaften*, xxxii. and xl.). Gold and silver are tested for purity by the touchstone or by purely chemical methods.

Technical processes. Very little has so far been accurately learned regarding chemical technical processes. A few indications may suffice here. In the first place we do not know much about the methods by which the metals were actually obtained. Gold was got by washing; in some places it was dissolved by quicksilver, the latter of course being regained by distillation (see E. Wiedemann, *op. cit.*, xxiv. 83). Quicksilver was obtained by distillation from cinnabar (either out of iron retorts or by the addition of splinters of iron) (E. Wiedemann, *Journ. für prakt. Chemie*, *op. cit.*, p. 111). On the manufacture of steel and especially its damascening, the providing with *firind*, there are a series of works, e. g. one by al-Kindī. According to a modern Oriental writer, Thābit (*al-Mashrik*, 1900, iii. 577 and 700), damascening is said to depend on the presence of titanium in the metal; but these statements are as a rule of an empirical and thumb nature (E. Wiedemann, *Beitr. zur Gesch. der Naturwissenschaften*, xxv.; L. Beck, *Gesch. des Eisens*², vol. i.).

For a series of artificially prepared inorganic substances see above.

The methods of obtaining different scents from plants were very highly developed. These were especially cultivated in Persia and in Damascus and followed the processes of the ancients. In the district of Shirāz, special taxes were levied on the buildings in which rose-water was prepared (E. Wiedemann, in Diergart, *Beiträge*, p. 234). The scents were partly extracted from the flowers or leaves by means of cold or hot oil and fat and then subjected to further processes. A great variety of oils, — olive, sesame, etc. — was used in the process (cf. Ibn al-Baitār under *duhn*). Water was poured on the different substances and they were put in retorts. These retorts were arranged around a shaft in circles, which were placed above one another in tiers. Hot air from a fire or steam from hot water heated the retorts. The steam developed in the retort carried off the sweet scented ethereal oils and was precipitated with them into a receptacle (pictures in al-Dimashḳī, *Nukhbāt al-Dahr*, text, p. 194; E. Wiedemann, in Diergart, *op. cit.*).

The important sugar industry, about which we possess fairly full information will be dealt with in the article SUKKAR (cf. E. A. von Lippmann, *Geschichte des Zuckers*, Leipzig 1910; E. Wiedemann, *Beitr. zur Gesch. d. Naturwissenschaften*, xli., lii., lv.) and the glass industry under ZADJĀDĪ.

On the manufacture of the usual inks, sympathetic and gold inks, of lacquers and solders, and of cements, a number of works exist which still await editing; so far as I can ascertain, they contain purely practical rules.

A very great part was played by the processes by which drugs, pearls, jewels, etc. were imitated. This was done to a very great extent as we know from al-Khāzini's *Mizān al-Hikma*. Many of the processes given by the different authors are simply pure inventions. Of particular interest are the statements by al-Djawbarī in his *Kashf al-Asrār* (cf. E. Wiedemann, *op. cit.*, xxxiii, and *Mitt. z. Gesch. d. Medizin d. Naturwissenschaften*, 1910, ix. 386) and those in the handbooks prepared for the *muhtasib*.

A proper history of *Kīmīyā*² and an account of its place in Muslim culture will only be possible when we are much better acquainted with the works of its representatives than at present, and also have a better idea of the sciences connected with chemistry, pharmacy, knowledge of drugs, etc., mineralogy, etc. As to chemistry a start has to be made almost from the beginning, as has been done by J. Ruska and E. J. Holmyard. It is important that the processes described should be translated into modern technical terms as Darmstädter endeavoured to do for the Latin Geber.

Bibliography: I. Oriental Sources:

al-Nadīm, *al-Fihrist*, p. 351 sqq. (Berthelot has translated the passages referring to alchemy: *La chimie*, etc., iii. 26 sqq.); al-Khwārizmī, *Ma-fātih al-ʿUlūm*, ed. van Vloten; *Rasāʾil Ikhwān al-Ṣafā*, ed. Bombay, ii. 95, and the translation of the section on Mineralogy by F. Dieterici, *Die Naturanschauung und Naturphilosophie der Araber*², p. 95 sqq. (to be used with caution); al-Masʿūdī, *Murūʾij al-Dhahab*, ed. Paris, viii. 175—177; al-Dimashqī, *Nukhbāt al-Dahr*, ed. Mehren, text, p. 48 sqq., transl. p. 52 sqq.; al-Kāzwinī, *ʿAdjāib al-Makhlūqāt*, ed. Wüstenfeld, i. 202, translation by J. Ruska, *Jahresber. der prov. Oberrealschule Heidelberg*, 1895/1896; Ṣalāh al-Dīn al-Ṣafādī, commentary on the *Lā-miyat al-ʿAdjām* of al-Tughraʾī, MS. Berlin, No. 7660; al-Akfānī, *Irshād al-Kāṣid ila Asna ʿl-Makāṣid*, ed. Sprenger, *Bibl. Ind.*, No. 21, 1849; Abu ʿl-Faḍl, *ʿĀin-i Akbari*, ed. Blochmann, text and transl., *Bibl. Ind.*; Ḥājjdī Khalifa, *Kashf al-Zunūn*, ed. Flügel, section on *ʿIlm al-Kīmīyā*², v. 270 sqq.; Ibn Khaldūn, *al-Muḳaddima*, ed. Quatremère, *Not. et Extr.*, xviii. 229 sqq., transl. de Slane, xxi. i. 249 sqq.

Catalogues of the Libraries, especially that of the Berlin Library. The Sulṭāniya Library in Cairo is also said to be very rich. There are also the alchemical writings themselves so far as they have survived. The Latin translations of Arabic works on *Kīmīyā*² are not here quoted (on them cf. M. Steinschneider, *Die europäischen Übersetzungen aus dem Arabischen bis Mitte des 17. Jahrhunderts in Sitzungsber. d. K. Akad. der Wissensch.*, Vienna, Philos.-hist. Kl., cxlix., 1904 and cli., 1905).

KĪNĀLİZĀDE, Ar. Ibn al-Ḥinnāʾī (cf. Z. D. M. G., xiv. 544 and Gibb, *H.O.P.*, iii. 199 note) a Turkish family of scholars and poets (cf. J. von Hammer, *G.O.R.*, iii. 736), of which the following are the most important members:

I. KĪNĀLİZĀDE, ʿALĀʾ AL-DĪN ʿALĪ B. AMRULLĀH, Ottoman jurist and author, was born in 916 (1510/1511) in Sparta in the district of Hamideli [q.v.] in Anatolia, the son of the kādī Emrullāh (Meḥmed) who died in 967 (1559) and grandson of ʿAbd al-Kādir Hamidī. He filled judgeships in the following towns: Damascus, Cairo, Brussa, Adrianople, and from Dĵumādā II, 978 (Oct.–Nov. 1570) in Constantinople, was appointed Kādī-asker of Anatolia in Muḥarram 979 (May–June 1571) and died on 6th or 7th Ramaḍān of the same year (Jan. 22/23, 1572) in Adrianople. His brother was the poet Muslimī, who was kādī at Rhodes and elsewhere and is said to have died in 944 (1537). Of ʿAlī's sons mention may be made of Meḥmed Fehmī Efendi, also distinguished as a poet, who died when only 32 on 28th Shawwāl 1004 and Ḥasan Čelebi (see below), the famous biographer of poets.

Mollā ʿAlāʾ al-Dīn ʿAlī was a very industrious writer. He wrote glossaries and commentaries on a series of theological works. He became famous by his ethical work *Akhlāk-i ʿAlāʾi* written in 972 (1564) for the Beylerbey of Syria, ʿAlī Paṣha, the original MS. of which is in the library of Rāghib Paṣha in Sтамbul (N^o. 966). This work (cf. Ḥādjīdĵi Khalifa, *Kashf*, i. 203, N^o. 280) was printed (236 + 127 + 52 pp.) in Shawwāl 1248 (Feb. 1833) at Būlāḳ (cf. *J. A.*, 1843, ii. 40, N^o. 68; Zenker, i. 1357, where ʿalamī is an error for ʿalāʾi) and besides translated either in full or in parts; cf. the MS. transl. of the Venetian dragoman Giovanni Medun in the Bonn University Library, N^o. 47 in J. Gildemeister, *Katal.*, p. 114, thereon G. B. Toderini, *Letteratura Turchesca*, Venice 1787, i. 95 as well as R. Peiper, *Stimmen aus dem Morgenlande*, Hirschberg 1850, i sqq., 403 sqq. and do., *Das Capitel von der Freigebigkeit*, Breslau 1848, esp. p. 75, 98, 128. MSS. of the Ethics of Mollā ʿAlī are numerous; cf. Flügel, *Wiener Kat.*, iii. 304 sq.; Pertsch, *Berl. Türk. Hss.*, p. 168 sq., where further details are given.

Another work is his collection of letters (*Münshāt*, cf. Ḥādjīdĵi Khalifa, *Kashf*, vi. 185) in the five sections of which, in a period in which style was decaying, he gives masterly specimens of the different kinds of literary composition. There are MSS. of this work in the British Museum (Rieu, *Türk. MSS.*, p. 94), Vienna, Nat.-Bibl., N^o. 289 (Flügel, *Katal.*, i. 266 sq.); Vienna, Konsular-Akad., N^o. lxxiv. Krafft, *Katal.*, 28 sq.).

Bibliography: The fullest biography is in the MS. *Tadhkira* of his son Ḥasan Čelebi; ʿAtāʾī, *Dhail-i Shaḳāʾik al-nuʿmāniya*, p. 164–168; ʿAlī, *Kunh al-akhbār* (cf. J. v. Hammer, *G.O.R.*,

iii. 755, N^o. 57); Pečewī, *Taʾriḫh*, i. 458; *Sidjill-i ʿothmāni*, iii. 501 (with erroneous statements regarding the Kīnālīzāde family); J. v. Hammer, *G.O.D.*, ii. 341, iii. 131; do., *G.O.R.*, iii. 736 (also contains mistakes regarding individual Kīnālīzāde's), iv. 603 (where the brother of Mollā ʿAlī, Mollā ʿAbd al-Raḥīm Kerāmī Čelebi, mentioned in Ḥādjīdĵi Khalifa, *Fedhlike*, i. 7 sq. and died in 1000 = 1591, is wrongly given as the author of this or another collection of letters; cf. thereon, W. Pertsch, *Berl. Türk. Hss.*, p. 471 on N^o. 491); Brusali Meḥmed Tāhir, *ʿOthmānlī müʿellifleri*, i. 400 (with exact list of writings); F. Wüstenfeld, *Die Geschichtsschreiber der Araber*, N^o. 532, p. 248 sq.

II. KĪNĀLİZĀDE ḤASAN ČELEBĪ, an Ottoman biographer of poets.

Ḥasan Čelebi was the son of the Mollā ʿAlī mentioned above and was born in Brussa in 953 (began March 4, 1546), where his father was judge. At the age of twenty he became assistant (*muṭāʾim*) to the famous Abū Suʿūd [q.v.], in 975 (1567/1568) professor, in 990 (1582/1583) “guardian” (*ṣāḥn*), i. e. *Müderreis* at the mosque of Meḥmed the Conqueror (cf. J. von Hammer, *G.O.R.*, vii. 186), five years later professor at the Suleimāniya mosque, at which his father had once been first *Müderreis* (cf. J. von Hammer, *G.O.R.*, iii. 349). In the year 999 (1590/1591) he became kādī of Aleppo, then of Cairo, Adrianople and Cairo again. In 1007 (1598/1599) he went as kādī to his native town of Brussa, then to Gallipoli, became kādī of Eiyūb, and in Şafar 1011 (July 1602) of Eski Zağhra. He died, the holder of an *arḫālīḳ* [q.v.] on Shawwāl 12, 1012 (March 15, 1604) at Rosetta (Rashīd) in Egypt.

Ḥasan Čelebi achieved fame by his comprehensive dictionary of poets in three sections (*faṣl*), *Tadhkirat al-Shuʿarāʾ*, a work which according to Ḥādjīdĵi Khalifa's view (*Kashf*, ii. 262, N^o. 2817) surpasses all previous works of the kind in the beauty of its language and the compactness of its matter. The *tadhkira* (finished in 944 = 1586 and dedicated to the great Saʿd al-Dīn [cf. KHONJA EFENDI] gives biographical sketches of nearly six hundred poets with specimens of their work. This most important work, of which many manuscripts exist, has not yet been printed. A definitive edition of this, the best and most comprehensive of all Ottoman anthologies, is urgently desirable.

Bibliography: ʿAlī, *Kunh al-akhbār* (cf. J. v. Hammer, *G.O.R.*, iii. 736, 756, N^o. 138); Ḥādjīdĵi Khalifa, *Fedhlike*, i. 240; *Sidjill-i ʿothmāni*, ii. 127; J. v. Hammer, *G.O.D.*, i. 44; ii. 341; iii. 131; do., *G.O.R.*, iii. 736; ix. 243, N^o. 137; Gibb, *H.O.P.*, passim, esp. iii. 199 sq.; Brusali Meḥmed Tāhir, *ʿOthmānlī müʿellifleri*, ii. 385; al-Muhibbi, *Taʾriḫh Khulāṣat al-Āthār*, Cairo 1284, ii. 29; F. Wüstenfeld, *Die Geschichtsschreiber der Araber*, N^o. 547, p. 254.

(FRANZ BABINGER)

KINĀNA B. KHUZAIMA B. MUDRIKA B. AL-YĀS B. MUḌAR is the name of a large Arab tribe which had its camping grounds at the beginning of Islām in the territory round Mekka, extending from the Tihāma in the South-west of the city, where they bordered on the lands occupied by the related tribe of Hudḥail, to the North-east of the city where their grounds adjoined those occupied by their nearest relations the tribe of Asad of Khu-zaima. They were very numerous and their chief

importance in the eyes of native genealogists lies in the fact that the *Quraysh*, and consequently the Prophet, derived their origin from this tribe. In view of this fact we have concerning them an abundance of notices of their subdivisions and of men of note who traced their descent from them. While later genealogists name as a rule only six large clans, Ibn al-Kalbī in the *Djamharat al-Nasab* mentions the following fourteen sons of Kināna: 1) al-Naḍr i.e. *Ḳais* who is considered the ancestor of *Quraysh* [q. v.]; 2) Nuḍair; 3) Mālik; 4) Milkān (so this name is vocalised in the good MS. of the *Djamhara*, while *Ḳalqashandī* insists on the pronunciation Malkān); 5) 'Amir; 6) 'Amr; 7) al-Ḥārith; 8) 'Arwān (or 'Azwān); 9) Sa'd; 10) 'Awf; 11) Ḡhanm; 12) Makhrama and 13) Djarwal. All these thirteen tribes are stated to be the offspring of Barra bint Murr, the sister of Tamīm b. Murr, for which reason they are brought into relationship with the large tribe of Tamīm. The fourteenth son of Kināna named 'Abd Manāt was a son of al-Dhāfra' bint Hanī b. Balī of Ḳudā'a for which reason this clan is often reckoned as belonging to Ḳudā'a itself. The later genealogists as a rule only mention al-Naḍr, Mālik, Milkān, 'Amir, 'Amr and 'Abd Manāt of most of which they also enumerate subdivisions. No divisions of Milkān, 'Amr and 'Amir are mentioned except al-Ḳain as a branch of the last named, while al-Naḍr as ancestor of *Quraysh* is dealt with in the article referring to *Quraysh*. Mālik was divided into the clans *Tha'laba* b. al-Ḥārith b. Mālik, with the subdivisions of *Firās* b. Ḡhanm b. *Tha'laba*, and *Mukhdadj* b. 'Amir b. *Tha'laba*, and *Fuḳaim* b. 'Adī b. 'Amir. The 'Abd Manāt were perhaps the most numerous and are split up into a number of clans: 1) Ḡhifār; 2) Bakr with the subdivisions of *Du'il* and *Laith*; 3) Bal-Ḥārith; 4) Mudlīj, who were renowned as augurs; 5) *Damra* b. Bakr.

It would be absurd to assume that these names mean actual sons or descendants of Kināna, but for the early period of Islām they are important as indicating the mutual relationship in which the various clans of Kināna considered themselves to be and were possibly entered in the *Dirwān* created by 'Umar. As with all other Arab tribes the exact knowledge of affiliation of single persons very soon became doubtful and only the descendants of men who had played an important part in the rise of Islām could trace their descent with some degree of certainty. The clans of Kināna which in later times, i. e. in the sixth century of the *Hidjra* were settled in Upper Egypt near *Ikhmīm* or in the Western Delta had no knowledge of their origin except that they claimed to be descended from the original stock and had immigrated into Egypt at various periods, the last immigration having been in the vizierate of Ṭalā'i' b. Ruzzīk (549—556 A. H.).

As close neighbours of the sacred territory, the tribe of Kināna played no unimportant part in the history of the city of Mekka in the time before Islām and the clansmen outside gave the final decision when the branch *Quraysh* wrested the rule of the city from the tribe of *Ḳhuzā'a*, for it was their chief Ya'far b. 'Awf b. Ka'b b. 'Amir b. al-Laiṭh b. Bakr b. 'Abd Manāt who was chosen to give his final decision which was in favour of *Quraysh*; and he received on account of his decision the nickname al-Shuddākh "the Crusher"

because he crushed the dispute. Their attitude towards the Prophet as a united tribe is not recorded, but one of their clans the Banū *Firās* was among the chief supporters of 'Alī at *Ṣiffin*. The last time Ṭabarī mentions them in his *Annals* is in the year 230 A. H. when they where in part still encamped near Mekka, but were too weak to resist the depredations of other tribes who had become more powerful. At this time a large section had their camping grounds in the Ḥawrān and near *Ṣarkhad*. Though not important as a tribe, the names of men of note as traditionists etc. are very numerous, too numerous to be mentioned in detail.

(F. KRENKOW)

KINDA, also called Kindat al-Muluk (the royal Kinda) was a South-Arabian tribe which, probably not numerous, was settled at the time preceding the rise of Islām in the country to the West of Ḥaḍramawt. The Arabian genealogists know their descent, but as usual with all South-Arabian tribes it is altogether imaginary. The line of descent is traced as follows: Thawr (i. e. Kinda) b. 'Ufair b. 'Adī b. al-Ḥārith b. Murra b. Uḍad b. Zaid b. *Yashdjub* b. Zaid b. 'Arib b. Zaid b. *Kahlān* b. *Saba'*. They appear not to be mentioned in ancient South-Arabian inscriptions and are first mentioned in history in the fourth century of the Christian era. Ḥudjr b. 'Amr b. Mu'āwiya b. al-Ḥārith al-Aṣghar b. Mu'āwiya b. al-Ḥārith al-Akbar b. Mu'āwiya b. Kinda, called *Ākil al-Murā*, was a step-brother of the *Himyarite* ruler Ḥassān Tubba' and in accordance with the practice of the *Himyarite* kings, his son 'Amr b. Ḥudjr was kept by Ḥassān Tubba' at his court as a page and at the same time hostage. When Ḥassān Tubba' made his expedition into the interior of Arabia and subdued the various tribes settled there, he appointed, upon his return to *Yaman*, his step-brother Ḥudjr ruler of the conquered tribes. Ḥassān Tubba' was killed at the instigation of his brother 'Amr, after an expedition against *Djadīs*, who resided in *Yamāma*. The latter gave a sister of Ḥassān Tubba' in marriage to 'Amr b. Ḥudjr and when his father Ḥudjr had perished he succeeded him as ruler of the Arab tribes in Central Arabia; he was nicknamed al-Maksūr. 'Amr was succeeded by his son al-Ḥārith who for a short time after the death of the Persian king *Kubād*h was made ruler of al-*Hira* but lost this possession upon the accession of *Nūsharwān*. After his death the now practically independent kingdom of Central Arabia was divided among the sons of al-Ḥārith, while his son Ḥudjr retained the rule over the tribe of *Asad*, *Shurāḥbil* became ruler of the tribes of *Bakr*, *Ḥanzala*, 'Amr b. *Tamīm* and the *Rabāb*, while *Salama* ruled over *Taghlib*, al-Namir b. *Kāsit* and *Sa'd* b. *Zaid Manāt* and *Ma'di Karib* had the tribes of *Ḳais* and *Kināna* under his authority. They immediately began to dispute one another's authority which resulted in the first battle of *Kulāb* in which practically all Arab tribes took part. This place *Kulāb* is difficult to identify; it is said to have been between al-Baṣra and al-Kūfa, seven days' journey from *Yamāma*.

After a fierce fight *Shurāḥbil* was killed but his adherents permitted his family to return in safety to Yaman. The final result however was that the authority of the various princes was very much reduced and the tribes regained their independence. Meanwhile *Ḥudjr* had not taken part in the quarrel and had ruled in tyrannical fashion over the tribe of Asad and the Byzantine annalists know of raids which *Ḥudjr* (*Ogaros*) and his brother *Ma'di Karib* had made upon the Roman border about the end of the fifth century. *Ḥudjr* was treacherously murdered by the Asad. He had been absent from the tribe, and when they refused any longer to acknowledge his authority and pay the tribute, he marched against them with an army probably drawn from the tribes over which his other relations ruled. His camp was surprised by the Asad and he was killed while his son *Imru ul-Ḳais* managed to escape. This event practically ended the lordship of the Kinda kings over the Arab tribes and the years which followed were occupied by *Imru ul-Ḳais* in attempts to regain at least part of the heritage of his father. After many unsuccessful attempts he finally went to Constantinople to seek help and auxiliaries from the Greek emperor, in which he was disappointed; and according to legend he was actually poisoned by emissaries of the Emperor at *Anḳira*.

But it was not only this family which gained the tribe the name of the Royal Kinda, for we find until late into the Muslim period men of note who held prominent positions at court as nobles of great importance and they were also prominent in resisting the early missionaries of Islām. *Ḳais b. Ma'di Karib* had been a man of eminence at the dawn of Islām and poems by *al-A'shā* testify to his importance. His son *al-Ash'ath* became a convert to Islām but apostasized; he was defeated by the army sent by *Abū Bakr*, made a prisoner and pardoned. His descendants were holding important posts during the rule of the *Umayyads*. Among other prominent men may be mentioned the false prophet *al-Muḳanna'* [q. v.] and the *Ḳāḍi Shurāih* [q. v.]. Other persons were named *al-Kindi* because they were clients (*mawālā*) of the tribe as e.g. the philosopher *Ya'qūb b. Ishāk al-Kindi* [q. v.]. A district in Syria and also a quarter of the city of *Baṣra* was named after this tribe and it is stated that the poet *Abū Nuwās* was born in the Kinda quarter of *Baṣra*.

Among the branches of Kinda are mentioned the clans of *Sakūn b. Ashras* and *al-Sakāsik*, from the former were descended the *Tudjib* who were among the earliest settlers in Egypt and were principally concerned in the revolt against the caliph *Uthmān*, one of their clan being actually named as the murderer of the Caliph. The clan of *Tudjib* later attained great influence in Spain and the *Banū Ṣumādīh* in Almeria, the *Banū Dhu 'l-Nūn* in Malaga and the *Banu 'l-Afṣas* in Badajoz each in their turn exercised in these districts royal authority till they fell before the power of the *Almoravids*.

(F. KRENKOW)

AL-KINDĪ, *ABŪ YUSUF YA'QUB B. ISHĀK*, an Arab philosopher, called the *ḡailasūf al-'Arab* on account of his South Arabian descent, was born probably in the middle of the ninth century A. D. in *Kūfa*, where his father was governor, and educated in *Baṣra* and *Baghdād*, then the great centres of education. He served in various capacities at the 'Abbāsīd court, especially under *Ma'mūn* and *Mu'taṣim*, as translator or editor of Greek philosophical works, as tutor to a son of *Mu'taṣim*, as astrologer, etc. Devoted to the *Mu'tazilī* theology of the court, he was affected by the restoration under *Mutawakkil* and his library was confiscated for a time. He was still alive in 870, when he thought he could foretell a duration of about 450 years to the 'Abbāsīd empire then threatened by the *Ḳarmaṭians* and a conjunction of stars.

Al-Kindi had acquired with tolerable understanding a knowledge of the so-called "ancient", i.e. mainly Greek learning, as far as it was accessible to him; and all his life he furthered its dissemination in Islām by an industrious literary activity. In the tenth century we find everywhere, especially in mathematics and natural philosophy, the traces of his activities. Of his works very little has survived in Arabic, but more in Latin translations, including some by *Gerhard of Cremona*. Enough survives with some quotations and biographical and bibliographical references to enable us to estimate his position in science and philosophy.

Eclectic in the sense of the later Hellenism, he regarded the Neo-Pythagorean mathematics as the basis of all sciences and endeavoured in Neo-Platonic fashion to combine the views of *Plato* and *Aristotle*. He was fond of applying mathematics not only in physics, but also in medicine, e.g. in the theory of composite medicines. He explained the effect of these medicines from the geometrical proportions of the mixture of physical qualities, warm, cold, dry or moist. He was therefore still regarded by *Cardan*, a philosopher of the Renaissance, as one of the twelve subtlest minds.

Al-Kindi was celebrated in the Middle Ages as an astrologer; he was numbered among the nine judges of astrology, but he dealt not only with what we would call astrological fantasies but with exact astronomical measurements and calculations.

As regards alchemy, much studied in his time, which was defended against him by the physician *Rāzī*, our philosopher adopted a rather sceptical attitude. Gold and silver, he thought, could only be attained from mines, where nature has brought them into being, and not made by human skill.

Al-Kindi dealt very fully with optics. His principal work, which was much used in the east and west, next to the work of his greater successor, *Ibn al-Haitham*, is based mainly on the *Optics* of *Euclid* in *Theon's* recension. In it he dealt with (1) the passage of light in straight lines, (2) the direct process of vision, (3) the process of vision by a looking-glass and (4) the influence of distances and angle of vision on sight along with optical delusions. According to him light takes no time to travel and vision takes place through a bundle of rays which, sent out from the eye expanding in the form of a cone, embrace the object. While the other four senses receive impressions from things, the sense of sight

grasps its object in an active and instantaneous manner.

We also possess by him, like his principal works only in a Latin translation, a little work on the cause of the blue colour of the sky, in which it is explained that this colour is not really special to the heavens, but arises from the mixture of the darkness of the sky with the light of the atoms of dust, vapour, etc. in the air illuminated by the light of the sun. A work on ebb and flow, also preserved in Latin, is remarkable because the author tested experimentally the principles of the theory, an erroneous one, however.

Primarily a natural philosopher, al-Kindī also discussed the doctrine of the soul and of the intelligence (*voûç*). According to him the world as a whole is the work of an externally active cause, the divine intelligence, whose activity is transmitted in many ways from above to the world. Between God and the world of bodies is the world of soul, which created the world of heavenly spheres. The human soul is an emanation from this world-soul. In so far as the human soul is combined with the body, it is dependent on the influence of heavenly bodies, but in its spiritual origin and being it is free. For only in the world of intelligence (*ʿaql*, *voûç*) is there freedom and immortality. If then we wish to attain the highest, we must turn to the eternal possessions of the intelligence, the fear of God, knowledge and good works.

In al-Kindī's treatise *De Intellectu*, edited by Nagy, we meet for the first time the doctrine of *ʿaql* in a form that is significant of the whole course of Neo-Platonic-Aristotelian philosophy in Islām. Following Alexander of Aphrodisias (*De Anima*, ii.) a fourfold *intellectus* is distinguished: (1) which is always *in actu*; (2) which is *in potentia* in the soul; (3) which is realised in the soul by the first (1) (so far corresponding to the threefold *voûç* of Alex. Aphr.: *ποιητικός*, *ύλικός*, *ἐπικριντικός*) and (4) an *intellectus demonstrativus*. According to a suggestion of P. Duhem's (*Le Système du Monde*, Paris 1916, iv., p. 405) by the latter is meant the *anima sensitiva*, about which Alex. Aphr. speaks in this context, but which he did not call *voûç* nor could have called it so. Al-Kindī seems to me to mean by his fourth *ʿaql* the effective participation of the third, just as Aristotle distinguishes between the possession of acquired virtue and its practice, acquired knowledge and mental activity. The fourth would therefore have to be distinguished from the first *ʿaql* in later Arab terminology as *ʿaql bi 'l-fʿl* from *ʿaql faʿal*.

AL-KINDĪ, ABŪ ʿOMAR MUḤAMMAD B. YUSUF, an Arab historian of Egypt, was born on 10th Dhū l-Hijja 283 (Jan. 17, 897) at some place not exactly known in Egypt and belonged to the Tudjib, a clan of the Kinda, who had come into Egypt with ʿAmr b. al-ʿĀṣ. He studied Tradition under Ibn Kūdaid (d. 312 = 924) and al-Nasāʾī (d. 302 = 914; q. v.); towards the end of his life he is said to have himself been a teacher of Ḥadīth. But his main interest was in the history and traditions of his native land. He seems to have spent all his life in al-Fusṭāṭ, where he died on 3rd Ramaḍān 350 (Oct. 15, 961).

His two principal works are the history of the governors of Egypt (*Tasmiyat Wulāt Miṣr* or simply *Umarāʾ Miṣr*) and the history of the judges of the country (*al-Ḳudāʾ*). The former deals with the governors (*umarāʾ al-salāh*) and includes the chiefs of police appointed by them (*walī* or *ṣāhib al-shurṭa* or *al-ḥarb*), but excludes other higher officials; these bare lists are only occasionally interrupted by brief notes on the domestic and foreign policy of the country. The author brings the history of Egypt down to the death of al-Ikhshid in 335 (946); an unknown author continued it till the coming of the Fātimids in 362 (972). Sections of the book were first published by K. Tallquist in Ibn Saʿid's *Kitāb al-Mughrib*, Leiden 1899 and by N. A. König in *The History of the Governors of Egypt*, New York 1908. As a supplement to his first work al-Kindī wrote the history of the judges of Egypt down to the appointment of Bakkār in 861 (246). Here in connection with the lives of the judges he not infrequently gives us important legal decisions laid down by them and thus gives us valuable data for the history of Muslim law. Al-Kindī seems to have brought the work down to his own time in a second edition, but this has not survived. Instead of the latter we have two continuations, one by Aḥmad b. ʿAbd al-Raḥmān b. Burd to the year 366 (977) and an anonymous one for the years 347—424 (959—1033), the beginning of which therefore covers part of the ground of the original versions; both are bare chronological lists. This work has been edited by R. Gottheil, *The History of the Egyptian Qadis*, Paris 1908. Both works have been brilliantly edited by Rhuvon Guest, *The Governors and Judges of Egypt or Kitāb el-Umarāʾ (el-Wulāh) wa-Kitāb el-Qudāh of el-Kindī together with an appendix derived mostly from Rafʿ el-ʿIṣr* by Ibn Hajar, G. M. S., xix., Leiden 1912.

Of other works by al-Kindī we know mainly

from quotations in al-Maḳrīzī's *al-Khiṭaṭ* and in Ibn Duḳmāk, *Kitāb al-Djund al-Ḡharbī* or *al-Adjīnād al-Ḡharabā* (?), a *K. al-Khandaḳ wa 'l-Tarāwīḥ* (on the fight for the trench made by Ibn al-Zubair's governor Ibn Djaḥdam for the defence of al-Fuṣṭāt), a *K. al-Khiṭaṭ*, a *K. Akhbār Masḍīd Aḥl al-Rāya al-Aḡam* and a *K. al-Mawālī*. A *Sīrat al-Sarī b. al-Ḥakam* is only mentioned by al-Maḳrīzī. Yāqūt in the *Irshād al-Arib*, ii. 156 quotes a history by al-Kindī beginning in 280 (894) and Ibn Duḳmāk (iv. 18, 3) gives him as a source for an event of the year 290 (903). Al-Suyūṭī wrongly ascribes to him the short *Kitāb Faḍā'il Miṣr*, which his son 'Omar composed for the Ikshidid Kafūr (355—357 = 966—968). It has been edited by J. Oestrup ('*Umar b. Muḥammad al-Kindī's Beskrivelse af Ægypten, udgivet og oversat*) in the *Bulletin de l'Académie Royale de Danemark*, Copenhagen 1896, N^o. 4. But al-Kindī himself did write a larger work with the same title which the son quotes several times, according to Nallino, *Opus Astron. al-Battani*, ii. 325.

Bibliography: in the article; short biographies of al-Kindī are only given in the still unpublished *al-Muḳaffā* of al-Maḳrīzī and the *Ta'rikh al-Islām* of al-Dhahabī.

(C. BROCKELMANN)

AL-KINDĪ, 'ABD AL-MASĪḤ B. IṢḤĀḲ, the fictitious name of the author of a celebrated Arabic apologia for Christianity, the *Risālat ilā 'Abdallāh b. Ismā'il al-Ḥaṣhīmī*. Professing (ed. 1880, p. 47; cf. p. 2) to be a contemporary account of a controversy held about the year 204 (819) before the Caliph al-Ma'mūn on the relative values of Islām and Christianity, it contains theological statements and a terminology probably posterior to the year 300 (912), for example in particular the allusion to the refutation by Ṭabarī (d. 310 = 923) of the thesis of the Ḥanbalī Barbahārī (d. 329 = 940) on the inscription of the name of the Prophet Muḥammad on the base of the throne of God. The adaptation to Christian theology of the ideas of the Islāmic *Kalām* as in the distinction between *ṣifāt dhāt* and *ṣifāt fī'l*, would make one try to identify this "Kindī" with some Jacobite author with pre-Averroan tendencies, for example with the celebrated Yaḥyā b. 'Adī (d. 364 = 974). The text was used and its author quoted, by al-Bīrūnī, under his assumed name of a Nestorian Kindite, "son of Isaac", addressing to a Ḥaṣhīmīte "son of Ismā'il".

This apologia, often aggressive in tone, is a very remarkable document. It contains the first known outline of a critical history of the gradual formation of the present text of the *Qur'ān*. The Arabic original, written in Syriac characters (Karshuni MSS.: Paris, *Catal. Zotenberg*, p. 204, 205; Gotha, *Cat. Möller*, p. 160) was analysed, then translated into Latin about the year 1141 by Peter of Toledo (MSS. Lat., Paris, N^o. 3393, 3649, publ. in Bibliander, *Alcoranus*, 1543, ii. 1—20) and resurrected in the xixth century by Sir William Muir.

KINKIWAR, KANKIWAR, KANGAVAR, a little district with a town of the same name and about 30 villages between Hamadān and Ḳarmīn. The town has about 2,500 inhabitants; in its vicinity is a famous castle, Ḳaṣr al-Luṣūṣ or Ḳaṣr Duẓdān, the "robber castle"; it is said to take its name from the fact that several animals were stolen from the Muslims at the conquest; Ṭab. i. 2649.

KINNASRĪN, a town in North Syria at the point where the Nahr Ḳuwaik enters the swampy lake of il-Maṭḱh. In ancient times it was called Χαλκίς, *Chalcis ad Belum* and lay ἐν μεθόροις Ἀράβων (Diodorus, *Bibl.*, xxxiii. 4a); perhaps it is to it that the note in Stephen of Byzantium refers, according to which a town named Chalkis was founded by the Arab Munkās. In the late classical period a part of the Syro-Arabian limes was called τὸ λίμνον Χαλκίδος (Malalas, p. 296, 5). In this region the Arabs very early immigrated into Byzantine territory; at al-Ḥiyār (the later *Ḥiyār bani 'l-Ḳa'ka'*) in the district of Ḳinnasrīn in 554 A.D. the Ḡhassānid al-Ḥārith won a decisive victory over the Lakhmid al-Mundhir of al-Ḥīra (Nöldeke, *S. B. Ak. Berlin*, 1887, p. 18; according to Herzfeld, *Jahrbuch d. Preuss. Kunstsammlungen*, 1921, xlii. 123, al-Ḥiyār is the modern Ḳaṣr ibn Wardān). The Syriac name Ḳenneshrīn (not to be confused with the monastery of Ḳenneshrē on the Euphrates also written Ḳenneshrīn; cf. G. Hoffmann, *Auszüge aus syr. Akt. pers. Märt.*, p. 161 sq.) occurs several times in Syriac texts before the Arab period (Wright, *Catal. Syr. MSS. Brit. Mus.*, ii. 537^b, 707^b; Severus of Antioch, *Epist.*, 37, p. 117 ed., p. 104 transl. Brooks); also in the Talmud (*Babyl. Talm.*, iii. 366, ed. Goldschmidt: Province of Ḳannishraiyā). In the last struggle between the Byzantines and Sassanians, the town was taken in 573 A.D. (Michael the Syrian, ii. 312) and in 608/609 A.D. by the Persians. At that time Arab tribes were already dwelling round Ḳinnasrīn, Ḥalab, Manbij and Bālis (Wellhausen, *Skizzen u. Vorarbeiten*, vi. 67; Lammens in *M.F.O.B.*, i. 52). In 637 Abū 'Ubaida took the town (al-Balādhurī, *Futūḥ*, p. 137, 139, 144 sqq.). It then became the capital of an administrative district (al-Balādhurī, *op. cit.*, p. 164, 189 sq.).

The Caliph Yazīd I in his reforms in the administration of Syria added to the four military provinces already in existence (*adǧnād*) Filastīn, al-Urdunn, Dimashḱ and Ḥims, a fifth the ḍjund of Ḳinnasrīn, which he separated from the ḍjund of Ḥims (Balādhurī, p. 132; following him Yāqūt, *Mu'ḍḡam*, iii. 742. Lammens, *Le Califat de Yazīd Ier* in *M.F.O.B.*, vii. [1914—1921], p. 446 sq.). Besides its capital, it included Ḥalab, Anṭakiya and Manbij. After the time of Ḥārūn al-Rashīd, in which the 'Awāṣim were again separated from the ḍjund of Ḳinnasrīn (in 170/786), the districts of Ḳinnasrīn, Ḥalab, Ma'arrat al-Nu'mān, Ma'arrat Maṣrīn and Sarmin (Le Strange, *Palestine*, p. 36) belonged to it. Various changes in the frontier seem to have been made later. Thus Ibn Khūr-dādhbih (*B. G. A.*, vi. 75; c. 850 A.D.) in addition to the places mentioned and Ḥiyār Bani 'l-Ḳa'ka'

and Martakhwān also includes the towns of Dulūk and Ra'bān in the north, which, according to other authors, belonged to the 'Awāšim, and al-Maḳdisi includes in our district the places of Antākiya, Bālis, Sumaisūt, the two Ma'arra, Manbidj, Baiyās, al-Tinā, Kinnasrīn and al-Suwaidiya (*B. G. A.*, iii. 54; the list given in iii. 154 sq. which is the only one noticed by Le Strange, p. 39 and Gildemeister in *Z. D. P. V.*, vii. 147 is very defective). On the other hand al-Khunāsira and Kafartāb are, probably rightly, included in Hīmš (in spite of Le Strange, p. 40) although the former in Iṣṭakhri's time belonged to the province ('amal) of Kinnasrīn (M. Hartmann in *Z. D. P. V.*, xxii. 146). Kinnasrīn, which seems in ancient times to have far surpassed Beroia in importance, later became more and more overshadowed by Ḥalab; the Arab geographers are practically unanimous in saying that it had formerly been a strongly fortified and flourishing town but in their day was already quite ruined, depopulated and had sunk to be a mere village. According to Yāqūt the inhabitants had left the town on the approach of the Byzantines (351/962); some fled across the Frāt, the remainder were settled by Saif al-Dawla in Ḥalab. When in 355 (966) Nicephorus Phocas advanced on Ḥalab, the Ḥamdānid retired to Kinnasrīn but, when he could not make a stand there, he destroyed the town. It was again populated under the Emperor Basil II, burned again in 389 (998). Rebuilt by the Banu 'l-Buṣaiṣ of the tribe of Tanūkh, it was laid waste again by the Byzantines (422 = 1030) and once more destroyed by Tādī al-Dawla Tutuṣh, after the Seldjūq Sulaimān b. Kūṭulmish had restored and rebuilt it. Henceforth Kinnasrīn was uninhabited. In the Crusading period it was several times used as a depot for military stores (Röhrich, *Gesch. des Königreiches Jerusalem*, p. 131, 139, 140). It never seems to have fallen into the hands of the Franks, who wrote the name Canestrine (William of Tyre, xiv. 7). In Yāqūt's time there was only a khān for caravans and the Sulṭān's tax-collectors there.

The modern Kinnasrīn, also called Eski Ḥalab by the Turks, still has great ruins of the ancient walls and those of a citadel on an eminence to the north east. A chain of hills in the north of the town is crowned by the sanctuary of Nabī 'Is in which fragments of Kūfic inscriptions of the xith century A. D. have been found.

KINTĀR (from the Latin centenarius, cf. German Zentner and English hundredweight), an avoirdupois weight in the ancient Arab weight system mentioned as early as Qur'an iii. 12, 68. Out of the wealth of tradition regarding the amount of this weight, we may select as the most usual and the one in keeping with its literal meaning, the equation 1 *kinfār* = 100 *ratl*, which however, is very indefinite. The term *kinfār* is, following its use in the Qur'an, chiefly applied to a considerable sum in gold coins (usually 10,000 dinars = 85 lbs.).

On other weights (*wasḥ* and *kurr*) see KAFİZ.

KIOSK. [See KÖSHK.]

KİPÇAK, a Turkish people; usually also written Kipčak or Kifčak, the forms Khifčakh and Khifshākh are also found. In later popular and learned etymologies (first in Rashid al-Dīn, *Ḍjāmī' al-Tawūrikh*, ed. Berezin = *Trudi Vost. Otd. Arkh. Obsch.*, vii. 23, later in Abu 'l-Ghāzi, ed. Desmaisons, p. 19) *kipčak* is connected with *kobuk* or *kobī* and explained as a "hollow tree trunk"; at the same time a legend is told of the birth of a boy from a hollow trunk; the boy is said to have been adopted by Oghuz Khān (cf. GHUZZ, ii. p. 168) and to have been given a separate territory as a fief. Gardizi (text in W. Barthold, *Oṭet v poezdkie v Srednyuyu Aziyu*, p. 82) mentions the Kipčak along with the Imāk as a division of the Kimāk who lived on the Irṭish, although the earlier anonymous author of the *Hudūd al-'Ālam* (f. 19a) say that the Kipčak had separated from the Kimāk and dwelled to the north of the Pečenegs. Ibn Khordādhbih (ed. de Goeje, p. 31, 6) and, following him, Ibn al-Fakih (ed. de Goeje, p. 329, 3) mention the Kipčak along with the Kimāk as a separate people. Maḥmūd Kāshgharī (i. 273) describes the Yimāk (sic) on the Irṭish as a subdivision of the Kipčak not of the Kimāk. In another passage of the same work (iii. 22) we are told that the Yimāk are a Turkish tribe (*djil min al-turk*), the same "as we call Kipčak" (*wa-hum al-kifdākiyatu 'indanā*); the Kipčak themselves thought they were a separate branch (*thumma atrāk kifdāki ya'ud-dūna anfasuhun hizban ākhara*). The Kimāk mentioned by Muḳaddasī (p. 274, 3) at Ṣawrān must have been Kipčak. In connection with the advance of the Kipčak from north to south is the appearance (first in the xith century in the *Dīwān* of Nāṣir-i Khusrāw; cf. Browne, *Lit. Hist. of Persia*, i. 227) of the name *Daṣṭ-i Kipčak* for *Mafārat al-Ghuzz*, cf. above, ii. 168. The Kipčak (Khifčak) are already mentioned by Baihaḳī (ed. Morley, p. 91) as neighbours of Khwārizm. According to Maḥmūd Kāshgharī (ii. 253 and iii. 23) the dialect of the Kipčak had the same phonetic peculiarities as the

dialect of the Ghuzz (and at the present day the dialect of the Kazak): *dj* for *y* at the beginning of a word. That the term *Dasht-i Kıpçak* was also extended to South Russia is shown by the evidence of Ḥamd Allāh Kāzwinī (*Nuṣhat al-Kulūb*, ed. Le Strange, p. 21 and 238), that *Dasht-i Kıpçak* is the same as *Dasht-i Khazar*; the same people were of course called Polowtzi by the Russians and "Comani" by western Europeans; the name *Kıpçak* was later transferred to the Mongol empire of the Golden Horde. According to J. Marquart (*Osttürkische Dialektstudien*, p. 102) the *Kıpçak* appear in history for the first time in 514 (1120/1121) in Ibn al-Athīr (x. 399) as allies of the Georgians; according to Marquart (*ibid.*, p. 136) the kingdom of the *Kıpçak* was founded by people who emigrated from Manchuria in connection with the rise of the Čurč (Chinese Kin dynasty); cf. thereon P. Pelliot in *J. A.*, ser. II, xv. 125 sqq. The *Kıpçak* in South Russia were exposed not only to the influence of Islām but also to that of Christianity; a prince of the *Kıpçak* (Chinese Kin-č'a) in the time of the Mongol invasion (the same prince is mentioned in Russian annals) was called George (Russ. Yuriy, hence Chinese Yü-li-ghī, in Bretschneider, *Med. Res.*, ii. 297 sq. and Pelliot, *op. cit.*, p. 150). Ibn Baṭṭūta mentions Christian *Kıpçak* at Kerč; the so-called "Codex Comanicus" must be regarded as a memorial of the spread of Christianity among the *Kıpçak*.

The *Kıpçak* are no longer mentioned after the Mongol period; like many other early names of peoples (Karluḡ, Uighur, Naiman etc.) the name *Kıpçak* is found as the name of a family among the Özbek and Kazak. The *Kıpçak* are particularly associated with Farghāna in the modern history of Central Asia, cf. the article *KHOĠAND*.

Bibliography: Especially J. Marquart, *Ost-europäische und ostasiatische Streifzüge*, Leipzig 1903; do., *Osttürkische Dialektstudien*, Berlin 1914. — On the Codex Comanicus cf. the bibliographical references in Pelliot, *J. A.*, ser. II, xv. 127. (W. BARTHOLD)

KİRĀ'A, the method of recitation, punctuation and vocalisation of the text of the Qur'ān. al-Suyūṭī has classified according to Ibn al-Djazarī the various readings of the Qur'ān into three series:

1. The *Kirā'a* accepted authentically, which possess the *idjīmā' al-ṣāḥāba* and the *tawātūr*, that is the seven canonical readings of the 'Oṭhmanīc text, attributed to Abū 'Amr b. al-'Alā, Ḥamza, 'Aṣim, Ibn 'Amir, Ibn Kathīr, Nāfi' and al-Kisā'i, which Ibn Muḡjāhid published (d. 324/936), cf. *QOR'ĀN*, § 18. To these are sometimes added Ya'qūb, Khalaf, Abū 'Ubaid, in order to arrive at the figure ten. 2. The *Kirā'a shādhḡha*, which are authentic, but have only *idjīmā'* without *tawātūr*; they are the maṣḡaf of Ibn Maṣ'ūd and Ubaiy; it is forbidden since the condemnation of Ibn Shanabūḡh in 323 (935) to make use of them. 3. The *Kirā'a shādhḡha* which are pure innovations, grammatical corrections proposed by critics such as Khalaf, Abū 'Ubaid and Ibn Saḡdān, exercising the right of *ikhtiyār*, an anti-traditional claim condemned from 322 (934) onwards (*Kirā'a* of Ibn Muḡsim al-'Aṭṭār condemned).

Bibliography: Nöldeke, *Geschichte des Qorāns*, passim; Suyūṭī, *Ikān*, Cairo 1278, i. 96; 'Abd al-Maṣḡh al-Kindī, *Risāla*, p. 79—83; Yāqūt, *Irshād*, ed. Margoliouth, vi. 300/301. 499/500. (L. MASSIGNON)

KİRĀN (A.) is defined by the *Mafāṭih al-'Ulūm*, p. 232 (cf. also E. Wiedemann, *Beiträge, Über die Astronomie nach den Mafāṭih al-'Ulūm in Sitzungsber. der physikal. med. Soc. Erl.*, xlvii., 1915, p. 238) as the conjunction of Saturn and Jupiter if the word is used without any qualification, but if the *kirān* of two other planets is meant it is defined by giving the names of the two planets concerned. In the *Kitāb Tafhīm li-'awā'il* and more particularly in Chap. ii. of the last book of the *Kānūn al-Maṣ'ūdī*, treating of the *kirānāt* of the upper planets, al-Birūnī, whom we here learn to be a convinced astrologer, deals very fully with this conjunction; according to him Saturn, being nearest the cone of fixed stars, has the greatest astrological influence, then Jupiter which is next and similar to it. From the course of the two planets (cf. e.g. C. A. Nallino, *al-Battānī*, ii. 103, *tabula motuum quinque planetarum in singulis annis romanis*) it is found that if a *kirān* takes place in Aries, the second will be in Sagittarius, the third in Leo and the fourth again in Aries and in cycles of about 20 years; and this occurs after Saturn has passed through eight zodiacal signs, which together form a triplicity. But it is not exactly 8 zodiacal circles but these and $2\frac{1}{2}^\circ = 242\frac{1}{2}^\circ$; the position of the conjunction shifts by this $2\frac{1}{2}^\circ$ between every two conjunctions on the zodiacal circle. After this has happened 12 times, the $2\frac{1}{2}^\circ$ has grown to 30° i.e. the size of a sign of the zodiac and the *kirān* enters upon a second triplicity, beginning with Aries, this is the case after $12 \times 20 = 240$ years. The *kirān* which takes place 24 years after the first is called the middle *kirān*. If the *kirān* has gone through all four triplicities which begin with Aries, Taurus, Gemini and Cancer, for which $4 \times 240 = 960$ years are required, then the *kirān* again enters Aries. It is then called the great *kirān*.

In all observations, geocentric observation is assumed; i.e. the planets go round the earth. According to al-Birūnī the word *kirān* is especially used for the conjunction of Saturn and Jupiter in Cancer. Here we can only refer the reader to the very full calculations given by al-Birūnī. From the same stem as al-*kirān* with corresponding meanings come al-*iktirān* and al-*muḡāwana* (see C. A. Nallino, *op. cit.*, p. 349). Al-Battānī only uses the term al-*idjtimā'* for the conjunction between sun and moon. — On *kirān*, or *ikrān*, as a technical term of *ihrām* see this article (ii. p. 455).

Bibliography: al-Birūnī, *Kitāb Tafhīm* etc. under the astrological expressions; do., *al-Kānūn al-Maṣ'ūdī*, loc. cit., Berlin MS. (Ahlwardt, *Katalog*, N^o 5667). The Brit. Mus. MS. N^o 1997 has only the beginning of the chapter on al-*Kirān*. (E. WIEDEMANN)

KİRĀT (from the Greek *κεράριον* = seed, grain of corn; the seed of the carob tree, *Ceratonia Siliqua* L.), a unit of weight in the Muḡammadan apothecary's measure and coinage.

(1) Apothecary's weight. The name and the weight had long been adopted from the Byzantines by the Arabs before Islām. The Constantinian weight system founded by the Arabs in Syria and Egypt and left unaltered by them was as follows (the Arabic names are given beside the Latin):

These seven denominations have survived apart from inevitable variations to the present day. The *raṭl* of this system of about $\frac{1}{3}$ rd kg., its $\frac{1}{72}$ nd part

(*mithkāl*) of about 4.55 grammes (70.5 grains) and the $\frac{1}{1728}$ th part (*kīrāt*) of 0.19 grammes (2.93 grains) weight may be regarded as unalterable quantities.

(2) Ancient coin-weight. The coinage reforms of the Caliph 'Abd al-Malik (75 = 694/695) upset this system. By lowering the Constantinian gold solidus from 4.55 (70.5 grains) to 4.25 grammes (65.6 grains) (i.e. the weight to which the solidus had sunk at the time of the Muslim conquest of Syria), a new reduced *mithkāl* was created on which it appears that a new weight system

apparently very contradictory equations of Arab metrologists.

The coin *kīrāt* of 0.177 grammes (2.7 grains) is frequently found in statements of value and price but of course has only an intelligible meaning if the word gold or silver is added to define it. Where this is not found, gold is to be assumed. It was only actually struck in gold exceptionally as largesse (*nihār*) on festive occasions (*ajlūs*, *nawrūs* etc.) as $\frac{1}{20}$ dinār.

(3) At the present day we find in the east, as until recently in Europe, a vast number of different

libra (<i>Raṭl</i>)	I	-	-	-	-	-	-	-	327.45 gr: 5050.	grains.
uncia (<i>Ūkiya</i>)	12	I	-	-	-	-	-	-	27.288 n: 425.	"
sextula (<i>Mithkāl</i>)	72	6	I	-	-	-	-	-	4.548 n: 70.1	"
drachma (<i>Dirham Kail</i>)	96	8	$I\frac{1}{8}$	I	-	-	-	-	3.411 n: 52.7	"
obolus (<i>Dānaḡ</i>)	576	48	8	6	I	-	-	-	0.568 n: 8.7	"
siliqua (<i>Kīrāt</i>)	1728	144	24	18	3	I	-	-	0.189 n: 2.92	"
granum (<i>Ḥabba</i>)	6912	576	96	72	12	4	I	-	0.047 n: 0.7	"

was based at the mints. In order not to deviate too far from the traditional divisions of the *mithkāl* the coin-*kīrāt* was fixed at $\frac{1}{20}$ *mithkāl* and this new *kīrāt* was divided not into 4 but 3 *ḥabba*. We thus get the following table:

kīrāt weights in the apothecary's system (for jewels, precious metals and drugs) and in the monetary system. Thus in the former system the *kīrāt* weighs 0.2073 grammes in Constantinople, 0.200 in Damascus, 0.2103 in Baghdād, in Persia

<i>Raṭl</i>	I	-	-	-	-	-	-	-	306	gr: 4700.	grains.
<i>Ūkiya</i>	12	I	-	-	-	-	-	-	25.5	n: 394.	"
<i>Mithkāl</i>	72	6	I	-	-	-	-	-	4.25	n: 65.6	"
<i>Dirham</i>	96	8	$I\frac{1}{8}$	I	-	-	-	-	3.186	n: 49.1	"
<i>Dānaḡ</i>	576	48	8	6	I	-	-	-	0.531	n: 8.2	"
<i>Kīrāt</i>	1440	120	20	18	3	I	-	-	0.177	n: 2.7	"
<i>Ḥabba</i>	4320	360	60	54	9	3	I	-	0.059	n: 0.9	"

It must however not be forgotten that of these denominations the *mithkāl* alone was actually coined (in the form of the *dinār*). The further regulation of the monetary reform of 75 A.H. that the silver *dirham* should be to the gold *dinār* in the proportion of 7:10 as regards weight, i.e. should weigh 2.97 grammes (45.8 grains) (see *DIRHEM*), thus established a weight for the silver coinage, which could not be fitted into the above system and made the coinage of the above *dirham* of 3.186 as an actual coin impossible. The co-existence of two apothecary's systems caused much trouble in course of time and the retention of the same names for weights of two slightly differing but differently divided systems is responsible for the

0.1951, in Further India 0.198 grammes. In Egypt the apothecary's system is uniform for all wares, the *kīrāt* weighs 0.193 grammes.

(For comparison: the English Troy carat = 0.20531, Dutch 0.2059, French 0.2055, Prussian 0.2055, Austrian 0.2061, etc.).

(4) The *kīrāt* is not used in Islām to define the proportion of fineness of gold.

(5) As a money of account *kīrāt* always meant $\frac{1}{24}$ *dinār* (i.e. a weight of gold of 1.77 grammes [27.3 grains]); this is found as early as the Egyptian papyri.

Bibliography: See under *HABBA* and Hofmaier, *Beiträge zur arab. Papyrusforschung*, in *Islam*, iv. 97. (E. V. ZAMBAUR)

KIRGIZ, a Turkish people, mentioned as early as the oldest Chinese accounts of Central Asia (from the second century A.D.) under the name Kien-Kuen, which according to P. Pelliot (*J. A.*, Ser. II, xv. 137) goes back to a Mongol word, singular *kirkun*. The lands of the Kirgiz are not exactly defined in these sources; according to a not very reliable source the land of the Kien-Kuen lay north-west of the land of the K'ang-Kiu, i.e. of Sogdiana. The name *Qirghiz* first appears in the Orkhon inscriptions of the eighth century; at that time the Kirgiz (as the contemporary Chinese annals also tell us) lived on the Upper Yenisei (Turkish Kem), north of the Kög-men or Sayan mountains. The same name (Kükman) is also mentioned in Gardizî (W. Barthold, *Ōtchet o poezdakh v Srednyuyu Aziyu*, p. 86); according to this source, the capital of the *Khān* of the Kirgiz was 7 days' journey north of these mountains. There it is also said that the Kirgiz had red hair and a white colour of skin (*surkhi-i mui wa-sapidi-i pusi*) which is explained by their alleged relationship with the Slavs; the same anthropological features, of which there is no longer any trace among the modern Kirgiz, are mentioned in the Chinese *T'ang-shu*; linguistically the Kirgiz were then already Turkicised; it is no doubt to them that the so-called Yenisei inscriptions (c. seventh century) belong, i.e. the inscriptions in a Turkish language found on the Upper Yenisei. They did not come to the front politically till about 840 A.D., when they succeeded in conquering the lands of the Uighur in Mongolia. Nothing was known in Muslim lands of this event; Marquart's endeavour (*Osteuropäische und ostasiatische Streifzüge*, p. 91 sq.) to connect with this the story in *Djāhīz* of the defeats of the Tughuzghuz, can be utterly rejected; like Qudāma (ed. de Goeje, p. 262, 13) *Djāhīz* only refers to the hostility between the Tughuzghuz and the *Kharlukh* (Karluḡ). *Istakhri* (p. 9 sq.) and others mention the Kirgiz (*Khirkhiz*) as eastern neighbours of the *Kimāk* and as northern neighbours of the *Kharlukh* and Tughuzghuz; in the east their lands are said to have stretched to the ocean. The most important article of export for trade with Muslim lands was musk. The Kirgiz were probably driven out of Mongolia in connection with the foundation of the empire of the *Khitai* in the beginning of the tenth century and the advance of the Mongol peoples; on the other hand a body of Kirgiz must have migrated as early as this century southwards to the present abode of the genuine Kirgiz (Kara Kirghiz); according to the *Hudūd al-'Ālam* (f. 18a) even the town of Pančul (the modern Akşu in Chinese Turkestan) was in possession of the Kirgiz. The Kirgiz are not mentioned again in this region till the xvth century; what the Chinese C'ang-Te, who was there in 1259, records of the Kirgiz (especially on the use of dog-sledges, cf. Bretschneider, *Mediaeval Researches*, i. 129) he had only been told and did not see himself and these stories probably do not refer to the people of the land he passed through. The main body of the people had probably remained on the Upper Yenisei; the *Qarā Khitai* [q. v.] when driven out of North China had to fight with these Kirgiz during their trek westwards. In the fertile region of the modern administrative district of Minusinsk the Kirgiz gradually adopted agriculture and a settled mode of life. According

to the *Hudūd al-'Ālam* (f. 17b) there was only one town among the Kirgiz, called Kemidjkat, where their *Khākān* lived, and no other towns or villages but only tents; on the other hand Rashīd al-Dīn says (ed. Berezin, *Trud? Vost. Otd. Arkh. Obshch.*, vii. 168 sq.) that the Kirgiz had "many towns and villages". From these and similar statements Radloff has drawn the conclusion (*J. A.*, Ser. 6, vol. ii., p. 328) that the present state of Kirgiz culture is much lower than it used to be.

In the xiiith century the Kirgiz on the Yenisei had to submit to the Mongols under Čingiz Khān. Negotiations for their submission were already begun in 1207 but it was only settled in 1218 when the last rebellion was put down. After the decline of the empire of the descendants of Čingiz Khān the Kirgiz had sometimes to be under the yoke of the Mongols, sometimes of the Kalmucks, and sometimes of the Russians; in 1607 they recognized the suzerainty of the *Qazāk*, but by 1609 we find them killing a tax-collector sent by the *Qazāk*. In 1642 they were described by the Kalmuck Khān Batur as Kalmuck, in 1646 by the Russian plenipotentiary Daniyil Arshinskiy as Russian subjects. In 1703 they were transferred by the Kalmucks by arrangement with Russia to the south to the region of the modern Semirečye; they are then said to have numbered 3,000–4,000 tents. As mentioned above, a portion of the Kirgiz had migrated thither at a much earlier date; shortly after 1514 a certain Muhammad is mentioned as being invested as Khān of the Kirgiz by Sa'īd Khān the ruler of the Mongols (*Tārīkh-i Rashīdī*, transl. E. D. Ross, p. 141); in the xvth century the Kirgiz were for the most part under the rule of the Khāns of the *Qazāk*. The Kirgiz were called *Burūt* by Kalmucks; they were nearly all driven out from Semirečye to Farghāna and *Qarātegin*; it was only after the destruction of the Kalmuck empire by the Chinese (1758–1759) that they returned to their old settlements in the southern part of Semirečye. At this date the name Kirgiz was transferred to the *Qazāk* by the Russians; to distinguish them from the latter, the true Kirgiz were called Black Kirgiz (*Qarā Qirghiz*). In Semirečye, the *Qarā Qirghiz*, outwardly at least, professed Islām; in their epic, which takes its name from the principal hero Manas, the wars against the Kalmucks are described as wars of religion. Unlike the *Qazāk*, the *Qarā Qirghiz* had neither princes nor nobles; the elders, called *Manap*, were not chosen by any kind of election but owed their position entirely to their personal influence. Owing to the continual state of war the tribes of the *Qarā Qirghiz* did not break up into small subdivisions as was the case with the tribes of the *Qazāk*; an *aul* (camp) of the *Qarā Qirghiz* comprised the members of a whole tribe and therefore occupied a much greater area than an *aul* of the *Qazāk*. In the xviiith century authority over the *Qarā Qirghiz* was claimed by the Chinese, in the sixth first by the Özbegs in Farghāna and later by the Russians; the final establishment of Russian rule dates from 1864. The prosperity of the *Qarā Qirghiz* has been seriously affected by Russian colonisation and particularly by the rising of 1916, when a considerable portion of the people migrated to China; the Russian government resolved — but nothing came of it owing to the revolution of 1917 — to take from the *Qarā Qirghiz* all their grazing-grounds except

the valley of the Tekes and to throw these lands open for Russian colonisation. An autonomous "territory of the *Qarā Kirghiz*" or *Kirghizistān* has now been constituted with Pishpek as capital (the term "*Qarā*" was never adopted by the people themselves and is now definitely repudiated).

Until recently in both Russia and Western Europe the name "Kirgiz" meant particularly the *Qazāq*; they are sometimes called also "Kirgiz-Kaisak" (*Kaisak*, corrupted from *Kazak*, to distinguish them from the Russian Cossacks). On the separation of the *Qazāq* from the *Özbek*, cf. the articles *ABU 'L-KHAIR* and *QAZAQ*. The whole of the *Qazāq* people was for long under the rule of one *Khān* who therefore had a considerable military force at his disposal; *Khān Qāsim* (d. 924 = 1518) was particularly powerful. In spite of several defeats from the Mongols allied with the *Özbeks* in the xvth century, the *Qazāq* still had a strong nomad kingdom at the end of this century under the rule of *Khān Tawakkul*, who, during the last years of the reign of *Khān 'Abd Allāh b. Iskandar* [q. v.], was able to make a successful incursion into *Mā warā al-Nahr* and even later still held the town of *Tāshkent*. In the xviii century the power of the *Khāns* only rarely extended over the whole people; but about this time *Tāshkent* and *Farghāna* were usually in the possession of the *Qazāq*, sometimes under nominal recognition of the suzerainty of the *Khāns* of the *Özbeks*. At this time must have taken place the division of the *Qazāq* into three "Hordes" (called by the *Qazāq* themselves *djüz* "hundred"); the great horde (*ulu djüz*) occupied the most easterly, the little (*kishi djüz*) the most westerly part of the so-called "Kirgiz steppes" and between the two the central horde (*orta djüz*). Towards the end of the xviii century this division was already an accomplished fact. *Khān Tyawka*, celebrated as the law-giver of his people (in 1694 a Russian embassy was received by him in the town of *Turkistān* and in 1698 one from the *Kalmucks*), still ruled all three Hordes and had a representative in each of them. In 1717 unsuccessful negotiations for the submission of all three Hordes to Peter the Great were conducted; in 1723 the towns of *Sairām*, *Tāshkent* and *Turkistān* were conquered by the *Kalmucks*. For a short period after this the suzerainty of the *Khān* of the Little Horde was recognised by all the *Qazāq* and the agreement doing this was sealed by the sacrifice of a white horse but the treaty had no practical results. In 1730, *Abu 'L-Khair* negotiated with Russia and concluded a treaty by which he declared himself and his people Russian subjects. This treaty was renewed several times in the xviii century; but it was not till the sixteenth century, especially after 1847, when the Russians were firmly established on the southern frontier of the Kirgiz steppes on the *Sīr Daryā*, that Russian rule became definitely established over the steppes and their inhabitants. The eastern part of the steppes was administered from Siberia and the western from *Orenburg*; regulations for the government of the Siberian *Qazāq* were published in 1822 and again in 1868. Even after the abolition of the *Khān*'s authority, the descendants of *Čingiz Khān* or "*Sultāns*" exercised a considerable influence over the people as a nobility (among the *Qazāq* called "white bones", *aq süyek*); their authority has been gradually destroyed by the measures of the Russian Government. The last

popular leader of the *Qazāq*, *Kenesarī*, who fought against the authorities in Siberia and *Orenburg* from 1842, was killed in 1847 in the mountains of *Ala Tau*; several risings were stirred up down to 1873 by his son *Sadik* (so-called by the Russians, properly *Šiddik*). Another son, *Ahmad*, later wrote the life of his father *Kenesarī* and of his brother *Sadik*, entitled: *Sultanī Kenisara i Sadik. Biografieskiye očerki sultana Ahmeta Kenisarina. Obrabotano dlye pečati i snabženo primečaniyami E. T. Smirnowim, Tāshkent 1889*. Review by V. Rosen in *Zap.*, iv., p. 122 sq.

The most southern part of the Kirgiz steppes was conquered in the sixteenth century by the *Özbeks* of *Farghāna* and *Khiwa* and partly colonised; the advance of the Russians in this part was therefore assisted by the *Qazāq*. After the foundation of the general-gouvernement of *Turkeštān* (1867) and the general-gouvernement of the Steppes (1882), *Semirečye* belonged at first to the latter, but was later again united to *Turkeštān*, the government of the Kirgiz steppes had less unity than before. On the other hand after the revolution an administrative unit was established called at first by the Russians the "Kirgiz Republic" and by the people themselves "*Qazākistān*"; since 1924 this "Republic" has included a vast territory, little smaller than Russia in Europe, but of course less thickly populated. According to the latest Russian figures before the revolution the *Qazāq* numbered about 4,000,000 compared with about 500,000 genuine Kirgiz. The present numbers of the population cannot be very different from these. *Čulošnikow*'s (see below) reckoning, by which the *Qazāq* and true Kirgiz would now be about 8,500,000 together is certainly much too high. In the northern part of the Kirgiz steppes between 1920 and 1923 the population is known to have declined by 21.20%. According to figures in the official publication *Sowjetskaya Kirgiziya* (1924, No. 8—9, p. 4), the population of the "Kirgiz Republic" is 6,536,000 including 4,008,310 Kirgiz (61.30%).

The *Bibliography* of the Kirgiz is very large: see the attempts to collect it in A. *Kharuzin* (*Etnograf. Obozreniye*, 1891 and 1892) and A. *Alektorow* (*Izv. Obsšt. Arkh. etc. Kazan*, xx. 1904). The fullest history of the Kirgiz steppes is that by A. *Levshin*, *Opisaniye Kirgiz-kaisakskikh ord i stepei*, St. Petersburg 1832; this is supplemented by many quotations (especially from the *Tārīkh-i Rashīdī* and the *'Abd Allāh Nāme*) in *Welyaminow-Zernow, Issledowanija o kasimovskikh taryakh i taravichakh*, vol. ii. On the everyday life (esp. of the *Qazāq*) in the sixteenth century: W. *Radloff, Aus Sibirien*, 2nd ed., Leipzig 1893, vol. i.; do., *Proben der Volksliteratur etc.*, vol. iii. and v. On laws: N. *Grodekow, Kirgiz i Kara-Kirgiz Sr-Daryinskoi Oblasti*, Tāshkent 1889; review by N. *Veselowskij in Zap.*, v. 115 sqq. On present conditions: *Obzor narodnogo khozaistva Kirgizskoi A. S. S. R. 1924 god. Pod redakciyei J. P. Krutulina*, Orenburg 1925. Later essays on the history of the Kirgiz: A. *Čulošnikow, Očerki iz istorii Kazak-Kirgizskogo naroda, Cast' I. Drevneye vremya i sredniye veka*, Orenburg 1924. M. *Tifšpayew, Materialy dlya istorii Kirgiz-kazakskogo naroda*, Tāshkent 1925. (W. BARTHOLD)

KIRID. [See CRETE].

KIRK KILISE. A town in Eastern Thrace, situated twenty-four miles to the east of *Adrianople*,

on the southern slope of the Istrandja mountains, which run parallel to the coast of the Black Sea from the north-west to the Southeast. It was conquered from Byzantium during the reign of Murād I, a few years after the capture of Adrianople and after the great defeat of the Serbians near this town (766). The chronology of the conquest is very uncertain, for neither the early Turkish chroniclers nor the Byzantine mention it. Ḥādjī Khalifa (*Chronologia historica*, Venice 1697, p. 116) and Sa'd al-Dīn (*Tādī al-Tawārīkh*, p. 3) say that Murād, after having definitely established his residence in the new palace of Adrianople, commanded in person an expedition in the territory to the east of this town; on this expedition Kīrk Kilise was taken, as well as some other places in the region of the Instrandja, such as Wize and Buñar Hışār. Ḥādjī Khalifa places these events in 769; Munedjdīm Bashī (iii. 295) gives the year 770. The identification made by von Hammer (*G.O.R.*, I, 175) with the ancient Tarpodizus (see Pauly, *Realencyclopaedie der classischen Altertumswissenschaft*, Stuttgart 1852, vi. 1605) would appear to be very questionable. Leunclavius *Pandectae Historiae Turcicae*, Paris 1650, p. 473) says that the town of Kīrk Kilise was called by the Greeks Sarante Ecclesies and that it was, in his time, the capital of the Sandjak of this name. Ewliyā Čelebi (v. 79) says that it was the most important sandjak of the wilāyet of Adrianople; he gives a short description of the town. It may be concluded therefore, that formerly Kīrk Kilise was not a place of importance; under Turkish rule, however, its situation on the route from Constantinople to Shumla and to Prawadia made it gain in importance. As regards the name "the forty churches", the numeral *kīrk* which is found here is also met with in other geographical names (e.g. Kīrk Aghaç); it is perhaps permissible to find in this an allusion to the forty saints who play a certain part in geographical nomenclature, both Christian and Muḥammadan (cf. Goldziher in *R.H.R.*, ii. p. 320).

About the year 1900 Kīrk Kilise had about 16,000 inhabitants, of whom Greeks formed the greater part; after them came Turks and Bulgarians. There were eight *djāmi*, one of which is attributed to the Sultān Bayezīd I and two *tekke*. The most important local industry was the weaving of wool. Under the new administrative system of the xixth century Kīrk Kilise remained the capital of a sandjak in the wilāyet of Ederne; the sandjak stretches along the two sides of the Istrandja and contains seven *kaḍā*. All this district is fertile and contains many streams, especially to the south of the Istrandja; the rivers, of which the most important is Erkene Şu, all belong to the basin of the Maritza. Agricultural products are grain, all kinds of fruit, and especially tobacco and wine. The pasturage is very suitable for the raising of cattle.

After the Balkan War had broken out in October 1912, the Bulgarians occupied Kīrk Kilise during the last days of this month, during their advance on Cataldja, to which the Turkish army had retired. As a result of the recapture of Adrianople by the Turks Kīrk Kilise was restored to Turkey after the war and remained Turkish after the victory of the Turkish nationalists, in 1922 (Treaty of Lausanne 23rd July, 1923). Kīrk Kilise is now, with Adrianople, Rodosto and Gallipoli, one of the chief towns of Eastern Thrace.

KĪRK WAZĪR. [See SHAIKHZĀDE, II.]

KIRKŪK, a town in Mesopotamia, in 44° 25' E. Long, and 35° 25' N. Lat., the largest town in the district bounded by the Little Zab in the north-west, the Djabal Ḥamrīn to the south-west, the Diyālā to the south-east, and the chain of the Zagros to the north-east. This territory, which even in the days of the ancient Babylonian empire and later in the Assyrian empire was much exposed to the raids of the hill-peoples of the north-east, was called under the Sāsānids, Gamarkān (Moses of Khurene) and in Syriac sources Bēth Garmē; the town of Kirkūk is called in these sources Karkhā de Bēth Selōkh. The proof of this identification was given by G. Hoffmann (*Auszüge aus syrischen Akten persischer Märtyrer*, *Abh. für die Kunde des Morgenlandes*, vii. no. 3, p. 267 sqq.). In the history of the martyrs of this town (*op. cit.*, p. 43 sqq.) its foundation is attributed to the Assyrian King Sardanā who had it built as a bulwark against the Medes. Seleucus at a later date built a tower in the citadel; henceforth the town bore the name of Seleucus (Selōkh) while the citadel was called Sarbūy or Sarbūg (cf. Marquart, *Ērānshahr*, p. 21). Under the Sāsānids the town became a celebrated centre of the Nestorians; the Metropolitan of Bēth Garmē had his residence there and it was here that took place the persecution of the Christians under Yazdegerd II (438—457) described in the martyrology above mentioned.

While the Christians continued to call the town by its old Syriac name, or in Arabic al-Karkh, (Eliyā of Damascus in Assemani, *Bibl. Or.* III/ii. p. ccccxvi.; cf. Hoffmann, *op. cit.*, p. 272) it is not clear what name the Arabs gave it. We find Bādjarmā as a *kūra* of the province of al-Mawṣil in Ibn Khurdādhbih (p. 94; al-Balādhuri, p. 265; Yāqūt, iv. 683) but none of the towns enumerated can be identified with Kirkūk. Ibn Khurdādhbih (*loc. cit.*) knows a town Khunyā Sābūr in Bādjarmā (a conjecture of de Goeje which applies also to Tabarī, i. 840). Hoffmann, (*loc. cit.*) suggests a connection with the town of Karkhīnā in Yāqūt (iv. 257). The identification is made more difficult by the fact that the Arab geographers always describe the road from Baghdād to al-Mawṣil as following the Tigris; the old road which is also the modern road by Kifri, Ta'ūk, Kirkūk and Irbil does not seem to have been much used in the early centuries of Islām.

In the xiith century the region of Kirkūk belonged to the territory ruled by the Begteginid dynasty which had its capital in Irbil [q.v.]. After the death of Muẓaffar al-Dīn Kōkbūrī in 1232, the lands of this dynasty passed to the 'Abbāsīd Caliphs to be conquered soon afterwards by the Mongols. The name Kirkūk is found for the first time in the history of Timūr by Sharaf al-Dīn 'Alī Yazdī (transl. Pétis de la Croix, Delft 1723, ii. 259), where we are told that after the conquest of the 'Irāk, Timūr set out for Diyār Bakr, going via Ta'ūk (Daḳūka among the Arabs), Carcouc (Kirkūk) and Altoun Cupru (Altūn Köprü) which he left on December 20, 1403. Next comes the rule of the Aḳ-Ḳoyunlu followed by the

conquest of Mesopotamia by Shāh Ismā'il I in the early years of the xvth century. When finally Mesopotamia and the Irāk had passed into the hands of the Ottoman Sultāns Selim I and Sulaimān I, by the first Turco-Persian peace concluded at Amasia (May 29, 1555), Kirkūk resumed its former role of an important bulwark against an enemy from the east. It appears also that from this time onwards the desolation of the banks of the Tigris encouraged the development of the ancient commercial and military route between Baghdad and al-Mawṣil (Ewliyā Ālebi, however, took the road along the Tigris, cf. *Siyāhat-nāme*, v. p. 6). Kirkūk again was occupied by the Persians after the fall of Baghdad in 1623, but was retaken by Khusrāw Pasha [q.v.] in 1630. In 1638 Murād IV passed through it on his way to recapture Baghdad. The real masters of the country however were the local Kurd chiefs in the province of Ardalān (Hādjji Khalifa, *Djihān-Numā*, p. 435). But little by little Ottoman power was established there through the energies of the pashas of the *eyālet* of Shehrizūr [q.v. or Shehrizūl]. This *eyālet* contained thirty-two sandjaks one of which was the sandjak of Kirkūk and this town became the official residence of the Pasha of Shehrizūr, after the town of this name was destroyed (*Djihān-Numā*, l.c.). In 1732, Nādir Quli (the future Nādir Shāh) besieged the town in vain; the following year there was a great battle near Kirkūk, where the Turks were completely defeated under the grand vizier Topal 'Othmān Pasha, who was killed in it. In 1743, Kirkūk again fell into the hands of the Persians but was restored to Turkey by the peace of 1746. The town remained in the Ottoman empire down to 1918; under the modern Turkish administrative system it was the capital of the sandjak of Shehrizūr (although the site of the old town of this name was henceforth in the new sandjak of Sulaimāniye) in the province of Mōṣul. Kirkūk had just been occupied by the English troops when the armistice of 1918 was concluded. It remained under the English and in 1920 passed under the government of the kingdom of the Irāk. It was not till 1926 that it was definitely incorporated in this kingdom after the agreement came to between Turkey and Great Britain regarding the fate of the old province of Mōṣul.

The modern town is grouped round an acropolis (*ka'a*) about 120 feet high, which forms a little town by itself; on the south and east side in the plain lies another larger quarter. These two are separated from a quarter on the west by the Khāṣa Āi coming from the north-east and running southwards, under the name Adhaim Ṣu, to reach the Tigris below Sāmarrā. The population must now be 20,000 at most. The Turks are the dominant element, or to distinguish them from the Turks of Asia Minor, Turkomans. This Turkish population was probably there long before the conquest by the Ottoman Sultāns but it is uncertain whether its origin is to be traced to a Turkish garrison placed there by the Caliphs in the ninth century or to an immigration in the time of the Seldjūks or Begteginids. In any case the town was always a bulwark of the Ottoman empire and a centre of its culture (cf. *Türk Yurdu*, 1915). In Turkish the name of the town is pronounced as Kirkūk, although the correct official form is Kerkūk (Sāmi, *Qāmūs al-A'lām*, v. 3846). The Christians

to the number of 350 families (*Rapport de la Commission de Mosul* quoted in the *Bibliography*, p. 52), also speak Turkish which they write in Syriac characters; they all live in the citadel. They are "Chaldaean" Catholics (Kirkūk is the see of an archbishop or Maṭrān) and descendants of the old Nestorians, although according to their own tradition they immigrated in the Seldjūk period. Since 1906 they have had a new cathedral. Arabic is spoken mainly by the Jewish population which is quite considerable. Finally there is a strong Kurdish element. The *ka'a* was at one time surrounded by a wall; it contains the mosque of Ulu Djamī, an old church, and on the slope of the hill there is a mosque called Mār Daniel. Quite recently excavations have been begun in the hill which promise to give us information about the history of the town in the Babylonian period. Another Christian monument is the tomb of the martyr Mār Tahmazgerd, who is known from the martyrology above mentioned; this tomb is to the east of the town.

Kirkūk is of some commercial importance; it is the market for the cereals and animals raised in the surrounding country and its most important connections are with Baghdad (via Ta'ūk and Kifri) and with Mōṣul (via Alūn Köprü and Irbil). A railway line is being built along this route. Then there is the eastward road to Sulaimāniya and on to Persia. Between Kirkūk and Sulaimāniya is the land of the Hamawand Kurds, who were redoubtable brigands in the Turkish period. The country round Kirkūk is still a little hilly but to the west of the town the Mesopotamian steppe soon begins, mainly inhabited by Arabs. The immediate vicinity produces a great deal of fruit. Here we have the most northerly palms in Mesopotamia.

The wealth of sulphur, naphtha, and bituminous products contained in the soil of the whole district of Kirkūk has been known and exploited since ancient times. The bituminous springs are specially well-known, two hours north-east of Kirkūk, called Bābā Gurgur where bluish flames rise out of the ground.

KIRMĀN, the name of a Persian province and of its present capital. The name of the town was derived later from that of the province. The usual pronunciation is Kirmān, although, according to the tradition of Arab scholarship (Yāqūt, iv. 263) the form Karmān is more correct; the name, in any case, goes back to the form Carmania, which is found in Strabo (xv. 2, 14), and which in its turn is said to be derived from the name of an ancient capital, Carmana (Ptolemy, *Geography*, vi. 8; Ammianus Marcellinus, xxiii. 6, 48). According to Marquart

(*Ērānshahr*, p. 30) the name Carmania replaced that of Yūtiya, which is found in the inscriptions of the Achaemenids (Beh., iii. 23) and corresponds to the *Oṽrio* whom Herodotus (iii. 93) places in the fourteenth satrapy. In Pehlevi the orthography *k-r-m-n* is found. Legendary Arabic historiography (Ibn al-Kalbī) derives Kirmān from the name of Kirmān b. Falūdj, the descendant of Japhet, who is said to have settled in this region. Later popular etymology has connected the name with the noun *kirm*, signifying worm or dragon, and derives it from the legend of Haftān-Bōkht and the dragon of Kirmān in the romance of Ardešhīr (see Browne, *Lit. Hist. of Persia*, i. 145).

1. THE PROVINCE. From the geographical point of view Kirmān is as a whole well-defined. Situated to the south-west of the great central Irānian desert (Dasht-i Lūt, or, in the middle ages, Maḥāzāt Khurāsān), the province is bounded in the east by the steppes, and the mountains which separate it from Makrān, while, from the direction of Yazd to the north-west, and from Fārs, to the west, it is also bordered by desert and uncultivated lands. The chief feature which distinguishes Kirmān from Fārs, is, as Iṣṭakhrī observed (p. 163), that the cultivated part of Fārs is an uninterrupted territory while Kirmān consists rather of a certain number of fertile and cultivated areas, separated by desert plains through which the villages are scattered. This geographical situation quite naturally leads to the sub-division into five principal districts: that of Kirmān to the north (in ancient times Bardasīr), of Sirdjān to the west, of Džiruft in the centre and of Bam and of Narmasīr in the east (Maḥdisī, p. 460). On the south, Kirmān is bounded by the sea but this part is of little interest for the province; the only important port, Hormuz [q. v.] is sometimes counted as belonging to Kirmān and sometimes to Fārs; but this port has often been in different hands from its hinterland. The lords of Kirmān have only once extended their domination over the opposite coast of 'Umān. Chains of mountains stretch across the province from the north-west to the south-east; to the north the highest chain is found which forms a part of the Kūhrūd and has summits like the Kūh Hazār to the north-west of Bam, with an altitude of almost 15,000 feet. This chain separates the district of Kirmān from that of Sirdjān; its continuation towards the south-east is called Djabal Pāriz or Bāriz. Further to the south-west there are other parallel chains. In the middle ages these mountains were inhabited by savage tribes like the Balūš (see BALŌCISTĀN) and the Ḳufs; the latter inhabit the mountainous region to the south of Džiruft, along the coast, on the Makrān side. Kirmān has no important rivers; the cultivated districts receive their water from the mountains; the most important of these streams is that which flows across Džiruft, called Khalīl Rūd (formerly Drw Rūd) without ever reaching the sea. Thus Kirmān contains within itself all the geographical features which are typical of the whole of Persia.

The Arabic geographers, beginning with Ya'qūbī, treat Kirmān as an independent geographical area (*iklām*). They classify three-quarters of its surface amongst the warm regions (*džurūm*); the cold districts (*šurūd*) are found mainly around Sirdjān (Iṣṭakhrī, p. 165).

From the point of view of traffic, Kirmān lies

on the great roads leading from Fārs to Sistān and Khurāsān and to India, and on the route for commerce and pilgrimage, which leads from the sea (Hormuz and later Bandar 'Abbās) to the north-east of Persia and beyond. This situation has exposed the province during its history to invasions from all sides: — a circumstance which has made it frequently change its political ownership, and which has been adverse to the development of its prosperity.

At the present day the desert part of Kirmān is more extensive than in ancient times; in the first centuries of Islām there were still forests in which lions roamed around Džiruft (Hamd Allāh Mustawfī, *Nuḥāt al-Ḳutūb*, p. 140). Now there are almost no trees except the date-palms which are found in large quantities around the villages and the towns. Irrigation is very laboriously practised by the subterranean *ḳanāt*. The principal agricultural products are corn, barley, and opium. The higher regions produce in autumn millet, cotton and beetroot. In the *džurūm* or *garmsīr* rice and maize are cultivated in summer and the environs of Bam and of Khabīš produce *hemnā*; besides, all sorts of fruits are found in great abundance — its dates especially are noted. The chief animal products are wool and goat skins (*kurk*) which are used for the manufacture of celebrated shawls. The mineral wealth of Kirmān, was exploited in the middle ages. Marco Polo speaks of the turquoises of Kirmān, the mines for which have now been abandoned. The mountains contain iron also, which formerly provided material for the armourer's art; to the west of Džiruft silver was found. Oxide of zinc, called *tūtīyā*, was prepared from the minerals found near Kubanān (Maḥdisī, p. 459 and 470 speaks of *al-tūtīyā al-Marāzibī*, see de Goeje in *B. G. A.*, iv. 246). Ḳazwīnī (i. 172) seems to refer to the existence of anthracite.

History. Under the Sāsānids the province of Kirmān had been governed by a governor holding the title of *Shāh* (Ibn Khurādādhbih, p. 17); thus Bahram V was before his accession Kirmān-Shāh [q. v.]; the semi-legendary tradition of the *Shāh-nāma* is also acquainted with a *Shāh* of Kirmān under king Kai-Khusraw (ed. Vullers, iii. 1279). Balādhuri, on the other hand, speaks of a *marzbān* of Kirmān (p. 391). Already, before Islām, Arab nomads had immigrated into Kirmān and according to Ṭabari (Nöldeke, *Gesch. der Perser u. Araber*, p. 57) it was Shāpūr I who, after his expedition against the Arabs, had driven out by force the people of the tribe of Bakr b. Wa'il. While admitting with some reservation the historical truth of this, Nöldeke prefers to think there was an immigration of Arabs into Kirmān in the period before Islām. The capital of the province at the end of the Sāsānid period was Shiradjān (Sirdjān).

640—750. The Arab conquest of Kirmān as recorded by al-Balādhuri (ed. de Goeje, p. 315, 391 sqq.) was begun by al-Rabī' b. Ziyād, who was sent by Abū Mūsā al-Ash'ari, from 638 governor of Baṣra under the Caliph 'Umar; he conquered Shiradjān and made terms with the inhabitants of Bam and of Anadaghār. Another Arab invasion was made about the same time by the governor of Bahrain, 'Uthmān b. al-'Āṣ al-Thakafī; he killed the Marzbān of Kirmān in the island of Abarkawān (which, however, belonged to Fārs). But its pacification was only temporary. In 29

(649–650) Yazdagird fled from Isfahān to Kirmān, where the majority of the inhabitants were still loyal. Then ‘Abd Allāh b. ‘Amir b. Qurayz sent Mudjāshī^c b. Mas‘ūd al-Sulamī with another general to pursue him. The Arab army perished in the snow at Baimand before reaching Shiradjān, and Yazdagird was able to continue his flight to Khurāsān, where he met his death (the flight of Yazdagird has perhaps influenced the story of the end of the King Dārā whom the *Shāhnāma*, ed. Vullers, iii. 1975, makes take to flight and perish in Kirmān). Mudjāshī^c, appointed governor of Kirmān by Ibn ‘Amir, succeeded at last in reconquering the chief towns as far as the mountains of the Kūfs; a counter-attack by the Persians from Hormuz was defeated. The historical data recording the conquests of this period are uncertain. Further information is found for example in al-Ya‘qūbī (*Kitāb al-Buldān*, p. 286). After the conquest many inhabitants fled to Sistān or to Khurāsān or withdrew into the mountains where they for long retained their Zoroastrian creed. The mountaineers themselves kept for three centuries more their independence. This province being at a considerable distance from the centre soon became the theatre of the activities of the Khāridjis. A certain number of the inhabitants had joined as *mawālī* the Azraqī Khāridjis who had seized Fārs and Kirmān about the year 693, under command of Kaṭari b. al-Fudjā’a [q.v.]; their centre was Djiruft. They remained there until about the year 699, when the general al-Muhallab succeeded in defeating them, after the separation of the Arab Khāridjis and the *mawālī* had weakened them. During the succeeding century Kirmān was a hotbed of rebellions and a favourite asylum for rebels. Thus ‘Abd al-Rahmān b. al-Ash‘ath [q.v.] the enemy of al-Hadīdjadī took refuge there for some time after his defeat (after 701). Twenty years later, Kirmān was one of the provinces over which the usurper Yazid b. al-Muhallab [q.v.] had established his dominion, which came to an end in 102 (720). From this time the Umayyads (of whom we know several coins struck at Kirmān) seem to have exercised a sufficiently efficacious control over the province of Kirmān, which moreover had been exhausted by wars — for it was from here that their last army set out to face the attack of the partisans of the ‘Abbāsids under Kaḥṭaba. The principal sources for this period are al-Balādhuri, al-Ṭabarī, al-Ya‘qūbī and al-Mas‘ūdi.

750–1041. Under the first ‘Abbāsids Kirmān was not the scene of important events; the provinces had to suffer during this time the incursions of the Zuṭṭ, coming from India, until they were driven out during the reign of al-Mu‘taṣim. There are ‘Abbāsīd coins struck in Kirmān in the years 165 and 167. Soon afterwards the province began to play a role, mostly passive, in the different Persian national movements, which gave rise to several dynasties. The first dynasty was that of the Šaffārids; Ya‘qūb b. Laith had obtained in 253/862, the governorship of Kirmān from Muḥammad b. Ṭāhir, the governor of Khurāsān. Ya‘qūb had to quell the opposition of the mountaineers around Djiruft; he and his brother ‘Amr seem to have left a favourable impression in the province (Sykes, *History of Persia*, ii. 16 according to the *Chronicle* of Afdal al-Dīn), but their reign was too short to leave more permanent

traces. ‘Amr succeeded his brother in 879, and, on his death in 902, the rule of the ‘Abbāsids, or rather anarchy, was re-established in Kirmān. In 315/928 Kirmān received a new master in the person of Abū ‘Alī b. Ilyās [q.v.], a former brigand, from Khurāsān, who looked upon the Samānids as his suzerains (Maḥdisī, p. 472). He soon found himself in conflict with the Būyid Aḥmad Mu‘izz al-Dawla, who attacked Kirmān in 935 and took Shiradjān. But Ibn Ilyās who had chosen for his residence Bardasir (the present town of Kirmān) had himself appointed governor for and tributary to the Būyids. The quarrel which broke out some decades later between Ibn Ilyās and his son al-Yāsī^c brought about the ruin of them both and resulted in the occupation of the province by the Būyids in 357 (968). Soon after the descendants of ‘Aḍud al-Dawla began to fight among themselves for the province and a very confused period followed, during which even the Ghaznawids were for some time masters of Kirmān (Mas‘ūd I conquered it in 1032; see also the article ABŪ KALIDJĀR). The Būyids were the first to fight with energy the mountain tribes of the Kūfs and Balūš. Sources for this period: al-Ṭabarī, al-Ya‘qūbī, Ibn al-Aṭhīr, Ibn Miskawaihi, Ḥamd Allāh Mustawfī, *Ta’rīkh-i Guzīda*.

1041–1222. The province was able to breathe at last when in 1041 a branch of the Seldjūks founded there a dynasty, which reigned until 1187. For the history of the members of this dynasty see the article SELDJŪKS, III. The founder was Kāwurd Karā Arslān Beg, the son of Čaghri Beg. In 440 (1048/1049) he seized the capital Bardasir and subdued the mountaineers of the Kūfs and of the Shabānkāra [q.v.], a Kurd tribe to the south-west who for some time had been terrorising the *garmisr* of Kirmān. Kāwurd finally conquered the territory of ‘Umān on the other side of the Persian Gulf. He made two attempts to resist the Great Seldjūks, Alp Arslān and Malik Shāh; the second attempt cost him his life (466 = 1074) and nearly ended his dynasty. Kirmān prospered most during the long reign of Arslān Shāh (1101–1142) who was also ruler of Fārs, and this state of things continued under his son Muḥammad Shāh (1142–1156). Under the last Seldjūks of Kirmān anarchy again reigned until the Ghuzz [q.v.], who came from Khurāsān, completed the desolation of the province. A chief of the Ghuzz, Malik Dīnār, became in 581 (1185) the ruler of Kirmān; his residence was at Zarand. Soon the turn of the Shabānkāra came; their chiefs Kutb al-Dīn and Nizām al-Dīn took Bardasir in 597 (1200), to the great joy of the inhabitants. But as the Ghuzz continued to resist under ‘Adjam Shāh, the son of Malik Dīnār, some years of confusion followed; the result of this was that Sa‘d b. Zangī, the Atābek of Fārs, made himself master of Kirmān in 600 (1203). In 607 (1210), the province was conquered in the name of Khwārizmshāh. In 1220 the half-independent governor of Kirmān was Shudjā‘ al-Dīn Zawzani, who after the defeat of the Khwārizmshāh Muḥammad refused to admit the son of this latter, Ghiyāth al-Dīn, when he was fleeing before the Mongols. Sources for this period: Ibn al-Aṭhīr; Ibn Ibrāhīm; Afdal al-Dīn (cf. *Bibliography*); Ibn al-Balkhī, *Fārsnāma*; Djuwainī, *Dīkhān Gushā*; Ḥamd Allāh Mustawfī, *Ta’rīkh-i Guzīda*; Rāwandī, *Rāhat al-Sudūr*.

1222–1502. Soon afterwards in 619 (1222)

the famous Burāk Hādhib [q. v.] who was descended from the Qara Khitai and was at the time vizier of the already mentioned Ghiyāth al-Dīn, drove Shudjā' al-Dīn out by force and succeeded in playing a political game so cunningly, first against Ghiyāth al-Dīn, next against Djalāl al-Dīn Khwārizmshāh, and finally against the Mongols, that he succeeded in keeping his power so that Kirmān never knew the terror of the Mongol armies. Burāk Hādhib who had received from the Caliph the honorary surname of Kutlugh Khān became thus the founder of the dynasty called that of the Kutlugh Khāns. It remained under the sovereignty of the Mongols until the year 1303. A notable figure of the dynasty was Turkhān Khātūn, the daughter of Burāk Hādhib; she reigned from 1258 to 1282, and contributed to the prosperity of the country by having the *kanā's* dug for irrigation. It was in her reign that Marco Polo visited the "kingdom" of Kirmān; it is evident from his account that at this time the ruler of Hormuz was also the vassal of the Sultān of Kirmān. The end of the dynasty was brought about by an act of disobedience of the last Kutlugh Khān (1303). The province had several Mongol governors, until in 1340 Mubārīz al-Dīn Muḥammad Muẓaffar, the husband of the last Kutlugh Khān's daughter, seized Kirmān. He took Shirāz in 1354 and founded the dynasty of the Muẓaffarids. His brother 'Imād al-Dīn in 1363 succeeded him in Kirmān; some of the buildings of the latter still exist (the Pā Minār mosque in the town of Kirmān). Not long afterwards the province became the theatre for the quarrels of members of the dynasty which was finally exterminated by Timūr in 1393. The Timūrids who had at times to put down rebellious governors (Shaikh Uwais in 1408) were followed in their turn in the ownership of Kirmān by the Qara Qoyunlu (about 1350) who soon had to give place to the Aq Qoyunlu. As a rule Kirmān was from this time united with Fārs under the governorship of one of the relatives of Uzun Hasan. Sources: Djuwaini; Nāṣir al-Dīn, *Simt al-'Ulā* (cf. *Bibliography*); Hamd Allāh Mustawfi, *Tārīkh-i Guzida*; 'Alī Yazdī, *Sharāf-Nāma*; 'Abd al-Razzāk Samarkandī, *Maṭla' al-Sa'dain*; Mirkhwānd, *Rawḍat al-Safā*; Khwāndamīr, *Ḥabīb al-Siyar*.

1502—1794. It was under the last prince of the Aq-Qoyunlu, Abu 'l-Faṭḥ Beg Bāyandari that Shāh Ismā'īl seized the province of Kirmān (about 1502) which henceforth belonged to the dynasty of the Ṣafawids [q. v.]. In 1509 it suffered from an invasion of the Özbeks, but until the end of the Ṣafawid period Kirmān enjoyed tranquillity; the majority of the inhabitants, as throughout Persia, adopted the official form of the *ihnā-'ashariya Shī'a*. One of the most noted Ṣafawid governors in Kirmān was Gandj 'Alī Khān (1596—1621) who built many caravanserais and bazaars. In 1720 the Afghāns under Maḥmūd Khān passed through Kirmān when they began their march on Isfahān, which brought about the downfall of the Ṣafawids. Then came the reign of Nādir Shāh (1735—1747) which was followed by a period of anarchy; the Afghān nomads and the Balūṭi ravaged the country. In 1772 (1758) Karīm Khān Zand conquered Kirmān under the last usurper. It was the overthrow of the dynasty formed by the latter which brought upon the province and especially on the capital, the most terrible catastrophe which it had experienced in its history. The son of

Karīm Khān, Luṭf 'Alī Khān [q. v.] fleeing before the Qājār Agha Muḥammad Khān had retired to Kirmān in 1794 where a part of the inhabitants remained faithful to him. In the same year the capital had to surrender and Luṭf 'Alī Khān, although he succeeded in escaping to Bam, was betrayed and handed over to Agha Muḥammad. The terrible vengeance of the Qājār, who according to the authorities, sold 20,000 women and children into slavery and blinded 35,000 male inhabitants, deprived the province of all strength and prosperity; it did not begin to recover until a century had elapsed. — Sources: Khwāndamīr and the Persian histories of the Ṣafawid and the subsequent dynasties (see *Grundriss der Iran. Phil.*, ii. 586 sqq., 592, 594).

From 1794. The Qājārs [q. v.] governed Kirmān usually by governors who belonged to the dynasty. During the years 1839—1841 a certain Agha Khān made many fruitless attempts to free the province from the power of the Qājārs. From this time there were no further notable events in the history of the province. In proportion as Persia became an important element, although passive for the moment, in world politics, Kirmān entered little by little into the sphere of influence of Great Britain. This situation found expression in the Anglo-Russian convention of 1907.

The principal towns and districts. The province of Kirmān is now divided into 19 districts. Three of the five chief towns mentioned by Maḥdisī (see below): Sirdjān, Džiruft and Narmāsīr are no longer in existence and are now only names of districts. Many of the towns and villages named in ancient geographies have also disappeared or have not yet been identified.

The northern part includes the capital Kirmān [q. v.]. On the route from Kirmān to Yazd still stand Zarand and Bāfk and, to the northeast of this route, on the edge of the desert we still have Kūhbanān (the Cobinan of Marco Polo) and Rāwar. Khābīṣ, a historic site to the east of Kirmān, in a much lower country, is famous for its dates. Māhān (now Māhūn) to the south-east of the capital is noted for the sanctuary of the Ṣūfī Saiyid Ni'mat Allāh (who died in 1431) built under Shāh 'Abbās. From the time of Maḥdisī Māhān was inhabited by Arabs.

The principal town on the west side was the old capital Sirdjān (often Shiradjān), situated very close to the province of Fārs. This town was larger than Shirāz in the time of Maḥdisī, but it was destroyed in 1396, after a long resistance against the armies of Timūr. The site is marked at the present time by a limestone rock rising in the plain to a height of 300 feet, called Kal'a-i Sang. This rock, formerly the citadel, has been described by Sykes (*10,000 Miles*, etc., p. 431 and following), who found some inscriptions there. In the neighbourhood is the village of Saiyidābād. The plain is much more fertile than that of Kirmān and contains many villages.

Bam [q. v.] in the eastern part of the province is still in existence. The road from Sirdjān to Bam passed by Rayīn and Darzīn; from this last place a road ran (and runs) to Džiruft. Narmāsīr (also Narmāshīr) situated at a short distance from Bam in a south-west direction, was formerly an important market for commerce with India; at the present time the name only marks a district. The village of Fahladj which is in this district was a fortress in the time of the Afghāns.

Djiruft, formerly the capital of the southern part of Kirmān, occupied a site now called Shahr-i Daḡiyanūs. In the time of Marco Polo the town had already been supplanted by its former quarter Kumādin called Camadi by the Venetian; it was an important market. Basing his belief on a passage in Idrisi (transl. Reinaud, p. 423) Sykes (*op. cit.*, p. 445) thinks that the earliest capital Carmana must be looked for between Djiruft and Fahladj. On the road from Djiruft to Hormuz are Walāshgird or Gulāshgird, which is still the name of a village.

Population. The inhabitants of Kirmān are described in general as possessing a dark brown colour and a slight physique because of the heat (Istakhrī). In the *garmsir* indeed, the summer is very hot and unhealthy (Sykes). The most ancient inhabitants of Kirmān were probably represented in the Middle Ages by the mountain peoples called the Ḳufs in the mountainous district of the south and the Bāriz (παριζῖοι in Herodotus, iii. 92), in the mountains to the south-east of the town of Kirmān, still called Bāriz Kūh. Maḡdisi (p. 471) says that the language of the Ḳufs and of the Balūs was unintelligible. These people were probably exterminated in the course of history or became mixed from the time of the Būyids and of the Seldjūks with the Irānian element. For the Balūs, who immigrated from the north-west (Balādhuri and Ṭabarī do not yet mention them) and who were established in Makrān from the twelfth century see the article BALŪCISTĀN. As regards the settled population it seems to be of Irānian stock; Strabo already says that their customs and their language are similar to those of the Medes and of the Persians (xv. 2, 14). From the time of the Sāsānids a part of the inhabitants was composed of Nestorian Christians; the bishop of Kirmān was under the authority of the metropolitan of Fārs. The conversion to Islām was slowly affected; according to Ṭabarī the mountaineers had been islāmised under the ʿAbbāsids; later they showed great sympathy for the Shiʿa (Maḡdisi). Yāḳūt (s. v. Ḳufs) insists upon the fact that while having no religion, they venerated ʿAlī b. Abi Ṭālib. The islāmised population was very much exposed to sectarian influences such as those of the Khāridjīs, and later that of the Ismāʿīlis. From the theological point of view the inhabitants of Shiradīn belonged, according to Maḡdisi, to the *ahl al-ḥadīth* and those of Djiruft to the *ahl al-raʿy*. The advent of the Ṣafawids at last established the official form of Shiʿa, *iṭhnā-ʿashariya* to which the great majority of the population still belongs. In the sixth century the sect of the Shāikhīs [q.v.] gained many adherents in the province of Kirmān, so that it became one of their most important centres. Sykes reckons their number at 7,000. The Bābīs are a little less numerous. Finally Kirmān is one of the districts where the adherents of the religion of Zoroaster were able to maintain themselves as a community under the spiritual direction of their ancient sacerdotal hierarchy. Tavernier (p. 390) says that in his time (about 1650) their number was still more than 10,000 in the town of Kirmān, after the great emigration to India. They had a temple at a distance of four leagues from the town; they were for the most part wool-merchants. Until the middle of the xviiith century there must have existed at Kirmān a school of *dasṭūr*'s whose influence was considerable. According

to Khanikoff there were still 12,000 Parsis families at Kirmān before its destruction in 1794 by Agha Muḡammad Shāh. About the year 1900 their number is given by Sykes as 1,700 souls (see also the article PARSI).

The Parsis of Kirmān, like those of Yazd, speak the archaic dialect called *Gabri*, which has been studied, e.g. by Houtum Schindler and Browne (cf. *Grundriss der Ir. Phil.*, i. 381 sq.) and more recently by O. Mann (*Die Mundarten von Khunsar*, etc., ed. by K. Hadank, Berlin-Leipzig 1926). The other dialects spoken in Kirmān do not seem to have ever been specially studied; they belong to the southern group represented e.g. by the dialects of Fārs and of Kāshān (see Geiger in *Grundriss*, i. 2, p. 422). Maḡdisi remarks that the language of Kirmān resembles that of Khurāsān.

The nomads who form a strong minority of the population of Kirmān are probably the descendants of the Arab, Turkish and Kurd invaders.

The total of the population of the province was estimated at 750,000 about the year 1900 (Sykes).

II. The town of Kirmān situated in the north-east part of the province (30° 17' lat. N. 56° 59' long. E.) has been identified in all likelihood with the town and the district which Arab geographers call Bardasir (Yāḳūt has Burdasir) or Guwāshir (see also Maḡdisi, p. 460). The two forms might represent the form Beh-Ardashir, which is, according to Ḥamza Isfahānī (ed. Gottwald, p. 46) the name of a town built by Ardashir, the founder of the dynasty of the Sāsānids. The building of the Ḳalʿa-i Ardashir, the ancient citadel to the east of the town, which, in the Middle Ages, must have been just outside the gate of the city, is also attributed to Ardashir. But the town was thought to be less ancient than Bam and Djiruft (Sykes, following Afḡal al-Dīn). A district to the south-west of Kirmān still bears the name of Bardasir. In the ninth century, when Ibn Ilyās had just occupied it, it was not yet very large, but in the xiiith century Yāḳūt describes it as the largest town of Kirmān. The name of Kirmān was given to it as capital of the province of that name. The official honorary name of the town is Dār al-Amān.

The town is situated at the meeting place of three valleys at a height of about 6,000 feet, 12 miles to the north of the Djūpar chain of mountains. The surroundings consist almost exclusively of steppes and possess very little cultivated land. Between Ḳalʿa-i Ardashir, already mentioned, and the town is a ruined citadel at a lower elevation, Ḳalʿa-i Dukhtar, which must have been formerly in the town. All the plain to the east and to the south of the town has a large number of remains of buildings. There are found here very beautiful pieces of fayence and other archaeological remains. The town itself is surrounded by a wall of baked clay with four gates. A quarter outside of the walls to the north-east is that of the Zoroastrians, Mahalla-i Gabr. The citadel is situated on the western side. Ḥamd Allāh Mustawfī (*Nuzhat al-Ḳulūb*, p. 140) speaks of a mosque built under ʿUmar b. ʿAbd al-ʿAzīz, but the most ancient mosque is at the present time the Masjid-i Malik built by the Seldjūk Tūrān Shāh (1084—1096); this mosque was already in ruins in the xvith century, but has been restored. The two other important mosques are the Masjid-i Djāmiʿ built, according to an inscription, in 1349 by Mubārīz al-Dīn Muḡaffar

and the Masjid-Pā-Minār, erected by the latter's brother 'Imād al-Dīn. A monument destroyed by an earthquake in 1896 was the Gunbad-i Sabz, a building of cylindrical form covered with mosaics of a greenish blue. According to information given to Sykes it was the tomb of one of the members of the dynasty of the Kutlugh Khāns, built in 640 (1242). After the destruction of the town in 1794, it was rebuilt under Faṭḥ 'Alī Shāh, but it only began to prosper under the governor Wakīl al-Mulk about the year 1860. (A plan of the modern town is given opposite p. 188 of Sykes, *10,000 Miles*, etc.). The number of inhabitants increased in the last part of the nineteenth century. Schindler in 1878 gives the figure as 41,170 and Sykes in 1900 as 49,120. The great majority are Shī'is, next come the Shaikhīs (6,000), the Bābis (3,000), and the Zoroastrians (1,600). The Jews form a very small group of seventy souls. Kirmān owes its very great industrial reputation to its shawls, but this industry has been surpassed by that of carpets in wool and in silk. The workers are almost exclusively men; Sykes estimates the value of the exports at £ 40,000 annually. Another important industry is the manufacture of felt.

G. Browne, *A Year amongst the Persians*², Cambridge 1926; Major P. Molesworth Sykes, *Ten Thousand Miles in Persia*, London 1902; the author who was British Consul in Kirmān from 1894 to 1899 is the best authority on the modern province. Other geographical descriptions: Hādījī Khalīfa, *Djihānnumā*, Constantinople 1145, p. 256; C. Ritter, *Erdkunde*, volume viii.; K. Prellberg, *Persien, eine historische Landschaft*, Leipzig 1891.

The historical sources have already been given in the text. Three sources are of the nature of local chronicles: The history of the Seldjūks by Muḥammad b. Ibrāhīm ed. by Houtsma in vol. i. of the *Recueil de Textes relatifs à l'histoire des Seldjucides*, Leiden 1886; Afḍal al-Dīn Ahmad b. Hāmid Kirmānī, *Ikḍ al-Ūlā li 'l-mawḳif al-a'lā*, lith. Tihān 1293 (cf. *Cat. of the Printed Pers. Books in the Brit. Mus.*, London 1922, p. 90); Nāṣir al-Dīn, *Simṭ al-Ūlā li 'l-ḥadrat al-ʿulyā*, written in 716 (1316) (cf. *Cat. of the Pers. MSS. in the Brit. Mus.*, vol. ii., p. 849); E. A. Strandman, *Chuandamir's af-handling om Qarachaitaiska dynastin med inledning och anmärkingar*, Helsingfors 1869. On pages 48—71 of the work mentioned by Sykes is a précis of the history of the province of

Kirmān. For modern times see also E. G. Browne, *The Persian Revolution*, Cambridge 1910; Sir Percy Molesworth Sykes, *History of Persia*², London 1921.

Mus.*, London 1875—1890, i., vi., vii., ix., espec. x., p. clxxxiii.—iv. (J. H. KRAMERS).

KIRMĀNĪ, KAMĀL AL-DĪN ABU 'L-ʿAṬĀ MAḤMŪD B. 'ALĪ of Kirmān, known as KHŴĀDJŪ KIRMĀNĪ [the name *Khṵwādju* is a diminutive form from *Khṵwādja*: cf. *Grundriss der Iran. Phil.*, i./ii. 185; another instance of this formation, not noticed there, is *pirū* from *pir*, Djalāl al-Dīn Rūmī, *Mathnawī* (ed. Nicholson) i. line 2169], a Persian poet, born, as stated in the epilogue of his *Gul u-Nawrūz*, Shawwāl 5, 679 (Jan. 28, 1281) at Kirmān. He died at Shīrāz, probably in 753/1352; the date 742, given by Dawlatshāh, is erroneous. Men of letters gave him the surname of *Nakhli-band-i Shīʿarāʿ* (or *Ni maʿānī*) (Dawlatshāh, *Tadhkira*, p. 249; Vullers, *Lexicon*, ii. 1301). Biographical details are scarce about him. He belonged to a distinguished family, and seems to have travelled widely. That he stayed some time at Baghdād, appears from the lines from his *Humāy u-Humāyūn* quoted by Dawlatshāh, *loc. cit.* Kirmānī was a *murīd* of Rukn al-Dīn al-Samnānī († 736/1345) and lived some time as a mystic in Šūfiyābād (in *Khurāsān*, cf. Ritter, *Erdkunde*, viii. 396).

His first patron seems to have been the Muẓaffarid ruler Mubārīz al-Dīn Muḥammad of Yazd [713/1314 — 759/1358 (deposed), died 765/1364]. Afterwards, Kirmānī was in the service of Amīr Shaikh Abū Ishāk (viz. Djamāl al-Dīn Shaikh Abū Ishāk, prince of Shīrāz till 754/1353; killed by order of Mubārīz al-Dīn in 757/1356). The poet died at the court of Abū Ishāk. A son of Kirmānī is mentioned in his *Kamālnāma* (see below).

Works. *Khṵwādju* Kirmānī wrote a *Khamsa*, in imitation of Nizāmī, as is the case with many of the later Persian poets, and a *Diwān*. The *Khamsa* consists of:

1. *Humāy u-Humāyūn*, a romantic poem, in the metre of Nizāmī's *Iskandarnāma* (i. e. *mutakārib*, because it treats of a subject from Irānian heroic tradition). It contains 3203 *dubāits*; it was composed, according to the epilogue, at Baghdād in 732. The prologue contains the *madḥ* of the Ilkhān Abū Saʿīd and his wazīr Ghiyāth al-Dīn Muḥammad; it states, that the poet was induced to compose the work by the high dignitary Abu 'l-Faṭḥ Maḍjd al-Dīn Maḥmūd. This *mathnawī* describes the adventures of Humāy, son of Shāh Hūshang, and his love of Humāyūn, princess of China. Notwithstanding the intrigues of the princess's father, the Faghfur, the lovers are united, Humāyūn's father perishing in battle by the hand of Humāy.

2. *Nawrūz u-Gul*, also a romantic poem, in the metre of *Khusrāw u-Shīrīn*, containing 2615 *dubāits*. It was completed in 742 (chronogram), dedicated to

Tādj al-Dīn Aḥmad 'Irāqī (a wazīr to the Muẓaffarid Muḥariz al-Dīn), and relates the love-story of Nawrūz, son of king Firūz of Khurāsān, and Gul, daughter of the emperor of Rūm. With the main narrative are interwoven three minor stories, told to the prince to console him in his love-sickness.

3. *Kamāl-nāma*, on ethics and religion, in the metre of the *Haft Paikar*, composed 744 (chronogram); this year is given as the date of completion of the *Khamsa* (Rieu, *Cat.*, p. 620). In the prologue, the Muslim saint Abū Ishāq Ibrāhīm of Kāzerūn († 426/1035) is praised; in the epilogue the poet addresses Amir Shaikh Abū Ishāq, the ruler of Shīrāz, and also his own son Muḍjir al-Dīn Abū Sa'īd 'Alī. The poem is divided into *bāb's*, in one of the manuscripts numbered from 1—12.

4. *Rawḍat al-Anwār*, mystical; a counterpart to the *Maḥzan al-Asrār* (Dawlatshāh, p. 251); composed 743 at Kāzerūn, according to the epilogue. It is divided into 20 *maḥāla's*. The dedication is to Shams al-Dīn Maḥmūd b. Šā'in (killed in battle 746/1345, as wazīr of Abū Ishāq of Shīrāz). The *Rawḍat* passes for the first poem of the *Khamsa*.

5. It seems not to be possible, to determine with certainty which of the other works of Kirmānī should be reckoned as the remaining part of the *Khamsa*. It may be, that it is the poem entitled *Mafātīḥ al-Kulūb wa-Maṣābiḥ al-Ghuyūb*, which is found in the manuscript No. 332 of the Library of the king of Oudh. This poem, consisting of 28 *bāb's*, appears, from the headings given in the catalogue, to treat of religious topics.

After the *Khamsa*, we have:

6. *Gawharnāma*; the aim of this poem, also a *maṭnawī*, is the praise of Bahā' al-Dīn Maḥmūd, who was wazīr to the Muẓaffarid ruler, and claimed descent from the renowned Nizām al-Mulk. Besides the wazīr, his ancestors are also praised in the work. The date of its composition is 746 (chronogram).

7. *Dīwān*. Dawlatshāh (or his authorities) say, that the *dīwān* of Kirmānī numbers 20,000 verses (cf. also Sprenger, *Cat.* *Oudh.*, p. 472); it contains *ḥaṣīda's*, mostly panegyric, e.g. on the Muẓaffarid Muḥariz al-Dīn and Shaikh Abū Ishāq; also on the persons, lauded in the *Gawharnāma*, and besides on other great men, as for instance Shīrwānshāh b. Minūčīhr. A letter to a Shīrwānshāh, ruler of Shābarān and Shammākhī, from the part of the great wazīr Rashīd al-Dīn is extant (Browne, *Persian Literature under Tartar dominion*, p. 83); the person, praised in the *Dīwān* of Kirmānī may have belonged to the family of Rashīd al-Dīn's addressee.

Further, the *dīwān* contains *ghazal's*, *muḥatta'āt*, *rubā'iyyāt*, etc.

Finally, a *tardī'a* of this poet (refrain: *kīh dīkhān šurāt ast u ma'nā dūst | war ba ma'nā naẓar kunī, hama ūst*) occurs in the Leyden manuscript 274, fol. 463 verso — 464 verso.

The little that is printed of Kirmānī's poetry will be found in the works, cited in the *Bibliography*. From these scanty extracts, it is impossible to form a judgment on his merits as a poet; therefore, the opinion of Browne, who had the opportunity of reading a great part of the *Dīwān*, may be repeated here: "his verse, while graceful and pleasing, lacks any conspicuous distinction or excellence".

KIRMĀNŠĀH, a town lying in a plain among the mountain ranges that border the Iranian plateau on the south-west, now the capital of a Persian province between Kurdistān on the north and Luristān on the south. The geographical position of the town is approximately 34° 20' North Lat. and 47° East Long.; the plain is traversed by the Kara Šu which runs to the north-east of the town in a south-easterly direction, joining the river Gāmāsīyāb (formerly the Gāwmāsā Rūd) farther south; the latter is a tributary of the Kerkha [q.v.] and the most important water-course of the province.

It was probably in this district that the earliest kingdom of the Medes was established (A. Billerbeck, *Das Sandjak Suleimania und dessen persische Nachbarlandschaften*, Leipzig 1898, p. 162); and here also were the Parthian provinces of *Καυβαδωννή* and *Μυδιά ἡ κάρω* (Isidore of Charax, § 4, 5). It was the province called Māh under the Sāsānids (May in Moses of Khorene), and in the early centuries after the Arab conquest. De Morgan wished to identify the ruins of the ancient Cambadene to the north of Kirmānshāh. This town is itself not very old: it was founded in the Sāsānid period and only began to be an important town from the xvth century onwards. The older Arab geographers know it only by the name of *Qarmīsīn* (other forms: *Qirmāsīn*, *Qarmāsīn*, *Qirmāsīn*, *Qarmashīn*): Maḥdisī (p. 28) says that it is another name for Kirmānshāhān, while Yāqūt (iv. 69) regards *Qarmīsīn* as an arabicisation of Kirmānshāhān (Dimashkī gives the same note with reserve but Ibn al-Fakīh already explains the first form by the second). Qazwīnī (*Geography*, p. 290) however says that *Qarmīsīn* is near Kirmānshāhān. To explain *Qarmīsīn*, Ritter, ix. 374, calls attention to the name of the river Corma in Tacitus (*Annales*, xii. 13). The name Kirmānshāhān seems first to appear in the tenth century, perhaps in the time of the Būyids, but the circumstances are unknown. A very widespread tradition found in Ḥamd Allāh Mustawfī, *Nuzhat al-Kulūb*, p. 108 makes Bahrām IV (388—399 A.D.) founder of the town: this king had acquired the title Kirmānshāh as governor of the province of Kirmān [q.v.] and the historians do record that he founded a town but it was more probably the little town of Kirmānshāh between Yazd and Kirmān (cf. Tabarī in Nöldeke, *Gesch. d. Pers. u. Arab.*, p. 71). Another tradition found more or less explicitly in almost all the geographers attributes the foundation to king Kawādh b. Firūz (488—531; cf. especially Maḥdisī, p. 257 sqq.). The country round the town contained and still contains many monuments of the time of the Sāsānian kings; they often resided there and their example was followed by later rulers, e.g. the Caliph Hārūn al-Rashīd and the Būyid Aḥd al-Dawla, who built a palace there (Maḥdisī, p. 393). The new name of the town may perhaps be connected

with this event for it was under Aḏud al-Dawla that the Buyids became masters of the province of Kirmān [q. v.].

Karmīsīn was peacefully occupied by the Arabs after the taking of Hulwān (in 640; Balādhuri, p. 301). The district of Māh, belonging to the province of Dībāl, was then granted as an appanage to the inhabitants of Kūfa and Baṣra. The upper part became Māh al-Kūfa with Dinawar as capital; the lower part was Māh al-Baṣra with Karmīsīn as its capital (Balādhuri, p. 306; Kūdāma, p. 226). Dinawar [q. v.] was however a much more important town than Karmīsīn (cf. especially Schwartz, p. 479) and the geographers of these times mention it mainly as a stage on the great road Baghdad — Khānikīn — Hulwān — Karmīsīn — Bisutūn — Hamadhān. Another important road ran from Karmīsīn to Nihāwand. The town is described in this period as pleasantly situated in a very fertile plain. It was ruled successively by the 'Abbāsids, Būyids — in their time it must have formed part of the territory of the Kurd dynasty of the Hasanawaih [q. v.], although it is not mentioned in the Kurd chronicle of Sharaf al-Dīn — and the Seldjūks; in the Mongol period it had sunk to a mere village (Ḥamd Allāh Qazwīnī).

The importance of Kirmānshāh began under the Ṣafawids after it had become a frontier bulwark of Persia against the Ottomans who had established themselves in dangerous proximity in Mesopotamia, especially after the time of Murād IV. The Turks several times occupied it in their wars with Persia, for example in 1630 during Khusrav [q. v.] Pāshā's expedition. It then was a fortified town with a brick wall; see the description in Ewliyā Ḍelebi (iv. 353) who attributes its foundation to Shāh Ismā'īl, which probably means that he fortified it for the first time. After the fall of the Ṣafawids (1722) the Pāshā of Baghdad succeeded in occupying Kirmānshāh but he was driven out by Ashraf Khān. In 1731, the Turks again occupied it to be expelled by the future Nādir Shāh. The treaties of peace of 1732 and 1736 left Kirmānshāh to Persia (cf. von Hammer, *G. O. R.*, vii. 404 sqq.). In 1754 Mīrzā Muḥammad Taqī Khān became its governor for Nādir Shāh. He later made himself independent until Karīm Khān Zand took the town in 1766 after a siege of two years. Under the Qājārs Kirmānshāh increased in importance; in 1790 it had about 6,000 inhabitants (Beauchamps, quoted by Ritter) but by 1810 there were already 12,000 houses (Kinneir, in Ritter). Under the governorship of Muḥammad 'Alī Mīrzā, son of Fath 'Alī Shāh, who lived at Kirmānshāh as an almost independent vassal, the town became a formidable bulwark against the Turks. After the Turco-Persian peace of 1823 'Alī Mīrzā was sufficiently powerful to annex to his province the large district of Zohab which ought to have been restored to Turkey. A complete list of the governors of Kirmānshāh under the Qājārs to 1905 is given by Rabino (see *Bibliography*). As recently as April 1915 the town was occupied by Turkish troops; they conducted propaganda on behalf of the Central Powers there until they were forced to retire in March 1917.

Kirmānshāh at the present day is rather the name of the province; the town is called more correctly Kirmānshāhān. About 1905 it had a population of about 60,000 (Rabino) and owes its prosperity to its position on the great trade route

of considerable antiquity (*al-djādda* in Maḳdisī) from Baghdad to Hamadhān (Kirmānshāhān is 100 miles from each of these two towns); the through traffic is enormous. The same road is used by the Shī'a pilgrims who visit the sacred places of the 'Irāq. Kirmānshāhān possesses no ancient buildings; the ramparts have been demolished and the most remarkable building is the arsenal, which is also the residence of the governor, built beside the great Top Maidān. The town contains a large number of caravanserais; there is not much local industry, the manufacture of carpets having disappeared. The majority of the citizens are Kurds, then come Persians, Turks, Jews and Christians. The surrounding plain is very fertile. Ewliyā (*loc. cit.*) and Ḥādjdī Khalīfa (*Djī-hannumā*, p. 302) make special mention of the cultivation of saffron.

The province lies between 34° and 35° N. Lat. and 44° 30' and 48° 30' E. Long., the capital is almost in the centre, in the western part are Kerind and Kaṣr Shīrīn [q. v.] and in the eastern Asadābād, Kangāwar (formerly Kaṣr al-Luṣūṣ), Bisutūn [q. v.], Nihāwand [q. v.] and the ruins of Dīnawar [q. v.]. It is rich in monuments of the Achaemenids and Sāsānids, which are mentioned with more or less detail by the old geographers, such as the famous sculptures of Taḳ-i Bustān, three miles east of Kirmānshāhān, to which the geographers give the name Shābdīz or Shībdāz from the horse of the king Khusrav and the plateau (*dukka*) where Khusrav Parwīz is said to have received the submission of the kings of the earth in a hall of audience with 100 columns (cf. also BISUTŪN).

It is one of the richest provinces of Persia. It exports wheat and rice and grows for its own use, maize, clover, castor-oil and cotton. It has a population of about 300,000 and is divided into nineteen districts (*bulūk*), many of which are named after the tribes which inhabit them. Rabino gives forty-four names of tribes for the province (cf. also Curzon, i. 557) who are for the most part Kurds. The largest Kurd tribe is that of the Kalhūr (mentioned in the *Kurdish Chronicle* of Sharaf al-Dīn) to the south-west who have given their name to a district. Another important Kurd tribe is that of the Sindjābī west of Kaṣr Shīrīn. Their southern Kurd dialect is called Lakkī by O. Mann (*Die Mundarten der Lurstämmen im südlichen Persien*, Berlin 1910, p. xxii.) although the Lakk in the proper sense of the word live in Luristān. In the south of the province there are tribes of Lurs. The greater part of the seminomadic population are 'Alī Ilahī [q. v.]. Besides the two groups mentioned there are several small tribes of Arabs and Turks which have become allied to the great Kurd tribes.

(J. H. KRAMERS)

KIRMĀSTĪ, capital of a *kazā* of the same name in Anatolia, 15 miles S. E. of Mikhālidj (cf. J. H. Mordtmann, in *Z. D. M. G.*, lxx. [1911], 101) and 40 miles S. E. of Brussa with about 5,000 inhabitants, 3,000 of whom are Muslims. The town has 14 quarters with 800 houses and lies on both banks of the Edrenos Çai (Rhyndacus). The origin of the name often wrongly written Kirmāslī, which points to a Greek *Κερμαστή or *Κρεμαστή, is uncertain, nor is it known what ancient town was here. Perhaps the Kremastis in the Troas (cf. Pauly-Wissowa, ii. 743) mentioned in Xen., *Hist.*, iv. 8, is to be connected with it. In the Byzantine period Aorata is said to have been here where the troops of Alexius Comnenus under Kamytzes were defeated in 1113 by the Saldjūks (cf. Anna Comn., ii. 279 sqq.). In any case there is close to K. a Byzantine castle in ruins which resembles that 6 miles farther up the Edrenos Çai at Kesterlek and presumably was intended with similar defences at Ulubad (Lopadium) and Brussa to keep back the advance of the Ottomans. In the town which has 6 mosques, including one large very old one with a türbe and 14 masdjid's, there are ancient remains (sarcophagi, inscriptions on the walls, ornaments) which do not seem yet to have been studied. The history of Kirmāstī under the Ottomans is quite obscure, as there are no records. Ewliyā Çelebi (v. 290) and European travellers (cf. W. Hamilton, *Researches in Asia Minor*, i. 77, 80, ii. 93, London 1842) say practically nothing about it. The Muslim inscriptions have still to be studied and edited. Kirmāstī, which did not suffer from the Greek occupation, was recently (1925) renamed Muştafa Kemāl Paşa in honour of the Turkish President. Kirmāstī is the birth-place of Seyyid-i Wilāyet (d. 929 = 1522 in Stambul), son-in-law of the historian Ashyq-Paşa-zāde (cf. Taşhkoprüzāde-Medjidi, *Şakā'ik al-Nu'māniya*, p. 352, 13), known from the *Menākib-i Tadj al-'Arifin* (i. e. *Sheykh Ebu 'l-Wefā'*; cf. Pertsch, *Türk. HSS. Gotha*, p. 137, No. 166 and Tornberg, *Catal. Uppsala*, p. 211, No. cccvii).

Two hours' journey from Kirmāstī are two hot mineral springs, called Dömböldak and Akardja.

KIRSH. [See GHRŪSH.]

KİR-SHEHIR, (Turkish *kır-shehrī* — "town of uncultivated lands"), a town in Asia Minor, capital of a Sandjak in the province of Angora, 97 miles (33 hours) S. E. of this latter, on a river called simply İrmāk, a tributary of the Kızıl-İrmāk which flows at a distance of two hours from the town and is crossed by the stone bridge of Kezik with thirteen arches (about 120 yards). Its height is

3,290 feet. The houses are scattered among gardens which extend in length to a distance of 10 miles and in breadth to that of 5 miles; these gardens bear in the North the name of Öz, in the West that of Çukūr-Çair, in the South that of Deinek, and in the East that of Kāndām; it has an abundant harvest of fruit, especially of grapes. The population consists of 8,462 inhabitants of whom 7,794 are Muslims, 651 Armenians and 17 Greeks. There are 25 great mosques (Seldjūk mosque of Djedebey), 19 small mosques, 4 medreses, a civil preparatory school, a secondary school, 2 primary schools, a church. Several Muslim saints are buried there: the poet 'Ashik Paşa (d. 733 = 1332), Akhi Ören, Shaikh Sulaimān. In the suburbs is held the fair of Yapraklı; it has hot springs: Terme (Θερμαί) or Karghan-Kayan, ferruginous, used as a cure for anaemia, a quarter of an hour away; Kara Kūrt, sulphurous wells, a cure for nervous disorders, 8 miles away. Manufactures of carpets of wool and mohair (*tiftik*) for the šalāt (*sağdjadā*, q. v.) and for the room (*kalīce*), for curtains (*perde-lik*, *ēček-li gilim*), for wallets (*heibe*), in three qualities: striped (*palānde*), the same in a finer quality; *kesme*, woven mats; chairs, arm-chairs, cupboards of walnut-wood. To the West the mountain of Emir-burnū, in the middle of it facing south the immense cave of Göbek-Çaya.

The Sandjak is divided into four *Kazā's* (Kır-shehir) to which are attached two *nāhiya*, of which one is Hādjdj Bektāsh [q. v.], Keskīn (capital Ma'den), Medjidiye (capital Boyalık, Kurd village), Awanos (Abanos). It does not include any high mountains; it has a chain of hills called Bārānī Dagh which extends for 14 miles in length in the vicinity of the capital and terminates at Kūrt Beli. Millstones are obtained from the hill 'Alī Körlü. Two lakes, one quite near the town at Shebili Baghlari, Dib-Siz Göl (the lake without a bottom), and the second in the canton of Medjidiye, Yanar Gölü, near the village of Yanaroglu, which has given it its name. Total population, 119,139 inhabitants, of whom 116,999 are Muslims, 1,794 Greeks, 346 Armenians. Agriculture is only slightly developed. Roads suitable for vehicular traffic are hardly made completed: towards Cesarea and Angora, 80 miles; towards Ma'den, 40 miles; towards New-Shehir, 55 miles.

KIRTĀS (A.), paper. This word is found in the *Kur'an* (vi. 7) with its plural *karūṭis* (vi. 91) where they can only mean papyrus. The Egyptians wrote on the *kirtās* manufactured from reeds called *bardī* (*Fihrist*, i. 21). Chinese paper, *warāk šini*, is made from vegetable fibre, *hashish*; microscopical examination has indeed shown that this paper is made, not from cotton but from various fibres (*J. A.*, 1925, ccvi., p. 159 sqq.); while the paper of Khorāsān is manufactured from linen fibre, *kattān*, by Chinese workmen in imitation of that of their own country (*Fihrist*, *ibid.*). More details are found in the article KĀGHADH.

Katāda in Ṭabari, *Tafsīr*, vii. 90, translates *kirtās* by *ṣahīfa* which tells us nothing.

(CL. HUART)

AL-KISĀ'Ī, 'ALĪ B. ḤAMZA B. 'ABD ALLĀH B. BAHMĀN B. FAIRŪZ, client of the BANŪ ASAD, grammarian and reader of the *Kur'an*,

born at Kūfa, died at Ranbūya, not far from al-Ray, about 189 (805). The following dates are also given for his death 179, 180, 182, 183, 185, 193 and 197.

After having studied in his native town, he came to Baṣra to study with al-Khalīl b. Aḥmad (see this article) who advised him to go and study language amongst the tribes of the Naǧd, of the Ḥiǧǧāz and of the Tiḥāma. On his return to Baṣra he found that al-Khalīl was dead and had been succeeded by the grammarian Yūnus b. Ḥabīb al-Baṣrī, who after several discussions on grammar gave up his place to him. Nevertheless he took up his permanent abode at Bagħdād where he taught chiefly Qur'anic diction, first in accordance with the method of his master Ḥamza al-Zayyāt, and afterwards he followed a method of his own; he is the seventh *badr*, and because of that he is counted amongst the seven canonical readers.

Ḥārūn al-Raṣhīd confided to him the education of his sons al-Amin and al-Ma'mūn. In spite of the opinion of the Imām al-Shāfi'ī who praised exceedingly his grammatical knowledge, al-Kisā'ī was especially weak in grammar, and his partisans admit that he only latterly concerned himself with this science. In any case he had numerous adversaries, whom he dealt with in a fashion neither honest nor just, notably Sibawaihi, al-Yazīdī.

Amongst his teachers were: Abū Dja'far al-Ru'āsi, Mu'adh al-Harrā', Sufyān b. 'Uyaina, Sulaimān b. Arḳam, Abū Bakr b. 'Ayyāsh.

His pupils were: Abū 'Omar al-Dūrī, Abū 'l-Ḥarith al-Laith b. Khālid, Yaḥyā b. Ziyād al-Farrā', Abū 'Obaida al-Kāsim b. Sulaimān.

Of his numerous works, it appears that we have no more than one, *Risāla fī laḥn al-'umma*, "a treaty on the mistakes of the vulgar language", which seems to be the oldest work composed on this subject and was published from the Berlin manuscript N^o 7103, by Brockelmann in *Zeitschr. f. Assyriol.*, xii. (1898), 29—46 (cf. below Nöldeke, *ibid.*, p. 111—115).

AL-KISĀ'Ī, the author of the *Kitāb Kiṣaṣ al-Anbiyā'*, is identified by Ḥāǧǧdī Khalīfa, iv., N^o 9437 with the grammarian and Qur'an reader 'Alī b. Ḥamza (see the foregoing art.). This identification, first adopted by Herbelot, *Bibl. Orientale*, 961b, but rightly disputed by

Lidzbarski, following Pertsch and Ahlwardt, in his *De prophetis quae dicuntur legendis Arabicis* (Leipzig 1893, p. 25), was again accepted by Wellhausen in I. Eisenberg's dissertation, *Die Prophetenlegenden des Muhammed ben Abdallah al-Kisā'ī* (Berne 1898), p. V., on the assumption that the work was not actually by this celebrated scholar himself but had been ascribed to him. The evidence of most manuscripts is however contrary to this view; they sometimes call the author (Abū 'Abdallāh) Muḥammad b. 'Abdallāh, sometimes Muḥammad b. Aḥmad, sometimes Ḥasan b. Muḥammad (sic). Besides it can hardly be doubted that the author is identical with the author of the *Kitāb 'Adǧā'ib al-Malakūt* (Ḥāǧǧdī Khalīfa, iv. 8075) or simply *Kitāb al-Malakūt* (*ibid.*, v. 10527) whom Ḥāǧǧdī Khalīfa calls Abū Dja'far Muḥammad b. 'Abdallāh al-Kisā'ī, and of the *Kitāb Bad' al-Dunyā*, whom he mentions by name without the *kunya* on iii. 991. This latter work is lost but perhaps it was only an independent edition of the first part of the main work, which in the manuscript is sometimes also called *Kitāb Bad' (Khalk) al-Dunyā wa-Kiṣaṣ al-Anbiyā'*. The period in which the author flourished is nowhere mentioned. Contrary to Eisenberg's view (Diss., p. ix.) nothing can be deduced as to this or the grammarian's authorship of the book from the statement of Ḥāǧǧdī Khalīfa, iv. 9477 that Sahl b. 'Abdallāh al-Tustarī [q. v.] wrote a *Mukhtaṣar Kiṣaṣ al-Anbiyā'*; for Ḥāǧǧdī Khalīfa does not say that this work was the basis of that of al-Kisā'ī. Al-Tha'labī [q. v.] does not mention al-Kisā'ī but an investigation of the sources and the relation of the two authors has still to be made, so that nothing can be deduced regarding the age of al-Kisā'ī. From the whole character of his literary activity one must agree with Ahlwardt in putting the author in the fifth century A. H.; while al-Tha'labī's work grew out of Qur'ān exegesis and is intended for learned circles, al-Kisā'ī is a typical representative of the class of *ḥuṣṣāṣ*; he relates the legends to edify and especially to entertain the reader. He therefore quotes only the oldest authorities, like Ka'b b. al-Aḥbār and Wahb b. Munabbih, although he likes to appear scrupulously accurate; but his quotations are not of the slightest value for literary criticism. The work, which exists in numerous manuscripts (to those mentioned in *G. A. L.*, i. 350, may be added: Gotha, Pertsch, *Verz.*, N^o 1839; Brit. Museum, Ellis and Edwards, *A descriptive List*, p. 34, Or. 5820; E. G. Browne, *A supplementary Handlist*, N^o 1012; Princeton, Littmann, N^o 28; Cairo, *Fihrist*, v. 113; Damascus, Zaiyāt, N^o 74, 39), being a popular work was not always carefully treated by the copyists, but often arbitrarily abbreviated; it has also been translated into Turkish, s. H. L. Fleischer, *Catalogus codd. mss. or. bibl. Dresdensis*, N^o 128.

KISĀ'Ī, ḤAKIM MAǦD AL-DĪN ABŪ IṢḤĀḲ (or ABU 'L-ḤASAN) KISĀ'Ī, a Persian poet of the second half of the fourth century A. H. belonging to the first period of Persian poetry. He was

born in Merw on Wednesday 26th Shawwāl 341 (March 16, 953) and according to most authorities died in 392 (1002); one source however (Wāliḥ, quoted by Ethé), says that he reached a very advanced age. A few of his poems have been preserved in the different *tadhkira*: they have been published by Ethé (*Die Lieder des Kisā'ī*, S.-B. Bayr. Ak., 1874, p. 133—149). These poems illustrate the whole repertory of Persian poets of the time; the best known is the *kašida* in which the poet gives the date of his birth as above and says that he composed it at the age of 50; this *kašida* is pessimistic and ascetic in tendency. The *tadhkira* describes him as a poet who celebrated the family of the Prophet in numerous poems (a *kiṭ'a* of this kind is given in Ethé's article). He is also said to have written *kašida*'s in praise of the Sāmānids and of Sulṭān Maḥmūd of Ghazna. He must have been a celebrated poet in the Sāmānid period; the later *tadhkira*'s however (such as Dawlatshāh) do not mention him.

The *Diwān* of Nāṣir-i Khuraw contains several passages in which the latter speaks contemptuously of Kisā'ī. Ethé (*Grundr. d. iran., Phil.*, ii. 281—282) has concluded from this that Kisā'ī must have been still alive in the time of Nāṣir (c. 1040) so that he must have lived to a great age. Ethé further seeks the cause of the antagonism between the two poets in their theological views, Kisā'ī being a "Twelver" (*iṭhnā-ashariyya*) Shī'ī and Nāṣir-i Khuraw a "Sevener" (*sab'iyya*). But Browne (*A Literary History of Persia*, ii. 160—164) holding that Nāṣir's invective is only intended to maintain his superiority as a poet, thinks that Ethé's conclusions cannot be accepted, even that regarding Kisā'ī's age, because there could be nothing astonishing in Nāṣir-i Khuraw's attempts to surpass one of the best known poets of the preceding generation.

Ser., xi. 28, 131. (J. H. KRAMERS)

KĪṢĀṢ (A.), synonymous with *kaḡad*, retaliation ("settlement", not "cutting off" or "prosecution"), according to Muslim law is applied in cases of killing, and of wounding which do not prove fatal, called in the former case *kiṣāṣ fi 'l-naḡs* (blood-vengeance) and in the latter *kiṣāṣ fi-mū dūn al-naḡs*.

1. For *kiṣāṣ* among the pagan Arabs see Wellhausen, *Reste arabischen Heidentums*², p. 186 sqq.; Procksch, *Über die Blutrache bei den vorislamischen Arabern und Mohammeds Stellung zu ihr*; the collection of essays: *Zum ältesten Strafrecht der Kulturvölker. Fragen zur Rechtsvergleichung, gestellt von Th. Mommsen*, Section v.—vii., and Juynboll, *Handbuch des islamischen Gesetzes*, p. 284 sqq.

2. Muḥammad takes it for granted that the blood-vengeance of Arab paganism — in which in contrast to the unlimited blood feud, definite retaliation, although not always on the person of the doer himself, forms the essential feature of the vengeance (cf. Procksch, *op. cit.*, p. 6 and note 5) — is a divine ordinance with the limitation assumed to be obvious, that only the doer himself can be slain: Qur'ān xvii. 35; xxv. 68; vi. 152 (cf. KATL, i. 1; in these passages only the *ius talionis* can be understood by the right to kill another; already in xvii. 35 the avenger of blood is forbidden to kill any one other than the guilty

one); ii. 173 sqq. (before Ramaḡān of the year 2): "To you who are believers the *kiṣāṣ* is prescribed for the slain, the freeman for the freeman, the slave for the slave and the woman for the woman; but if anyone is pardoned anything by his brother he shall be dealt with equitably . . . and pay him compensation as best he can. This is an indulgence and mercy from your Lord. But he who commits a transgression after this shall be severely punished. In *kiṣāṣ* you have life, you of understanding . . ." (the first verse says that a freeman can only be slain for a freeman, a slave for a slave and for a woman only a woman [but probably a slave or a woman for a freeman, but this is not expressly stated and must be deduced], naturally of course only the guilty one and that in all other cases the payment of compensation [*diya*] takes place. This is an extension of what is presumed in the earlier passages: the treatment of the freeman in relation to the slave is a matter of course according to old Arab views and that of the woman, which cannot be completely explained from them, represents an independent decision of Muḥammad's based on them [there is quite a different interpretation of the verse in Procksch, *op. cit.*, p. 75 note 5]. The commentators had difficulty in reconciling the passage with later developments [cf. below 4]. Only one explanation, thrust into the background and later completely abandoned, interprets the verse quite correctly, but makes it abrogated by v. 49 [see below]. By "prescribed" is meant not a duty but a rule not to be transgressed; pardon is the abandonment of *kiṣāṣ* with a demand for compensation instead; the law is described as an indulgence and mercy and life-giving in contrast to the often unlimited blood-feud of pagan times, because only the guilty one is slain and the life of the innocent thus preserved); v. 49 (after the first encounter with the Medina Jews but before the outbreak of open hostilities): "and we have prescribed for them (the Jews) in it (Torah): a life for a life, an eye for an eye, a nose for a nose, an ear for an ear, a tooth for a tooth, and *kiṣāṣ* for wounds; but if anyone remits it, it is an atonement for him (i.e. for his sins) . . ." (this verse of course does not cancel ii. 173). In the years 3—5 with iv. 94 sqq. there came the distinction between deliberate and accidental killing (of KATL, i. 1): in this the application of *kiṣāṣ* is excluded; in ii. 190 (before the campaign of the year 6) *kiṣāṣ* is used metaphorically in the sense of retaliation of like with like (in the case of disregard for the holy territory and month by the enemy).

3. The facts gathered from the *Sira*, the records of the life of Muḥammad, are in agreement with this. In the so-called ordinance of the community at Medina, which belongs to the early Medina period it is laid down that if any one slays a believer and is convicted (proof of guilt in a trial before the authority — Muḥammad — is therefore required as a condition for the carrying out of *kiṣāṣ*), talion takes place even if the avenger of the blood of the slain man declares himself satisfied; all believers must be against the murderer and can only take an active part against him. Here the *kiṣāṣ* is brought from the sphere of tribal life into that of the religious-political community (*umma*) which finds an echo in the law, not however to be taken literally, that believers are one another's blood-avengers for their blood

spilt for the sake of Allāh, but is throughout recognised as a personal vengeance, as is also laid down in the case of the Medina Jews, no one is to be prevented from avenging a wound. A limitation of *kişās*, logical from the standpoint of the *umma*, lies in the fact that the believer is forbidden in the ordinance of the community to kill a Muslim on account of an unbeliever. On two occasions when Muslims had killed heathens who had however treaties with Muḥammad, he did not allow *kişās* to be made "because they were heathen" (this does not in any way follow from the ordinance of the community) and even paid the compensation himself; his utterance regarding the possibility of *kişās* à propos of the second of these cases is however illogical. On two occasions, also for political reasons, he obtained the acceptance of compensation when the avenger of blood undoubtedly had the claim to *kişās*, but in one case he cursed the murderer — again an illogical attitude. Muḥammad in his turn after the capture of Mecca in keeping with the regulation of the ordinance of the community, abandoned his claim to compensation for the slaying of a nephew of his, which had taken place during the heathen period. In this connection he is said to have laid down the principle that any blood-guilt attaching to a Muslim dating from the period of heathendom was to be disregarded (cf. *ḲATL*, i. 2). But Muḥammad also intensified the operation of *kişās* and on two occasions had the murderer executed, when there were aggravating circumstances, without offering the avenger of blood the choice between *kişās* and compensation; the proscription and execution of murderers who were also *murtadd*'s (q.v.; cf. *ḲATL*, ii. 5), is however to be interpreted differently; from everything it is clear that Muḥammad also supervised the carrying out of *kişās*.

Taking the evidence of the *Qur'an* and the *Sira* together, it is evident that Muḥammad did not recognise the blood-feud, but allowed *kişās* to survive as personal vengeance, only he subjected its application to certain limitations and endeavoured to free it from tribal customs of pagan times, all important advances by which it was brought nearer in character to a punishment. That Muḥammad at the same time, according to the demands of the individual case, sometimes gave decisions deviating from his own rules, is intelligible.

4. Among the traditions (*ḥadith*'s) that one must be genuine according to which Muḥammad had a Jew, who had smashed the head of a Muslim *djāriya* (slave girl or young woman) with a stone, killed in the same way, because in this case there was no question of an avenger of blood. At a later period when *Qur'an* ii. 173 (cf. above § 2) was interpreted in a new way, the attempt was made to see in it evidence that a man might be killed as *kişās* for a woman, without observing that the tradition referred to an unbeliever while the *Qur'an* passage was only concerned with Muslims. But this *Qur'anic* prescription regarding the woman was very early neglected and interpreted differently; it is true that 'Umar b. 'Abd al-Azīz, al-Ḥasan al-Baṣrī, 'Aṭā' and 'Ikrima are quoted as representatives of the *Qur'anic* view that a man cannot be put to death for a woman (Zamakhshari on *Qur'an* ii. 173) but Sa'īd b. al-Musaiyab, al-Sha'bī, Ibrāhīm al-Nakha'ī and Kaṭāda had held the opposite view (*ibid.*) and the latter opinion prevails in the law-schools without any opposition

(Zamakhshari's statements on the point are not quite accurate); at the same time it is remarkable that traditions expressing the rejected view are hardly to be found. From the point of view of the difference of opinion in the law-schools, the following is important. For the view that *kişās* could be inflicted on several, on account of one individual, if they had committed the crime jointly, no unambiguous tradition could be found. Those who held this opinion had therefore to rely on a tradition which does not at all prove what it is said to, and were only able to quote in support (alleged) decisions of old authorities. Their opponents naturally pointed out this flaw. The question how the *kişās* is to be executed is also disputed; the champions of the view that it is to be inflicted in the same manner as the slaying, quote the tradition mentioned above, while those who insist upon execution with the sword in every case rely upon a saying of Muḥammad's. There are also varying opinions as to whether a man can be put to death on proof by *ḥasāma* (cf. 5 below) and ancient authorities are quoted for both; the historical truth is perhaps that Muḥammad wished to apply *ḥasāma* in a case of bloodshed and when it could not be managed, paid compensation himself; besides it is said (certainly wrongly) that he confirmed *ḥasāma* as it existed in the period of heathendom. Among other traditions, mention may be made of the story that among the children of Israel there was only *kişās* and no possibility of paying compensation (this is wrongly cited in explanation of *Qur'an* ii. 174) and that Muḥammad granted the blood-avenger's request to abandon claim to *kişās*, laid great stress on forgiveness, and even asked him to do so (cf. above 3; in these historically certain cases, however, his attitude was influenced by purely political considerations); finally we are told that he who raises a claim for blood without cause is one of the men most hateful to God. Other traditions agree with the regulations mentioned and still to be mentioned and need not therefore be quoted, especially as the *ḥadith*'s on this subject are collected in Guillaume, *The Traditions of Islam*, p. 107 sqq.

Summing up the results of the traditions as the expression of opinion of authoritative circles of Islām in the early period, we must notice in contrast to Muḥammad's period the important change in the treatment of women, which marks an undeniable advance, just as the request for forgiveness is evidence of a loftier point of view.

5. The *kişās fi 'l-nafs* according to the *Shari'a*. In the cases of illegal slaying noted in the article *ḲATL*, i. 5—7 *kişās* comes into operation, i. e. the next-of-kin of the slain man, who in this capacity is called *walī 'l-dam* (avenger of blood) has the right to kill the guilty man under certain conditions. From what has been said above, it is obvious that this punishment still partakes for the most part of the character of personal vengeance; this is also clearly seen in the regulations — disputed in points of detail — prescribed for the case when the avenger in any way mutilates the murderer and only occasionally the idea of punishment by an authority for the sake of justice crops up [thus in all cases of culpable, illegal slaying in which *kişās* cannot take place, *ta'zir* intervenes; the competent authority is therefore regarded as the *walī* of one who has no *walī*; therefore anyone who kills a *dhimmi*, *mu'ahad* (an unbeliever

connected with the Muslim state by a treaty) or a *musta'min* (an unbeliever who enters a Muslim country after being given a safe conduct) must, according to Malik, be put to death and the *wali* has no right to abandon claim to *kişāş*. On the other hand, however, it is laid down that anyone who kills a *wakf* slave goes scot-free, but that this point of view is found at all is a step in advance, for Muhammad's decisions in this connection (cf. above 3) were only dictated by the demands of the individual case; in other matters also in certain points we see a loftier attitude adopted, at least in some of the schools.

For the application of *kişāş* the fulfilment of the following conditions are necessary: 1) The life of the person slain must be absolutely secured by the *shari'a*; this is the case with a Muslim, *dhimmī* and *mu'ahad*, at least so long as they are in the *Dār al-Islām* [q. v.], and *Dār al-Şulh* [q. v.] (in the case of the slaying of a Muslim prisoner in the *Dār al-Ḥarb* [q. v.] it is unanimously agreed that there is no *kişāş* and for the slaying of another Muslim there is no *kişāş*, according to the Ḥanafī school; there are corresponding regulations for the *dhimmī* and *mu'ahad*) in contrast to the *musta'min*, *murtadd* and *ḥarbī* [but *kişāş* may be inflicted on a *murtadd* if he kills another *murtadd*, and Mālik makes *kişāş* the general rule if anyone kills a *murtadd*, without the authority of the Imām]. This point of view is to be distinguished from the conception of the illegality of the slaying (cf. KATL, i. 5) although the two ideas have a certain amount in common; the killing of a *musta'min* is illegal but there is no *kişāş* (apart from the special case just mentioned). 2) The slain man must not be a descendant of the slayer, nor the slave of the slave of one of his descendants, nor must there be a descendant of the slayer among the heirs of the slain man. 3) It is further taken for granted that the man when he committed the deed must be of years of discretion and be in full possession of his faculties. 4) The further conditions are disputed (cf. below). — Any alteration in these relations of the doer after the deed makes no difference to the old blood-guilt (it is however to be noted that the adoption of Islām by a *ḥarbī* wipes out all previous blood-guilt) with the exception of lunacy (in which case *kişāş* cannot be inflicted), nor does, for example, an alteration in the relations of the slain man after the doer has decided on the deed but before it is actually committed (but there are various views on this point). If one of several men who have slain someone jointly cannot be put to death for one or other of these reasons, the others also escape *kişāş*; this is also the case if a further reason for killing leads to the action of the slayer. If the slayer dies before *kişāş* is carried out, all claim by the avenger of blood ceases according to Abū Ḥanīfa and Mālik; according to al-Şāfi'ī and Aḥmad b. Ḥanbal compensation can still be claimed.

Mālik, al-Şāfi'ī, and Aḥmad b. Ḥanbal further demand, before *kişāş* can be allowed, in addition to the conditions mentioned that the slain man is at least the equal of the slayer as regards Islām and liberty, so that they certainly uphold Muhammad's intentions, while the Ḥanafīs — of course interpreting differently the evidence cited — take no account of this and therefore occupy an undoubtedly higher position. A particular view of

Mālik's has already been mentioned. According to Mālik the slayer can further be put to death, if he has deliberately slaughtered his descendant and this view is also admitted in the Şāfi'ī school. Several may be put to death for the killing of one, according to Abū Ḥanīfa, Mālik and al-Şāfi'ī, if they have done the deed together, provided the part taken by each was such that if he had acted alone, the result would have been the same (Mālik alone excluded *kasāma* [cf. below] on the basis of which, according to him, only a single individual can be put to death). There is unanimity on the point that anyone who has killed several people is liable to *kişāş*; on the question whether compensation has also to be paid there are different views.

Kişāş can only be applied after definite proof of guilt is brought. The procedure of proof in a murder trial is essentially the same as in another case; in *Kişāş fi'l-nafs* there is however also the old Arab institution of the *kasāma* (cf. KASAM and Goldziher, *Zeitschr. für vergl. Rechtswissenschaft*, 8, p. 412 sqq.; Wellhausen, *Reste arabischen Heidentums*, 2, p. 187 sqq.) which Islām allowed to survive (cf. above); according to Mālik, Aḥmad b. Ḥanbal and al-Şāfi'ī's earlier opinion, *kişāş* can be inflicted on the accused (but according to Mālik on one only) if the *kasāma* is performed and the other conditions are fulfilled, according to Abū Ḥanīfa and the later view of al-Şāfi'ī, which became predominant in his school, he has only to pay compensation; among the Şāfi'īs, with the limitation that he may be put to death if in the course of the trial the accuser swears to his guilt twice with fifty oaths each time. If the person entitled to inflict *kişāş* does so without previous judicial proof he is punished with *ta'zir*.

The execution of *kişāş* is open to the avenger of blood and according to Abū Ḥanīfa consists in beheading with the sword or a similar weapon; if the avenger slays in another fashion he is punished with *ta'zir*, but not imprisoned; according to Mālik and al-Şāfi'ī the guilty person with certain limitations is killed in the same way as he killed his victim; both views are given by Aḥmad b. Ḥanbal.

Kişāş takes place — among other conditions — only when the next of kin (*wali*) of the slain man or the owner of the slain man, if he was a slave, demands it; if there are several (equally nearly related) avengers of blood all must express this desire; if one of them remits *kişāş*, the refusal affects all. Views are divided on the case where the avenger of blood (or one of several) can give no definite expression of opinion. The *wali*, or the wounded man before he dies if the case occurs, is permitted to remit the *kişāş* and he is even urgently recommended to do so, either in return for the payment of compensation or for another equivalent or for nothing. There are many special regulations on detailed points and many differences of opinion between the schools of law.

6. *Kişāş fi-mā dūn al-Nafs* according to the Şari'a. If any one deliberately (with '*amd*', opposite *khaṭ'*; cf. KATL, i. 5) and illegally [this excludes the wounding of one who tries to murder or injure or rob a fellow-man, if it is not possible to repel him otherwise; it is for example permitted to strike someone in the eyes or throw something in the eyes of a man who forces his way into another's house without

permission] has inflicted an injury, not fatal, which could be inflicted on the doer's person in an exactly similar way (what is meant by this is very fully discussed in the Fīkh books) he is liable to *qīṣās* on the part of the wounded man, (except that Mālik makes it be inflicted by an expert), if the conditions necessary for carrying out the *qīṣās* *fi 'l-naḥs* are present with the following modifications: according to Abū Ḥanīfa, *qīṣās* *fi-mū dūn al-naḥs* is not carried out between man and woman or slaves among themselves, but it is according to Mālik, al-Shāfi' and Aḥmad b. Ḥanbal; Abū Ḥanīfa and Mālik further allow no *qīṣās* *fi-mū dūn al-naḥs* between freemen and slaves. According to Mālik, al-Shāfi' and Aḥmad b. Ḥanbal this *qīṣās* is inflicted for one on several, but not according to Abū Ḥanīfa. A sound limb may not be amputated for an unsound one; if the guilty person has lost the limb, there can of course be no *qīṣās*. In the case where he loses it after committing the deed, there is a corresponding difference of opinion as in the case of his death before the execution of *qīṣās* *fi 'l-naḥs*.

The further regulations correspond to those quoted in section 5.

7. If retribution is not permitted or if the person entitled to *qīṣās* voluntarily remits his claim, compensation may nevertheless be demanded; for an unlawful slaying, the blood money (*diya*; q. v.) is to be paid to the avenger(s) of blood, in an unlawful but not mortal wounding, according to the particular case either the full *diya* or a definite part of it or a contribution defined by the law (*arṣḥ*; q. v.) or a percentage of the *diya* laid down by the judge (the so-called *ḥukūma*) to the injured person; all this of course on the supposition that the slain or wounded man was a freeman. If he is a slave his value must be made good. If the culprit is a slave, his owner has to pay these contributions for him; he can however escape by handing over the slave (parallels in the Romano-Celtic institution of *in noxam dedere*; cf. e. g. Girard, *Nouvelle Revue Historique*, 1887, p. 440 sqq.).

8. Of the regulations of the Shī'a Fīkh books, which need not be gone into fully here as they are essentially the same as the Sunni, we need only mention that among the Twelver Imāmis, for example, it is taught that if a man has killed a woman, *qīṣās* can be carried out if the *wālī* of the woman pays the relatives of the man the difference between the blood-money on each side; an isolated interpretation explains Qur'ān, ii. 173 in this way. Here we can scarcely have a late effect of the Qur'ānic rule regarding woman, as similar calculations are also made in other cases.

9. On the practical carrying out of *qīṣās*, cf. KATL, ii. 10, in which we may note that breaches of his regulations are recorded of even the Prophet's companions.

Bibliography: The Fīkh-books; the works already quoted under KATL: the article QIṢĀS in T. P. Hughes, *A Dictionary of Islam*. For the Arabic expressions not further explained see the separate articles. (J. SCHACHT)

KISHM. 1) A long island in the Persian gulf (also called *ḥawila* because of its shape), off the coast of Lāristān at the entrance of the straits of Hormuz, opposite Bender 'Abbās. In length it is about 77 miles. It is separated from the mainland by a strait, called Clarence Strait, the breadth of

which varies from one to seven miles. It is composed of rocky and calcareous hills. The latter to the West form an elevation called Kishm Kūh (mountains of Kishm). Vegetation is rare; mines of sulphur and of salt are found here; the population, of Arab origin, amounts to 15,000 inhabitants. It was ruined by an earthquake in 1884. The chief pursuit is coral and pearl-fishing. Idrīsī (in Abu 'l-Fida', *Taḳwīm al-Buldān*, ed. Reinaud, p. 373) mentions a great whirl pool in the sea near here; the name that it now bears is that of the capital, a small town with 5,000 inhabitants, situated at the eastern point; an old Portuguese port is still to be seen there; in the Middle Ages it bore successively the names of the Island of the Banū Kāwān (Iṣṭakhri, p. 107); Barkāwān (Ibn Hawḳal, p. 183); Ibn Kāwān, Abarkāfān, Abarkāwān (Balādhuri, p. 386); Lāft (Iṣṭakhri, p. 32, i. 18; Yaḳūt, iv. 341) from the name of a place still found at the present time on the Northern side. The English founded, at Bāsīdū, the factory of Bassadore, soon afterwards abandoned. Other places are Guran and Sūxeh.

2) There was formerly a town of the same name in the upper basin of the Oxus which belonged for a short time to the Yabghū of Tokhāristān (Ṭabari, *Annales*, ii. 1590 10). It is found in Hiouentsang under the name of *Kit-li-sit-mo*, corresponding to a hypothetical Sanskrit name *Kṛśma; it lay four days to the East of Hwōh, identified by Yule with Warwālīz near Ḳunduz (J. Marquart, *Erānsahr*, p. 70, 231).

(Kesem); L. Pelly, *Visit to Lingah*, *Journal of the R. Geogr. Soc.*, 1865, xxxiv. p. 251 (with map); Dubeux, *Perse*, p. 55; De Bruyn, *Voyages*, p. 322. (CL. HUART)

KISMET (A., T.); this word, the Arabic meaning "distribution" of which is a synonym of *iktisām* later came to mean lot, portion and developed as a third meaning "the lot which is destined for every man". It is this meaning of the Turkish that is best known. In Turkish however *kismet* is not so much an expression of theological doctrines concerning predestination (cf. QADAR) as of a practical fatalism which accepts with resignation the blows and vicissitudes of fate. The same sentiment is often expressed among Persian and Turkish poets by the words *falak* and *ḥarkh* to express the irrational and inevitable influence exercised by the spheres.

In Turkish, *kismet* is also another word for the judicial office called *ḥassāmīlik*, especially in the expression *kismet-i 'ashariye*, i. e. the authority charged with the supervision and maintenance of the *ewḳāf* instituted by the Sulṭāns (cf. Sāmī, *Ḳamūs-i Tūrki*, s. v.).

KISRĀ, the Arabic form of the name of two Persian kings of the Sassanian dynasty, *Khushraw* [q. v.] has become a general name for all the Persian kings; then it was given a broken plural *akāsira* (other forms: *kusūr*, *akāsir*, *kasāsira*). The only remaining monument of the town of al-Madā'in (Seleucia-Ctesiphon) before its recent destruction

by an earthquake was called Tāk-Kisrā "vault of Chosroes" and Iwān-Kisrā "audience-chamber of Chosroes" (Pietro della Valle, Fr. transl., Paris 1661, part 2, p. 64—68; Buckingham, *Travels in Mesopotamia*, i. 519; Edw. Yves, *Voyage from England to India*, London 1773, p. 290; Beauchamp, in *Journal des Savants*, 1790, p. 797; Olivier, *Voyage dans l'empire ottoman*, vol. ii., p. 433 sqq.; J. Cl. Rich, *Narrative*, ii., ch. xix., p. 159; J. Keppel, *Personal narrative*, i. 122 sqq.; J. Baillie Fraser, *Travels in Koordistan*, ii. 1—9).

(CL. HUART)

KĪSSĀ (A., plur. Kīṣaṣ) does not occur in the Qur'ān. The Qur'ānic noun from the root *k-ṣ*, perhaps an infinitive, is *kaṣaṣ* which occurs 5 times: iii. 55; vii. 175; xii. 3, 111; xxviii. 25; and in the title of xxviii. The root does not mean simply "narrate", as usually translated, but has a particular meaning and usage which have conditioned the whole after use of *kīssa*. It will be for clarity in this connection to look shortly at the usual Qur'ānic expressions meaning "narrative", "narrate". In Muḥammad's earlier career (for such broad considerations the order of the Qur'ān is sufficiently significant), he used exclusively the root *ḥ-d-ṭḥ*; thus *ḥadīth* (meaning strictly "a new thing", "news", "an event" as opposed to *ḥadīm*) occurs 23 times in all: e.g. lxvi. 3; lxxviii. 44; lxxvii. 50; lxxix. 15; lxxxv. 17; lxxxviii. 1; *ḥaddathā*, xciii. 11; xcix. 4. In lxvi. 3, *ḥadīth* is combined with root *n-b-* which occurs before that only twice: lxxv. 13; lxxviii. 2. In Muḥammad's later career root *n-b-* preponderates by far: stem ii occurs 46 times and stem iv. 4 times, apparently in much the same meaning, but al-Rāghib in the *Mufradāt* (p. 499, l. 5 from below; Lane, p. 2753a) says that *nabba'a* is more intensive than *anba'a*; stem x occurs once; the noun *naba'* occurs in the sing. 17 times and in the plur. 11 times. Of the root *kḥ-b-r* the verb does not occur and the 52 noun usages are curiously scattered from Sūras ii. to lxxvii., with two isolated, and apparently early, in xcix. 4 (*akḥbār*) and c. 11 (*khabir*). Of these 52 occurrences 45 are *khabir*, "well informed".

The root *k-ṣ* is much more difficult. Leaving aside *ḥiṣāṣ* [q. v.] "talio" (ii. 173, 175, 190; v. 49), the fundamental and primary meaning is given in xviii. 63, *fa-raddū 'alā āthārihimū kaṣaṣū*, "so they two went back in their foot-prints, tracing them", and in xxviii. 10 where the mother of Moses says to his sister, *kuṣṣihī*, "trace him up". This meaning persists in all the Qur'ānic usage; cf. the similar development of root *t-l-w*, "to follow, imitate, recite from, relate a narrative (*naba'*)", Qur'ān, v. 30; xxviii. 2, etc. So *kaṣṣa* means "he traced out, step by step, the facts in the case of some one or something and (or) he made a statement upon it". The lexicons all add the explanation *'alā waḍiḥihi* which Lane (p. 2526c) renders, "in its proper manner"; perhaps better, "straight on, point by point" (*shai'an ba'da shai'in* in *Lisān*, viii., p. 341, l. 3 from below). This statement is made by Allāh to (*'alā*) the Prophet (mostly), Qur'ān, iv. 162; vi. 57; vii. 6, 99; xi. 102, 121; xii. 3; xvi. 19; xviii. 12; xx. 99; xl. 78; by the Qur'ān, xxvii. 78; by Moses to Shu'aib of Midian, xxviii. 25; Jacob tells Joseph not to recount his dream (*ru'yā*) to his brothers, xii. 5; Allāh tells the Prophet to state the case (*fa-kuṣṣi-l-kaṣaṣ*) to the people, vii. 175; messengers

(*rusul*) make a statement of Allāh's signs (*āyār*) to the people, vi. 130; vii. 33. It is combined with *naba'* (sing. or plur.): vii. 99; xi. 102, 121; xviii. 12; xx. 99; with *ḥaḥḥ*, iii. 55; vi. 57. It might be possible in all these cases to translate roughly "narrate", but that would obliterate the basal idea in the root of following up traces (*ittibā' al-aṭṭār*, *Lisān*, viii., p. 341—343) which, in these cases, are ideas and expressions (*Lisān*, p. 342, l. 4 from below). This is sometimes expressed as a *bayān*, "explaining"; so, while Baiḍāwī (ed. Fleischer, i., p. 451, ll. 19 sqq.) exegetes Qur'ān xii. 3 as a following of traces, the *Lisān* (p. 431, l. 4 from below; p. 432, l. 5 from below) explains it as a *bayān*.

It is significant that in the lexicons the usage for narrating is very subordinate and in the case of *kīssa* sometimes vanishes. The fundamental ideas in the root are two, "to cut off, shear", as hair with scissors (not, apparently, in the Qur'ān) and "to follow traces"; the *Lisān* quotes only traditions and never, *shawāhid* of poetry in illustration of the usage *kaṣṣa 'alaihi 'l-khabar*, "he recounted the information to him". In the *Misbāḥ* the only meaning given to *kīssa* is *shai'an, amr*, "affair", "matter", "case" — not *ḥadīth* or *khabar*. In the *Ṣaḥāḥ* the meanings are (i.) *amr* and (ii.) *ḥadīth*, and the plural *kīṣaṣ* is restricted to the *kīssa* which is written. In the *Lisān* (p. 341, l. 5 from below) *kīssa* is said first to be known (*ma'rūfa*) and then there is quoted, *fi ra'sihi kīssa* ("there is a *kīssa* in his head"), as meaning "the whole thing is merely talk" (*al-djumla min al-kalām*); cf. the judgement on *kaṣṣ* as *kaṣṣ*, "words", opposed to *'amal*, "works" (p. 343, ll. 2 sqq.; Lane, p. 2526c). Later in the *Lisān* (p. 342, l. 7 from below) *kīssa* is given two meanings, *amr* and *ḥadīth*, and several traditions bearing on the *kāṣṣ* (evidently the religious exhorter and storyteller; see below) are quoted. In one he is said to be either an *amir*, whose duty it would be to exhort his people in his *khuṭba's*, using stories of the past, or his appointee — such do not seek gain, or he who does it out of pride and hypocrisy, whose exhorting and talk have no reality in them. Cf. several forms of this tradition and remarks upon them by Murtaḍā al-Zabīdī in his *Ithāf al-Sāda*, a commentary on the *Ihyā* of al-Ghazālī, vol. i., p. 153. In another it said that the *kāṣṣ* may expect (divine) hatred (*maḥṣ*) because he will inevitably add to or take from his stories as he tells them. In these traditions, evidently of late origin, the connection of *kāṣṣ* with *kīṣaṣ*, "stories", is taken for granted but others held that the *kāṣṣ* was so called because he followed up (*kaṣṣ*) one story with another in his *kalām*, here apparently "patter" in contempt (above, p. 671a; *Lisān*, p. 343, l. 10). From all this it is plain how uncertain was the original meaning of *kīssa*. Lexicographically the existence of the word is assured and it may be conjectured that, beside *kaṣṣ* and *kaṣaṣ*, infinitives, it was originally an *ism naw'*, "a kind of tracing out" — but what kind? So in the *Ṣaḥīḥ* of Muslim, *Salām, bāb al-sīr*, trad. 44: *sāk al-ḥadīth bi-kīṣṣatihi naḥwa ḥadīth*.... "he carried on, or pursued, the *ḥadīth*, in his way of tracing it out step by step, just like the *ḥadīth* of...". In later Arabic the word had two distinct meanings: (i.) "story" mostly of a religious and edifying kind, but used also much more widely and even, in Spanish Arabic, "history", if we can

trust the *Vocabulista* of Pedro de Alcala (Dozy, *Supplément*, ii., p. 352a, b, under *kaššās* and *mu-kaššīs*; cf., too, "historian" in Redhouse's *Turkish and English Lexicon*, p. 1458a); (ii.) "request", "petition", "claim", laid before a superior; a number of examples of this are given by Quatremère in his *Sultans Mamlouks*, I, i., p. 236, note III; there was an official for the purpose of dealing with these called *kišša-dār*; see, too, Gaudefroy-Demombynes, *La Syrie*, p. xlv. This second meaning is almost certainly more original and goes back to the *sha'n*, *amr* of the lexicons. It is worth notice also that *kaššās* similarly retained two separate meanings: (i.) the professional reciter of such tales = *kāšš* above and (ii.) a police-agent, detective, "tracer". For the second meaning Dozy (*loc. cit.*) refers to the Breslau text of "The 1001 Nights", vol. vii., p. 313, l. 4 from below, derived here from one of De Sacy's Egyptian MSS., although the printed text of Zotenberg's Egyptian Recension is quite different (II Calcutta, ii. 246; I Bulaq, i. 500). In the grammatical usage *damir al-kišša* = *damir al-sha'n* the meaning *sha'n* is explicit; Zamakhsharī in the *Mufaṣṣal*, p. 54, ll. 8 sqq., explains such a prefixed *huwa* as meaning "the case, and the event, is..." (*al-sha'n wa 'l-hadīth*...).

In rubrics of Bukhārī's *Ṣaḥīḥ kišša* occurs several times and always apparently in the sense *sha'n* or *amr*, "the matter, affair, case of"; see ed. Bulaq, 1314, iv. 182; v. 72, 129, 171, 172, 174.

In the *Fihrist* (c. 400 A.H.) *kišša* does not seem to occur; certainly it is not there one of the normal words for "story" in any sense. These are: *ta'rikh*, *khavar*, *hadīth*, *sīra*, *samar*, *khurāfa*; *hikāya* in the *Fihrist* is used only in the exact sense of a verbatim reproduction (see *HIKĀYA*, above). Undoubtedly the *kaššās* had been at work for more than two centuries, but their labours had not reached literary form and recognition.

In a very few years more that had taken place. There are two books with which the word *kišša* is peculiarly connected, the so-called *Kiṣṣa al-anbiyā'* (commonly rendered "Stories of the Prophets") of al-Kisā'i [q. v.] and of al-Tha'labī (d. 427 A.H.; cf. on both Lidzbarski, *De prophetis legendis arabicis*, Leipzig 1893). Yet in the rubrics of the first book *hadīth* is the word used throughout except of the *Kiṣṣat Harūt wa-Mārūt* (ed. Eisenberg, p. 45) and there is no mention of *kiṣṣa* in the introduction. The second book begins: "This is a book which contains the *kiṣṣa* of the prophets mentioned in the Qur'ān with commentary" and then quotes Kur. xi. 121, "and each (piece of information) We trace out (or give in detail, or explain, *na-kusṣu*) for thee of the information (*anbā'*) concerning the Messengers, that by which We establish thy heart". Five reasons are then given why Allāh recounted to Muḥammad such records of the past, apparently interest in the *kiṣṣa*, for some people, required justification. Thereafter *kišša* is used regularly in the rubrics and it is probable that Tha'labī understood by *Kiṣṣa al-anbiyā'* very nearly, "The Records, or Accounts of the Prophets", records from the Qur'ān and from *hadīth*. While it is plain that Tha'labī was not regarded as a very careful traditionalist (see Murtaḍā al-Zabīdī, *Ithāf al-Sāda*, vol. iv., p. 556, but contrast Ahlwardt's judgement on his Qur'ān commentary in the Berlin Cat., i. 293) yet a gulf still separated him from the utterly unscrupulous professional

kaššās who made a living out of the pious gullibility of the masses and drew as freely on their imagination as did the popular entertainers with secular *asmār* and *khurāfāt*. It is unnecessary to give details on these as Goldziher (basing on the *Kitāb al-Kuṣṣa* of al-Djāwzī, d. 597 A.H.) has already dealt with them in his *Muhammedanische Studien*, vol. ii., p. 161 sqq. (also his *Richtungen der isl. Koranauslegung*, p. 58 sqq., 61). They began as stirrers up of religious enthusiasm before the Muslim armies, like the poets in the old days, making free use of *sady'*, or rhymed prose. Thus they naturally became popular exegetes of the Qur'ān and public homilists, passing into storytellers for religious purposes. From these the professional class must have quickly developed and it is certainly strange that there is no mention of them in the first *Fann* of the eighth *Maḳāla* of the *Fihrist* where the varieties of storytellers are dealt with in detail. Further, there is only one trace of them in the *Amthāl* of al-Maidānī (d. 518 A.H.) in a *muwallad* proverb, *al-kāšš lā yuḥibbu 'l-kāšš*, "one *kāšš* does not love another" (Cairo 1310, ii. 51; ed. Freytag, ii. 304, N^o 180). But in the *Ihyā'* of al-Ghazālī (d. 505 A.H.) there are a number of references. In Book I of the *Ihyā'*, in the section which deals with the perversion of religious expressions, it is pointed out how *dhikr* and *tadhkir* have been twisted by homilists (*wu'āz*) to apply to *kiṣṣa*, poetry, *shath* (q. v., cf. also Macdonald, *Religious Attitude*, p. 173) and *ṭammāt* ("overmastering outpourings"; Dozy, *Supplément*, ii., p. 59a). *Kiṣṣa* are a *bid'a* and evidently not one to be approved. The *kaššās* appeared only in the troublous times (*al-fitna*) after 'Umar, i.e. under 'Uthmān and 'Alī. 'Alī excluded them from the mosques but made an express exception of Ḥasan al-Baṣrī because of the truly edifying and terror-striking character of his *kalām*. A *madjlis* for *dhikr* may be more edifying even than reciting the Qur'ān, according to traditions from the Prophet, but such traditions do not apply to the *madjlis* of the *kaššās* who give the name of *tadhkir* to their *khurāfāt* and are occupied with *kiṣṣa* which breed nothing but controversies and which are quite different from the *kiṣṣa* of the Qur'ān. So al-Damīrī in his *Ḥayāt al-Ḥayawān* (Cairo 1313, ii. 170), giving the story from Tamīm al-Dārī about *al-djassāsa*, the strange beast in attendance on al-Dajdjal in his island, says that Tamīm was the first who *kaṣṣa 'ala 'l-nās*. So there are *kiṣṣa* the listening to which is for edification and there are *kiṣṣa* which are the reverse. The difficulty is to distinguish; truth may easily lead to falsehood and the useful to the harmful. A long statement as to this is quoted from Aḥmad b. Ḥanbal (ed. with commentary of Murtaḍā al-Zabīdī, *Ithāf al-Sāda*, i. 240 sqq.). Again, in the Book on the *Ṣalāt*, in the section which considers how the pious should pass their leisure time on Friday, there is a warning against the frequenting of the *kaššās* (iii. 277 sqq.). It is worth noticing that the commentator Murtaḍā (d. 1205 A.H.) uses *kiṣṣa*, *akhbār* and *hikāyāt* quite indiscriminately. So, too, Ibrāhīm al-Baidjūrī in his *ḥaṣhiya* on Abū Shudjā's *matn* on canon law, written in 1258 A.H., speaks of "lying *hikāyāt* like the *kiṣṣa* of 'Antar and of al-Dalhama" (Cairo 1307, i. 131, 12).

But Massignon in his *Essai* (pp. 141 sqq., 221) has shown that, in spite of this condemnation,

the labours of the mystics of Islām and of the *ḥuṣṣāṣ* among them were what gave to Islām its permanent type as we know it to-day. Their spontaneous movement, preaching to the populace directly in rhymed prose pointed with religious legend, was the first apologetic and categetic of Islām. They naturally shocked the canonists and theologians and religious authorities generally. They were sincere and terribly in earnest and the *ḥāṣṣ* who worried 'Aṣīṣha by holding forth in the court of her chamber until she sent to Ibn 'Umar who drove him away and broke a stick over his back, may have been like an over-zealous street-preacher with us (*ḥyā'*, iii. 279). All depended on the character of the men, as the exception of Ḥasan al-Baṣrī by 'Alī shows. In Ramaḍān the daily preaching in the mosques is still of this character. It cannot, then, be surprising that *kiṣṣa* has come to be one of the most popular words for "story" and especially for "religious legend". In the index of book-titles in Ahlwardt's Berlin Catalogue (x. 493^b—496^b) it occurs 216 times; of these 27 are in the form *kiṣṣat ghazwat* . . . , on which confer the cases from Bukhārī above. These are mostly religious stories, but quite a large proportion are non-religious and of the Arabian Nights type. In the same index *ḥikāya* occurs only 48 times and there are very few uses of *ḥadīth* simply as "story".

Bibliography has been given in the article.

(D. B. MACDONALD)

KİŞT (ξέστις, sextarius, sétier, Sester etc.), an Arab measure of capacity for fluids equal to about a pint. In the early period of Islām the use of measures of capacity seems to have been more general than in the later period for in the mounds of ruins in Egypt, we find numerous broken bottles with the official stamp indicating their capacity expressed in *kiṣt*'s. We get an idea of the volume from statements such as a *kiṣt* of oil weighs 18 *ūḳiya*, a *kiṣt* of wine 20, a *kiṣt* of honey 27; assuming a troy ounce of 27.288 grammes and taking into account the specific gravity of the liquids above mentioned, we get a value of c. 0.54 litre for the early Arab *kiṣt* (the old French sétier = 0.546 litre).

A multiple was the *djarra* (amphora) = 48 *kiṣt* (c. 25 litre). — Cf. also the article **KAFİZ**.

(E. v. ZAMBAUR)

KISWA. [See **KĀ'BA**, **MAḤMAL**.]

KİT'Ā (A.), pl. *kiṭā'*, "piece cut off", "section", means in the geometry of the Arabs (a) a segment of a circle, the part cut off by a chord; (b) a segment of a cone, the part cut off by a plane; (c) a section of any other figure (parabola, ellipse, etc.). From the same verb *kaṭa'a* come three other geographical expressions, *kuṭā'* (so written in the *Dict. of Techn. Terms*, ed. A. Sprenger, etc.) or *kaṭṭā'* (so in the *Cod. Leidensis*, 339, 1, ed. R. Besthorn and J. L. Heiberg, and in the *Maḥaṭṭih al-'Olūm*, ed. van Vloten) = sector of a circle, i.e. an area bounded by two radii and the portion of the arc of the circle between them; *ḥaṭṭ'* or better *ḥaṭṭi'*, a line cutting through the circle, i.e. a

secant; *kaṭ'* = section (through a body) e.g. *kaṭ' al-maḥkrūt al-mustadīr* = conic section.

Bibliography: Besides the above mentioned works cf. *The Elements of Euclid* in the recension of Naṣīr al-Dīn al-Tūsī, Rome 1594, and *Traité du quadrilatère, attribué à Nassiruddin al-Toussy*, éd. et trad. par Alex. Pacha Cavatheodory, Constantinople 1891. (Here *quadrilatère* is the translation of *al-shakl al-kaṭṭā'* where *kaṭṭā'* is apparently an intensive form of *kaṭ'* i.e. "the polysecant figure").

(H. SUTER)

KİTÂB (A., pl. *Kutub*), book. With the art of writing the Arabs had taken over from their Northern Semitic neighbours also the words for book and for writing and in the earlier phraseology *Kitāb* means simply something which is written, not necessarily a book and in fact the word is also applied to a "letter" simply. As we do not possess any Arabic book earlier than the *Qur'an* and the only other remains, besides inscriptions on stone, are the poems of early poets to which we may add in some cases the tale or *Kiṣṣa* [q. v.] explaining the occasion on which the poem was composed, we cannot be certain whether books existed or not. The word *Kitāb* occurs rather frequently in the *Qur'an* in several meanings but the outstanding meaning is the sacred book containing the revelation of God to his worshippers and in consequence the adherents of the three great religions known to Muḥammad, the Christians, Jews and Mazdians are named the "People of the Book" (*Ahl al-Kitāb*). For the first the *Indjil* or New Testament is meant, for the Jews probably only the Pentateuch and Psalms, while I do not know whether any book of the Mazdians was known to him at all. However the *Qur'an* knows of another Book i.e. the Book in which God has written the destiny of every man and in which during his life-time all his good and evil deeds are continuously recorded to be brought before him as witness for his reward or punishment on the Day of Judgment. The "Book" par excellence is however the *Qur'an* itself; it is the revelation of God, untarnished by falsifications through ill-will or human error and according to its own assertion there is no book in the world equal to it, nor can it ever be equalled, being the true word of God. As the *Kitāb* is the word of God it has also the meaning in the *Qur'an* of "a decree of God" or it becomes the "impression" which God stamps upon the hearts of man; and as anything written down is lasting so God himself has "written" or made incumbent upon himself to have mercy upon men. Finally it means a simple letter or message written to a distant person.

If we investigate the meaning of the word as applied in the verses of the Arabic poets before Islām we find it used in almost all the same meanings, though perhaps we have to be very sceptical when we find the word in the meaning of divine revelation, though 'Adī b. Zaid, a Christian poet who lived shortly before Muḥammad, uses the verb in the meaning of predestination (*Djamharat al-Aṣḥār al-naṣrāniya*, ed. Cheikh, p. 102 ult.), it may be that the poem was attributed to him by a later forger. I am, however, not so confident that such old references to ideas expressed in the *Qur'an* are of necessity falsifications. More frequent are the references in old poems to

writings in a foreign script, and there is every evidence that the ancient poets were at least acquainted with the appearance of manuscript books adorned with illuminated title-pages. In a verse by Tufail al-Ḡhanawī (x. v. 3) the poet refers to a written safe-conduct which he calls a Kitāb. At the same time the word appears to have also the meaning of a book as a literary product and though I believe that poems etc. were committed to writing very early, some elapsed time after the Qurʾān had been fixed in writing in book-form before any other works were committed to paper or parchment and it is very difficult to say which Arabic work was first written in this form. The collectors of the traditions of the Prophet for a long time insisted upon the *Ḥadīth* being handed down orally, and the same was probably the case with the commentaries of the Qurʾān by Ibn ʿAbbās. This must have been fairly comprehensive and al-Baghawī in the *Maʿālim al-Tanzīl* states that he received the book through three different channels. The books on the *Maḡāzī* or biographies of the Prophet also were very early committed to writing, but as all the earlier works are lost, except in extracts, it is difficult to say that they were books. This much however is certain, that the *Dīwān* of the poet Labīd existed in written copies before the end of the first century of the Hīdja from the verse of al-Farazdaq (*Naḡāʾid*, ed. Bevan, i. 201, 6) where he states that he possesses his poems in a complete book. After this, books were written in the lands of Islām with feverish activity, to which the thousands of titles of lost works found in biographical works bear witness. Finally, one work has had the distinction of being simply called *al-Kitāb*, namely the great grammatical book of the Baṣrian Sibōḥ (Sibawaihi) and it is certainly the most extensive work of early Islām which has come down to us.

The Arabic lexicographers try to find an etymology of the word from others meanings of the root in the language which can easily be consulted in the existing dictionaries, but it would be vain to seek the derivation there for a word which had been imported from the North with the art of writing.

(F. KRENKOW)

KITĀBKHĀNA, library, is a Persian word for which we find also the Arabic *maktaba*, which is applied to public libraries founded and endowed by princes and private individuals for the benefit of scholars, sometimes for those of a special sect or for some particular study. With the zeal for literary pursuits and the ever increasing composition of books, after the period of conquests, men of literary tastes accumulated handsome private collections of books and from the example of the Kūfī philologist Abū ʿAmr al-Shaibānī we can reasonably assume that it was a custom for authors to deposit copies of their works for reference in the mosque of their town or quarter. The earliest record of anything like a public library is connected with the name of Khālīd b. Yazīd b. Muʿāwiya who devoted his life to the study of Greek sciences, particularly alchemy and medicine. We are told that he caused such books to be translated, and when an epidemic occurred at the beginning of the reign of ʿUmar b. ʿAbd al-ʿAzīz, he commanded the books to be fetched out of the library (*khizāna*) to be made available for the people. However, the first public library on a large scale was the *Dār al-ḥikma* (Temple of Wisdom) inaugurated by

the ʿAbbāsīd caliph al-Maʾmūn in Baghdād. To make this library as comprehensive as possible he had valuable Greek manuscripts purchased in the Byzantine empire and translated by a number of competent scholars into Arabic. This library contained books in all the sciences cultivated by the Arabs and it flourished till the city was taken and sacked by the Mongols in 656 A.H. Equal in importance was the library of the Fātimīd rulers of Egypt in Cairo, which contained untold literary treasures and we learn that in the year 435 = 1043/1044 the wazīr Abū ʿl-Ḳāsim ʿAlī b. Aḥmad al-Djardjarī gave instructions for a catalogue of the books to be made and the bindings to be renewed, and he appointed Abū Khalaf al-Ḳudāʾī and Ibn Khalaf al-Warrāk to superintend the work. This library remained intact till the death of the last Fātimīd caliph al-ʿĀḍid, when Ṣalāḥ al-Dīn ordered it to be dissolved and the Ḳāḍī ʿl-Fāḍil [q. v.] bought most of the books and deposited them in the library of the Fāḍiliya Madrasa which he founded, where they were soon neglected and by the time of al-Ḳalqashandī most of them had disappeared. This library is stated to have contained 6,500 volumes on exact sciences, alone such as mathematics, astronomy etc. and among its treasures was a globe of copper stated to have been constructed by Ptolemaios and bearing an inscription stating that it had been acquired by Khālīd b. Yazīd b. Muʿāwiya. The third great library was that of the Umayyad caliphs of Cordoba, which was also dispersed after the Almoravid conquest of Spain early in the fifth century of the Hīdja. Among the minor libraries was one founded by the Ḡhaznawī Sultān Maṣʿūd, most of whose treasures were later transferred to Bukhārā. We are frequently told of valuable private libraries which were placed at the disposal of learned men as e.g. in the biographies of al-Ṣūlī [q. v.] we read of his large collection of books which were bound in tasteful leather-bindings in red and yellow leather. Al-Ṣafadī [q. v.] records in the biography of Ḡhars al-Nīʿmat al-Ṣabī that he founded in Baghdād a library of about 300 volumes for the use of students and that this library was shamelessly robbed by the librarian who had been placed in charge. But even earlier we read of Abū Tamām detained by wintry weather in Hamadān selecting from the books, which he found there in the libraries, the contents of his celebrated poetical anthology, the *Ḥamāsa*. A great impulse was given to the foundation of libraries by the wazīr of the Saldjūk Sultān Malikshāh, Nizām al-Mulk, when he founded in Nishāpūr and Baghdād and other places colleges or Madrasa's for public instruction. These colleges were not only endowed with funds for the salaries of the professors, but also provided with the most precious manuscripts of works dealing with the sciences taught at these institutions. When early in the seventh century of the Hīdja the Mongols swept over Persia we read that in addition to the loss of human life and the destruction of other valuable property untold quantities of priceless books were wantonly destroyed. The Aiyūbīd amīrs of Egypt and Syria emulated the example of the great Saldjūk wazīr in founding colleges, but from a remark of Ḳalqashandī, neither they nor those in charge of these Madrasa's appear to have had a proper conception of the value of great public libraries (*Ṣubḥ al-Aʿshā*, i. 467). For the centuries which

follow we still find learned men endowing mosques and colleges with their books, where they were deposited as *Wakf* or inalienable property, but the custodians with incredible dishonesty in most cases not only did not prevent, but actually connived at the loss of most of these treasures. How many a manuscript which once was deposited in these libraries for all eternity has found its way into private hands, or into the large libraries of Europe! In addition to this in most cases a fearful neglect set in soon after the foundation of the library and instead of being the source for enriching the knowledge of students the books became the breeding places of worms. As the control over the guardians of the libraries was rarely as strict as it should be, the books entrusted to their charge fell frequently into such a condition that they could no longer be used without falling to pieces. A striking example are the books which formed part of the Imperial library of Delhi, now deposited in the India Office in London; though the volumes may contain many a valuable work, worms and long neglect must almost drive the librarian to despair in his task of making the books again accessible to students. In more recent times this state of things has improved; the *Khedival* (now State) Library in Cairo has led the way in again collecting the treasures in books which have survived several centuries of neglect, and its treasures are available to students who can afford to visit Cairo. Inestimable are the treasures in valuable books deposited in various libraries in Constantinople of which catalogues have been printed, though these are in many cases very inaccurate. Many valuable libraries exist in Madina and in the 'Irāk and it is occasionally possible to those who possess Muslim friends in those countries to obtain information about rare manuscripts existing there. We also have incomplete catalogues of the *Zāhiriya* library in Damascus and the libraries in the great mosques in Fās and Tunis, but as yet it is very difficult for European students to make use of the treasures deposited in these libraries. In India also we find a new era as is testified by the care which is bestowed upon the books preserved in the State-Library in Haiderabad, the *Khudābaksh* Library in Bankipore, the Library in Rampore and the Molla Fērōz Library in Bombay. I have been told by those who have visited the Imām Yahyā in Ṣan'ā' in Yaman that his extensive library contains many very ancient manuscripts among which some are as good as lost to the other world for the present. The Shī'a shrines at Karbalā' and Najaf have also valuable libraries, but the hope that these together with manuscripts from other centres in the 'Irāk might be collected into one central State Library is probably very remote. The very fact that continually valuable ancient manuscripts are brought to Europe from the East is a proof that far more ancient manuscripts are preserved than might be expected from the neglect of many centuries, but the excellence of the paper and ink used in early times for writing has preserved many a volume which would have perished, and in addition it is also probable that at the dissolution of the large libraries their contents found their way into private hands from which they gradually reappear. Testimony for this is also that in the East exist many very valuable private collections of ancient manuscripts as e.g.

the library of the Saiyid Ṣadr al-Dīn in Baghdād and of Aḥmad Taimūr Pāshā in Cairo, besides others known to us. Unfortunately the owners are in many cases, the two named excepted, very unwilling to give any information about their possessions. As it is more and more realised that the remains of ancient literature, whether Arabic or Persian, should be made accessible, the owners commence by having some of the rarer works made accessible by the press and when the value is fully recognised we may hope that within the next fifty years much may be in the hands of the students which is now guarded in Eastern libraries.

(F. KRENKOW)

Arrangement, administration and use of libraries. In the fourth (tenth) century there were already buildings devoted solely to libraries and erected specially for this purpose. For example Sābūr b. Ardashīr, the vizier of Bahā' al-Dawla, built in 381 (991) in Baghdād in the Karkh quarter a *Dār al-Kutub*, which contained over 10,000 volumes (Ibn al-Athīr, *Kāmil*, ix. 246; Yāqūt, *Mu'djam*, i. 799). The geographer al-Muḥaddasī (p. 449) found in Shirāz a huge library which had been built by the Būyid 'Aḍud al-Dawla (338–372 = 949–982). This library was a separate building and consisted of a great hall and a long vaulted building along the three sides of which were a series of rooms (*khawāṣṣ*). Along the walls of the central vaulted room and along the side-rooms were cases of carved wood three ells high and three broad, with doors which were let down from the top. The books lay on shelves one above the other. The cases used in the Fātimid library in Cairo were somewhat different (Maqrīzī, *Khifāṭ*, Cairo 1270, i. 409); the bookcases (*rufūf*) were divided by partitions into separate compartments (*ḥadjiṣ*) each of which was closed by a door with hinges and locks. Open cases which also were divided into small compartments, are illustrated in a miniature by Yahyā b. Maḥmūd of the year 634 (1237) in the Paris MS. of Hariri (MS. Arabe, 5847), which shows a library in Baṣra (Blochet, *Les enlumineurs des MSS. orientaux*, Paris 1926, Pl. 10). Unlike our custom, we find the books lying one above the other in the small compartments, as is still usual in the East. This explains the Oriental custom (which is only occasionally found in the west) of writing a short title of the works on the upper or lower edge.

The books were systematically arranged, classified according to the various branches of knowledge. Copies of the Kur'ān had usually a special place; in the Fātimid library for example they were kept on a higher level than the others. The various books were often present in several copies; this made it possible not only to lend the same work to several readers but the scholar was also enabled to read corrupt passages at once in a manuscript by referring to another copy. The Fātimid library of Cairo for example had thirty copies of the *Kitāb al-Ain* of Khalil, twenty copies of the *Tārīkh* of al-Ṭabari and if the figure is not wrong actually a hundred copies of the *Djamhara* of Ibn Duraid.

The catalogues consisted either of several volumes in which (probably according to the various branches of knowledge) the titles of the books were arranged, or, as in the Fātimid library, a list of the books within was fastened to the door of each room.

Libraries usually had a director (*ṣāhib*) and one or more librarians (*khāzin*) according to the size of the institution, also copyists (*nāsikh*) and attendants (*farrāsh*). We find that some of the most celebrated scholars were librarians: thus the historian Ibn Miskawaihi was librarian to the vizier Abu 'l-Faql b. al-'Amid in Raiy (Ibn Miskawaihi, *Tadjarib al-Umam*, ed. Amedroz and Margoliouth, Oxford 1921, text, ii. 224, transl., v. 237); al-Shābushtī (d. 390 = 1000), the author of the book of monasteries, was librarian of the Fātimid library in Cairo under al-'Aziz (Ibn Khaldūn, *Wafayāt*, i. 338).

The books were acquired partly by purchase and partly by the copyists attached to the libraries copying manuscripts. Makrizi has preserved for us the budget of a library (i. 459); according to this, the Caliph al-Ḥākim (386-411 = 996-1020) spent 257 dinārs a year (c. £150) on the *Dār al-'Ilm* founded by him. This was allotted as follows:

	Dinārs
Mats from 'Abbadān, etc.	10
Paper for copyists	90
Salary of the librarian	48
Drinking water	10
Wages of the attendant	15
Wages of the keeper of paper, ink, and reed pens	12
Repairing the door-curtains	1
Repairing books	12
Felt carpets for the winter	5
Blankets for the winter	4

Libraries were open to everyone free of charge. Paper, ink and reed-pens were supplied by the authorities. Some private libraries even provided for the maintenance of scholars who had come from a long distance. A deposit had usually to be made if books were taken outside the library buildings, at least Yāqūt (*Mu'djam*, iv. 509 sq.) (d. 626 = 1229) praises the liberality of the libraries in Marw where he always had two hundred and more volumes to the value of two hundred dinārs in his house without a deposit. Instructive in this connection also is the waḳf document of 21st Šafar 799 (Nov. 24, 1396) by which Ibn Khaldūn bestowed his *Kitāb al-'Ibar* on the library of the Džāmi' al-Ḳarawīyīn in Fās; according to it, this manuscript was only to be lent out to trustworthy, reliable men for two months at most in return for a substantial deposit; for this period was long enough to copy or study the borrowed work; the director of the library was to take care that this rule was observed (Lévi-Provençal in *J. A.*, cciii. [1923], p. 164).

But at the same time we find in Muslim lands purely reading libraries. One of these was the library of the Madrasa al-Maḥmūdiyya founded in Cairo in 797 (1395). By the will of the founder the Ustādār Džamāl al-Dīn Maḥmūd b. 'Alī (d. 799 = 1397) no book was to leave the rooms of the Madrasa. The manuscript of the *Tadjarib al-Umam* of Ibn Miskawaihi (Gibb Mem. Ser., vii/6) published in facsimile by Caetani belonged to this library; in the waḳf document on the first page of this manuscript dated 15th Šahbān 797 (June 5, 1395) it is written: "The above-named donor makes the condition that neither the whole work nor a single volume of it shall be lent from the library either against a deposit or without one".

Nevertheless by the year 826 (1423) when the books were checked, it was found that 400 volumes (exactly a tenth of the total) were missing, whereupon the then director of the mosque was dismissed (cf. Ibn Ḥadjar al-'Askalānī in Quatremère, *op. cit.*, p. 64, 70; Makrizi, *Khiṭaṭ*, ii. 395).

If we think of the above statements, which are true even of the fourth (tenth) century, it can safely be asserted that Muslim libraries were in every respect centuries in advance of those of the west. There was a general need for public libraries felt in Muslim lands much earlier than in the west.

ḲITĀL, one of the names of the xlviii Sūra of the Ḳur'ān.

ḲITḤĪR is the name in Muḥammadan legend of the Biblical Potiphar. Ḳitḥīr is corrupted from Fiṭfir like Bilqīs, queen of Saba, from Nikaulis, or as in the Yūsuf legend we have Ainam or Hāinam from Muppīm, Ḥuppīm. Ḳitḥīr was then further corrupted to Itfir (so generally in Ṭabarī and Ṭha'labī), Itfin and almost unrecognisably to Ḳitṭīn (Ṭabarī, ed. de Goeje, i. 377) and Ḳitṭifin (Ṭabarī, *Tafsīr*, xii. 98). On the other hand al-Kisā'ī always has Ḳuṭīfar, a direct borrowing from Potiphar. Ḳitḥīr is quite arbitrarily called Ibn Ruḥaib. In the Ḳur'ān xii. 30, 51, the Egyptian who buys Joseph is called al-'Aziz. This is not considered a personal name but a title of honour, for after his elevation we find Joseph likewise addressed as al-'Aziz (xii. 78, 88). Joseph succeeded Ḳitḥīr as Treasurer of Egypt, according to some in Ḳitḥīr's lifetime after his dismissal from office, according to others only after his death, when Joseph inherited his office and his wife. Legend numbers Ḳitḥīr, — along with Jethro's daughter who offered hospitality to Moses and Abū Bakr who magnanimously appointed 'Omar his successor — as the three *afrasu*, most chivalrous and noblest in their dealings among mankind (Ṭabarī, Ṭha'labī). Cf. also 'AZIZ and YŪSUF B. YA'ḲŪB.

KITMĀN. [See ṬAQIYA.]

KITMĪR. [See AṢḤĀB AL-KAḤF.]

KĪYĀFA is an infinitive of the 1st stem (form of name of office or trade, Wright³, i. 114a) of root *k-w-f*, meaning "trace, follow traces, follow".

The root does not occur in the *Kurʾān* except as a variant in xvii. 39 (Baidāwī, ed. Fleischer, i. 539 25), but the cognate root *k-f-w*, with the same meaning, occurs five times. Technically in old Arabia *kāʾif* (pl. *kāfa*) was used not only of one who followed and interpreted actual tracks on the ground but also of one who professionally established kinship between individuals by likeness, primarily likeness of the feet. This ability was ascribed peculiarly to the tribe Mudlidi, who were called simply *al-Kāfa* (Ibn Kūtaiba, *Maʾārif*, ed. Wüstenfeld, p. 32 11); so *mudlidi* meant *kāʾif*. Other synonyms are *mudjazziz*, lit. "shearer" (*Lisān*, xi, 202 5 where cf. whole article for *kiyāfa* in general; Goldziher, *Muh. Studien*, i. 185) and *ḥāzir*, lit. "conjecturer, guesser" (Goldziher, p. 184, note 9, who refers to *Aghānī*, x. 38 17). In a story given from Muḥammad al-Anbārī by Freytag (*Chrestomathia*, p. 31 sq.) a *kāʾif* in the infancy of the Prophet tells by his *firāsa* [q. v.], that he is a foster-child and foretells his future eminence. And the Prophet himself in tradition (Bukhārī, *Farāʾid*, b. 17; Muslim, *Raḍāʿ*, trad., 36, bāb: *al-walad li 'l-firāsh*) decides a case of kinship by resemblance (*shabah*). In the same passages are other traditions giving prophetic sanction to the practice and using as synonyms *kāʾif*, *mudlidi* and *mudjazziz*: it is plain from them that the *kāʾif* paid special attention to the feet, as was natural in a race of trackers. From the fact that a poet in the *Ḥamāsa* (ed. Freytag, p. 504) is named simply ʾIyās b. al-Kāʾif the profession was evidently one of distinction. From the beginning, also, it had in it a certain mystery: it was an innate power belonging to certain individuals or the peculiar inheritance of a tribe. It, therefore, attracted the special attention of Muʿtazilites who felt driven to accept certain facts as to it but had, on their principles, to seek rationalistic and philosophical interpretations of them. Al-Masʿūdī in his *Murūdj* gives to it and some allied phenomena a whole chapter (li., Paris ed., iii. 333—346) and refers to other books of his where he has treated the same subject more completely. Ḳazwīnī in his *ʿAdḍib al-makhlūkat* (ed. Wüstenfeld, p. 318) traces it similarly to psychical power in those who profess it and places their "souls" (*nufūs*) in the class of the *nufūs al-fāḍila*, "super-souls", among which are those of the prophets, the *walī's* and *kāhin's*: all these possess a certain instinct of insight. In canon law *kiyāfa* of necessity plays little part. The services of a *kāʾif* are to be called in only when the paternity of the child of a female slave is in doubt as between a former and a present owner (Juynboll, *Handbuch des islam. Gesetzes*, p. 187 sq.); for further details see Sachau, *Muh. Recht nach Schaf. Lehre*, p. 89 sq.; Baidjūrī, *Hāshiya* on the *Sharḥ* of Ibn Kāsim on the text of Abū Shudjā, Cairo 1307, ii. 184 (*in amkana kawnuhu minhumā ʾurida ʿala 'l-kāʾif*); Nawawī, *Minḥādī al-ṭālibin*, ed. van den Berg, iii. 450 sq. In present day folk-lore usage *kiyāfa* has become chiromancy and physiognomy, called also *ʿilm al-simiyā* and *ʿilm al-asār* (Boethor, *Dictionnaire français-arabe*, vol. i., p. 154b; Doutté, *Magie et Religion*, p. 370 and references there). Very strangely the word has come to mean in modern Egyptian colloquial, "style, fashion", *ṣāhib kiyāfa*, "a stylish person" (Spiro, *Vocabulary of the colloquial Arabic of Egypt*, p. 505, who gives no other meaning). This apparently connects with

Turkish and Persian usage of *kiyāfa* in sense "appearance, form, gait, costume" (Redhouse, *Turkish and English Lexicon*, p. 1503b; Steingass, *Persian-English Dictionary*, p. 997a).

Bibliography: The principal treatments of this subject are in Robertson Smith, *Kinship and marriage*², p. 169 sq.; Goldziher, *Muh. Studien*, i. 184 sq.; Doutté, *Magie et Religion*, p. 370; Dozy, *Suppl.*, ii. 420a; see further references in all these. (D. B. MACDONALD)

AL-KİYĀMA, "the Arising" (of men at the Resurrection), and *al-Sāʿa*, "the Hour" (or Day of Judgement), come for theologians under the general term *al-Maʿād*, "the returning", i. e. the return to life after death; and they rank them among *al-samʿiyāt*, things on which traditional teaching is based, as the prophetic office, or which for their authority go back to the prophetic office, as this Return and such causes of eternal happiness and misery, connected with it, as faith and obedience, unbelief and disobedience (Mawākif of al-Idjī, Bulāḳ 1266, p. 544 sq.).

A schematic statement of the order of events in Muslim eschatology. I The Signs which will announce the coming of the End, especially the appearance of the Antichrist, al-Dajjāl (see above, i. 886 sq.), who will lead almost all men astray, followed by the descent of ʾIsā (see above, ii. p. 524 sq.), or the Mahdī [q. v.] (or ʾIsā is both), who will kill al-Dajjāl. A period of faith will follow. II The First Blast of the Trumpet; all living things will die. The Interval. The Second Blast of the Trumpet, bringing all living things to life again and uniting them at the Place of Gathering (*al-maḥshar*). The long standing there (*al-mawḳif*) in the presence of Allāh and the Sweat (*al-ʿarāk*). III The Judgement begins. The questioning of each individual directly by Allāh. The Books of Record. The Weighing of the deeds of those as to whom there might be doubt. Adjustment of enmities and requital of wrongs between man and man, and man and beast. IV The Bridge over Hell into Paradise (*al-Sirāt*). The Intercession (see SHAFʿA). The Tank of Muḥammad. V The Fire (Hell and Purgatory; see DJAHANNAM above, i. 998 sq.); the Garden (Paradise; see DJANNA above, i. 1014 sq.); a Limbo (according to some theologians). — *Ihyāʾ* of al-Ghazālī, Cairo 1334, iv. 436—453; *Ithāf*, commentary on *Ihyāʾ*, x. 447—530.

For Muḥammad, a revivalist preacher seeking to strike terror in his hearers, the doctrines of the Resurrection and of the Judgement were of the first importance, and the *Kurʾān*, in consequence, is full of references to them. The word *maʿād* occurs once only (*Kur.* xxviii. 85) and evidently has not this application there: it may mean the place of Muḥammad's resurrection or Mecca to which he will return from exile (Baidāwī in loc.). But the verb is used very frequently; in *Kur.* iv. 10, 35; xxi. 104; xxx. 10, 26; lxxv. 13, of Allāh's bringing men back at the resurrection, in contrast to his first production of them (*abdaʾa*); in contrast to his *anbata* in *Kur.* lxxi. 16, 17; in contrast to his *faṭara* in *Kur.* xvii. 53. The same verb is used of the repeated processes of creative power in the earth in *Kur.* xxvii. 65; xxix. 18 and of man being brought back to the earth at death and burial, *Kur.* xx. 57. *al-Kiyāma*, only in the phrase *yawm al-kiyāma*, occurs 70 times, e. g. ii. 79, 107, 169, 208; iii. 48, 71, 155;

lxviii. 39; lxxv. 1, 6 (last occurrences). On the meaning of *ḳiyāma* (*ḳiyām* with the feminine termination of emphasis) see *Mufradāt* of Rāghib al-Isbahānī, p. 429, ll. 2 sq. *al-Sā'a* occurs 40 times, generally in fixed phrases and always, when with the article, of the Hour; e.g. vi. 31, 40; vii. 186; xii. 107; xv. 85; xlvii. 20; liv. 1, 46; lxxix. 42 (last occurrences). In the *Iḳyā'* of al-Ḡhazālī (iv. 440 sq.; *Ithāf*, x. 462—465) there is a long list of names of the Hour which occur in the *Qur'ān* or can be formed from *Qur'ānic* phrases. The following may be mentioned: *al-ḳār'a*, "the striker", *Qur.* xiii. 31; lxix. 4; ci. 1, 2 only; *al-ghāshiya*, "the coverer", *Qur.* xii. 107; lxxxviii. 1 only; *al-sāḳḥḥa*, "the deafener", *Qur.* lxxx. 33 only; *yawm al-faṣl*, "day of dividing", xxxvii. 21; xlv. 40; lxxvii. 13, 14, 38; lxxviii. 17 only; *al-wāḳ'a*, "the event", lvi. 1; lxix. 15 only; *al-ḥāḳ'a*, "the certainty", lxix. 1, 2, 3 only; *yawm al-ḥisāb*, "day of reckoning", xxxviii. 15, 25, 53; xl. 28; *yawm al-ba'th*, "day of arousing", xxx. 56 only (*al-ba'th* alone xxii. 5 only); *yawm muḥit*, "an encompassing day", i. 85 only; *yawm al-dīn*, "day of judgement", xi. 3; lxxiii. 11 and very often; also *al-dīn* alone in meaning "the judgement" very often; for meanings of *dīn* in the *Qur'ān* see above, vol. i., p. 975.

In the overwhelmingly theocentric theology of Muḥammad the doctrine of the Resurrection and Judgement was only second to that of Allāh's creation of the world, was a necessary consequence to it and could be proved by it. Allāh as Creator meant Allāh as Ruler and Allāh as Judge. But a Judgement meant a Resurrection and all the analogies of what we call nature pointed to the possibility of such a return and repetition of life, if under other conditions. So Muḥammad was primarily a preacher of this wrath to come and of the need of repentance and self-surrender to Allāh before it should come. For the Arabs of his time the Resurrection was, if anything, a harder doctrine than the Creation. Muḥammad proved the one by the other. He had also a foothold for this in the primitive Arab conception that the dead had a continued and conscious existence of a kind in their graves; cf. among the Hebrews, Job, xiv. 20—22. Through Muḥammad this belief passed into Islām and is the basis in Islām of the doctrine of the two Judgements (see below), of punishment in the grave (*adḥāb al-ḳabr*; see MUNKAR and NAKĪR), and of bliss in the grave, i.e. that the grave for each individual is a preliminary Hell or Paradise. This doctrine does not seem to have any sure *Qur'ānic* basis although texts from the *Qur'ān* (vi. 93; ix. 102; xiv. 32; xl. 11, 49; lxxi. 25) are used by the theologians in support of it (*Mawāḳif* of al-Idrī, p. 591; al-Taftāzānī on 'Aḳā'id of al-Nasafī, Cairo 1321, p. 109; al-Bukhārī in heading to section cited below). It is possible that there may be a reference to it in *Qur'ān* xxxv. 21 where Muḥammad seems to be warned not to preach to the dead in their graves, as (e.g.) he preached to the Djinn. But that it was taught by Muḥammad seems certain from the mass of traditions on the subject (*Ṣaḥīḥ* of Muslim, ed. Constantinople 1329—1334, viii. 160—164, *Kitāb al-djanna*; *Ṣaḥīḥ* of al-Bukhārī, Bulāḳ 1315, ii. 97—100, *Kitāb al-djannā'is*). In consequence of all this the *Qur'ān* from beginning to end is full of lurid descriptions of the Day with picturesque details of its certainty, its nearness and its over-

whelming terrors — passing into descriptions of the Fire and, in contrast, of the Garden. In the *Qur'ān* it is a Judgement of individuals and not of peoples or of religious bodies in masses; this, as Wellhausen pointed out, shows the Christian, as opposed to Jewish, theological influence upon Muḥammad. Later traditions and still more the theologians were going to change all that in accordance with the "agreement" (*idjmā'*) of Islām. As examples of these multitudinous, longer or shorter descriptions, reference will suffice to *Qur.* vi. 22—31; xix. 67—74; xxii. 1—7; xxiii. 101—end; xxxix. 68—end; lxix. 1; lxxv. 1; lxxxi.—lxxxiv.; xcix.—ci. Naturally the most picturesque details are in the earlier and more poetical sūras. The descriptions of the Garden changed also with Muḥammad's changing circumstances and age; cf. Josef Horowitz, *Das Koranische Paradies*, Jerusalem, 1923.

In these descriptions there are certain references and allusions which (i) tradition has developed more precisely and elaborately, of which (ii) the systematic theologians have made chary use in their short eschatological statements but which (iii) the writers for religious edification have expanded in intolerable and contradictory detail. Thus (i) the *ṣirāt* is only once in the *Qur'ān* (xxxvii. 23) *ṣirāt al-djahīm* — a mere allusion to "the road to Hell". This has become in tradition "the bridge", elaborately described, "over the back of hell" (*Ṣaḥīḥ* of Muslim, i. 113, 116, *Kitāb al-imām*; *Ṣaḥīḥ* of Bukhārī, ix. 128, 130, *Kitāb al-tawḥīd*). (2) The noun *mawḳif* does not occur in the *Qur'ān*, but four times (vi. 27, 30; xxxiv. 30; xxxvi. 24) there are allusions to man standing in the presence of Allāh on the Day. This has become the awful scene which al-Ḡhazālī develops so fully in his

Durra (ed. Gautier, 1878, p. 50 sq.). (3) *Qur.* lxviii. 42, "on the day when a shank (*sāk*) shall be uncovered" means, according to the commentators (e.g. Baidāwī, Fleischer's ed. ii., p. 350, l. 10), a day of stress and trouble when skirts will be tucked up for flight. In the traditions (*Ṣaḥīḥ* of Muslim, i. 115 foot — *Kitāb al-imām*; *Ṣaḥīḥ* of Bukhārī, ix. 130 — *Kitāb al-tawḥīd*) the *sāk* is that of Allāh and the uncovering of it is a sign between him and the true believers. (4) On the resurrection trumpet there is much more in the *Qur'ān*. The *Qur'ānic* formula is *nufīḳha fī 'l-sūr* (vi. 73; xviii. 99; xx. 102; xxiii. 103; xxvii. 89; xxxvi. 51; xxxix. 68; l. 19; lxix. 13; lxxviii. 18), except in lxxiv. 8, where it is *nukira fī 'l-nākūr*. In lxix. 13 a single blast, *nafḳha wāḥida*, is enough, but in xxxix. 68 there are two blasts; at the first all in heaven and earth, save whom Allāh wills, swoon (*ṣa'tīka*); at the second they are restored and stand up. This whole passage has evidently been of the first importance in the forming of the later picture of the Day. In tradition the first blast of the trumpet is reckoned among the Signs of the Day (*Ṣaḥīḥ* of Muslim, viii. 201 sq.; 210, *Kitāb al-fitan wa-ashrāf al-sā'a*). (5) The word for "balances" when used in the singular in the *Qur'ān* expresses the general idea of justice (xl. 16; lv. 6, 7, 8; lvii. 25 and Baidāwī on these passages) but the plural, *mawāzin* (vii. 7, 8; xxi. 48; xxiii. 104, 105; ci. 5, 6) is used only, in fixed phrases, of weighing men's good and bad deeds in the eschatological Balances on the Day. (6) There is a personal

account between Allāh and every man (*ḥisāb* and other terms; cf. C. C. Torrey, *Commercial-theological terms in the Koran*, Leyden 1892, p. 9 sq.) and there are books written by recording angels (*saḥāra*, *kātibūn*; lxxx. 11—15; lxxxii. 10—12; lxxxiii. 7, 18). Each man has a book of his own deeds or there is simply the Book (x. 62; xxxiv. 3; xvii. 14, 15; xviii. 47; lxix. 19, 20, 25—7; lxxxiv. 7—12); Allāh himself is a witness (*shahid*, often) or he is watching in a lurking place, like a hunter waiting for game (lxxxix. 13, *la-bil-mirṣād*); or *Djahannam*, personified, is such a *mirṣād* (lxxxviii. 21), a dubious phrase which gives the commentators much trouble. (7) Again, *Djahannam* (occurs 77 times) is brought as though it were moveable (lxxxix. 24) and there is a description of it (lxvii. 7, 8) as braying and boiling and almost bursting with rage as though it were a wild animal. What this became in tradition is seen in the *Ṣaḥīḥ* of Muslim, viii. 149 sq.; *Maṣābiḥ al-sunna*, Cairo 1318, ii. 154—156; *Mishkāt al-maṣābiḥ*, Dihli 1327, p. 428—430. Al-Ghazālī develops the idea still further, for pious edification, in his *Durra*, p. 44, 56 sq. (8) In *Qurʾān* xlv. 9 there is a very obscure expression. "Then look for the day when the heaven shall bring plain smoke" (*dukhān mubīn*). Baiḍāwī (Fleischer's ed. ii., p. 245, ll. 22 sq.) gives as a possible interpretation a reference to smoke as one of the Signs of the Day; for the traditions on this see *Ṣaḥīḥ* of Muslim, viii. 130 sq., 179, 208. (9) For a supposed *Qurʾānic* allusion to the descent (*nuzūl*) of ʿĪsā as one of the Signs of the Day see above ʿĪsā, ii. 525 and add to the references there *Ṣaḥīḥ* of Muslim, i. 93—95, 107 sq.; viii., p. 175—208. (10) Another of the Signs to which allusion is made in the *Qurʾān* (xxvii. 84) is the Beast of the earth (*dāb-batān min al-arḍ*); cf. *Ṣaḥīḥ* of Muslim, i. 96; viii. 179. Baiḍāwī (*in loc.*) identifies it with *al-djassāsa*, "the searcher out", described in a tradition in the *Ṣaḥīḥ* of Muslim (viii. 203—206) as in attendance, according to Tamīm al-Dārī, on the false Masīḥ al-Daḍḍjāl, apparently the Antichrist, in a certain island; see also, *ʿĪsā*, vii. 337; Damirī's *Ḥayāt al-ḥayawān*, Cairo 1313, ii. 170. (11) On al-Daḍḍjāl, who is not in the *Qurʾān* at all, see traditions in Muslim, viii. 161, 194—208; on p. 189 thirty lying Daḍḍjāls will come before the end; Bukhārī, ix. 159 sq. See, also, DAḌḌJĀL, above i. 886; the name is evidently Aramaic, not Arabic. (12) The Tank (*ḥawḍ*) of Muḥammad also plays an obscure part in the picture of the Day, although it does not occur in the *Qurʾān*. There is doubt especially as to the end of the *Ṣirāt* at which it should be placed; in later collections of traditions (*Maṣābiḥ*, ii. p. 145; *Mishkāt*, 415) it is grouped with the Intercession and after the Reckoning and the Weighing. See, also, Bukhārī, ix. 46. (13) In the story of *Dhu 'l-karnain* in the *Qurʾān* (xviii. 82—98) he builds a great wall to keep back Yāḍūdī and Mādūdī. But that will hold them only until the Day; then it will be made as dust (verse 98) and they will come out (*Qur.* xxi. 96). For this, among the Signs, in tradition see *Ṣaḥīḥ* of Bukhārī, ix. 61; *Ṣaḥīḥ* of Muslim viii. 165 sq., and often.

There is thus very little in the *Qurʾān* as to the Signs preceding the Last Day; but such picturesque and accidental references as there are have proved useful in the later development. The

systematic theologians have been by far the most cautious in this. Nasafi in his *ʿAkā'id* gives only five: the appearance of al-Daḍḍjāl; the Beast of the earth; Yāḍūdī and Mādūdī; the descent of ʿĪsā; the rising of the sun in the west. Taftāzānī in his commentary on this passage (p. 145) gives ten: the Smoke; Daḍḍjāl; the Beast; the rising of the sun in the west; ʿĪsā; Yāḍūdī and Mādūdī; three eclipses, in west, in east and in Arabia; a fire which will break out in al-Yaman and drive men to the Place of Gathering; cf. a similar list in the *Ṣaḥīḥ* of Muslim, viii. 179. But the traditionalists have luxuriated in tendentious details. A section of tradition is devoted to *al-ḥitan wa ashkrāt* or *āyāt al-sā'a*, "trials and signs of the Hour"; *Ṣaḥīḥ* of Muslim, viii. 165—210; *Ṣaḥīḥ* of Bukhārī, ix. 46—61; *Maṣābiḥ*, ii. 128—42; *Mishkāt*, p. 392—410. To give any full analysis of these would be impossible here. Reference may be made for this and for details on the Resurrection and Judgement to Hughes' *Dictionary of Islam*, p. 539^a—44^b. This is largely based on Sale's "Preliminary Discourse", Section 4, p. 76—103 of ed. 1734, and he, in turn, was greatly indebted to the learning and research of Edward Pococke, in his *Porta Mosis*, ii. p. 235—313 of ed. Oxford 1654—55, who gives Arabic passages and terms at length. These details were then taken up by the writers for religious edification and an immense literature was based upon them. Even among mystics in Islām religious conversion has normally been wrought by fear of the wrath of Allāh; in consequence their books are full of pictures of the horrors of death, the resurrection and the judgement. This is the whole bearing of the last Book of al-Ghazālī's *Iḥyā'* (iv. 361—469) on "Taking thought of death and that which comes after it" (*Dhikr al-mawt wa-mā ba'dahu*), until it ends in a few pages on the Beatific Vision in Paradise and the wideness of Allāh's mercy, for luck! (*alā ṣaḥīl al-tafā'ul*). His smaller treatise, *al-Durra al-fākhirā*, on the same subject, goes still further in this direction.

Yet in this mass of traditions certain drifts of influence and development show themselves, theological and historical. Reference has already been made to the development of the doctrine of two judgements, a lesser on the death and burial of the individual and the greater on the Day itself. It is difficult to say whether this was in the mind of Muḥammad, but it was a natural development of the doctrine of the Punishment of the Grave which is so strongly represented in traditions. The doctrine, also, that the Fire itself will be a temporary place of purgation for "certain rebellious ones of the believers" would naturally grow out of this. It, too, is represented in tradition and has become fixed in theology (Taftāzānī on Nasafi, p. 114—19). On the whole question, see *Immortality in Mohammedanism* by the present writer in E. H. Sneath's *Religion and the Future Life*, New York 1922, p. 311 sq. This leads naturally to the relation of faith and works and of sins, greater and lesser, and that involves a classification of different ranks even among the saved believers. On the whole question, see *IMĀN*, above, ii. 474 sq. Some believers will enter Paradise without any punishment or even reckoning (*ḥisāb*); there will be 70,000 of these (Muslim, i. 136—138). Then there are the *shuhadā'*, whose spirits (*arwāḥ*) seem already to be in Paradise (Muslim, vi. 38)

and a man who is killed in defence of his property is a *shahid* [q.v.] and his slayer is in the Fire (Muslim, i, p. 87). But the theological question which seems to have weighed most heavily in the Muslim world when traditions were being formed was that of Intercession (*shafʿa*, q.v.).

The historical influences are equally plain in these traditions. Some may go back to Muḥammad himself full of forebodings as to the future of his people; the times must be evil before they are better. Such are those which tell that the Hour will not come until no one in the world says, "Allāh! Allāh!" — i.e. there is no faith left (Muslim, i, 89—91). But others seem clearly connected with the later civil strife. The traditions prophecying the murder of ʿUthmān run into prophecies of the Hour (Muslim, viii, 170 foot) and show the deep feeling of despair produced among the pious by the civil wars and the growing unbelief. Again, when the dream of the speedy conquest of Constantinople faded, the belief rose that that conquest would be one of the Signs of the End. As soon as the cry of Muslim triumph was heard in that city their armies would be recalled to face Antichrist, al-Dajjāl (Muslim, viii, 187 sq.). Then ʿIsā would descend. So some traditions see the whole world plunged in unbelief before the end, and others make the crowning conquest of Islām introduce the end.

The theologians have seen quite clearly that it was impossible to construct out of these materials a consistent narrative of what would take place on the Day. So they have abandoned the attempt and contented themselves with saying that such and such things — the *Ṣirāt*, the Weighing, the Tank, etc. — are Realities (*ḥaqīq*) and leave generally untouched what kind of reality is meant. Philosophically, they knew very well, there are different kinds of reality (Nasafī and Taftāzānī, p. 110 sq.; Ḳidjī, p. 592). They thus abandon picturing the Day to such religious writers as have edification for their object and not fact. Apparently the distinction was quite clear in their minds, and it goes back to the fundamental principle in Islām of the economy of teaching ("Speak to the people according to their understanding" — a saying ascribed both to 'Alī and to the Prophet) which was the ultimate source of the medieval doctrine of the two-fold truth. The situation may be illustrated by al-Ghazālī's method which was at least three-fold. In the last book of the *Iḥyā'* and, still more, in the *Durra* his frank object is to strike terror; these are all Realities — very dreadful Realities! Yet his philosophical conscience troubles him and even in the *Iḥyā'* (Book of *al-tawba*, "Repentance", iv, 20 sq.) he teaches that words applied to concrete things in this world can be used of things in the world to come only by metaphor, as *amthāl*; and he defends this by Qurʾān xxix, 42. But in his *Iktīṣād* (Cairo 1320, p. 96—98) he is a sober scholastic — the *Mizān* and the *ṣirāt* are *ḥaqīq* by revelation and the reason cannot deny them; in his *Maḍnūn* (Cairo 1303, intended for theological specialists) he develops to a certain extent the philosophical bottoming of these ideas — the Intercession (p. 28), the Reckoning and the *ṣirāt* (p. 36), the pleasures of Paradise (p. 38 sq.) which will be sensuous, imaginative, rational (*ḥissī, ḥayālī, ʿaqlī*). The feeling left in the mind is that there are still more distinctions, explanations and refinements behind

the two *Maḍnūn*'s, and that feeling is strengthened by his *Mishkāṭ al-anwār*; see the translation of this by W. H. T. Gairdner in "Asiatic Society Monographs", vol. xix. Further, al-Ghazālī developed the doctrine of a Limbo for those who, by reason of youth, mental affliction, historical and geographical situation and environment, had not been able to become Muslims and, therefore, had no works of obedience, in the technical sense, to their credit. There was nothing against them and punishing them in the Fire would be unjust: but there was nothing also for which they could be rewarded. He found a place for them, therefore, in the Qurʾānic *al-Aʿrāf* (vii, 44—46) which he explained as "Heights" whence those in the Limbo look down on both Heaven and Hell and their inhabitants. Such a conception was beyond doubt very far from Muḥammad's mind, but as a theological fiction it was sufficient for al-Ghazālī's purpose. For the four-fold classification of man which thus resulted see his *Iḥyā'*, iv, p. 20—28; *Iḥāf*, viii, p. 548—570; for this particular class see his *Faiṣal al-tafrīka*, ed. Cairo 1319, p. 75 sq. and *Iḥyā'*, iv, 27 sq.; the *Iḥāf*, viii, p. 564—568 gives different views on the subject and there is an attack on al-Ghazālī's position in *Les Prolegomènes Théologiques de Senoussi* by J. D. Luciani (Alger 1908), p. 106 sq. On the whole subject see Miguel Asín, *La Escatología musulmana en la Divina Comedia*, Madrid 1919, p. 99 sq. The treatment of eschatology by al-Ḳidjī in his *Mawāḳif* is of the dryest scholasticism, in startling contrast to the picturesqueness of the materials which he uses. Like al-Ghazālī he makes no use of the Signs; they were history, apparently, and not philosophical theology. He begins with the possibility of a Return to existence of a nonentity (*maʿdūm*) and fights that out with the different unbelieving philosophical schools: the different elements that follow suggest to him only dogmas to be demonstrated, and even the doctrine of the Intercession of Muḥammad interests him only by its connection with the Muʿtazilite heresies. For eschatological ideas as developed among the mystics see Louis Massignon, *La Passion d'al-Hallaj*, Paris 1922, ii, 664—698.

Bibliography has been given in the article.

(D. B. MACDONALD)

ḲIYĀS (A.), infinitive III of *ḵāsa*, deduction by analogy. The term is used with a multitude of meanings; cf. the lexicons, especially Dozy, *Supplément*, s.v. Here we shall confine ourselves to *ḵiyās* as one of the "roots" of the *fiḵḵ*, i.e. the deduction of legal prescriptions from the Qurʾān and the *sunna* by reasoning by analogy. — The death of Muḥammad deprived the community of the means of obtaining revelations and at the same time of its guide in matters political and religious. At first they relied on the book of Allāh and the example of the Prophet. The Qurʾān and the *sunna* naturally became the guides of the community. The expansion under the first Caliphs, the growing interest in theological and juridical speculation, the whole new world, intellectual and material, raised questions previously unknown, the answers to which could not be found in the Qurʾān or in the *sunna*. Men thus found themselves forced to take decisions or to regulate their conduct from their own opinion. The beginnings of this process were certainly not theoretical in character.

In the second half of the first century A.H. *fiḵḵ* began to develop at the same time as *ḥadīth*.

This parallelism gave rise to a rivalry between the "historical" and "rationalist" schools, the *ahl al-hadith* or *ahl al-ilm* and the *ahl al-ra'y* [q. v.]. The earliest founders of *madhhab*'s compiled their manuals of law, either by oral communication like Abū Ḥanīfa (d. 150 = 767) or in writing like Mālik b. Anas (d. 179 = 795) without much worrying about questions of general principle. Al-Shāfi'ī (150—204 = 767—820) was probably the first to give an outline of the "roots" (*uṣūl al-fikḥ*), of the value and function of the Qur'ān, *sunna*, *idjmā'* and *qiyās* in the theological and judicial system of Islām. "Qiyās" he says "is used in the cases which are not dealt with by the Qur'ān nor *sunna* nor *idjmā'*" (*Risāla*, p. 65). For him, "*qiyās* and *idjtihād* [q. v.] are two terms for the same idea" (*op. cit.*, p. 66). It might be added that there are other terms, more or less synonymous. We have already mentioned *ra'y*, a word which is often used as a synonym of *qiyās*, but which assumed the meaning of "pure reasoning", whereas *Qiyās* has always a more limited meaning is as much as it is applied to a particular method of reasoning, which otherwise ought to be applied to the other roots of *fikḥ* also. As more or less synonymous terms, we may mention *istiḥsān*, *istiṣāḥ* [q. v.], *mafhūm* (see below), *tamthīl* (see below).

The attitude defended by al-Shāfi'ī was not long in arousing fervent discussions. Among its opponents may be mentioned in the first place Dā'ūd al-Zāhirī [q. v.], who, although rejecting the employment of *qiyās*, approached the method of analogy when he relied on the *mafhūm* of the sacred texts.

Al-Bukhārī, himself a Shāfi'ī, included in his collection of traditions a chapter entitled "That one must adhere to the Qur'ān and to the Sunna". The *tardjama* of bāb 7 begins thus: "Traditions relative to the disapproval of *ra'y* and to the practice of *qiyās*". Equally significant is the *tardjama* to the ninth bāb: "How the Prophet taught his community what Allāh had taught him, without *ra'y* or *tamthīl*". This last term is explained by *qiyās* in the commentary of al-Kastallānī.

Al-Dārimī collected in his *Sunan* a number of traditions disapproving of the use of *ra'y* and *qiyās* in cases in which neither the Qur'ān nor *sunna* settle the problem (*Introduction*, bāb 16, 21). Among traditions we may mention that which traces the origin of the use of *qiyās* to Iblis (cf. Sūra vii. 11).

On the other side, the supporters of *qiyās* rely on the *ḥadīth* which tells how Muḥammad when he sent Mu'adh b. Djabal to the Yemen as qāḍī, asked him "How will you decide when a question arises"? He replied: "According to the Book of Allāh". — "And if you do not find the answer in the Book of Allāh?" — "Then according to the *sunna* of the Messenger of Allāh and if you do not find the answer neither in the *sunna* nor in the Book?" — "Then I shall come to a decision according to my own opinion (*adjtahidu ra'yi*) without hesitation". Then the Messenger of Allāh slapped Mu'adh on the chest with his hand saying: "Praise be to Allāh who has led the messenger of the Messenger of Allāh to an answer that pleased him" (Abū Dā'ūd, *Aḥḍiya*, b. 11; Tirmidhī, *Aḥkām*, b. 3; Dārimī, *Introduction*).

In spite of the opposition already mentioned, *qiyās* has found its place among the *uṣūl al-fikḥ*.

In some traditions (Nasā'ī, *Āḍāb al-Ḳuḍāt*, b. 11) there is mention not only of the Qur'ān and *sunna*, but also of the "usage of pious individuals" (*al-Ṣāliḥūn*) taking precedence of *qiyās* among the *uṣūl*. "The usage of pious individuals" has taken the place usually accorded to *idjmā'* [q. v.] which is the third "root", *qiyās* occupying the last place.

Although it is admitted, *qiyās* is nevertheless surrounded by restrictions. Here are some examples. The opponents of *qiyās* quote Sūra iv. 62 "and if there are differences of opinion between you and your chiefs, try to settle them, relying on Allāh and his Messenger". "Allāh and his Messenger", according to them, means Qur'ān and *Sunna*. The verse therefore passes over *qiyās* in silence. Baiḍāwī replies to this objection "Settling the differences by referring them to the texts is done by *tamthīl*" (see below) and by deduction" i. e. by *qiyās*.

This verse has given rise to a full exposition of the limitations of *qiyās* on the part of the commentator Fakhr al-Dīn al-Rāzī, who lays down the rule that Qur'ān and *sunna* have precedence absolutely over *qiyās*. Only when it is impossible to use these "roots", the use of *qiyās* is permissible, cf. the tradition about Mu'adh (translated above) and the example of Iblīs, who argued instead of obeying the commandment of Allāh (see above). The text of the Qur'ān is established by *tawātur*, while *qiyās* is only *maẓnūn* and following one's *ẓann* (individual opinion) is what the *kuffār* do (cf. Sūra x. 67). If traditions require to be verified by the sacred text, *qiyās* does still more so. The Qur'ān is the word of Allāh, while *qiyās* is the work of the feeble intelligence of man.

QIZ, in Turkish, "girl"; the word is common to most dialects (Radloff, *Opitt*, ii., col. 818); it is also found in the Orkhon inscriptions where *kiz-oghli* "daughter" is opposed to *uri-oghli* "son" (W. Thomsen, i. E., 7, p. 99).

Qiz-kulësi, the "maiden's tower", is the name given to an old tower now surmounted by a light-house, built on a rock at the entrance to the Bosphorus, between Scutari and Haider-pasha. Europeans wrongly call it "Leander's Tower", erroneously applying to it the legend of Hero and Leander, the scene of which is properly the

Straits of the Dardanelles. *Kiz-taṣhī* is the name given to Marcian's column at Constantinople, because this ancient monument was credited with the power of distinguishing virgins from others (Galland, *Journal*, ed. Schefer, ii. 125).

Kızlar Aghası, "the Aga of the maidens", a title borne among the Ottomans by the chief black eunuch, the negro supervisor of the Imperial Harem. His official title was *dār ül-se'adet al-sherife aghası*, "the Aga of the noble Gate of felicity". He was entitled to be called *devlet-lü 'ināyet-lü* and "Highness". In the *Sāl-nāme* he appeared at the head of the officials of the *Mā-bain*, with the rank of *mushīr* (marshal). (CL. HUART)

KIZIL AHMADLI. [See ISFANDIYĀR OGHLU.]

KIZIL ARSLĀN, ^{OTHMĀN} B. İLDEGİZ, an Atābeg of Ādharbāidjān. His father, the Atābeg İldegiz [q.v.], had been the real ruler in the whole Seldjūk empire. Kizil Arslān's mother was the widow of Sultān Toghrīl I and mother of Sultān Arslān b. Toghrīl [q.v.]. When İldegiz died in 568 (1172), he was succeeded by his son Muḥammad Pahlawān; in 570 (1174—1175) the latter besieged Marāgha while Kizil Arslān advanced on Tabriz and when the lord of these two towns, the Kādi Ṣadr al-Dīn, entered into negotiations and declared his willingness to give up Tabriz, Muḥammad Pahlawān declared himself satisfied and gave the town over to his brother Kizil Arslān. In the beginning of 582 (1186), or according to another statement as early as Dhu 'l-Ḥijda 581 (Feb.—March. 1186), Muḥammad Pahlawān died and Kizil Arslān took over the government. Muḥammad Pahlawān had been on good terms with Sultān Toghrul II who had long before succeeded his father Arslān. But Toghrīl was treated almost like a prisoner by Kizil Arslān. When he fled from Hamadhān to Semnān, Kizil Arslān pursued him and overtook him near Dāmaghān but had to retire after a desperate battle. While the Sultān returned to Hamadhān, Kizil Arslān appealed to the Caliph al-Nāṣir who promised to help him and sent his vizier Djalāl al-Dīn 'Ubaid Allāh b. Yūnus against Toghrīl. 'Ubaid Allāh was however defeated in the beginning of Rabi' I, 584 (May 1188) and the Sultān threatened Ādharbāidjān. Kizil Arslān then again occupied Hamadhān and had Sindjar b. Sulaimān Shāh (or b. Malik Shāh) proclaimed Sultān, while his nephew Kutluḡ İnāndj b. Muḥammad Pahlawān rebelled in İsfahān. Kutluḡ was soon driven out by Toghrīl but when he was pursued and an encounter took place fortune did not favour Toghrīl and he had to return to Hamadhān which Kizil Arslān had in the meanwhile abandoned. The latter then suddenly appeared on the scene, captured Toghrīl and interned him in the fortress of Kahrān in Ādharbāidjān, and then by arrangement with the Caliph set aside his protégé Sindjar and assumed the title of Sultān himself. But in the night before his coronation, or according to another authority, some time after it, he was murdered. This took place in Shabān 587 (Aug.—Sept. 1191) or according to others in Shawwāl (Oct.—Nov.) of the same year; but see Houtsma, *Some remarks on the history of the Saljuks*, *Acta orient.*, iii. 143. The murderer was never identified.

(K. V. ZETTERSTÉEN)

KIZIL-BĀSH (T. "Red Head"), the name given by the Turks to the confederation of seven Turkoman tribes, Ustādjlu, Shāmlu, Tekelū, Bahārlu, Dhu 'l-Qadr, Qadjar and Afshār, who placed the *shaiḡhs* of Ardabil on the throne of Persia and helped Shāh Ismā'īl to found the dynasty of the Ṣafawids [q.v.]. The latter had given them as a head-dress the red turban worn by the disciples of his ancestors.

This name was taken by J. Morier for the title of one of his novels, *The Kuzulbash, a tale of Khurasan*, 3 vols., London 1828, the period of which is the reign of Nādir-Shāh.

The name of a religious sect found throughout Asia Minor and regarded as Shī'ī by the Muslims; it is closely connected with the Nuṣairis of Syria. Its adepts call themselves 'Alawī, i. e. followers of 'Alī. Some are Kurds; the others are for the most part Turks and only speak Turkish. Unlike the Muslims, they do not shave the head and let their beards grow freely; they do not observe the canonical prayers (*ṣalāt*) or ablutions. They drink wine and do not observe Ramaḡān. They fast for the first twelve days of Muḥarram and lament the deaths of al-Ḥasan and al-Ḥusain. 'Alī is an incarnation of God who had already manifested himself in other incarnations, such as Jesus. God is one in three persons; below him are five archangels, intermediary between the divinity and man, twelve ministers and forty saints. They have a reverence for the Virgin Mary and recite litanies in her honour. They celebrate a service during the night. The priest who officiates sings prayers in honour of 'Alī, Jesus, Moses and David, accompanying himself on musical instruments. He holds in his hand a willow wand which he steeps in water; this consecrated water is then distributed among the houses. During the ceremony those present publicly confess their sins; the priest imposes penances, such as fines in money or kind. The lights are then extinguished (hence the Turkish expression *čerāḡh-söndürür*, "extinguisher of torches", by which they are popularly known) and they abandon themselves to lamentations and weeping for their sins. The lights are again lit; the priest pronounces the absolution (which may be refused, at least for a certain time); he takes pieces of bread and a cup of wine or similar liquid and after consecrating it steeps the bread in the wine and distributes it among those present. Those whose neighbours cannot report favourably upon them are excluded from it. Among the Kurds a sheep is also sacrificed and its flesh is distributed at the same time as the bread and wine.

They have a hierarchy at the head of which are two patriarchs regarded as descendants of 'Alī and invested with divine power; one of them is the Shaiḡh of Khubyār near Siwās, who lives in a *tekke* built in the wilds. He is recognised as Ṣūfī Shaiḡh by the government. Below him are bishops and at the bottom of the hierarchy, priests (*dede*), intermediaries between God and man. The Kizil-bāsh observe several Christian festivals, Easter, which falls on the same Sunday as that of the

Armenians, preceded by a week's fast, and that of St. Sergius celebrated on February 9th. They do not permit divorce. Like the Muslims they have a religious veneration for certain trees; they reverence the sun, moon and the sources of rivers. Their principal sanctuaries are the *tekke* of Khub-yār, those of Sewidjī, Pīr Sultān-li Yalindjak and Hādjdjī Bektāsh. Their religion seems to consist of survivals of pagan beliefs mixed with forms of Christianity covered by a cloak of Islām. They seem to number over a million (Kurds of Dersim, Malaṭya, Terdjān, Erzindjān, part of the wilāyets of Siwās and Bitlis, Turks of the wilāyets of Ma'mūret al-'Aziz, Siwās and Angora).

In Afghānistān, the name is given to immigrants of Turkoman stock who form with the Tadjik and Hindki the principal representatives of the bourgeois class; they came from Persia in the train of Nādir Shāh who settled them in Kābul and several other towns as garrisons. They keep themselves aloof from the rest of the population; at Kābul the court and government officials are recruited from them; at Herāt they are engaged in commerce and industry. They speak Persian, while using Turkish among themselves. Their number is put at 75,000.

(CL. HUART)

KIZIL-IRMĀK (T. "Red River"), the ancient Halys ("Αλυξ"), Alys ("Αλυξ"), the largest river in Asia Minor. It rises in the mountains which separate the wilāyet of Siwās from that of Erzerūm, waters the towns of Zarra (4,530 feet high) and Siwās (4,160 feet high), then enters the province of Angora where it meets the mountain of Ardjish and the Kōdjā Dāgh range which force it to make an immense detour of over 160 miles. Its course is at first south-east, then it turns northwards, and finally it reaches the Black Sea below Bāfrā in the middle of marshes. It is nearly 600 miles long. Its waters of a dark yellow when they are in flood diminish enormously in the summer; its bed is wide and its banks high. Its principal tributaries on the right are the Khān-shūyu and the Delidje-Çai; those on the left are the Şarūmsāk-Çai which flows by Kaışariye, the Dewrek-Çai from Tosia, the Gök-Irmāk which comes from the İlghāz-Dāgh (the ancient Olgassus) and waters the town of Kaştāmūni [q. v.]. — According to Strabo (xii. 561), the river Halys ("Αλυξ") took its name from the mines of rocksalt, the produce of which was exported in the form of large blocks; these mines thirty miles to the north of Yūzghād near the village of Şarīl-Kāmish, are worked among the red sandstone, covered with clay and marl of a reddish colour; this soil washed down by the heavy rains gives the river a reddish colour, whence its name.

In ancient times, this river marked the boundary between the autochthonous peoples of Asia and those who had come from Europe to colonise the country. Herodotos (i. 72) makes it a frontier between Lydia and Media. It seems to have been known to the Arabs by its ancient name, if it is that is referred to by the name *Ālis* in a verse of Abu 'l-'Alā' al-Ma'arrī (S. de Sacy, *Chrestomathie ar.*, iii., text, p. 45, transl. p. 109, gives by mistake "Aloos", an error reproduced by Defrémery, *Mémoires d'Histoire Orientale*, ii. p. 221).

(CL. HUART)

KIZIL-KUM (T. "Red Sand"), a desert between the Sīr-Daryā and the Āmū-Daryā, cf. above, p. 741, **KARĀ-KUM**. The country is less uniform, especially in the central part, than in the **KARĀ-KUM**; the desert is crossed by several ranges of hills. The Kizil-Kum becomes more and more inhospitable as one goes southwards. The region called Adam-Kīrlīghan ("where man perishes") between the Āmū-Daryā and the cultivated region of Bukhārā consisting of sandhills (*barkhān*) is considered especially uninviting and dangerous. In the summer there is absolutely no life in the desert, in the winter a few springs are visited by the Kīrgīz (Kazak). In the middle ages also, we are told, a campaign could be conducted from Djend against Khwārizm i. e. through the Kizil-Kum in winter only when the desert was covered with snow (Baihaḳī, ed. Morley, p. 858 sq.). As usual, the desert sands are encroaching on the cultivated lands as a result of the nomad life of the inhabitants and the resulting destruction of the scanty supply of wood. In the second half of the xixth century several villages on the lower course of the Zarafshān have become buried in sand.

(W. BARTHOLD)

KIZIL-ÜZEN (in Turkish *āzeri*, "Red River"), the ancient Amardus, a river which flows through Ādh ar bāidjān and enters the Caspian Sea, forty miles east of Enzeli, after having received the Persian name of Sefīd-Rūd, "White River", at its junction with the river Shāh-Rūd at Mendjil. Its source lies in the province of Ārdilān, and it begins by crossing Irāk-'adjamī to the north; its right bank tributary is the Zendjān, on the left it receives the Karā-göl at Miyāne, then it runs along the southern slopes of Elburz, describing a great arc 125 miles long and crosses this range through the defile of Rūdbar and the narrow valley of Rustam-ābād, a kind of couloir through which rush violent winds from the south in winter and from the Caspian in summer. It was known to the Arabs as Nahr al-Abyad "White River" (transl. of the Persian *Sefīd-Rūa*); cf. Dimashḳī, *Cosmography*, transl. Mehren, p. 145; at one time the Turks called it the Hülān (Hādjdjī Khalifa, *Djihān-numā*, p. 304).

(CL. HUART)

KOÇ HIŞĀR, the name of several places in Asia Minor. The meaning — if it is not

simply a corruption of *Koçja Hişar* — is "castle of the ram" and it may be compared with proper names like *Koyun Hişar*, *Toklu Hişar*, *Keçi Hişar*.

1. *KOÇ HIŞAR* in the sandjak of Kanhri is a little town on the Dewrek Cai, twenty-five miles north of the town of Kanhri. It is on the high road from Constantinople to Boli, Amasia and Erzerüm, between *Karadja Wiran* and *Toşia*. According to *Ewliya Çelebi*, this *Koç Hişar* was captured by *‘Othmān* in 708 (1308) and completely ruined, but this statement is not confirmed by any of the old Turkish chronicles. The country of *Kaştamūni* must at this time have still been under the dynasty of *İsfendiyār-Oghlū*. In the xviiith century there was a fort outside the town.

Bibliography: *Hādjdji Khalifa, Djihān-numā*, p. 646, 673; *Ewliya Çelebi, Siyahet-nāme*, ii. 178; iii. 251; *Sāmī, Kāmūs al-A‘lām*, v. 37, 16; C. Ritter, *Erdkunde*, xviii. 406; F. Taeschner, *Das anatolische Wegenetz*, Leipzig 1924, i., plate 26.

2. *KOÇ HIŞAR*, a little town, the capital of a *kaşa* in the sandjak of *Konya* ninety miles north-east of *Konya* and 115 miles east of *Kaışariya* on the eastern shore of the great salt lake called *Tuz Gölü* in the central plateau of Asia Minor. The town surrounded by gardens and vineyards is an oasis in the great steppe; it lies on the unfrequented road from Angora to *Ağ-saray*. A little is done in weaving kelims and *sadjdādas* there; the *kaşa* used to be called *Esbkeshān*.

Bibliography: *Hādjdji Khalifa, Djihān-numā*, p. 620; *Ewliya Çelebi*, iii. 194; Ritter, *Erdkunde*, xviii. 63, 970; *Sāmī, Kāmūs al-A‘lām*, v. 3715; i. 755.

3. *KOÇ HIŞAR*, a little town, capital of a *kaşa* on the right bank of the *Kızıl İrmāk* [q. v.], 20 miles north-east of *Siwās* on the road from *Siwās* to *Zārā* and *Erzerüm*. The ruins of an ancient encircling wall still exist and in the neighbourhood are many artificial caves, dating from a very remote epoch.

Bibliography: *Hādjdji Khalifa, Djihān-numā*, p. 627; Taeschner, *Das anatolische Wegenetz*, ii., plate 36; Cuinet, *La Turquie d'Asie*, i. 695.

4. *KOÇ HIŞAR*, a village ten miles south of *Mārdin*, famous for the battle fought in 1515 between the Turkish General *Bīyūklī Muḥammad Pasha* and the Persians under *Kara Khān* (cf. *SELİM I*). The earliest Turkish historians do not mention the place in connection with the battle. *Munedjdjim Bashī*, iii. 460, calls the scene of it *Eski Koç Hişar*.

Bibliography: *Sāmī, Kāmūs al-A‘lām*, v. 3716; von Hammer, *Gesch. d. osm. Reich.*, ii. 433. (J. H. KRAMERS)

KOÇI BEG, also called *Gurūdjalī Kodja Muştafa Beg*, the historian of the decline of the Ottoman empire.

Koçi Beg belonged to *Gorča* (*Korytza*) in Macedonia (Greece, cf. H. Gelzer, *Vom. Hl. Berg und aus Makedonien*, [Leipzig 1904], 201 sqq.) and was therefore probably of Albanian descent. Other statements, which as a rule make him a native of *Gümüldjina* are wrong. He came when still young to Constantinople, was brought up in the *Serai* and in the service of the Sultāns *Aḥmed I* to *Murād IV*. He was in particular favour with the latter, whose trusted adviser he became. In this capacity he wrote for his sovereign the famous

treatise, *Risāle-i Koçi Beg*, in which with ruthless frankness he exposed the causes of the decline of the Ottoman empire. He finds the main reason for increasing decay in the neglect of and breaches of the old principles of the constitution. *Koçi Beg*, the Montesquieu of the Ottomans, gave an excellent political and statistical exposition of the decline of Turkey as a world power in his memoir, which clearly reveals all the disorders that had entered the body politic from *Murād III* to *Murād IV*. The document composed in 1040 (1630) did not receive special attention till a later period. It has been several times printed, first edition *Stambul* 1277 = 1860 (cf. *J. A.*, 1863, ii. 231, N^o 134), and without place (London), edited by *Aḥmed Wefik Pasha* 1279, 8°, 32 pp. and *Stambul*, 1303, 8°, 124 pp. — W. F. A. Behrner published a German translation in *Z.D.M.G.*, xv., 1861, 272 sqq. (cf. also *Z.D.M.G.*, xi. 111, and xvi. 271) and J. Thury a briefly Hungarian one in *Török történetirok*, vol. ii., 1896, p. 406 sqq., Budapest, 1896. The book entitled *Canon de Sultan Suleiman II, représenté à Sultan Mourad IV pour son instruction, traduit du turc en françois par M* [= *Pétis de la Croix*], Paris 1725, 12°, is said to contain a French translation. A Russian translation with Turkish text was given by *Vassilij Dmitrievič Smirnov* in *Kotschybeg Gümüldzinskij (!) i drugie osmanskie pisateli XVII. veka*, St. Petersburg 1873. *Koçi Beg* according to the *Sidjill-i ‘othmāni*, iv. 63 presumably following *Na‘īmā*, composed for Sultan *Ibrāhīm* (1640/1648) a further treatise, *Risāle*, probably of a similar nature. He was the teacher of the great Ottoman historian *Na‘īmā* [q. v.]; he died at the beginning of the reign of Sultān *Mehmed IV* (1648/1687) and is said to be buried in his native town. His brother *Khurrem Beg* is said to have fled to Russia and to have become a Christian there.

Bibliography: *Sidjill-i ‘othmāni*, iv. 63; J. v. Hammer, *G.O.R.*, iv. 334, sqq., v. 291 (with a good, succinct summary of the contents of the *Risāle-i Koçi Beg*); Behrner in *Z.D.M.G.*, loc. cit.; *Brusali Mehmed Tāhir, ‘Othmānī Mülflileri*, iii. 119 sq. (with interesting notes on the family); *Pertsch, Berl. Türk. Hss.*, 244 sq. N^o. 215; *Flügel, Wiener Kat.*, ii. 255, N^o. 1045. (FRANZ BABINGER)

KODJA ILI, the name of a sandjak in the old territorial division of the Ottoman empire. This sandjak covered the north-west part of *Bi-thynia*, including the whole of the shore of the Gulf of *Nicomedia*. In the north it was bounded by the Black Sea, in the east by the *Bosphorus* and the Gulf of *Nicomedia*, in the south by the sandjak of *Brusa* and in the east by that of *Boli*; on this side the *Sakaria* forms the natural boundary but in the administrative division the eastern bank of this river was included in the sandjak. The name *Kodja Ili* is connected with *Akçe Kodja*, the famous *ghāzī* and companion-in-arms of *‘Othmān*. In the last years of the latter's reign, *Akçe Kodja* and his companions such as *Kara Mursal* had made *ghasā* into this territory and thus paved the way for the conquest of *Iznikmid* and other towns by *Orkhān* after his accession. When the town of *Iznikmid* fell into the hands of the Turks (c. 730 = 1329: the date is uncertain cf. *IZMID*), *Akçe Kodja* was already dead but *Kodja Ili* was given as a fief to his comrades-in-arms who had to defend the territory from the Greeks. *Sulaimān*

Pasha, son of Orkhān, was given the sandjak of the newly acquired territory. The descendants of these feudal frontier-guards were still to be found at a later period in the country.

In the xviiith century Kodja Ili, along with Bigha, formed part of the *eyālet* of the Kapudan Pasha and the west bank of the Bosphorus was under the direct administration of Constantinople. In the centuries following, Kodja Ili was incorporated in the *eyālet* of Khudāwandigār. After 1867 the old name was abandoned for that of the capital Izmid and in 1888 this territory became an independent *mutesarriflik* directly under the Minister of the Interior. A large area along the eastern shore of the Bosphorus was at this time included in the *wilāyet* of Constantinople. This *mutesarriflik* had five *kazā* (Izmid, Kara Mursal, Ada Bazar, Kāndere, Geiwe). Hādjidji Khalifa enumerates 19 of them.

KÖH (P.), mountain; cf. the following compounds.

KÖH-I BĀBĀ, KÖH-I BUBUK, KÖH-I MĀLIK SIYĀH, KÖH-I SAFID, KÖH-I SIYĀH, KÖH-I TĀFTĀN. The dominant mountain system of Afghānistān is the Hindū-Kush, and the huge extension westwards which consists of the Kōh-i Bābā to the west of Kābul and of the double range divided and drained by the Harī Rūd River flowing due west towards and past Herāt. The southern component of this double range is the Kōh-i Safid; the northern chain is called successively from east to west the Paropamisus, the Kōh-i Bubuk, and the Kōh-i Siyāh. The Safid Kōh is also the name of the important range which divides the valley of Djalālābād on the Kābul River from the Kurram Valley and the Afridī Tirāh. The altitude of its highest peak Sikārām is 15,600 feet.

Koh-i Tāftān is the name given to the system of parallel ranges on the Persian side of the western border of Balūčistān; they attain an extreme height of 13,500 feet and extend north-westwards into the Kōh-i Mālik Siyāh, lying to the west of the Sistān basin.

The culminating peaks of the Kōh-i Bābā overlook the sources of the principal rivers of Afghānistān — the Harī Rūd, Helmand and the Kābul River — and nearly reach 17,000 feet (height of Shāh Fulādī: 16,870 feet). This range is a part of the continental divide of Asia, high, rugged, desolate, and almost pathless. Sir Thomas Holdich in *The Gates of India* describes it as a rolling, barren tableland, wrinkled and intersected by narrow mountain ranges whose peaks run to 13,000 and 14,000 feet in altitude. The winter is long and severe and the range is then impassable; the sparse Mongol population live a life of hard privation. The Harī Rūd flows due west to Herāt through a deep, narrow trench bounded north and south by the straight flat-backed ranges already named. These chains gradually decrease in elevation till they run out into the Persian plains towards Mashhad.

The central Afghān highlands are practically unexplored.

Bibliography: See s.v. AFGHĀNISTĀN.

(R. B. WHITEHEAD)

KÖH-I-NŪR, a diamond, now weighing 106¹/₁₆ carats, but originally much larger; the early history of it is obscure, and authorities are not agreed as to whether it may be identified with the diamond mentioned by Bābur in his Memoirs; but about 1656 it was presented by Mir Djumla [q.v.] to the Mughal emperor, Shāh Djahān, and was seen in 1665 by Tavernier in the treasury of Awrangzēb; in 1739 it was carried off to Persia by Nādir Shāh, who gave it the name it now bears. Nādir Shāh’s grandson, Shāh Rukh, gave it in 1751 to Ahmad Shāh Durrānī, whose grandson, Shāh Shudjā’, when in exile in Lāhōr in 1813, had to surrender it to Mahārājā Randjit Singh. On his death-bed in 1839, Randjit Singh is said to have expressed a wish that the diamond should be sent to the temple of Djagannāth, in Orissa, but it remained in Lāhōr until the annexation of the Pandjāb in 1849 by the East India Company, who presented it to Queen Victoria.

(T. W. ARNOLD)

KÖHĀT, the central district of the North-West Frontier Province of British India, lying between Peshāwar and Bannū, with the river Indus as its eastern boundary. The district is a broken hilly tract and the area is 2,694 square miles. As a whole it lies at an elevation of about 2,000 feet; the rainfall is very capricious, the average annual fall at the town of Kōhāt, the administrative headquarters, being 18.6 inches. There are three *taḥsīls*, Kōhāt, Teri and Hangū. The tract is divided between the Bangash and Khatāk branches of the Pathān race, the Bangash occupying the Mirānzai valley and the western portion of the district, while the Khatāks are found on the eastern side down to the Indus. The total population at the 1921 census was 214,123, and the language commonly spoken is Pashto. The only town is Kōhāt; the district contains the military outposts of Thal and Fort Lockhart. A large and increasing trade with Tirāh and Kābul passes through by the Khushhālgarh-Kōhāt-Thal railway; imports and exports, apart from this through-traffic, are small, with the exception of salt which is the chief export. The thickness of the rock-salt at Bahādur Khel exceeds one thousand feet, perhaps the greatest amount of exposed salt in the world.

(R. B. WHITEHEAD)

KOHRUD, arabicised form of *Kōh-rūd*, “river of the mountain”, a village seventy-five miles from Isfahān on the road from Kāshān [q.v.] in a valley in the midst of trees and orchards. The col which separates the two slopes of the mountain is here; Oliver St. John in 1871 from this applied the name to the chain of mountains which separates Irāk-‘Adjamī from Fārs and stretches into Balūčistān (chief peaks: Shīr-kūh

south of Yazd c. 12,000 feet high and Hazār-kūh south of Kirmān c. 13,500 feet high).

KĪŌI. [See KĪŪY.]

KÖKBÜRI, ABŪ SA'ID MUẒAFFAR AL-DĪN B. 'ALĪ B. BEGTĒGĪN, lord of Irbil, the most celebrated of the Begtēginids. Kökbūri was born in Muḥarram 549 (April 1154) and was 14 when his father died. Although he was older than his brother Yūsuf, the Atābeg Muḥjahid al-Dīn Ḳaimaz succeeded in obtaining the succession of the latter to the throne under his guardianship, whereupon Kökbūri left Irbil and went first to Baghdād and then to al-Mawṣil. Here he was welcomed by the Zangid Saif al-Dīn Ghāzī b. Mawdūd, who took him into his service. Later Saif al-Dīn, or according to another statement, his brother and successor 'Izz al-Dīn Mas'ūd granted him the town of Ḥarrān as a fief. As a faithful follower of Ṣalāḥ al-Dīn he received from him Edessa in 578 (1182/1183) and later also Sumaisāt. In 582 (1185) he was imprisoned by Ṣalāḥ al-Dīn on an old charge but soon released again because the latter feared that the people of Mesopotamia would desert him, if he dealt too harshly with Kökbūri. After Yūsuf's death in 586 (Oct. 1190) Kökbūri received Irbil and Ṣhahrazūr in exchange for his former possessions, which Ṣalāḥ al-Dīn gave to his nephew Taḳī al-Dīn 'Omar. As Kökbūri left no family he willed his lands to the 'Abbāsīd Caliph al-Mustansīr. He died in Ramaḍān 630 (June 1233). See also the articles BEGTĒGĪNIDS and IRBIL.

(K. V. ZETTERSTĒEN)

KOKČA. [See BADAḲHSHĀN, i. 552b].

KŌMIS, a province in Persia, the *Κομισσηνὴ* of the ancients (Polybius, *Excerpta*, x. 25) between 'Irāk-'Adjamī, Khorāsān and Ṭabaristān; capital Dāmaghān; other towns Bisṭām and Biyār; the canton of Semnān is sometimes included in it. Through it passes the trade-route between Raiy (and now Ṭeherān) and Khorāsān. Muḳaddasī (p. 353) places it in the Dailam country. Industry flourished there; *kisā'* were made there, woollen blankets used both as cloaks and for beds (Dozy, *Dict. des noms des vêtements*, p. 383) which were exported abroad, cotton handkerchiefs with embroidered designs, small and large, single or double (*sawādihidj*, *muḥashshāt*), sometimes of the value of 2,000 dirhams; muslins for hanging down on the shoulders from turbans (*tailasān*) and fine woollen robes (Muḳaddasī, p. 367). In the time of the Seleucids and Arsacids it formed one of the six divisions into which the ancient satrapy of Parthiene was divided; it included the old capital of the Parthians, Hecatompyle, identified with Dāmaghān; it was the property of the family of Mīhrān.

ḲONAK, a Turkish word (derived from *kon*, "to settle, to establish oneself", reflexive from *ko*, "to place"), meant at first a hostelry (Meninski), a caravanserai and then by extension of meaning a relay, a stage, the distance at the end of which one stops to spend the night; later it acquired the sense of large house, hotel, palace; the term is commonly applied to the mansion of the governor of a province, or the place where the administrative offices are installed (in Eastern Arabic, *sarāya*, from the Pers. *serāy*). (CL. HUART)

KONG, the word Kong is a corruption of *Kpon*, the native name for a place in the north of the present French colony of the Ivory Coast, near the watershed between the basin of the Comoe and that of the Nzi, a tributary of the Bandama.

The town was founded at a comparatively early date by some Senufo of the tribe called Falafala, who still retain rights over the soil but except for this privilege are now of very little importance. These Senufo were and have remained pagans.

From the xvth or xvth century onwards a number of Muslims who claim to be of Sarakolle origin, known by the name of Dyula, which they say is their real name, and speaking a dialect of the Mandingo language, settled in small groups in the region of Kong where they devoted themselves mainly to commerce. According to their traditions they came from Māsina and had founded several settlements on their way, notably one where now stands the town of Boko-Dyulaso. At first these Dyula had no political influence in the country. Favourably received by the native Senufo to whom they brought an element of prosperity by their experience of the world and commercial aptitude, they gradually acquired an undisputed influence.

Towards the end of the xviiith century a chief of one of their factions called Sēku Watara seized by force the village of Kpon or Kong and made it the capital of a state which was not long in incorporating all the country between Bobo-Dyulaso in the north and the outskirts of the dense forest in the south, but did not go beyond the Comoe in the east or the Bandama in the west. The different provinces of the kingdom were governed through Dyula chiefs the majority of whom resided at Kong beside the sovereign, while others lived among the Senufo tribes who had become their vassals.

The kingdom of Kong does not seem to have played any considerable military part beyond its territorial limits, the Dyula being in general little warlike in disposition. But its influence was great both at home and abroad, not only from the political point of view but also as regards the development of civilisation. The old village of the Falafala had been transformed by Sēku Watara and his successors into a regular town, which had about 15,000 inhabitants when it was visited in 1888 by the explorer Binger. It was at once an important commercial centre and a focus of Muslim culture, the influence of which was felt in the

neighbouring provinces, especially in the south in the districts of Gimini and Dyammala. Alongside the wretched huts of the Senufo the Dyula had built houses with pylons and terraces in the style called Sudanese, resembling those of Dyenne and Timbuktu, and five mosques with double pyramidal minarets dominated the different quarters of the town. The number of literates, able to read intelligently and write Arabic correctly was relatively high. A well supplied market attracted to the town people from outside it and weaving, dyeing, and basket-making were busy industries.

The fame of Kong was wide spread in the Nigerian Sudan. Mungo Park heard of it on his first voyage in Africa revealed its existence and name to Europe and at the same time, relying on inaccurate information, gave currency to the idea of an important chain of mountains called mountains of Kong, alleged to lie near this town. In reality, the range of which he had heard is over 200 miles to the south-west of Kong and forms the extremity of the eastern branch of the massif of Fûta-Djallon.

The first European to reach Kong and bring back an accurate report on the region was the French explorer Binger. Coming from Ramako, he reached Kong on February 20, 1888 and stayed there till March 11. In December of the same year Treich-Laplène, resident de France aux Établissements de la Côte d'Or (now Colonie de Côte d'Ivoire) arrived in Kong, coming from the south via Bonduku and persuaded the king Karamoko-Ule Watara and his dignitaries to accept an agreement placing the State of Kong under a French protectorate. This treaty was signed on January 10, 1889 in the presence of M. Binger who had rejoined Treich-Laplène at Kong five days before. M. Binger at the head of a mission, which included three other Frenchmen, again visited Kong in 1892.

Two years later Captain Marchand went there and learned that the town was threatened by the conquering Samori. The latter, at war with the French, had informed the king and the notables of Kong that they had to submit to him. Karamoko-Ule had replied to this ultimatum with soft words and the despatch of a kind of tribute. Nevertheless he desired to remain faithful to the treaty concluded with France and he begged Captain Marchand to get the French government to send troops to protect his kingdom from Samori. This is how it came about that an expedition called the Kong column was concentrated at Great Bassam in August 1894 and sent under Lt. Col. Monteil from the Ivory Coast. Its advance was hampered by the hostility of the tribes of Baulé, a land south of Kong. Encountering Samori's army in March 1895, with his effectives much reduced, Lt.-Col. Monteil was obliged to retire without inflicting a decisive defeat on the enemy or being able to advance as far as Kong.

Once freed from the French offensive, Samori wished to punish Kong for having provoked it and decided on the gradual and systematic destruction of the town. The king, the notables and the greater part of the population fled to Bobo-Dyulaso, the remainder were massacred or reduced to slavery. The mosques were razed to the ground, the houses pillaged and set on fire and in 1896 there were only a few ruins left of the once great and wealthy town. The kingdom of which it had been the capital, broken up and dismembered, was annexed by Samori who had

made his capital at Dabakala in the province or Gimini, SS. E. of Kong.

In January 1898 a detachment of French troops coming from the north occupied the site of the town and built a station there. This was besieged a little later by bands of Samori's soldiers and relieved at the end of February by Commandant Caudrelier. It was then that Samori left the district to take refuge on the Bandama and later fled to the south-west. He was taken prisoner soon afterwards on September 29, 1898 near the Liberian frontier by Captains Gouraud and Gaden.

Once peace was restored to the country, the French authorities endeavoured to bring back the people of Kong to their town and to make them rebuild their houses. Karamoko-Ule had died in the meanwhile. His successor agreed to return to Kong with several Dyula families and there gradually arose on the ruins of the ancient town, beside the French station, new houses some in the Sudanese style like the old ones, others of humbler style, simple huts with thatched roofs. A market was built and a mosque. But the majority of the survivors of the old population of Kong preferred to remain at Bobo-Dyulaso or in its vicinity and although it is slowly growing, the new town or Kong had only 3,000 inhabitants in 1925. The ancient kingdom however has been gradually restored and is administered as before under the suzerainty of a prince of the Watara family through Dyula chiefs, called chiefs of districts. But it is under the authority of the French administrator; the suzerainty of the prince is only nominal and the native Senufo tribes actually enjoy an independence such as they never had under the old regime.

(MAURICE DELAFOSSE)

KONYA (the ancient Iconium), a town in Asia Minor on the railway from Baghdad, the capital of the province of the same name, in a barren plain. It is 5,000 feet above sea level; of its 44,000 inhabitants, 39,300 are Muslims, 1,500 Greeks, 3,000 Armenians, 50 Protestants, 150 Catholics. The streets are broad and unpaved. The houses are built of terre pisée, except public and special buildings, 44 mosques, 147 masjids, 5 libraries, 42 medreses, the Greek church, the Armenian church, 68 schools, 7 caravanserais and 8 baths; the exports are wheat, barley, maize, cotton and Angora wool; saltpetre and tobacco (manufactures of the state). It was formerly the capital of the Seldjûks of Rûm of whom monuments still survive. It was girt with walls by 'Alâ' al-Din Kai-Kubâd I and the stones of these walls have been used in the erection of modern buildings. Texier and von Moltke were still able to record that 108 towers of the walls were still standing. Ruins still exist of the palace of the Seldjûks and of the citadel (610 = 1213/1214). The mosque of 'Alâ' al-Din begun by 'Izz al-Din Kai-kâ'us I in 616 (1219-1220) and finished in 617 (1220-1221) by an architect of Damascus, Muḥammad b.

Khawlān; in front of it is the tomb of **Ghiyāth al-Dīn Kai-Khusraw I** built by the architect **Yūsuf b. 'Abd al-Ghaffār** and containing a *minbar* in black wood adorned with arabesques, the work of an artist from **Akhlat**, made in (550/1155). The college of **Qaratāi** is adorned with faience (649-1251/1252); the medrese called *Indje minareli*, "with the slender minaret", has been recently destroyed by an earthquake; mausoleums of **Shaikh Sadr al-Dīn** (d. 673 = 1274), of **Fakhr al-Dīn 'Alī** surnamed **Şāhib 'Atā'** (d. in 684 = 1285) who was minister of **Ghiyāth al-Dīn Kai-Khusraw III**, and of **Shams al-Dīn Tabrizi**. We may also mention the *Syrān-lī medrese* "college of glass" of 640 (1242/1243) and some monuments of the time of the **Karamān** dynasty. The tomb of **Ḍjalāl al-Dīn Rūmī** [q. v.] and of all his successors, the grandmasters of the **Mawlawiya** order, down to the present day is surmounted by a cupola in the form of a pyramid in eight tiers covered with tiles in blue enamel. A few remains of the Roman period are collected in the *bezestān* or "cloth market", and lions called **Phrygian** but probably **Hittite**.

The Emperor **Frederick Barbarossa** spent a week there in the reign of **Kılıç Arslān II** (May 18-26, 1190) a fortnight before he perished in the waters of the **Calycadnus**. It was the scene of a victory of **Ibrāhīm Pasha**, son of **Muhammad 'Alī**, over the **Ottomans** (December 21, 1832). A kind of apricots called *hamar al-dīn* is grown there of which a tart called by the same name is made, as at **Damascus**; a kind of blue flower called *bāgh üzayı*, "flower of the vineyard", is used to dye cloth blue. Lime water is obtained from the springs at **Merām** one hour's journey to the west (gardens and promenades at the foot of the mountains), which improves by being matured in jars.

Bibliography: **Yāqūt**, *Mu'djam*, ed. **Wüstenfeld**, iv., 204; **Hādjdjī Khalifa** *Djihānnumā*, p. 615; 'Alī **Djāwād**, *Djoghrafiyā Lughātī*, p. 643; **Sāmī Bey**, *Kāmūs al-a'lām*, v. 3781; **Ibn Baṭṭūta**, *Rihla*, II, 281; **Texier**, *Asie Mineure*, Paris 1882, p. 661; **V. Cuinet**, *Turquie d'Asie*, i. 818; **Cl. Huart**, *Konia, la ville des derviches voyageurs*, Paris 1897, p. 132 sqq., 158, 169, 183 (drawings and photographs); **Fr. Sarre**, *Reise in Kleinasien*, Berlin 1896, p. 28 sqq. and Pl. xvi.—xxx. (photographs). (CL. HUART)

KOPAK, a Persian and **Transoxiana** coin. *Kopaki dinārs* are mentioned in the *Sharafnāma* (the life of **Timūr**), and **Bābur** (*Memoirs*, *G. M. S.*, p. 185) speaks of 300 *tomān* *Kopaki* (see also **P. de Courteille's** transl. i. 420). **P. de la Cive**, as quoted by **Quatremère** (*N. E.*, xiv. 74, n.) says that *dinārs* *copghies* are gold ducats worth 7.10 French money. See also **Tavernier**, *Hobson-Jobson*, and **Murray's English Dict.**, s. v. **Copeck**. Though the **Transoxiana** and **Persian** *Kopak* was a gold coin, the word may still be etymologically identical with the **Russian** *Copeck*, just as *dinār* and *denarius* degenerated from being gold and became silver coins.

(H. BEVERIDGE)

KÖPRÜ (in Turkish "bridge"; East. Turk. *Köp-prük*) also called **Vezir-Köprü**, "the vizier's bridge" (from the famous grandvizier **Köprülü Muḥammad Pashā**, of **Albanian** origin; see below **KÖPRÜLÜ**), capital of a *kaḏā* in the *sandjak* of **Amasia** in the province of **Siwās** on the river **Astawoluz**, a tributary on the right of the **Kızıl-Irmāk**; it has 8,600 inhabitants,

mainly **Muslims**, 17 mosques, 2 libraries, one of which is a *waḳf* founded by **Köprülü-zāde Fāḍil-pashā**, 6 medreses, numerous charitable buildings erected by **Köprülü Muḥammad Pashā**, 6 caravanserais, five baths, and three dervish monasteries. The houses are covered with red tiles and the chimney tops have a metal cap like the minarets of Turkish mosques. It contains the palace of **al-Hādjdj Yūsuf-aghā** and in the citadel, the mosque of the same; monasteries of the **Qādiriya** and **and Khalwatiya** dervishes; eleven caravanserais, two *imārets* (poor kitchens) and eight schools. The best baths are those of **Aḥmad Pashā**. The **Bezestan** (central market) was built by **Yūsuf-aghā**. The ports of the town are **Bafra** and **Sinope** on the **Black Sea**; a road suitable for vehicular traffic connects it with **Şamsūn**.

Köprü-şuya is the name of a river which rises in the **Tawshān-Dāgh** and flows into the **Kızıl-Irmāk** [q. v.] near **Vezir-Köprü**. It is also the name borne by the ancient **Eurymedon** which flows into the **Mediterranean** sea in the **Gulf of Adalia**; at its mouth is the little town of **Köprü-bāzār**.

Bibliography: 'Alī **Djāwād**, *Djoghrafiyā Lughātī*, p. 687; **Sāmī Bey**, *Kāmūs al-a'lām*, v. 3905; **Ewliyā Efendi**, *Travels*, transl. v. Hammer, ii. 217. (CL. HUART)

KÖPRÜ HİŞAR, "fortress of the bridge", a village in the province of **Khudāwandiğār** in **Asia Minor** on the **Çürük-şū** near **Yeni-Şehir**. It was the site of a **Byzantine** castle taken by **Sultān 'Othmān** in 688 (1289) after the capture of **Biledjik** where he slew his uncle **Dündār** by shooting him with an arrow.

Bibliography: **Sāmī Bey**, *Kāmūs al-a'lām*, v. 3906; **J. de Hammer**, *Hist. de l'empire ottoman*, transl. **Fr. de Hellert**, i. 87-89; **Cl. Huart**, *Konia, la ville des derviches tourneurs*, Paris 1897, p. 18 (view of the bridge).

(CL. HUART)

KÖPRÜLÜ, a family of **Ottoman viziers**. This celebrated family which provided the **Ottoman** empire with its most prominent statesmen at the period of its commencement of decline, was probably of **Albanian** origin. In his *Mémoires, contenant diverses relations très curieuses de l'Empire Othoman* (Paris 1684), **Sieur de la Croix** says the founder of the family was the son of a **Greek** or **Arab** priest, a statement adopted by **L. von Ranke**. It is more probable that the ancestor of the family was an **Albanian** who migrated in the xvth century from his native district to the town of **Köprü Merzifün** in **Anatolia**. **Köprü**, now usually called **Vezir Köprü**, was at this time an important settlement, which had a long history (cf. **Hādjdjī Khalifa**, *Djihānnumā*, 625, 4 infra and 628, 9 where *Kede ghara* [= *Qara kede* in **J. von Hammer**, *G. O. R.*, vi. 3] is given as the old name and also **Ewliyā**, *Seyāhetnāme*, ii. 399), and only began to lose its importance at a later date (cf. **M. Kinneir**, *Journey through Asia Minor*, London 1818, p. 298). Near it lies **Taş köprü** which gave their name to the famous family of scholars, the **Taş köprüzāde**. To distinguish it from the latter **Köprü** was later renamed **Vezir Köprü** in honour of the **Köprülü** family. Here **Mehmed Köprülü**, the grandson of this **Albanian** immigrant, was born, the first to make the family name famous and widely known. The number of important men who came from this family is not small. A certain **Bahdjatī Ḥusain** (of **Raḏgrad**, d. 1094 [1683] at

Belgrade) composed a *Ta'rikh-i Sülāle-i Köprülü*, a history of this family, the original manuscript of which is in the Köprülü Library in Stambul (N^o. 212). It contains details of the ancestry of the Köprülüs. Among the most important members of the family are the following:

1. Köprülü Mehmed Pasha, grandvizier of Turkey, or better, administrator of the Empire, born it is said in 991 (1583), died November 1, 1661 at Adrianople. In his youth he was a humble scullion and then cook in the Imperial palace; entering the service of the grandvizier Khosraw Pasha, he became his purse-bearer and then rose to be chief marshall in the service of the grandvizier Kara Mustafa Pasha [q.v.], a native of Merzifun. He then rose steadily up the ladder of the higher offices of state. As a pasha of two tails (*tugh*) he was appointed governor of Damascus, Jerusalem and Tripolis and in 1061 (1651) became vizier of the cupola. Soon afterwards however he was granted the unimportant *sandjak* of Küstendil and retired in chagrin to his native town. After a brief imprisonment at the hands of the rebel Wārdār 'Alī Pasha against whom he had taken the field, he was liberated by the grandvizier Ipsir Pasha and appointed by him governor of Tripolis. Before he had entered upon the duties of the office he was deprived of it and retired again to Köprü. Then the grandvizier Mehmed Pasha, "with the crooked neck" (*egri boyunu*) took him to Stambul where he was soon to become his most dangerous rival. By Dhu 'l-Hijja 3, 1066 (September 22, 1656) he had received the seal of the empire. He attacked religious zealots with great energy (cf. J. von Hammer, *G. O. R.*, vi. 5 sq.), had the ringleaders in previous risings executed without mercy and purified public life. In reorganising the shattered finances of the State, he was incorruptible and inexorable and in doing this made many enemies. He renewed the courage and lowered national feeling of the Ottoman people and endeavoured to revive the ancient glory of the Ottoman arms by a war with the Venetians. He fought in the Dardanelles in 1067 (1657) with Admiral L. Mocenigo, a battle which ended in the loss of the Ottoman fleet and the capture of the Venetian flagship. Mehmed Pasha endeavoured to compensate for this by the conquest of Tenedos and Lemnos; and in the following year 1068 (1657) Transylvania was conquered. He next turned his attention to Persia where he occupied the town of Yanowa, then suppressed threatening risings in Northern Syria and in Egypt, built the new fortresses on the Dardanelles (cf. the article KAL'AI SULTĀNĪA) and planned fortifications for the frontiers generally (cf. J. von Hammer, *G. O. R.*, vi. 86 sq.). He succeeded in considerably enriching the state treasury. Before his death on 7th Rabi' I, 1072 (October 31, 1661) he recommended on his death-bed to the Sultān his 26 year old son Aḥmad as his successor in the grandvizierate. He was interred behind the School of Tradition beside the burned pillar.

A brother-in-law of Mehmed Pasha was Kiblelī-zāde Mustafa Pasha (died 1074 = 1663; cf. *Sidjill-i 'othmānī*, iv. 397), whose son the chief marshall Kiblelī-zāde 'Alī Bey was executed in 1114 (1702) (cf. Rāshid, *Ta'rikh*, i. 261, and J. von Hammer, *G. O. R.*, vii. 49). From them was descended the literary historian Köprülü-zāde

Mehmed Fu'ād Bey, born 1306 = 1890 (cf. on the genealogy of 'Alī Emīri in *'Othmānī Ta'rikh we-Edebiyāt Medjmu'asi* of 30th vi. [p. 79 sq.] and 31st viii., 1334 [1918] [p. 116 sq.] and M. Hartmann, *Dichter der neuen Türkei*, Berlin 1919, p. 91 sq.).

Bibliography: the histories by Na'imā, J. v. Hammer, Zinkeisen, and especially Sir Paul Rycart and Richard Knolles, also Andrea Valiero, *Historia della guerra di Candia*, Venice 1679, 527 (where it is stated, as in G. Brusoni, *Historia dell' ultima guerra trà Veneziani e Turchi*, Venice 1673, i. 292, that Mehmed Köprülü was a renegato Perugino di casa Ferretti); the historical novel *Histoire des Grands Vizirs Mahomet Coprogli Pascha et Ahmet Coprogli Pascha, celle des trois derniers Grands Seigneurs* etc. etc., Paris 1676, is quite fictitious (where for the first time we have the oft repeated fable that Mehmed Köprülü was of French origin); M. Brosch, *Geschichten aus dem Leben dreier Grosswesire*, Gotha 1899; L. v. Ranke, *Die Osmanen und die spanische Monarchie*, Leipzig 1877, p. 74 sq. (brilliant summing up of the personality of Mehmed Pasha); 'Othmān-zāde Aḥmad Tā'ib, *Hadīkat ül-Wizērā*, p. 104 sq.; *Sidjill-i 'othmānī*, iv. 173 sq.; Aḥmad Rafīk, *Köprülüler*, Stambul 1331, 1 part, 143 p. II. Köprülü-zāde Faḍil Aḥmad Pasha, son of the preceding, Ottoman grandvizier, born 1045 (1635) at Wezīr Köprü, died 26th Sha'bān 1087 (October 30, 1676) near Adrianople. Mehmed is said to have been unable to read and write, therefore he wished his son to become a scholar. The young Aḥmad, while still a child, was entrusted to the famous historian and later Shaikh al-Islām Kara Çelebi 'Abd al-'Azīz [q.v.], became his *mulāzim* and when only 16, held the office of a *muderris* in the mosque of Mehmed the Conqueror. For ten years he had held this position before he decided to enter the civil service. Three years before his father's death he went as governor to Erzerum and in the following year to Damascus in the same capacity. From here he conducted a successful campaign against the Druses (cf. J. von Hammer, *G. O. R.*, vi. 93) but in consequence of his aged father's increasing dropsy he was recalled by the Sultān to the capital where he was given the rank of *kā'im maḥām* after an audience with the Sultān. On 7th Rabi' 1072 (October 30, 1661) he was given the imperial seal immediately his father died. He was then only 26. For fifteen years he filled the office of grandvizier with ability and strength and far surpassed his father in education and statesmanship. He undertook numerous campaigns during his tenure of office. His first was against Hungary, when he took Neuhausl (Ujvár, September 29, 1663), besieged several fortresses, razed Zerínvár to the ground and finally suffered a severe reverse at St. Gotthard on the Raab on August 1, 1664 at the hands of Count Montecuccoli. At the end of May 1667 the Cretan war was begun which he conducted in person and ended with the occupation of Candia at the beginning of October 1669. Shortly before then he had placed two of his brothers-in-law in the two most important offices in the empire: Kaplan Mustafa Pasha was made Grand Admiral (*Kapudān Pasha*, q.v.) while Kara Mustafa Pasha [q.v.] had been appointed *Kā'im-maḥām* in the imperial camp (J. von Hammer, *G. O. R.*, vi. 227). The

Ķapudān Pasha Saiyid Mehmed Pasha is mentioned as a third brother-in-law (cf. J. von Hammer, *G. O. R.*, vi. 323) whether rightly or not is uncertain.

In the summer of 1672 (1083) he turned his attention to Poland and took Kamieniec Podolski after a several days' siege, celebrated by the poet Nābī, on 3rd Djumādā I, 1083 (August 27, 1672). On the other hand the grandvizier lost the next battle, that of Chotin (Polish: Chocim, Turk.: Chotin); the fortress was lost in November 1673 (Radjab 1084); Aḥmad Pasha had to take to flight. While he was able to make up for the loss of the battle of St. Gotthard by a satisfactory peace of Vasvár (August 10, 1664), he had to prepare for a new war the next year, which ended with the recapture of Chotin and the taking of Ladyzyn. On the way to the imperial camp, Fāḍil Aḥmad Pasha died after eighteen days, illness on 22nd Sha'bān 1087 (October 30, 1676) at the farmplace of Kara Biber near the bridge of Erkene (between Burghas and Adrianople). The body was brought to Stambul and he was buried beside his father. His early death is said to have been caused by over-indulgence in spirits and to dropsy caused thereby (cf. Pétis de la Croix, *État général de l'Empire Ottoman*, Paris 1695, ii. 81). As early as the siege of Candia he had been liable to epileptic fits, and already looked a tired old man, weary of life. He afterwards indulged in all kinds of vices, surrounded himself with women (he is said to have had 80 wives, including slaves) and liked to drink Polish brandy which the doctors had prescribed for him.

Aḥmad Pasha certainly surpassed his father in intellect and intelligence and still more in his love for the arts and sciences, which he encouraged even when in the field. In Stambul he founded a comprehensive library (cf. Mouradgēa d'Ohsson, *Tableau*, ii. 488) which is still in existence, (*Catalogue*, *Defter*, 248 sqq., 4^o, n.d.) as a monument to his fame. His seal-bearer Ḥasan wrote his life under the title *Djawāhir al-Akhbār* and his campaigns were several times celebrated in verse and prose (cf. F. Babinger, *Die Geschichtsschreiber der Osmanen*, Leipzig 1927, p. 211 sqq.). Contemporary European writers are unanimous in praising the sound judgment and keen penetrating intellect of this distinguished statesman.

Bibliography: the above mentioned historians and M. Brosch, *Geschichten aus dem Leben dreier Grosswesire*, Gotha 1899; L. v. Ranke, *Die Osmanen* etc., Leipzig 1877, 75 sqq.; 'Othmānzāde Aḥmad Tā'ib, *Ḥadiqat ul-Wüserā*, 106 sqq.; *Sidjill-i 'othmānī*, i. 222; Aḥmad Rafīk, *Köprülüler*, ii., Stambul 1331, 156 p.; Barozzi-Berchet, *Relazione degli stati Europei*, ii. part (of which the *relazione* of the *bailo Nani* are specially important); J. Covell, *Early Voyages in the Levant*, London 1893 (C. describes him as a small bearded man with large eyes and a round face; cf. p. 195, 206, 267); J. Chardin, *Voyages*, i. 81 sq., 87 (according to whom he limped, cf. Covell, p. 206); Sir Paul Rycout, *Present state of the Ottoman Empire*, 135 sqq.; C. Magni, *Quanto di più curioso, e vago ha potuto raccorre* etc., Parma 1679, 465, 479 sqq.; Antonio Geropoldi, *Bilancia storico-politica dell' Impero Ottomano*, Venice 1686, 139 sqq. (to be used with caution).

III. Köprülü zāde Muṣṭafā Paṣhā, son of I and brother of II. He was born in 1047

(1637), the second son of Mehmed Pasha. He was appointed vizier of the cupola in Djumādā II, 1091 (July 1680) and became successively *mustahfiḡ* (commandant of a fortress) of Bender, Silistria, Baba Dagħ, the Dardanelles, Chios, etc., then in Dhu 'l-Ḥiḍḍja 1098 (October 1687) was appointed the grand vizier's deputy (*kā'imma-kām*) and ultimately received the seal of the empire on 24th Muḥarram 1101 (November 7, 1689) after once again being *mustahfiḡ* of the Dardanelles and of Candia. He was by this time 52 and was reputed to be a strict observer of the laws of Islām and an enemy of the Christians. His mind inclined more to learning than to military affairs. *Questo gran veziro*, says a contemporary Italian *relazione*, è un altro mufti astemio, nemico del vino, nemico dei Christiani, zelante della sua fede, huomo scrupoloso, scarno, bruno e brutto, stimato per un santone e dottor della sua legge, politico ma non ha nessuna pratica di guerra (cf. J. v. Hammer, *G. O. R.*, vi. 547) which gives a very clear idea of his character and qualities. His aim was to make the grand vizier as independent as possible, wherefore he reduced the number of viziers of the cupola and dismissed officials whom he did not like. His wise measures to improve the finances of the State, such as publicly farming out the tobacco tax and regulating the currency, showed his clear insight into the needs of the kingdom. He had the superfluous silver of the imperial palace melted down and gave his own to the mint, contenting himself with pewter. In the summer of 1690, he went with the army against Serbia, recaptured Belgrade (October 18, 1690), took Essegg (Hung. Eszék) and fell on September 19, 1691 before Slankamen, near Belgrade. His body was not found. Like his brother he was called the virtuous, *Fāḍil*. He was a distinguished statesman, who clearly recognised the needs of his day and therefore introduced various innovations, the correctness of which time proved.

Bibliography: the historians mentioned and: 'Othmānzāde Aḥmad Tā'ib, *Ḥadiqat ul-Wüserā*, 116 sqq.; *Sidjill-i 'othmānī*, iv. 406 sq.

IV. Köprülü zāde Ḥusain Pasha, nephew of I, Ottoman grandvizier, usually called 'Amūdī zāde, i. e. paternal nephew. Ḥusain Pasha was a son of *kihterī* (i. e. little) Ḥasan Agha, a brother of Köprülü Mehmed Pasha and had the opportunity of being trained for public life among his cousins. He filled the offices of grand admiral (*Ķapudān Pasha*) and of governor of Chios. Entrusted with the defence of Belgrade in the summer of 1108 (1696), he attracted the attention of the Sultān Muṣṭafā II by his wise counsels and was promoted by him from the governorship of Belgrade on 1st Rabī' I 1108 (Sept. 17, 1697) to the grandvizierate (cf. J. v. Hammer, *G. O. R.*, vi. 641 sq.). He proved an advocate of a moderate and peaceful policy and his first important act was to conclude the peace of Carlowitz on Jan. 26, 1699 with Austria, Russia, Poland and Venice. This peace restored to Austria almost all she had lost to the Porte since 1526 and formed the basis of later agreements between Austria and Turkey. Ḥusain Pasha was also the friend of learned men and poets to whom he often gave liberal and handsome gifts. Like his cousin, he tried to improve the treasury, the army and the fleet and notably to lighten the lot of the Christians by

reducing and remitting the poll-tax (cf. J. v. Hammer, *G. O. R.*, vii. 44). He founded a large number of buildings for pious purposes, for example mosques in Stambul, Adrianople, Gradisca, and Lepanto, built schools, colleges, waterworks and wells of all kinds (cf. J. v. Hammer, *G. O. R.*, vii. 47 sqq.). The execution of his cousin by Kiblelîzâde 'Alî Beg, because of a secret passion, it is said (cf. Rashid, *Târîkh*, i. 261; the story in Kantemir's *Geschichte des osmanischen Reiches*, Hamburg 1745, p. 618 sqq., is quite absurd) affected him deeply. An incurable disease finally forced him to tender his resignation, which was accepted 12th Rabi' II, 1114 (Sept. 5, 1702). He retired to his estate on the heights of Buçuk Tepe near Adrianople and died almost immediately afterwards at his country house near Siliwri on 29th Rabi' II, 1114 (September 22, 1702). He was buried in a special tomb on the "Saddlers' market" in Stambul.

Bibliography: The historians above mentioned and: 'Othmânzâde Aḥmad Ta'ib, *Hadîkat ül-Wüserâ*, p. 124 sqq.; Râmiz Pashazâde Mehmed 'Izzet, *Khariṭa-i kapudanân-i daryâ*, Stambul 1285, 75 sqq.; *Sidjill-i 'othmânî*, ii. 202.

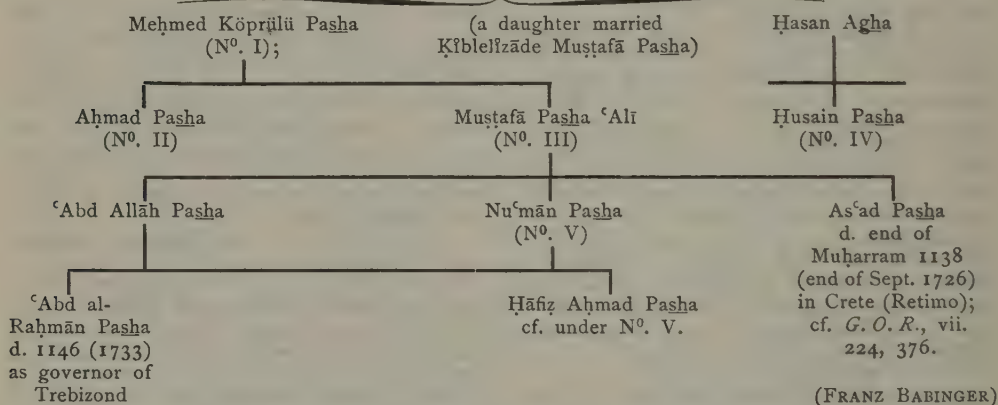

V. Köprülü-zâde Nu'mân Pasha, son of III, Ottoman grandvizier. He began his career by filling several governorships (Erzerum, Anatolia, Negroponte, Candia), became comman-

dant of the Dardanelles, then again governor of Candia, Negroponte, Bosnia and Belgrade. He married 'Ā'isha Sulṭān, daughter of Muṣṭafâ II (June 1710; cf. J. v. Hammer, *G. O. R.*, vii. 145), and immediately afterwards was appointed grandvizier. His period of office did not in any way confirm the hopes that had been placed upon him on all sides as saviour of the empire. He opposed a war with Russia to assist the king of Sweden, was disgraced and on Aug. 18, 1710 sent back to Negroponte as governor. He later became governor in succession of Candia, Bosnia and Belgrade, Cyprus, Iç-eli, Mentesh [q. v.] and finally died after a busy life on 7th Rabi' I, 1131 (Jan. 21, 1719) after a fever in Crete. His son was the *nishāndî bashî* and later several times governor (cf. J. v. Hammer, *G. O. R.*, viii. 115, 153, 185, 264), Hâfiz Aḥmad Pasha, the last Köprülü-zâde mentioned in Turkish history as holding a public office. He died in 1183 (1769) as governor of Cairo. On him and on his descendants see *Sidjill-i 'othmânî*, i. 262 sq.

Bibliography: Dilâwerzâde 'Omar, *Dhail* on the *Hadîkat ül-Wüserâ*, p. 12 sqq.; *Sidjill-i 'othmânî*, iv. 586 sq.

The following genealogical table may help to show the connections between the various bearers of the name Köprülü (cf. J. v. Hammer, *G. O. R.*, vii. 623):

GENEALOGICAL TABLE OF THE KÖPRÜLÜ:

KOPUZ (т.), a musical instrument, a kind of guitar with one string which the bards of Central Asia used to accompany their songs. The body of it was made out of a gourd.

(CL. HUART)

KÖR OĞHLU (т., "son of the blind man"), the hero of a popular romance in prose mingled with verse of which there are Persian and Turkish recensions. He was, it is said, a Turkoman of the Tekke tribe named Rūshān son of Mîrzâ Şarrāf who lived in the reign of Shāh 'Abbās II (1051—1077 = 1641—1666). He was

born in the north of Khorāsān and lived there in the second half of the xviiith century of our era. In the valley of Salmās (Ādharbāidjān) are still shown the ruins of the castle of Čamli-bel built by him. He used to plunder the caravans on the road from Turkey to Persia via Erzerum and Khoi. He is the national hero of the nomad tribes of Persia of Turkoman origin. Poetical versions of the story of his exploits are sung at the festivals to the accompaniment of music. His horse Kîrāt shares his fame; the song lamenting his death is considered one of the beautiful elegies in existence. Nomadic singers called "*asli-k*", "lovers", sometimes accompanied by jugglers and rope-dancers wander through the towns, villages and encampments of Transcaucasia and Ādharbāidjān and recite this epic in sections called *maḡlis* or "seances". They are known as *kör oghlu-khwān* "reciters of Kör-oghlu". The Turkish recension puts the scene

of Kōr-oghlu's exploits in Asia Minor, locating them around Boli (the ancient Claudiopolis in the province of Kāstāmūnī).

His name is derived from the fact that the lord of the district (in the Persian version, Sultān Murād, sovereign of a part of Turkeṣtān and in the Turkish, the Dere-beyi of Boli), furious at seeing that the head of his stables, the father of our hero, sent by him to pick the best out of the horses brought to him in tribute, had chosen a thin one, had his eyes gouged out. The area of the adventures of Kōr-oghlu in the Persian version is very extensive for it includes successively Khorāsān, Ādharbāidjān, Eriwān, Nakhčewān, Anatolia, Kars, Syria, and Egypt. The Turkish version does not go beyond the district of Boli.

Bibliography: A. Chodzko, *Popular Poetry of Persia*, p. 3—344; L. Szamatolski, in *Aus türkischer Volks- und Kunstichtung*, Berlin 1913, p. 8—26. (CL. HUART)

KÖRĀ, an ancient decayed town, situated at 26° 7' N. and 80° 22' E. on the old royal road from Agra to Allahabad (Ilāhābād), now in the Fathpūr District of the United Provinces of British India. Under the Sultāns of Dihlī it was the capital of a province, and in Akbar's time it was the head-quarters of a *sarkār* in the *sūbah* of Allahabad.

A copper coin of Akbar is known of Kōrā mint. The place was also a mint-town of the later Mughal emperors from the time of Rafī' al-Darādjāt onwards.

Bibliography: *District Gazetteer of the United Provinces of Agra and Oudh*, Allahabad 1906, vol. xx., p. 154, 157—158, 251 *sqq.*

(R. B. WHITEHEAD)

KORAH. [See KĀRŪN].

KORAN, the, (*al-Kur'ān*), the sacred book of the Muḥammadans contains the collected revelations of Muḥammad in a form fixed by committal to writing.

1. Even among Muslims there is no unanimity regarding the pronunciation, derivation and meaning of the word. Some pronounced it *Kurān* without hamza and saw in it a proper noun not occurring elsewhere, like *tawrāt* and *indjil* or they derived it from *karana*, to tie together. Others rightly began with *kor'ān* with hamza and explained it either as an infinitive in the sense of a past participle or as an adjective from *karā'a*, to collect. It is really very easy to see an infinitive in it as it occurs as such in Sūra lxxv. 17 (cf. Ṭabarī, ed. de Goeje, s. v.). The exact meaning must be sought in the usage of the *Kur'ān* itself where the verb *karā'a* frequently occurs. In Sūra xvii. 95 it certainly stands for "to read", but the most frequent meaning is rather "to recite, to discourse", which does not necessarily pre-suppose a written text. Thus Allāh says, lxxv. 17: "Move not thy tongue too quickly with it for it behoves us to collect and recite it". Similarly the word is used of Muḥammad who recites the revelations made to him, xvi. 100; xvii. 47; vii. 203; lxxxiv. 21; cf. the 4th form in lxxxvii. 6 or of the believers when they recite the revelations at prayer, lxxiii. 20. Cf. also, "If thou mentionest thy Lord, the unique, *b'il-kur'āni* in reading aloud", xvii. 49. We thus come to the meaning, lecture, discourse, what is uttered, i.e. what Muḥammad heard from Allāh and repeated ("follow our recital", lxxv. 18;

"We enable thee to repeat so that thou mayest not forget", lxxxvii. 6), and then later uttered before men. Schwally, Wellhausen, *Z.D.M.G.*, 67, 634; Horowitz, *Der Islam*, xiii. 67, on the other hand see in it a Syriac or Hebrew loanword *ker'yānī*, *ker'yānī* (lectio, reading, or what is read) and they rightly insist that *karā'a* is not genuine Arabic with the meaning "to read". We should have to imagine that Allāh actually read to the Prophet out of the heavenly book, but even then the further use of the word is no easier explained. It is in any case quite absurd for E. Meyer to explain the *Kur'ān* as a book read by Muḥammad, somewhat after the fashion of Joseph Smith, for the heavenly book, the contents of which were communicated to him, was really a concealed book and he heard the voice of Allāh and read nothing (xcvi. 1 notwithstanding). It was rather the case that the *Kur'ān* was first made intelligible to him by Allāh making it into an Arabic *Kur'ān*, i.e. translating it into Arabic.

The word is not found in the *Kur'ān* itself in the above sense of "collected revelations in written form" because they were only collected after the death of the Prophet. It is used either for the separate revelations which were made one by one to the Prophet (e.g. x. 16; xii. 3; lxxii. 1; cf. ii. 181, the *Kur'ān* sent down in Ramaḍān) or as a general term for the divine revelation which was sent down piece by piece (xvii. 107; xx. 1; lxxvi. 23; cf. xxv. 34; lix. 21) which he received from Allāh (xxvii. 6) so that he could communicate it to men (xxviii. 85).

The term *al-Kitāb* (the scripture or the book) is used as an alternative of *Kur'ān*. They often appear to be synonymous. The "scripture" is also sent down (e.g. xl. 1; xlv. 1; in "a blessed night", xlv. 1, i.e. like the *Kur'ān* of a single revelation). It is said in xv. 1, "these are the miraculous tokens (*āyāt*) of the scripture and of a perspicuous scripture", and in xxvii. 1, "these are the miraculous tokens of the *Kur'ān* and of a perspicuous scripture". On further consideration however there is a distinction between the two expressions. When we read xii. 1, "These are the miraculous tokens of the perspicuous scripture and we have sent them down as the Arabic *Kur'ān*", cf. xx. 12, or "we have made the perspicuous scripture into an Arabic *Kur'ān*", xliii. 1 *sq.*, or, when the *Kur'ān* is called (x. 38) an exposition of the scripture of the Lord of Heaven, it is evident that *al-Kitāb* is the more comprehensive term and that it is "*Kor'ān*" in so far as its contents are revealed in a way intelligible to man. It was not the heavenly book itself that was sent down to Muḥammad, but portions of its contents in an Arabic form, and for this the word *Kur'ān* is used.

From its contents the *Kur'ān* is frequently called *Dhikr*, a word of several meanings, which in this case means admonition, warning, xxi. 24, 43; xxxviii. 87 etc. The *dhikr* also is sent down, xv. 6; xxi. 51; xxviii. 7 and is called "a noble scripture" in xli. 41; cf. "This is an admonition and a perspicuous *Kur'ān*" xxvi. 69. How the conceptions flowed into one another is seen in xxi. 7, where the "people of a scripture" (*Ahl al-Kitāb*) are called on one occasion *Ahl al-Dhikr*. *Al-Hikma* the wisdom, may be mentioned here as it is not only associated with the scripture in ii. 123, 146; iii. 158; lxii. 2, but in ii. 231; iv. 113, there is a reference to its being

sent down, and in xxxiii. 34 to its recitation. On the loanword *furkân* see that article. A term peculiar to the Korân, the origin and original meaning of which is still obscure, is *Sûra*. It is used only for the separate revelations, while *Kurân* has sometimes a more comprehensive sense and is found in the Mecca as well as the Medina sections; for further details see the article *SÛRA*.

Smaller sections of the *Kurân* were called *āyāt*, plural *āyāt*. It means properly, like the related Hebrew word *ōš*, token, token of belief (ii. 249; iii. 36; xxvi. 197); and especially a token of Allāh's existence and controlling power, xii. 105; xxxvi. 33, etc., hence often "miracle" (iii. 43; xliii. 45 *sqq.*), and gives a very instructive glimpse into Muhammad's ideas and consciousness. In Mecca the demand of his opponents that he should give proof by some miracle of his credibility as a messenger of Allāh caused him serious difficulties. The gift of performing miracles, possessed for example by Jesus, was denied him but the revelations offered him a very good substitute, of the divine origin of which he was firmly convinced (vi. 158; vii. 202; xx. 133; xxix. 49 *sq.*). They were the only convincing miracles and thus received the name *āyāt*. They were sent down from heaven (ii. 93; xxviii. 87) to the Prophet of Allāh (ii. 253; iii. 51; xlv. 5) and proclaimed by him to men (ii. 146; iii. 158; lxxv. 1) as in former times by the Prophets (xxviii. 59): "Allāh proclaims his *āyāt*" (ii. 183); "the believers recite them in the night" (iii. 109); "the unbelievers dispute them" (xxix. 46, etc.). The only noteworthy point is that Muhammad when he expresses himself more definitely does not use the word like *sûra* of the revelations but only of the smaller parts of which they consist; e.g. "a *Sûra* which we have sent down with perspicuous *āyāt*" (xxiv. 1), "a scripture which we have sent down so that they may reflect on its *āyāt*" (xxviii. 28); "these are the *āyāt* of the wise scripture" (x. 1; xii. 1; xliii. 1; xxvi. 1; xxi. 1); "these are the *āyāt* of the *Kurân* and of a perspicuous scripture" (xxviii. 1; cf. xxvi. 1); "a scripture the *āyāt* of which are firmly linked together" (xi. 1; xli. 2) and especially "in the scripture and unambiguous *āyāt* and others which have several meanings" (iii. 5); and "if we abrogate an *āya* or consign it to oblivion, we put a better or a similar one in its place" (ii. 100); "if we exchange one *āya* for another", etc. (xvi. 103). Unfortunately one cannot see from such passages how large or small these component parts of the revelations were. Later scholars took them to be verses in the technical sense but this does not agree with xxx. 58 and other passages where the reference is clearly to divisions required by the sense without it being possible to define their length more exactly.

2. From what has already been said we can see how Muhammad regarded the origin of his revelations. They came from heaven and were taken from a well-guarded tablet (lxxv. 21), a concealed book only to be touched by the pure (lvi. 76), the "mother of the scripture" (the original scripture, xliii. 3; otherwise iii. 5). The book is called "an admonition on noble, lofty, pure leaves through the hands of noble scribes" (lxxx. 11 *sqq.*; cf. lii. 2, where Muhammad swears by a scripture written on unrolled parchment, and lxi. 2: "by the reed-pen and what it writes", xcvi. 4 *sq.*:

"with the reed-pen he taught men what they did not know"). The Prophet did not become acquainted with the whole of this book but only with isolated sections of it, which were given to him in Arabic dress: "Proclaim", it is said in xviii. 26, "what is communicated to thee of Allāh's scripture; no one may alter its words", and in iv. 162; xl. 78, he says expressly that Allāh told him of some of the Prophets but not of all. Nevertheless, we can obtain from the revelations given by Muhammad an idea of the heavenly scripture, from which they are taken, for it is apparent that it contained a similar mixture of instruction dealing with the being of Allāh, the creation of the world and especially of man, good and evil spirits, the coming judgment, paradise and hell and the experiences of the older prophets, and in addition all sorts of regulations regarding the worship of Allāh, and the life of the community, including quite special laws (iv. 104, 126, 139; xxxiii. 6). The field of cosmology is touched on in the reference to the twelve months (ix. 36), the temptation of man by Satan in xxii. 4. But further perspectives are opened up when it is said that the heavenly book comprises all that has happened in the universe and will happen (x. 62; xxii. 69; xxvii. 77; xxxiv. 3; vi. 38, 59; xi. 8; cf. xx. 53 *sq.*; lv. 57; xxxv. 12; xvii. 60, etc.); even if the Muslims had remained in their houses at the battle of Uhud, those who were destined to die would have been attracted to the places where they were to fall (iii. 148); (cf. my essay in the *Haupt-Festschrift*). The *Kurân* contains only a few and very obscure hints regarding the process of communication of the revelations; it is wrapped in a secrecy which Muhammad either could not or would not illuminate. It is not from the *Kurân* but from reliable *hadīths* that we learn something about the half diseased ecstatic conditions, with which he was overcome (cf. the article MUHAMMAD); the revelation lxxiii. 1; lxxiv. 1, at most might contain only a slight reference to them. The main thing was however, as already observed, not what he saw but what he heard, which is also emphasised in the descriptions of the visions (liii. 10; lxxxi. 19) that he had visions is evident from liii. 5 *sqq.*; lxxxi. 23 *sqq.* It was the voice of Allāh that with a few exceptions talked to him in the stereotyped "we" and stamped even what the Prophet had to say by a prefixed *kul* "say!" as a divine utterance. But he did not hear this divine voice directly — for this his conception of Allāh's superiority was too great — but through the intermediary of the "spirit" or of an angel, according to the later passage ii. 91, Gabriel. "The trustworthy spirit brought the revelation down into the heart of Muhammad (xxvi. 192 *sq.*); "the spirit of holiness brought it down from Muhammad's Lord with truth" (xvi. 104); "Allāh sends the angel down with the spirit of (? *min*) his word to whom He will" (xvi. 2); "The Lord of the throne sends the spirit of his word to whom he will of his servants so that he may admonish" (xl. 15); "We have revealed to thee a spirit of our word" (xlii. 52), — all somewhat obscure expressions, which are not made any clearer by the fact that the spirit is in other passages (lxx. 4; lxxviii. 38; xcvi. 4) associated with the angels, but which at least show that the Prophet had formed some idea for himself of the

"How?" of the revelation. It is also certain that one particular revelation must have had decisive importance for him, without doubt the one by which a prophetic mission was imposed upon him. Ramaḍān was later chosen as the month of the fast because the Qur'ān was sent down in it (ii. 181); "the perspicuous scripture was sent down in a blessed night" (xliv. 2 *sqq.*), namely in the "night of all-power" in which the angels and the spirit at their Lord's command descended on account of every matter (to be settled) (xcvii. 1 *sqq.*) (Schaade proposes to read *tunazzilū* — they bring down commands of all kinds) — apparently a late offshoot of the old Babylonian idea of a day on which the events of the year were settled. That Muḥammad was able to distinguish the words heard by him from his own thoughts is evident from xx. 113; lxxv. 16 *sqq.*; lxix. 44 *sqq.*; x. 16 *sq.*; vii. 202, just as it is in general certain that he was firmly convinced of the reality and truth of his revelations (see MUḤAMMAD). Like the earlier prophets (xx. 51) he had to fight with the whisperings of Satan (viii. 199; xxiii. 99; xli. 36) and that these sometimes endeavoured to mingle with the revelations seems to be indicated by xvi. 100. To protect himself from these he sought protection with Allāh, but a reliable tradition reports that at least once he allowed himself to be tempted by Satan to recognise the Meccan goddesses al-Lāt, al-'Uzzā and al-Manāt to some extent. But he afterwards discovered his error, whereupon the revelation is said to have received the form now found in liii. 19 *sqq.*

It would certainly be wrong to identify those inspirations received under these mysterious conditions with what we now read in the Qur'ān. Even the oldest short Sūras which might have been heard by him in their present form very probably received their present form with rhymes etc., in a later recasting. At any rate this is evident in the later long sections, like the histories of the prophets or the reproductions of dialogues between Muḥammad and his opponents, where of course his answers can only be based on inspirations. An exact distinction between the auditions of the Prophet and their later formulation is however an impossibility, although it may be assumed that the former consisted essentially of fundamental ideas and suggestions which the Prophet afterwards developed.

3. A special feature of the revelations which much occupied Muḥammad himself and his opponents, was that they were communicated piecemeal, although they existed complete in the heavenly book (xvii. 107; lxxvi. 23): "The unbelievers say, why was the Qur'ān not sent down to him as a whole? We wished to strengthen thy heart thereby and we arranged it in this way" (xxv. 34). That the breaking up of the Qur'ān into small parts was in reality connected with the fact that the separate revelations were provoked in Mecca by the attacks of the opponents, in Medina by political and other conditions, was a fact Muḥammad did not clearly realise and yet this circumstance had a decisive influence on the form and contents of the Qur'ān. Its striking incompleteness is connected with this. Nowhere do we find an exhaustive treatment of the principles of belief or of laws but the Prophet as a rule goes quickly from one subject to another according as conditions demand. In the Qur'ān we thus find for

example only a few scattered indications regarding the great pilgrimage so that it would not be possible to reconstruct the whole ceremony from the Qur'ān without the help of ḥadīths. In such cases one must always consider the possibility that ḥadīths antedate all sorts of later customs; and that this actually happened we see from the instructive example of the settling of the times of daily prayers. According to tradition, the angel Gabriel taught them to the Prophets but the Qur'ān talks only of two obligatory periods of prayer, to which ii. 239 adds the afternoon prayer (cf. ṢALĀT); when there is mention of the five times of prayer in Muḥammad's letter to 'Amr b. Ḥaṣm (Ibn Hishām 962), this is probably an indication of a later recasting of the text (cf. thereon Ibn Sa'd, iv., i. 159). That Muḥammad knew quite well that the full contents of the heavenly book had not been communicated to him is evident from the passages mentioned above, according to which Allāh had told him of some of the Prophets but not of others.

Of special significance for Muḥammad's own conception of the revelations is the distinction which he makes between them. Thus it is said in iii. 5 of the Qur'ān: "In it are unambiguous *āyāt* which are the mother of the scripture (its firm foundation, otherwise in lxiii. 3) and others which are ambiguous; those in whose hearts there is a tendency to err adhere to the ambiguous because they seek vexation and (arbitrary) exposition; yet no one knows the exposition except Allāh; but those who are strengthened in knowledge say we believe in it, everything comes from our Lord". The obscure passages which to the pain of the Prophet produced criticism and quarrelling, are ascribed to divine inspiration equally with the clear passages. But there are cases where the divine revelation not only abrogated principles of the earlier religions of revelation but even regulations which Muḥammad himself had proclaimed. How he reconciled this with the idea of an original scripture in heaven, the contents of which were revealed to him, is not easy to see, if he ever really reflected on the point at all; but in any case the idea itself that Allāh revoked and altered the announcements of His will caused him no difficulty. This is the doctrine, later thoroughly discussed by the theologians, of *nāsikh* and *mansūkh*, the abrogating and abrogated. There were special works on the subject, e.g. by Abu 'l-Ḳāsim Hibat Allāh b. Salāma (d. 410 = 1019) and 'Abd al-Ḳāhir b. Ṭāhir (d. 429 = 1038). The terminology goes back to ii. 100 where it is said with reference to the alteration of the direction at prayer, "if we abrogate an *āya* or consign it to oblivion, we offer something better than it or something of equal value"; cf. also xvi. 103: "if we put one *āya* in the place of another — and Allāh surely knows best what He sends down — they say "thou art simply romancing"', but this verse may also refer to unintentional variations in the repetition of earlier pronouncements.

If Muḥammad did not have quite a clear conception of these points of view, he was all the more sensitive when the Meccans pointed out that his wisdom was communicated to him by mortal teachers, some of them foreigners (xvi. 105; xxv. 5 *sq.*; xliv. 13). His defence on this point is very weak and he really concedes the justice of the charge. What he learned in this way was probably

transformed into indubitable divine words when it re-echoed in his fits of obscured mentality.

4. Among the most far-reaching of Muḥammad's conceptions is the idea that not only his mission but also the revelations of the earlier Prophets and the holy scriptures of the Jews and Christians were based on the original heavenly scripture so that they coincided in part with what he himself taught. The Qur'ān "was sent down in perspicuous Arabic language and it is in the scriptures of the ancients; is it not a sign that the learned men of the Jews knew it?" (xxvi. 195 sq.). The Qur'ān thus confirms what was earlier revealed (iii. 75; vi. 92; xxxv. 28; xlvii. 11, etc.). The law is given to Moses, the Gospel to Jesus, and in addition there is the Psalter which David received (iv. 161; xvii. 57). They all came out of the heavenly book and therefore the Jews and Christians are called *Ahl al-Kitāb*, the people of the (original) scripture. From such statements alone it can be seen that Muḥammad had no idea of the real contents of these books and that he can never have read them, so that it is labour lost to try to ascertain what is meant by the "leaves of Abraham", which are mentioned alongside of the leaves of Moses (liii. 37 sqq.; lxxxvii. 18 sq.), or the books which the Prophets brought according to xxxv. 23. The Qur'ān expressly confirms this position of the Prophet by the word *ummī* (from *umma*, like *laikos* from *laos*; according to Wensinck, *Acta Orientalia*, ii. 191, rather *ethnikos*, cf. however, ii. 73), i. e. a layman, who could not read the holy scriptures of the earlier religions of a revelation (ii. 73; iii. 19, 69). "Allāh has sent amongst the uninstructed a messenger from their midst, who proclaims his *āyāt* to them and teaches them the scripture and wisdom" (lxii. 2); "Thou didst not know what scripture or belief was" (xlii. 52; cf. xxix. 47). This idea of the essential identity of his teaching with the earlier books of revelation, is found all through the Meccan period and in Medina also he still adheres to it although with some modifications. He now regards the older religions in a more critical spirit and emphasises their differences from his own. The Jews only received a part of the "scripture" (iii. 22; iv. 47) and, what is more important, there are in their laws regulations which have only a limited validity like the observance of the Sabbath which is only binding on them (ii. 61; iv. 50, 153) or the forbidden foods which were intended as a punishment for the Jews (iv. 158; vi. 147; no doubt a medical interpolation; otherwise in v. 7). The main point however is that he defends himself against Jewish criticism by the assertion that in their scripture the Jews had forgotten (v. 16) or concealed (ii. 169), or actually corrupted all sorts of things. "They have perverted the words from their places" (iv. 48; v. 16, 45), and a similar charge is raised against the Christians because they worship Jesus as God and have introduced monasticism.

5. Although Muḥammad owed not only his general religious and moral ideas but certainly also the idea of God's revelation through prophets sent by Him to contact with Jews and Christians, or probably more correctly with the numerous sectarian offshoots of these religions settled in Arabia — his series of prophets, strange to Judaism proper, in which the regular prophets of the scrip-

tures are lacking, recalls somewhat the Clementine writings for example — his teaching developed in the early period, not according to Biblical models but in the style of the pagan Arab soothsayers with their oracles, formulae for blessings and curses, etc. In the introductions to the oldest sūras, he swears by the most remarkable things, by the fig- and olive-tree and by Mount Sinai (xcv. 1), by the heavens and the signs of the Zodiac, by the dawn and by the ten nights, by the double and the single (lxxxix. 1 sq.) etc. He also uses a form found with these soothsayers which gives the older parts of the Qur'ān a distinctive character. While he rejects with indignation the assertion of his opponents that he is a poet (xxi. 5; xxxvii. 35; lii. 30; lxix. 41; cf. also the verdict of the poets xxvi. 224 sqq.) and his discourses really have nothing in common with the productions of Arabic poetry of the time, highly developed as regards language and rhythm, he used after the fashion of the soothsayers, rhymed prose, *sadq*, which consists in two or more short sections of the utterance being linked together by a rhyme. In view of the constant suffix forms and endings and wealth of the vocabulary of Arabic, such sentences can be formed without much trouble especially as the finer rules of the rhymes of poetry do not apply to *sadq*. Muḥammad also used the *sadq* form with great freedom, frequently repeated the same rhyming word and used "false" rhymes. In his later revelations he became still more negligent in their application (cf. the material collected by Vollers, *Volkssprache und Schriftsprache im alten Arabien*, 1905, p. 15 sqq.; Nöldeke-Schwally, *Geschichte des Qorans*, i. 36 sqq.) so that Muslim scholars assert, not quite without justice, that the Qur'ān is not composed in proper *sadq*. Nevertheless this form may be used with caution for critical excisions (e.g. lxxiv. 31—34; lxxxv. 10 sq.) or emendations (e.g. lxxiv. 43, *djahim* for *saḥar*). Rhymed prose was of importance for the style of the Qur'ān as it enabled Muḥammad to use peculiar (e.g. xxxvii. 130; xcv. 2) or rare words (e.g. lxxxiii. 18 sq.) or even had a definite influence on the contents (e.g. the nineteen angels lxxix. 30, the eight, lxix. 17, the dual form, lv. 46 sqq. etc.). Among other artifices Muḥammad occasionally uses the refrain (e.g. sūra liv. and especially lv.) without however actually reaching a regular strophe formation. Among the rhetorical artifices may also be mentioned the frequent similes, as Muḥammad attributed a special value to them and reflects on Allāh's use of them (xiv. 30; xxiv. 35; xxix. 42; lix. 21; and notably ii. 24). The *amthāl* are as a rule simple comparisons which are not infrequently very effective and much to the point (e.g. xliii. 15, 18; xxiv. 39). In so far as they are taken from nature, it is made to appear in vii. 56; xliii. 18, as if Allāh had so formed the processes of nature as to express a moral lesson. In other cases the *amthāl* are taken from history, as warnings or inspirations (xiv. 47; xliii. 57; lxvi. 10 sq.); a remarkable simile is found in the "Light-Verse" (xxiv. 35) which is practically isolated in its strongly mystical colouring. On one occasion a simile is spun out into a regular parable (xviii. 31 sqq.), but it is rather spoiled by the confusion of the picture and the truth to be illustrated by it. That Muḥammad at any rate later heard something of the parables in the

Gospels is shown by xlvi. 29, from which however it can once more be seen that he possessed no real knowledge of the New Testament.

6. The language in which Muḥammad delivered his revelations was, according to the most natural assumption the Ḥidjāz dialect of the people of Mecca. The view put forward by Vollers that it was a purely popular speech, distinct from literary Arabic with its strict grammatical rules, so that the present text only came into existence as the result of a later revision, has been rightly refuted by R. Geyer and Nöldeke, as there is no support for it either in the oldest traditions nor in the evidence of language, although the inadequate reproduction in an alphabet of consonants does not exclude the possibility that the pronunciation on the lips of the Prophet may have offered all sorts of shades of variation. It might rather be asked whether Muḥammad may not have used the language in general use among poets; but this could only be settled if we had other specimens of language for comparison from the Mecca of the day. The style is quite different in the earlier and later parts of the Qurʾān, although it bears everywhere undeniably the stamp of the same individual. To Muslims the absolute perfection of the language of the Qurʾān is an impregnable dogma, the acknowledgment of which is not however easy to a reader with some stylistic training and a certain amount of taste. In the earliest revelations one is carried away by the wild fancy and grotesque presentation, sometimes also by a warmer feeling, so that it would be pedantic to lay much weight on faults in language or logic. In the later sections also higher flights are not lacking, for example when the Prophet expresses his admiration for the wonders of creation and of life; but as a rule his imagination soon exhausted itself and gave place to a prosaicism in which the slips in reasoning and style, a comprehensive catalogue of which has been made by Nöldeke, *Neue Beiträge zur semitischen Sprachwissenschaft*, p. 5 sqq., make quite a bad impression. The Prophet becomes fond of wearisome repetitions of long stories interspersed with religious and moral platitudes which have an unpleasing effect (cf. for example, "the most beautiful tale", Sūra xii.) or crude psychological explanations, or polemics which prove little to those who do not share his premisses. As an example, the naive argumentation iii. 39 may be quoted, in which he sees in the fact that he was not present, when the events narrated took place, a proof that it must have been communicated to him by revelation. We should however not forget that the really effective element in his preaching lay not in his speeches but in the unusually suggestive power of his personality and also that many weaknesses in his style may be explained by the fact that (like the Alexandrine translators of the Old Testament) he had first to create a language for ideas new and remote to his countrymen, a task for which he had apparently no special gift.

7. What was the exact state of the Qurʾān at the death of Muḥammad is a question that cannot be answered with absolute certainty. One thing only is certain and is openly recognised by tradition (al-Suyūṭī, *Itkān*, i. 71) namely, that there was not in existence any collection of revelations in final form, because, so long as he was alive, new revelations were continually being

added to the earlier ones. But, on the other hand, everything points to the fact that even then much of the later Qurʾān must have already been written down. In the early period of his mission his discourses were probably preserved as a rule in the memories of his hearers, after he had repeatedly delivered them, and, as the lasting importance of his words probably only gradually dawned on them, we must probably consider the possibility that a good deal has been lost, of the earliest revelations in particular. Passages like lxxvii. 6 sq.: "We will enable thee to discourse and thou shalt only forget what Allāh wishes", or ii. 100: "If we make thee forget an āya" (the reading *nan-sa'uhā* is of course a dogmatic correction), clearly suggest that the discourses in question were not written down. But it cannot have been long till they felt obliged to secure the revelations from Allāh by writing them down, and it is easy to understand that the material readiest to hand, like shoulder-blades, palm-leaves, stones, etc. were used, as we are told in the stories of the later collection of the Qurʾān. What we are told of the knowledge of the art of writing in Mecca and Medina (al-Balādhuri, ed. de Goeje, p. 471, 473; cf. Goldziher, *Muh. Stud.*, i. 110), is not of much value, although the story is not without interest that among the wives of the Prophet, Hafṣa and Umm Kulthum could write and ʿĀ'isha and Umm Salama could read but not write. There can be however no doubt that in a commercial city of the importance of Mecca with its international connections not a few were able to write more or less well — according to al-ʿAzrakī, *History and Description of Mecca*, ed. Wüstenfeld, p. 102, 3, etc., documents and bills were prepared there before Islām — and there were certainly not lacking either there or later in Medina people who wrote down Muḥammad's revelations. Whether the Prophet himself could read or write is therefore of minor importance, however eagerly this question has been discussed by Muslims, but only from dogmatic points of view and as a rule with an erroneous application of the term *ummi* already mentioned. From the Meccan passage xxix. 47, it might be concluded that he only learned late in life, but the expression is obscure and probably only refers to the reading of sacred texts. All the more important therefore is the passage xxv. 6, where his opponents say, "These are nothing but old fables which he writes down (or causes to be written down?) and they are dictated to him morning and evening". But such remarks refer rather to the matter collected by the Prophet, than directly to his discourses themselves. But when Muḥammad (xi. 16) challenges his opponents to produce ten sūras like his own, this undoubtedly presupposes that sūras were available for comparison in writing. This is still more clearly shown by the already mentioned formal abrogation of earlier utterances, which would not have been necessary if these had only been orally transmitted. In the story of ʿOmar's conversion (Ibn Hishām, ed. Wüstenfeld, p. 226 sq.) there is a reference to a page of writing, but not much stress can be laid on such details in tradition. When ruling in Medina, Muḥammad made several of his followers prepare a number of documents, several of which were preserved with a note of the writer (cf. also Wākidi, abbrev. transl. by Wellhausen, p. 35, on the Nakhla letter), and it is obvious that the same was the case with

the later revelations especially with such as refer to legal regulations. The traditions (Balādhurī, p. 472 sq.; al-Tabarī, ed. de Goeje, i. 1782) give the names of Meccans and Anṣār who helped him as secretaries, including two in particular, Ubaiy b. Ka'b and Zaid b. Thābit. According to a curious story, 'Othmān's foster-brother, 'Abd Allāh b. Abī Sarh [q.v.] often acted as Qur'ān-writer to him and he had the honour of having an enthusiastic exclamation of his on listening to the dictation of Sūra xxiii. adopted in it (Balādhurī, p. 473 and the commentators). According to other stories (cf. Wākidi, abbrev. transl. by Wellhausen, p. 55), he boasted before the Quraysh that he had often induced the Prophet to alter the wording of the revelations, whence it ultimately came to be said that he had falsified the Qur'ān (Goldziher, *Die Richtungen der islamischen Koranauslegung*, p. 35). Finally we may call attention to important evidence in a poem by Muḥammad's laureate Ḥassān b. Thābit after the battle of Badr (*Dirwān*, ed. Hirschfeld, p. 15, 1), in which he speaks of a *ḥaḥḥ al-wahy* on smooth page, which here must almost certainly mean the writing of a revelation (see Nöldeke, in *S. B. Ak. Wien*, 1900 on Labid, *Mu'allafā*, verse 2). What was officially written down in this way formed with the earlier private notes and what people had retained in their memories the Qur'ān in an embryonic state. The conflict of this state of affairs with some traditions (principal, Ibn Sa'd, ii/ii. 113 sqq.) according to which various people already collected the Qur'ān in Muḥammad's life-time is only apparent. The explanation is that *ḍjama'a* here, as usual elsewhere (e. g. *Fragm. Hist. Arab.*, ed. de Goeje, p. 275; cf. *Itkām*, i. 72) means "to learn by heart and know". The same is true of a tradition, later popular among the Shi'is, to the effect that 'Alī wished to avoid paying homage to Abū Bakr until he *ḍjama'a* the Qur'ān (Ibn Sa'd, ii/ii. 101, 17 sqq.; al-*Ikḍ al-farīd*, ii. 176) which originally meant simply "had learned by heart", but was later misunderstood. Lastly a passage may be mentioned which would be of the greatest importance for the history of the Qur'ān in the time of Muḥammad if it could be trusted. In the Prophet's letter of instruction to 'Amr b. Ḥazm (Ibn Hishām 961; cf. Sperber, *Die Schreiben Muḥammeds an die Stämme Arabiens, Mitteilungen des Seminars für orient. Sprachen zu Berlin*, vol. xix. 2, 83) it is laid down among other things that no one may touch the Qur'ān except in a state of purification; but Caetani, *Annali dell' Islām*, ii. 1, 319, note 1, is undoubtedly right in thinking that the regulations laid down in this document were in many cases formulated from a point of view of later date (cf. above, p. 1065b).

8. With the death of the Prophet the position was radically altered. The source of revelations ceased to flow, and the believers in cases of doubt had no one whom they might consult, as no one had inherited Muḥammad's prophetic gift. The discourses left by him thus acquired increased importance, for in them spoke the Prophet or rather God through him to his community, if they were able to interpret his words correctly. The task therefore naturally presented itself of collecting his valuable legacy in as complete and accurate a form as possible and preserving it from destruction. This obvious development is also confirmed by the traditions but unfortunately in a way

which leaves much obscure. The most popular view (see Nöldeke-Schwally, ii. 11 sq.) finds the stimulus to the first collection of revelations in the circumstance that many who knew the Qur'ān (*ḥurrā*, reciters; on the later meaning "pious ascetics", see Goldziher, *Vorlesungen über den Islam*, p. 189) had perished in the battle with the false prophet Musailima. This aroused in 'Omar the fear that all knowledge of the revelations might be lost wherefore he, although with some difficulty, induced the caliph Abū Bakr to begin the collection of the scattered discourses. The work was entrusted to the already mentioned secretary of Muḥammad, Zaid b. Thābit. He collected everything that was written on different, often primitive (cf. above), materials, and what people retained in their breasts (i. e. memories) and wrote it on separate leaves (*ṣuḥuf*, pl. of *ṣaḥifa*, written leaf), which he gave to Abū Bakr. After the latter's death, this book passed into the possession of 'Omar who bequeathed it to his daughter Ḥafṣa, the widow of Muḥammad. In this story the first thing that strikes one is that there is no reference to the official transcripts made by order of the Prophet himself, although they would at any rate have reduced the danger threatened by the death of the *ḥurrā*. Caetani moreover (*Annali dell' Islām*, ii/i., p. 713 infra) has called attention to the fact that those who fell in the battle with Musailima were, according to the lists, which have been handed down, mainly new converts, none of whom could be expected to have an extensive knowledge of the Qur'ān. If the whole story is thereby rendered uncertain, it becomes more important to note that there are other traditions, according to which it was 'Omar himself who ordered and supervised the collection (*Itkām*, i. 73) and indeed we are even told (Ibn Sa'd, iii/i. 212, 4) that 'Omar died before the task was completed. As it is easier to understand how such a pious work could have been antedated than that it could have been transferred from Abū Bakr to his successor, the second story is perhaps somewhat more probable, although the mechanical way in which 'Omar is said to have tested the genuineness of the separate parts (if they were known to two authorities) does not sound very trustworthy. Zaid's participation in the work remains the one thing certain in the stories and on the other hand the realistic feature that the *ṣuḥuf* came into the possession of Ḥafṣa. But this very point raises other difficulties. If the *ṣuḥuf* was to be an authorised standard codex it is difficult to understand why it was given to a woman. G. Weil thinks that Ḥafṣa was to take care of it but this could have been more safely done in other ways; and if it was to be a standard MS. from which copies could be made, it was quite inconvenient to leave it with Ḥafṣa, as not every one had access to the widow of the Prophet. There is never any reference to any authorisation. The whole business was done in a spirit of great freedom, as we hear of several variant versions of the Qur'ān from the pre-'Othmānic period. The only solution of the difficulty may be in the hypothesis suggested in the next section, that a distinction should be made between the simple material collection of the *ṣuḥuf* and a regular arrangement and editing by Zaid of the sūras contained in them. If this is so, the "leaves" would lose any real importance and it is not

difficult to believe that they might be given to 'Omar's daughter as a gift of honour.

9. The men to whom particular editions are ascribed were the already mentioned Ubaiy b. Ka'b (Ibn Sa'd, II/ii. 103; III/ii. 59—62), 'Abd Allāh b. Mas'ūd (see IBN MAS'UD), Abū Mūsa 'Abd Allāh al-Ash'arī (see AL-ASH'ARĪ) who became famous in the story of 'Alī, and Miqdād b. 'Amr (see Ibn Sa'd, III/i. 114—116). All these recensions gradually disappeared after the authorisation of 'Othmān's Qur'an; but several very valuable items of information regarding the first two are given in the *Fihrist*, ed. Flügel, p. 26 sq. and in *al-Itkān*, i. 80—82, which throw some light on the oldest phase of the history of the Qur'an. They had the same sūras as 'Othmān's Qur'an but in a somewhat different order and with the important difference that Ubaiy had two additional sūras (prayers recalling Sūra i.) while in Ibn Mas'ūd, Sūra cxiii. and cxiv. and probably also Sūra i. were not given. Besides these recensions there was a further one, on which 'Othmān's edition was later based, and which is associated with the Zaid already mentioned. If, as Schwally does, we tried to identify Zaid's edition with the *ṣuḥuf*, it would be difficult to understand the divergencies of the other recensions in view of the former's prestige. Besides, the name "the leaves" suggests rather a loose collection of separate leaves, and not a definite arrangement of the portions. This is definitely expressed in another tradition, according to which Zaid collected the sūras with much difficulty in no particular order (Nöldeke, *Geschichte des Qorāns*, p. 195). These difficulties are not easily disposed of by the assumption that Zaid after collecting the *ṣuḥuf* prepared an edition of his own with a definite order of the Sūras, which added a fifth to the already mentioned four editions, one by which the others did not feel themselves bound. The Sūras in it were, as in Ibn Mas'ūd and Ubaiy, arranged on the principle of decreasing length; but it was only a general principle (taken from Jewish examples?) the details of which were left to the individual. Zaid's version later received authoritative importance, when it was used as the basis for 'Othmān's Qur'an. A further light might be thrown by a phenomenon which, although in itself exceedingly obscure, seems to permit some significant deductions. We refer to the mysterious letters, discussed more fully below, which are found at the beginning of about a quarter of the Sūras. In this connection Nöldeke and following him H. Hirschfeld and more recently especially H. Bauer, *Z. D. M. G.*, lxxv. 1 sqq., have called attention to the fact that some of these letters are repeated before several sūras and that these sūras form little consecutive series. Thus HM is found before xl.—xlvi. (according to Bauer originally before xxxix. also; before xlii. with following 'SK), 'LR before x.—xv. (before xiii., 'LMR), 'TSM before xxvi.—xxviii. (before xxvii. however without M), 'LM seems to be an exception, as it is found not only before xxix.—xxx. but also before ii.—iii.; but we can easily see that the reason is that the order in this case is upset by the principle of decreasing length, by which the sūras already mentioned are placed at the head of the collection while the others being shorter are placed later. This remarkable phenomenon can have only one explanation, namely that these groups formed

little separate collections, which Zaid found already formed and would not break up. Bauer has also called attention to the interesting fact that Ibn Mas'ūd did not feel himself bound by them but inserted the separate components approximately where they belonged from their length, with the exception however of the HM group which he left together, although in a different order. It seems therefore to have had a particular significance for him which is also indicated by the fact that he called this group *Dibādī al-Qur'an* (see *Itkān*, i. 71; cf. the article *Dibādī*, in Lane, s.v.); Ubaiy on the other hand paid no attention to the small series but arranged all the sūras according to their length, although in a very inexact fashion. We see then that there were links between the separate scattered sūras and the *ṣuḥuf*, small collections probably of a purely private character. This gives us definite evidence that the collection in its present form cannot go back to the Prophet himself.

10. On the other hand, it is a very difficult question whether the sūras which Zaid found were given the form in which we know them by the Prophet himself or whether other hands intervened. That the oldest, quite short, revelations are original units is generally recognised. This is also true of several longer ones, especially xii. which forms a connected story or of Sūra lv. with its refrains. Nöldeke moreover rightly utters a warning against assuming that whenever the thread of continuity appears to break, we have the work of a later hand, as abruptness and lack of co-ordination is really characteristic of Muḥammad's style. There are also certainly small pieces of later periods which the Prophet himself may have inserted for some reason in older pieces. In other cases, however, we have the impression that various accidents, which we can no longer know of, may have played their part in the shaping of the Sūras, among them perhaps the circumstance that several short discourses might have been written on the same piece of material, which would simply explain, for example, the transitions from xcvi. 5 to v. 6, or from lxxiv. 10 to v. 11. The most difficult thing is undoubtedly to suppose that Muḥammad himself composed the unusually long second Sūra in which we find in the middle of speeches of the second year A.H., without any explanation, pieces from the Meccan period (v. 19—37, 158—166) and also of the later Medīna period. That the beginnings of the Sūras (with perhaps the exception of xlvi., lxxi., xcvi., cviii. which begin with *innā*) regularly coincide with the actual beginnings of the revelations is proved by the introductory conjurations or formulae like "These are the *āyāt* of the Book" or "This is the Book", or "See, a Sūra, which we have sent down, etc.". But the next question is whether such exordiums refer to the whole Sūra or only to what immediately follows, to which the rest may have been later joined; cf. e.g. the introduction xix. 1, which only fits the story of Zakariyā and Maria while, on the other hand, the formula v. 16 is adopted in v. 42, 52, 55 and 57. In brief we are here unfortunately usually confronted with questions which cannot be answered with certainty, however important the correct answer would be for an understanding of the Qur'an.

11. With the reign of 'Othmān we enter upon more solid ground. According to a statement of Ibn al-Athīr (ed. Tornberg, iii. 86) the four

recensions mentioned above found acceptance, each in a particular region: Ubaiy's in Damascus, Miḡdād's in Ḥims, Ibn Mas'ūd's in Kūfa and al-Ash'ari's in Baṣra; support is given to this statement by the fact that the two last named held offices in the provinces mentioned. That the existence of several divergent versions would produce uncertainty is easily understood. We are told in a widely disseminated tradition that the general Hudhaifa thought that the quarrels among his followers about the correct form of the sacred book, while on a campaign in Armenia and Aḡhar-bāiḡdjan, were dangerous and asked the Caliph 'Othmān to try to abolish this unfortunate state of affairs, so that believers might not quarrel like Jews and Christians over their scriptures. The Caliph recognised the justice of the request and asked Ḥaṣṣa to let him have the *ṣuḡuf* for a time so that copies might be made of them (*nasakhūhā fi 'l-maṣāḡif*). Ḥaṣṣa agreed and the Caliph entrusted the task to a commission consisting of Zaid, already mentioned, 'Abd Allāh b. Zubair [q. v.], Sa'īd b. al-ʿĀṣ (Ibn Sa'īd, v. 19—24) and 'Abd al-Raḡmān b. al-Ḥārith (*ibid.*, v. 1 sqq.). Other individuals are also named but the usual tradition appears the most reliable and in any case it may be considered practically certain that Zaid, on account of his previous services, shared in the work. From the attitude which 'Abd Allāh and his father al-Zubair soon afterwards took up towards the Caliph, one might perhaps suppose that the members were chosen, not so much by the Caliph in person, as by a wider circle. Besides it is not easy to see clearly what their work really was. If they had only to make copies of a standard text, reliable scribes would have sufficed so that the men named would at most exercise some sort of supervision over the work. According to the tradition, they were to retain the Kuraishī dialect in cases of doubt, but this probably only reflects a later notion of the dialect of the Qur'ān. Further they could not have made clear fine distinctions of pronunciation with the imperfect Arabic alphabet. At any rate the most important point is that the version of 'Othmān was based on the *ṣuḡuf* or as just explained on Zaid's edition of them, so that we can in this way gain some idea of the contents and form of this basic manuscript. We are next told that of the copies then made, one was kept in Mecca, while three were sent as standard texts to Kūfa, Baṣra and Damascus, that is practically to the regions in which the four differing versions above mentioned were current. Mecca however is added and other authorities give a large number (cf. Nöldeke-Schwally, ii. 112 sq.). The authorised edition was readily accepted everywhere; the people of Kūfa alone are said to have refused to give up their Ibn Mas'ūd. Against the accuracy of the whole story, it might perhaps be urged that a knowledge of the Qur'ān and interest in its correct form must really have been much too slight among Muslim soldiers in this period of the great wars of conquest to give rise to dissensions in the army. But on the other hand, it may be recalled that in the fighting which soon afterwards broke out between 'Alī and Mu'āwiya, there is mention of Qur'ān-readers (*ḡurra'*), not only among 'Alī's troops but also among the Syrians (al-Dinawari, ed. Guirgass, p. 175, 204; cf. the article *ṢIFFIN*); the very fact that there were different versions of

the Qur'ān in Syria and in al-ʿIrāḡ must have given rise to comparisons and disputes. Whether the Caliph, as we are told in the different traditions, had the extant differing versions burned, torn up or obliterated, has been doubted by Schwally and not without reason, especially as such steps would have been quite ineffectual against the Qur'ān-reciters who carried the sacred texts in their memories. In any case the alleged destruction cannot have been completely carried out, for according to al-Muṭarrizī (in Lane, s. v.), Sulaimān al-A'mash could recite the whole of the Qur'ān (cf. KHATM) according to both 'Othmān's and Ibn Mas'ūd's versions and the author of the *Fihrist* even asserts that he had seen a two hundred year old copy of the Qur'ān according to Ibn Mas'ūd (cf. the obscure statements in Nöldeke, *Gesch. d. Qur'āns*, 1st ed., p. 276 sq.). Even without any such drastic measures, the new version must have gradually driven out the variants because of its official authority and the general desire for uniformity. It was in this way that there came into being the authorised Qur'ān, which has remained generally authoritative to the present day and in spite of all vicissitudes has formed, with the Sunna, the solid foundation for Muslim life and thought. It differed from Ubaiy's Qur'ān by the omission of the two sūras only found in his version, while it was a little larger than Ibn Mas'ūd's Qur'ān, which omitted Sūra cxiii. and cxiv. and probably also Sūra i. (see Nöldeke-Schwally, ii. 39 sqq.). While its order generally, with the already mentioned exceptions was based on the principle of decreasing length, the first sūra, the celebrated *fātiḡa*, stands outside of this arrangement, apparently because it was intended to serve as an introductory benediction and prayer. It is specially noteworthy because of its lack of any distinctively Muslim thought and the presence of Jewish and Christian terminology. Sūra cxiii. and cxiv. are not the shortest and are thus not in their proper place, but it is hardly necessary to lay much stress on this point. Although they are made into utterances of Allāh by the prefixed *ḡul*, these formulae for protection against evil powers (cf. xvi. 100; xli. 36) are very different in character from the rest of the Qur'ān. In these circumstances the omission of the three sūras in Ibn Mas'ūd becomes significant and the question arises whether they do not represent a secondary arrangement of the sūras about the origin of which nothing definite can be said, whether the work of the Prophet himself or others.

12. This leads to a further and very important question, whether all the revelations in the authorised Qur'ān come from Muḡammad himself or whether foreign matter has been added or passages forged for propagandist purposes. As a matter of fact, there has been no lack of such assertions, in the Muslim world and by modern scholars. The arguments brought forward on this point, within Islām, are however of no real importance as they are based on purely dogmatic premisses. For example, some of the puritanically-minded Khāriḡjis are said to have rejected Sūra xii. as a love-story unworthy of the Qur'ān (al-Shahrastānī, *Kitāb al-Milāl wa'l-Nihāl*, ed. Cureton, p. 95 sq.). But it so undeniably bears the stamp of the Prophet's style that the forger must have had an astonishing power of imitation: forgery is all the more improbable as

the Sūra was found in Ibn Mas'ūd and in Ubaiy and must therefore have been very old. The fact, that some reject as false passages those in which Muḥammad curses his opponents is due to the more refined religious ideas of the Mu'tazila and perhaps to Christian influence. But in general it is the Shi'is who have pronounced against the integrity of the 'Oṭhmānic Qur'an. This however was only a result of the fact that they missed very much in it pronouncements on the prominent position of 'Alī and his family and their claims to sovereignty and to the coming forth of the hidden Imām at the end of the world; and they roundly insisted that all this had been most maliciously suppressed by the godless 'Oṭhmān. In support of this assertion, they very cleverly point to the undeniable lack of coherence in several sūras, but the situation is not improved by filling the gaps with references to 'Alī. But not only are odd verses said to have been suppressed but whole sūras, which glorified 'Alī, only two of which have been published, the sūras *al-Nūrāin* and *al-Walāya* (see Nöldeke-Schwally, ii. 102 sq.; Goldziher, *Die Richtungen der islamischen Koran-anslegung*, p. 271). As there is no agreement among the Shi'is themselves regarding the genuine form of the book of revelations, the attempts made by them to produce the complete text have regularly failed, and they have therefore retired to the safe position, that the authentic form is secretly transmitted by each imām to his successor, to be communicated with the true exposition to the believers ultimately on the coming forth of the hidden imām. Till then, *faute de mieux*, they use the 'Oṭhmānic Qur'an and make shift with an exegesis which enables new interpolations to be made unrestrictedly, and arbitrary alterations in the text, which however they refrain from in all passages used liturgically.

Several modern scholars have endeavoured in a different fashion to prove the occurrence of passages in the Qur'an which are not genuine. Thus de Sacy (*Journ. des Savants*, 1832, p. 535) suggested that 'Omar's doubt about the death of Muḥammad would have been impossible if the verse quoted against it (iii. 138) by Abū Bakr were genuine, so that it must have originated with Abū Bakr. G. Weil agrees but, as a logical result, he rejects a series of verses of similar content (iii. 182; xxi. 35 sq.; xxix. 57; xxxix. 31 sq.). But it is just this increase in the number of passages attacked (which even yet is not sufficient, cf. e. g. vi. 163 and notably xxxiii. 53) which makes criticism unreliable and what is to be deleted is in perfect keeping with what Muḥammad says out of his purely human nature. The question is usually attacked from the wrong side, for the fault is not in the Qur'an but in the tendentious tradition, which in reality is attacking the belief that crops up in a disappearance off and return of the Prophet; cf. especially the antitheses between the worship of Allāh and of Muḥammad. Weil's doubt regarding xvii. 1 and xlv. 14 is no better founded, nor are H. Hirschfeld's objections to v. 73, 101; lxi. 6 and all passages in which the name of Muḥammad occurs. When Weil in particular asserted that 'Oṭhmān falsified the Qur'an by all sorts of omissions, this is refuted, like the Shi'a charges before mentioned, by the simple fact that nowhere in the oldest records is there any hint of such a thing although

his opponents collected a long list of charges against him.

13. Another question is raised by the additional sūras in Ubaiy's recension, which, according to *Itḥān*, i. 82, are also found in Abū Mūsā's version and in the Qur'an of Ibn 'Abbās: do we really have in the authorised Qur'an all the revelations in existence at the death of Muḥammad? Although by the completion of the collection, the utterances that came from the heavenly book and Muḥammad's own words were rigidly limited there are references in the traditions to several utterances which really belonged to the Qur'an but were not included for various reasons, including some that are said to have been in the Qur'ans of Ubaiy and Abū Mūsā; cf. Nöldeke-Schwally, i. 234—261; ii. 44 sq. and thereon al-Ṭabarī, ed. de Goeje, i. 1627, 10, and the glossary under *ḥ'*. We need not reject this statement off-hand. It would really not be surprising if the difference between the two kinds of pronouncements was at first not rigid, especially in so far as they were only preserved by memory. But nowhere is the genuineness of the revelations said not to have been accepted conclusively proved; of some the falsity is much more probable and it must be further remembered that they would not contribute any real addition to the Qur'an. The best known is the so-called "verse of the stoning" (*āyat al-radīm*) according to which incontinence in women not virgins can be punished by stoning. As regards matter it might well belong to Sūra xxiv.; but it is in direct contradiction to its second verse and on the other hand it cannot be included among those abrogated, as, according to the traditions, 'Omar punished this crime in this drastic fashion. It seems therefore to be a secondary verse intended to authorise the more severe punishment.

If a critical examination of the Qur'an on these lines leads to a satisfactory result, it must not be taken to mean that the canonical Qur'an gives an absolutely true and faultless reproduction of the utterances of the Prophet. On the contrary it undoubtedly contains not a few explanatory additions (cf. e. g. the probably secondary *ḥabir*, ii. 216) and harmless interpolations (cf. e. g. A. Fischer in the *Nöldeke-Festschrift*, 1906, p. 33 sqq. whose arguments however are hardly cogent). Transferences of sentences may also have taken place, cf. the striking example quoted by Goldziher, xxiv. 60a, which breaks up the context. But this is something quite different from a deliberate and tendentious falsification of the revelations, against which protests would certainly have been raised at once.

14. The Sūras were originally separated from one another by the *basmala* ("in the name of God, the Merciful, the Compassionate") placed at the beginning of each (see vol. i., p. 672). It is only lacking in Sūra ix., probably because Sūra viii. was originally joined to it. In the text itself, the formula is found in xxvii. 30 at the head of a letter from Solomon to the queen of Saba, a proof that the Prophet regarded it as a regular form of introduction. In keeping with this, is the fact that it often occurs in his despatches (Ibn Sa'd, ii. 23—37 *passim*) and according to Ibn Hishām, ed. Wüstenfeld, i. 341, at the beginning of the ordinance of the community. But he also used the older formula: "in Thy name",

Allāhumma (Ibn Sa'd, ii/i. 19, 14; cf. Ibn Hishām, p. 747 on the treaty of Hudaibiya). It therefore doubtless opened the sūras which the Prophet himself had caused to be written down and was then placed at the beginning of all the sūras. The order of the sūras in 'Othmān's Qur'ān was probably already the present one. That there were variations however is evident from the story of the revolution against 'Othmān (al-Ṭabarī, ed. de Goeje, i. 2963) in which we find the tenth Sūra quoted as the seventh, which agreed with the order in Ibn Mas'ūd and Ubayy. According to the *Itkān*, i. 79, Ibn 'Abbās also described the tenth Sūra as the last of the seven "long ones", but this perhaps refers not to its position in the Qur'ān but in relation to the actual long sūras. In any case al-Ṭabarī in *Tafsīr* (see *Z.D.M.G.*, xxxv. 598) quotes a tradition going back to the Prophet himself, according to which the Qur'ān was divided as follows: the seven longest sūras, iii.—vii. and x., the *mī'ūna* (sūras of about 100 verses), the *mathānī* and *al-mufaṣṣal*, the short sūras which begin with xlix. The name *al-mathānī* apparently goes back to the very variously explained "seven *mathānī*" of xv. 87 in which Geiger and Nöldeke see the Aramaic *matnā*, Hebrew *mishnā*.

15. Immediately following the *hasmala* we have in 29 sūras the mysterious letters already mentioned (*al-fawātiḥ*) which have challenged the ingenuity of Muslim and modern European scholars alike. The sūras in which they occur belong with the exception of sūras ii. and iii. to the later Meccan period. There are 14 letters in all that occur, sometimes singly, sometimes from 2 to 5 together; some occur only once, others are repeated, before two, five or six sūras. All recollection of their real significance had been lost as the great variety of explanations proffered shows (see *Itkān*, ii. 10 *sqq.*; *Z. D. M. G.*, xxxv. 603 *sqq.*). Some Muslims see in them simply letters of the alphabet, intended to call the Prophet's attention to the approach of a revelation, while others tried to explain them from the old numerical value of the letters (cf. vol. i., p. 68 *sq.*); or they were read with the names of the letters *yā, sīn, kā*, etc., and all kinds of mystical names were found. The most popular explanation was that they were abbreviations which had to be expanded, thus for example *khy'ṣ* would stand for *karīm, hūdī, ḥakīm, 'alīm* and *ṣādīq*. But this offered such a wealth of possibilities that the attempts to solve the problem degenerated into a kind of game, which became all the more varied when some proposed to place the letters from different sūras together and read for example: *ṣl, ḥm* and *n* as *al-Rahmān*. It is no wonder then that in the end some, like al-Suyūṭī saw in the letters a mystery, the solution of which Allāh kept a secret to himself. Modern scholars have in part repeated these old suggestions. Nöldeke, abandoning his earlier view, suggested that the Prophet attached no special significance to these letters, but only intended to give a mystic reference to the heavenly original text. But in this case they should have been found before all the revelations and not only before a smaller part of them. The most popular theory more recently has been that of abbreviation, but this has developed into the same kind of guesswork as among the Muslims, and rarely convinces anyone except the ingenious inventor. Quite recently H. Bauer in the essay al-

ready mentioned has sought a safer basis for interpretation, starting from the fact that some sūras take their name from the introductory letters, viz. xx., xxxvi., xxxviii., l., xlii. and lxviii., the two latter however with variants. Now as the names of the sūras are catchwords taken from the sūras concerned (see below), he supposes that these letters are something similar. But this conclusion is by no means certain and his ingenious attempts to find the passages concerned in the sūras are, as a rule, not very convincing and it should be remembered also that he cannot apply this explanation to the letters that occur before several sūras, but has to be content with seeking an internal or external relation between these sūras and the letters. The same may be said against Gossen's attempt in *Der Islām*, xiii. 191 *sqq.* H. Hirschfeld revived Nöldeke's earlier explanation that the letters were originally marks put on by the owners of some of the manuscript copies made by Zaid to show they were their own property, except that he regards the group of letters not as single names (e.g. *ṭh* for Ṭalḥa) but names of several owners (e.g. *ṭh* for Ṭalḥa and Abū Huraira). In comparison with earlier suggestions, this strikes one as very moderate and un fanciful. Nor is it refuted by Nöldeke's argument that such abbreviations are not to be expected in the beginnings of written Arabic literature; for it is not at all improbable that the people of Mecca with their highly developed trade may have marked, e.g. in the annual trading-caravans the goods of individual citizens taking part in them in some such way, and that this custom was adopted in another branch of life, where it was necessary to guarantee the genuineness of a document or some such thing. It might also be possible that there was an imitation of the Jewish practice, cf. the article "Abbreviations" in the *Jewish Encyclopaedia*. In any case this hypothesis would agree very well with the above discussed connection of the letters with small private collections of copies of the revelations. But even this view does not lead to any final result, as the expansion of the letters to names offers so many possibilities.

16. Among the secondary elements in the Qur'ān are the names of the Sūras. These are catchwords which refer either to the beginning of the sūras (e.g. lxxiii.—cxii.) or to some subject dealt with in them (e.g. "The Cow" in ii. 63 *sqq.*; "The House of 'Imrān" in iii. 30; "Hūd" in xi. 52 etc.). That they were generally known in the first half of the eighth century is certain, as some of them are mentioned by John of Damascus (in Migne, *Patrol. Graeca*, xciv. 769, 772); viz. "the Cow" (Sūra ii.), "the Women" (Sūra iv.), "the Table" (Sūra v.) and in addition a name no longer found, "the Camel", which might refer to vii. 71—75, xi. 67 *sq.* or xxvi. 155 *sqq.* This however does not prove that they were already adopted in the manuscripts at this time; and that they do not all come from Muḥammad himself, as John says, is evident from their varying (Sūra ix. for example is also called *al-Ṭawba*: cf. *Itkān*, i. 66 *sq.* and the above notes on Sūra xlii. and lxviii.). Besides, they originally ran "the sūra in which the cow is mentioned" etc. and appeared in the manuscripts not as super but as subscriptions (Nöldeke, *Geschichte des Qur'āns*, p. 320). The two non-canonical sūras of Ubayy had similar names, *Sūrat al-Khāl* and *Sūrat al-Hafd*.

The sūras were divided into "verses", which were called *āyāt*, following the linguistic practice of the Qur'ān already mentioned. They are generally arranged according to the rhymes, but as the divisions were originally not marked in the manuscripts, there is a difference of opinion about their divisions and numbering (see *Itkān*, i. 83 sq.; Nöldeke, *Gesch. d. Qorāns*, p. 300).

17. Although the 'Othmānic Qur'ān prevailed over its rivals, it did not provide for the Muslim world a real *textus receptus*, and yet one would think that, if ever one were necessary, it would be for such a book as the Qur'ān, as Allāh speaks in it everywhere. Even 'Othmān himself, according to one story (al-Ṭabari, *Tafsīr*, iv. 24), did not adhere to the text authorised by him, but read Sūra iii. 100 with an addition not now found in it; and if this is correct, it is no wonder that others took still greater liberties. Various circumstances contributed to the continual variations in the form of the text. First there was the carelessness of the few trained copyists; even the copies of the Medīna standard codex (al-Imām) sent to the provinces are said not always to have been identical with it, and lists are given of Medīna, Damascus, Baṣra and Kūfa readings, to which a few from Mecca are added. These refer however only to minor points, which are of interest for the history of the language and orthography, but not for the matter. The cause of variation in the text was of greater importance, namely, the different readings which the *Kurra* retained in their memories and would not always abandon, even when they had a written Qur'ān before them. These are primarily readings which were found in the rival versions and had thus gained currency. Finally there was a third factor, the deficiencies of the Arabic script. It lacked not only signs for the short and to some extent for the long vowels, the pronunciation of which was left to the reader (which meant, for example, also the choice between active and passive) and for double consonants, but different consonantal sounds were expressed by one character, e.g. *d* and *dh*, *h* and *kh*, etc., and in the degenerate Arabic script, very different letters had come to assume the same form, so that for example *r* and *z*, *b*, *t* and *th* and at the beginning or in the middle of a word *n* and *y* also were indistinguishable. In any case the sense was little affected by such however possibilities, e.g. xxxii. 9, where it was a matter of indifference whether one read *ḡalilnā* or *ḡalīlnā*; but in other cases a different pronunciation was a matter of moment, e.g., v. 8, where the alteration of a case-ending modifies the rule about ablution before prayer. Such possibilities afforded a means by which perplexed spirits could get rid of various passages that offended them, e.g. xii. 10 where in place of the troublesome *kuḏhabū*, *kuḏhibū* or *kuḏhdhibū* could be read. In this way there arose a perplexing confusion of readings and in place of the striving for uniformity that one would have expected, people became accustomed to unlimited liberty in these matters, so that they did not hesitate to substitute for particular words, their synonyms or to insert short explanatory additions. This freedom was all the more unbridled in its development, as the Umayyad caliphs had little feeling on such questions and preferred to take care that passions were not aroused by state interference in such matters.

18. Gradually however, the situation came to arouse misgivings. As by this time the state of affairs just described had developed to such an extent that the preparation of a canonical text was not to be thought of, and there was, besides, no authority who could enforce the adoption of one, the endeavour was made to eliminate the worst defects by more general principles. Not every variant was allowed, but only those which were based on recognised authorities, preferably such men as had received their reading from the successors of the companions of the Prophet. At the same time the overwhelming mass of small details led the art of reading the Qur'ān, hitherto transmitted orally, to be replaced by critical writings. The first book of this kind is said to have been written by a Jewish convert to Islām Hārūn b. Mūsā (d. c. 800 A.D.). Of later works dealing with variant readings, special mention may be made of that of Abū 'Uḃaid al-Kāsim (d. 837 A.D.; Brockelmann, *Gesch. d. arab. Litt.*, i. 106, 189) and of the celebrated Ṭabari's *al-Djāmi'*. The measures taken were however too indefinite to be really effective and the attempt was therefore made to limit the number of authorities, for example by emphasising the importance of ten recognised teachers. The number seven however was especially popular in this connection and support was found in it in an alleged saying of the Prophet regarding the seven *aḥruf* in which the Qur'ān is revealed and which all possess divine authority. Although "seven" in this tradition is probably only a round number meaning "several" and it was quite uncertain what the word *aḥruf* really meant, the number was taken literally and *aḥruf* was given the unauthorised meaning of variant readings. The complete historical inaccuracy of this assertion was sharply criticised by several scholars, but it found wide acceptance, especially after Abū Bakr b. Muḏjahid (d. 936 A.D.) had chosen seven from among well known teachers and declared them authoritative Qur'ān-readers, and with each of them two men were associated as transmitters (*ruwāt*). The seven were Nāfi', Ibn Kaṭhīr [q.v.], Abū 'Amr al-'Alā', [q.v.], Ibn 'Amir, Abū Bakr 'Āsim, Ḥamza and the famous philologist al-Kisā'ī. The selection was quite an arbitrary one, but the method used elsewhere by Muslims, e.g. in the four *maḏhāhib*, of declaring several rivals authoritative and equally trustworthy had decided practical advantages as it averted endless and passionate disputes. There was of course no lack of protest by prominent scholars who rightly objected to the unjustifiable exclusion of other equally authoritative teachers. In the xth century A.D. however, the exclusive authority of the seven canonical teachers began to prevail and their readings were specially dealt with by several authors, among them Abū 'Amr 'Othmān al-Dānī (d. 1053 A.D.) whose *Kitāb al-Tafsīr* displaced Ibn Muḏjahid's work, in Abū 'l-Kāsim Kāsim al-Shāṭibī's (d. 1194 A.D.) versification. But a number of scholars with critical ability did not hesitate to take into consideration readings of other readers not included among the celebrated ten, especially those of Ya'qūb al-Ḥaḍramī. What degree of liberty in selecting readings was claimed by the abler critics is seen from the rule laid down by Muḥammad al-Djazarī (d. 1429; cf. Brockelmann, ii. 201) who is followed by al-Suyūṭī (*Itkān*, i. 94), "every reading which is in consonance

with the Arabic language — although only in some respect — and with the 'Othmānic manuscripts of the Qur'ān — although only as a possibility — and whose chain of tradition is faultless, is considered a correct reading and must not be rejected but belongs to the seven *ahruf*, in which the Qur'ān is revealed, whether it comes from the seven or the ten or from other recognised Imāms; but if it does not fulfil one of these three conditions it is to be branded as weak, arbitrary or false, whether it comes from the seven or from any one who is older than they". But this freedom was only exercised in learned works; in all public readings before the people the readings of the seven canonical readers were observed. At the present day only two methods of reading are in general use, that of Ḥafs, rāwī of 'Āṣim and in Africa, except Egypt, that of Nāfi'. This is the extent to which Muslim textual criticism has prevailed. A proper critical edition of the Qur'ān making use of all available material is a task which still awaits modern scholarship.

19. This work on the text was considerably facilitated by the introduction of different means of restricting the ambiguity of the old script. Diacritical points were introduced to distinguish letters of the same form, marks indicating the pronunciation of the vowels, nunation, the feminine ending *-at*, the consonantal pronunciation of *alif*, and the sign for the doubling of a consonant. As is usual in such cases, all recollection of the period of their introduction had been lost among the Arabs. It is certain that they are based on an imitation of the Syrian practice and recent finds of coins, inscriptions and particularly of papyri have thrown some light on the question. These show that at the beginning of the viiith century the diacritical points were in use, at any rate to some extent; but they were certainly older and had perhaps been already introduced in the pre-Muḥammadan period. The vowel signs were originally dots in varying positions and were only replaced after the middle of the viiith century by the signs now in use, modelled on the semivowels, *ʾ*, *w* and *y* (for further details see i., p. 384; Nöldeke, *Gesch. d. Qurāns*, p. 305 sqq.). In some the use of these signs in the manuscripts of the Qur'ān aroused misgivings. According to the *Itkān*, ii. 202, the Medinese Malik b. Anas (d. 795 A. D.), for example, only permitted their use in copies intended for students and did not permit them in the large manuscripts used in public worship. Others, on the other hand, permitted their use without hesitation, as the signs from their form could not be regarded as a component part of the sacred book. To make the distinction clear, the vowel signs were originally distinguished by another colour, while the diacritical points were written in black as parts of the letters. On the incorporation of the names of sūras into the Qur'ān, see above; on the different marks for separating the verses, especially for every 5 and 10 verses, see Nöldeke, *Gesch. d. Qurāns*, p. 324; see *ibid.* on the *sajda*, the mark for the passages in the text where one should prostrate oneself.

20. In editing the Qur'ān, no attention at all was, as we have seen, paid to chronological order, a result of the composite character of many sūras, which also made an arrangement according to their contents impossible. Instead, the sūras were

arranged, although only approximately, according to their length, which however only led to the inconvenient result that the very earliest sūras, being the shortest, were put at the end. But as chronological arrangement is of fundamental importance for the understanding of the text, the commentators were faced with a task, the necessity of which had already been recognised by the Muslims. The main thing was to establish whether the sūras arose in the Mecca or Medina period, or whether they were composed of pieces from both periods. This problem has on the whole been solved, although views differed on many points of detail (cf. *Itkān*, i. 15 sqq.). In practice this question can be satisfactorily answered in most cases, if a series of criteria are used, some of which may be outlined here.

When Muḥammad disputes with his countrymen about the resurrection of the dead or the oneness of God, when he refutes the assertion that he is a magician, a poet or one possessed, when he fights against the custom of burying newly born girls alive, we know that we are in Mecca. The difficulties only begin, when we try to arrange the separate pieces of this group in their chronological order, for there is an entire lack of distinct references to definite events; and even if there were any, it would help very little as the chronological statements in the old traditions of Muḥammad's life in the Meccan period are quite unreliable. A rare exception is formed by Sūra xxx. with the mention of the defeat of the Byzantines by the Persians, probably in the year 614 A. D. More uncertain, although not improbable is the connecting of Sūra liii. with the emigration of some of the Prophet's followers to Abyssinia. There is the further difficulty that Muḥammad, not unintentionally, delivered his orations in a kind of chiaroscuro and it is exceedingly rarely that personal names are mentioned (cxi. 1; xxx. 37). The traditions however are everywhere able to tell us exactly who the anonymous individuals that appear in the Qur'ān were, but these identifications are certainly due to horror of a vacuum and are often definitely wrong. We have therefore to rely essentially on internal criteria. G. Weil laid the foundations for a classification of the Meccan Sūras by dividing them into three classes. He was followed by Nöldeke, who in turn is followed by H. Grimme, although with certain variations in the order which are not of great importance, and show that generally accepted results are not to be obtained in this field. The most certainly recognisable is the first group, a series of short addresses full of excited passion, glowing imagination and no little poetic power. These are such distinct features that it is certainly a mistake when Lamens, *Faṭima*, p. 64, wants to transfer Sūras xciii. and xciv. to the latest Medina period. Characteristic of the group are also the already mentioned conjuration formulae; and the peculiar phrase occurring thirteen times *mā adrāka*, "thou surely knowest not"; *mā yudrika*, xlii. 16, lxxx. 3, also belongs here, in which case xxxiii. 63 is perhaps a verse that has been separated from its context. Lastly Snouck Hurgronje, *De Gids*, 1886, ii. 259 sq.; iii. 109 called attention to the very important point that Muḥammad did not from the very first proclaim strict monotheism as the principal thing but the approach of the Last Judgment, from which he was to save his countrymen. The assertion

that there is no god but Allāh appears sporadically from lxxiii. 9 onwards: and it must certainly have taken some time before there was a definite breach with the idolators (Sūra cix.) and before he met them with the declaration of the oneness of God (Sūra cxii.). It is not till the second group that everything centres round monotheism and for this reason the polemical passages lli. 25 *sqq.* and liii. 19 *sqq.* directed against the daughters of Allāh are probably a little later than the adjacent verses. Starting with the assumption that the *Qur'ān* gives a complete picture of Muḥammad's preaching, the Muslims have discussed the question which Sūra is the oldest, probably containing his call to be a Prophet (see above). The majority decided for Sūra xcvi. 1—5 (see *Iḥkām*, i. 29) and many modern critics have followed them in this. Properly understood, the passage really does fit this view very well; but it is not absolutely certain and, as already mentioned, we must deal with the possibility that it is just of the earliest revelations that much may have been lost before people began to learn them by heart or record them in writing.

Of the next two classes, the third is probably the easiest to define. It is the weakest part of the *Qur'ān*, in which Muḥammad's imagination apparently became exhausted, and he was content with tiresome repetitions of his earlier ideas and especially with the tales of the prophets. The form becomes discursive, and more prosaic, in which this group resembles the following ones. The passages belonging to it show clearly that Muḥammad would have become intellectually bankrupt if the migration to Medina had not aroused him to a new effort. The transition to this group is formed by the second. The opening enthusiasm gives place to calm and the Prophet's aim is to influence his hearers by proofs, which to tell the truth are often not very convincing, such as descriptions of phenomena of nature and in the life of man, in which occasionally we have a flash of the old poetic fire. Considerable space is occupied by the stories of the experiences of earlier prophets, which were intended to warn his enemies and to encourage himself, because he constructed them with great daring on the model of his own experiences. The introductory conjuration formulae become rarer and rarer and completely disappear in the third group. To the second group belongs the remarkable episode in which Muḥammad is fond of using for Allāh the name al-Raḥmān, unknown to the Meccans. In the Sūras of the first group it is found once only, in Sūra lv. 1, rarely in the third and nowhere in the Medina sections.

Instead of this simple grouping, which excellently characterises the Meccan sūras, H. Hirschfeld has proposed another, quite artificial, system, in which the sūras following xcvi. 1—5, are arranged under the following heads: declamatory, narrative, descriptive and legislative. The result is not so very different from Nöldeke's, but the system is mechanical and often arbitrary in its application, e. g. when xciii. 9 *sqq.*, where the change of rhyme alone proves nothing, is cut off and added to the legislative series.

21. In the revelations of the Medina period, the question is much easier to settle. Everywhere that we find Muḥammad attacking the Jews or the *munāfikūn* [q. v.], that he summons to the holy

war ("on the path of Allāh") or where he lays down criminal or civil legislation, we are in Medina, whether we are dealing with whole sūras or small sections or single verses, e. g. vi. 147 *sqq.*; xxix. 1—10; lxxiii. 31—34a. The references to events known to us from the *Sira* in the Medina period, the battles in Muḥammad's wars, his discourses etc., afford us a particularly safe means of arranging the sūras chronologically. There are also all kinds of details in which an investigation of the pertinent passages reveals at least their relative order, e. g. his opinions on wine and his varying utterances on the attitude to other religions and on the holy war. Such details are very suitable for the subjects of special studies and very often yield very important results. Snouck Hurgronje has clearly revealed one point of fundamental importance in *Het Mekkaansche Feest*, p. 33 *sqq.* In the Meccan sūras it is often said that no prophetic admonisher had been sent to the Arabs before Muḥammad as to other peoples (xxxii. 2; xxxiv. 43; xxxvi. 5). Abraham occupies a prominent position among the prophets (xix. 42); he is however only a prophet like the others and has nothing to do with the Arabs. When he is called *ḥanif* [q. v.], this is in contrast to the polytheists, just as Muḥammad himself is called a *ḥanif*; and when there is a reference to the *millat Ibrāhīm* (vi. 162; xvi. 124), it may also be understood of monotheism, cf. the words of Joseph in xii. 38. Abraham on the other hand gains quite another significance in Medina, after the definite breach with the Jews had been made. In direct contrast to the previous neglect of the Arabs, we are now told that Abraham lived in Mecca and founded the sanctuary of the Black Stone with his son Ishmael: ii. 119—123; iii. 89—91, a legend (? invented by Arabian Jews?) which had never been heard of in Mecca (xxviii. 57; xxix. 67). When Abraham is now called a *ḥanif*, the word is used not only in contrast to the polytheists but also to the Jews and Christians: iii. 60; iv. 124; cf. ii. 129; and the *millat Ibrāhīm* is now the original pure religion, which Muḥammad wishes to introduce (ii. 124, 129; iii. 89; iv. 124), for Thora and Gospel were only sent down after Abraham (iii. 58) and the Jews and Christians corrupted the original religion (see above). This certainly shows that passages like xiv. 30—40; xxii. 27, 77, could not have arisen in Mecca, but only later in Medina, which may perhaps also be true of vi. 162, and xvi. 124 above mentioned. Less certain is another criterion of criticism pointed out by the same Dutch scholar (*De Gids*, 1886, ii. 460). He sees in Muḥammad's polemics against the Christians a result of the breach with the Jews and therefore thinks that all passages in which they occur must be Medinese. In the great majority of cases this dating is certainly right, but there is at least one such passage which can only be Meccan. In one of the frequent verbal duels between the Prophet and his polytheistic countrymen xliii. 57 *sqq.* the latter endeavour to involve him in the difficulty that Jesus, whom he himself takes as a model, is actually worshipped as God by the Christians; and Muḥammad sharply repudiates this view for "Jesus was and only professed to be a man". Muḥammad was however in the Meccan period always convinced of the full agreement of his teaching with that of the Jews and Christians; but we must remember that,

as already mentioned, the main thing with him at first was not monotheism but the proclamation of the imminent judgment, an idea which he certainly adopted from the Christians; what they thought about Christ was quite subordinate to this and it is also possible that the very Christians with whom he was in contact at this time had heretical views with regard to ecclesiastical Christology. He would soon learn that there were differences on various questions among the "peoples of a scripture" (xxiii. 55; xxvii. 48; xlii. 18) and as strict monotheism had become to him the central element in religion, he had at once to reject orthodox Christology as a degeneration of pure Christianity. Passages like xix. 35—41 may thus have already originated in Mecca.

Just as the first revelation received by Muḥammad was sought among the Meccan sūras, so did the Muslims seek the last among the Medīnese, especially as this question was of some importance for possible abrogations. But the Muslim statements vary rather much: cf. *Itkān*, i. 33 sq. Sūra v. or ix. or cx. is given as the last sūra; ii. 278 resp. 281 or iv. 175 as the last verse, while others say v. 5 or ix. 29 sq. The last is connected with a tradition which says that Zaid in collecting the Qurʾān found these two verses last. Much more attractive is the view that v. 5 is the last, which is probably rightly connected with the farewell pilgrimage (cf. the emphasised "to-day"); as regards contents, it would be very suitable as a final verse, although the meaning is not that Muḥammad's mission was completed but that Allāh's cause had been victorious. The claims of the other verses suggested as the last verse are not capable of any further proof.

22. For the Muḥammadans, the Qurʾān is not the sacred book in the usual sense but something of much greater significance. It is, as already mentioned, the faithful reproduction of the original scriptures in heaven. This sounds rather strange, when we remember that this heavenly book, according to the passages above quoted, only became by Allāh's grace an "Arabic" Qurʾān, intelligible to Muḥammad and his people, as the scriptures of the *Ahl al-Kitāb* were closed to them; but this distinction gradually disappeared for the religious consciousness. After the conception of eternity and the uncreatedness of the word of God had become known to Muslim theologians through the polemics of Christian theologians (cf. C. H. Becker, *Zeitschr. f. Assyriol.*, xxvi. 186 sqq.), it was applied by them to the copy in heaven and then finally by the strictly orthodox school to the Arabic copies of the Qurʾān and expressed, epigrammatically in the sentence, "What lies between the two covers, is the word of God". The Muʿtazilis and the more free-thinking theologians raised a protest, it is true, but after al-Ashʿari himself, in the last version of his dogmatics, had championed the view that the written or recited Qurʾān is identical in being and reality with the uncreated and eternal word of God, the victory was won by the orthodox school.

(F. BUHL)

KORDOFĀN is a province in the Anglo-Egyptian Sūdān which lies roughly between Latitudes N. 16 and 10 and Longitudes E. 32 and 27.

The word Kordofān or Kordofāl, as it is often pronounced locally and written in old documents, does not occur, we think, in any Arabic historian or geographer of the middle ages. It is generally supposed to be derived from a small hill of the same name some ten miles S.E. of al-ʿObeid (Lat. N. 13° 11', Long. E. 30° 14'), but the meaning of the word, the language from which it is drawn, and the territorial limits to which it was applied before the last century, are all uncertain. In the

Tabakāt wad Daifulla (1805) the name occurs in the lives of three holy men of the seventeenth century: one of them, called al-Kordofālī, came from Kurun which is south of Tekāli and another from Zalaṭa which is west of Nahūd. Burckhardt, whose knowledge of it was mainly obtained from merchants in Shendi (1814), refers to Kordofān frequently as if it were a region comparable to Dārūr or Sennār. In the seventeenth and eighteenth centuries it seems, therefore, to have included a broad corridor running between the southern Nūba mountains and Dār Kabābīsh; to this day Arabs north of Lat. N. 14° 30' speak of "going to Kordofān". After the Egyptian conquest in 1821 the name was applied to one of the greater administrative areas into which the Sūdān was divided and for the next sixty years it covered a region reaching from or near the White Nile westwards to Dārūr, and from Dongola province south to the line formed by the Baḥr al-Ḥazāl and the Baḥr al-'Arab. After the Egyptian defeat in 1899 the province was re-constituted for a few years on the old lines but it has since been reduced by the formation, first, of the White Nile province and, later, of the Nūba Mountains province. As at present defined, Kordofān province covers an area of about 119,000 square miles with a population estimated in 1925 at less than half a million. Al-'Obeid is the capital and the chief local centres are at Bāra and Sōderi (north), Umm Ruāba and Rahad (east) and Nahūd, Abū Zabād, al-Qaiya and Muglad (west). The capital of the Nūba Mountains province is at Talōdi.

In this vast area there is considerable variety of soil, rainfall, fauna, and flora, and the inhabitants are perhaps still more diverse, the region in these respects being typical of a series of African territories between the same parallels of latitude, though unlike some of these Kordofān has never formed the centre of an independent native state. The middle zone through which a railway passes to al-'Obeid, is and has long been the most important economically and as a pilgrim route from Central and Western Africa. Before the Egyptian conquest the Dārūr slave-trade, a trade then chiefly in small children, passed through this zone, and during the Egyptian rule it was the centre from which slaves were recruited for the army from the Nūba mountains. Gum, ivory, ostrich feathers and a little gold have also been traded through this region for many centuries, but only the first of these commodities is still of importance: to-day large quantities of the finest gum are exported from Kordofān to the world markets, also cattle to Egypt from the Baḳḳāra districts in the south-west, and from the eastern district grain (*dukkh*) to Arabia. The opening of the railway, the sinking of deep wells, and the clearing of motor roads have given a great impetus to the development of this country. North of this zone the rainfall is light, semi-desert conditions prevail over large areas, and the country is divided between various camel-owning tribes except for a few hills still occupied by much reduced communities of sedentary Nūba and a few oases, like Bāra, where gardens can be cultivated. In the southern third, on the other hand, and particularly in the Nūba mountains, natural conditions are much more favourable to the production of crops like cotton and the breeding of cattle and horses: this part of the country has now been tranquil

for some years and is steadily increasing in wealth as communications improve.

The population is formed of the most diverse elements. In the north and centre Arabic is universally spoken and Islām of the usual African type is the religion of the people: in the south, Arabic is now spreading along the trade-routes, but most of the people on the hills have still kept their own languages and forms of religion. Most of the Arabic-speaking people whose conversion to Islām is not very recent, claim Arab pedigrees but it is impossible to say what amount of Arab blood is still flowing in any particular district here or elsewhere in the Sūdān. The Arabs filtered into the land in small bands and intermarried freely with the natives, Libyan, Nubian, Beja or what not, according to their own traditions which are confirmed by their customs and appearance. The Kabābīsh, for example, in the north of Kordofān, who are counted, probably with right, one of the most 'Arabian' of the tribes, infibulate their women according to the Sūdān 'Pharaonic' rite and observe the marriage customs which are characteristic from Dongola to Sennār, and the tribe is a recent amalgam of heterogeneous elements, different sections speaking different dialects of Arabic. The Baḳḳāra tribes, on the other hand, are, or until recently were, strongly opposed to infibulation and the more characteristic wedding customs of their Muslim neighbours, yet they can hardly be considered more Arab than the Kabābīsh. It is obvious that the term Arab when used in the Sūdān as an ethnic term must be understood with a difference. This difference must be still further accentuated in the case of the more mixed communities in the centre of Kordofān and on the more advanced Nūba hills where Arabic is spoken and Islām practiced as it is understood on the Nile. When one turns from these to the naked Pagans on the hills, one enters a sphere which is quite as heterogeneous as the sphere one has left: the term Nūba which is applied by the Arabs here to any black pagans suggests a relationship which has no existence in fact. In a recent study Meinhof has enumerated 27 languages spoken on the Nūba hills and has traced them to three distinct African language groups which reach back to remote prehistoric days. It may be added that Meinhof's list is probably incomplete and that the inhabitants of different hills also differ profoundly from one another in physical type and in the acquired knowledge and dexterity observable in primitive crafts and pursuits.

Bibliography: MacMichael, *The Tribes of Northern and Central Kordofan*, 1912, and *A History of the Arabs in the Sudan*, 1922, contain bibliographies of the early literature and a great deal of new material bearing especially on the Arab period. Meinhof in *Eine Studienfahrt nach Kordofan*, Hamburg 1916, gives a useful résumé of recent work on the southern languages and, among other things, disposes of the view that the languages belonging to the Nubian group are of recent origin there by showing that the southern group must have broken away from the Nilotic group before the adoption of Christianity had brought Greek and Coptic loanwords into the language. Reference should be made also to the official publications of the Sudan Government, to papers by C. G. and

B. Z. Seligman in *Harvard African Studies*, 1918, in Hastings' *Encyclopedia of Ethics* etc., s.v. Nuba, in *J. R. A. I.* for 1910 and in the *Zeitschrift für Kolonialsprachen*, 1910, and to various notes by MacMichael, Newbold, Davies, Hillelson, the Seligmans and others in *Sudan Notes and Records* from 1918 onwards.

(J. W. CROWFOOT)

KORKÜD, eldest son of the Ottoman Sultān Bāyazid II, was appointed to the governorship of the province of Teke in Asia Minor; incurring the enmity of the grand vizier 'Alī Pasha, who preferred his brother Aḥmad Sultān to him, he decided to quit his father's territory after the grand vizier had seized certain estates in his province; obtaining sanction to set out on the pilgrimage to Mecca, he embarked in Muḥarram 915 (April 1509) with 87 persons in his train on five ships commanded by Ra'īs Akbāsh; after a voyage of five days, he landed at Alexandria and was accorded a magnificent reception in Cairo by the Mamlūk Sultān but the latter refused him passage through his territory for fear of displeasing the Ottoman Sultān; Korkūd thereupon resolved to come to terms with his father's vizier and was restored to his governorship. While he was on his way back to Cilicia his flotilla was attacked and defeated by the Knights of Rhodes; the prince was forced to land on the nearest coast. In passing through the province of Teke, he had his baggage plundered in the vicinity of Elmalu by brigands commanded by Kara-biyik, called *Shāh Kūli* (cf. *Der Islām*, xi. 88 sqq.). Suspecting intrigues on the part of his brothers, he went in disguise to Constantinople and stayed at the mosque of the Janissaries, but the latter took the side of Selīm and distrusted Korkūd's incapacity. The forced abdication of Bāyazid made him abandon all hope of succeeding him (8th Šafar 918 = April 25, 1512). After the massacre of the imperial princes, Korkūd was in terror of his life; Selīm, setting out unexpectedly from Brussa under a pretext of going hunting, arrived five days later in front of Magnesia the capital of the province of *Šārūkhān* [q.v.] of which his brother was governor. Korkūd fled from his palace by a back-door accompanied by Piyāle, whom alone he trusted. After hiding for twenty days in a cave, they took refuge in the province of Teke in disguise but were betrayed to the governor Kāsim Beg by the Turkomans, who were surprised at the handsome trappings of the horse lent by Piyāle to one of them who was sent to procure them provisions. Korkūd, taken prisoner and separated from his companion, was strangled during the night by *Kāpydībāshi* Sinān's men by order of Selīm (Nov. 1512).

Korkūd was a poet and musician. He assumed the poetic surname (*makhlas*) of *Ḥarīmī* and composed melodies, one of which is still famous under the name *Ghazālī Rūh* "food of the spirit". He surrounded himself with men of letters and scholars and was the patron of musicians in whose company he delighted. At his court he had the poet *Ghazālī* of Brussa, called *Deli Birāder* "the mad brother" on account of his whimsical gaiety, who later wrote a funeral elegy on his patron (von Hammer, *Gesch. d. osm. Dichtkunst*, ii. 201); this did not prevent him also mixing in legal circles and preparing a collection of *fetwās* entitled *Korkūdiya*. — His name means in Turkish "terrifying".

Schefer, Paris 1896, liii. 45, 332; Brūsālī Mehmed Tāhir Bey, *'Othmānī Mü'elliflerī*, Stambul 1338, ii. 382 sq.; the Ottoman historians e.g. 'Ashīk Pasha-zāde, Naṣrī, 'Ālī (*Kunh al-Akhbār*) give interesting notes on the life and the works of the prince Korkūd. (CL. HUART)

KORKUD DEDE, the legendary councillor of Oghuz Khān and reputed author of the book of *Dede Korkud*. Korkud Dede is said to have been the sage adviser of the eponym of the tribe and first ruler of the group of peoples, to which the Anatolian Turks at first belonged, Oghuz Khān, for whom he composed a book in the simplest antique style with wise sayings and admonitions, intermingled with all kinds of traditions and counsels. Whether Korkud Dede was a historical personage or not can no longer be ascertained. A. Diwajew in the article discussed by W. Barthold in the *M. S. O. S.*, i. (1898), Pt. 2, p. 154 and iv. (1901), Pt. 2, p. 183, has dealt with the tomb of the saint Khorkhut Ata (*ata* = *dede*, "father") in the Russian district of Kazalinsk not far from the mouth of the Sīr-Daryā. There is perhaps some connection here. The book, usually called simply *Kitāb-i Dede Korkud*, is regarded as a part of the epic of Oghuz, the *Oghuz-nāme* and in its present form is believed to be barely older than the xvth century. It can be shown to have arisen in Eastern Anatolia. The *Kitāb-i Dede Korkud* was published in 1332 in Stambul (172 p.) from a modern Dresden copy taken from an older Berlin MS. (cf. W. Pertsch, *Katal. der Türk. HSS.*, No. 203, p. 227 sqq.). On the contents cf. W. Barthold in *Zapiski vostochnago otdeleniya imperat. russk. archeolog. obščestva*, viii., 1893/1894, 203—218; xi., 1897/1898, 175—194; xii., 1899, 937—958; xv., 1902/1903, 139 sqq.; cf. also 'Abd al-Qādir in the *Türkiyāt Medjmu'asi*, 1, Stambul 1925, 213 sqq.

Bibliography: cf. F. Babinger, *Die Geschichtsschreiber der Osmanen*, Leipzig 1927, p. 8 sq., where the older literature is collected; also K. A. Inostrančev's article *Korkud v istorii i legendě in the Zapiski* etc., xx. 40—46 and Mehmed Djawdat's article *Korkud Ata in Derg-yāh*, No. 15, Stambul 1337.

(FRANZ BABINGER)

KÖSE MIKHÂL (T., "Michael the beardless"), an Ottoman general, a Greek renegade, was lord of *Kharman-Kaya*, a fortified town situated at the foot of Mount Olympus in Mysia, to the east of Edrenos, when he was made prisoner by prince 'Othmān, the future Sultān, during a raid made by the Lord of In-Önü (698 = 1299). When 'Othmān had succeeded his father Er-Togrul, he became the intimate friend of the sultān, who on his advice seized Lefke, Yeñidje, Ak-Ḥisār, Geiwe, Tekfūr-būnār, Modreni, Biledjik (699 = 1300). Converted to Islām (706 = 1306) he was entrusted with the direction of the campaigns of Orkhān, was a member of the council of war which accompanied

the young prince, and negotiated the surrender of Brussa (726 = 1326).

His descendants called Mikhâl-oghlu (sons of Michael) for a long time held from father to son, the command of the *âkındji* (scouts). One of his sons had taken the side of Prince Sulaimân, son of Bâyezid I; later he left him to offer his services to Muḥammad.

Yakhshi-Beg, his second son, supported Muḥammad against Mūsā and commanded his vanguard. Another Mikhâl-oghlu, Muḥammad Beg, nephew of Yakhshi-Beg, was on the contrary among the party of Mūsā in the quality of beyler-bey of Rumelia and, after the defeat of that prince, was imprisoned at Tokât. Lastly a descendant of the same name was sent to ravage Transylvania at the time of Sulaimân I's expedition against the Hungarians in 927 (1521).

Hammer, *Hist. de l'empire ottoman*, transl. Hellert, i. 64, 77, 102, 129, 147; ii. 143, 151, 152, 156; v. 15. (CL. HUART)

KÖSEM WÂLIDE also called MÂHPEIKER, the wife of the Ottoman Sultân Aḥmad I [q. v.] and mother of the Sultâns Murâd IV and Ibrâhîm I. — Kösem (lit.: "bell-wether", "courageous") or Mâhpeiker was a Greek by birth. In 1637 she was about 45, so must have been born about 1592. Contemporary accounts describe her as a woman, still beautiful even at an advanced age, with fine features, vigorous looking, with an expression of benevolence and superior intelligence. For nearly thirty years this statesmanlike princess exercised a great influence on the government of the country. While, even in the lifetime of her husband Aḥmad I, she took an active part in public affairs and through her beauty and intelligence was able to share in the government, at a later period she had firm control of the reins of government, when her minor son Murâd IV ascended the throne. For five years she ruled as his guardian. On his death in 1049 (1640), when the weak and effeminate Ibrâhîm I (1640—1648) came to the throne, she was active in warding off trouble at home, began a war with Crete which dragged on and increased popular feeling against the incapable Sultân. Kösem Wâlide strove in vain to prevent his deposition, although she had been thrust aside by him, as previously by Murâd IV. Ibrâhîm was deposed on August 8, 1648 (18th Radjab 1058) and executed a few days later. Three years afterwards however, when the minor Mehmed IV had ascended the throne and a rivalry arose between the old Wâlide Kösem and Ibrâhîm's widow, Tarkhân Khadidja, in the course of which Kösem was accused of trying to murder Mehmed IV in order to put his brother Sulaimân in his place, she met a miserable end in a mutiny of the Janissaries in the palace on 16th Ramaḍân 1061 (September 2, 1651); she was strangled with a curtain-string. She was buried beside her husband. Kösem Wâlide is still celebrated and honoured among the Turks on account of the numerous foundations which perpetuate her name. She was a noble, magnanimous, truly queenly woman of great intelligence and a good heart but of strong character. She devoted the annual income from five royal domains belonging to her entirely to building (1646) a house of rest

called after her (*Wâlide Khân*, collapsed on the morning of March 21, 1926), a Friday mosque bearing her name in Scutari and a mosque begun by her but finished by the younger Wâlide in Stambul (*Wâlide Djami'i*) and to the carrying out of waterworks in Egypt, to the support of the poor in Mecca, to providing for debtors who had no means of payment, and to supporting widows and orphans (Na'ima, *Ta'rikh*, ii. 298, 310; J. von Hammer, *G. O. R.*, v. 547, where details are given to show her benevolent disposition).

Bibliography: The histories of J. von Hammer and Zinkeisen, where the Ottoman (especially Na'ima and Hâdjîdji Khalifa) and European sources (*Relazioni* of the Venetian *baili*) are utilised; cf. also Aḥmad Rafîk, *Kadimler Saltaneti*, 2 vols., Stambul 1332 and 1924.

(FRANZ BABINGER)

KOŞER. [See KUSAIR].

KÖSHK (Ottoman Turkish pronunciation of the Persian *kūshk*; the Arabic derivative *djawsak*, pre-supposes an unattested form **gōshak*, *gōsha*, "corner"), isolated pavilion in a park, kiosk. This name was given to the country houses of the caliphs (as opposed to their house in the town), such as the Djawsak al-Khākāni of Sāmarrā, the plan of which has been given by Ernst Herzfeld (*Mitteilung über die Arbeiten der zweiten Kampagne von Samarra, Isl.*, 1914, v. 203). There were in Cairo a certain number of these pavilions, also called *kaşr* (pl. *kaşūr*), at the cemetery of Karāfa (Maḳrîzî, *Khiṭat*, ii. 452); these two expressions are synonyms, as is shown by a passage in Ibn Battūta, iii. 212.

(CL. HUART)

KOSHMA is originally a general term for poetry among the Turkish peoples. In the later usage of the word it was applied to the native Turkish popular poetry, in contrast to the classical poetry taken from the Persian and based on the laws of the Arabic 'arūd [q. v.]. The term corresponding in Eastern Turki to the Western Turki *koşma* is *koşuk* or *koşugh*.

In the oldest sources e. g. in the *Kutadghu Bilik* (composed in 1069/1070) *koşuk* still has the quite general meaning of "poem, verse", e. g. in Radloff's edition, St. Petersburg 1891, p. 1, l. 2 from below: *bu kitâbni koşuknî aimîsh* "has composed this book, this poem"; *ibid.*, p. 5, l. 4, *bu türkâ koşuklar tûrâtım saña* "I have polished (i. e. composed) these Turkish verses for thee". In Maḥmūd al-Ķāshghari also, *Diwān Luḡāt al-Turk* (1073/1074), i. 314, *koşugh* is equated to the Arabic *sh'r*, *raḡja* and *kaş'id*. The Persian musician and scholar 'Abd al-Ķādir of Marāgha (xiv—xvth century, cf. E. G. Browne, *A History of Persian Literature under Tartar Dominion*, Cambridge 1920, index, s. v.), in his work entitled *Maḳāsid al-Alḥān* does not yet discriminate between *koşuk* and the quantitative quatrain *tuyugh* (see Ra'ûf Vektâ, *Eski Türk musikîsine dâir tetebü'ler Millî tetebü'ler medîmû'asî*, i. 461). On the other hand in a verse by 'Alî Shēr Nawâ'î (d. 1501; q. v.) quoted in Pavet de Courteille, *Dictionnaire Turc-Oriental*, p. 432 s. v. and in Radloff, *Versuch eines Wörterbuchs der Türk-Dialecte*, ii. col. 640 the *koşuk* is definitely contrasted with the *tuyuk*.

Later we find poems and songs composed according to the rules of Turkish popular poetry expressly called *koşma*, *koşuk*. The characteristic

features of this poetry are the following: 1. Strophic structure. The strophes are usually quatrains. The *koşma* poems contain at least two strophes. 2. Syllabic or accented syllable rhythm, i.e. the lines of the strophe have the same number of syllables and the value of the syllables as regards stress is either a matter of indifference or stronger and weaker syllables follow one another in definite order which is repeated. In the latter case after a definite number of syllables, we always have of necessity a caesura in the middle of the line. In the later *koşma* strophes the most popular lines are hendecasyllabic divided into 6-5 with one caesura or 4-4-3 (with two caesuras). 3. There is rhyme or assonance of at least two endings in the strophe. The rhyme is usually grammatical and may extend to several final syllables according to its nature. It usually arises as a result of strict parallelism in the syntactical structure of the two halves of the verse. The rhyming in the *koşma* strophe is usually *abcb* or *aaba*. 4. Alliteration of the initial syllables of the lines is not maintained among all Turkish people (cf. T. Kowalski, *Études sur la forme de la poésie des peuples turcs, Mémoires de la Comm. Orient. de l'Acad. Polonaise*, No. 5, Cracow 1922; in Polish with a French résumé, p. 157 sqq.).

In earlier times the *koşma* songs were usually sung by the bards (*uzan*) to the accompaniment of a musical instrument, especially the *koşun* [q.v.] beloved of the Turks, at court festivities or in the camp of the army. The *koşma* poetry was always industriously cultivated among the people, in spite of the increasing popularity of the classical quantitative poetry. The popular forms like *kaya bışi*, *deyışi*, *ezgi*, *ır*, *türkü*, *varsaglı*, *türkmâni*, some cultivated among the *Âdharbâidjân* and some among the Ottoman Turks all belong to the *koşma*. The songs of popular mystics called *ilâhî* and *nefes* from the time of Yûnus Emre (xiii.-xiv. century) are composed according to the rules of the *koşma* (see Köprülüâde Mehmed Fu'ad, *Türk edebiyâtında ilk müteşavvirler*, Constantinople 1918, p. 334—335). The *koşma* popular poetry, which sometimes produces really beautiful lyrics, was mainly cultivated by wandering singers (*âşîk*, also called *sân şâiri* or *öyürcü*). Many of them like 'Âşîk Ömer, 'Âşîk Kerem, 'Âşîk Çharib, Derdli, Djewheri, attained great fame and the collections of their songs or life stories are among the most popular books among the Turks (cf. Köprülüâde Mehmed Fu'ad, *Türk edebiyâtında 'Âşîk Tarâinîn Menshe' we-Tekâmülü in Milli tettebbü'ler Medjmu'ası*, i.; do., *'Âşîk Djewheriye 'âid iki vethika* in the periodical *Yeni Medjmu'a*, No. 84; G. Jacob, *Türkische Volksliteratur*, Berlin 1901, p. 17—18). There were even singers of popular songs in the corps of Janissaries; cf. J. Deny, *Chansons des Janissaires turcs d'Alger*, in *Mélanges René Basset*, Paris 1925, ii., p. 33—175.

The term *koşma* (but not the kind of poetry to which it was applied) seems to have fallen out of use and if the modern *Âdharbâidjân* poet Djawâd who died recently called his collection of songs *Koşma*, this is probably simply to be explained by an archaïcising popular movement in modern literature. The name has survived in the form *kozoñ* (*koşoñ*) among the Altai Turks (Tatars). The Altai *kozoñ* (on them cf. W. Radloff, *Über die Formen der gebundenen Rede bei den altaischen*

Tataren, *Zeitschr. f. Völkerpsychologie und Sprachwissenschaft*, iv., 1866, p. 85—114 and Kowalski, *Études etc.*, p. 140—151) are very important in so far as from their structure and name we can make a definite deduction regarding the original meaning of the words *koşma*, *koşuk*, etc. They are pairs of strophes connected by a close parallelism between the two in form and content. From this we see that *kozoñ* from *koş-* "to join together", *kozo* "two and two" etc., refers to the parallelism in thought and syntactical structure, which originally formed the essential feature of Turkish popular poetry.

The *koşma* poetry was not without influence on literature. The modern Turkish poets for example took many of their forms from popular poetry.

Bibliography: (dealing particularly with *koşma*): Köprülüâde Mehmed Fu'ad, *Koşma Tarzı*, a comprehensive article in the periodical *Yeni Medjmu'a*, No. 78 (with references to the literature); do., *Türkiya Târikhi*, Constantinople, 1923, i. 51—52; do., *Türk edebiyâtı Târikhi*, Constantinople 1920, i. 93; Kowalski in the above quoted *Études etc.*, p. 140. — On the rhythmic structure of Turkish popular poetry cf. Th. Korš, *Drewniejšij narodnyj stich tureckich plemion in Zap. Wost. Otd. Imp. Russk. Archeol. Obschtschestwa*, xix., ii.—iii., p. 139—167, St. Petersburg 1909. (T. KOWALSKI)

KOŞOWA (from the Yugo-Slav *kosovo polje* — "plain of the blackbirds", from *kos* "blackbird" in Old Slav, Bulgar and Czech; the Turkish *kūs owa* "plain of the kettle-drums", Sa'd al-Din, i. 117 is a literary invention), the name of a plateau in Upper Macedonia (Old Serbia) of an average height of 1,500 to 2,000 feet, surrounded by high mountains which form the watershed; it sends some streams to the east to the Adriatic by the Drina, to the south to the Aegean Sea by the Vardar, to the north to the Danube by the Ibar, a tributary of the Morawa. It was here that the Ottoman army under the command of Sultân Murâd I Khudâwendigâr defeated the Serbs in a great battle, which resulted in the ruin of the Serbian empire and the conquest of the country in 791 (June 15, 1389). The kral of Serbia, Lazar, had appealed to his allies in Bosnia and Albania; the Sultân on his side had brought from Asia the forces of his two sons Bâyezid (from Kutâhiya) and Ya'kûb (from Karasi) and those of the vassal princes of Şârûkhân, Monteshe, Âidin and Hamîd. At dawn a Serb, Miloş Obilić, arrived in the Ottoman camp, professing to have deserted and begged the honour of being admitted to the presence of the Sultân; after prostrating himself, he suddenly jumped up and plunged his dagger in Murâd's breast; he then fled, but was caught just as he was mounting his horse and cut to pieces by the Janissaries. The popular ballads of Christian origin, an echo of which is found in Coluccio Salutati's letter of congratulation to King Wladko, speak of twelve brave young men, bound together by an oath, who fought their way right through to the Sultân's tent and stabbed him twice with the dagger, one wound being on the neck and the other on the lower part of the body. The Turks attacked, furious with rage to avenge the death of their Sultân. The kral Lazar, abandoned by Wladko and the Bosnians, seized with panic, fell into the hands

of the Turks and was decapitated with the nobles who accompanied him by order of the dying Sultān. Three monoliths erected on the battlefield mark the places where Milosh twice escaped from the Janissaries and where he was killed (Şolakh-zāde). A mausoleum was built on the spot where Murād died; the body of the Sultān was however taken away and buried at Brussa. — In Sha'bān 852 (October 17, 1448, Eve of St. Luke) a Hungarian army, commanded by John Hunyadi and including also Wallachians and German and Bohemian arquebusiers, met at Košowa an Ottoman army commanded by Sultān Murād II: the battle at first indecisive, turned in favour of the latter as a result of the treachery of the Wallachians and the flight of Hunyadi; it ended on the 19th with the glorious but fruitless defence of the German and Czech auxiliaries behind a barricade formed of waggons and artillery.

The name Košowa was given to a wilāyet formed after the Russo-Turkish war of 1877: it was bounded on the east by Bulgaria, in the west by Montenegro, Bosnia and the wilāyet of Scutari in Albania, in the north by Serbia and in the south by the wilāyets of Monastir and Salonika. It was divided into six sandjaks: Ūsküb (capital of the province), Prishtina, Prizrend, Yeñi-Bāzār (Novi-Bazar), Tashlidja (Plevlie) and Ipek; at a later date the sandjak of Yeñi-Bāzār was changed into a *kaşā* and a new sandjak made called Senidje (Sienitz) with Kōlashin as a *kaşā* (Sālnāme, 1325, p. 932). This territory was ceded to the Serbs by the Treaty of London (May 30, 1913); it is now part of the kingdom of the Serbs, Croats and Slovenes.

(CL. HUART)

KOŠTĀ B. LŪKĀ, AL-BA'ALBAKKĪ. Our authorities for his life are Ya'qūb al-Nadīm (*Fihrist*, p. 295), Ibn Abī Ūṣaib'ā (i. 244, who quotes a very large number of works, mainly medical), Ibn al-Kifī (p. 292), Abu 'l-Farāj (text, p. 274; transl., p. 197). These give as their sources Sulaimān b. al-Ḥassān, Ibn al-Nadīm al-Baghdādī, 'Ubaid Allāh b. Djibril and others not mentioned by name. There are also references in other passages of the Arabic biographical and bibliographical works mentioned above. For those which we have utilised below, see the indexes.

Koštā b. Lūkā belonged to Ba'albak (the Heliopolis of the Greeks) in Syria; he was of Greek descent and a Melkite i.e. an orthodox Christian. In this capacity for example he disputed with a Nestorian cleric regarding the duality of the natures

in Christ (cf. G. Graf, *Die christlich-arabische Literatur*, in *Strassburger Theolog. Studien*, vol. VII/i., 1905, p. 38 sq.). We know the years of birth and death of many Arab mathematicians but not of Koštā b. Lūkā. We have however the following chronological data for his life. For the Caliph Muṣṭa'in (862—866) he translated the work "On the lifting of heavy burdens" (*Barulcus*) of Heron and the *Spherica* of Theodosius; he wrote an introduction to geometry for Abu 'l-Ḥasan Alī b. Yahyā who belonged to al-Mutawakkil's (847—861) court and died in 888—889. To Ismā'il b. Bulbul, Mu'tamid's vizier (870/892) he dedicated his work on the use of the sphere with an axe. He was still alive in the reign of al-Muktadir (908—932), for he was on terms of intimacy with the latter's contemporary Abū Ishāk Ibrāhīm b. al-Mudabbir (*The Table-Talk of a Mesopotamian Judge*, ed. D. S. Margoliouth, *Oriental. Transl. Fund.*, 2nd ser., xxvii. and xxviii., text, p. 131, transl., p. 144). Suter supposes that Koštā b. Lūkā died about 912; as he can hardly have begun to translate before he was 25 years old, it would result from the above data that he was born about 820 and lived to be 70 or 80.

Koštā b. Lūkā was regarded as a talented and very brilliant physician and a sound scholar in many branches of learning, such as philosophy, astronomy, geometry, arithmetic and music. It was impossible to find him lacking in any aspect of his knowledge. According to the *Fihrist*, it was the general opinion that Koštā b. Lūkā ranked higher than the celebrated physician and translator Ḥunain b. Ishāk (d. 873). But, according to the same source, there were others who held the view that Ḥunain was the better. In any case both were brilliant scholars. Modern opinion ranks Koštā below Ḥunain. Koštā b. Lūkā could write Greek, Syriac and Arabic; he had a perfect knowledge of Greek and was an excellent translator, especially of medical works; this was natural as he was a physician. His Arabic style is famed as well as the way in which he arranged his works; his concise presentation is justly praised; its lack makes difficult the study of the works of others, notably those of Ibn al-Haiṭham.

Koštā b. Lūkā left his native district in the 'Abbāsid period and went to Asia Minor, the land of Rūm; here he acquired a number of Greek writings and returned with them to Syria. He was summoned to 'Irāk, probably by one of the Caliphs, to translate works there. At the same time he revised many existing translations; Koštā b. Lūkā thus rendered great services to the East in making accessible classical learning. The Muslims therefore say that the reason that many branches of philosophy are studied in Muslim lands is that Koštā b. Lūkā introduced them on his return from this journey. Towards the end of his life Sanharib, an Armenian prince took Koštā b. Lūkā to his land, where he lived till his death. The Armenian Patriarch Abu 'l-Ḥaṭṭrif was a learned and distinguished man for whom Koštā b. Lūkā prepared many excellent works on the most different subjects. It is evidence of the great prestige enjoyed by Koštā that a cupola was erected in his honour over his tomb, as was only done for princes and high religious officials.

Ibn al-Ṣalāḥ celebrated Koštā's merits in verse (Ibn Abī Ūṣaib'ā, ii. 166).

Of his relations to his contemporaries,

we know that he wrote medical works for some of them or translated medical books, for example even for Christian officials. Among such were Abū 'l-Ḡhaṭrif al-Baṭriḳ, al-Baṭriḳ al-Fatan, al-Ḥasan Muḥammad b. Aḥmad, the secretary of the Chief Patriarch, Abū Muḥammad al-Ḥasan b. Muḥammad, the chief Qāḍī, Abū 'Alī b. Banān b. Ḥārith. It is probable that Koṣṭā b. Luḳā also met the philosopher al-Kindī at the Caliph's court, as Ibn al-Kiṭṭī specially mentions that the two had met. Of a certain Abū 'Isā b. al-Munadjjim (astronomer or astrologer), we unfortunately know nothing; Koṣṭā b. Luḳā sent him a letter from Armenia on the subject of Muḥammad as a prophet (for his relations with other men see the sources).

The literary activity of Koṣṭā b. Luḳā covered the most varied fields, as in the case of the Banū Mūsā, Ishāḳ b. Hunain and Thābit b. Qurra; it does not seem however to have been quite so comprehensive as in the case of the two latter; but it should be remembered that we are extremely well informed about the latter. Ishāḳ b. Hunain, for example, himself prepared a list of his translations from Galen (G. Bergsträsser, *Hunain Ibn Ishāq über die syrischen und arabischen Galen-übersetzungen*, in *Abh. zur Kunde des Morgenlandes*, xvii., N^o. 2, and a record of Thābit's works was made by a relative.

A list of translations of Greek works was made by M. Steinschneider in *Z. D. M. G.*, vol. 1., 1896; see the index of names under Koṣṭā b. Luḳā as the order is that of the Greek authors. The titles of a series of very valuable medical treatises are given by Wüstenfeld and Leclerc (*op. cit.*). Only a few of these seem to have survived, for example that on the treatment of the body in jaundice (*K. fi Tadbīr al-Abdān fi 'l-Safar* etc.), on phlegm (*K. fi 'l-Balgham*), insomnia (*K. fi 'l-Sahar*). None of these writings has so far been utilised. He also dealt with problems of hygiene, for example, baths (*K. al-Ḥammān*) and the standards for foods (*K. Kawānin al-Aghdiya*).

In addition to these and similar works on philosophy, science and mathematics, Koṣṭā b. Luḳā also wrote on dyes and colours: *K. fi Khidāb* (on the staining of *khaish*, a coarse linen, and its alteration by sprinkling, *K. al-'Illa fi Iswīdād al-Khaish wa-Taghayyurihi min al-Rashsh*). Other works dealt with fans and the causes of wind (*K. fi 'l-Mirwaha wa-Asbāb al-Rih*), and on date wine and the drinking of it at feasts (*K. fi 'l-Nabid wa-Sharbihi fi 'l-Walā'im*) and how to avert poisoning (*K. fi Daf' al-Sumūn*).

According to Ḥādjdjī Khalifa, vol. v., p. 132, Koṣṭā b. Luḳā is also the translator of the work on Byzantine agriculture (*Kitāb al-Falāḥa al-Rūmiya*) by Kostus son of Askūrāskinā; a translation by Sergius b. Heliā is said to be better (Ḥādjdjī Khalifa, vol. v., N^o. 10377; cf. thereon M. Steinschneider, *Z. D. M. G.*, vol. 1., p. 382, 1896 and A. Baumstark, *Die christlichen Literaturen des Orients*, ii. 21).

In the field of philosophy his principal work deals with the distinction between soul and spirit, pneuma (*al-farḳ* or *al-faṣl bain al-nafs wa 'l-rūh*). The genuineness of the work has been disputed. The difference between soul and pneuma lies 1) in their nature: the soul is corporeal, the pneuma incorporeal; 2) in their qualities: the soul occupies no space, the pneuma does; the former cannot be

but latter can be enclosed by the body; 3) in the condition after death: the soul is immortal and the pneuma mortal; 4) the pneuma is the instrument of the soul for communicating the functions of life to the body and for sensual perception. It controls most processes of the body, such as breathing, the pulse, sensation and movement. The pneuma goes to the eye in the hollow nerves. In its finest form, it is active in the higher processes of the mind, imagination, memory and reason. It is of special interest to explain, as Koṣṭā b. Luḳā endeavoured to do, the physiological processes; here he shows his medical knowledge.

The work had a far-reaching influence. It is for example much used by 'Abd Allāh b. al-Faḍl in his great book on nature. — Johannes Hispanus translated it into Latin. The text was published by Gabrieli as: *La Risalah di Qusta ben Luqa sulla differenza tra lo spirito e l'anima. Rendiconti della Reale Accademia dei Lincei*, 1910, xix., p. 622. It has been very fully discussed in connection with this edition by M. Horten in *Die philosophischen Systeme der spekulativen Theologie im Islam*², 1912, p. 179—189. Cf. also the edition by C. S. Barach, *Bibl. philos. mediae aetatis*, 1878, ii., p. 117 (cf. Baeumker, *Jahresbericht in Stein. Archiv für Geschichte der Philosophie*, 1892, v., p. 557). G. Graf, *Psychologische Definitionen aus dem grossen Buch der Natur von 'Abd Allah, Beitr. zur Gesch. der Philosophie des Mittelalters*, Supplement 1913, p. 74.

Koṣṭā b. Luḳā dealt very fully with occult subjects; his most important work in this field, which survives in a Latin translation, is "On natural affinities" or more fully "Letters on incantations, conjurations and appendages for the neck (amulets)", in which he assumes such things to be facts and discusses them more fully (cf. Thorndike, *op. cit.*); he interprets them however by autosuggestion and in the case of amulets thinks they have effect because they have an encouraging and strengthening influence on the spirit. It was probably through such studies that he came to deal with the subject of sand-figures in his *K. fi 'Amal al-Āla allati tursamu 'alaihā al-Djāwāmi' wa-tu'malu minhā al-Natā'idj*, "On the use of the instrument on which the *djāwāmi'* are marked and with which the *natā'idj* are obtained".

In mathematics Koṣṭā b. Luḳā, like many others, dealt with the difficult and obscure passages in Greek works. His treatise on the proof of the wellknown rule of the two errors (*Kitāb fi 'l-Burhān 'alā 'Amal Ḥisāb al-Khaṭa'ain*), is pure algebra, that on numerical problems (*K. Istikhrādj al-Masā'il al-'adadiya*) on the *al-Talāḳī* calculation (coincidence) are on the way to algebra, *K. fi Ḥisāb al-Talāḳī 'alā Djihat al-Djabr wa 'l-Muḳābala*. From a treatise by Ibn al-Haiṭham (*Fi Masā'il al-Talāḳī*, "On the problem of coincidences; cf. on this method of calculation, E. Wiedemann in *S. B. P. M. S.*, *Erl.*, 1927; St. Petersburg. Rosen, *Catalogue*, N^o. 192, 7^o) we see that it dealt with problems like the following: two men A and B came to the market and wished to buy an article. Neither has sufficient money: A says to B, give me $\frac{1}{3}$ rd of what you have then I can buy the article. No, says B to A, give me $\frac{1}{4}$ of what you have then I can buy it. — From the title in Koṣṭā b. Luḳā it is evident that he solved the problem with equations, while Ibn al-Haiṭham took a more roundabout way. We know practically

nothing of any geometrical work by Koştā b. Lūkā. He wrote an introduction to geometry in the form of questions and answers (*K. Mudkhal ilā 'ilm al-Handasa 'alā al-Masū'il wa 'l-Djawāb*); he also dealt with cones and spheres etc. To this part of his work probably belonged the treatise, on the part which cannot be divided (like the point) (*K. fi 'l-Djus' alladhi tā jutadjazzu*). We know more however of his astronomical work. He wrote a treatise (Oxford, Uri, 879, N^o. 2), "On the form (structure) of the spheres (*K. Haiyat al-Aflāk*)". It must have been composed at the same time as, or very little later than, the famous *Astronomy* of al-Farghānī (d. 861); from the scientific point of view it is on a much higher level than the latter and goes more into details; excellent diagrams make the subject clearer. It also deals with problems not in al-Farghānī, for example the measurement of the degrees between Tadmor and al-Rakka and a method hitherto ascribed to al-Bīrūnī of measuring the circumference of the earth. Koştā b. Lūkā's work seems to me to have been used as a foundation by numerous later writers.

Koştā b. Lūkā devoted a good deal of attention to the construction of astronomical instruments; the first work to be mentioned in this connection is his *K. fi 'l-'Amal bi 'l-Kura dhāt al-Kursi*, "On the use of the sphere with an axe" (cf. KURA). It survives in several manuscripts some complete, others incomplete, and has also been copied or utilised in other works. Another astronomical work is "On the use of the great astronomical cones", *K. al-'Amal bi 'l-Kura al-kabira al-nudjūmiya*. Whether works dealing with other instruments e.g. on a ball-shaped astrolabe, *K. fi 'Amal al-Aşturlāb al-kurī*, are by Koştā b. Lūkā need not be discussed here (cf. H. Seemann and Th. Mittelberger, *Das kugelförmige Astrolab*, *Abhandl. zur Gesch. der Naturw.*, part viii., 1925, p. 46). In keeping with the spirit of his age Koştā b. Lūkā also wrote an introduction to astrology (*K. al-Mudkhal fi 'ilm al-Nudjūm*). The "Paradise of History", *K. al-Firdaws fi 'l-Ta'rikh*, composed in Armenia perhaps was similar in nature.

Of writings on physics may be mentioned those on the burning glass (*al-Marāya al-muhriqa*) and on the *Karastūn* [q.v.] and the book on weights and measures (*al-Awzān wa 'l-Makāyil*) which was certainly used by the Archbishop Eliyā for his book of the same name (cf. Th. Ibel, *Über die Wage* etc., Inaug. Diss. Erlangen 1906, p. 97). Of special importance is the translation of Hero's βαρυμετρος (*Kitāb fi Raf' al-Ashyā' al-thakila*, "On the raising of heavy bodies"); it has been edited with French translations by Carra de Vaux, *J. A.*, ix., 1893, i. 386—472 and ii. 152—269, 420—514 and German by L. Nix and W. Schmidt in *Heronis Opera omnia*, 11/i.; further bibliographical references were given in these editions and also in C. Brockelmann, *G. A. L.*, i. 204. Not the least important point about this work by Koştā b. Lūkā is the insight into Greek mechanics that it gives us.

KÖTEL (from the Armenian *kōthal*, "wall, side"; Fraenkel, *Aram. Fremdwörter*, p. 223) in Persian means a mountain pass, a neck between two peaks. This word, which does not appear in any Persian dictionary, is borrowed from Eastern Turkish, which took it from the Armenian; it is found in the *Babür-nāma*, ed. Ilminsky, p. 99, l. 23; p. 100, l. 1; p. 172, l. 18; p. 166, l. 22; cf. Radlof, *Opht.*, ii., col. 1277; Pavet de Courteille, *Dict. turk-oriental*, p. 463. (CL. HUART)

KÖY, the word used in western Turkish for village. It is the form in which Turkish has borrowed the Persian *gūy* (cf. Bittner, *Der Einfluss des Arabischen und Persischen auf das Türkische*, *S. B. Ak. Wien*, cxlii., N^o. 3, p. 103) or perhaps more correctly *kūy* (Vullers, *Lexicon; Burhān-i Kātib*, p. 759) meaning originally path, street. In the geographical nomenclature of the Ottoman empire we find many place-names compounded with *kūy*, like Boghāz Kūy, Ermeni Kūy, etc. It seems that these names are not found before the end of the Seldjūk period. Kūy in the sense of an open village is opposed to *kaşaba* meaning a small town. In eastern Turkish place-names we always find the word *kend* used for a village. Sometimes this last word seems to have been replaced by *kūy* (cf. e.g. Ritter, *Erdkunde*, xi. 221 sqq.: Kađi Kend, near al-Mawsil, becomes Kađi Kūy). (J. H. KRAMERS)

KÖYÜN BABA, lit. "father of sheep", a Turkish saint. He is thought to have been a contemporary of Hādjdji Bektash [q.v.] and is said to have received his name from the fact that he did not speak, but only bleated like a sheep five times a day at the periods for prayer. Sulţān Bāyazid II, called *Walī*, built a splendid tomb and dervish monastery on the site of his alleged grave at 'Othmāndjīk (near Amasia, in Anatolia) which was one of the finest and richest in the Ottoman empire. Ewliyā Çelebi in his *Travels* (*Seyāhetnāme*, ii. 180 sq.) describes very fully the great Bektashī monastery there, at which he was cured of a malady of the eye and was initiated into the order. Cf. J. von Hammer, *G. O. R.*, i. 608, on Ewliyā's pilgrimage to the tomb of Köyün Baba. Nothing is known regarding the life of this remarkable saint not even whether he really existed. That he is represented as a disciple and contemporary of Hādjdji Bektash means nothing, as almost all early Ottoman saints are credited with having enjoyed this privilege. The sanctuary itself does not seem to have been examined; but see Maercker in *Z. G. E.*, xxxiv., 1899, p. 376.

Bibliography: Hādjdji Khalifa, *Djīhānumā*, p. 625, 24 (brief mention of the tomb); Ewliyā, *Seyāhetnāme*, ii. 180 sqq.; cf. also J. v. Hammer, *G. O. R.*, i. 230 and 608 (extracts from Ewliyā). (FRANZ BABINGER)

KÖYUNDJİK, a little village, which was built on the great group of artificial mounds, that cover the ruins of the royal palaces of Nineveh, opposite the town of al-Mawsil, to the east of the Tigris. The name of this village is not found in the middle ages nor in the Turkish authors of the xviith century; it has been thought, however, that the name is connected with the dynasty of the Kara Köyunli, which reigned in this region

in the xvth century (von Oppenheim). After being for the most part destroyed by Kurds in 1836, the village was moved to the alluvial plain between the mounds and the Tigris, after archaeological excavations had begun in 1845.

The Arab authors of the middle ages, from Ibn Khordādhbih, know the site of Nineveh under the name of Ninawā (the vocalisation of Yāqūt, iv. 780; nowadays it is also pronounced Nainawā) and connect the place with the story of the prophet Yūnus b. Mattai. Al-Maḳḍisī also calls it Nūnawā (Niebuhr likewise speaks of Kal'a Nunia; perhaps the name was changed under the influence of the Arabic word meaning the fish of Yūnus) and he mentions near it the mound of Tell al-Tawba, on the top of which was a mosque surrounded by houses of *mudjāwirūn*. This last place is the present village of Nabī Yūnus, to the south of Kōyundjīk and also within the bounds of the ancient Nineveh. This village is separated from the ruins by the little stream of Khawṣar (the name is already found in al-Maḳḍisī) and was called Nunia in the time of Niebuhr. Ibn Djbair (ed. Wright-de Goeje, p. 236) says that the ancient walls and the gateways can still be distinctly seen and Ibn Baṭṭūta says the same thing in almost identical words. In the xiiith century Ninawā was inhabited by Christians (Abu 'l-Faradj Barhebraeus, *Tārīkh mukhtaṣar al-Duwal*, ed. Šāliḥani, p. 393). The mounds of Ninawā have always been an inexhaustible quarry for building materials for the inhabitants of al-Mawṣil.

Excavations were begun in 1842 by the French consul Botta, already famous for his work at Khorsābād. A. H. (afterwards Sir Henry) Layard then took in hand the excavations, first from 1845 to 1847 and again from 1849 to 1851, employing Arab and Nestorian workmen. A great many of the objects discovered were taken to London. Since then excavation has definitely ceased, all the trenches have been filled up so that now the ruins present the same appearance as before the discoveries.

Layard, *Nineveh and its Remains*², London 1849; do., *Discoveries in Nineveh and Babylon*, London 1853; M. von Oppenheim, *Vom Mittelmeer zum Persischen Golf*, Berlin 1900, ii. 182 sqq.

(J. H. KRAMERS)

KRĀN, a modern Persian silver coin, now worth about fourpence. When Fath 'Alī Shāh (1211—1250 = 1797—1834) of Persia reorganised the currency at the close of the 30th year of his reign, he instituted a new silver unit, the *krān* (from *ḵarn*, a century, decade, any period of years, in this case thirty) to take the place of the old silver rīāls, 'abbāsīs and ṣanārs which ceased to be coined; 1 tūmān = 10 *krāns* = 200 *shāhīs*.

The *krān* at first weighed two *mithkāl*s (9,2 grammes = 142 grains) but was soon reduced by Fath 'Alī Shāh to 1½ *mithkāl*s (6,9 grammes = 106,5 grains) and again by Muḥammad Shāh to 30 *nakhods* (5,75 grammes = 88,7 grains). At the beginning of Nāṣir al-Dīn's reign, the *krān* was further

reduced to 28 *nakhods* (5,37 grammes = 83 grains) and in order to check the export of Persian silver to Russia and India it was again reduced to 26 *nakhods* (4,983 grammes = 77 grains) in 1857. The standard of fineness was normally .960, but both weight and fineness varied considerably at the different provincial mints with the probity of the provincial authorities. In 1877 (1294) the provincial mints were abolished and all the coins were henceforth struck at Ṭeherān with modern European machinery under the supervision of an Austrian mintmaster, Bergrath von Pechan. Since this date the two-*krān* piece (*do hazār dīnār*) has been the common silver coin; the one *krān* is not uncommon. Five *krān* pieces, half and quarter *krāns* have also been occasionally struck but are rarely seen in currency. The weight of the *krān* continued to be reduced (in 1327 = 1909, it was 4,54 grammes = 71 grains, just half its original weight) and the fineness has also suffered. On the coins the denomination is as a rule expressed in multiples of the *dīnār* (1 *krān* = 1,000 *dīnārs*) except that the quarter *krān* is called a *rabī'*. On a few 2 *krān* pieces of Nāṣir al-Dīn Shāh, on those of Muḥammad 'Alī Shāh (1324—1327 = 1907—1909) and of the first two years of Aḥmad Shāh (1327—1345 = 1909—1926) however the name *krān* is found on the coins.

Rabino, *Coins of the Shahs of Persia in Numismatic Chronicle*, London 1911, p. 182—196. (J. ALLAN)

KRĪM (the Crimea), a peninsula on the northern shore of the Black Sea. The name (of uncertain origin) was at first given in the xiiith century to the town of Solghat or Solkḥad, now called Starīy Krīm ("Old Krīm"), then the residence of the Mongol governor, in the interior of the country south-west of Kafa [q. v.] and north-east of Sūdak. Towards the end of the xivth or beginning of the xvth century, the old name was driven out by the new one as is shown by the words of al-Kāḷkashandī (*madīnat Solghāt — wa-ḵad ghalaba 'alaiḥa ismū 'l-Krīm*, quoted by Tiesenhausen, *Shornik materialov, otnosyashchikhsya k istorii Zolotoi Ordī*, St. Petersburg 1884, p. 401). The old name, the origin of which is likewise unknown (cf. the very artificial Turkish etymology in Muḥ. Riḍā, *al-Sab' al-Saiyār*, ed. Kazem-Bey, Kazan 1832, p. 78) and which must be presumed to have been in existence before the Mongol period, cannot be found before the xiiith century. In Greek legends of saints and lists of bishoprics, we find the fortress of Fulla or Fullai mentioned, the residence of the Khazar governor of the eastern part of the peninsula along with Sugdaia (Sudak); it is assumed that the position of this fortress corresponded to the site of Solghat.

There are only scanty references in the Arab geographers to the peninsula; Idrīsī's statements (transl. Jaubert, ii. 400) about the harbours are, as the forms of the names show, probably taken from the reports of Italian sailors; apparently the trading relations of the Italian cities even then

extended to the northern shore of the Black Sea. The first Muḥammadan campaign to the Crimea was undertaken shortly before the Mongol conquest by the Turks of Asia Minor under Sulṭān 'Alā al-Dīn Kaikubād (616—634 = 1219—1236) (*Recueil de textes relatifs à l'histoire des Seljoukides*, ed. Houtsma, iii. 328 sqq.). In the reign of the Khān of the Golden Horde, Berke, about 1265, 'Izz al-Dīn Kai Kāwus, who had been driven out of Asia Minor and liberated from Byzantine imprisonment by Berke, was given the towns of Solkḥad and Sutaḳ (Sudak) as a fief (*Recueil*, etc., iv. 298; cf. above, i., p. 708); in the rule over these towns he was followed by his son Ghiyāth al-Dīn Mas'ūd (*Recueil*, iv. 335). Tatar coins were struck in Kırım, as the town is always called on the coins, from 686 (1287/1288). In Arabic sources of the Mongol period the name is always written al-Kırım and is vocalised by Ibn Baṭṭūṭa (ed. Defrémery-Sanguinetti, ii. 359) as "Kīram". In the report of the first Egyptian embassy to the court of Berke (text in Tiesenhausen, *Sbornik*, etc., p. 54), Kırım is described as a "village" (*karya*) inhabited by different peoples (Kıpçak, Russians and Alans); on the other hand Ibn Baṭṭūṭa calls it a "large and beautiful town". In 686 (1287/1288) an architect and 2,000 dinārs were sent from Egypt to build a mosque in Kırım to bear the name of the Egyptian Sulṭān (Maḳrīzī, text in Tiesenhausen, *Sbornik*, p. 423); among the ruins of Old Kırım there have actually survived ruins of a mosque built in the Egyptian style. The mosque built by Khān Uzbeḡ in 714 (1314/1315) is in quite a different style of architecture.

Even the earliest rulers of the house of Girāy (cf. above, ii., p. 171 but better perhaps Girei) lived in the town of Kırım and struck coins there. During the civil troubles of the second half of the ixth (xvth) century under Mengli-Girei, the town is said to have been completely destroyed; but we find coins struck in Kırım as late as 923 (1517) in the reign of Muḥammad Girei (O. Retowski, *Die Münzen der Girei*, Moscow 1905, p. 71). On the ruins of Old Kırım, which have been several times explored and described but have suffered severely from depredations, cf. especially P. Köppen, *Krimskiy Sbornik*, St. Petersburg 1837, p. 340 sqq.; W. Smirnow, in *Zap.*, i. 278 sqq. Excavations were begun there in 1925 under the auspices of the *Association for Oriental Studies* and continued in 1926.

Under Ottoman suzerainty (from 880/1475) the name of the former capital was extended to the whole peninsula and its population (*Kırım Khalkı*, *Kırım Tatarları*: cf. W. Radloff, *Versuch eines Wörterbuches der Türk-Dialecte*, ii. 745). The peninsula with its population of different stocks (this was the only place where remnants of the Goths had survived) and its monuments of ancient and early Christian culture became in this period almost completely influenced by Islām and Turkish culture. For the history of the Crimea in this period and the pertinent literature see the articles BAGHÇE SARAI and GIRAY.

After the final incorporation of the Crimea in Russia (1783), the Muslim population was expressly guaranteed complete religious liberty. The text of the edicts then published was later incorporated in the articles of the Russian code relating to religious liberty. A special office of

Muṭli for the Crimea was created, completely independent of the Muṭli of the Volga area in Ufi, and as in Ufi a "spiritual authority" was appointed. On the other hand under the influence of Greek ideas then favoured by the government, Greek culture was encouraged at the expense of Turkish. The kingdom of the former Tatar Khāns was now called the "Tauric territory" (1784, abolished 1797), later (from 1802) "Tauric gouvernement". The capital of the gouvernement was Aḳ Mečet, which had been burned by the Russians in 1736 and now received the name of Simferopol; other towns arose on other sites with Greek names, notably the naval base of Sebastopol. Old Kırım was now called Leukopolis (Lewkopol) but this name never became popular. Russian and Greek immigration and the migration of a large part of the Tatar population to Turkey has wrought a complete change in the character of the population. The Muslims (according to the census of 1913, *M. I.*, 1913, p. 761 only 206,113) are now small in numbers compared with the Christians (less than one third of the total population).

After the revolution of 1917 the Muḥammadan population, as everywhere in Russia, endeavoured without particular success to constitute themselves into an independent community on a religious basis, acting independently of the authority of the state. The territory north of the isthmus of Perekop was later separated from the former "Tauric gouvernement" and joined to the Ukraine republic. The peninsula now forms the "Autonomous Socialist Soviet Republic of Kırım".

Even before the Revolution, the educated "Kırım Tatars" disclaimed this name given them by the Turks; (the name of "Tatars" also occurs in native documents). They wished to be known simply as Turks and their language to be called Turkish (it is really very much influenced by the literary language of the Ottoman empire). At the present day the language of the literature, produced mainly in Simferopol, is called "Turkish", even officially, in contrast to the "Tatar" literary language of the Volga territory.

Garkavi (Harkavy), *Krimskiy poluostrov do mongolskago nashestviya v arabskoi literature (Trud' IV Arkh. Svezda*, ii., 1891, p. 239 sqq.). For the later literature see especially the article "Kırım" in *Geografiko-statisticheskiy Slovar' Rossiyskoi Imperii*, St. Petersburg 1863—1873 (with full bibliography). On the "nationalist illusions of the Kırım-Tatars" in the years 1917—1918 cf. Yelagin in *Noviy Vostok*, v. 190 sqq.; vi. 205 sqq. — On the excavations in Old Kırım cf. *ibid.*, xiii.—xiv. 271 sqq.; xv. 360 sq. (W. BARTHOLD)

KROYA, a town and fortress in Albania, once the headquarters of Skanderbeg [q. v.]. Kroya (Turk. Aḳ-Ḥiṣār) sometimes also called Aḳçe Ḥiṣār or Aḳ Serāy has had a stirring history. It is believed to be built on the site of the ancient Euriboea. Its history in the middle ages has still to be investigated. It is said to have been founded by the Neapolitan noble Carlo Thopia, whose ancestors held the land between Tirana and Durazzo about the middle of the xvth century. The remains of the ancient defences seem to be of Italian origin. Kroya only acquired renown when the Albanian patriot George Kastrioti,

called Skanderbeg (d. January 17, 1468), made it his headquarters, after escaping from imprisonment among the Turks and becoming a Christian again. It was from Kroya that Skanderbeg in 1443 issued his call to a war for the liberation of Albania which he waged with skill and success for many years. When in 1450 Kroya was surrounded by Murād II, Skanderbeg forced the Sultān to abandon the siege. He was also able to hold out against Mehmed II and after his death Kroya was stormed by the Turks on July 14/15, 1478, after the neighbourhood had been cruelly devastated. The town became completely Muslim and is now the capital of a district mainly inhabited by Mir-dites; the population can barely be over 10,000. Kroya is noteworthy as a centre of the Bektashis who had a monastery there. The saint Şarî Şaltîk Dede [q.v.] has one of his graves there and indeed the number of graves of Bektashi saints around Kroya is considerable. Their origin have not yet been studied. The people pay special reverence to the tombs of Hādījī Hamza Baba and of Baba 'Alī (with a monastery, *tekke*). The number of tombs is given as 366, of course quite an arbitrary figure. The Bektashi order is said not to have been introduced, till the end of the xviiith century by a certain Shaiikh Memi but was suppressed by 'Alī Pasha of Janina, a statement which is unreliable (cf. Ippen, *Skutari*, p. 71 sqq.). The fact is that the overwhelming majority of the inhabitants still profess the Bektashi system.

Bibliography: The details of the taking of Kroya by the Ottomans are very differently given by the contemporary chronicler Benedetto Dei (extract given in *Della decima e della altre gravezze, della moneta, e della mercatura de' Fiorentini fino al secolo XVI*, ii., Lisbon and Lucca 1765, p. 270 sq.) so that they require critical examination; Ippen, *Skutari*, p. 71 sqq.; *Wissenschaftliche Mitteilungen aus Bosnien*, vii. 60; A. Degrand, *Souvenirs de la Haute-Albanie*, Paris 1901, p. 215 sqq. (with pictures); F. W. Hasluck, *Geographical distribution of the Bektashi in Annual of the British School at Athens*, 1915, xxi., p. 121 sq.

(FRANZ BABINGER)

KUBĀ'. [See AL-MADĪNA].

KUBAN (called in Noghai Turkish, KUMAN, in Čerkes, PSHIZ), one of the four great rivers of the Caucasus (Rion, Kura, Terek and Kuban). It is about 450 miles long. It rises near Elburz at a height of 13,930 feet. Its three constituents (Khurzuk, Ulu-Kam, Uč-Kulan) join together before reaching the defile through which the Kuban enters the plains (at a height of 1075 feet). The Kuban at first runs through the wooded outer spurs of the mountains and then, taking a westerly direction, flows through the plains with forests on either bank. Its left bank tributaries are Da'ut, Teberda, Zelenčuk, Urup, Laba, Bēlaia, Pshish, Psekups, Afips, Adagum, etc. Its lower course breaks into two branches, one of which (Protoka) flows into the Sea of Azov and the other (the main one) into the Black Sea (although it also sends off a channel to the Sea of Azov). The lower course of the river frequently changes its bed. As late as the xvth century for example, it discharged the bulk of its waters into the Sea of Azov. The Kuban with its tributaries drains an area of 20,000 sq. miles.

The administrative district of the Kuban — before 1918 the province (*oblast'*) of the Kuban Cossacks — also included the valleys, further north, of the Baisugh, Čelbası, Sasıka and the left bank of the Yeya, all flowing towards the Sea of Azov or ending in lakes and marshes. This territory between the chain of the Caucasus and the sea stretched to the north as far as the province of the Don Cossacks and to the east as far as that of the Terek Cossacks. The area of this great province, which is divided into 7 arrondissements (Yeya, Temrük, Kawkazski, Ekaterinodar, Maikop [in Turkish: "much oil"], Laba, Baṭṭāl-pashinsk), was estimated at about 32,000 sq. miles.

Klaproth, *Tableau du Caucase*, Paris 1827, p. 89, estimated the tribes of the Kuban at about 100,000 families. According to the *Russian Encyclopaedia*, the native population about 1861 was 200,000 men (?) but as a result of expatriations en masse, this number had fallen to 90,471 about 1883. Russian colonisation which was begun by the Cossacks about 1861 had reached 1,500,000 by 1894. In 1916, official statistics put the whole population of the province at over 3,000,000. The number of "highlanders" and "Sunnīs" included in this total had also increased and reached 139,000. The native elements indicated by these official terms which lack precision, included the remainder of the Čerkes and Abaz tribes [q.v.] (related to the Abkhāz, q.v.) and Turks of Kara-Čai. The latter (about 15,000 in 1900) lived in the villages (*a'ul*) of Kart-Djurt, Uč-Kulan and Khurzuk, etc. in the upper waters of the Kuban and spoke a northern Turkish dialect (Noghai). They were at one time under the Čerkes princes of Kabarda and in 1822 submitted to the Russians.

After 1920, the territory of Kuban was reorganised on an ethnic basis; besides the *Kabarda-Balkar* region (on the Terek) two autonomous (within the Soviet system) areas were created on the Kuban: 1. *Kara-Čai-Čerkes*, east of Urup with its capital Baṭṭāl-pashinsk; it has about 150,000 inhabitants of whom 45% are Turks, 25% Čerkes and 13% Cossacks; 2. *Adıghe*, a strip of territory along the Kuban and Laba; its capital is Tokhtamukai and it contains about 70,000 Čerkes. The new divisions do not correspond to old administrative divisions.

The basin of the Kuban has been inhabited since the bronze age. The oldest tombs at Maikop go back to the second (according to Rostovtzeff, to the third) millenium B. C. Scythian tombs of the fourth-fifth centuries B. C. are very numerous (Kelermes, Voronežskaia) and Sarmatian tombs from the second century B. C. to the first A. D. The Greeks called the Kuban Hypanis, Vardanes, Anticitēs. In Byzantine authors we find Κοῦφης, Κῶφης (Marquart, *Osteurop. Streifzüge*, p. 32). The spread of Christianity among the Adıghe (Čerkes) according to local legends dates from the emperor Justinian (527—565); cf. Shora Nogmow, *Istoria adıgheiskago naroda*, Tiflis 1861, p. 43.

The Arabs were not well acquainted with the district. According to a bold conjecture of Marquart (*ibid.*), p. 37, 161, 164, Kuban is to be read for Dübā (*Kübā), which according to Gardizi (quoting Djaihanī, c. 301 = 914) formed the southern boundary of the Madjār (Madyars) and to the south of which (on the left bank) lived (Ibn Rusta, p. 139) the Ṭwās, probably an Alān

tribe [q. v.] (cf. the southern Ossete tribe of Tual-tā and the name of the Alāns: Ās). On the other hand Mas'ūdī (*Murūdj al-Dhahab*, ii., p. 45—46) says that the immediate neighbours of the Alān were the Kašak living between the Caucasus and the Black Sea. The Kašak (a parallel form is al-Kāsakiya, Mas'ūdī, *Kit. al-Tanbih*, p. 157) are the Čerkes, whom the Russian chronicles call Kasogī and with whom the Russian principality of Tmutarakan (on the peninsula of Taman in the xi.—xiith century) had continuous relations.

The later history of the territory of Ḳuban is at first the story of the struggle between the Russians and Ottomans and more particularly the Ḳhāns of the Crimea for the possession of the fertile plains southeast of the Sea of Azov and later of the struggle of the Russians with the warlike tribes of the left bank of the Ḳuban.

In the xvth century, Moscow's interest in the northern Caucasus was stimulated by the marriage of Ivan the Terrible with the Ḳabardian princess, Maria Temrükovna (in 1561). Soon afterwards Sultān Selim II sent Ḳāsim paša to Astrakhan and Dewlet-girai of the Crimea invaded Ḳabarda.

In 1589 the Cossacks appeared before Azov, a former Venetian and Genoese colony which the Ottomans had taken in 880 (1475). A long series of struggles began for the possession of Azov (cf. AZAḲ) and the Čerkes principality of Ḳabarda (to the east of the Ḳuban on both sides of the middle course of the Terek). Down to the beginning of the xviiith century the Ḳhāns of the Crimea had the upper hand and by about 1717 the Čerkes had been converted to Islām (Nogmow). By the Russo-Turkish treaty of 1739 the two Ḳabarda were proclaimed independent to constitute a buffer state between the two powers. By article 21 of the treaty Küçük-Ḳainardjī [q. v.], 1774, Great and Little Ḳabarda were placed under the suzerainty of the Ḳhān of the Crimea whose independence was recognised (art. 3). In 1782 the Turks occupied Taman but by the edict of April 8, 1783, Catherine II proclaimed the annexation by Russia of the Crimea, Taman and the "Tātārs of Ḳuban". On Dec. 28, 1783, the Porte recognised the course of the Ḳuban as the frontier. Between 1787 and 1791, the movement in the western Caucasus led by the religious leader Shaiḫ Maṣṣūr caused the Russians considerable trouble but the Russo-Turkish treaty of Yassi (a town which owes its name to the Ās = Alān; cf. Tomaschek, in Pauly-Wissowa², i. 1282—1284) confirmed the frontier of 1783. The treaty of 1829 (art. 4) moved it southwards to the roadstead of St. Nicolas (between Poti and Batum) but the territory within these bounds was only effectively occupied 32 years later after a stubborn and heroic resistance of the tribes of the Ḳuban.

The line of defences of the Caucasus had been planned under the Empress Anna (1730—1740). In 1777 the line started from Azov and went by Stavropol, Georgiewsk to Ekaterinograd (on the Terek). In 1792 it began at Bughaz (north of Anapa) and following the Ḳuban for a while, left it to go to Georgiewsk (1794) and then 1798 to Ekaterinograd (cf. the map in the *Aklī kawḫ. arḫeogr. komissii*, Tiflis 1868, i.). In 1834 General Weliaminow established a military cordon on the left bank of the Ḳuban as far as Gelendjik (on the Black Sea). In 1838 Noworossisk (Tsems)

was founded on the site of the old Turkish fortress of Sudjuk-Ḳal'a. After risings provoked by the operations of the allies in the Crimean War, General Yewdokimow in 1861 carried out an enveloping manoeuvre with the object of making the highlanders descend into the plains and of driving the rebels towards the coast to force them to migrate to Turkey. According to native sources (H. Bammate, in the *Revue Politique Internationale*, Nov.—Dec. 1918), 75,000 (?) refugees left the Caucasus in 1864; Russian sources give the number of emigrants at 13,586 from 1871—1884. In 1864, the Russians reached the passes of the chain of the Western Caucasus.

Bibliography: Cf. the articles ABḲHĀZ, AZAḲ, ČERKES. Archaeology: Minns, *Scythians and Greeks*, Oxford 1913, p. 634—638 gives a complete bibliography; Rostovtzeff, *Iranians and Greeks in South Russia*, Oxford 1922. All the passages in classical authors relating to the Caucasus in B. Latyshev, *Scythica et caucasica e veteribus scriptoribus graecis et latinis*, in *Zap. Russ. Arkh. obsch.*, 1890—1906. Similar passages in the Arabic geographers have been transl. by N. Karaulow, *Sbornik materialow ... Kawkaz*, Tiflis, xxix., xxxi., xxxii., xxxviii. (map). For the general bibliography see Miansarow, *Bibliographia caucasica et trans-caucasica*, St. Petersburg 1874—1876 and Dubrowin in vol. III/i. of *Istoria voimī na Kawkaz*, St. Petersburg 1885—1888. There is an account of the Russo-Turkish wars and geogr. information in the *Grande Encyclopédie russe*, ed. Brockhaus and Efron. Statistics for 1916 in the official publication *Kawkazski Kalendar' pour 1917*. Situation after 1923 in the publication of the Foreign Office, *Soviet Russia, A description of the various political units*, London 1924, and in the *Encyclopédie soviétique*, i., Moscow 1926, under rubric Adighe (N. F. Yakowlew). On the Čerkes [q. v.] language cf. also Prince N. S. Troubetzkoy, *Langues caucasiennes septentrionales*, in *Les langues du Monde*, ed. by A. Meillet, Paris 1924, p. 336, 341 and N. Yakowlew, *Tables phonétiques de la langue cabarde et Glossaire des exemples*, fasc. i. and ii. of the *Travaux de la section des langues du Caucase septent. de l'Institut Oriental*, Moscow 1923. For the Turkish dialect of Ḳara-Čai cf. W. Pröhle, *Karatschaishes Wörterverzeichnis*, Keleti Szemle, x., 1911. (V. MINORSKY)

ḲUBBA (now Ḳuba), a district in the eastern Caucasus between Bākū and Derbend [q. v.]. The district of Ḳubba with an area of 2,800 square miles is bounded on the north by a large river, the Samūr, which flows into the Caspian, on the west by the "district" of Samūr which belongs to Dāghistān [q. v.], on the south by the southern slopes of the Caucasian range (peaks: Shāh-Dagh, 13,951 feet high, Bābā Dagh 11,900) which separate Ḳubba from Shamāḫha (cf. the article SHĪRWĀN), on the S. E. by the district of Bākū and on the east by the Caspian. The area between the mountains and the flat coast land is called Djāf (Vullers, i. 499: *djāf*, "ad venerationem principis destinatum nemus"). The plain between the rivers Yalama and Belbele is called Muskūr; Shābarān lies further south (cf. SHĪRWĀN). The other cantons are Barmak (so-called after a member of the Barmecide family, who sought refuge here in the reign of Hārūn

al-Rashid), Shishpāra, Tip, Khinalugh, Budugh, Yuhari-bash, Sirt, Anakh-dara, and (sometimes) Kābistān (*Akl*, iv. 650).

The population in 1896 was 175,000, 36,70/0 Tāt [q. v.] speaking the Iranian dialect of *Tāti*, 25,50/0 of Ādharbāidjāni Turks, 24/0 of highlanders of the Kürā group (the Kūrines) and 80/0 highlanders of the group (S. E. Dāghistān group) formed of Khinalugh, Djek, Křiz and Budugh, to whom the Udi of Shekki [q. v.] seem to be related. Muslims form 94/0 of the population (76,5 Sunnis, and 17,5 Shī'is). Jews, Russians and Armenians together number several thousands. The town of Kūbba (16,300 inhabitants), only founded about 1750, lies on the right bank of the river Kūdial; on the left bank is the Jewish quarter of the town. Near the mouth of the Kūdial is the roadstead of Nisābād (called Nizowia by the Russians) which played an important part in Russian military operations in Transcaucasia.

The history of the district of Kūbba, which at first must have formed part of the ancient Caucasian Albania, is mixed up with that of Shīrwān; Shābarān (now a ruined site on the river Kūlhan, Russian Gilkin) had been an important centre inhabited by Christians (Muḳaddasī, p. 376) before Shamākha became the capital of Shīrwān. On the banks of the river Kūlhan may still be seen ruins with a wall running from the sea to Bābā Dagħ. Near the town of Kūbba is the tomb of Shīrwān-shāh Kā'ūs b. Kaiḳubād (d. 774 = 1373).

It was only in the xviiith century that Kūbba enjoyed a period in independence. In the time of Shāh Sulaimān Šafawī [q. v.] a member of the family of the *ūsūmī* of Kaitak (cf. DĀGHISTĀN) called Husain Khān arrived at the court of Isfahān. He became a Shī'ī and gained the favour of the Shāh who appointed him Khān of Kūbba and of Sāliyān (at the mouth of the Kura). Husain Khān built the castle of Khudād. His grandson Husain 'Alī b. Ahmad, with the help of Peter the Great, regained the ancestral estates of the *ūsūmī* but his position was threatened by the alliance of Surkhai, prince of the Kāzi-Kumūkh, with Hādjī Dā'ūd, religious chief of Muskūr, who with the help of Turkey played a considerable part in Dāghistān from 1712. Nādir Shāh restored Sāliyān to Husain 'Alī. After the death of Nādir, local dynasties arose everywhere. At this time Husain 'Alī moved his capital from Khudād to Kūbba where he built a town and annexed Shābarān and Kūlhan. He died in 1171 (1758). His son Fath 'Alī Khān who succeeded him sought the help of the empress Catherine II, who in 1189 (1775) sent General de Medem to Derbend, under a pretext of avenging the death of the academician Gmelin, who had died on June 27, 1774 in captivity with the *ūsūmī* of Kaitak. With the help of the Russians, Fath 'Alī reestablished his authority over what he could regard as his hereditary fief (Dāghistān, Kūbba, Sāliyān). He also took Shīrwān and the Khān of Bākū appointed him his son's guardian. The influence of Fath 'Alī Khān gradually extended beyond the bounds of the district. In 1193 (1778) he sent 9,000 men to Gilān to restore Hidayat Khān, who had been driven out by the Kādjars [q. v.]. In 1202 (1788) he seized Ardabil whereupon the Shāh-sewān [q. v.] recognised his authority. The Khāns of Kara-Dagħ and of Tabriz sought his support. Fath 'Alī is credited with ambitious designs on Ādharbāidjān. To recon- cile

his plans with those of the king Irakli of Georgia, Fath 'Alī met the latter at Shamkūr (Shamkhor) but soon afterwards fell ill and died in 1203 (1789).

The political and military work of Fath 'Alī Khān crumbled away under his successors. His young son Shaikh 'Alī Āghā (from 1791) had a very adventurous career. This young Khān relied on the support of the Kādjars but Count Zubow took Derbend on May 4, 1796 and entrusted the government to his sister Perī-Djahān Khānum. Taken prisoner by the Russians, Shaikh 'Alī Āghā escaped and renewed the struggle. On the accession of the emperor Paul, Russian policy suddenly changed and the Russian troops were withdrawn. Shaikh 'Alī returned to Derbend. In 1801 he and the other Khāns sent a delegation to Alexander I, but by 1805 we again find Shaikh 'Alī rebelling against the Russians to whom he caused continual trouble till 1226 (1811). The khānate of Kūbba was occupied by the Russians in 1806 and by the treaty of 1813 Persia renounced her claim to the eastern Caucasus. From its incorporation in the Russian empire, Kūbba formed a "gouvernement" of Shīrwān (later of Bākū). Since 1919 Kūbba has been part of the republic of Ādharbāidjān, at first independent and then Soviet; this is not to be confused with the Persian province of the name [q. v.].

Bibliography: cf. the articles DĀGHISTĀN, DERBEND, SHEKKI and SHIRWĀN. See especially the work of the local historian 'Abbās Kulī Āghā Baki-Khānow (a descendant of the Khāns of Bākū, who were related to Fath 'Alī Khān), the *Gūlistān-i Iram* of which a Russian version was published by the author himself (1794—1846) was published at Bākū in 1926 (*Travaux de la société scientifique de l'Azerbaïdjan*, part 4). The principal documents are in the collection by *Akl Kavkazskoi Arkheograficheskoi Komissii*, publ. by A. Bergé, Tiflis 1866 *sqq.*, i.—xii., index under Derbend-Kūbba. (V. MINORSKY)

KUBBAT AL-ŠAKHRA, the Dome of the Rock, Jerusalem, often erroneously designated the Mosque of 'Omar. In the first place, it is not a mosque but a shrine or oratory erected above the sacred rock (*ṣakhra*) and similar to the other domed edifices scattered over the *ḥarām* area; in the second place, it was not built by 'Omar but by the fifth Umayyad Caliph, 'Abd al-Malik b. Marwān. Jew, Christian and Muslim alike revere the sacred rock which they regard as the *omphalos* of the world. It is even said to be 18 miles nearer heaven than any other spot. Muslims set it next to the Ka'ba in order of sanctity.

Although there is no specific mention of the *ṣakhra* in the O. T. it is referred to nevertheless in the Talmud and Targums. Here Melchizedek set up his altar; here Abraham sacrificed; here was the Bethel of Jacob; here was the threshing-floor of Arawna the Jebusite (II Sam., xxiv. 16 *sqq.*); here David worshipped; and here were the altars of Solomon, Zerubbabel and Herod. But Muḥammadan tradition has greatly magnified all this legendary material. Angels visited the Rock 2,000 years before Adam was created, and Noah's ark rested here after the Deluge. It is said to be actually one of the rocks of Paradise, and that here on the Resurrection Day the Angel of Death, Israfil, will blow the last trumpet. Previous to this the Ka'ba will come from Makka as a bride unto the *Ṣakhra*. They assert that it rests on a

palm-tree beneath whose shade Āsiya, Pharaoh's wife, and Miriam, Moses' sister, will give the faithful a cooling draught from one of the rivers of the Garden. All the sweet waters on the earth are believed to originate somewhere beneath it. The Rock itself is, by others, reported to be miraculously hung between heaven and earth, but since this wonder was too remarkable for human eyes to behold, it has been purposely hidden by the surrounding building. Beneath the Rock is a cave (*maghāra*) the floor of which when stamped upon by the foot emits a hollow sound pointing to the presence of a cavern beneath, perhaps a well, the so-called "Well of the Spirits" (*bi'r al-arwāḥ*) where the souls of the departed are believed to assemble twice weekly. This hollowness of walls and floor has no doubt given rise to the legend of its being suspended in mid-air. Tradition states that all the prophets of God up to the time of Muḥammad have come to pray here at the Rock which is daily surrounded by a body-guard of 70,000 angels (Ali Bey, *Travels*, ii. 220). God is said to have ordered Moses to institute the ṣakhra as the qibla, and Muḥammad intended doing likewise only he was told by God to take the Ka'ba at Makka as the qibla. The change took place in Radjab A. H. 2.

When 'Umar conquered Jerusalem he (guided by Ka'b al-Aḥbār, the converted Jew) found the ṣakhra scandalously covered with filth. This he ordered to be removed by the Nabataeans, and after three showers of heavy rain had cleansed the Rock, he instituted prayers there (Le Strange, *Palestine under the Muslims*, p. 139 sqq.). In the years 69—72 (688—691), 'Abd al-Malik b. Marwān built the Dome of the Rock. The political situation at the time was the immediate cause of this undertaking. The rival claimant to the Caliphate, 'Abd Allāh b. al-Zubair, was favoured by the inhabitants of the Haramain (Makka and Madina). Fearing lest his Palestinian subjects who visited the Ka'ba on pilgrimage should return infected with the spirit of revolt, 'Abd al-Malik determined on a plan to divert the Makkan pilgrims from the seditious area and lead them instead to Jerusalem. After sending out feelers in the shape of circulars stating his intentions, and after receiving warm support, he proceeded with his project, the embellishment of Jerusalem (de Vogüé, *Le Temple de Jerusalem*, p. 75). Then he declared to his people: "This Rock (Ṣakhra) shall be unto you in the place of the Ka'ba" (Ya'qūbī, ii. p. 311). For the expenses of the building he is said to have set apart a sum equal to the revenue from Egypt for seven years, and as a treasure-house for this money he commanded to be built after his own design the edifice in the neighbourhood that is now known as the *Ḳubbat al-Silsila* (Dome of the Chain). This building is said to have pleased him so much that he ordered the Dome of the Rock to be modelled after it. The Ṣakhra was surrounded by a latticed screen of ebony and curtains of brocade. At this time also a precious pearl, the horn of Abraham's ram, and the crown of Khosraw were suspended to the chain which hung in the centre of the Dome, but with the coming of the 'Abbāsids these were transferred to the Ka'ba (Palmer, *Jerusalem*, p. 86). In those days the building was so full of incense that a person who had been there was known at once by the odour which clung to him. Another reason why 'Abd

al-Malik built the Ḳubbat al-Ṣakhra is given by al-Mukaddasī, who says that the Caliph "noting the greatness of the Dome of the Ḳumāma [the Christian Church of the Anastasis (*ḥiyāma* corrupted to *Ḥumāma* ordure)] and its magnificence, was moved lest it should dazzle the minds of the Muslims, and hence erected, above the Rock, the Dome which now is seen there" (Le Strange, *Pal. Explor. Fund's Q*; 1887, viii., p. 103). For long, controversy has been waged regarding the true founder and builder of the Ḳubbat al-Ṣakhra. It seemed too wonderful an achievement for the Arabs. Ferguson argued that it was the work of Byzantine architects under Constantine and that it marked the site of the Holy Sepulchre. Conder was the chief opponent of this view. No doubt 'Abd al-Malik employed Greek architects in the construction, and there was abundance of Greek columns and capitals at hand among the ruins of the churches destroyed by the Persians, which could easily be incorporated into the structure. Ferguson's argument, besides being fallacious, is contrary to the evidence of Arab historians.

That the Ḳubbat al-Ṣakhra was erected by 'Abd al-Malik is indicated by the famous Kūfic inscription in yellow and blue tiles above the cornice round the base of the Dome: "Hath built this dome the servant of Allāh, 'Abd al-Malik, commander of the Faithful, in the year two and seventy — Allāh accept him". When the 'Abbāsīd Caliph al-Ma'mūn repaired the place in 831 A. D. and built the octagonal wall, some of the tiles were removed and others containing this Caliph's name inserted in place of 'Abd al-Malik's. But the forgery is easily detected, the tiles are of a darker blue while the letters of the name are closer together (a chromo-lithographic facsimile is to be found in de Vogüé, *ibid.*, pl. xxi.).

In the year 846 A. D. on the night of the great earthquake, the keepers of the Ḳubbat al-Ṣakhra testified that the Dome was cleft in twain so that they could see the stars and feel the rain on their faces. Then a still small voice said: "Put it back again"; and soon the dome resumed its former position. During another earthquake in 407 (1016), the dome fell down on the Ṣakhra (Ibn al-Aṭhīr, *al-Kāmil*, ix. 209). Six years later it was restored by Ḥākim (see de Vogüé, *ibid.*, pl. xxxvii.). There is a fragmentary inscription (pl. xxiii.) inside on the tile-work dated 418 A. H. (1027 A. D.) marking further repairs. The author of the *Muthīr al-Ghīyām* ("The exciter of desire", i. e. to visit Jerusalem) says: "In the year 452 (1060) the Great Lantern (*tanūr*) that hung in the Dome of the Rock fell down and there were in this lantern five hundred lamps". This was taken as a bad augury (Le Strange, *ibid.*, p. 130). In 1099 the Crusaders entered Jerusalem and the building, endowed by Baldwin II, became the *Templum Domini*, the Church of the Knights Templars. It was redecorated inside and outside with Christian paintings and images of the saints. A marble altar was set up on the Ṣakhra, and a large golden cross on the summit of the dome. A large iron screen of French workmanship with four gates was erected between the pillars of the inner ring. The cave beneath was transformed into a Chapel. They believed it to be the Holy of Holies, and called it the Confessio (Joannes Phocas, *P. P. T. S.*, p. 20). The building thus became the type of "Temple" Churches built

in Europe. The dome was the symbol of the order and appeared on the Grand Master's seal. A polygonal type of building reminiscent of the Dome of the Rock appears in Raphael's *Marriage of the Virgin* as the Jewish Temple (de Vogüé, *ibid.*, p. 78, note).

In 1187 Saladin captured the Holy City. The Golden Cross on the dome was knocked down amid the cheers of the Muslims and all impurities, such as the marble casing on the Rock, removed. In the cave below, prayers were made in his presence, led by the *kāḍī* of Damascus. (For a contemporary account see Ibn al-Aṭhīr, *ibid.*). The lengthy inscriptions copied down by John of Wurzburg must have been destroyed at this period since no trace of them now remains. Instead there can now be seen inside the Cupola the inscription set up by Saladin to record his restoration (text in de Vogüé, *ibid.*, p. 91 *sq.*). There have been other restorations since. In 1447 part of the roof was destroyed by fire, caused it is said by certain young noblemen hunting there for pigeons with a lighted candle. A complete renovation took place under Sulaimān the Magnificent (1520-1566). Until recent years little was done to remedy the ravages of time (*Ordinance Survey of Jerusalem*, 1865, p. 32). Nowadays the authorities are anxious to maintain the building in a condition worthy of its past splendour.

The building itself is of harmonious proportions and stands, along with some minor edifices, on an irregular platform, 10 feet in height, paved with limestone slabs. The Şakhra is almost on a level with this pavement, the highest point being only five feet above it (or c. 2,440 feet above the Mediterranean). Six flights of steps leading up to the platform end in elegant columns or arcades called *Mawāzīn*, or "Balances", because here on the Resurrection Morn all things will be duly weighed in the balances of Justice. The building is in the shape of a regular octagon, with side 66 feet in length. The diameter within is 152 feet; that of the dome at its base being 66 feet. The dome, 99 feet high, is wooden, covered outside with lead, and inside with stucco, beautifully gilded and richly ornamented. The exterior of the building was formerly covered with marble but this has partly been displaced by the *Kāshāni* porcelain tiles added by Sulaimān the Magnificent in 1561. Indeed during the xvth century, the whole edifice was restored and embellished so that the external incrustation of the walls, the beautiful stained glass windows, and numerous other decorative effects throughout are characteristically Turkish. Qur'ānic passages wonderfully inscribed in interwoven characters form a frieze round the building. There is a perfect harmony in the colour scheme. The fenestration is remarkably fine, especially in the case of one window near the Western Doorway. In the interior four massive piers and twelve columns surround the Şakhra in the centre. The dome rests on these. Another series of supports consists of an octagonal screen composed of eight piers and sixteen columns, two columns occurring between each pair of the six-sided piers. In this way the interior is divided into three concentric parts. The outer octagonal aisle is 13, the inner, 40 feet wide. The doors face the four cardinal points: North, *Bāb al-Djanna* (Gate of Paradise); South, *Bāb al-Qibla* (South Gate); East, *Bāb al-Nabī Dāūd* (Gate of the Prophet David) or *Bāb al-Silsila*

(Gate of the Chain); West, *Bāb al-Gharb* (West Gate). The teak (*sāḍī*) doors have very artistic old locks and are covered with bronze plates stamped with a Kūfic inscription (dated 216 A.H.). The building consists of basement (16 feet high) with the aforementioned doors; a storey of plain masonry (20 feet high) with seven round arches on each side, 38 of which are pierced for windows, the rest being blind; and, lastly, the wonderfully proportioned dome above. The pavement is laid with marble mosaic fastened down by clamps run in with lead.

The Rock, about 56 feet long by 42 feet wide, is almost semicircular in form, the curved sloping side lying to the East, and the higher straight side to the West. Geologically it forms a portion of one of the harder grey beds of the Jerusalem plateau, and has been left practically in its rough unheaven state throughout the ages. In visiting this sacred spot the devout pilgrim has to be careful to keep the Şakhra on his right hand, so that he performs the circumambulation of the holy relic in the opposite direction from the circuit of the Ka'ba. Ibn 'Abd Rabbihi (in his *ʿIqd al-Farid*, transl. in part by Le Strange in *Pal. Quart. Stat.*, 1887, p. 99) states: "Now when thou enterest the Şakhra make thy prayer in the three corners thereof, and also pray on the slab which rivals the Rock itself in its glory for it lies over a gate of the gates of Paradise". This slab is a portion of the marble pavement near by the *Bāb al-Djanna* and is supposed by some to mark the place where the prophet Elias knelt in prayer. Others believe it covers the Tomb of Solomon (*Kabr Sulaimān*). All, however, assert that it was originally part of Paradise, and is generally termed the Flagstone of Paradise (*Balāṭ al-Djanna*). A tradition has it that Muḥammad drove into this slab nineteen golden nails which are destined to drop out periodically. When all have fallen through, the end of the world has come. The Devil almost succeeded in removing them but the angel Gabriel intervened in the nick of time. Nowadays three nails remain in place, while one has sunk a little. It is with humble step and slow, therefore, that the pious pilgrim treads this holy place lest by dislodging one of the nails he should hasten the day of judgment.

On a detached piece of a marble column on the S.W. of the Şakhra, covered by a rude shrine which also contains hairs from the prophet's beard, is to be seen the *Qadam Muḥammad* (or Footprint) which he left behind him on the night of his ascension to heaven on his steed *al-Burāk*. During the Crusades when the Christians occupied the Kubbāt al-Şakhra this was known as the Footprint of Jesus. The round hole in the middle of the Rock was where the prophet's body pierced its way upwards. And near by is shown the very Saddle of al-Burāk in the shape of several marble fragments. There is also pointed out on the West side of the Rock the impression of the Handprint of Gabriel (*Kaff Sayidnā Djibril*) where he held down the Rock when it was about to rise with Muḥammad. Directly opposite are preserved the banners of Muḥammad and 'Umar, and the buckler of Ḥamza. The cases containing these relics are dust-covered. Once a year this dust is carefully gathered and sold in minute quantities as a panacea of miraculous power. A slight depression in the pavement on the East side of the Rock is pointed

out as the Footprint of Idris. In the N. E. corner is the recess known as the Prophets' Kibla (*Kiblat al-Anbiyā'*). There are also several ancient Kur'āns and a dwarf screen known as Taqlid Saif 'Alī (the imitation of the sword of 'Alī).

The entrance to the cavern beneath is by means of the Bāb al-Maghāra, at the S. E. corner of the Rock, the pilgrim humbly descending the eleven steps with the following prayer on his lips, known as the "Prayer of Solomon": "O God, pardon the sinners who come here, and relieve the injured". The average height of the cave is six feet, and on the roof may be seen the impress of Muḥammad's head. The floor is paved with marble and the sides are whitewashed. It is said to be able to hold 62 persons (Ibn al-Faḥīh, *B. G. A.*, v. 100). A projecting piece of rock known as the Tongue of the Rock (*Lisān al-Şakhra*) is so-called because it greeted 'Omar on one occasion. There is also to be seen the slender column supposed to uphold the Rock. The guide points out on the right the Mihrāb Sulaimān (Solomon's prayer-niche); on the left, the Maḥām al-Khalil (Abraham); on the N. corner, the Maḥām al-Khiḍr with the Mihrāb Dā'ūd opposite.

On the S. E. of the Şakhra a staircase leads upwards to the gallery of the dome whence the crescent on the summit may be reached. The eulogy pronounced on it by Muḥaddasī (*P. P. T. S.*, iv., p. 46) still holds good at the present day: "At dawn when the light of the sun first strikes on the Cupola, and the Drum catches the rays; then is this edifice a marvellous sight to behold, and one such that in all Islām I have never seen its equal".

QUBILAI (usually written Qubilāi but also "Qublāi"), Mongol emperor (1260—1294), brother and successor of Khān Möngke. He was probably born in 1214; when Čingiz Khān returned in 1225 to Mongolia from his campaign in Western Asia, Qubilai, who was then eleven years old, had just gained his first trophy of the chase; after the Mongol fashion, Čingiz Khān himself smeared his thumb with flesh and fat (Rashīd al-Dīn, ed. Berezin, *Trud' Vost. Otd. Arkh. Obsch.*, xv. 141, text). In the reign of his brother he was governor of China from 1251 and devoted himself to the conquest of the kingdom of the Sung dynasty, which was only completed in his own reign (in 1279), whereby the whole of China, for the first time since the tenth century, was again united under one ruler. After a victory over his brother Arigh-Buga who was proclaimed Emperor in Mongolia (cf. the article **BERKE**), Qubilai remained in China and transferred the capital of the Mongol empire to Peking (Khānbaliq, q. v.). In spite of great achievements at home (Imperial Canal, new code of criminal law, Academy) and abroad (great, although unsuccessful campaigns at sea against Japan and the island of Java, such as had never been undertaken in the history of China, before or after), his reign was for China a period of oppressive foreign rule. Qubilai was, like most Mongol emperors, favourably disposed to Islām and the Muslims; only for a time (seven years, 1282—1289, of which the first four years are described as a period of severe persecutions) as a result of the events connected with the assassination of the minister Aḥmad (see **KHĀNBALIK**) did the Muslims fall into disfavour with him.

(Qubilai in China under Möngke), 338 sqq. (Qubilai's own reign); Howarth, *History of the Mongols*, i., p. 187 sqq., 216 sqq. On the persecutions of the Muḥammadans also *Zap.*, xxii. 160 sqq.

(W. BARTHOLD)

KUBU, a district with self-government under the suzerainty of the Dutch Government in the southern part of the delta of the Kapuas river; for administrative purposes it belongs to the Pontianak division of the residency of "Westerafdeeling van Borneo". In the north it is separated from the kingdom of Pontianak by the Great Kapuas river, in the east it is bounded by the districts of Tayan and Simpang, in the south and west by the China Sea. The ruling family is of Arab

descent, the founder of the kingdom was Saiyid Aidrus al-Aidrus who settled not far from the mouth of the river Tērēntang with a few Arab, Buginese and Malay followers about 1780, soon after his brother-in-law, the Arab adventurer Sharif 'Abd al-Rahmān al-Qadri, had founded the sultanate of Pontianak. The capital and kingdom received its name from an entrenchment (Malay: *kubu*) thrown up as a defence against raids by pirates. He put himself under the protection of the Dutch East India Company who recognised him as ruler with the title *tuwan* (lord). The land is of little importance; it consists for the most part of a swampy wooded plain which is only in parts drained (mainly in the Ambawang district in the north-west) and fitted only for primitive tillage and growing coconuts. The population is not numerous and is very scattered. It consists almost entirely of immigrants; besides Arab half-breeds and a number of Chinese they are mainly Buginese. There are very few Dayaks. The predominant religion is Islām but its observances are for the most part neglected; only here and there one finds a mosque which is falling to pieces. The ruler, whose capital is quite an insignificant settlement, governs with three notables (*wakil*), members of his family, each of whom is allotted a certain territory as an appanage.

K. Enthoven, *Bijdragen tot de geographie van Borneo's Westerafdeeling*, Leyden 1903, ii. 869; Th. J. H. van Driessche, *Nota betreffende het landschap Koeboe*, in *Tijdschrift van het Kon. Ned. Aardrijkskundig Genootschap*, Series 2, xxix., 1912, 326; article KOEBOE, in the *Encyclopaedie van Nederlandsch-Indië* 2, ii., 1918, 357. (W. H. RASSERS)

KUBŪR, pl. of the Arabic *ḵabr*, which, besides its usual meaning of "tomb", has also that of "box, sheath or needle case", although it is not given in any dictionary; cf. Abū Yūsuf, *Kitāb al-Kharāj*, p. 17. In North Africa one finds *ḵabra*, pl. *ḵabūr*, "holsters" (Beaussier). This plural passed into Ottoman Turk, as a singular, and was borrowed later by Arabic dialects of Africa (*ḵubūr*, pl. *ḵubūrāt*, "leather pistol-belt worn round waist" [Beaussier]). It has the same meaning of case, sheath, to which one can add that of quiver; it is commonly used (by an abbreviation of *ḵalem-ḵubūru* "case for reeds") for a case for holding cut reeds, a pen-holder, vulg. Ar. *dawāya* (class. *dawāt*), Pers. *ḵalem-dān* (illustrated in Huart, *Calligraphes*, p. 16; Lane, *Modern Egyptians*, i. 288).

KUČAK (MİRZĀ) WIŠĀL, surname of Muḥammad Shāfi', Persian poet of the sixteenth century, born at Shirāz, a clever calligrapher and musician, died in 1262 (1846). Author of numerous poems (*diwān* lithographed at Teherān 1275) the *Basm-i Wišāl*, the completion of the *Farḥād u-Shīrīn* of Waḥṣhī (lithographed at Teherān 1263) and of a translation into Persian of the *Atwāk al-Dhahab* (golden collars) of Zamakhshari. His sons, Wiḵār, Maḥmūd Ḥakīm (the physician), Abū 'l-Qāsim Farhang, Dāwari, Yazdāni and Himmēt had inherited the paternal talent.

(CL. HUART)

KUČAN, a town in Persia, in the northern part of the province of Khorāsān [q. v.] on the upper course of the Atrek [q. v.], perhaps the ancient Ashak or Arsaka, in the older Arab geographers *Khābūshān*, later *Khūdjān*, e.g. Muḥaddasī, *B.G.A.*, iii. 319, 3 and Baiḥaqī, ed. Morley, p. 761; also Yāqūt under Ustuwā (i. 243, 20) according to Sam'āni (*G.M.S.*, xx., f. 312^a); according to Yāqūt, ii. 487, 21, the usual local pronunciation was *Khūshān*; Sam'āni, f. 211^a, here also has only the form *Khūdjān* (Sam'āni had himself been there). The origin of the pronunciation Kučan is traced by Rashid al-Dīn (ed. Quatremère, p. 183) to the Mongols. The ruins of the ancient *Khābūshān* (this name is still borne by a large village) lie 3 farsakh west of the later town, which was destroyed in the sixteenth century by a series of earthquakes. Towards the end of the viith (xiiith) century Ghāzān, afterwards Ilkhān, when governor of Khorāsān built a Buddhist temple in Kučan (C. d'Ohsson, *Histoire des Mongols*, The Hague and Amsterdam, 1834/1835, iv. 148, quoting Rashid al-Dīn). In the reign of 'Abbās I [q. v.] a Kurd principality (tribe of Za'farānlū) was founded with a hereditary Ilkhāni at its head. Like most towns of Persia of some size, Kučan also has the tomb of an Imāmzāde, Ibrāhīm b. 'Alī, son of 'Alī b. Mūsā, who is buried in Meshhed. On the hill now called Nādir-Tepe near Kučan, Nādir Shāh was killed in 1160 (1747). In the reign of Nādir Shāh (after his campaign of 1740 against Bukhārā) a few leaves of a copy of the Qur'ān written by the Timurid Baisonghor Ghiyāth al-Dīn [q. v.] preserved in Samarkand (according to others in Shahr-i Sabz i.e. Kash) were brought to Kučan. Shāh Naṣir al-Dīn in 1883 had two of the leaves brought to the Museum in Teherān. In the suppression of a rebellion of the Ilkhāni by 'Abbās Mirzā [q. v.] the town suffered severely, and the great earthquakes of 1852, 1871, 1893 and 1895 were still more disastrous to it. When Curzon visited it in 1889, the population was under 12,000; but we are also told that 12,000 perished in the earthquake of 1893 and about 10,000 were left. The present Kučan was only rebuilt after the last earthquake about 8 miles east of the ruined town.

KÜÇÜK BAIRAM. [See İD AL-FİTR.]

KÜÇÜK KAINARDJE (T., "small hot spring"), a town in Bulgaria, 45 miles to the South of Silistria, was until the treaty of Berlin (July 13, 1878) a part of the Ottoman

Empire. It was in this town that a treaty of peace between 'Abd al-Hamīd I, the Ottoman Sultān and Catherine II, the Empress of Russia, was signed on the 12 Djumādā I, 1188 (July 21st, 1774). The Russian army having appeared before Shumla and the troops of the grand vizier Muhsin-Zāde Muḥammad Pasha, having abandoned it in a body, the latter decided to send plenipotentiaries to Field-Marshal Romanzoff; he chose the re'is-efendi Munib and Kāya-beg Aḥmad Rasmī; Prince Repnine, the Russian Ambassador, represented the Empress. After a discussion which lasted for seven hours, the plenipotentiaries came to an agreement on July 17; but the signature was postponed for five days in order to make it coincide with the date of the treaty signed by Peter the Great after his defeat on the Pruth (July 22, 1711): and the town of Küçük Kainardje was chosen because it was the place where the General Weissmann had perished. The treaty consisted of twenty-eight articles which established the political independence of the Tatars of the Crimea, of Bessarabia, and of Kūbān, while reserving religious supremacy to the Sultān (a phrase which gave rise to the idea of the Caliph-Pope, which became so widespread throughout European literature, see also KHALĪFA). It restored to the Khān of the Crimea all the lands conquered by the Russian Army, except the two ports of Kerč and Yeñikal'a; the restoration of the conquests of the Russians except the two Qabarṭa, Azof and Kiliburun. It restored prisoners to liberty without ransom; and provided for the free navigation of the Black Sea and the Mediterranean. It established freedom for commerce, security for travellers and in particular for the pilgrims from Jerusalem (this article later allowed Russia to intervene in the affairs of the Holy Land). The Porte acknowledged the Empress of Russia's title of *pādishāh* and her right to build a church at Pera. The question of Poland, which had been the chief cause of the war, was not dealt with in the treaty. By two additional secret clauses (Martens, *Recueil des traités*, ii. 287) the Porte promised to pay as war indemnity the sum of 15,000 purses = 7,500,000 piastres, worth at this time four million roubles, within three years. Russia on her side undertook to order her fleet to evacuate the Archipelago as quickly as possible. This treaty contributed largely to strengthen Russian influence.

(CL. HUART)

KUČUM KHĀN, a Tatar Khān of Siberia, in whose reign this country was conquered by the Russians. Abu 'l-Ghāzī (ed. Desmaisons, p. 177). is the only authority to give information regarding his origin and his genealogical relation to the other descendants of Čingiz Khān. According to this source, he reigned for forty years in "Turan", lost his eyesight towards the end of his life, was driven from his kingdom by the Russians in 1003 (1594/1595), took refuge with the Manghit (Nogai) and died among them. References to Kučum are also found in the work of the Ottoman Turk Saifi said to have been written in 990 (1582) (Leyden MS., N^o. 917; transl. without a reference to the

MS. by Ch. Schefer as an appendix to his translation of the history of Central Asia, *Histoire de l'Asie Centrale*, by 'Abd al-Karīm Bukhārī, Paris 1876, p. 303 sq.). Kučum's kingdom and its capital are there called "Turā"; the Russians had taken this town during Kučum's absence. Kučum afterwards returned and drove out the Russians after a long siege (1—2 years) but the latter carried off his son a prisoner to Moscow. These stories seem to show that Saifi's work was probably composed later than the year given in the title (Schefer, *loc. cit.*, Preface, p. iv., even gives the year 990 A. H. as date of death of the author).

The name "Isker" for the capital of Kučum (near the confluence of the Tobol and Irtysh) seems to be found only in Russian sources; it is only from the latter also that the principal events of his reign can be chronologically arranged. Kučum did not inherit his kingdom from his father but had expelled his predecessor Yādīgār; in 1563 Yādīgār is still mentioned as king of Siberia, while in 1569 we find Kučum. In 1581 Isker was conquered by Russian Cossacks under Yermak; the Cossacks owed their victory to the use of fire-arms, then still unknown in Siberia. Kučum's son Makhmet-Kul (Muḥammad Kul) was sent a prisoner to Moscow. It was not till Yermak fell in an unexpected attack (1584 or 1585) that Isker was vacated by the Russians; but by the year 1587 we find troops, who had just arrived, building the Russian town of Tobolsk near this town. Kučum did not suffer his last defeat at the hands of the Russians till August 20, 1598. He is said to have been slain by the Nogai, with whom he had taken refuge, out of revenge for his father's raids on them. The document used by Radloff (*Aus Sibirien*², Leipzig 1893, p. 146 sq.) dealing with an embassy from Kučum to Bukhārā and the order by 'Abd Allāh Khān [q.v.] his governor in Khwārizm to send teachers of religion to Siberia, cannot be genuine. Khwārizm was at this date an independent kingdom and not under the rule of the Khān of Bukhārā. The form "Közüm" adopted by Radloff is also not to be found in any historical sources.

(W. BARTHOLD)

KUDA'A, a group of tribes. When Islām was first preached, the genealogical division of the Arab race into three main bodies, Moqar Ma'add, Rabi'a and Yemen, had just been completed. The poets refer to it as a well known principle. Agreement had not been reached regarding the fourth group, claiming descent from a common ancestor, called Quda'a. This group comprised several important tribes, settled in the northern Hidjāz and leading a nomadic life between Arabia, Irāk, Syria and Egypt.

Without protest, the Quda'a had allowed themselves to be classed with the Yemen group. Wellhausen (*Das arabische Reich*, p. 113) observes that this grouping was not old. This is quite correct but decides nothing. If the Quda'a had allowed it, it was because their interests coincided with those of the Yemenis. They might have perhaps stopped there if the matrimonial alliances of the Sufyānid caliphs with the Banū Kalb [q.v.]

had not upset the political equilibrium of the Arab tribes. Kalb formed the main nucleus of the Ḳuḏā'a and the old genealogical fiction was intended to secure it the unconditional support of the Yemeni tribes of Syria. At any cost the Ḳuḏā'a Yemen bloc had to be broken up. Several Ḳuḏā'a tribes had for long lived alongside of the Moḏaris and contracted temporary alliances with them. This could be usefully exploited. Evidence of the importance attached to the discussion of these questions is the fact that they were raised in the presence of the Prophet.

Now nothing could be more unstable than the grouping of the Beduin tribes. To understand how down to the Omayyads and in spite of the institution of the *diwān*, the ethnographical connections of the Ḳuḏā'a had remained floating, it is sufficient to read in the *Naḳā'id Djarir wa 'l-Farazdaq*, N^o. 104 (verses 23—24; cf. *Djāhiz*, *Ḥayawān*, iv. 107 below). They were unable to produce charters or base their arguments on historical documents. Vague traditions and especially poetry were appealed to. Did not the poetry contain the "archives of Arabia", *diwān al-ʿArab*? In this connection the author of the *Aghānī* (vii. 77—78) speaks of verses fabricated by the Ḳuḏā'a, anxious to connect themselves with the Yemen group. Apocryphal poetry is the curse of the whole of pre-Muslim history. A vast and disastrous activity was displayed in this field. But it would be a great mistake to charge this exclusively to the genealogists of Ḳuḏā'a. In fact the Ḳuḏā'a seem the least deserving of suspicion, because under the Omayyads they were better able than some others to do without alliances. The supremacy assured to the Kalbis in Syria freed them from the necessity of seeking allies among the Moḏaris, to say nothing of their antipathy to the ʿKaisis with whom they were soon in open conflict. In their verses *Djarir* and *Farazdaq* appeal to an old alliance between Tamim and Kalb. The latter tribe had probably lost all recollection of it. But they could not be displeased to see their importance recognised by the best poets of Tamim, the great Moḏari tribe, whose friendship was also sought by ʿKais.

The Ḳuḏā'is were only represented in small numbers in Egypt. In 102 A.H. a Kalbi governor of Egypt reconstituted a distinct group with various Ḳuḏā'i clans, which he had found scattered among the Moḏari and Yemeni tribes in his province. Besides Kalb and its numerous subdivisions, the following are the main tribes of the Ḳuḏā'a group: Ṣāliḥ (the predecessors of Ḡhassān in Syria), Tanūkh, Djarm, Balī, Djuhaina, Kain (Banu 'l-Kain or Balkain), Bahra' Mahra, *Khushain* (to be retained in the text of al-Kindī, p. 72, 11.). For these tribes the reader is referred to the separate articles on them. Their proximity to the Syrian frontier or their settlement in Syria had encouraged the spread of Christianity among them. We therefore find them at the Arab invasion at first taking the side of the Byzantines.

ḲUḌĀMA B. DJĀ'FAR ABU 'L-FARĀDJ AL-KĀTIR AL-BAGHDĀDĪ, an Arab author. Born a Christian, he adopted Islām under the Caliph al-Muktafi (289—295 = 902—906) and served in the central administration at Baghdād in which he obtained the office of *Madjlis al-Zimām* in 297 under the vizier Abu 'l-Ḥasan b. al-Furāt. The date of his death is not known. Most writers (Ibn Taghribirdi, ed. Juynboll, ii. 323; Reinaud, *Géographie d'Aboulfēda*, lx., lxxxiv; de Goeje, *B. G. A.*, vi., 22; Dérenbourg, *Mss. de l'Escorial*, ii., x.) give 337 (958) but according to Yāḳūt, *Irshād al-Arib*, vi. 204, that date is due to Ibn al-Djawzī who is not to be relied on for such matters. The only certain thing is that he was still alive in 320 as in that year he was present at a disputation between Abu Sa'īd al-Sirāfi and the logician Mattai. One result of his official activities was the for us most important book, the *Kitāb al-Kharādj* which he seems to have compiled soon after 316; only the second volume of it survives in the Köprülü library in Stambul; de Goeje published extracts from it in *B. G. A.*, vi. The work first begins by discussing of the provincial division of the empire and the organisation of the postal services and gives the yield in taxation for each district. The author then gives a survey of the adjoining foreign countries and their inhabitants and next gives a very full account of the financial system, taxation and administrative law. A short history of the Arab conquests is simply copied from al-Baladhuri. He devoted his leisure to belles-lettres and produced a work on style and rhetoric, *Kitāb Naḳd al-Naḥr al-ma'rūf bi-Kitāb al-Bayān*, edited by his pupil Abū 'Abdallāh Muḥammad b. Aiyūb and a poetics *Kitāb Naḳa al-Shi'r*. Both works are preserved in the Escorial MS. N^o. 242 of Dérenbourg's Catalogue; the latter is also in the Köprülü library i. 445, 2 (see Rescher, *M. S. O. S.*, xiv., 17) and has been printed from it at Stambul in 1902.

ḲUDATKU BİLĪK [See YŪSUF KHĀṢṢ ḤĀDJIB.]

AL-ḲUḌS, the usual Arabic name for Jerusalem in later times. The older writers call it commonly Bait al-Makdis (according to some: *Muḳaddas*, cf. Gildemeister, *Z. D. M. G.*, xxxvi. 387 sq.; Fischer, *ibid.*, lx. 404 sqq.) which really meant the Temple (of Solomon), a translation of the Hebrew Bēt-hammikdash (e.g. Ibn Hishām, ed. Wüstenfeld, p. 263, 2) but it became applied to the whole town. They also frequently use the name İlyāz, from Aelia (see below). They likewise knew the old name Jerusalem, which they reproduce as Urishalim (or -am) (variants in Yāḳūt, ed. Wüstenfeld, i. 402). The name al-Balaṭ also occurs in *Muḳaddasi*, a word of uncertain meaning derived from *palatium*, but which probably means "royal residence". For other names of rarer occurrence see Gildemeister, *op. cit.*

When the Roman soldiers of Titus became masters of the whole city after a long and strenuous siege at the end of September 70 A. D., the splendid temple had already been burned down, according

to Sulpicius Severus by order of Titus, according to others against his desire (see Willamowitz, *Kultur d. Gegenwart*, i./viii. 170; Windisch, *Theol. Tijdschr.*, 1914, p. 519 *sqq.*) and for the last few nights the city had looked like a sea of fire. The Roman soldiers, maddened by the stubborn defence, continued the destruction after the capture of the city and plundered without mercy. But it is certainly wrong to think of the conquered Jerusalem as being razed absolutely level with the ground. The eastern part of the city had suffered most, notably the area of the Temple, but a considerable piece of the city wall with a prominent tower was left at the south-east corner and on the western side Titus left the city wall and the three great towers of the palace of Herod intact, to serve as a shelter for the Roman camp. Many of the old houses must also have been still standing, or at least have been in such a condition that the Jews, who were gradually returning, could find some sort of shelter in them.

For the first half century after the fall of Jerusalem we are completely without information about the unfortunate city. Risings continually flamed up in the country round but nothing is said about the capital. At the beginning of the reign of Hadrian, peace was ultimately restored but later (132—135 A.D.) another revolt broke out when the Emperor forbade circumcision and wanted to build a new city upon the ruins of Jerusalem. After the rising had been suppressed with difficulty, he carried out his plan and a purely pagan city arose which was called Colonia Aelia Capitolina. While on the north side it observed the boundary marked by the so-called third wall, it left out the southern half of the original city and in the south-west a part of the upper town; these remained the bounds for the whole period following except for a brief interruption under Šalāh al-Dīn. The new city had the usual buildings, baths, theatre, sanctuaries etc. (see *Chronicon Paschale* and on it, Vincent and Abel, *Jerusalem*, ii. 6 *sqq.*) and was divided into 7 parts, each under an administrative official. The Emperor had a sanctuary built in honour of the Capitoline Jupiter as the principal god, for which the great masses of ruins there formed a rich quarry (cf. Eusebius, *Dem. evangel.*, viii. 3). According to Dio Cassius, lxix. 12; Hieronymus, *Comm. in Isaia*, xi. 8, etc., this temple was built exactly on the site of the old Jewish temple, which Vincent and Abel, *op. cit.*, ii. 15 *sq.*, doubt, but without sufficient reason. That the "rock" which had formed the old altar for burnt offerings, remained practically untouched is evident from its later history, but unfortunately we do not know if it was actually used in connection with the worship in the new sanctuary. With the help of a few coin-types we can form some idea of the appearance of the temple of Jupiter, and we also know that two statues of Hadrian (probably one of the Emperor and one of Antoninus) were erected near it. If this temple of Jupiter raises questions which are difficult to answer, this is still more true of the temple of Aphrodite built in Jerusalem on the site of which was later built the Constantinian Church of the Holy Sepulchre (on presumed remains of this temple, see Schmaltz, *Mater Ecclesiarum*, p. 351). According to Eusebius, wicked men, inspired by demons (pagan deities) had done everything they could to conceal and

to pollute this place by covering τὸ βέλον ἀντρον with earth brought for the purpose and building a temple of Aphrodite with its impure cult. Whether this was the real reason for the building of the temple of Aphrodite is very doubtful. For even if we grant the possibility that a recollection of the place of the Crucifixion and of the tomb of Christ had been preserved among the earliest Christians, it is unlikely that Hadrian to whom the building may, with most probability, be credited paid so much heed to the Christians that he would deliberately insult them so deeply (cf. P. Mickley, *Die Konstantinkirchen im heiligen Lande*, 1923, p. 36 *sq.*; Dalman, *Palästina-jahrbuch*, ix., 102 *sq.*). At most it can only have been an accident. On the other hand we may ascribe to Hadrian's rebuilding of the city the broad pillared way which runs through Jerusalem from north to south on the mosaic map of Madeba of the vith century (see Guthe, *Z. D. P. V.*, xxviii. 120 *sq.*; Gisler, *Das Heilige Land*, 1912, p. 214 *sqq.*), of the pillars of which a series of remains have been unearthed (cf. Vincent and Abel, *op. cit.*, ii. 22). It debouched on the north into an open square with a single pillar standing alone, after which the North Gate in the middle ages was known as the "Gate of the Pillar" (*Bāb al-'Amūd* or *Bāb 'Amūd al-Ghurāb*). Jews were forbidden under pain of death to enter the new city. This prohibition remained in force under Antoninus Pius, but they were again allowed to practise circumcision. As the Christians were not affected by the prohibition, their numbers must have increased in the centuries following Hadrian's reign. Their place of worship in this period was the Church of Sion on the southern peak of the next hill, which was therefore regarded as the mother of the other churches in the Holy Land. It was at first a small building, which was not replaced by a large basilica until a later date. In the same period pilgrimages to Palestine, especially to Jerusalem, began to become more numerous (cf. Windisch, *Z. D. P. V.*, xlviii. 145 *sqq.*). The faithful came thither from all countries, and especially when the earlier obstacles and dangers had been diminished by the conversion to Christianity of Constantine I, numerous bodies of pilgrims followed the example of the queen-mother, Helena, who visited Palestine in 320. The appearance of Jerusalem about this time (c. 333) is described to us in the work of the so-called pilgrim of Bordeaux, the exact character of which cannot however be readily defined. We learn that the two Hadrian statues were still standing and perhaps also the Temple of Jupiter, although the words are not clear (*et in aede ipsa ubi templum fuit quem Salomon aedificavit*). If this was the case, the temple must have very soon afterwards been taken down when the Emperor began to build his church. The *lapis pertusus* over which the Jews were allowed to weep and pour oil on one day of the year, is probably the stone on which the altar for burnt offerings had stood, which therefore must have been lying exposed in those days. If it did not take place earlier, the complete desolation of the site of the temple must have begun at this time, when the Christians, remembering Christ's words (Matt. xxiv. 2), rejected any thought of rebuilding the temple; Eucharis (*Itinera Hierosyl. Latina*, i. 52) expressly mentions it. But this was not true, at least about 348, of the outer enclosures of the site which Cyril (*Patr. Graec.*,

xxxiii. 889) mentions as still in existence, and at a still later date there is a reference to the outer wall at the S.E. corner with a high tower. The name given it, "Tower of David", which is found about 350 in Epiphanius, is based on an erroneous transference of David's citadel to this site and indeed this period in general with the many pilgrims asking about sites mentioned in the Bible, proved very productive of local traditions with no authority or even quite false.

In his great buildings the Emperor Constantine was only concerned with Christian associations. Besides the basilica on the Mount of Olives mentioned by the pilgrim of Bordeaux, his main work was the building (completed in 335) of the large and splendid church on the spot where Christ had been crucified and which was therefore consecrated to the victorious Cross. Proof that it was the true site was according to Eusebius the *παρ' ἑλπίδα πᾶσαν* at the light emanating from the Holy Sepulchre when they began to dig out the soil.

It was the Emperor's intention to build a great sanctuary for the whole of Christendom, which was to surpass all others in the splendour and costliness of its materials. Eusebius gives a very rhetorical picture of this building and therefore one that is not easy to visualise. The sepulchre, discovered by a miracle, was adorned by the Emperor with beautiful pillars and rich decoration. East of it lay an open paved square, which was enclosed on three sides by pillared halls. On the east side was a great basilica through the eastern exits of which one entered the outer gateway and reached the street of the market through them. The basilica had a sloping roof. Eusebius also speaks of a hemisphere, which some take to be a cupola on the roof, others an apsis. Eusebius does not mention a building over the Holy Sepulchre (Micklethorp, *op. cit.*, p. 38 sq. however finds a reference to it in the *hemisphaerion* just mentioned, which he supposes is mentioned in the wrong place in the text). The Sepulchre was originally, it appears, in the open air and it was the sons of Constantine who first built over it the so-called *anastasis*, the rotunda form of which, later maintained, is first mentioned by Cyril in 350. In the account of the building there is no mention of the principal relic, the remains of the Holy Cross; but they were in existence barely 15 years later; they were perhaps old pieces of wood found in excavating for a cistern. They were later preserved at the S.E. corner of the basilica in a silver case. Constantine's reign brought some relief to the Jews as they were permitted, as already observed, to enter the city and weep on the stone on the site of the Temple. Further scope was given them in the reign of Justinian who not only completely abolished the old prohibition but gave them permission to rebuild the Temple, which however they were prevented from doing by flames bursting forth, according to Ammianus. After the Emperor's death Constantine's regulations were again enforced. The more peaceful period that now began gave the Christians leisure to devote themselves to their own theological and hierarchical disputes, which had for the Jerusalem Christians the satisfactory result that they were freed from the suzerainty of Caesarea, as, at the Council of Chalcedon (451—453), the bishopric of Jerusalem was recognised as an independent patriarchate, comprising Palestine, Prima, Secunda and Tertia. The Emperor's family

devoted continual attention to the embellishment of the town. Thus the Empress Eudocia, who visited Jerusalem in 460, built a church of St. Stephen and a church at the pool of Siloah. A still more dazzling epoch came with the reign of Justinian who was fond of building. He had churches and hospitals built in the country round, including a nosokomium in the capital (cf. Cyril in *Z. D. P. V.*, xxxvi. 305). He also bestowed a splendid church of Theotokos on the city of which Procopius gives a florid but by no means lucid description (*De Aedificiis Justiniani*, v. 6). According to him the church was supported by pillars and had a roof of cedar trunks. From a statement by Theodosius it seems to have been in the shape of a cross. One very important statement in the description of Procopius is that the ground was not large enough for the intended building, so that the Emperor had great substructures made on south and east until the ground reached the level of the adjoining rocks. This is in favour of the assumption often made that this church was the predecessor of the mosque of Aḳṣā, the oldest parts of which undoubtedly belonged to a church. The part of the site of the Temple which lay in ruins and which would not be built upon for the reasons already mentioned must therefore have stretched so far south that the remaining area was too small for so large a church (cf. R. Hartmann, *Z. D. P. V.*, xxxii., 185 sqq.). Others like H. Dressaire, *Echos de l'Orient*, 1912, p. 146 sqq., 234 sqq.; K. Schmaltz, *op. cit.*, p. 385, look for the site of Justinian's church in the Jewish quarter southwest of the Temple area.

A sudden end was put to this idyllic state of affairs by the devastating invasion of the Persians in 614 A.D. When they were before Jerusalem, the Patriarch Zacharias, who, like Jeremiah of old, saw in the attack a punishment for the immorality prevailing in the city, advised surrender but the people would not listen to him, although the Byzantine troops in Palestine were leaving the city to its fate. With the help of their siege machinery, the Persians entered the town and bathed the city in the blood of old men, women and children. The churches were destroyed and the crucifixes trodden under foot. The Jews, who had as a rule been on good terms with the Persians, are said to have used the occasion to avenge themselves on the Christians. The Patriarch was sent into banishment with other dignitaries and the palladium, the Holy Cross, to the horror of Christianity was carried off by the victors (cf. K. Schmaltz, *op. cit.*, p. 69; P. Peeters, *La Prise de la Jérusalem par les Perses, Mélanges de l'Université de Beyrouth*, ix. 1 sqq.; Eutychius in Vincent and Abel, *Jérusalem*, ii. 242). The change only came when Heraclius began his marvellous campaign of conquest which led him far into Persian territory. Kawadh II, Sheroë, who ascended the throne on the assassination of his father in 628, sought peace and withdrew all the Persian troops from Byzantine territory. After his brief reign, complete confusion reigned in Persia so that the war could not be continued. The Holy Cross was sent back in its case which the Persians by God's providence had never opened and restored to its former place on September 14, 629; in the meanwhile a monk named Modestius had been showing great energy and succeeded in restoring the destroyed church, including the Church of the Holy

Sepulchre built by Constantine, which was restored to its former size and decorated as far as the modest means allowed. The remains of the Cross did not however stay in Jerusalem, but were sent in 633 by Heraclius to Constantinople, when he was doubtful of being able to defend Syria. Nevertheless a piece seems to have remained in Jerusalem, as the continuation of the festival of the elevation of the Cross shows (Vincent and Abel, *op. cit.*, ii. 227).

But scarcely had the Christians in the Holy Land begun to breathe a little more freely again after this severe visitation, than events occurred which were destined to have far more fatal consequences. The politico-religious community formed by Muḥammad, little heeded outside of Arabia up to the time of his death, became a few years later with startling suddenness a danger threatening the neighbouring countries.

Although Jerusalem lay outside the regular orbit of the Prophet's interests, he mentioned it several times in the Qur'ān, a natural result of his indebtedness to Jews and Christians. As he had no idea of the actual appearance of the town, the cursory mention of the *miḥrāb* (Sūra, iii. 32 sq.; xix. 12) is of no importance, but Jerusalem became of real significance for him in the period when, following the example of the Jews, he turned at prayer in the direction of the holy city. The tradition is certainly right which says that the earlier *qibla* mentioned in Sūra ii. 136, 138, which he exchanged for the sanctuary at Mecca after the breach with the Jews, was Jerusalem, whether he already used this direction in the Meccan period or only introduced it after his migration to Medina in order to win over the Jews there (cf. the article MUḤAMMAD). In the former case which is more probably right, Jerusalem must from the very beginning have been of very considerable significance to him as a religious centre. According to the usual explanation, moreover Sūra xvii. 1 with the expression *masjid al-aḡṣā* indicates Jerusalem as the goal of the Prophet's nocturnal journey, not however the later mosque of the name but the site of the old Temple of Solomon. The correctness of this interpretation is however not certain for there is a certain amount of support for Horowitz's (*Isl.*, ix. 159; following Schrieke, *ibid.*, vi. 1 sqq.) suggestion that Muḥammad was rather thinking of a place in heaven in this phrase (see MUḤAMMAD). But the traditional view, which must have arisen very early, gained the greatest importance for Jerusalem, for on it is based the classing of the sanctuary at Jerusalem among the three most holy places of prayer in the world; indeed it is sometimes even given the preference over the other two.

The Muslim armies that crossed the frontiers of Arabia after the death of Muḥammad entered Palestine as well as the lands of the Euphrates. With the defeat of the Imperial troops at Adīnādāin (q. v. and add to the *Bibl.*, Mas'ūdī, *Murūdj al-Dhahab*, v. 225) in July 634, after which the Byzantine general Aretion had to take shelter in Jerusalem, Byzantine rule in Palestine began to totter and its fate was settled on the Yarmūk in August 636; the fortified towns then surrendered one after the other to the victorious Arabs. Two different accounts of the taking of Jerusalem have been handed down. According to the most usual version, the Arab general Abū 'Ubaida in 17 (638)

asked the Caliph 'Umar to come to his headquarters at Djabīya [q. v.] as the people of Jerusalem would only capitulate on condition that 'Umar himself concluded the treaty with them. According to the other story, which de Goeje, *Mémoire sur la conquête de la Syrie*, 1864, p. 110 sqq., rightly prefers, the Caliph came to Djabīya of his own accord to arrange the affairs of the conquered regions and from there (according to Balādhuri, ed. de Goeje, p. 139) he sent Khālīd b. Thābit to Jerusalem to besiege the town and the terms made by the latter for the surrender were then approved by 'Umar. These terms, which are preserved in several versions (e. g. Ṭabarī, i. 2404 sq.; cf. Balādhuri, p. 139; Ya'qūbī, ed. Houtsma, ii. 167; cf. de Goeje, *op. cit.*, p. 122 sq.) were quite mild. The Christian inhabitants were granted security for their lives, property, churches and crucifixes, while the Jews were not to live among them; the churches were not to be used as dwellings, and not to be torn down or reduced in size, and the Christians retained their religious liberty; in return they were to pay the *djizya* and assist in warding off the Byzantine troops and raiders. The statements on the date of the taking of Jerusalem also vary; Ṭabarī for example gives Rabi' II of the year 16.

Further details of 'Umar's conduct at the capture of Jerusalem are given by various Christian and Muslim authors. Theophanes (ed. de Boor, i. 339) who wrote towards the end of the viiith century, records under the year 627 that the Caliph on the conclusion of the treaty, so favourable to the Christians, entered the holy city wearing soiled robes — according to this author a sign of his devilish hypocrisy — and demanded to be led to the site of the Temple which he then made a place of pagan worship. Writing in the tenth century, the Egyptian Christian Eutychius (*Annales*, ed. Pococke, ii. 285 sqq. and in Vincent and Abel, *Jérusalem*, ii. 243) tells somewhat more fully how 'Umar refused to perform his *ṣalāt* in the basilica of the Church of the Resurrection and instead said his prayers on the steps at the entrance in order, as he explained, to prevent the Muslims from using the authority of his example to turn the church into a mosque and that he gave the Patriarch Sophronius a document confirming this. At his request, Sophronius then pointed out the "Rock" covered with debris on the site of the Temple as a suitable site for his masjid. The Caliph at once began to clear off the rubble and as the Muslims followed his example the rock soon came into sight. At the same time he gave instructions that the masjid should be so planned that the worshippers had the rock behind and not in front of them. It is apparent that the story is intended to confirm the alienable right of the Christians to their churches by the authority of the great Caliph. There is naturally no such tendency in the Muslim historians — the earliest is al-Muḥarrāf in the tenth century with whom Shihāb al-Dīn al-Maḡdī, Shams al-Dīn al-Suyūṭī and Muḡjir al-Dīn (see below) are in substantial agreement — who on the contrary show the Christians in a less favourable light. According to them the Patricius, who appears here more correctly in the place of the Patriarch, at first tried to deceive 'Umar when he demanded to be taken to David's *masjid*, by showing him the Church of the Holy Sepulchre and the Church of Sion.

But the Caliph saw through the deception, as the Prophet had described to him the place as he had seen it on his nocturnal journey; he was ultimately taken to the site of the Temple, which he recognised as the right place, but it had first of all to be cleared of debris. In another story, recorded as early as Ṭabarī, i. 2408, Ka'b b. al-Aḥbār [q. v.] a Jewish convert to Islām plays a part which gives the story a point directed against the Jews. When 'Umar entered the Temple area he summoned Ka'b to obtain his opinion regarding the choice of the place for the masjid; but when the latter proposed that the place of prayer should be placed behind the Rock (north of it) the Caliph declined as he saw in the proposal a concealed attempt to plan the masjid for the benefit of the Jews, so that the qibla would actually strike the site of the old Temple.

If we examine these traditions more closely, we see that they all agree that 'Umar had a Muslim place of worship erected on the deserted Temple area. That we are on firm historical ground here is corroborated by Bishop Arculfus about 670 (*Itinera Hierosolymitana*, ed. P. Geyer, 1898, p. 226 sq.; cf. Arculf, transl. by Mickle, 1917, 19 sq.) who describes this masjid as a very simple building (*Saraceni quadrangulam orationis domum quam subrectis tabulis et magnis trabibus super quasdam ruinarum reliquias vili fabricati sunt opere ipsi frequentant*), but it could however hold 3,000 men. In reality this was a very practical settlement of the situation that had arisen from the conquest of Jerusalem; the Caliph acquired a site long held sacred, without coming into conflict with the privileges granted to the Christians, as they would not build a church on the site of the Temple for reasons already stated. It is further clear that what Eutychius tells us about 'Umar's praying on the steps of the basilica of the Sepulchre is an unhistorical invention intended to avert any encroachments by the Muslims. But this bias of the story only becomes evident from a further story of Eutychius, according to which the Muslims "of our day" (i. e. the first half of the tenth century) overrode 'Umar's regulations, when they took possession of the half of the forecourt on the steps to the Constantinian Basilica and built a masjid there, which they called the Masjid 'Umar, because 'Umar had prayed there. Schmalz (*op. cit.*, p. 361) thinks a few remains of columns from this mosque can still be seen.

Under the Umayyads the political conditions contributed in a peculiar way to increase the prestige of Jerusalem. Their interest in Muḥammad's foundations was not considerable so that it was not difficult for them to abandon the holy cities in Arabia when the prescribed visits to them met with difficulty for any reason, and Jerusalem in particular, the holiness of which the Prophet, according to the usual exposition of Sūra xvii. 1, had recognised, formed a welcome substitute, all the more so as it was much easier to reach from Damascus than Mecca or Medina. Evidence of the esteem in which Jerusalem was held, was early shown by Mu'āwīya who had himself proclaimed Caliph here. A Syriac source published by Nöldeke, *Z.D.M.G.*, xxix., 90, records that in July 971, Seleuc. (660 A.D. = Šafar-Rabi' A.H. 40) many Arabs assembled in Jerusalem to make him king and that he ascended to Golgotha and prayed there and next went through Gethsemane to the

Tomb of Mary, where he again prayed. Arabic sources (Ṭabarī, ii. 4; Mas'ūdī, v. 14; Ibn al-Aṭhīr, iii. 388) say that homage was paid to him in Jerusalem in the year 40, and this must have happened only after 'Alī's assassination on 17th Ramaḍān, which is less probable than the Syriac story. 'Abd al-Malik (65—68 = 685—705) took a further step in this direction. When the anti-caliph Ibn Zubair had become master of Mecca, 'Abd al-Malik feared, not without reason, that the Syrians who made the pilgrimage thither, might be persuaded or forced to join him. He therefore forbade them to go there and when the people appealed to the definite command of the Prophet, he ordered them to go on pilgrimage to the holy Rock in Jerusalem and referred them to a tradition recorded by the famous traditionist al-Zuhri, according to which Muḥammad classed Mecca, Medina and Jerusalem as places of pilgrimage of equal value, nay, from what is apparently the original form of the ḥadīth, the last town was to be placed above the other sanctuaries (cf. Ya'qūbi, ii. 167; Balādhuri, p. 143; Yāqūt, ed. Wüstenfeld, ii. 818; Ibn al-Aṭhīr, ed. Tornberg, ii. 390; Goldziher, *Muhammedanische Studien*, ii. 35 sq.). To express this esteem for the town in fitting and splendid form, the Caliph had a cupola built on the Rock upon which the Prophet had placed his foot on his journey to heaven, the Qubbat al-Šakhra [q. v.] around which the *ḥawāf* was to be performed. That (Muḥaddasī, *B.G.A.*, iii. 159) the Caliph in building it intended to surpass the beautiful cupola of the Church of the Sepulchre is probably quite in keeping with his general aims. Others make Wālid I the builder of the Qubbat al-Šakhra, but this is at once contradicted by an inscription that survives, in which however the name of 'Abd al-Malik has been altered to that of the 'Abbāsīd Caliph al-Ma'mūn but in such a way that not only does the difference in colour betray the alteration but the date 72 (691) has fortunately remained intact. According to later writers (Ibn Taghribirdī, 'Ulaimi, etc.), 'Abd al-Malik also built the Akṣā Mosque, which was given its name from Sūra xvii. 1: but if the mosque was built out of the Church of Justinian (see above) this can only mean that the Caliph in converting the church into a mosque committed a direct breach of the promise made by 'Umar. In any case the Christians in Jerusalem retained their churches, such as the Church of Sion, the Church of Gethsemane (corrupted by the Arabs to "al-Djismāniya") and notably the Church of the Resurrection, the name of which al-Ḳiyāma (i.e. *anastasis*, the Arabs turned in ridicule into al-Kumāma, "ordure"). On the south side of this church, there stood in the time of Arculfus a square church of the Virgin which later disappeared. The last Umayyad Caliph Marwān II razed the walls of Jerusalem to the ground in 128 (746) after a rising in Palestine and two years later it was visited by an earthquake recorded by al-Muḥarrar and later writers, which was followed by another soon after the 'Abbāsīds had seized the empire. The Caliph al-Manṣūr had the damage repaired, perhaps on his visits to Jerusalem (Ṭabarī, iii. 129, 372) in 140 (758) or 154 (771). But afterwards another earthquake so damaged the building that it had once again to be restored in the reign of al-Mahdī, perhaps when he visited the city and prayed there in 163 (780) (Ṭabarī, iii. 500) (cf.

Muḳaddasī, *op. cit.*, 168). On this occasion the Caliph had the building made broader and shorter perhaps in order to emphasise the mosque form more strongly. Of work on the Dome of the Rock there is no mention in these years. But that something was done a little later under the Caliph al-Ma'mūn (198—218 = 813—833) is evident from the falsified inscription already mentioned and from another of the year 216 (831) put up by the Caliph's brother who was then governor of Egypt and Syria (Ṭabari, iii. 1100).

With the gradual dissolution of the 'Abbāsīd empire Palestine also became involved in political troubles and the land once again became a bone of contention between powers in Egypt and in Western Asia. In 265 (878) it passed to the Tulunids and in 292 (905) to the Fātimids. In this period the hitherto quite tolerable relations between Muslims and Christians became worse. How the Muslims, contrary to the treaty with 'Umar, in 936 cut off half the outer court of the Church of the Holy Sepulchre by building a masjid has already been mentioned. Yahyā of Antioch (Vincent and Abel, ii. 243) tells of a very serious outbreak of fanaticism in 355 (966). The Muslims, who were joined by the Jews, set fire to the doors of the Basilika and the Church of the Resurrection, so that the dome of the latter fell in, entered the Church and looted all they could and afterwards sacked the Church of Sion. The Patriarch, who had hidden himself was dragged out, put to death and his corpse burned. The destroyed churches were restored under his successor, but not long after they were finished an even more terrible blow struck them when that strange character the Fātimid Caliph al-Hākim in Ṣafar of the year 400 (October 1009, see Vincent and Abel, *Jérusalem*, ii. 249; on the other hand according to Ibn al-Aṭṭir, ix. 147 in 398 = 1008) ordered this sanctuary to which the eyes of all Christendom turned, to be destroyed. The order was carried out as thoroughly as the solidity of the building permitted, but afterwards the Patriarch Nicephoros succeeded in appeasing the Caliph so that he allowed the Christians to worship on the ruins of the Church. Clermont-Ganneau has with great acuteness connected with these events a Kūfic inscription found in 1897 on a large block beside the central gate of the old east wall of the basilica, forbidden those under protection (*al-dhimma*, i. e. Christians and Jews) to enter the masjid (the mosque of 'Umar above mentioned) (*Recueil d'Archéologie Orientale*, iv. 283 *sqq.*; cf. *M. D. P. V.*, 1897, 70 *sqq.*). Hākim's successor, al-Zāhir, was forced to conclude a peace with the Byzantine Emperor Romanus III by which he permitted the latter to rebuild the Church of the Resurrection at his own expense. A new earthquake in 1034 destroyed the sore tried church, which was now left in ruins on account of the poverty of the Christians, until it was restored in 1048 by the liberality of the Emperor Constantine Monomachos. But it was only the Church of the Resurrection, that was rebuilt while Constantine's Basilica never rose again. Only the Chapel of St. Helena, the site of the finding of the Cross was preserved. Another earthquake in 1076 (1016) severely damaged the Dome of the Rock (Ibn al-Aṭṭir, ix. 205) and the Caliph al-Zāhir had to have the dome over it rebuilt as an inscription testifies (see 'Alī al-Herewī, *Archives de l'Orient Latin*, i. 602).

The Seldjūks put an end for a time to Fātimid rule in Palestine, and their leader Tughril Beg was recognised as Sultān in Baghdād in 447 (1055). Jerusalem also felt the effects of this when the Turkish general Atsiz on his campaign against Filāṣṭīn in 463 (1070) conquered the city as well as Ramla and the adjoining country, which, as the Seldjūks posed as protectors of the Caliphate, resulted in the 'Abbāsīd Caliph being again after a long interval mentioned in the *ḥuṭba* in the mosque there. When Jerusalem soon afterwards rose in rebellion, Atsiz in 469 (1076/1077) had to besiege it again and after its capture, there was a wholesale massacre from which only those escaped who took refuge in the Aḳṣā Mosque (Ibn al-Aṭṭir, x. 46, 64, 68 *sqq.*). The Seldjūk Sultān Tutuṣh in Damascus had Atsiz put to death and in 484 (1091) Jerusalem was given to Sukmān, the son of a Turkoman officer. In 489 (1096) the Fātimid Sultān al-Musta'li again succeeded in taking the city and in holding it successfully next year against Ridwān, son of Tutuṣh. The triumph of the Fātimids was however of short duration only, for a couple of years later the Crusaders arrived and made their victorious entry into the Holy City on July 15, 1099.

For the tenth and eleventh centuries, the period of the events outlined above, we have valuable material available in a series of Arabic descriptions of Jerusalem and its holy places. Even as early as the end of the ninth century we have the brief account by the geographer and historian Ya'qūbī, who however deals mainly with questions of administration and population only (*B. G. A.*, vii., 328 *sq.*). The next is Ibn al-Faḳīh who wrote in 290 (903). After relating the legends and ḥadīths associated with Jerusalem he gives a good description of the Ḥaram with its gates and sanctuaries, notably the Mosque of the Rock and al-Aḳṣā. His measurements are of interest because some of them agree very well with present day measurements (*B. G. A.*, v. 94 *sqq.*). Soon after Ibn al-Faḳīh, Ibn 'Abd-rabbihi (p. 328) in *al-Iḥd al-farīd* (Cairo 1331, iv. 274 *sq.*) gives a description of the Dome of the Rock, which in many ways recalls that of his predecessor but the figures show considerable divergence. He likewise mentions different sanctuaries in Jerusalem and gates of the Ḥaram. The information in al-Iṣṭakhṛī's version of an older work now lost (c. 340 = 951/952) is very concise; the same applies to Ibn Ḥawkal's version of the same book (367 = 977/978). There are references to the al-Aḳṣā Mosque, unsurpassed in size, to the Ṣakhra with the Rock and the cave below, and to David's Mihrāb (*B. G. A.*, i. 57, ii. 112). All these writers are thrown into the shade by the great geographer al-Muḳaddasī, or al-Maḳdisi, who was born in Jerusalem (375 = 985/986). He begins with a list of the great attractions of Jerusalem and the advantages of living there but also mentions the disadvantages. He then describes the Aḳṣā Mosque rebuilt after the earthquakes, the new parts of which stood out clearly from the older parts. There were 15 doors on the north side (a remarkably large figure, which does not agree with the other statements), the central one being a great iron door; there were 11 doors on the east side. Along the north side ran a court with marble pillars, built by the Ṭahīrid 'Abdallāh (d. 230 = 844). Over the centre of the building from north to south was a pyramidal roof with the beautiful

dome above it. Next comes the description of the platform in the centre of the Ḥaram with the Dome of the Rock, practically agreeing with that of Ibn al-Faḳīh. It was an octagonal building with four doors, to which staircases led. The interior was divided into three concentric halls with marble pillars. In the centre was the "Rock" which is described exactly as in Ibn al-Faḳīh, 33 ells long and 27 broad and below it the cave which could hold 69 people. The "rock" was separated from the rest by a circular colonnade. Upon this rested a drum with a window, which supported the beautiful dome to the top of which was 100 ells high. The dome consisted of three wooden frameworks, the lower of which was covered with gilt copper, while the second consisted of iron bars and the third of wood covered with metal plates. Most of this agrees with the present Dome of the Rock so that the rebuilding in 413 (1022) must have followed the earlier form. Muḳaddasī gives 1,000 royal ells as the length of of the ḥaram, 700 as the breadth; it had 700 marble pillars and 45,000 lead slates, and it could be entered in 13 places by 20 doors which were numbered (*B. G. A.*, iii. 166 *sgg.*). Besides these Arabic descriptions we have that of the Persian Nāṣir-i Khusraw who visited Jerusalem in 438 (1047). He was a good observer, who mentions the conditions of soil and vegetation, the number of inhabitants (20,000 males), the bazaars, and architecture of the houses, the good hospital, the cemetery, at the east wall, the aqueduct leading from Solomon's pool etc., and describes the Ḥaram and its sanctuaries in great detail; but his statements unfortunately do not seem always to be accurate, so that they are sometimes more confusing than useful. In place of the 15 doors on the north side of the Aḳṣā mentioned by Muḳaddasī, he only gives five, but gives 10 on the east; among the former he also mentions the great iron door (*Sefer-nāme*, ed. Schefer, 1881, p. 67—99). To the eleventh century also belongs al-Musharraf's work, *Kitāb Faḳā'il Bait al-Maḳdis wa 'l-Shām* (exists in a unique MS. in Tübingen, see Seybold, *Die Arabischen Handschriften der Universitätsbibliothek zu Tübingen*, 1907, i., p. 62 *sgg.*) which after a survey of the earlier history of Jerusalem deals with 'Umar's conquest of the city and 'Abd al-Malik's buildings on the Ḥaram, the advantages of the city, the traditions associated with it and the religious merit that is acquired by praying there; it has been much used by later writers.

The Franks celebrated their entry into Jerusalem by a frightful massacre, particularly on the temple site, in great contrast to the restraint shown by 'Umar when he became lord of the city. The valuable treasures in the Dome of the Rock were also carried off. Jerusalem now became the capital of the kingdom of Jerusalem, the first ruler of which was Godfrey de Bouillon, "protector of the Holy Sepulchre"; but he died soon afterwards on July 18, 1100, and his brother Baldwin I succeeded him. The patriarchate hitherto Greek now became Roman. The Crusaders were anxious to have the churches restored in their original form. Their main concern was with the Church of the Holy Sepulchre, the most sacred place to Christianity. The Rotunda of the Resurrection retained its old form. But instead of rebuilding the Constantinian basilica with a courtyard surrounded by cloisters on the old lines, a

remarkably shortened church was built immediately on to the east side of the Rotunda in Late Roman style, which was intended to serve as a choir for the daily services founded by Godfrey (see Dalman, *Palästina-Jahrbuch*, iii. 39 *sg.*). In this way the plan was simplified, but again somewhat complicated by the fact that a cross nave and two irregular side-naves were built in front of the choir. The south side of the cross-nave was the main entrance to the sanctuary. A dome was built over the spot where the cross nave intersected the shortened main nave and a bell-tower south of the Rotunda of the Resurrection. In the church thus formed and consecrated in 1149 the kings of Jerusalem were interred. Among the other churches restored we may specially mention the Church of Sion or of the Apostles which was in ruins. A splendid building and one very characteristic of the Crusaders arose not far to the south of the Church of the Holy Sepulchre.

In the eleventh century merchants from Amalfi had built, along with a church of St. Maria Latina, a monastery to be used as a hostel by poor pilgrims. The first patron was John the Merciful, a patriarch of Alexandria, but later it was John the Baptist. In addition to the monks and nuns, the order of the Knights of St. John was instituted here, who devoted themselves not only to tending the sick and wounded but also to the defence of the holy places and fighting the infidels. After the taking of Jerusalem by the Crusaders, a splendid hostel with over 1,000 beds and a noble church were built. The Crusaders were however not content simply with restoring the sacred places of Christendom. While 'Umar had left the Christians the undisturbed use of their churches and reserved only the area of the temple for Muslim worship, the Crusaders took over the mosques there and turned them into churches. The Dome of the Rock, which from an insufficient knowledge of its history, they called *Templum Domini* remained practically unaltered. But a golden cross was placed on the top of the cupola and the "Rock" hitherto uncovered in its centre was overlaid with slabs of marble, on which an altar was built. Considerable alterations were made on the Aḳṣā mosque which was now called *Templum Salomonis* or *Palatium Salomonis* (on the latter name cf. as early as the pilgrim of Bordeaux: *sub pinna turris ipsius sunt cubacula plurima, ubi Salomon palatium habebat*). These changes were made because the building, after first being the palace of the Latin Kings was handed over to the newly founded order of the Templars. They put a number of living rooms in the mosque and added a number of buildings which were to be used as latrines and granaries (Idrīsī, *Z. D. P. V.*, viii. 125; Ibn al-Aṭhīr, xi. 364 *sg.*) and they also built a Crusaders' Church in and by the mosque but it was never completed (see John of Würzburg, Ch. 5). Apart from these changes, under Frankish rule Jerusalem remained much as it was before the conquest. A strong wall surrounded the town, before which deep ditches were dug at several places. Four gates facing the four points of the compass, with others at intervals, gave admittance to the city.

Among the descriptions of Jerusalem in the Frankish period the best although short is that in the Book of Roger by Idrīsī in 1154. He mentions the four main gates, describes the Church of the Holy Sepulchre, the Ḥaram with the Dome of

the Rock, and the Akṣā Mosque, Gethsemane, the Church of Sion and several churches in the vicinity of the town. As he does not appear to have been there himself, his statements are probably based on information supplied by men sent by Roger. A little later in 1173 'Alī al-Herewī (from Herāt) visited Palestine; his description (not yet printed) was translated by Schefer (*Archives de l'Orient*, 1886, i., p. 587—609). He describes the Dome of the Rock with its four pillars, 12 columns and 16 windows, the iron work round the rock, the cave of the Spirits, the Akṣā and its portico with 16 marble columns and 8 pillars, gives their measurements, mentions the stables of Solomon, and the cradle of Jesus, the Tower of David, with the *Mihrāb* mentioned in the *Kuṣṣān*, Siloah and the Church of the Holy Sepulchre. There are also numerous descriptions by pilgrims, only a few of which can be mentioned here. In 1102 and 1103 i.e. shortly after the conquest of Jerusalem, the Saxon Saewulf was there and left a short account of his visit (*Recueil de voyages et des mémoires, publié par la Société de Géographie*, 1839, iv., p. 839—846) in which he describes the Church of the Holy Sepulchre, Maria Latina, the site of the Temple, the Church of St. Anne, Gethsemane, and the Mount of Olives. The Russian Abbot Daniel's journal of the year 1106 is also of value (transl. by Leskien in *Z.D.P.V.*, vii. 23 sq.). He gives brief but vivid descriptions of the country and the buildings and had an eye for all sorts of details which are rarely mentioned elsewhere. He describes in order the Church of the Holy Sepulchre, the Tower of David, the Dome of the Rock (the holy of holies), the house of Solomon (al-Akṣā), Gethsemane, the Mount of Olives and the situation and natural features of the city. The next important authorities are John of Würzburg (*Descriptiones terrae sanctae ex saec. viii., ix., xii. et xiv.*, ed. Tobler) and Theodorici (*Theodorici Libellus de locis sanctis*, ed. Tobler, 1865). On the Jewish side there is Benjamin of Tudela (1165), who does not however deal with the Christian sanctuaries.

The period of the Crusades is one of the least inspiring periods in the history of Christianity. Its pitiable collapse is in striking contrast to the splendid enthusiasm with which it was opened, but even this was overcast by the deep shadow of the inhuman bloodshed at the taking of Jerusalem. The Crusaders owed the advantages they won in the first period less to their own ability than to the political weakness of the caliphate at that time and the newly founded kingdom of Jerusalem soon broke up in confusion in which selfish individual interests were openly displayed and Christians occasionally fought with their fellow-Christians and freely concluded alliances with their Muslim opponents. Therefore when powerful personalities appeared on the side of the enemy in 'Imād al-Dīn Zangī and his son Nūr al-Dīn and still more when the highly gifted Aiyūbīd Saladin (Ṣalāḥ al-Dīn) became master of Egypt in 1169 and began to conquer Syria after the death of Nūr al-Dīn, the fate of the Christians in Palestine was sealed. The for them disastrous battle of Ḥaṭṭīn [q.v.] resulted in Saladin's advance on Jerusalem. When he appeared with his army before the town, the inhabitants who had appointed Balian of Nāblus commander-in-chief declined the favourable conditions offered them and decided to fight to the

last. Saladin however moved his camp to the weaker north side of the city and when his siege artillery began to demolish pieces of the wall, the defenders lost courage and endeavoured to reopen negotiations with Saladin. After Saladin had several times refused to see the envoys, Balian informed him that the inhabitants, if their surrender was not accepted, were resolved to put all non-combatants in the city to death along with the Muslim prisoners, to burn all that might be looted and to destroy the sanctuaries on the site of the Temple. This made such an impression on Saladin and his emirs that the terms were accepted (1187). The inhabitants were allowed to leave the city on paying a poll-tax and Saladin's attitude was so lenient that not only was the amount of the ransom reduced but many people were allowed to depart, although they could not pay the necessary money. He also ordered armed soldiers to accompany the columns of emigrants to protect them from attack, while at the same time in some parts of the country Christians were preventing their co-religionists from passing through (cf. Ibn al-Aṭhīr, xi. 361—366; Röhrich, *Geschichte des Königreiches Jerusalem*, p. 451 sq.). It was mainly the Latin Christians who left Jerusalem while the Greek Christians, the so-called Syrians, were allowed to stay in the city without becoming slaves. It is quite evident from several sources that even after the retaking of Jerusalem by the Muslims, a considerable number of Christians remained there and in Palestine generally (cf. Rotermund, *Z.D.P.V.*, xxxv. 24 sq.). But Jerusalem lost its Christian character and Saladin actively removed the traces of the period of Christian occupation. The golden cross on the Dome of the Rock was thrown to the ground amid the applause of the Muslims and laments of the Christians and replaced by a crescent. The wall round the Rock with the altar was removed. Saladin, as an inscription shows, had the cupola regilt (de Vogüé, *Le Temple de Jérusalem*, p. 91 sq.) but otherwise the building was allowed to remain as it was. The restoration of the Akṣā Mosque cost great labour, as it had not only to be cleared of all trace of Christian worship but the architectural alterations of the Christians had also to be removed. An inscription mentions that the *mihrāb* and the mosque were restored by Saladin's orders (de Vogüé, p. 101). The armoury of the Knights Templar in the southwestern part of the Akṣā was transformed and given the name "Mosque of the Women". Saladin had a very elaborate and beautiful *minbar* ordered by Nūr al-Dīn for the Akṣā, which was in Ḥalab, brought to the place for which it was intended. The cross over the Church of the Holy Sepulchre was removed and the bells broken as in the other churches. He spared the Church of the Holy Sepulchre itself but forbade the pilgrims to visit it; this prohibition was however removed in 1192. The great hostel of the Knights of St. John was presented as a *wakf* to the Mosque of 'Umar and the church there turned into a hospital under the name "Muristān". The convent of the Church of St. Anne, which the nuns had to leave, was turned into a large handsomely endowed school, the name of which, al-Ṣalāḥiyya, recalled its founder (the church however had already been used as a school before the conquest by the Franks; Tobler, *Topographie von Jerusalem*, i. 429). The dwelling of the Patriarch northwest

of the Church of the Holy Sepulchre was turned into a hostel for pilgrims (*khanka*). The walls round Jerusalem, which had suffered during the siege, were renovated under the personal supervision of Saladin — a deep ditch was dug in front of them — and the towers between the Gate of the Pillar (see above) and the Gate of the Mihrāb on the west side were rebuilt (Muḍjir al-Dīn, p. 338). On this occasion a part of the west hill hitherto outside the walls was incorporated in the city (cf. Rotermund, *op. cit.*, p. 21).

After the death of Saladin (589 = 1192) his brother usurped his son's inheritance and seized the power in his own hands and then divided it among his own sons, of whom al-Mu'azzam received Damascus and Palestine. This anti-Christian ruler, fearing that the Christians might establish themselves in Jerusalem ordered it to be destroyed in 1219, and this was done so thoroughly that only the Holy Sepulchre, the Tower of David and the Mosques on the Ḥaram were spared. He further showed his reverence for the sanctuaries on the Ḥaram by building a new wooden tower for the Aḳṣā and restoring the arcades on the south side of the Dome of the Rock. From him also probably dates the porch on the north side of the Aḳṣā (see de Vogüé, *op. cit.*, p. 103, and thereon Hartmann, *Z. D. P. V.*, xxxii. 204). He also built a school for the Ḥanafis beside this mosque. After his death the Emperor Frederick II, then excommunicated, achieved by his statesmanship, what the arms of the Crusaders had failed to do, by concluding a treaty with al-Mu'azzam's brother, al-Kāmil, in 626 (1229) whereby Jerusalem — except the Muslim sacred places on the Ḥaram — and a narrow corridor to the sea were ceded to him for ten years. The Emperor crowned himself there in the Church of the Holy Sepulchre, without the assistance of any of the priesthood. In this way the Latins again came into possession of the city for a brief period. When the period had expired, a son of al-Mu'azzam who ruled in Kerak and, like his father, hated the Christians fell upon the holy city, destroyed the citadel and forced the inhabitants to capitulate. The Christians were relieved by the disputes which broke out between the Aiyūbids in Damascus and those in Egypt; they realised the value of their support and the rival princes began to make great promises to win it. The Christians preferred to support Ṣāliḥ Ismā'il of Damascus and in this way they came once more into undisturbed possession of the holy city (1244). The Egyptian Aiyūbid al-Ṣāliḥ Nadjm al-Dīn however summoned the Khwārizmians to his assistance and they at once carried fire and sword through Syria, slew a large number of fugitives from Jerusalem, plundered and murdered in the city, desecrated the Church of the Holy Sepulchre, where the tombs of the kings were ruined, and other churches. He had now full freedom of action and, when his allied enemies were defeated at Gaza, he seized Jerusalem and henceforth the town remained in Muslim hands. This was the real end of the Crusades, the permanent political result of which was a burning hatred between Christians and Muslims such as had only rarely flamed up before. Not long afterwards, the Aiyūbids were succeeded by the Mamlūk Sultāns in Egypt, under whom Syria and Palestine formed one province, after Ḳuṭuz had won great fame in 1260 by defeating

the advancing Mongols in the battle of 'Ain Djālūt [q. v.].

In the Mamlūk period, Jerusalem fell into the background after being for a time the centre of interest in the east. What we know of its history in this period we owe mainly to the compiler Muḍjir al-Dīn 'Ulaimi, who, as an appendix to the earlier history of the town, tells us what various Mamlūk Sultāns had done for it. The frequently necessary repairs of the sanctuaries there gave these princes an opportunity of displaying their pious interest and the mosaics on the outer wall of the Dome of the Rock, which had suffered from the wind and rain, in particular needed frequent repairs, which need not be detailed here. We are told of several Sultāns that they lightened the taxes which the town had to pay and that other Sultāns gave splendid copies of the Qur'ān to the mosques. The great Sultān Baibars I [q. v.] had the Aḳṣā restored and in 662 (1263) built a Ḳhān northwest of the town which was intended for the relief of the poor. Al-Manṣūr Ḳalā'ūn (678—689) restored the roof of the southwestern parts of the Aḳṣā beside the Mosque of the Women. Al-Manṣūr Lādjin (696—698) restored the mihrāb of David on the south wall of the Aḳṣā. Al-Nāṣir Muḥammad in his third reign (709—741 = 1309—1340) paved the back part of the Aḳṣā with marble slabs, had two windows pierced right and left of the Mihrāb, restored the arcades on the north side of the raised part of the Ḥaram, and the Gate of the Cotton-Merchants, gilt the domes of the two sanctuaries on the Ḥaram in such brilliant fashion that in Muḍjir al-Dīn's time, c. 180 years later, they still looked like new (an inscription in the Dome of the Rock mentions this gilding and a renovation of the outer roof; de Vogüé, *op. cit.*, p. 91); the aqueduct which brought the water from the Sultān's Pool to the town was also repaired in the same reign. In 851 (1447/1448) lightning set the roof of the Dome of the Rock on fire and a portion of it was consumed whereupon Sultān Djaḳmaḳ (842—857) had it repaired. This ruler was hostile to the Christians and ordered all the new buildings in the Sion monasteries and in the Holy Sepulchre to be destroyed. He took away from the monks the so-called Tomb of David and the site where, according to Church tradition, the Apostles were filled with the Holy Ghost and took away a balustrade from the Church of the Holy Sepulchre and carried it to the Aḳṣā Mosque. The able Sultān al-Aṣḥraf Ḳā'it-Bey (873—901 = 1468—1495) who took a great deal of interest in the sacred places of his kingdom, built, as an inscription tells us, the well between the raised part of the Ḥaram and its west wall and rebuilt the school which bears his name at the Gate of the Chain in the Aḳṣā and extended it (Muḍjir al-Dīn, p. 387). In his reign also several aqueducts which led water into the town were restored (*ibid.*, p. 621, 655, 661 sq.).

Of the geographical works of the Aiyūbid and Mamlūk period, Yāḳūt's great dictionary the *Mu'jam al-Buldān* (ed. Wüstenfeld, 1866—1873) is in the first rank with its great use of older sources. In the main article on Jerusalem (iv. 590 sqq.) he gives a description of the town, its water supply, its climate, its wealth in fruit and the Ḥaram sanctuaries, and details the famous men who have lived there. To the xivth century belong

the geographical works of al-Dimashkī (*Cosmography*, ed. Mehren, 1866) and Abu 'l-Fidā' (ed. Reinaud and de Slane, 1840) and Ibn Baṭṭūṭa's *Travels* (ed. DeFrémery and Sanguinetti², 1869-1879). To the xvth century belongs Khalil al-Zāhiri's (d. 872 = 1468) work, which exists in two synopses, on Palestine and Syria (R. Hartmann, *Die geographischen Nachrichten über Palästina und Syrien in Khalil al-Zāhiri's Zubdat Kashf al-Mamālik*, 1907). In the section on Jerusalem he deals with Qur'anic passages and traditions relating to Jerusalem, the Dome of the Rock, the four rites used there, the pious foundations, bazaars, schools, khāns and baths and the Church of the Resurrection. There are also several works dealing specially with Jerusalem, which are based on Muṣḥarraf mentioned above. To the xivth century belongs Ibn Hilāl Djamāl al-Din al-Maḥḍisi's work composed in 752 (1351) not yet published, the *Muthīr al-Gharām ilā Ziyārat al-Kuds*, extracts of which were given by Le Strange in *J.R.A.S.*, New Ser., 1887, xix., p. 297-305, which refer to 'Umar's entry into Jerusalem and 'Abd al-Malik's buildings. Shams al-Din al-Suyūṭī's *Ithāf al-Akhiṣā bi-Faḍā'il al-Masjid al-Aḡṣā* written in 875 (1470) quotes it, sometimes word for word; a synopsis is given by Le Strange, *op. cit.*, p. 258 sqq. with the translations of several passages. It is a mixture of topographical information and worthless traditions. Of more importance is Muḍjir al-Din's work written in 1495 entitled *al-Uns al-Djalil bi-Ta'rikh al-Kuds wa 'l-Shām* (pr. Cairo 1283, extracts translated by H. Sauvaire, *Histoire de Jérusalem et de Hébron*, 1876). The book begins with a series of legends followed by accounts of 'Umar and 'Abd al-Malik taken from earlier writers; then come notes on al-Ḥakīm's destruction of the Church of the Holy Sepulchre, the taking of the city by the Franks and by Saladin and the period following him till 1244. The next section contains a description of the sanctuaries on the Ḥaram and its gates, the schools, the houses, mostly built on ancient remains, the churches, the streets and city-gates and cemeteries, the survey, of which a resumé was given above, of the Mamlūk Sulṭāns who had devoted attention to the city, and a list of the higher officials who had held office there. His simple and lucid description of the seven-naved Aḡṣā with its pillars and columns, its gable roof and its dome shows that in those days it had practically the same form as at present. This is also true of the cupola of the Dome of the Rock supported by 12 columns, and 4 pillars and the surrounding octagon with 16 columns and 8 pillars; the measurements given practically agree with the present ones. The pilgrim's descriptions of this period are numerous (see Röhrich, *Biblioteca Geographica Palestinae*, No. 41-172) but give little that is new. Among the more valuable are Burchardus, *De Monte Sion*, 1283 (in Laurent's *Peregrinationes medii aevi quattuor*, 1864, second ed. 1873, who also gives Ricaldus, *De Monte Crucis* and Willbrand von Oldenburg, cf. Rotermond, *Z.D.P.V.*, xxiv. 1 sqq.), Felix Fabri, 1480 and 1483 (C. D. Hassler, *Fratris Felicis Fabri Evagatorium*, 1843-1849, cf. thereon the map by Bernhard von Breitenbach in *Z.D.P.V.*, xxiv. 129) and the Bohemian M. Kabátník, 1491 (transl. in *Z.D.P.V.*, xxi. 47 sqq.). An interesting account of the Church of the Holy Sepulchre about 1436 has been published by R. Durrieu

in *Florilegium dédié à M. de Vogüé*, p. 197 sqq.

In 1517 Selim I, the Ottoman Sulṭān put an end to the Mamlūk dynasty, and Jerusalem with the rest of Syria now passed to the Ottoman Turks, who were little capable of restoring the lands they ruled to new life. One of the most notable of these Sulṭāns, Sulaimān I (1520-1566), was not only a great soldier but took a considerable interest in building and Jerusalem also benefited from this. He had the mosaic on the outer wall of the Dome of the Rock, which demanded continual repairs taken away and replaced by tiles of faience, the blue colours of which, alternating with white, green, and yellow, gives the mosque its characteristic appearance. In the lower parts, marble slabs were used instead, while at the top a dark blue band with an inscription in white ran round the octagon. Perforated sheets of gypsum, filled with panes of variegated glass, were put in the windows. The Sulṭān also had the city-walls renovated and gave them the form they still have to-day. At some places they rest not upon the rock but on the débris of earlier walls. On this occasion a part of the west hill was again cut off from the unwallled town. In Sulaimān's reign in 1545 the dome of the bell-less bell-tower on the Church of the Holy Sepulchre fell down in an earthquake. In 1555 the little building in the rotunda over the tomb was removed and replaced by a new one regular in shape. The whole Church was now divided among the different denominations, who jealously watched one another. These feuds and the hostile attitude of the Muslims for long delayed the very necessary restoration of the dome of the Anastasis and the bell-tower, until finally in 1719 the work was taken in hand. In rebuilding, by order of the Turkish government, the existing forms were retained and the attempted alterations at the Anastasis had to be removed. In 1808 a fire broke out in the Armenian chapel, which destroyed most of the western part of the church. The Greeks succeeded in asserting their claim to do the restoration and they entrusted the work to an architect from Mytilene, named Komnenos Kalfa, who, by the unfortunate way in which he performed his task, has acquired a kind of Herostratic renown. The Sulṭān who had given authority to the Greeks by a firmān was Maḥmūd II (1808-1839); he also, according to an inscription, renewed the gilding of the Dome of the Rock and had its outside restored. This is the not very edifying end of the story of the Church of the Holy Sepulchre. But for the unfortunate rivalry among the different denominations, it would possibly have been decided much earlier to remove the ugly new buildings and the plaster covering the old walls, so that the Church of the Crusaders could be restored by using the old materials.

In the xixth century Palestine was again disturbed from the state of vegetation in which it had lapsed. Napoleon invaded the country and fought the Turks on the old battle-ground of the plain of Yizre'el, but his plan of taking Jerusalem was abandoned. Next Muḥammad 'Alī seized the country and Jerusalem surrendered to him in 1831. The European Powers put a stop to the further advance of his adopted son Ibrāhīm Pasha and when the discontent with Egyptian rule in the land continued to increase, France withdrew her protection from Muḥammad 'Alī and with the support of England and Austria, Sulṭān 'Abd al-Majid once

more came into possession of Palestine and Jerusalem in 1840 and the Turks held it till the World War, which deprived them of the country and opened up a new epoch in the history of Jerusalem. Palestine is now governed under an English mandate and Jerusalem is the capital of the central district, Jerusalem-Jaffa.

In the course of the sixth century, a new life began to invigorate Jerusalem, which altered more and more the mediaeval character of the city. Ibrāhīm Pasha's government introduced progress in various directions, which however threatened to be checked when the city passed to the Turks again but was gradually revived when increasing security began to attract Europeans thither. The number of visitors increased very much and many strangers settled in the city. It was a great step forward when European consulates were instituted, who afforded foreigners legal protection. It was significant of the altered conditions that the prohibition to non-Muslims to enter the site of the Temple was abolished after the Crimean War and that bells, forbidden since the time of Saladin, were restored to the churches. Postal and telegraph services and other modern institutions, the most recent of which was the railway from Jaffa, were introduced and hostels on modern lines were erected. A new era in building began in this period, partly in the city itself, where ruined houses were restored or replaced by new ones, and partly in the vicinity. Schools, pilgrim hostels, hospitals including one for lepers, an orphanage etc. were built. Several churches were built or old ones restored, including the Church of St. Anne presented by the Sultān in 1856 to Napoleon III and the Church of the Redeemer on the Muristān, which was given in 1869 to the King of Prussia. The number of Jews who migrated there, which nearly doubled between 1881 and 1891 (*Z. D. P. V.*, xvi. 196) has greatly increased since the World War. Ibrāhīm Pasha allowed them to build synagogues, which they have continued to do and several synagogues with high cupolas were built having Talmudic schools attached to them. The Jews have now built a building for a medical faculty, as the beginning of a university. The excavations undertaken in Jerusalem in recent years throw light mainly on the earliest history of the city and are therefore not dealt with here; we need only mention the excavations conducted by the Russian Palestine Society as they are of importance for Constantine's buildings.

The most striking feature about Jerusalem and one that makes quite a painful impression on the visitor is the conflict of different creeds and denominations, for all of which it is a holy city. Not only Christians, Muslims and Jews are more or less at enmity with one another, but the various Christian denominations are also rivals and each is striving to extend its influence at the expense of the others. Now, down to the Crusaders, the Greek Orthodox Church formed the main body of Christians and after the expulsion of the Latins came into their own again has already been mentioned. They were the subjects of successive Muslim rulers, but had their own self-government and elected their own Patriarch, whose supremacy over the Orthodox Church however passed to the Patriarch in Constantinople after the Turkish conquest. The fact that they restored

the Church of the Holy Sepulchre burned down in 1808, gave them a considerable advantage but cost so much that they found themselves in a difficult position. They were rescued by the Russians, but the result was the Russian Church and government gained an increasing influence, which was still further extended by the building of hospices and splendid churches. The Roman Catholic Latins whom the Crusaders brought into the land were expelled after Saladin's conquest, the Latin Patriarchate abolished in 1291 and his palace fell into the hands of the Muslims. In 1305 Robert of Sicily bought for the Roman Church the Church of the Holy Sepulchre and the coenaculum but the Dome of the Rock remained in possession of the Greeks. Only the Franciscans were able to remain there, even after they were expelled from the Sion monastery in 1551 and in spite of the most oppressive conditions, they have been untiring and beneficial in their activities. France under Louis XIV endeavoured to exercise a protectorate over the Holy Land but this disappeared under Napoleon who had no interest in it. In 1848 the Roman patriarchate was revived and since that date Roman Catholic influence in Jerusalem has considerably increased. To strengthen the Protestant element, the Anglo-German bishopric of St. James was instituted in 1841 at the suggestion of Friedrich Wilhelm IV of Prussia but it never had any vitality and was abolished in 1887.

ḲUDSĪ, poetical name of Ḥādījī Muḥammad **Khān**. He adopted this name (meaning holy) because he was a native of Mashhad. He came to India in the 5th year of Shāh Djahān 631—1632). There is a notice of him, with some extracts, in vol. i., p. 351, of the *Bādshāh-nāma*. He is highly praised by the author of the *Imālī Sālīh*, who gives the couplets which Ḳudsī composed for the Peacock-throne (see also *Bādshāh-nāma*, i., part ii., p. 80). He wrote a poetical *Shāh-djahānnāma* and a poem in praise of Kashmīr. He died at Lahore in 1056 (1646). Rieu (ii. 684b) is mistaken in saying that he died in Kashmīr (*Bādshāh-nāma*, ii. 504). He wrote odes and quatrains, as well as *Mathnawīs*; for a *ḡaṣida* in praise of Shāh Djahān, he was weighed against rupees.

KUDUMMUL, a small volcanic island in the Red Sea in 17° 52' N. Lat., called Kotumble on the English Admiralty charts. The island has a rich flora, which has been studied by the botanist Ehrenberg, and is noteworthy for its iron deposits, which are mentioned as early as the geographer Ibn al-Mudjāwir (d. 630 A. H.). The rocky island of Kudummul which lies near Ḥamīda on the Arabian coast once marked the boundary between the land of the Kināna and Yemen.

(ADOLF GROHMANN)

AL-ḲUDŪRĪ, whose full name was ABU 'L-ḤASAN (var. AL-ḤUSAIN) AḤMAD B. MUḤAMMAD B. AḤMAD B. DJA'FAR B. ḤAMDĀN AL-BAGHDĀDĪ AL-ḲUDŪRĪ, a Ḥanafī lawyer, born in 362 (972), died at Baghdād on the 5th Radjab 428 (April 24, 1037). He studied law under Muḥammad b. Yaḥyā al-Djurdjānī and ḥadīth under Muḥammad b. 'Alī Suwaid al-Mu'addib, 'Ubaid Allāh b. Muḥammad al-Djawshānī. Amongst his pupils may be noted the celebrated traditionist and historian al-Khaṭīb [q. v.] al-Baghdādī. Al-Ḳudūrī had to hold several public disputations in defence of the Ḥanafī school against his contemporary the Shāfi'ī lawyer Abu Ḥamīd al-Isfarā'īnī.

The two following of his works have been preserved:

1. *al-Mukhtaṣar*, a manual of law of great clearness composed, it appears, for his son Muḥammad and containing 12,500 questions: a) the chapter on marriage has been translated by G. Helmsdörfer, Frankfurt 1832; b) the chapter on the Holy War (*al-Siyar*) has been edited with a translation and notes in Latin by Rosenmüller (in *Analecta Arabica*), Leipzig 1825—1826. The *Mukhtaṣar* was published at Delhi in 1847, at Constantinople in 1291, 1309, at Kazan in 1880.

2. *Kit. al-Tadīrīd* dealing with the differences between the Ḥanafīs and the Shāfi'īs, *Brit. Mus. Cat.*, No. 1194; *Bibl. Khed.*, *Fih'r.*, iii. 17.

Bibliography: a biography at the beginning of the *Mukhtaṣar* published at Constantinople in 1309; Ibn Ḳutlubogha, *Tabakāt*, p. 5, No. 13; Ibn Khallikān, *Wafayāt*, Cairo 1310, i. 21; al-Sam'ānī, *al-Ansāb*, Leyden 1912, f. 444b; Muḥammad 'Abd al-Ḥayy al-Laknawī, *Kit. al-Fawā'id al-baḥiyya fī Tarādjīm al-Ḥanafīyya*, Cairo 1324, p. 20; Abu 'l-Fidā', *Ta'rikh*, Constantinople 1286, ii. 169; Ḥādījī Khalifa, *Kashf al-Zunūn*, ed. Flügel, v. 451, No. 11625, and Ind. No. 3635; Brockelmann, *Gesch. der arab. Litt.*, i. 174—175.

(MOH. BEN CHENEH)

AL-KŪFA, a once celebrated city south of the ruins of Babylon, on the western arm of the Euphrates (cf. AL-FURĀT), which later disappears in the swamps west of Wasīt. After the battle of al-Ḳādisiyya [q. v.] the Arabs by command of 'Omar built a strongly defended camp on this site in order to control more easily the people of the newly conquered province, while the old capital Ctesiphon was ruthlessly destroyed, and the capital of the Lakhmid dynasty, Hira, only a few Arab miles south of Kūfa gradually lost its former importance. For military reasons this settlement which was called *al-Kūfa* and the somewhat older Baṣra were placed on the west side of the river, so that communication between the capital Medīna and the army headquarters should not be affected by any natural obstacles. While Baṣra was built quite near an already existing village, al-Khuraiba, which later became a suburb of Baṣra, Kūfa was an entirely new settlement founded by Sa'd b. Abī Waḳḳās according to some in 17 (638), to others not till 18 or even 19. According to the Persian tradition, however, there had been on the same site a town built by the mythical king Hūshang of the Pishdād dynasty, which fell in time completely into ruins and Sa'd b. Abī Waḳḳās had to rebuild it: not much importance need be attached to this story. The usual meaning of the Arabic word *kūfa* is "a round sandhill". The name therefore would indicate that the oldest part of the town was built on an eminence of this kind; other explanations however are given, cf. Yāḳūt, iv. 322. According to the Arab geographers Kūfa occupied an extensive area in the wide plain on the bank of the Euphrates; its position was considered more healthy than that of Baṣra, and the principal products of the country round were dates, sugar-cane and cotton. The importance of Kūfa grew with the eastward advance of the Arabs; the general in supreme command there was also the political representative of the Caliph and governed the province. The two sister towns of Kūfa and Baṣra had usually separate governors; but sometimes they were combined; on this, see the article AL-ʿIRĀQ. With the great importance which Kūfa gradually attained for the ruling Arabs as well as the subject Persians, the number of inhabitants grew very rapidly. In addition to the families of Arab soldiers, merchants, artisans and other workers mainly of Persian origin settled in vast numbers. The original camp consisted simply of tents and other primitive dwellings with a mosque and a few other public buildings, but in course of time it grew into a permanent settlement of clay huts. Finally (according to the usual statements) in the governorship of Ziyād b. Abīhi, i.e. after about 50 (670), a regular town with brick houses was built. The people of Kūfa, who were

partly members of different Arab tribes, particularly South Arabian Beduins and partly all kinds of Persian elements, cannot be denied military ability. At the same time the Kūfāns were distinguished by brilliant intellectual gifts and their considerable achievements in the field of Muslim learning. Among their most striking characteristics however was a remarkable fickleness and lack of reliability, which in the long run proved highly disastrous in political life, and was responsible in a high degree for the civil wars which interfered so much with the prosperous development of the Caliphate. Even 'Omar to whom the town owed its existence had occasion to complain of the insubordination of the Kūfāns, who were never satisfied but had always some objection or other to the governors appointed by the Caliph. When he was induced to yield to their wishes, their demands became more and more intolerable, and during the last six years of his reign, he had to change the governor in Kūfa no less than three times. When the opposition to 'Othmān long prepared in secret finally broke out in 34 (655), the Kūfāns were the first to proclaim their fidelity to 'Alī. After the battle of the Camel in 36 (656), where 'Alī was victorious over his combined enemies, he went to Kūfa, and now it looked as if this town would become the seat of the Caliphate. But when 'Alī encountered Mu'āwīya in the plain of Siffin, the 'Irākīs were outwitted by the Syrians; victory slipped from the Prophet's son-in-law, when just within his grasp, and after he had declared himself satisfied with the arbitration, the Khārīdjīs abandoned him. After the assassination of 'Alī in the year 40 (661), the Kūfāns had to acknowledge Mu'āwīya as commander of the faithful. The stalwart governors of the new caliph, first Ziyād b. Abīhi and next his son 'Ubayd Allāh, who received in 55 (674/675) the governorship of Baṣra, which after the death of Mu'āwīya was combined with that of Kūfa, were able in a masterly fashion to keep the turbulent people of Kūfa in check, and when Husain b. 'Alī [q. v.] decided to accede to the appeal of his many followers in al-'Irāk and set out from Mecca for Kūfa, 'Ubayd Allāh's energetic measures easily suppressed the rebellious tendencies of the Kūfāns. In Muḥarram 61 (October 680) Husain fell at Karbalā'. After the death of the second Umayyad Caliph, Yazīd I, civil war broke out once more. As 'Alī's younger son, Muḥammad b. al-Ḥanafīya, was not inclined to put himself at the head of the Shi'ī party in Kūfa, the Kūfāns paid homage to 'Abd Allāh b. al-Zubair, who had already been proclaimed Caliph throughout the Ḥidjāz, and for years disputed the supremacy with the Umayyad Marwān and his son 'Abd al-Malik. In 66 (685) the unscrupulous adventurer al-Mukhtār b. Abī 'Ubayd [q. v.] succeeded in taking Kūfa and a regular reign of terror began, which lasted about a year and a half. All who did not openly profess the doctrine of the Shi'a, which was general among the Persians especially, were ruthlessly persecuted until the Arab population appealed for help to Muṣ'ab b. al-Zubair who had been appointed Governor of Baṣra by his brother, the anti-Caliph 'Abd Allāh b. al-Zubair. In a battle at Ḥarūrā' near Kūfa (67 = 687) al-Mukhtār was defeated and slain and Muṣ'ab took a bloody revenge on the rebels. From this time the Persian elements in the population were more and more suppressed and in the end the old

hereditary points of conflict between the different Arab tribes played a much greater part in the political history of 'Irāk than the national differences between Arabs and Persians. After Muṣ'ab had fallen, fighting the Umayyads (72 = 691), Kūfa had to submit and 'Abd al-Malik was able to enter the town unopposed. From 75 (694) till 95 (714) the administration of the whole of the 'Irāk was in the hands of the energetic Ḥadīdjādī b. Yūsuf [q. v.] who in order to break all resistance founded a new capital in Wāṣit, from which he could easily control both Kūfa and Baṣra. During the long governorship of Khālīd b. 'Abd Allāh al-Ḳasrī (105—120 = 724—738) peace and quiet generally prevailed in al-'Irāk. In 127 (745) however the Khārīdjīs seized Kūfa and it took the troops of the Caliph Marwān II two years to drive them out. Soon afterwards the 'Abbāsids appeared in the field. The Umayyad governor of Khorāsān, Naṣr b. Saiyār, was defeated and in 132 (749) the long prepared rising in Kūfa broke out. The 'Abbāsids had no difficulty in occupying the town; Kūfa was made the capital and remained so for nearly two decades although the 'Abbāsīd rulers usually lived, not in Kūfa itself, but sometimes in Ḥāshimīya, farther north on the Euphrates and sometimes in Anbār. After the foundation of the new capital Baghdād [q. v.] by the second 'Abbāsīd Caliph al-Manṣūr, Kūfa gradually sank in importance, but it retained for a considerable time a large garrison, and the renown for learning, which the inhabitants had won by the first half of the second century A. H. remained down to the fifth century. In spite of the altered political conditions, 'Alid sympathies and the old fondness for all sorts of new movements and rebellious tendencies remained undiminished. In 199 (815) a descendant of 'Alī named Muḥammad b. Ibrāhīm, also called Ibn Ṭabātabā, appeared in Kūfa and tried to assert his claim to the caliphate. The governor was expelled and the pretender won numerous adherents. Although he died in the same year, the dangerous rising was only put down by great efforts. In the reign of al-Musta'īn [q. v.] Kūfa was again disturbed by the 'Alids. In 250 (864/865) the 'Alid Yaḥyā b. 'Omar raised a rebellion against the government with all sorts of rabble. The governor had to flee and the rebellion rapidly spread; order was however soon restored. After some time, another 'Alid set up in the always turbulent city but his rule was of only short duration. In 256 (870) 'Alī b. Zaid, likewise a descendant of 'Alī proclaimed himself there and drove the governor out. He then routed the commander of the government troops, al-Shāh b. Mikāl, who had been sent to suppress him; but on the advance of a new army he had to vacate Kūfa. When western 'Irāk and Syria were devastated by the Ḳarmāṭians, Kūfa did not escape; in 293 (906) they entered the city and in 312 (924/925) it was conquered and sacked by the famous Ḳarmāṭian leader, Abū Ṭāhir. It was similarly sacked in 315 (927) and 325 (937). The increasing collapse of the caliphate in the fourth century contributed to the decline of Kūfa, although the Būyids, who seized the capital Baghdād in 334 (945) and thus gained political supremacy, as Shi'īs took a special interest in Kūfa or rather its suburb Naḡjaf, because the latter was believed to contain the holy tombs. But in time the power of the Būyids also weakened; in 375 (985/986) the

Ḳarmatians once more occupied Kūfa, and eleven years later it was granted as a fief by Bahā' al-Dawla [q. v.] with other places to the 'Ukailid al-Muḳallad b. al-Musaiyib. It then passed to the Banū Mazyad; but when the latter in 495 (1101/1102) built a new capital, Ḥilla, which rapidly grew, to the north of it, the former capital gradually lost any importance. When Ibn Djubair visited it about 90 years later, the old walls had been taken down and Kūfa showed other signs of decay. From the Mongol period onwards it rapidly fell into oblivion. When Ibn Baṭṭūta visited the town, it was for the most part deserted, mainly as a result of the raids of the neighbouring Beduins of the tribe of Ḳhafādja. From his description it appears however, that the mosque was still fairly well preserved. Of the old government buildings (*ḡaṣr al-imāra*) which Sa'd b. Abī Waḳḳaṣ had built, only the foundations were left. Its decline at this time is corroborated by the *Nuḡhat al-Ḳulūb* of Ḥamd Allāh Mustawfi-i Ḳazwīnī written in 740 (1339/1340). Later we only find Naḍjaf in its vicinity mentioned, which retained a certain importance as a Shī'ī place of pilgrimage and is now usually called *Maṣḡhad 'Alī*, "the tomb of 'Alī". Niebuhr gives the following description of the country round Kūfa: "The land around is all desert and the town has no longer any inhabitants. The most noteworthy object here is the great mosque in which 'Alī was mortally wounded; but even of this little is left but the four walls".

On the services of Kūfan scholars to Arabic philology, see the article ARABIA, *Literature*. There was also considerable activity in Kūfa, as in Baṣra, in other fields of Muslim learning during its palmiest days. Especially after the battle on the Ḥarra in 63 (683) many of the old companions of the Prophet, who were regarded as authorities on Muslim tradition, emigrated to al-'Irāq and settled in the most important towns. Only two of these traditionists need be mentioned here: the celebrated 'Abd Allāh b. Maṣ'ūd, who was one of the earliest converts and was sent to Kūfa as a guide and teacher, and the no less distinguished 'Amir b. Ṣharāḥīl al-Sha'bī (d. circa 104 = 722).

KŪFIYA (in the dialects of Syria, *keffīye*, Cuche, *Dict.*, p. 577; Burckhardt, *Notes on the Bedouins*, p. 27; G. Fesquet, *Voyage en Orient*, p. 185), an Arabic word borrowed from the Romance languages (Ital. *cuffia*, Span. *cofia*, Port. *coifa*, French *coiffe*, *coiffe*), the name of a silk handkerchief,

which the Bedouins of the Syrian desert, as far as the region of Mecca, wear as a head-dress; it is kept on the head by a cord of camel-hair dyed black and fastened at intervals with cords of bright colours called '*agāl*' (class. '*īḳāl*'). This handkerchief is square-shaped, yellow, or yellow and green in colour and is placed on the head in such a way that one corner hangs behind, while two others fall down in front of the shoulders; the square is first of all folded in two to form a triangle, what is called a gore in dressmaking. The corners on the shoulders may be brought over the face to shelter it against the rays of the sun, against the cold wind, against the rain, or to conceal one's features when one does not want to be recognised. The woof of the ends hanging down much below the edge of the material are twisted into cords like a long fringe (J. B. Fraser, *Travels in Koordistan*, i. 228). The head-dress used also to be worn by the Mamlūk Sultāns of Egypt.

KUFRA. [See KĀFIR.]

KUFRA, a group of oases in the Eastern Sahara, halfway between Cyrenaica and Wadai. It was for long only known from the account by Rohlfs, who succeeded in reaching it in 1879. Since then it has been visited by two other Europeans, Marshal des Logis Lapierre (1918) and Mrs. Rosita Forbes (1920—1921). The group of oases to which the name Kufra is given extends from S. E. to N. E. for a length of about 120 miles between 24° and 26° N. Lat., and 31° 34' E. Long. The most southerly is about 850 miles S. E. of Tripoli and 600 miles S. of Benghazi. They number five, separated from one another by *serir* or stretches of banks of gravel; Taiserbo in the N. E., Būseima in the centre, Erbehna (the Ribiana of Mrs. Forbes) in the S. E. and Sirhen, N. E. of Būseima and to the S. E. Kufra properly so-called, the Kebabo of Rohlfs, the largest of all. The total area of the group according to Rohlfs is about 7,000 square miles of which Kufra has 3,400 and Taiserbo 2,500.

Kufra lies in the bottom of a depression, the height above sea-level of which varies from 800 feet at Taiserbo to 1,400 at Kebabo. The soil consists mainly of marl and sand covered with dunes in the north, which perhaps are connected with those of the Libyan desert. One chain of dunes extends from the north of Taiserbo, another surrounds Būseima. In the central and southern parts, the depression is crossed by calcareous ranges lying upon Numidian sandstone. The hills Djebel Erbehna, Dj. Būseima, Dj. Sirhen, Dj. Neri (north of Kebabo) assume a tabular form like that of the *gūr* of the South Algerian Sahara.

There are neither springs nor streams in Kufra, but everywhere at a depth of 3 to 10 feet an abundant water-bearing stratum can be tapped. At various parts the waters forms on the surface of the ground brackish lagoons or even permanent

lakes, of which the most remarkable are that of Erbehna and especially that of Būseima, which measures about 6 miles in length. They may be regarded as relics of a former period in which the lacustrine character of the oases was much more marked than to-day.

These subterranean waters make up for the scarcity of rain and are sufficient to nourish an abundant and varied vegetation. In the dry beds grew the *hād* (*cornulaca monacantha*), and the *diss* which provide excellent camel food; around the lakes and marshy hollows fields of cereals, wheat, *dūra* (*sorghum vulgare*), vegetables, orchards of olive, fig, orange and citron trees form a verdant girdle but usually a very narrow one. The breadth of this zone does not exceed 1,000 yards at Būseima. Date palms constitute the principal wealth of the oases. According to Rohlfs there are 4 millions of them, many of them however growing wild. There are none however in the oasis of Sirhen. As to the fauna, it is represented by gazelles, many varieties of birds (crows, falcons, and cranes) and reptiles like lizards and non-venomous snakes.

The population of Kufra does not exceed 5,000. Almost all belong to the tribe of Zāwiya, Arabicised Berbers who supplanted the Tūbu, the former owners of the oases. The majority of them are semi-nomadic and only have temporary camping-places. There are only settled groups at Kufra where the village of Djōf has 250 inhabitants and where some 500 individuals live about the Sanūsī zāwiya of al-Istāt. The geographical situation of Kufra gives it a certain commercial importance. It is a stage on the caravan route leading from Cyrenaica to Wadai, a route used since the beginning of the sixteenth century, the period when Sulṭān Sabūn made it known to enable travellers to escape the brigandage of the people of Tibesti. According to Muḥammad al-Ḥashā'ishī there was a market at Djōf where business was entirely done by barter. But as in all the markets of the Sahara, the principal traffic was in slaves, a trade which gradually tends to disappear.

We know very little of the history of Kufra. According to Rohlfs it was a settlement of the Garamantes and there are still to be seen there buildings similar to those noticed in Fezzān by Duveyrier, which seem to date back to a remote antiquity. In the historical period, the land was occupied by the Tūbu, who have left numerous traces of their occupation, cemeteries, houses, fortified villages on the tops of hills. Their Sulṭān lived at Djiranguedi, in the oasis of Taiserbo. The people were pagans, whence perhaps the name Kufra (*kafara*, pl. from *kāfir*, infidel) given to the region where they were settled. They were dispossessed about 1730 by the Zāwiya and the Ḥassūna, tribes from Tripolitania. The Tūbu had almost completely disappeared by the beginning of the sixteenth century, and are now represented at Kufra by only 300–400 individuals. Towards the middle of the same century the Senūsīya appeared, who founded a settlement at Taiserbo, then built the zāwiya of al-Istāt in the oasis of Kebabo, near the village of Djōf. They bought up the best land and the richest gardens. At the time of Rohlfs' journey they already held a quarter of the palm-trees of the oasis and had begun to plant new groves. Already very important in those days, the zāwiya of al-Istāt is now the

residence of the grand master of the brotherhood. In 1895 Sidi al-Mahdī, son and successor of Sidi Muḥammad al-Senūsī, the founder of the order, left Djaghbūb [q. v.] and came to settle in Kufra.

KŪHISTĀN (P.) or KŪHISTĀN is the arabicised form of the Persian name Kūhistān meaning a mountainous country (derived from *kūh*, "mountain" with the suffix *-istān*) and corresponds to the Arabic designation al-Djibāl. As the Iranian plateau is very mountainous, we find many more or less extensive areas in it to which the name Kūhistān has been given, as Yāqūt has already remarked (iv. 204). Many of these names have disappeared in course of time. Thus Ḳazwīnī (ed. Wüstenfeld, p. 228) says that the term Kūhistān is used for Media, which other geographers always call al-Djibāl. In the *Shāh-nāma* of Firdawsī we even find Kūhistān used as the old name of Mā warā' al-Nahr (ed. Vullers, p. 531), but this is probably a case of an erroneous identification made by Firdawsī himself (cf. also Vullers, *Lexicon*, s. v. *Kūh*).

The principal districts that are or have been called Kūhistān are as follows:

1. **Kūhistān-i Khurāsān.** This is the mountainous and partially arable region which stretches south of Nishāpūr as far as Sistān in the south-east. It is surrounded on all sides by the great salt desert of the Central Iranian plateau and consists of scattered groups of oases; one feature of its geographical unity is the fact that no part of it belongs to one of the great centres of civilisation that surround it. These are in the north Nishāpūr, in the north-east Herāt, in the south-east Sistān, in the south-west Kirmān with Yazd, and in the west Media. Although Kūhistān has always been connected with these by caravan routes and is therefore not absolutely cut off, its isolated position, combined with the relatively low productivity of the soil, has caused it to be little known and neglected and its inhabitants have usually been ruled by a number of independent lords. If it has been reckoned a district of Khurāsān, this is only because Nishāpūr and Herāt are relatively the nearest places to it. Kūhistān has therefore never been a very clean cut geographical term; a modern traveller like Curzon, although he describes the different districts, does not even mention its name.

The orography of Kūhistān is still little known. The mountain chains which in the north run more east to west, assume the direction N.W.–S.E. as one moves southwards. These chains, which have passes rising to over 3,000 feet, enclose cultivated areas of which the principal are, beginning in the north: Turshiz and Turbat-i Ḥaidarī [q. v.] now called Turbat-i Shāikh Ishāk and to the east Djām; next comes the district of Djunābād (formerly Yunābid) and more to the east, that of Khwāf with the old town of Zawzan;

then comes Tūn, with the district of Ṭabas on the west of it, which latter extends so far to the west that in the middle ages it was not included in Kūhistān; next come to the south of these, Kāin and Birdjand, to the south of which there are no more oases of any importance until we reach Sistān by the Neh route. The rivers of the region are of little importance; irrigation is done by canals and *kahriz*; Makdisi (p. 322, reading of the Constantinople MS.) says that the only running stream he knows in Kūhistān is near Ṭabas; the latter is also the only town which he includes, with the neighbouring district of Kuri, in the *djūrūm* or warm regions.

It is probable that various places in Kūhistān have a history going back to pre-Muḥammadan times, but so far we have no information on this period. To realize this, it is sufficient to glance at the second map given by Herzfeld in his article *Khorasan in Der Islām*, vol. ix. The journey of this writer in 1925 confirmed his first impression. Moses of Chorene does not mention this region in his *Geography*. In the period of the early Arab conquests we find Kūhistān under the rule of the Ephthalites. Historians say that it was first conquered in the caliphate of ʿOmar by ʿAbdallāh b. Budail al-Khuzāʿī; the latter setting out for Kirmān took al-Ṭabasain — it is by this dual (for Ṭabas and Kurīn, according to al-Balādhuri) that the Arabs always refer to the district of Ṭabas — later called the “two gates of Khurāsān” (Ṭabari, i. 2704); a deputation of the inhabitants is said to have concluded a treaty with ʿOmar (Balādhuri, p. 403). In 31 (653) when Ibn ʿAmir undertook the conquest of Khurāsān, his advance guard under al-Aḥnaf passed through Kūhistān and defeated the Ephthalites there (Ṭabari, i. 2885, and Balādhuri, p. 403, who give other traditions also). In the years following, Kūhistān was the centre of a great national revolt under a chief called Kāren (a village in Kūhistān still bears this name), a rising which was put down by Ibn Khāzim (Ṭabari, i. 2905; Marquart, *Ērānshahr*, p. 135). In 51 (671) it was again necessary to reconquer it; this was done by al-Rabiʿ b. Ziyād from “the Turks” or rather Ephthalites (Ṭabari, ii. 156). Henceforth Kūhistān formed from the administrative point of view a part of Khurāsān and more particularly of the provinces which the Arab geographers still call by the old name of Abarshahr with its capital Nishāpūr (cf. particularly al-Yaʿqūbi, *Kitāb al-Buldān*, B. G. A., vii. 278, who gives a rather limited definition to Kūhistān, for he mentions al-Ṭabasain, Djām and Zawzan separately). These remote countries became in the early centuries of Islām the principal refuge of Zoroastrians driven from their homes by the new religion (cf. particularly Inostrantsev’s work quoted in the *Bibliography*). In the ninth century the province was under the rule of the Ṭahirids (Ibn Khordādhbih, p. 35) and later of the Ṣaffārids. The Arab geographers of the ninth and tenth centuries know it very well. In this period Kāin was the capital and the commercial centre of Kūhistān, especially for through trade between Kirmān and Khurāsān. The province was further noted for a very fine linen woven there, which Abū Nuwās mentions under the name *Kūhiya* (cf. al-Djāhiz, *Kitāb al-Bayān*, Cairo 1332, i. p. 79); this industry flourished at Tūn in particular. Prayer-carpet also

were made there. In the year 1052, Nāṣir-i Khusrāw passed through Kūhistān, going from Iṣfahān. He went by Ṭabas, Tūn, Kāin and Sarakhs and describes them as large flourishing towns. In the time of the Saldjūks, Kūhistān, the old asylum of the Zoroastrians, became a refuge for the Ismāʿīli heretics, who for this reason were often called “*al-malāhida al-kūhiya*”. They built here strongholds on the model of the famous citadel of Alamut; there are still many ruins of these castles which have not yet been examined (Herzfeld, *Reisebericht*, p. 273). The Khwārizmshāhs had on several occasions to send military expeditions to punish the *malāhida* (cf. e.g. *Djuwainī, Taʾrikh-i Djihān Gushā*, ii. 47, 49). The coming of the Mongols who exterminated the Ismāʿīlis at the same time brought about the ruin of Kūhistān. The region lost all importance and the geographers — like Abu ʿl-Fidaʾ — only quote their predecessors of several centuries before. It is improbable that this is the district referred to by Marco Polo under the name of Tunocain, which Le Strange (p. 352) proposes to identify as Tūn-u Kāin. During the following centuries the region must have very often been in a state of anarchy (cf. Idrisi, transl. Jaubert, i. 430) when power was in the hands of chiefs of Arab origin. The Ṣafawids exercised some authority there but after them, power lay in the hands of the amirs of Ṭabas and of Kāin. At this time Kūhistān inclined towards Afghānistān rather than Persia, until the Qādjar succeeded in bringing it under their sway towards the middle of the sixteenth century. The chiefs of the ruling families kept their positions as governors for the Shāh and received pompous titles from the Persian court. About 1900 the amirs of Kāin no longer lived in this town but in Birdjand; they claim descent from the Arab tribe of Khuzaima. Some members of this family have also ruled Sistān. The rulers of Ṭabas also govern the district of Djunābād (capital Djunain).

The settled population of Kūhistān is of a very ancient stock: their houses are also of a very archaic type. Their dialect seems to offer few peculiarities. Ivanov distinguishes in Kūhistān the dialect group of Turshiz and Djunābād and that of Kāin, Tūn and Birdjand. Many villages around Kāin and Birdjand are inhabited exclusively by sayyids. In some places we also find descendants of the Ismāʿīlis, who recognise the authority of the Agha Khān. There are also small colonies of Bahāʾis, while the Sunnī Afghān element is relatively strong. The nomads are for the most part Arab Sunnis, still speaking Arabic; they live along the main routes; a few Turkish tribes are found only in the north, as far as Turbat-i Haidari. Finally in the south there are Balūčis, who move in summer towards Sistān.

The towns are very small. Kāin, the old capital, had in 1900 about 4,000 inhabitants (Sykes). The land around this town is more fertile than that of Birdjand. The commercial relations with the Gulf of Persia are greater than with Meshhed (export of silk, opium, saffron and hides). For the other towns like Ṭabas, Ṭabas Sunnikhāne Turbat-i Haidari, Turshiz and Zawzan, cf. the special articles.

2. The Arab geographers appear to have known two towns of the name Kūhistān in the province of Kirmān. One of them was called Kūhistān Abī Ghānim and was in the district of Dīruft, between this town and the Djabal al-Kūfs (Maḳdisī, p. 52, 461, 467; Yāqūt, iv. 206; Le Strange, p. 318). The other Kūhistān was situated on the road from Sirdjān to Bām, 6 farsakhs from the former town (Ibn Khurdādhbih, p. 66; Qudāma, p. 196; Maḳdisī, p. 473; Le Strange, p. 311).

3. Kūhistān of Kābul in Afghānistān is a district N. E. of the town of Kābul and includes the districts of Pandjshir, Nidjzan, Tagan, etc. The population is composed of an element called Tādjiks, who speak Persian and Pashṭō and other elements called Kūhistāni who speak Pashai (a Dardic dialect) and Parāči (Iranian) (cf. *Imperial Gazetteer of India*, xiv., Oxford 1908, p. 241).

4. The northern part of the native state of Swāt in the north-west of India is also called Kūhistān. It is the mountainous region around the upper course of the river Swāt; it stretches eastwards as far as the Indus and westwards as far as Pandjhora so that a distinction is sometimes made between Kūhistān of Swāt and Kūhistān of Pandjhora. The people of the valleys (estimated to number 20,000) have suffered since the xvth century from Afghān invasions. Under the rule of the Afghāns they became very zealous Sunnī Muslims; the religious chiefs (*ākhund*) have an enormous influence in the country. Another consequence of the Afghān invasions has been the expansion of Pashṭō all over the country. This language has gained ground at the expense of the old local dialects. The latter — to which the general name of Kūhistāni is given — are very numerous and belong to the Dardic group which according to recent research (Morgenstierne) seems to belong to the Indian group of languages. The principal dialects are: Gārwi (Swāt Kūh.), Tōrwālī (Swāt and Pandjhora Kūh.) and Maiyā (Indus Kūh.).

Bibliography: Biddulph, *Tribes of the Hindoo koosh*, Calcutta 1880; *The Imperial Gazetteer of India XXIII*, Oxford 1901, p. 183 sqq. On the languages see: Grierson, *Linguistic Survey of India*, viii/ji. 507; G. Morgenstierne, *Report on a Linguistic Mission to Afghanistan*, Oslo 1926, *Instituttet for sammenlignende Kulturforskning*, series C, 1—2.

5. Lastly Kūhistān is the name of a barren

and mountainous region in the eastern part of the district of Karachi. The population is nomadic and consists of Sindis and Balōṭis. The population in 1901 was estimated at 12,877 (*The Imperial Gazetteer of India*, Oxford 1908, vol. xv., p. 353). (J. H. KRAMERS)

AL-KUHL is, in the first place, a name for a mineral, stibnite (antimony sulphide) and secondly for galena (lead sulphide), for both of which the name *ithmid* is also used. The word *ithmid* comes from the Greek *στίμις* and according to J. Ruska the words antimony and bismuth are derived from *ithmid*. In Persian *al-kuhl* is called *surma* from the place it comes from. Arabic synonyms are *al-nuḥās al-muḥarraḳ* (burned copper) *al-isfahāni*, *kuhl djlā*, *kuhl sulaimān*, *kuhl aswad*, etc.

Although the *Mafātiḥ al-ʿUlūm* (ed. van Vloten, p. 262) says of *kuhl* that it is a substance of lead (*usrub*) and the *Petrology* of Aristotle says that *ithmid* contains lead, according to E. Seidel (*Mechithar*, p. 185, No. 215) the *ithmid* corresponding to it is almost always antimonite. Confusions naturally occur. According to M. Meyerhof *al-kuhl* is pure antimony.

In the *Nuḥat al-Kulūb* (ed. Le Strange, *G.M.S.*, xxiii./ii., p. 197) Ḥamd Allāh Mustawfī for example gives places where it is found, at Isfahān, on Dāmāwend and in Spain. The latter is said to be particularly rich in the second quarter of the month. Stibnite is still found in Persia and in Spain. In Persia there are mountains called Kūh-i Surma and al-Kazwīni mentions a Djabal al-Kuḥl near Baṣṭa (text, p. 171).

It is to be noted that stibnite can be crushed to a much finer powder than galena; the former is much less hard than the latter. From its principal use *al-kuhl* comes to mean also the cosmetic made from it and then cosmetic in general. As it has to be crushed to a very fine powder, it means a fine powder in general.

As a cosmetic for the eyes, *al-kuhl*, after being ground up with other materials, is used to dye black the eye brows and eyelashes, or the edges of the lids, especially by women. It probably came to the Arabs from the ancient Egyptians. Stibnite has been several times found in their cosmetics (X. Fisher, *Archiv für Pharmakologie*, ccxxx., 1892, p. 9). But the Egyptian cosmetics are usually of pulverised galena, with other materials added. According to M. Meyerhof (*Der Bazar der Drogen etc. in Kairo*; *Archiv für Wirtschaftsforschung im Orient*, 1918, part 3/4, p. 210) sulphur antimony and sulphur of lead (*kuhl*) are sold to this day in Cairo as in ancient times as a cosmetic for the eye. The best still comes from Persia (*al-isfahāni*). That brought by the pilgrims is very popular (*al-makki* and *al-hidjāzi*). Surma is used as a cosmetic in Teherān also. The imitation cosmetic contains galena (*kuhl al-ḥadjar*) with isinglass (*anzarūt*). In place of galena, graphite, smoke-black, especially that from the cheaper kind of frankincense, from burned almond shells etc. is used.

Besides the already mentioned black substances, some of other colours were used as cosmetics (*kuhl*). In his pharmacological principles al-Muwaffaḳ mentions a very black and one not quite so black, a black violet and even a pinkish and one quite white and also a yellow. The adjective *kuhli* is therefore used not only for black, but

also for all dark colours, e.g. dark blue, purple, the dark red of the carbuncle.

As a cosmetic, *al-kuhl* is applied by means of a small probe (*mīl* or *mirwand*), the point of which is sometimes moistened with rose-water. The cosmetic is kept in a box (*mukhula*). From a picture in Lane, this resembles an old tear-glass. *Al-mukhula* however is also a sundial or a truncated pyramid (cf. E. W. Lane, *Manners and Customs of the Modern Egyptians*, p. 29 sqq. and 403; E. Wiedemann and J. Würschmidt, *Über eine arabische kegelförmige Sonnenuhr*, *Archiv. f. Gesch. der Naturwissensch. und Technik*, 1916, vii., p. 359).

Al-kuhl is very much used as an unguent for the eyes. Ibn al-Baitār and others give particulars on this subject.

Numerous imitations of *kuhl* are given by al-Djawbarī in his work: *Kitāb al-Mukhtār fī Kashf al-Asrār* in the section: "Revelation of the secrets of ophthalmists"; *al-kuhl* is in this connection not used as a cosmetic but as an unguent for the eyes.

Women painted with *kuhl* are particularly praised by the poets, or such as do not find it necessary to resort to it. E. von Lippmann quotes passages from al-Mutanabbi, Ḥāfiẓ and Firdawsi.

The name alcohol for anything ground down into the finest and softest powder was transferred quite arbitrarily by Paracelsus in the sense of quintessence to the spirit of wine as the noblest component of wine, a name which gradually came into general use for it.

The Muslims were not able to obtain our alcohol by distillation before about the xiiith century, as they were not able to condense the vapours escaping from solutions of alcohol for lack of suitable apparatus. Alcohol was probably first obtained in the xiiith century in Western Europe. (On this cf. the researches of E. von Lippmann, printed in his *Beiträge zur Geschichte der Naturwissenschaften und der Technik*, Berlin 1923, p. 56—127).

We have for a later date (second half of the xvth century) from the time of the Mughal Emperor Akbar a description of the preparation of *arak* (cf. the *Ain-i Akbari* by Abu 'l-Faẓl Allāmī, transl. H. Blochmann and J. Jarrett, 1893, i. 69 and E. Wiedemann, *Beiträge zur Geschichte des Zuckers in Die deutsche Zuckerindustrie*, 1921, p. 302; see also E. von Lippmann, *op. cit.*, p. 124).

From *al-kuhl* is derived *al-kahḥāl*, ophthalmist, on this see—in addition to a number of articles on separate points by M. Meyerhof—the full and comprehensive treatment of the subject by J. Hirschberg in *Geschichte der Augenheilkunde*, Bk. ii., *Gesch. d. Augenheilkunde im Mittelalter*, forming part of Graefen Saemisch, *Handbuch der allgemeinen Augenheilkunde*, vol. xiii., Leipzig 1908. — The following is J. Hirschberg's summing up:

Very different estimates have been placed on the value of the work of the Arab ophthalmists. Want of knowledge of their works has led to their being undervalued in many quarters. But as early as 1490 A. Benedetti (Professor in Padua) said: "The most brilliant ophthalmists at the present time are in Asia, Syria and Media; in other lands, including Italy, they are exceedingly few in number". The greatest authority on the history of ophthalmic medicine, J. Hirschberg, then goes on to say that the name of the Arabs will never disappear from the records of the study of ophthalmic medicine and surgery (*op. cit.*, p. 243).

Bibliography: All our knowledge of the

history of antimony, stibnite and *kuhl* and their uses as cosmetics is excellently summed up by E. O. von Lippmann, in *Entstehung und Ausbreitung der Alchemie*, etc., Berlin 1919, p. 629, and notices of their use in Muslim lands are very thoroughly utilised; Dozy, *Supplément*, ii. 446; Vullers, *Lexicon Persico-latinum*, ii. 286/287 has a detailed article; Hille, *Über den Gebrauch und die Zusammenstellung der orientalischen Augenschminke (al-Kuhl)*, *Z. D. M. G.*, 1851, v., p. 236—242; F. Seidel, *Der Mechtithar aus Her, ärztliches Werk über drei Arten der Fieber*, Leipzig 1908, p. 215; E. Wiedemann, *Beiträge*, xxvi.: *Über Charlatane bei den Muslimen nach al-Gaubari (Enthüllung der Geheimnisse der Augenärzte)*, *S.B.P.M.S. Erg.*, 1911, xliii., p. 210; do., *Beiträge*, xl.: *Über Verfälschungen von Drogen*, etc., *S.B.P.M.S. Erg.*, 1914, xl., p. 176 and 186; *Das Steinbuch des Aristoteles*, ed. and transl. by J. Ruska, Heidelberg 1912, p. 119, 175. — References to *al-kuhl* are found in the different cosmographies e.g. that of al-Ḳazwīnī, the works on pharmacology, e.g. those of Ibn al-Baitār and al-Muwaffaq, in the books on ophthalmics, etc.

(E. WIEDEMANN)

ḲULU ḤIṢĀR, a town in Asia Minor, in the province of Siwās in the sandjaḳ of Kara Ḥiṣār *Sharḳī*, the capital of a ḳazā on the right bank of the Gilgit, on a rocky hill, height 3,900 feet; inhabitants 1,809, of whom 905 are Muslims, 604 Greeks and 300 Armenians. The capital of the ḳazā has been moved to the village of *Mishāz*. Near it is *Köse-dāgh*, a mountain covered with vast forests.

(CL. HUART)

KŪKA, capital of Bornū, situated in 12° 55' N. Lat. and 13° 30' East Long. (Greenwich). The town was founded in 1814 by the *Shaikh* Muḥammad al-Kanomī, 9 miles east of Lake Chad in a sandy plain dotted with *baobab*'s (*adansonia digitata*) called *kūka* in Kanūri, whence the name Kaoukawa or Kikoa, "town of the kūka's", given it by the natives. It was visited by Denham and Clapperton (1822—1823). Sacked in 1846 by the Wadians, it was rebuilt almost immediately. It had already recovered its prosperity by the time of Barth and Vogel's journey. Kohlfs (1868), Nachtigal (1871) and Monteil (1892) also made stays of some duration there. During all this period, Kūka was one of the most flourishing towns in the Sūdān. It was again destroyed in 1894 by Rabah, who transferred the capital of Bornū to Dikoa.

Kūka really consisted of two towns: an eastern and a western. The latter contained nearly two thirds of the population and was inhabited by Arab traders. It was traversed for its full length by a broad avenue called Dendal which ended in the market place which lay between the two towns. The most common type of dwelling was an enclosure divided into several courts in which stood huts of earth covered with straw or cubical earthen buildings. The eastern town was the residence of the Sultān and the chief officials. The population was estimated by the travellers mentioned above at 50,000—60,000. An almost equal number were encamped in the immediate vicinity.

Kūka in those days was a very important commercial centre where the products of the Sūdān (cloth-stuffs, hides, salt, natron, ostrich-feathers, kola nuts) were exchanged for European products brought from Tripolitania. There was also a considerable trade in camels, horses and slaves. Unlike the custom in the other markets of the Sūdān, coined money was rather plentiful here and business was done with a standard coinage (Maria Theresa dollars). The principal merchants were Arabs, agents of houses in Tripoli and Murzuq. Kūka in conclusion, had a reputation as a literary centre; although education was confined to reading and writing and the knowledge of a few sūras of the Qurʾān, there were not less than 2,000—3,000 students.

Since the destruction of Rabāh's empire and the occupation of Bornū by the English, the town of Kūka has been rebuilt but has not regained its former prosperity, chiefly in consequence of the moving of the capital of the British and the native administration to Maiduguri, a healthier site.

KŪLA, a town in Asia Minor in the province of Aidin in the sandjak of Sarūkhān, 130 miles east of Maghnīsā (Magnesia), capital of a kaḏā; it is 2,200 feet above sea-level, has 6,100 inhabitants, of whom 5,655 are Muslims and 345 Greek Orthodox; it has 38 schools, four of which are secondary, 30 mosques, 2 Orthodox Churches, 3 baths and 2 caravanserais. It manufactures Smyrna carpets. The town is built of black lava except the mosques, the walls of which are white; it lies at the head of a valley running southwards out of the volcano of ʔara-Ṣu. Its citadel is in ruins and it retains numerous marble remains from antiquity.

AL-KŪLAʿĪ. [See AL-GOLĒA.]

KULAIB B. RABĪʿA, a chief of the Banū Taghlib of the pre-Muḥammadan period, whose murder by his brother-in-law Djassās b. Murra al-Shaibānī was the cause of a long and bloody war between the two sister-tribes Taghlib and Bakr [q.v.] which was known as "the war of Basūs" [q.v.]. His genealogy was: Kulaib b. Rabīʿa b. al-Ḥārith b. Murra b. Zuhair b. Djusham (Wüstenfeld, *Geneal. Tabellen*, c. 22). Kulaib's real name is said to have been Wāʾil and the name of Kulaib ("little dog") to have given to him because of his habit of taking a small dog with him and making it bark by beating it in all the places which he wished to reserve as his own private property; the people who heard the barking of the dog refrained from using the place. This story, the point of which, however, eludes us, is evidently a later invention: the name Kulaib is frequently met with in Arab nomenclature and does not look like a surname.

Kulaib is represented as having all the characteristic traits of the tyrant, of which the independent and critical spirit of the Beduins has always had a profound horror; he is said to have been proclaimed "king" (on the use of this title cf. Lammens, *Le Berceau de l'Islam*, Rome 1914, p. 210) after the brilliant victory won at Khazazā over the united Yemenī tribes and to have ruled not only over the Banū Taghlib but also over the Banū Shaibān, the most important section of the Banū Bakr. After a short time he is said to have abused his power and to have usurped the rights of hunting and of pasturage at the expense of his subjects (the usurpation of the *ḥimā* is the regular grievance of the Beduins against "tyrants"; the same reproach was made against the caliph ʿUthmān). Indeed it was because the she-camel Sarāb, belonging to a Tamīmī woman al-Basūs or to one of her clients of the tribe of Banū Djarm, trespassed upon the private property of Kulaib, that the latter put her to death (or killed its young one and injured the mother) and this act of violence was the cause of his murder by Djassās, whose mother was the sister of al-Basūs.

The details of the story are given in our sources with some variations, most of which are found as early as the work of Abū ʿUbaida who is, as is well known, the source of almost all our information on the *aiyām al-ʿArab* (q.v., i. 230). Certain features, especially in the *K. al-Aghānī*, have been borrowed from Ibn al-Kalbī, and the account of al-Mufaḏḏal al-Dabbī has also been preserved. It is evident that we are no longer able to ascertain if the history of Kulaib (and in general that of the war against the Banū Taghlib and the Banū Bakr) contains a nucleus of historical truth along with a mass of features undoubtedly legendary. This is a problem which can only be solved in connection with the general question of the historical value of the whole of the traditions of the pre-Islāmic period. Considered by itself the episode of Kulaib has nothing improbable about it. We might be tempted to recognise in it a fairly clear memory of an attempt to form a political organisation among the Banū Taghlib and the Banū Bakr of a kind superior to the ordinary Beduin tribes; the attempt, similar to that which gave the royal crown to the chiefs of the tribe of the Banū Kinda, must have been suggested by the example of the kingdom of the Lakhmids of al-Ḥira, not far from which the Banū Taghlib and the Banū Bakr have their homes. The story of the tyranny and the death of Kulaib must have taken form at a very remote period; this is evident from the verses of ʿAbbās b. Mirdās and of al-Nābigha al-Djaʿdī (both contemporary with the beginning of Islām) given in our sources; in that of al-Nābigha in particular, the history of the killing of the camel is already told in detail. An allusion to the power of Kulaib is found as early as the *muʿallaqa* of the Taghlibī ʿAmr b. Kulthūm (v. 65). We have, moreover, contemporary documentary evidence of the accounts relating to the fate of Kulaib in the numerous allusions contained in the elegies on his death, which were attributed to his brother Muḥalhil (one of the earliest Arab poets; cf. Ibn ʔutaiba, *Shiʿr*, ed. De Goeje, p. 164—166; Muḥ. Ibn Sallām, *Ṭabaqāt al-Shuʿarāʾ*, ed. Hell, 13 lines 11—16 etc.), but naturally their authenticity is more than doubtful.

The story of the murder of Kulaib is developed in a quite arbitrary fashion in the romance cycle of the Banū Hilāl (cf. Mittochw, *Proelia Arabum Paganorum*, Berlin 1899, p. 11).

(G. LEVI DELLA VIDA)

KULBARGA. [See GULBARGA.]

ҶULDJA, a town in the upper Ili [q. v.] valley. A Muḥammadan kingdom is first mentioned in this region in the viith (xiiith) century: its founder, who is said to have previously been a brigand and horse-thief, is called Ōzār in *Djuwainī* (*G. M. S.*, xvi., p. 57) and Būzār in *Djamāl Ḳurashī* (in Barthold, *Turkestan*, i. 135 sq.). According to the latter, he assumed the title of Toghrul Khān as ruler. The capital of the kingdom was Almalgh, first mentioned in this connection and later a great and wealthy commercial city. We owe our information about its site mainly to the Chinese (in Bretschneider, *Med. Researches*, Index); it lay south of Lake Sairam and the Talki pass, north of the Ili, probably northwest of the modern Ҷuldja.

Like the other rulers of these regions, the king of Almalgh had dealings with Čingiz Khān. He was surprised and killed while hunting by Küčlük, the governor of the kingdom of the Kara Khitai [q. v.]; but Küčlük could not take the town of Almalgh. Ōzār's son and successor Suḳnāk (or Sughnāk)-Tegin married a granddaughter of Čingiz Khān (a daughter of Djuči). On his death (651 = 1253/1254, cf. *Djuwainī*, p. 58; 648 = 1250/1251 in *Djamāl Ḳurashī*) he was succeeded by his son whose name (Danishmand-Tegin) like the names of the other rulers of this line are given only by *Djamāl Ḳurashī* (Barthold, *Turkestan*, i. 140 sq.). Almalgh in his time (beginning of the viiith = xivth century) was still ruled by this dynasty. How long this line continued to reign is not known. The silver and copper coins struck at Almalgh in the viiith (xiiith) century apparently belonged to them.

As a great commercial city on the main route through Central Asia to China, Almalgh is frequently mentioned by European travellers and missionaries.

Like the towns on the Čū [q. v.], the Talas and elsewhere, Almalgh was completely ruined by the constant civil wars and other fighting in the viiith (xixth) century (cf. Bābur, ed. Beveridge, p. 1; Mirzā Muḥammad Ḥaidar, *Ta'rikh-i Rashidi*, transl. E. D. Ross, p. 364). Muḥammad Ḥaidar mentions the ruins of the town with the tomb of Tughluḳ Timūr Khān (d. 764 = 1362/1363; cf. *DUGHĀT*); these ruins lie between the Khorgos, the boundary river between Russia and China and the village of Mazār and have been fully described by N. Pantusov (*Kaufmansky Sbornik*, Moscow 1910, p. 161 sq.). Inscriptions from graves of Nestorian Christians have also been found there.

The town now called by the natives Ҷuldja or

Ghuldja (Radloff, *Aus Sibirien*, ii. 336 gives the meaning "Elk"; cf. also Ҷuldja Bāshī, name of a mountain between the Čū and the Ili, Masalskiy, *Turkest. Krai*, p. 42) was founded in 1762, after the conquest of the Kalmück empire by the Chinese, under the name Ning-yüan-cōng; whether, as Radloff (*Aus Sibirien*, ii. 321) says, a town of Ҷuldja had already been in existence for a considerable time, is doubtful. Somewhat later than this "Tatar" Ҷuldja, in 1764, the town of Hoi-yüan-cōng was founded, also called "Chinese Ҷuldja", "New Ҷuldja" or "Great Ҷuldja", the headquarters of the Chinese commander-in-chief (*dsandsün*). The Chinese government transferred 6,000 families from Kashgharia into this region which had been almost completely desolated in the war with the Kalmücks; these immigrants came to be called "Taranči" (agriculturists). In 1851 a treaty of commerce was concluded in Ҷuldja between Russia and China, whereby Ҷuldja was opened to Russian trade. In 1862 Radloff visited both Old and New Ҷuldja and gave a very full description of them in his *Aus Sibirien*, ii. 305 sqq., 336 sqq.; the population of Old Ҷuldja is then said to have been "at least 80,000" but this must be exaggerated.

This prosperity was almost completely destroyed by the Muḥammadan rebellion of 1863—1866. New Ҷuldja was taken after hard fighting in 1865 and completely destroyed; so far as we know, this town is still in ruins. After some fighting among the insurgents, the rule ultimately passed to a Sultān of the Taranči; he is usually called Sultān A'lā Khān or Abu 'l-A'lā (in Russian accounts frequently corrupted to "Abil-Oglya"). In 1871 the sultānate was occupied by the Russians and the Sultān deported to Wyerny where he received a pension of 5,000 roubles a year till his death. Ҷuldja was administered by Russia for ten years and was only restored to China by the St. Petersburg treaty of 1881. The population of Ҷuldja (i. e. the older town "Old Ҷuldja") in 1872 was only 7,693 of whom 4,098 were Muslims. The Chinese removed the administrative offices to Suidun (about 25 miles N.W. of Ҷuldja), but Ҷuldja still remains the most important town in the Ili territory; it also contained a Russian consulate. At the beginning of the xxth century Ҷuldja is said to have had about 30,000 inhabitants (N. Bogoyavlenskiy, *Zapadnny zastiennyy Kitai*, St. Petersburg 1906, p. 108 sq.).

Bibliography: On the site of Almalgh see particularly Bretschneider, *Mediaeval Researches*, i. 69 sq.; ii. 33 sqq. A collection of references from Christian sources has been made by I. Hallberg, *L'Extrême Orient*, etc., Göteborg 1906, p. 17 sq. (*Almalech*). On the Christian epitaphs see especially P. Kokowtzw in *Zap.*, xvi. 0190 sqq. On the rising of 1860—1862, W. Radloff, *Aus Sibirien*, ii. 394 sqq.; Dyakow in *Zap.*, xviii. 233 sqq.; *ibid.* (p. 236) for the bibliography (compiled by L. Kotvič). On the period of Russian rule see N. Pantusov, *Svideniya o Kul'džinskoy rayone za 1871—1877 godŭ*, Kazan 1881; Kostenko, *Turkestanskiy Krai*, St. Petersburg 1880, i. 427 sqq. On conditions after the restoration of Chinese rule see D. Fedorow, *Opŭt voenno-statisticheskogo opisanija Iliyskoy kraia*, Tashkent 1903; Rec. by W. Barthold, *Zap.*, xv. 0131 sqq.; S. N. Veletzkiy in *Izv. Russk. Geogr. Obšč.*, 1915, li. 149 sqq. (W. BARTHOLD)

KUL-OGHLI in Turkish "son of a slave". The Janissaries being the slaves (*kul*) of the Sultān, the children whom they had by native women, especially in the Barbary States, were given this name. They occupied a special position among the population. While slaves born of the Christian women-slaves were regarded as Turks, and enjoyed the same rights as their fathers (service in the ranks of the Janissaries, and admittance to all the offices of state), those who were born of alliances between Janissaries and women of the country (Moors) were classed with the relatives of their mothers. They could not be enrolled in the Janissaries and could only claim admission to a limited number of offices. They became mixed with the native population, but being related to the Turks they had not to suffer the same vexations as other classes of society. They were in general fine men with white skins and well marked muscular development; they were of a sluggish temperament and a peaceful character.

(CL. HUART)

KULTHŪM B. 'IYĀP AL-KUSHAIRĪ of the tribe of Kaïs was chosen by the Caliph Hishām to avenge the disastrous defeat inflicted by the Šūfī Berbers on the Arabs on the "Day of the Nobles" (*Ghazawāt al-Ashraf*) in the beginning of 123 A. H. He set out at the head of 30,000 men, to whom were added the garrisons of al-Ifrikiya and the Maghrib, and joined Ḥabīb b. Abū 'Ubaida who was trying to stop the advance of the Khāridjis near Tlemcen. The tactless attitude of the Syrians and particularly the arrogance of Baldj, nephew of Kulthūm and his successor-designate, dissatisfied those they had come to assist. The Berber leader Khālīd b. Ḥamīd (or Ḥumaid) retired before the Arabs to Wādī Sebū in the centre of the Maghrib, and a battle was fought at Nabdūra (var. Nafdūra, Baqdūra). The wise advice of Ḥabīb was not heeded. The Arab cavalry concealed by Baldj succeeded after great efforts in piercing the Berber lines but the latter reformed behind them and overwhelmed the Caliph's troops. Ḥabīb and the other leaders were killed. Kulthūm fought with the greatest bravery reciting verses of the Qur'ān to encourage the others, but finally he fell. One third of the army was killed and a third taken prisoners (Dhū 'l-Ḥijjdja 123 = Oct.—Nov. 741). Baldj's cavalry's only hope was to take refuge in Ceuta, whence after much suffering they were able to cross to Spain.

(RENÉ BASSET)

AL-KULZUM, a seaport on the Red Sea (Arab. *Baḥr al-Kulzum*, [q. v.], *Baḥr al-Hind*

or *Baḥr al-Habasha*). The name is a corruption of the Greek Κλύσμα (as in Arabic almost always without the article, i. e. τὸ κλείσμα, the "sluice" at the mouth of the canal, which led from the Nile to the Red Sea). This canal begun by Pharaoh Necho finished by Darius of Persia, was later restored by Ptolemy II Philadelphos and by Trajan. After the latter it was called under the Roman Empire and even down to the eighth century occasionally δ Τραιανοῦ ποταμός or ὕδατα τοῦ Τραιανοῦ (Ptol., iv. 5, 24, ed. Müller, p. 713; Bell, *The Aphrodito Papyri*, No. 1346 10 and 1465) or *Augustus amnis*, and from it in 341 A.D. we find the Eastern Delta called ἡ Αὔγουσταμινική ἐπαρχία (Mommson, *Röm. Gesch.*, v., p. 615; on the date: Eduard Schwartz, *N. G. G. W.*, 1904, p. 354 sq.). In the Muslim period, when the making of the canal was wrongly ascribed to Hadrian, labour was repeatedly spent on it (J. Maspero and G. Wiet, *Matériaux*, i., p. 84, under Khālīdj al-Kāhira). 'Umar b. al-Khaṭṭāb in 23 (643/644) for example had it repaired to facilitate the transport of corn for Mecca from Fustāt to the Red Sea (Yāqūt, *Mu'djam*, ed. Wüstenfeld, ii., p. 466; John of Nikiu, ed. Zotenberg, p. 577); it was called after him *Khālīdj Amir al-Mu'minin* (al-Muḡaddasi, ed. de Goeje, p. 198; Yāqūt, *op. cit.*, p. 465; Ibn Duḡmāk, ed. Vollers, iv., p. 120). According to Abū Ṣāliḥ (in Evetts, *Churches and Monasteries*, p. 88) its mouth was at al-Kulzum, according to Mas'ūdī (*Murūdj al-Dhahab*, iv., p. 97) and others (more accurately) at *Dhumb al-Timsāḥ*, 1 *mil* from the town, where the Meccan pilgrims from Egypt crossed the canal by a large bridge. The Caliph al-Manṣūr in 775 had it partly filled in, fearing an attack from his uncle Muḥammad b. 'Abdallāh, who had rebelled against him in Medīna, so that in Abū Ṣāliḥ's time it ended at al-Sadīr at the entrance to the Wādī Tūmilāt. New but fruitless attempts to make it navigable again were made by the Caliph al-Rashīd (Mas'ūdī, *op. cit.*, p. 98 sq.). He is however said to have abandoned the attempt out of fear of the Greeks. Henceforth the bulk of its water flowed into the Birkat al-Djubb (al-Idrīsī, p. 164) till it was completely filled in in 1899 for sanitary reasons.

The town of al-Kulzum owed its importance mainly to this canal; for according to the descriptions of the Arab geographers, it was a desolate and miserable site without water and vegetation; neither trees nor fruits could flourish there. In antiquity and in the early Muslim period its only importance was as a point of departure for shipping on the Red Sea, the commonest name among the Arabs for which was derived from it. The cornships of al-Fustāt after they had passed the canal sailed from here to al-Djār and Djidda. Of the Jewish merchants called al-Rādhāniya, Ibn Khurdādhbih (ed. de Goeje, p. 153) says that they came from the lands of the Franks to al-Faramā; thence they carried their wares 35 farsakh on camels to al-Kulzum, where they were loaded on ships which took their course to India and China. According to the same geographer, al-Kulzum with al-Ṭūr and Aila formed a district of Egypt (*op. cit.*, p. 81).

The country round al-Kulzum was inhabited at an early date by Arabs. They are already mentioned in the *Acta* of the hermit Sisoēs (Coptic: *apa Djidjōi*) and John Kolobos who lived there. In the *History* of the latter, Kulzūm (sic)

appears for the first time in the Arabic Synaxarium as the name of the ancient Klysmā.

When under the last 'Abbāsīd governor in Egypt, 'Anbasā b. Ishāk, the Budjā rebelled in Nubia, invaded al-Ṣa'īd and laid waste many towns, al-Mutawakkil sent against them an army under Muḥammad b. 'Abdallāh al-Ḳummī which went from Ḳūs straight through the desert to the emerald mines, while seven ships with stores sailed from al-Ḳulzum to Ṣānga near 'Aidhāb and provided the victorious army from there with the necessary supplies.

In the autumn of 971 the Ḳarmāṭian leader Hasan b. Aḥmad on his campaign against the Fāṭimid Djawhar took the towns of al-Ḳulzum, al-Faramā, and Tinnis; after his defeat before Cairo (Dec. 24, 971) he retired under cover of night via al-Ḳulzum to Arabia.

Reynald de Châtillon (in Maḳrīzī, Arnāt) at the beginning of his naval expedition against the holy cities in the winter of 1182/1183 sent two ships from 'Aden, which were to watch the citadel of al-Ḳulzum and prevent the garrison from procuring water (Maḳrīzī, *Sulūk*, transl. Blochet in *R.O.L.*, 1900/1901, viii., p. 550 sqq.; Ibn al-Aṭhīr on the year 578 in *Recueil des hist. or. des crois.*, i. 658). But soon afterwards the Ḥādīb Ḥusām al-Dīn Lu'lu' built a fleet by order of Ṣalāh al-Dīn's brother, al-Malik al-'Adil, in al-Ḳulzum which sailed for 'Aidhāb and put a sudden end to the desperate enterprise (G. Schlumberger, *Renaud de Châtillon*, 1898, p. 259—279; Moritz, *Arabien*, Hanover 1923, p. 119 sq.). When al-Dimashḳī (ed. Mehren, p. 213) includes al-Ḳulzum among the lands under al-Karak (cf. R. Hartmann in *Isl.*, 1911, ii., p. 141), this is perhaps a memory of these events of a century before.

In the time of Idrīsī, Yāḳūt and Dimashḳī, al-Ḳulzum was already a deserted town. Maḳrīzī found among old documents in the palace of Cairo accounts of the expenditure on the civil and military administration of the town and district and concluded from them that it must once have been most flourishing. According to Idrīsī the Beduins had occupied and plundered it. The only water-supply he knew of in the vicinity was the well at al-Suwais, which yielded only a scanty supply of brackish water. Al-Muḳaddasī (tenth century) already mentions al-Suwais (i. e. Suez), which gradually took the place of al-Ḳulzum, a mile from it (cf. Maspero-Wiet, *op. cit.*, p. 107 sq.).

The view occasionally expressed in later Arab geographers and astronomers (Nāṣir al-Dīn al-Ṭūsī, Ulūgh-Bey) that al-Ḳulzum once consisted of two towns, which goes back to a statement of al-Idrīsī taken from Ibn al-Wardī (Gildemeister in *Z.D.P.V.*, viii., p. 119 note) and the hypothesis, based on it, of two towns of al-Ḳulzum in different places, were already shown to be untenable by Quatremère; but it has recently been repeated of the ancient Klysmā, as Naville found an inscription near Heroonpolis (or Hero, in Tall al-Mashḳūṭa) according to which the distance was *ab Ero in Klysmā M[ilia] viii.* (Naville, *The Store-City of Pithon and the Route of the Exodus*, London 1885), while it is elsewhere correctly put at 68 Roman miles (Müller on Ptolemy, *Geogr.*, i. 2, p. 685 sq.). In this connection, Dillmann has rightly pointed out that it is very doubtful whether the milestone has not been moved from its original position, as all other references leave not the slightest doubt as to the location of Klysmā.

The name al-Ḳulzum still survives for the mound of ruins, Kōm al-Ḳulzum north of Suez; perhaps also in the name of the well of Ḳizmil (for Ḳilzim?) near Suez (Littmann in *Z.D.M.G.*, lxx., p. 511; suppl. to p. 14, note 2; Moritz art. KLYSMA in Pauly-Wissowa, *Realencykl.*, xi., p. 881).

AL-ḲŪMA, al-Ḳūma and al-Ḳawma, one of the seven kinds of poetry created by the moderns. Invented by the people of Baghdād under the 'Abbāsids, it was at first used as a call to announce during Ramaḍān the last moment of the night, at which it is still permitted to eat or drink. The singers said to their colleagues at the end of each night: *ḳūmā li-nusakhhir ḳūmā* 'arise! to take thy meal before the dawn of day, arise!' Later, verses were made in this style for vendors of flowers, wine, etc. It does not seem to be true that Abū Nuḳṭa invented the *ḳūmā*. It is more probable that the form was already in existence before the reign of the Caliph al-Nāṣir.

According to the prosodists, this kind of poem which is always in the vernacular, should have as metre in each hemistich *mustaf'ilun fa'ilān*; but, according to the specimen given by al-Ibshīhi (*al-Mustatraf*, Būlak 1292, ii. 275), al-ḳūmā is a poem composed of strophes of two verses rhyming in the first, second and fourth hemistich; the metre is *mustaf'ilun fa'ilān* or *fa'ilān* or *fa'lān* and rarely *fa'ilātūn*. *Mustaf'ilun* may be *mutaf'ilun* = *maf'ā'ilun* and rarely *mustaf'ilun* = *mufta'ilun*.

Bibliography: see the article KĀN WA-KĀN. (MOH. BEN CHENEH)

KUMAIT B. ZAID, an Arab poet of the tribe of Asad, born in Kūfa about 60 and died in 126. Of his compositions, the most famous next to the *Mudhahhaba* (see below) are the *Hāshimiyāt* so called because they sing the praises of the Banū Hāshim, the family of the Prophet. But not the whole of the Banū Hāshim are considered worthy of the honour and praise of the poet; besides Muḥammad we find only 'Alī and his descendants. Verses i. 79 and ii. 105 *sq.* in which 'Abbās and his sons are commemorated were perhaps only added in the 'Abbāsīd period. The *Hāshimiyāt* consist of four long and two short *qaṣidas*; a fragment, the larger part of which is a typical *qaṣida* opening and four quite short songs, three of which have only two verses each. These poems are not all of the same period; the oldest seems to be II which should be dated about 96—99 A.H.; III is not much later; I cannot be earlier than 105, IV than 118, IX—XI are composed not earlier than 122, and VI is perhaps as late as 125/126. In his *qaṣidas* Kumait follows the model of the old poets. Although as a townsman, he is remote from the life of the desert, he describes the camel which carries him to the person celebrated, the wild bull and the *ḥafā* bird, and he devotes many panegyrics to the 'Alids in the traditional style for Beduin *saiyids*. He borrowed much from the Qur'ān as well as from the old poets, and a Kufan philologist of the second century A.H., Ibn Kunāsa, composed a *Kitāb Sarikāt al-Kumait min al-Kur'ān* (see *Fihrist*, p. 70). The *Hāshimiyāt*, the poetical value of which was not highly esteemed by Arab critics, were much thought of in Shī'a circles; for modern scholarship, their importance lies mainly in the fact that they reflect ideas current in the moderate wing of the Shī'a at the end of the first and beginning of the second century A.H. While Kumait regards the first caliphs as usurpers (vi. 10), he declines to curse them, like the fanatical Shī'is; if they did wrong in withholding Fadak from the daughter of the Prophet, they will be forgiven on the day of judgment. 'Alī is the waṣī of the Prophet, who handed over to him the wilāya at the pool of al-Khumḥ (vi. 6; the verse seems to be oldest evidence of this Shī'a belief); guidance is to the 'Alids alone and they will again consolidate the foundations of Islām. The poet however cannot summon himself to assist by deed the 'Alids, whose praises he sings so enthusiastically, and in X and XI he reproaches himself for not obeying the call of Zaid. But he is not afraid to make fierce attacks on the reigning dynasty; he reproaches the Umayyads with having no right to the leadership of the community and with abusing their position for their own ends. When however these attacks came to the ears of the Caliph Hishām — a longish poem directed against the 'Abd Shams is also preserved in *Ḍjamhara*, p. 187 *sqq.* — Kumait tried to atone for his indiscretion by panegyrics on the Umayyads. Such opportunism is not uncommon among poets and Kumait himself calls his conduct *taḳiya* (iv. 86; the expression according to Goldziher, *Z. D. M. G.*, lx. 219, is here used for the first time in the Shī'i sense) and such forced tributes to the Umayyads do not affect his real feelings for the Banū Hāshim. — The *Mudhahhaba*, Kumait's poem directed against the Yemen tribes is notable for its length — the expression "longer than a poem

by Kumait" became later proverbial. It is said to have had 300 verses, of which about a third survive from different parts of the poem. There is no trace of a hostile attitude to the Yemenis in the *Hāshimiyāt*, although the poet lays stress on the fact that the Prophet like himself belonged to the Khindif group. Between 97 and 101 Kumait had even composed a panegyric on the Muhallabis, the champions of South Arabian influence and the revulsion only came later, probably not till 118 after the composition of the fourth poem of the *Hāshimiyāt*. Kumait is said to have been induced to attack the South Arabians by a lampoon by a Kalbi poet on the 'Alids and it is said to have been Khālid b. 'Abdallāh al-Ḳaṣri, governor of al-'Irāk, who was dependent on the support of the South Arabian tribes, who brought Kumait's anti-Umayyad verses to the Caliph's notice, to have him rendered innocuous. It is certain at any rate that Kumait continued to lampoon Khālid even after his death; he brought his own destruction on himself by this. Yemeni troops, who heard him reciting his lampoons on Khālid, wounded him so seriously that he died in consequence.

KUMĀN. [See KIPÇAK.]

KUMBARADJĪ. [KHUMBARADJĪ.]

KUMİS, a Turkish word meaning "a drink of soured mare's milk", which has passed in this form into Russian and western European languages; it is explained in Radloff's *Versuch eines Wörterbuches der Türk-Dialecte*, vol. ii., St. Petersburg 1899, p. 853 under *kümis*. The word is found as early as the *Kudatku-bilik* where it is mentioned in the first place among the products of cattle-breeding (kumıs, milk, hair, fat, curds and cheese [W. Radloff, *Das Kudatku-Bilik*, Pl. ii., St. Petersburg 1910, p. 379]). Wherever the Turkish horsemen went they carried *kumıs* with them. According to Kutubi, *Uyūn al-Tawārikh* (cf. Brockelmann, *G. A. L.*, ii. 48), MS. in Constantinople, Köprülü 1121, f. 69a, Baibars I just before his death 676 (1277) drank *kumıs* (*al-kumiz*) for several days in the "variegated castle" (*al-Ḳaṣr al-Ablak*) in Damascus. In the court ceremonial of Özbeg princes in the xii. (xviith) century, fully described by Maḥmūd b. Walī, *Baḥr al-Asrār fī Manākibi 'l-Akhyār* (*Grundriss d. iran. Phil.*, ii., 362, Ind. Off., No. 575, Text publ. by W. Barthold in *Zap. Geogr. Obšč. po otdel. etnografii*, vol. xxxiv., 1909, p. 295 *sqq.*) "the drinking of *kumıs*" (*āshāmīdan-i kumiz*) is treated as an important affair; it is described minutely, how the *kumıs* has to be poured from skins (*ṣaba*) into cups (*ayağh*), how the cups are to be taken, who is to take the first, who the other cups etc. In every place where the nomadic people have passed to a settled life, the customs associated with the taking of *kumıs* have gradually fallen into disuse. (W. BARTHOLD)

KŪMIYA. In the Middle Ages, one of the most important tribes of the Maghrib; they were at one time called *Ṣaṭfūra* and were descended through *Fātin* from *Mādghis al-Abtar*. Tradition says that the brothers of *Kūmiya*, the eponymous ancestor of the tribe, were *Lemāya* and *Maṭghara* from whom were descended numerous families, some of whom still exist at the present day. The most important representatives of the *Kūmiya*, who live in the N.W. of Algeria between *Tlemcen* and *Areshkūl* (*Rashgun*) are the B. 'Ābid, from whom was descended the first Caliph of the *Almohad* dynasty, 'Abd al-Mu'min [q. v.], born at *Tadjera* between *Honain* and *Nedroma*; the *Nedroma* who gave their name to an important town; the *Ṣaghāra*, now represented by the *Mātila*; the B. *Ilūl*, of whom a section the *Masifa* still exist. The *Kūmiya* showed themselves devoted to 'Abd al-Mu'min, who was one of them. They formed the second *djund* in the *Almohad* army; but they exhausted themselves in supplying the dynasty with soldiers for the wars in Spain and North Africa. Subjected to *kharaḍj* [q. v.] by the *Zenāta*, some of them joined another group, the *Ūlhāsa* and formed the powerful confederation of *Trāra* in the N. E. of Algeria.

Bibliography: R. Basset, *Nédromah et les Traras*, Paris 1901, and the writers there quoted. (RENÉ BASSET).

KUMM, a town in Persia in 'Irāk 'Adjamī near a stream, not however sufficient for local needs, which comes from *Djurbādhakan* (*Gulpaigān*). It was conquered by *Abū Mūsā al-Ash'ari* in 23 (644); it rebelled in the caliphate of al-Ma'mūn and refused to pay taxes, under the leadership of *Yahyā b. 'Imrān*. Against it the Caliph sent 'Alī b. *Hishām al-Marwazi* who demolished the wall surrounding it and levied a war indemnity of 7,000,000 dirhams. The treaty was broken in the caliphate of al-Mu'tazz (252—255 = 866—868) who sent a force against it, an army under *Mūsā b. Boghā*, governor of 'Irāk 'Adjamī; most of the inhabitants were massacred and the chief notables carried off as hostages.

In the time of al-Iṣṭakhrī it was walled. Its water supply came from wells and huge cisterns substantially built. Its inhabitants have always been fanatical *Shi'is* and it is one of the strongholds of the followers of 'Alī. It has many tombs of saints and pious men (444 according to *Aḥmad Rāzi*), including the mausoleum of *Fātima*, daughter of the seventh Imām *Mūsā al-Kāzim* and sister of the eighth Imām 'Alī al-Riḍā. The later *Ṣafawids* are buried there.

In the time of *Iṣṭakhrī* (*B. G. A.*, i. 230) one stage distant was a little town inhabited by *Mazdaeans* (*Karyat al-Mad'jus*). The family of the Persian poet *Nizāmī*, born at *Gandja*, originally came from *Tafriṣh*, near *Kumm*.

Bibliography: *Yākut, Mu'jam*, ed. *Wüstenfeld*, iv. 15, 175 = *Barbier de Meynard, Dict. de la Perse*, p. 456; *B. G. A.*, i. 201; ii. 252, 264; iii. 392 n. a, 395; *Balādhuri*, ed. de *Goeje*, p. 312, 314; *Ḥamd-Allāh Mustawfi*, ed. *Le Strange*, p. 67 = transl. p. 71; *Dimashki*, transl. *Mehren*, p. 249; *Ḥādjdji-Khalifa, Djihān-numā*, p. 305; *Le Strange, The Lands of the Eastern Caliphate*, p. 209. (CL. HUART)

KŪMŪKS, a Turkish people in the northern part of *Daghestān* (q.v., especially p. 888 sq.), where also information is given regarding the *Lezgian* people of the *Qāzi Kūmūk*

or *Ghāzi Ghumūk* and the political conditions under which one section of this people has become separated from its kinsmen and turkicised). The princes (*Shāmkhāls*) of the *Qāzi Kūmūk* in the tenth (xvth) century gradually extended their territory from their old capital in the mountain village of *Kumukh* in a north easterly direction to the coast; they spent the winter in the coast plains in the village of *Būināk* and the summer in *Kumukh*. Since 1049 (1639/1640) the *Shāmkhāls* have ruled only in the coast territory with their capital in *Būināk* or *Tārkhū* (*Tarkī*); they did not come back to *Kumukh*. The burial-place of the last *Shāmkhāls* was the village of *Tümengi-Kazanīsh* (Russ. *Kazanishchi*). At the present time the *Kūmūks* are the leading element in the republic of *Daghestān*, the capital of which is *Makhač-Kal'a* (Russ. *Petrowsk*). They number over 100,000. The dwellings of the *Kūmūks* stretch from *Sulāk* in the north to the river *Bashli-čai* (north of *Derbend*) in the south; they speak an archaic dialect, connected with *Komanic* and quite different from the language of their northern neighbours, the *Nogaians*, which became a literary language in the second half of the sixteenth century.

Bibliography: (in addition to the works quoted under *DAGHESTAN* see especially): B. Čobanzade, *Zamietki o yazykie i slovesnosti kumukov* (*Izv. vost. fak. Azerb. gos. Universiteta*, t. i., Baku 1926, p. 95 sq.); in it on p. 138 *Bibliography* down to 1926; cf. thereon A. Samoilovič in *Zap.*, xxi., 0152 sq. (W. BARTHOLO)

KUNDUZ, the name of a river, town and district in Northern *Afghānistān*. The district is bounded on the east by *Badakhshān*, on the west by *Tashkurghān*, on the north by the *Oxus*, and on the south by the *Hindū Kush*, and is inhabited chiefly by *Özbegs*, who overran it from the north in the sixteenth century. The river rises in the *Hindū Kush*, flows northward and is one of only two rivers in northern *Afghānistān* which reach the *Oxus*. The town is the trade centre of a considerable district which produces the best horses in *Afghānistān*.

Bibliography: *Zahīr al-Din Muḥammad Bābur, Bāburnāma*, ed. A. S. Beveridge, *G. M. S.*, i.; *Abu 'l-Faḍl, Akbarnāma*; *Khāfi Khān, Muntakhab al-Lubāb*. (T. W. HAIG)

KUNFUDA, a seaport on the Red Sea, 45 miles from *Ḥālī*. The town is in the form of a large rectangle enclosed by a wall, strengthened at several points by towers and pierced by three gates. Practically the only stone buildings are at the harbour, where is the bazaar with its one-storied warehouses in an irregular line, and the chief mosque and smaller mosques with low minarets. On a little island about a quarter of a mile away is a small castle which used to be the residence of the representative of the *Sharif* of *Mecca*. The town is now estimated to have a population of 10,000, but S. Langer in 1882 put it at only 2,000. The harbour, which is enclosed by a number of sandy islets and is only accessible to Arab vessels of medium size, has great disadvantages, notably that the boats cannot land there. Trade and commerce are moderate: *Kunfuda* exports the myrrh collected in *Asīr* and also hides and honey; the harbour used to be frequented by slave-dealers who brought their Abyssinian slaves for sale here, but England's sharp control has made slave smuggling practically impossible. Trade with the

interior is limited to the exchange of provisions and every day necessities and is confined to modest bounds. The much more important harbour of Ḥudaïda further south has long since attracted about all the trade. The poverty of the inhabitants is revealed by the primitive huts, built of poles and thatch with gable roofs, which are typical of the whole coast plain.

Kunfuda is perhaps a very old settlement, in any case it is a district of great interest to classical students, the land of the Debae. Pliny's "regio Canauna" has been identified by A. Sprenger and B. Moritz with the Ḳanawnā mentioned by al-Ḥamdānī but this town lies at the mouth of the Wādī of the same name. Gold, for which this region was celebrated in antiquity, is still found here; the Al Ḳhatāriṣh still get gold from the streams. Ḳunfuda however seems to have been the northern limit of this ancient gold area. The name appears to be comparatively modern. The Portuguese know it in the form Confutá. Niebuhr calls Ḳunfuda a large but badly built town. In his day it derived a certain importance from the trade in coffee, because all the ships carrying coffee from Yemen to Djidda had to pay toll here to the Sharif of Mecca, although the town was within the sphere of suzerainty of the Imām of Ṣan'ā'. The town of Ḳunfuda passed to the Sharif with the whole strip of coast from Djidda to Ḥalī which the Sharif of Mecca won about 1772 and even had a certain revival of prosperity when Muḥammad 'Alī conquered the Sharifs and made Ḳunfuda his base of operations for the campaign against Central Arabia and 'Asīr. It was only in 1870 that Turkey was able to revive Muḥammad 'Alī's plans and Ḳunfuda became the base of operations against the tribes of the hill country of 'Asīr, after the conquest of which in 1871, Ḳunfuda with its hinterland became a ḳazā of the *sandjak* of 'Asīr. The World War freed this area from Turkish rule, which was however never very strong here. Ḳunfuda was linked up to the outer world when Turkey instituted a telegraph line connecting it with Luhaiya and Ḥudaïda and Ṣan'ā' on the one side and with Djidda on the other.

(ADOLF GROHMANN)

KUNŪT, a religious technical term, with various meanings, regarding the fundamental signification of which there is no unanimity among the lexicographers. "Refraining from speaking", "the prayer during the *ṣalāt*", "humility and recognition that one's relation to Allāh is that of a creature to his creator", "standing" — these are the usual dictionary definitions which are also found in the commentaries on different verses of the Ḳur'ān where *ḳunūt* or derivatives from the root *ḳ-n-t* occur. There is hardly one of these for which the context provides a rigid definition of the meaning (cf. Sūra ii. 110, 239; iii. 15, 38; iv. 38; vi. 121; xxx. 25; xxxiii. 31, 35; xxxix. 12; lvi. 5, 12).

The Ḥadīth gives more definite contexts. "The best *ṣalāt* is a long *ḳunūt*" (e.g. Muslim, *Ṣalāt al-Musāfirin*, trad. 164, 165, *Bāb Afḍal al-Ṣalāt Ṭul al-Ḳunūt*; Tirmidhī, *Ṣalāt*, bāb 168). Here in the unanimous opinion of all the commentators (see Nawawī on the passage) *ḳunūt* means "standing". In the well known *ḥadīth*: "alike to the fighter on the path of Allāh is he who fasts, who stands, who *ḳānit bi-āyāt Allāh*" (Muslim, *Imāra*, trad. 110), *ḳānit* has obviously the meaning of "to recite standing" (cf. Abū Dā'ūd, *Ṣaḥr Ramaḍān*, bāb 9: "And he who recites 100 verses of the Ḳur'ān standing, is enrolled among the *ḳānitūn*"). *Ḳunūt*, however, usually seems to be connected in meaning with *du'ā'*, e.g. in the oft quoted tradition which tells how Muḥammad in the *ṣalāt al-ṣubḥ* appealed to Allāh for a month against the tribe of Ri' and Dhakwān, as they had slain the *ḳurrā'* at Bi'r Ma'ūna (*Witr*, bāb 7); in this case the meaning is certain from the explanation *yadū 'alā* (Bukhārī, *Witr*, bāb 7; *Djihād*, bāb 184). In the parallel tradition, Bukhārī, *Maḡhāzī*, bāb 28, trad. 3 there is added "and till then we were wont to perform the *ḳunūt*". Some sources (see Goldziher, *loc. cit.*, p. 323) add that this was in the month of Ramaḍān.

The rite also appears in parallel traditions in a more precise form; it is said that the *ḳunūt* took place in the *ṣalāt al-faḍīr* (Bukhārī, *Da'awāt*, bāb 59) after the *rukū'* (Bukhārī, *Witr*, bāb 7). It is still more precisely defined in a *ḥadīth* in al-Nasā'ī, *Taṭbīḳ*, bāb 32: "...that he heard how the Prophet when he raised his head after the first *rak'a* at the *ṣalāt al-ṣubḥ*, said: "O Allāh, curse this and that man (i.e. some of the *munāfiḳūn*); thereupon Allāh revealed: "It does not concern thee whether He turns to them with favour or punishes them" (Sūra, iii. 123). The following is another example of *ḳunūt*: "When the messenger of Allāh lifted his head after the second *rak'a* at the *ṣalāt al-ṣubḥ*, he said: "O Allāh, save Walid b. Abī Walid and Salima b. Hishām and 'Aiyāsh b. Abī Rabī'a and the weak ones in Mecca. O Allāh, tread heavily on Moḍar and send them years of famine, like the years of Joseph" (al-Nasā'ī, *Taṭbīḳ*, bāb 28). According to another tradition, which also goes back to Abū Huraira (Bukhārī, *Adhān*, bāb 126) the *ḳunūt* consisted of prayers and blessings for the Muslims and curses upon the unbelievers.

We are also told that the *ḳunūt* was regularly performed at the morning and evening *ṣalāt* (*ṣubḥ* and *maḡhrib*; Tirmidhī, *Ṣalāt*, bāb 177; al-Nasā'ī, *Taṭbīḳ*, bāb 30). Tirmidhī gives the following note on this tradition: "The learned differ in their views about the *ḳunūt* at the *ṣalāt al-faḍīr*. Some of the scholars of the *ṣaḥāba* and later generations

advocate this *kunūt*, such as Mālik and al-Shāfiʿī. Aḥmad (b. Ḥanbal) and Ishāk say: "There is no *kunūt* uttered at the *ṣalāt al-faḍīr* except in a calamity, which affects the Muslims as a body". In such a case the Imām has to pray for the Muslim armies. *Zuhr* and *ʿishā* are also mentioned as *ṣalāt*'s into which the *kunūt* was inserted (Bukhārī, *Adhān*, bāb 126; Nasāʾī, *Taṭbīk*, bāb 29).

There is further a difference of opinion as to where in the *ṣalāt*, the *kunūt* should be inserted. ʿĀsim is said to have asked Anas b. Mālik about the *kunūt*. Anas replied: "The *kunūt* took place..." I asked: "Before or after the *rukūʿ*?" He replied: "Before the *rukūʿ*". I said: "But I have been told on your authority: after the *rukūʿ*". Anas replied: "Then they lied. The apostle of Allāh only uttered the *kunūt* prayer after the *rukūʿ* for a month. I think, after he, etc. etc." (here follows the story of Biʾr Maʿūna, see above, Bukhārī, *Witr*, bāb 7). It is even said that the *kunūt* is a *bidʿa*. Abū Mālik al-Ashjaʿ records a tradition on the authority of his father, that the latter had performed the *ṣalāt* under the direction of Muḥammad, Abū Bakr, ʿUmar, ʿUthmān and ʿAlī and that none of these uttered the *kunūt* prayer. He adds "it is therefore also a *bidʿa*, my son" (al-Nasāʾī, *Taṭbīk*, bāb 33).

Nevertheless it continued to be known as the name of the prayer (*duʿāʾ*) at the *ṣalāt*. In the books of tradition a formula is given for the *kunūt al-witr* (it occurs often and in different forms, though it is not always called *kunūt* but is given names like *duʿāʾ* etc.): "O Allāh, lead me amongst those whom Thou guidest, and pardon me among those whom Thou pardonest, and care for me among those for whom Thou carest and bless me with what Thou distributest, and protect me from the evil that Thou has decided upon; for Thou decidest and none decides about Thee. Disgrace will never come upon him for whom Thou carest. Thou art blessed and exalted, O our Lord" (Tirmidhī, *Witr*, bāb 10). The same formula is found as an element in the *ṣalāt* in Nawawī, *Minhādī*, ed. van den Berg, i. 83, 455 sq.; Lane, *Lexicon*, s. v. *k-n-t*, who gives another.

(A. J. WENSINCK)

KUNYA (A.), properly meaning a metonymical appellation, is however also the technical term for the naming of a man (or also of a woman) after his eldest son, i.e. Abū, a name which is omitted from very few Arab personal names (cf. also LAḲAB) and in many cases is even the only one known to us. The origin of the custom lies in the value placed by Semitic peoples upon children, especially sons; which again points to the importance placed on the punctilious performance of funeral rites, a duty that was incumbent on the eldest son in particular. There is negative evidence of the connection between the kunya and funeral rites in the fact that slaves as a rule had no kunya and that they, when not adopted into the family, were buried without ceremonies.

In Arabic literature the kunya, if not absolutely a title of honour, is at least regularly thought more highly of than the simple name. According to the *Lisān*, s. v. the champion who challenged

to single combat between the hostile armies called himself by his kunya. When a warrior is appealed to for help by his clan, he is called by his kunya (Ḳais b. al-Khaṭīm, ed. Kowalski, Leipzig 1914, fragment, iv., l. 38). ʿĀʾisha said on one occasion to Muḥammad: "All thy wives have a kunya but I alone have none". Thereupon he replied: "Assume the kunya Umm ʿAbd Allāh!" (Aḥmad b. Ḥanbal, vi. 151). From this tradition we see — a fact otherwise unknown — that childless people could have a kunya. In other cases it did not express paternity but some other characteristic. Abū Huraira [q. v.] "he of the kitten" is said to have received this kunya from his kindness to cats. History does not record why the first Caliph was called "Father of the Camel-foal". The Abū of the kunya often indicates a physical peculiarity e. g. Abū Shāma "he with the birthmark". In other cases the kunya is given in malicious or good natured irony e. g. Abū Djaḥl [q. v.], Abū Lahab [q. v.]. Finally we may note the many geographical names in the form of a kunya e. g. Abū Simbel [q. v.], Abū Ḳubais [q. v.], Abū Habba [q. v.], Abū ʿArish [q. v.]. In the Oriental dictionaries of all kinds, the kunyas are usually classed together in one group. There are also dictionaries which deal exclusively with kunyas.

(A. J. WENSINCK)

KUR, Russian *Kura*, in the Arab geographers *Kurr*, the largest river in the Caucasus, over 600 miles in length, according to Ḥamd Allāh Ḳazwīnī (*Nuṣḥat al-Ḳulūb*, G. M. S., xxiii/i., p. 218) 200 farsakh. Iṣṭakhṛī (*B. G. A.*, i. 189) describes the Kur as navigable and full of fish; even at the present day very little would require to be done to make the river accessible to modern steamers from Mingčaur (a little below the mouth of the Alazan) to the Caspian Sea. The Araxes, regarded as a separate river in ancient times, always appears in Muslim sources as a tributary of the Kur. According to Ḥamd Allāh Ḳazwīnī (*op. cit.*), the Kur in those days in addition to its mouth in the Caspian Sea also sent a branch out which flowed into the Sea (*buḥaira*) of Shamkūr. This statement (only found here) must be due to a misunderstanding. In Ḥamd Allāh Ḳazwīnī there is no reference to any such sea. He only mentions the town of Shamkūr (Russ. *Shamkhor*), two farsakh from Gandja on the road to Tiflis (*op. cit.*, p. 181 sqq.), which in his day as now was in ruins. The navigation of the Kur has only once played a part in political history, at the destruction of the town of Bardhaʿa by the Russians in the year 332 (943/944). In addition to the references to this event given under the article BARDHAʿA see D. S. Margoliouth, *The Russian Seizure of Bardhaʿa in 943 A. D.* (*Bull. of the School of Oriental Studies*, 1918, p. 82 sqq.); A. Yakubovskiy, *Ibn Miskawayh o pokhode Rusov v Berdaa v 332 g. = 943/4 g.* (*Viz. Vremennik*, 1923–1926, vol. xxiv., p. 63 sqq.).

Bibliography: G. Le Strange, *The Lands of the Eastern Caliphate*, Cambridge 1905, p. 179; E. Weidenbaum, *Putevoditel' po Kavkazu*, Tiflis 1888, p. 41 sq. (W. BARTHOLD)

AL-KURA, the sphere. The Arabs studied the properties of the sphere, following Euclid, Archimedes and Theodosius. They also dealt with certain principles of spherical trigonometry, which form the foundations for astronomical theory, the principle of the transversal (*shakl al-kaffū*⁴), the principle of the four magnitudes (*al-shakl al-mughnī*) and the principle of the shadow, i. e. of the tangent (*al-shakl al-qillī*) following Menelaus and Ptolemy. (On the translations cf. M. Steinschneider in *Z. D. M. G.*, 1896, I., p. 161 sqq.; the mathematical principles are discussed by H. Bürger and K. Kohl, *Axel Björnbo Thābits Werk über den Transversalensatz in Abhandl. zur Gesch. der Naturwissenschaft und Medizin*, 1924, part 7, p. 1—91; references are given there to the earlier literature also).

2. *Al-Kura dhāt al-kursī* (the globe with the axe) is used in two senses:

a) The globe of the heavens (instead of *al-kura* we also find *al-baiḍa* in this sense, the egg, e. g. in *Mafāṭih al-Ulūm*, p. 235, in al-Battānī, *Opus Astronomicum*, ed. C. A. Nallino, 1913, i., p. 138; cf. E. Wiedemann, *Beitr.*, iii., *S.B.P.M.S.*, *Erlg.*, 1905, xxxvii., p. 239 sqq.). The constellations are painted on a globe. It is placed in a ring which stands on 3 or 4 legs. Such globes have been prepared and described perhaps as early as by Hipparchus, at any rate by Ptolemy. Ptolemy's description is given in the Arabic translations of the *Almagest* and in separate treatises. One such globe, erroneously ascribed to Ptolemy, was seen in Cairo in 435 (1043/1044) by Ibn al-Sandbadi (cf. Ibn al-Kifṭī, p. 440). — The globes were made of wood covered with paper or with different metals. Hollow globes could also be made of metal, which were then fastened to wooden spheres. 'Alam al-Dīn Kaṣīr al-Ta'āsīf used a gilt wooden globe (Abu 'l-Fidā', *Annales*, ed. Reiske, iv. 479, H. Suter, No. 358). The making of such globes and the errors that occur in them have been fully discussed by al-Bīrūnī (*Beiträge zur Gesch. der Mathematik*, etc. in *Abhandl. zur Gesch. der Naturwiss. und Medizin*, part 4, 1922, p. 79—93; cf. also H. Schnell, *ibid.*, in a later part).

The astronomical instrument prepared by al-Idrīsī for King Roger was apparently an armillary sphere.

b) *Al-Kura dhāt al-kursī* is also an arrangement by which one follows the movements of the heavens. The horizontal ring is directed to the horizon, it is notched at right angles in two opposite points, a meridian ring is placed in the notches and allowed to go to its lowest position in a groove. The globe itself turns round an axis which is placed in round holes at two opposite points on the meridian ring. Divisions are marked on the horizon and on the meridian ring. By turning the meridian ring in its grooves the axis of the globe can be inclined at will to the horizon and the instrument can thus be used for all latitudes. A quadrant with divisions which can be placed on the globe enables many kinds of measurements to be taken. With this globe, the magnitudes of importance in astronomy, *al-ḥālī*⁵, *al-maḥālī*⁶, the props of the earth etc., can be obtained.

The oldest Arabic work on the subject is by Ḳoṣṭā b. Lūḳā [q. v.] and exists in Arabic in several editions, e. g. that of al-Marrākushī; it may go back to classical originals, as is probable in view of the author's relations to the Greeks. It

was also translated into Latin, and into Spanish by Alfonso of Castile (*Libros del Saber*, vol. i.).

If the globe is left out and a series of other rings its added to the horizon and meridian rings, which correspond to circles in the heavens, we get the armillary sphere (*ālat dhāt al-halāk*), the instrument with the rings with which the ancients, the Arabs and notably Alfonso of Castile occupied themselves a great deal.

Bibliography: B. Dorn, *Drei astronomische Instrumente*, in *Mém. de l'Acad. impériale des Sciences de St. Petersburg*, series 7, vol. ix., No. 1, p. 31; L. Am. Sedillot, *Mém. sur les instruments astronomiques des Arabes*, in *Mémoires présentés par divers savants à l'Acad. R. des inscriptions*, etc., Paris 1844, series I, vol. i., p. 1—229; F. Nolte, *Über die Armillarsphäre*, *Abhandl. zur Gesch. der Naturwissenschaft*, etc., part 2, p. 1—50. Nolte also gives the earlier literature.

3. *Al-Kura al-muḥarriḳa*, the burning-glass (lit. the strongly burning globe). Even the ancients knew the property possessed by rock crystal and glass globes of concentrating sunlight falling upon them on one point and setting alight an inflammable material there. But we find no indications that any scholar of antiquity studied the theory of this phenomenon. Ibn al-Haiṭham and Kamāl al-Dīn al-Fārisī investigated this theory very brilliantly. Ibn al-Haiṭham starts from the values given in a table of Ptolemy's and collected by himself also, of the angle of incidence, angle of divergence and angle of refraction of a ray of light falling on a smooth surface of glass, and investigates the path of the rays when they strike the surface of the globe at different distances from the axis drawn between the sun and the centre of the ball. It is proved that after refraction they all meet on the opposite surface of the globe in a little section from which they emerge with their direction altered. They cut the axis at different distances from the ball: the majority however meet at a point distant less than half the radius of the ball, this is the burning point. If drawings are placed in the cone of rays formed by the rays coming from it, for example a red circular surface with a black ring upon it and looked at it through the front of the ball remarkable figures are seen; these were also studied very fully by Ibn al-Haiṭham and Kamāl al-Dīn; they were able even then to reach the same results as Schellbach at a later date.

Wiedemann, *Beitr.*, xix., *Über die Brechung des Lichtes in Kugeln nach Ibn al-Haiṭham und Kamāl al-Dīn al-Fārisī* in *S.B.P.M.S.*, *Erlg.*, 1910, xlii., p. 15—58; cf. also the references in the articles *KAWS*, *KUZAḤ* and *KAMĀL AL-DĪN AL-FĀRISĪ*. (E. WIEDEMANN)

KUR'Ā (A.), "lot, drawing lots" is regarded by the lexicographers as a synonym of *sukma*, just as most verbal stems of the root *k-r-ʿ* are equated to those from *s-h-m*. The reason for this is that lots were cast in pre-Muḥammadan times with arrows (*sahm*). Muḥammad, it is true, forbade drawing lots with arrows as a means of prophesying and as a game of chance (*Sūra* ii. 216; v. 92) but this prohibition is in turn much limited by two other passages in the *Qur'ān* in which drawing lots is described as at least permitted (*Sūra* iii.

39; xxxvii. 141). While in these passages the root *s-h-m* is used to describe the drawing of lots, in later times the root *k-r-ʿ* is generally used for the permitted forms of drawing lots; its primitive meaning seems to be "to beat, to strike" a synonym of *q-r-b*. (Even in the earliest period we find the combination *ḍarab aḥdāh* "to strike arrows").

In addition to these two passages, Bukhārī in the last *bāb* of the *Kitāb al-Shahādāt* quotes five other incidents in the life of the Prophet, from which it appears that in certain circumstances he regarded the drawing of lots as permitted. On all these occasions lots were drawn to decide between two or more parties who had an equal right to a thing, but could not come to an agreement, as to which the legal right or the disputed article should be allotted (Kāṣṭallānī, iv. 416, 5 sqq.). Although there is no compulsion to draw lots to secure a decision, the drawing of lots was very popular, because it appeared more fitted than the verdict of a perhaps biased judge to appease the disputants and to exclude any injustice (*Hidāya*, p. 814). Therefore, for example in the *Shāfiʿī* law book *Minḥāj al-Ṭālibīn* decision by drawing lots is said not to be admissible in two only of the eleven cases in which it could possibly be used.

The drawing of lots was and still is most frequently used (Musil, *Arabia Petraea*, iii. 294) in the division (*kisma*) of pieces of land and articles between two parties having equal claims. In this case, strips of paper with the names of the disputants are used which are rolled up in a ball of clay or wax and drawn by some person or persons who were not present at the writing and rolling up of the names. This lottery by balls is also called *kurʿa* (*Dict. of Techn. Terms*, ii. 1199; Kūhīstānī, *Djāmiʿ al-Ramūz*, Kazan 1309, i. 297; Kāṣṭallānī, iv. 416, 18 sqq.).

As, among the Turks, the drawing of lots was specially used in connection with the calling up of recruits, the word in Ottoman Turkish has the restricted meaning of calling up for military service, so that *kurʿaya girmäk*, for example, means "to reach the age for military service".

From the purely legal meaning of the word, *kurʿa* later came to be applied to a practice in the field of magic and superstition. Just as the proper meaning of *kisma* was extended from the division of things in dispute to that of one's fate or lot, *kurʿa*, also originally used at a division, came to be applied to a consultation of fate by individuals themselves when in doubt or out of curiosity when in difficult positions. In contrast to fortune-telling, which relates to all future things, *kurʿa*, like an oracle, confines itself to answering "yes" or "no" to the questioner at a time when he wishes to know whether he should enter upon an undertaking or whether an event will occur, i. e. to advising in a case, in which, like the division of disputed articles, there are only two solutions, to which the questioner has to some extent an equal claim.

There is no doubt that this modern use of drawing lots is really forbidden by the law. It is an attempt to learn the future and what is concealed (*Baiḍāwī*, *Dukḥūl fī ʿIlm al-Gḥaib*) and is, so far as its object is concerned, identical with the method of divination by arrows, practised in the temple of Mecca before Islām and strongly condemned by the Prophet in Sūra v. 4 (Freitag,

Einleit. in das Studium d. arab. Sprache, Bonn 1861, p. 154 sqq.). But, from the fact that arrows were not used and especially because the well known legal term *kurʿa* for permitted decision by lots was transferred to this really illegal form of casting lots, it looked as if with the alteration in the name of this kind of fortune-telling the thing itself had been altered, especially as quotations from the Qurʾān and the citing of names of the prophets were used to give it an appearance of sanction.

The *kurʿa* is still one of the most usual methods of consulting the fates, especially in the Arabic speaking parts of the world of Islām. Along with the still more common augury by pricking (*faʿl*) and by drawing on sand (*raml*) it is to be regarded as an augury from dice, inasmuch as in the *kurʿa* the starting-point is almost always numbers or letters, which are obtained either directly by throwing dice or in a similar way. According to the way in which this number is obtained or the course taken from this number to the oracle, finally uttered in the form of verses, three different literary forms of the *kurʿa* are distinguished: 1) *Kurʿa al-djāfariya* (this should be read for *djauhariya* in Ahlwardt, iii. 565) which is traced to Djāfar al-Ṣādiq, has most clearly retained the character of an augury from dice, inasmuch as in it a definite poetical interpretation corresponds to each of the possible combination of three letters of the dice. It is to this variety of *kurʿa* that the definition of "science of drawing lots" given by Ḥādīdjī Khalifa seems to refer (ed. Flügel, iv., p. 513, N^o. 9413). 2) The *Kurʿat al-Anbiyā* is the simplest form, as in it the answer is given according to which of the names of the Prophets the finger falls upon. The most detailed and complicated, but for this very reason the most popular form, which is traced to the Caliph Maʾmūn is 3) *kurʿa al-maʾmūniya*, which begins with a number of questions out of the daily life of men written in separate circles out of which the one concerned has to be chosen. But before the oracle delivered in verse is learned from the mouth of a king, one has to run through a series of figures which include constellations and birds of fate and end in towns (hence also called *kurʿat al-mulūk* or *kurʿat al-tuyūr*). This kind of *kurʿa* offered the greatest scope for the imagination and experienced the greatest development and variations; it is just on this account however that it has almost completely lost any character of fortune-telling but looks more like a harmless and entertaining game. This also explains why the word *kurʿa* in popular usage ultimately came to be used by an erroneous generalisation for all kinds of oracles (e.g. *Kurʿat al-Raml* in Pertsch, Gotha, N^o. 73, 4, and *Kurʿa li-lkhrādj al-Faʿl wa ʿl-Damir* or *Kurʿa fī ʿIlm al-Raml* in the Cairo Catalogue, v., p. 350 sq.).

Although the last kind of *kurʿa* in particular seems to be comparatively modern — the oldest manuscript only dates from the xith century A.H. —, the idea that there is old material in it, dating back to Hellenistic times, is not to be dismissed offhand. The reference in the *Fihrist* (i., p. 314, 15—18) to Greek authors and the fragments of Greek books of fate that have survived from the period of the Diadochi, which contain almost word for word the same answers as the Arabic books now in use make such a supposition very probable.

Although the importance of the Arabic *kurʿa*

for similar literature in the west has been exaggerated, it is certain that the Arabs had a not inconsiderable influence on the Hebrew books of fate and either through these or directly on mediaeval European books of fate.

Bibliography: There are a few works lithographed (cf. Doutté) but the bulk of Ḳur'ā literature is in manuscript. In addition to the catalogues printed down to the middle of the 19th century which were used by Flügel in his *Losbücher der Muhammedaner*, Leipzig 1861, the following three catalogues may be mentioned: Ahlwardt, Berlin, iii., N^o. 4235—4244; Pertsch Gotha, N^o. 24, 3, 93, 26, 1304, 09, 10; de Slane, Paris, N^o. 2637—2641, 2706, 2715 sq., 2758; Ibn Sida, *Mukhaṣṣaṣ*, xiii. 23; Bukhārī, ed. Krehl, ii., p. 163 (*Bab al-Ḳur'ā fi 'l-Mushkilāt*); Kaṣṭallānī, *Sharḥ al-Bukhārī*, Būlak 1304, iv. 413 sqq.; *Minḥādī al-Tālibin*, ed. v. d. Berg, iii. 119 sq., 324; ii. 328, 404 sq.; iii., 99 sq., 102, 122 sq., 379, 395 sqq., 440, 461 sqq.; Marghinānī, *Hidāya*, Calcutta, 1818, p. 813 sq. (*Faṣl fi Kaṣfiyat al-Ḳisma*); *The Hedaya*..., transl. Ch. KURAIBIYA, the name of a group of the Kaisāniya [q. v.] This reading of the name is probably to be assumed in al-Ash'arī's *Maḳālāt al-Islāmīyīn* (without diacritical points in the MS. mentioned below) and is also found in 'Abd al-Ḳādir al-Djilānī; the author of the *Mafātīḥ al-'Ulūm* has *Karibiya* as have 'Abd al-Ḳāhir al-Baghdādī, Abu 'l-Ma'ālī and al-Makrizī. In favour of the former reading is also the form *al-K-r-n-biya* (transl. *Karanbiyya*) given by Muṭahhar b. Ṭāhir al-Makdisī, which may be due to a corruption of the text. This group is said to be called after a certain otherwise unknown Abū Kuraib (in al-Ash'arī without diacritical points; in 'Abd al-Ḳādir al-Djilānī, in the printed text as well as in the Leyden MS., Or. 335, f. 96a; *Ibn Kuraib*; al-Khwārizmī, al-Baghdādī, Abu 'l-Ma'ālī and al-Makrizī: *Abū Karib*; Muṭahhar b. Ṭāhir al-Makdisī: *Ibn K-r-n-b*) al-Darīr. It was probably he who spread the Messianic views regarding Muḥammad b. al-Ḥanafiya [q. v.], which are characteristic of the Kuraibiya. The flourish of Abū (Ibn) Kuraib is therefore to be placed in the period after the death of Ibn al-Ḥanafiya (probably in 81 = 700).

According to al-Ash'arī, the Kuraibiya believed that their imām, Muḥammad b. al-Ḥanafiya, was still alive and was living in the mountains of Raḳwā [q. v.] west of Medina, with a lion on his right hand and a leopard on his left, guarding him, while his food came to him morning and evening, until the time for him to appear again. In their view the reason why the imām was kept hidden in this way was that Allāh had a special plan for him. Al-Baghdādī describes his stay in Raḳwā in similar terms; according to him, there was a spring of water and another of honey beside the imām, which provided his daily food. Al-

Shahrastānī and al-Manṣūr bi'llāh 'Abd Allāh b. Ḥamza (*al-'Iqd al-Thamīn*, B. M. MS. Or. 3976, f. 8b *infra*) also mention this, without referring explicitly to the Kuraibiya. The last-named author also mentions the idea that the imām holds intercourse with the angels in Raḳwā (as does Ibn Ḥazm) and that in his concealment he is considered "the eye of Allāh watching over his creatures".

Most of these traits go back to older Messianic ideas. They are nearly all found in verses by Kuthaiyir [q. v.] and al-Saiyid al-Ḥimyarī (cf. *al-Aghānī*², vii., 4, 11 sqq.; viii., 30, 25 sqq.) from whom the writers on heretical sects seem to have taken their information.

Al-Ash'arī mentions Kuthaiyir as a champion of the views of the Kuraibiya and quotes the same verses by him as al-Baghdādī (p. 28 sq.) and al-Shahrastānī (cf. also *al-Aghānī*², viii., 31, 8 sqq.).

(C. VAN ARENDONK)

KURAIISH. 1. Before the Hijra. About the time of the Hijra all the clans of this tribe, which then held pride of place in Mecca, thought they could claim a common ancestor. Was he called Fihir or Kuraish or perhaps al-Naḍr, surnamed *Ḳuraish*? They did not take the trouble to examine closely the problem of the name. Did the names given to the eponymous ancestor refer to a historical personage? Were they not "names without substance" like those which the Meccans according to Ḳur'an liii. 23 gave to their divinities? The only authority, the *nassāba*, the Meccan genea-

logists, could give was that they had found them in the old onomasticon of Tihāma and in poems of doubtful authenticity. Yāqūt (*Mu'djam*, ed. Wüstenfeld, iv. 79) summing up the statements of his predecessors, thinks the explanation which derives the name of the celebrated Meccan tribe from the word *ḡuraish* "shark" *bārid* i.e. worthless. He further adds that the poetical fragment cited in support of this etymology is *maṣnū'*, apocryphal, and I think it can be recognised as a Beduin satire directed against the rapacity and aggressive spirit of Muḥammad's fellow-tribesmen.

In any case, there is nothing of which we know less than the very modest beginnings of the imperial tribe of Ḳuraish. The groups of Semites, leading a nomadic life in the desolate country round Mecca, have always been looked upon as the most disinherited of western Arabia. In the confused mass of starving Beduins of the southern Hidjāz, the Ḳuraish formed in their early days one of the poorest branches of those who claimed to belong to the main stem of the Kināna. Numerically inconsiderable, lost among the Kināni tribes, the primitive clan of the Ḳuraish led a precarious existence "in the depths of wild ravines and among the bare mountains encircling the sacred territory" (Balādhuri, *Ansāb al-Ashraf*), — made up of shepherds and robbers, by turns the auxiliaries and the scourge of Meccan commerce. They hired to the Meccans their camels and lent their services as guides and caravan-leaders; in a word they played the part assumed by the Banū Hudhail [q. v.] in the time of Abū Sufyān and again at the present day. No more scrupulous than the latter, they never hesitated about stripping pilgrims and isolated convoys. They steadily prepared and watched for an opportunity of driving out of Mecca the Banū Khuzā'a who ruled there and of seizing their treasure which they coveted.

A condottiere called Kuṣaiy [q. v.] gave them a place in history and laid the foundations of their political career. He was of foreign origin and came from the steppes of the north, on the Syrian frontier. A fiction connects him with the genealogical tree of the Fihir-Ḳuraish through Ḥalīb-Lu'āiy-Ka'b and Kilāb. This adventurer reunited the scattered groups of the tribe and succeeded by a coup de main in installing them in the heart of Mecca. The *Sira* gives only a confused explanation of how, led by Kuṣaiy, the Ḳuraish were not long in securing political supremacy over the Khuzā'a, a predominance which they soon strengthened still further by gaining possession of the sanctuary of the Ka'ba. If we may base a conclusion on such slender foundations as the traditional genealogical lists, and calculate from the number of generations mentioned in them, this revolution must have taken place in the last quarter of the fifth century A. D., a hundred years before the birth of the Prophet. At the latter date then, barely a century separated the Ḳuraish, now Meccans, from the period when their ancestors had led a nomadic life.

Some ten clans were considered as Ḳuraish in those days: Omaiya, Nawfal, Zuhra, Makhzūm, Asad, Djumaḥ, Sahm, Hāshim, Taim and 'Adiy. The three last named owe their fame mainly to Islām, even Hāshim, although, like Omaiya it was related to Kuṣaiy, the noble who brought them to Mecca. This noble descent did not bring great fortune to the Hāshimis. The Omaiya and

Makhzūmis gained predominance over the other families through their wealth and influence. The ten clans began by occupying the centre of the town, the bottom of the valley *al-Baḥā'*, into which issued the water of Zamzam, the hollow in which stood the little house of the Ka'ba. This gained them the name of "Abṭahī, Biṭāhī" or "Ḳuraish al-Biṭāh". They kept it even after the impoverished clans like the Hāshim, had had to abandon this central position which was considered the quarter of the Ḳuraish aristocracy.

The "Ḳuraish al-Zawāhir" were held in much less esteem. The *Zawāhir* or suburbs of the town and the *shib* ravines of the hills which surrounded the town were left to the Beduins, to foreign camp-followers and to slaves. It seems that the "Ḳuraish of the suburbs" were mixed with these foreign elements. As regards bravery, they were creditably distinguished from their fellow-tribesmen of the Baḥā'. They provided the Meccan republic with its bravest soldiers and never failed to make the most of it. The main occupation of every one in the centre as well as in the suburbs was trade. "They were merchants": this phrase reappears with monotonous regularity in the notices of the more illustrious Ḳuraish.

The *Sira* and *Hadith* preserve the memory of several confederations (*hilf*) or secondary groupings formed among the principal clans of the Ḳuraish. They have been discussed in the article *HILF*. The *hilf al-fuḍūl* seem to be associated with a historical event of which the Meccan chroniclers have exaggerated the importance. This pact must date from the last years of the sixth century, since the Prophet in his youth was present at its conclusion and never failed in consequence to recall it, "the most glorious which history records" (Ibn Sa'd, *Ṭabaḳāt*, ed. Sachau, i. 82).

Outside of Tihāma, the Ḳuraish seem to have had trading colonies at Tabāla, Djurash, Nadjrān, stages on the road to the ports of the Indian Ocean. Much the most important of these was Ṭā'if [q. v.] in the mountains of Sarāt. It was a country resort for the rich bankers of the Ḳuraish, who acquired country houses and farms there.

If we examine orthodox tradition, the Beduins before the Hidjra are represented as never missing an opportunity of recognising the political and religious superiority of the Ḳuraish. The latter was practically guaranteed to them by the possession of the Ka'ba, a kind of national sanctuary and centre of an annual pilgrimage for the western half of the Peninsula. The Christian Arabs themselves do not seem to have entirely escaped this religious influence. The prerogative of *hilm* was not disputed to the Ḳuraish. They owe to it the fact that they were able, in spite of their small numbers and their barren territory, to exercise a kind of spiritual supremacy among the jealous Beduins. It is again the *hilm*, as we shall see, which explains their glorious destinies on the vast theatre on which the sudden expansion of Islām was soon to place them. *Hilm* meant the equilibrium of the intellectual faculties, all intent on the business of life to the neglect of scientific speculation. Nothing is more common than the mention of this ruling quality in the notices of the notables of the Ḳuraish. This prerogative, which in the opinion of Arabs, denotes men born to govern, has even been said to have been proclaimed by the Prophet. "A Ḳuraish", he said

"is worth two men of any other tribe". And according to al-Zuhri [q. v.], himself a Kuraish, this saying referred to their acuteness "the rare quality of their intelligence". In them the Beduins admired the diplomatic ability, the style of speaking, the ready rejoinders always à propos, the precision of their eloquence. They were able to condense into a few telling sentences, when the Beduin as a rule would lapse into his usual prolixity. The purity of their dialect was less generally granted. It was Islām and in particular the influence of the Qurʾān which gained the Meccan dialect its triumph over its rivals in Najd, although the latter had been refined and perfected by several generations of poets.

Although they did not love them, the nomads felt for the Kuraish that respect which is inspired in the inferior for the prestige of a superior organisation, capital and the possession of great wealth. In Mecca alone were the Beduins familiar with the idea — rudimentary, it is true, — of a form of government and political solidarity concepts foreign to their individualist mentality, and it impressed them by its novelty. But in this intellectual superiority which impressed them more than they would have cared to acknowledge, the Beduins declined to acknowledge poetic talent, which they claimed as a monopoly of the nomads. They placed the Kuraish rhymers far behind those of Tāʾif and particularly of Medīna, not to speak of the poets of Najd and not without justice. We know no poet of Mecca before the Hidjra whose name is worthy of record. The Kuraish had for the first time in the person of ʿOmar b. Abī Rabiʿa [q. v.] a poet worthy of a place in the Arab Parnassus already quite crowded.

The Beduins also did not like the exclusiveness of the Kuraish and the control they exercised over their everyday life. Acting as guides, and convoys to Meccan caravans, and in debt to the financiers of Mecca, they alleged they were exploited by the "sharks" of the Kuraish. It is the eternal complaint that divides capital and labour everywhere. Their grievances united them in the contempt they professed to feel for this corporation of merchants, "cowardly and avaricious". Their poets boast of having pierced the wineskins, then broken the skulls of these greedy hagglers, "eaters of pollenta" (*sakhīna*), the favourite dish of the Meccans. They boasted of being able to humble the pride of the Kuraish, proud in the shadow of their sanctuary, trembling with fear outside the sacred territory. The Meccan custom of relying on the bravery of the "Aḥābiṣh" and other Beduin mercenaries, of sending negroes to fight for them was not calculated to raise them in the esteem of the nomads, and a quarter of a century after the death of the Prophet, we still find the Arabs refusing to allow the Kuraish the virtue of bravery.

We may put to the credit of Muslim tradition the story of the general supremacy of the Kuraish being accepted without demur by the Arabs before the Hidjra. This legend was put about to make the seizure of the caliphate by the Kuraish appear less shocking. Considering the individuality and mentality of the Beduin, it may have been rather a question of moral supremacy. Did it extend much beyond the frontiers of the Hīdžāz and the districts bounding on Najd? We do not think so. The great Kaṣi confederacies — like the Hawāzin and the Ghatafān — possessing pasturage on both

sides of the common frontier could not escape this supremacy. Since the decline of the Hīmyar principalities, Mecca had become the largest and most powerful city of western Arabia. The spectacle of this power solidly based on a close alliance of economic and religious interests could not fail to impress the Beduins, who were intelligent observers and very susceptible to the prestige and influence of the capital.

The activities of the ancient Kuraish consisted as we have seen of commercial and financial speculations within and beyond Arabia. In the article MECCA we describe the trade-routes that ran to it, and the agreements concluded by its people with their neighbours in Arabia and foreign countries; next we examine the form of government, the part played by capital and lastly the organisation of the great caravans on which the prosperity of the Kuraish metropolis depended. The reader may be here referred to this article.

II. After the Hidjra. With the preaching of Muḥammad the story of the Kuraish becomes practically that of Islām. The two histories become one. The *Sīra* does not discriminate between them. On the other hand, after the death of the Prophet, the destinies of the Kuraish develop independently of those of Mecca. After having bitterly opposed the new religion, the Kuraish notables gained control of it as being in their best interests. The first eight years of the Hidjra were filled with fighting with the Prophet, who had taken refuge in Medīna. In the year 8 (*al-fath*), the surrender of Mecca without a blow being struck put an end to the institutions by which the tribe had hitherto been governed and brought about its break up and dispersal throughout the Arab world. To the casual observer, nothing seemed to have changed. In reality Mecca had lost its autonomy; it was now politically dependent on Medīna and governed by an agent of the Prophet. The Kuraish were under no delusions. The exodus began; the principal families gave the signal for it and came to settle in Medīna, which had become the capital of Islām, because Muḥammad was there.

The death of the Prophet raised the problem of his successor, the question of the caliphate. Two illustrious Kuraishis, Abū Bakr and ʿOmar seem to have foreseen this eventuality and to have been prepared for it. Upon whom was the political guidance of Islām to fall? Muḥammad had left no stipulations on the subject. But his constant partiality for his fellow-citizens, who had fled from Mecca, had aroused the protests of the Anṣār, which are preserved in the poems of Ḥassān b. Thābit [q. v.]. There seems no reason to doubt that if death had not suddenly taken him, if he had thought it prudent to express his opinion, it would have been to the "emigrants" of the Kuraish in preference to the Anṣār that he would have entrusted the destinies of Islām. Throughout his career as a prophet, he had never ceased to proclaim himself a true Kuraishī. In spite of the Hidjra, in spite of the resounding rupture and the eight years of war with Mecca, he never for a moment thought of linking his cause with the fortunes of Medīna. If this idea had arisen in his very susceptible mind, he would not have been long in rejecting it, when he saw the political incapacity of the Anṣār and their lack of preparation. As if he wished to suggest

to them the superiority of the Ḳuraish, the Prophet made the Medinites turn in prayer towards Mecca, now the sacred city of Islām and made its conquest a task for the zealous converts.

That the Ḳuraish had the exclusive right to this succession must have been the attitude adopted by Abū Bakr and 'Omar before the Anṣār assembled in the *ṣakīfa* of the Banū Sā'idā. What we can gather from the arguments put in the mouth of Abū Bakr is that, speaking in the name of the Ḳuraish refugees, he insisted upon their priority in adopting Islām, the superiority of their noble blood, their prestige with the Arabs and their relationship to the Prophet. From these premises, the speaker thought he could deduce that his fellow tribesmen had a monopoly of the supreme power. He concluded by proposing a division to the Anṣār: "let us have the duties of an amir and you those of vizier". But after having appealed to the Ḳur'ān (ix. 101) where the supremacy of the Ḳuraish is said to be implied, why was an explicit decision of the Prophet not put forward? One word would have sufficed instead of all this rhetoric. For a childlike people like the Anṣār, accustomed for ten years to anticipate the slightest wish of Muḥammad, his will would have finished the debate. If Abū Bakr did not pronounce this word, if none of his acolytes appealed to it, we must believe there was no such decision.

The *Summa* took this into account when it tried to collect all the pronouncements possible ascribed to Muḥammad and all recorded by the *Ṣaḥīḥ*. Let us quote the most characteristic of these ḥadīths: "The Ḳuraish are the heads of this government". "The Imāms are Ḳuraish". "Power will remain with the Ḳuraish so long as two Muslims exist". "The kingship (*mulk*)" — and still more explicitly — "the caliphate remains in the Ḳuraish". In the last sentence we have the classical formula as approved by the Shari'a and accepted by all orthodox tradition. The latter however had not dared appeal to the Ḳur'ān. This book simply makes no reference to the Ḳuraish monopoly. In reply to the verses quoted in their favour by the Meccans, the Anṣār readily quoted a multitude of others, proclaiming the unworthiness and faithlessness of their Ḳuraish rivals.

It cannot however be denied that the Prophet had a preference for the Ḳuraish nor that he had a low opinion of the fitness of the Anṣār for governing. But he was too wise to give voice to such sentiments. He knew too well the causes of dissension that were already at work in the young community to do anything to make matters worse. In the course of his wars with the Meccans, he had let drop remarks like the following: "In good as in evil, the Ḳuraish are always in the first rank". It is by recording exactly such utterances, and giving them a political significance, which they did not really have, that tradition has formulated *ḥadīth* unambiguously reserving the caliphate for the Ḳuraish. If they had the slightest knowledge of it, the Anṣār would not have been able to dispute the Ḳuraish monopoly nor to propose to Abū Bakr to recognise it on condition that the supreme dignity was held alternately by a Meccan and a Medinite.

This seems also to be the conclusion to be deduced from the attitude of the Khāridjīs. If in the first century of the Hidjra, we want to find strict

and logical believers, placing Islām above caste prejudices and ambitions, we have to look for them in the ranks of these dissenters. Their implacable logic never ceased to protest against the privileges claimed by the Ḳuraish and to give more weight to their protests, they gave themselves caliphs chosen from different Arab tribes.

Although they did not hold the same views as the Khāridjīs, the 'Alids and Shī'īs came inevitably to the same conclusion. This is how in the first century A.H. their most authorised interpreter, Kumait [q.v.], argued the claims of the 'Alids; if contrary to the Shī'ī theory, the supreme dignity in Islām is no longer the exclusive privilege of the family of the Prophet, it ought to become the common patrimony of all the Arab tribes, not only of Muḍar but also of Rabī'a and Yemen and above all of the Anṣār. These extreme legitimists therefore were ignorant of the alleged veto laid by Muḥammad on non-Ḳuraish.

The creation and monopoly of the Ḳuraish, the caliphate — while greatly benefiting the Ḳuraish individually — only served to precipitate the break up and dispersal of the tribe, a phenomenon, the beginnings of which we have already seen just after the *fath* (8 A.H.). Their cohesion and the prosperity of the capital Mecca depended entirely on commerce. Now in a quite unexpected fashion, at least for the Beduins, the conquests of Islām upset all the economic conditions of Western Arabia. The direct route from India via Mesopotamia was opened up again by the reunion under one rule of the valley and mouth of the Euphrates, and international trade avoided the difficult detour by the Arabian desert. Nothing could be less like the Mecca of Abū Sufyān than that of the Caliph 'Omar. The continental blockade established by the Prophet after the battle of Badr, was slackened; then his death suddenly stopped business going to Mecca. One after another the neighbouring fairs, e.g. that of 'Okāz were suppressed — at least there is no further mention of them after the *fath* of Mecca. Deserted by commerce, the barren valley of Mecca, strangled as in a vice between two ranges of bare hills, could not maintain its former inhabitants, all brokers, caravaners and traders for generations past. Gradually shops and offices closed and their owners came to Medina, now the capital of the caliphate, to rejoin their fellow-citizens who had made new positions for themselves there.

The old Ḳuraish had foreseen this decline. They had talked of it to Muḥammad when their ardent fellow-townsmen had urged them to adopt Islām. These shrewd conservatives were reluctant to upset the religious and social institutions to which they attributed the prosperity of their town. "Allāh will not fail to provide", the Prophet replied, "He will furnish them ample compensation; he will enrich them of His abundance when He thinks the time has come" (Ḳur'ān ix. 28; xxviii. 57). Among the less prominent Ḳuraish families a small number were ready to await the promised compensation on the spot. Apart from the period of the annual pilgrimage, the town did not begin really to revive until the day when under the Omayyads the Ḳuraish officials, enriched by the exploitation of the provinces, came to enjoy their retirement in Mecca, spent their wealth there and as a result attracted thither poets and musicians whose presence was to turn the sacred city into a city of pleasure.

But the attraction exercised by the new capital in Medina was not at first very great. After the election of Abū Bakr, the old members of the *Dār al-Nadwa* or grand council of the Ḳuraish flocked thither, all the merchant princes of Mecca. They understood the necessity of becoming reconciled to the old friends of the Prophet, now the arbiters of power, while waiting the time when they could supplant those novices in the art of ruling. The reiterated appeals of the Ḳurʾān to emigrate in the direction of Allāh and his Prophet, had for long fallen on deaf ears. It required the revolution, the economic crisis produced by the triumph of Islām and the prospect, depressing to business men of "eating their capital" by letting it lie unproductive in their strong boxes. This prospect led them to discover the economic advantages and the spiritual merits of the "Hidjra", the migration of the Muslims. But these "emigrants" of the eleventh hour were not destined to find a suitable milieu for their business enterprise among the Anṣārs. The Omayyad and Maḥzūmī financiers did not succeed in setting up their offices once more in the oasis of Yathrib. The future had something better in store for them.

This was the period of the conquests which by opening up the eastern provinces to them was to introduce them to a stage of new and manifold activities. Henceforth they were to command armies, to govern provinces and for several centuries, to rule the whole Arab empire. One marvels at the number of remarkable men who sprang from this city of shop-keepers and tried their skill in careers hitherto unknown to them, such as governors and generals. What is no less surprising than the novelty of these roles is the aptitude and decision of character with which they filled them — and this prevents us from regarding the Ḳuraish founders of the caliphate as mere novices. The fact is that for them, commerce on a large scale as it had been practised in Mecca before the Hidjra had been for them a long preparation for a political career.

When therefore Muḥammad thought of entrusting the destinies of Islām to them, his patriotism had not exaggerated the capacity of his fellow-citizens. He had the ability to foresee that the prestige of Mecca, the influence which it had exerted in the centuries before Islām, had gone to give the Meccans intellectual predominance. "In the period of paganism, the Ḳuraish had completed their education. It was to fit them to govern the Arabs, at a time when the latter were dominating the world. They ceased to be Meccans but they remained Ḳuraish" (Wellhausen, *Reste arabischen Heidentums*², p. 94).

This brings us to say that after the creation of the caliphate, the history of the tribe of Ḳuraish is separate from that of the town of Mecca. It develops at first in Medina, — which by the first century A.H. had become as Ḳuraish as Mecca, — then beyond Arabia, in Syria, Damascus, Baghdād and in the conquered provinces. The history of the Ḳuraish diaspora becomes merged in that of the Omayyads, 'Abbāsids, various families of Sharifs or descendants of Muḥammad. Of these princely lines, those descended from 'Alī and Fāṭima, after the overthrow of the 'Alid caliphate in the 'Irāk, alone returned to Arabia, to settle, not in Mecca but in Medina. They found there several Hāshimī families, among others the descendants of Dja'far b.

Abū Ṭālib [q. v.]. The Ḥasanids were the stock from which descended the dynasty of Grand Sharifs of Mecca. The Ḥusainids held for some time the amirate of Medina. Another 'Alid dynasty, that of the Zaidis, descended from Zaid, grandson of Ḥusain b. 'Alī, is still ruling in Yemen. All these 'Alid families soon multiplied enormously within and beyond Arabia. They produced the innumerable sharifs and sayids who filled the Muslim world. In Arabia some returned to the nomadic life and there we have the spectacle of Ḥasanid sharifs leading bands of brigands, and infesting the main routes.

In the xiiith century A.D. the Spanish traveller Ibn Dujair (*Rihla*, ed. Wright, p. 73—74) testifies to the great number of Ḥasanids, Ḥusainids and Dja'farids scattered over the Hidjāz, as well to the depths of poverty into which many of them had sunk. Even before this time, if we may believe a text quoted by Snouck Hurgronje (*Mekka*, i. 42) we would have to admit that as a result of the continual revolts of the 'Alids and the rigorous measures they provoked against them, the Ḳuraish element in the population of Mecca had been practically exterminated. Ya'qūbī (*Kitāb al-Buldān*, ed. de Goeje, p. 327) who discovers everywhere in Syria the presence of Arab tribes notes in Southern Lebanon, towards Ṣaidā, a Ḳuraish group, but does not mention whether it was important or not. The geographer Hamdāni mentions others in Naǧd, at Tabāla and at other parts of the Yemen. Those of Hamdān were renowned for their bravery (*Djazirat al-'Arab*, ed. D. H. Müller, p. 119, 122, 165, 194, 258). Among the tribes settled in the east of Mecca, Burckhardt (*Voyages en Arabie*, transl. Eyriès, iii. 307) mentions Ḳuraish. According to him: "of this famous tribe there are only left 300 men capable of bearing arms. In spite of their great name and ancient fame, they are little thought of by the other Beduins. They camp in the neighbourhood of Mount 'Arafāt'.

At the present day, apart from the Sharifs, as regards true Ḳuraish we find only the Shaibi at Mecca, the guardians from time immemorial of the keys of the Ka'ba, at least if we do not accept their problematical descent from the anti-caliph 'Abdallāh b. Zubair [q. v.].

Bibliography: This is given in the article MEKKA. (H. LAMMENS)

ḲURAIṢH B. BADRĀN, 'ALAM AL-DĪN ABU 'L-MA'ALĪ, an 'Uḵailid. After the death of Badrān in 425 (1033/1034) Ḳuraish was recognised as lord of Naṣibin. In the struggle between his two uncles, Ḳarwāsh [q. v.] and Abū Kāmil, he took the former's part. After the death of Abū Kāmil in 443 (1052) al-Mawṣil and Naṣibin were united under the rule of Ḳuraish. Soon afterwards 444 (1052/1053) he became involved in a war with his brother al-Muḵallad and another 'Uḵailid, Kāmil. The war did not last long and the situation remained unchanged. In 446 (1054/1055) Ḳarwāsh recaptured the town of al-Anbār, which really belonged to the 'Uḵailids but had been seized in Ḳarwāsh's time by al-Basāsiri [q. v.] governor of Baghdād, and had the *ḵuṭba* read there in the name of the Saldjūk Ṭoḡhrilbeg. In Dhu 'l-Hidjja of the same year however al-Basāsiri advanced on al-Anbār and laid siege to the town, which very soon surrendered to him. When Ṭoḡhrilbeg entered Baghdād 447 (1055) al-Basāsiri left the capital, but when he

reappeared at the head of a large army and declared for the Fāṭimid caliph al-Mustansīr, Ṭoḡhrilbeg sent his cousin Ḳutulmush against him. The powerful Amīr Dubais b. 'Alī b. Mazyad had joined al-Basāsiri wherupon Ḳuraiṣh who had long been devoted to the Saldjūk Sultān joined the latter. At the end of Shawwāl 448 (beg. January 1057) al-Basāsiri and Dubais inflicted a severe defeat on the troops of Ṭoḡhrilbeg near Sindjār; Ḳutulmush escaped but Ḳuraiṣh was wounded and had to surrender. Ṭoḡhrilbeg himself then took the field and seized the town of Takrit which belonged to the 'Ukailids. After his brother Yaḳūtī had joined him at the beginning of 449 (1057), al-Mawṣil also was occupied whereupon the Sultān himself set out for Naṣibin and sent his general Hazārasp with another army against Dubais and Ḳuraiṣh. They were defeated and had to sue for peace. While Dubais returned to his own territory, Ḳuraiṣh joined al-Basāsiri who had settled in al-Rahba. In 450 (1058) the two latter regained Mawṣil, but again abandoned it on the approach of Ṭoḡhrilbeg from Baghdād. The Sultān, who did not find them in al-Mawṣil set out after them and followed them to Naṣibin; when however he had to turn his attention to his brother Ibrāhīm whom he suspected of rebellious intentions, al-Basāsiri and Ḳuraiṣh advanced against him. The followers of the Sultān tried in vain to defend the capital; in Dhu 'l-Ka'da of the same year (Dec. 1058) al-Basāsiri entered Baghdād and the caliph al-Ḳā'im had to take refuge with Ḳuraiṣh, who brought him to safety. Al-Basāsiri could only hold out for a year, when Ṭoḡhrilbeg put an end to his rule. Ḳuraiṣh died in 453 (1061) as lord of Naṣibin and al-Mawṣil at the age of 51.

(K. V. ZETTERSTÉEN)

ḲURAIẒA, BANU, one of the three Jewish tribes of Yaṭhrib, related to the Banu 'l-Naḍir. The two tribes together bore the name of Banu Darīh, and were said to have settled in Yaṭhrib much later than the other Jews. In what proportion their original Palestinian stock had intermixed with the Arabs, it is not possible to say, but al-Ya'ḳūbi's statement that both tribes were only hebraized *Djudhām* (Ḳudā'a), is not credible.

The Banu ḲuraiẒa consisted of two branches: Banu Ka'b and Banu 'Amr; they resided outside the city on the southern side, along the Wādi Mahzār, with the sister-tribe of Ḥadāl, having the Aws Allāh on the N.W., the Banu 'Abd al-Ashhal on the N.E. and the Ḥarra on the E. Landowners and cultivators, the ḲuraiẒa had brought agriculture to a high degree of development, and lived prosperously on the products of the soil and their commerce. At the time of Muḥammad's arrival in Madīna, they had 750 warriors, and possessed large stores of arms and armour.

Allied, like the Naḍir, to the Banu Aws, they had fought on their side in the battle of Bu'āth [q.v.], which took place on their territory a few years before the Hījra.

In Muḥammad's communal constitution they, like the other Jewish tribes, are not mentioned by name, but appear only as allies of different sections of the Aws (art. 25, 30, 31 and 47).

Their attitude towards the Prophet was hostile from the first, like that of the other Jews (see above article *ḲAINUḲĀ'*, and ap. Ibn Hishām, p. 352, a list of Muḥammad's Ḳuraiẓi enemies), but no definite break took place until the siege of Madīna (Dhu 'l-Ka'da, 5 A.H.), when the ḲuraiẒa, who in the beginning had contributed spades and baskets to the digging of the trench, withdrew their support. According to tradition Huyayī b. Akhtab, sent by Abū Sufyān, had succeeded in gaining the support of their chief, Ka'b b. Asad, despite a written treaty of alliance with Muḥammad. The Prophet sent Sa'd b. Mu'adh, Sa'd b. 'Ubāda and two others to ascertain their attitude: they returned after a stormy interview, confirming the ḲuraiẒa's defection.

The latter seem to have planned an attack on Madīna, together with the Ḳuraiṣh and Ḡhaṭafān; it was not executed through lack of mutual confidence, and their only exploit was an unsuccessful night-expedition of eleven men. Having failed to reach an agreement with the Ḳuraiṣh, who refused to give them hostages in exchange for military support, the ḲuraiẒa finally abandoned the campaign, thus hastening its end.

This traditional version is open to many doubts: the existence of a particular treaty with Muḥammad does not seem plausible, as his relations with the ḲuraiẒa were already defined by the communal constitution, it was probably invented to justify the action taken against them. Their support of the Ḳuraiṣh appears to have been of a purely negative character, on the other hand it is easy to see how the important position they occupied on the side of the town not defended by the trench practically put Madīna at their mercy. One of the fortresses incorporated in the line of defence, Rātidj, belonged to Jews (tribe unknown), and formed a dangerously weak point in the Muslims' position. All these circumstances caused much anxiety and hatred of the Jews during the siege, suggesting immediate action against them: on the very day of the Ḳuraiṣh's departure Muḥammad was ordered by Gabriel not to lay down arms until he had punished the ḲuraiẒa; the siege of their fortresses lasted the same evening (23rd Dhu 'l-Ka'da), and lasted 15 or 25 days, with an active exchange of arrows, stones and strong language, but no casualties.

Having at last decided to surrender, the ḲuraiẒa asked for the same conditions as obtained by the Banu 'l-Naḍir, but were told they must yield without condition, giving up all they possessed. They turned to their ally and protector Abū Lubāba b. 'Abd al-Mundhir, hoping through his intercession to emigrate, but he gave them to understand that the situation was desperate, and that inevitable surrender would be followed by destruction. His repentance for having revealed to them their lot, seems to show that Muḥammad did not intend the ḲuraiẒa to suspect how they would be treated; the Prophet's conduct on this occasion is far from clear and certainly not blameless.

Having surrendered without attempting any resistance, the ḲuraiẒa were separated from their women and children, and put under custody. The Aws interceded on their behalf, and obtained that

their fate should be decided by their own chief, Sa'd b. Mu'adh; the latter, however, not daring to cross what he knew to be the Prophet's wishes, decreed that all males who had reached puberty should be slain, and the women and children sold as slaves. On the morrow, in the market-place, from 600 to 900 men were beheaded, the execution lasting all day. It is worthy of note that only four chose to save their lives by conversion.

The women and children were sold at auction, mostly in Madina, the remaining in Syria and Najd, and the price divided in the usual way of spoils. Their land was partitioned into five portions: one went to Muḥammad, and the various families, divided into four groups, drew lots for the rest. Among the captives Muḥammad chose for himself Raiḥāna bint Zaid al-Naḍariya.

The exceptional cruelty shown to the Kuraiza, as compared with the other Jewish tribes, is due to the fact that they had remained alone and defenceless, and to their wavering, feeble, and altogether unwarlike behaviour. This last circumstance makes it all the less probable that they ever took an active part in the hostilities against Madina.

Several passages in the Qur'an are referred to the Kuraiza; see especially viii. 60 and xxxiii. 26—27.

KURAMA, according to Radloff (*Versuch eines Wörterbuches der Türk-Dialecte*, St. Petersburg 1899, vol. ii., p. 924) "a Turkish tribe in Turkistan"; the same authority gives the Kirgiz (i. e. Kazak) word *kurama* (from *kura*, "to sew together pieces of cloth") with the meaning "a blanket made of pieces of cloth sewn together". In another passage (*Aus Sibirien*², Leipzig 1893, i. 225) Radloff himself says that the Kurama are "a mixed people of Özbegs and Kirgiz" and their name comes from the fact, asserted by the Kirgiz, that "they are made up of patches from many tribes" (*kura* to "patch together"). According to Radloff, the Kurama are "a settled tribe" between Tashkent and Khodjand, to be more accurate, on the river Angren (a corruption of Ähengerän) south of Tashkent. In Russian sources we find it stated as early as 1875 that the Kurama first arose in the xviiith century; the same view has been put forward by Aristow (*Zamietki ob etničeskoi sostavie tyurkskikh plemen*, etc., St. Petersburg 1897, p. 112) and more recently by I. Zarubin (*Spisok narodnostei Turkestanskogo Kraja*, St. Petersburg 1925, p. 12). But as early as 1045 (1635—1636) in the

description of the wars between the Kazak and Özbegs on the Angren we find the "leaders of the Kurama" (*sardārān-i Kūrāmā*) mentioned (Maḥmūd b. Walī, *Baḥr al-Asrār*, Ind. Off. 575, f. 119a). Under the rule of the Khāns of Khokand in the xixth century the word Kurama is used not only as an ethnographic but also as a geographical term and the name of an administrative division. The road from Khokand to Tashkent over the Kendir-Dawan pass was called the Kurama road (*Rāh-i Kūrāma*, e. g. *Ta'rikh-i Shāh-rukhi*, ed. Pantusow, Kazan 1885, p. 238). The Kurama were ruled by a Beg who lived in the fortress of Keručī (in the written language Kirāwčī; on Russian maps also Kelyaučī). This use of the word Kurama was retained for some time under Russian rule. In the division of the territory (*oblast*) of Sīr-Darya into districts (*uezd*), what later (after 1886) became known as the "district of Tashkent" was called the "district of Kurama" (*Kuraminskij uezd*). The centre of government of the district was intended to be the little town of Toi-Tübe founded in the reign of Madali Khān (1822—1842; cf. **KHOKAND**) (here are the ruins of a mediaeval fortress examined in 1885 by Professor Veselovskiy); but the district headman (*uesdnij načal'nik*) actually lived at Küylük on the Čirčik. Under Russian as under Khokand rule the district of Kurama was of considerable economic importance as a centre of rice-growing. Russian ethnographers put the Kurama in a class by themselves as descendants of nomads (Kirgiz, i. e. Qazaq) who have become agriculturists (Sarts, q. v.). In spite of the adoption of the Sart mode of life, the Kurama never quite lost their particular characteristics inherited from their nomadic ancestors.

To this day this can be noticed among them; unlike the Sarts, the Kurama live, like the Qazaq, in yurts; their wives as with the Qazaq are unveiled. In other respects however the Kurama have advanced further from their nomadic ancestors than they had at the beginning of Russian rule. At that time Radloff and other students could still distinguish among them the division into families. According to Radloff there were five of these: Djulaür, Teläü (this name is still borne by a village inhabited by the Kurama), Tama, Djagalbaif and Taraklı. This division is now quite lost; where traces of it still exist, marriages between members of one family are no longer — as among the Qazaq — considered illegal. The fact that the Kurama are a mixed people can still be recognised; besides the mixture of different stocks among them there has been, according to Zarubin (*op. cit.*) a mixture of different social ranks. The Kurama themselves do not use this name although they do with the addition of another ethnic (Kirgiz-Kurama, Sart-Kurama). The number of the Kurama in the district of Tashkent (formerly Kurama) was in 1917: 52,335; in 1920: 49,697 (but in recent years there has of course been a decline in numbers of the population in Turkistān generally on account of the great famine). There are further some 9,330 Kurama in the district of Khodjand. The word with the meaning of "mixed people" is also found in the area where Turkoman languages are spoken, but these Kurama have no connection with those on the Angren.

Petersburg 1880, i. 328; V. Masalskiy, *Turkestanskiy Krai*, Petersburg 1913, p. 306 and 607; Fr. v. Schwarz, *Turkestan*, Freiburg i. Br. 1900, Index, esp. p. 10 sq.; N. Mallickiy in *Protokol' Turk. Kruzhka Lyub. Arkh.*, 1898, iii, p. 176 sq. (W. BARTHOLD)

KURĀNĪ (also GURĀNĪ), SHAMS AL-DĪN AḤMAD B. ISMĀ'ĪL, MOLLĀ, a celebrated Ottoman jurist and author. Mollā Kurānī belonged to Shehrizūr [q. v.] in Kurdistan. He studied in Cairo, where he met Mollā Yekān (i. e. Mehmed b. Er-maghān b. Khalil, cf. Tashköprüzade-Medjdi, *Shakā'ik al-Nu'māniya*, i. 99 sqq.; Sa'd al-Dīn, ii. 438 sqq.) who brought him to Asia Minor and introduced him to Sultān Murād II. He was appointed professor at the Kāplıdja and later at the Bāyazid mosque of Brussa and then entrusted with the education of prince Mehmed, afterwards Sultān, who was then governor in Maghnisa (cf. von Hammer, *G. O. R.*, ii. 244 sqq.). When Mehmed came to the throne, Mollā Kurānī declined the vizierate offered him, but took the office of *kādi-asker* (855 = 1451). When deprived of this office, he went as *kādi* and administrator of the pious foundations to Brussa, but came into conflict with the Sultān, whom he always met boldly, was dismissed and returned to Egypt. Sultān Kā'itbey received him with honour and distinction. Mehmed II recalled him in 872 (1467) and in 885 (1480) made him *Shaikh* al-Islām in Sımbul. Here he died in 893 (1488) after a long illness. Sultān Bāyazid II paid his debts amounting to 180,000 *akçe* [q. v.] out of the treasury. Mollā Kurānī, who is described as a tall man with a long beard, was buried at Yüsek Kāldırm in Galaṭa in the court of a mosque founded by him (cf. Hāfiz Hüsain, *Hadıkat al-Dıawāni*, i. 207; J. v. Hammer, *G. O. R.*, ix. 89, N^o. 445). A quarter of Sımbul bears his name but it is usually pronounced *Gürānī*. Mollā Kurānī wrote a number of poems and important works of exegesis, of which the most important are *Shāyāt al-Amānī fī Tafsīr sab'a al-Mathānī* and *al-Kawthar al-djāri 'alā Riyāḍ al-Bukhārī* on Bukhārī's work on *Hadıth* and other works on Kurānic studies. Mollā Kurānī was a Shāfi'ī but became a Ḥanafī at the request of Murād II.

Bibliography: Tashköprüzade-Medjdi, *Shakā'ik al-Nu'māniya*, i. 102—111; Sa'd al-Dīn, *Tādij al-Tawārikh*, ii. 441—449 (with numerous anecdotes); Brūsālī Mehmed Tāhir, *Othmānī Müellifleri*, ii. 3; İlmīye Sālnāmesi, Sımbul 1334, p. 334 sq.; J. v. Hammer, *G. O. R.*, i. 532, ii. 244, 589; Brockelmann, *G. A. L.*, ii. 228 sq. (with list of some of his works, more fully in Mehmed Tāhir, *op. cit.*); Rif'at, *Dawḥat al-Mashā'ikh*, Sımbul n. d., p. 20 sq.

(FRANZ BABINGER)

KURBĀN, sacrifice. The word goes back to the Hebrew *korban*, perhaps through the intermediary of the Aramaic (cf. Mingana, *Syriac Influence on the Kurān* in *Bulletin of the John Rylands Library*, vol. xi, N^o. 1, p. 85; S. Fränkel, *De vocabulis in . . . corano peregrinis*, p. 20). The language of the Kurān, as is well known, shows a preference for religious technical terms ending in *-ān* and some of them are not always used with their original significations. This is true of *kurban*, which occurs three times in the Kurān. In Sūra iii. 179 and v. 30 it obviously means sacrifice. In Sūra xlvı. 27, however we read: "Did

those help them, whom they had taken for *kurban* as gods to the exclusion of Allāh!" Here the word must be more or less synonymous with "gods". Probably it has a meaning which is connected with the Arabic *k-r-b* (see below); the commentators take the same view and the word is explained as "mediators" (cf. the article *SHAFĀ'A*).

The word hardly seems to occur in classical *hadıth*. The *Lisān* mentions two traditions which are striking enough: "The characteristic of the community (i. e. the Muslims) lies in the fact that their *kurban* is their blood", i. e. that instead of sacrifice they have offered the blood of their martyrs. And the other: "The *şafā* is the sacrifice of every pious man". We may suppose there are apologetic tendencies in both traditions.

The term also came to be applied in Muslim ritual to the killing of an animal on the 10th Dhu 'l-Hıddja and the whole celebration on this and the following *tashrik* days is called '*İd al-Kurban*' (cf. '*İD AL-ADḤĀ*'), in Turkish speaking countries *Kurban-Bairam* (cf. *BAIRAM*).

In Christian-Arabic the word means the eucharist. — In conclusion it should be pointed out that there seems to be a genuine Arabic word *kurban*, plur. *karābin*, which means the courtiers and councillors in immediate attendance on a king; the word probably comes directly from *k-r-b* "to be near" (see above). (A. J. WENSINCK)

KURBUKA, ABŪ SA'İD KAWĀM AL-DAWLĀ, lord of al-Mawşil. In the war waged by Tutush b. Alp Arslān, Barkiyārūk's uncle [q. v.], against the two rebellious governors Aḳ Sonḳor and Būzān which ended with the capture and execution of these two, the amir Kurbuḳa who had been sent to their help by Barkiyārūk was also taken prisoner. After Tutush had fallen in Şafar 488 (February 1095) (cf. *BARKİYÄRÜK*), Kurbuḳa was released by his son Rıdqwān, and with his brother Altūntāsh collected a band of adventurers and occupied Harrān. Muḥammad b. Muslim b. Kuraish lord of Naşibin then applied to him for help against his brother 'Alī who had been appointed governor of al-Mawşil by Tutush; Kurbuḳa made an alliance with Muḥammad but had him murdered after he had seized Naşibin and set out against al-Mawşil, which 'Alī had to surrender after a long siege (Dhu 'l-Kāda 489 = Oct., Nov. 1096). After the capture of al-Mawşil he disposed of his troublesome brother Altūntāsh and occupied al-Rāhla. In 491 (1098) Barkiyārūk sent him with a large army to retake Anṭākiya [q. v.] which had just been conquered by the Christians. Edessa, which had also just been taken from the Muslims, was besieged by Kurbuḳa on the way but he had to give up the siege and soon afterwards appeared before Anṭākiya. When the Christians made a bold sortie against the besiegers, he inflicted a disastrous defeat on them in spite of their superior numbers; Kurbuḳa's own conduct is said to have contributed towards the disaster, as his arrogance irritated his commanders so that they only awaited a favourable opportunity to abandon him. In the battle between Barkiyārūk and his brother Muḥammad in Radjab 493 (May—June 1100) which ended in the defeat of the former, Kurbuḳa commanded Barkiyārūk's left wing. In the following year he was sent to Aḡharbāldjān. Here he conquered the greater part of the country but when he was nearing the town of Khuwaiy, he fell ill and could not continue the campaign. He died in Dhu 'l-Kāda

495 (Aug—Sept. 1102) after appointing Soukordja his successor.

Bibliography: Ibn al-Athir, *al-Kāmil*, ed. Tornberg, x., see index; Abu 'l-Fida', *Annales*, ed. Reiske, iii. 290, 292, 308, 316, 322, 336; Weil, *Geschichte der Chalifen*, iii. 140, 151, 152, 154, 164—169. (K. V. ZETTERSTEEN)

KURČI (from the Eastern Turkish, *kür*, "guard, defence", and suffix *-i* forming nouns indicating trades), he who bears arms, the sword, chief huntsman (Pavet de Courteille, *Dict. Turk. Or.*, p. 425), armourer; sword-cutter; troop of cavalry; captain of the watch; leader of a patrol; gendarmerie; governor of a fortress or of a town (Sulaimān Efendi, *Lughat-i Dhaḡhatāi*, p. 232); sentry, sentinel, guard, inspector (Vambéry, *Caghataische Sprachstudien*, p. 316).

Under the Šafawids, this word, borrowed by Persians, was applied to the bodyguard employed to protect the king's person, who accompanied him to war. After the battle of Čaldīrān, those who were taken prisoners were led before Selim I and massacred (J. von Hammer, *Hist. de l'empire ottomane*, iv. 200).

(CL. HUART)

KURDISTAN, "land of the Kurds". The name can be regarded from two points of view: historical and ethnographical.

I. From the historical point of view the term Kurdistān seems to have been invented by the Salḡjuks as a name for the province including the lands between Āḡharbāidjān and Luristān (Senna, Dainawar, Hamadān, Kirmānshāh etc.) as well as certain a joining areas to the west of Zagros (Shahrizūr, Khuftiyan = Kōi-sandjak?). The capital of the province of Kurdistān was at first Bahār (N. E. of Hamadān) and later Sulṭānābād of Camčamāl (near Bisutūn). Its 16 cantons are enumerated by Hamd Allāh Mustawfī, *Nushat al-Kulūb* (ed. Le Strange, p. 108).

This author also refers to western Kurdistān as Wilāyat-i Arman and Djazira (Arbil and Āmādiya forming part of the latter). In the Mongol period, we have in general little information about the mountainous region containing Hakkārī, Bohtān and Armenian Anti-Taurus. It is possible that in the west the term Kurdistān was at first applied to the region of Darsim, for according to the *Sharaf-nāma*, i. 163, in official documents (*parwā-nadīāt wa-ahkām*) as well as among the Kurds themselves, the term *wilāyat-i Kurdistān* was applied particularly to the fief of Čamišgazak. But by the time of Timur, the *Zafar-nāma*, i. 686, speaks of the Amir of Bidlis as the most important man in all *bilād-i Kurdistān*. In the history of Selim I (*Selim-nāma*, MS. of the Bibl. Nat. Pers. 285, fol. 109, v.) its author Hākīm Idris says that after returning from Tabriz, Selim ordered him to go through the whole country "starting from the beginning of the land of the Kurds (*bilād-i Akrād*), i. e. from Urmia and Ushnū to Āmid and Malāṭiya" in order "to win over the princes and rulers of the country of Kurdistān (*ta'lif-i mulūk wa-hukkām-i mamālik-i Kurdistān*) and to ratify treaties and the protection granted them" (*uhūd wa-imān-i izzān*). Thus the use of the name became generalised and applied to the system of feudal Kurd fiefs, in Turkey as well as Persia; cf. the map in the *Sharaf-nāma*, and the *Travels* of Ewliyā-Čelebi,

iv. 74—75: *Kurdistān diyārī*. Gradually the affairs of Kurdistān were dealt with by the pashas of Diyārbakr, Vān, Baghdād, Erzerūm etc. (cf. Sāmī Bey, *Kāmiūs al-Ālām*, v. 3840). Towards the middle of the sixteenth century the administrative term "wilāyat of Kurdistān" is applied to the *livā* of Diyārbakr, Mush and Darsim; but as a general rule, official Ottoman nomenclature was based on the names of capitals and took no note of ethnographical terms (I have been unable to consult Mükrimin Kḡalil Bey's article on the scope of the term "Kurdistān" in *Yeni-Türk*, 1925, N^o. 21).

As regards early European maps (cf. the specimens in Khanzadian, *Rapport sur l'Unité géographique de l'Arménie*, *Atlas Historique*, Paris 1920, and the geographical analysis in the Report of the Commission of Enquiry by the League of Nations, c. 400, m. 147, 1925; vii., p. 23—28 and the map, N^o. 3), they seem to be based on the *Djihān-numā*, on memories of the ancient Corduene and perhaps on Armenian statements about the Korčaiḡh (cf. KURDS: Origins).

II. Whatever may have been the geographical application of the term "Kurdistān", it is evident that it has nothing to do with the actual dissemination of Kurdish people (cf. the article KURDS). The word Kurdistān in its common acceptance means simply the regions inhabited by Kurds, cf. the Persian expression *Kurdistān-i Khorāsān* referring to the Kurd colonies in Khorāsān. Now the country continuously occupied by Kurds is a strip of territory running from S. E. to N. W. Its length is about 600 miles (Luristān-Malāṭiya) and its breadth averaging 120 to 150 miles is greatest (250 miles) on the line Mawṣil-Ararat (cf. *Djihān-numā*, p. 445—449).

Before 1914, the Kurds were divided among Turkey, Persia and Russia. As a result of the treaty of March 16, 1921 concluded between Moscow and Angora, the majority of the Transcaucasian Kurds are now in Turkish territory. On the other hand by the final settlement of the Mawṣil problem, Turkey lost the Kurds of this wilāyet who are now in 'Irāḡ. In consequence the position at the present day is as follows:

A. In Persia where the position is best known, the Kurds occupy the provinces of Kirmānshāh [q. v.] and Senna [q. v.] as well as the southern part of Āḡharbāidjān (cf. SĀWDJ BULĀK) and the canton of Bidjān. The Kurds also occupy the mountainous region of the districts of Urmia (especially the cantons of: Ushnū, Mergewer, Dasht, Tergewer, Brādōst, Salmās [q. v.] (the cantons: Somāi [q. v.], Cahrik), Khōi (the cantons: Ķotūr, Aland) and Mākū (where the Kurds live on the slopes of Ararat). We find colonies of Kurds in Khorāsān (the khānats of Kūčān, Budjūnūd and Daragaz), in Kirmān, Fārs, northern Luristān, Pusht-i Kūh, Warāmin (near Teheran; cf. Brugsch, *Reise*, ii. 496), Ḳazwin, Mandjil (cf. Rabino, *R.M.M.*, xxvii., p. 259) etc. The number of Persian Kurds may be put at not more than 500,000.

B. As regards Turkey, it is at present (1927) impossible to evaluate fully the repercussions of the war on the geographical distribution of various peoples, such as the flight of the Kurds before Russian troops, the deportation of the Armenians, the expatriation to the 'Irāḡ of the Nestorians of Djūlāmerg, the punitive expeditions of the Turks into Darsim (1921) and to Kharpūt and Diyārbakr (1925). The map given by Sir Mark Sykes

(*The Caliph's Last Heritage*, p. 533) gives an approximate picture of the distribution of the Kurds in Turkey before the war. The principal centres of Kurds lie just along the Turco-Persian frontier (the cantons of Bāyazid, Bargîr, Maḥmūdiya, Albak, Gawar and Shamdinān). Kurds mingled with Christians inhabit the region round and south of Lake Wān as far as the Tigris. Between the Tigris and the Euphrates we find the Kurds mainly to the north of a line joining Feshābūr (below Djazīrat Ibn 'Omar) to Sumaisaṭ (above Biredjik). On the west the Kurds are found considerably across the Euphrates (Ritter, xi. 144). According to Trotter (1878) the limit of their expansion to the south-west was the line Diwrigi-Erzerūm-Ḳarş- (Eriwān). The Kurds are particularly numerous in the country south and west of Bidlis, in the mountains separating Diyārbakr from Mūsh and in the fork formed by the two sources of the Euphrates. It should however be noted that between Arzingjan and Diyārbakr Kurds proper alternate with Zāzā [q. v.], an Iranian people, whose physical appearance, language and religion however prevent us assimilating them directly to the Kurds. On the high plateau of Erzerūm, the Kurds alternate with Turks and Muslim immigrants from the Caucasus (Čerkes, Ossetes etc.). They are found, particularly south and southwest of Erzerūm. In the lands recently incorporated in Turkey, Kurds occupy the western slopes of Ararat (the cantons of Surmali and Kaghizmān). There are outlying Kurd colonies far to the west in Cilicia, in the district of Siwās (the ḡaḡās of Ḳangāl, Ḳoç-ḡişar, Zara and Diwrigi where before the war there were 20,000 Kurds), south of Angora (G. Perrot, *Les Kurdes de l'Haimaneh, Revue des Deux Mondes*, 1/ii., 1865, p. 607—631) etc. According to statistics in Alboitin, *Nowi Wostok*, Moscow 1925, vii. 116, the number of Kurds in Turkey is 1,500,000. Turkish sources seem to put at 96,000 the number of tents of Kurds (nomads?); the publications of the Department for the Supervision of the Tribes ('*ashā'ir müdiriyyeti*) are not yet accessible in western Europe.

C. The Kurds of al-'Irāk (in the former wilāyet of Mawṣil) according to the census of 1923—1924 number 494,007; they occupy the whole of the liwā' of Sulaimāniya (189,900), form a considerable majority in the liwā' of Arbīl (170,650 out of 191,780) and a majority in Kirkūk. The ethnographical position and the migrations of the tribes are summed up in maps N^o. 6 and 8 prepared by the Commission of Enquiry of the League of Nations (c. 400, m. 157, 1925, vii.).

D. In Russian Transcaucasia the Kurds of Eriwān and of Ḳarş in 1910 numbered 125,000 including 25,000 Yazidis. Of the Kurds (speaking Kurdish) only a small number are incorporated in the Soviet Republic of Armenia. On the other hand the old Russian censuses did not reckon separately the Kurds of the cantons of Zangazūr, Djawānshir, Djibra'īl and Aresh in the government of Elizawetpol (= Gandja). These Kurds of Gandja (cf. the evidence of Arab authors on the presence of Kurds in Arrān) now form a separate canton (*uyezd*) in the Soviet Republic of Ādharbāidjān but it seems that their language is the ordinary Turkish of Ādharbāidjān (cf. Čursin, *Azerbaidjanskiye Kurdi in Izw. Kawh. Istor.-Arkheol. Instituta*, Tiflis 1925, iii).

E. As regards Northern Syria, the Kurds long

settled there in the wilāyet of Aleppo (especially at Kilis) before the war numbered 125,000 according to the Russian Consul Zimmermann (cf. also Cuinet, ii. 124; Hartmann, *Das Liwa Halab*, Berlin 1894, p. 83, 92, 95, 96, 98, 99, 100 and 105). According to the *R. M. M.*, liii., p. 317 there are 20,000 Kurds in Syria under the French mandate (to the north of the 'Alawis and at Beilān). There is also a Kurdish quarter in Damascus. On the Kurds of Sindjār, where the administrative position is not quite clear, see the article YAZIDIS.

F. The Kurds had also advanced far to the west. In Balōčistān (q. v.; i., p. 636a) there is an important Kurd tribe settled among the Brahōi (and speaking Brahōi?). Recent researches (Tedesco) have ascertained a certain affinity between Kurdish and Balōči. As regards Afghānistān, the *Sharaf-nāma*, i. 327, noted the move to Ḳharčistān of a part of the Čigāni tribe. Morgenstierne, *Report on a Linguistic Mission to Afghanistan*, Oslo 1926, p. 5 thinks it possible there are people speaking Kurdish west of Herāt.

Bibliography: Cf. the articles ARMENIA, BOHTĀN, SĀWDI-BULĀḲ, SENNA, SHAHRIZŪR, SHAKĀḲ, SHAMDINĀN, SŌMĀI and SULAIMĀNIYA. There is an excellent bibliography of Kurdistān to 1856, in Lerch, *Izslodovaniya*, St. Petersburg 1856, i., p. 5—19 (it is not included in the German translation).

The only general description of all the lands inhabited by the Kurds is in the monumental work of Ritter, *Erdkunde*, 1838, viii., p. 392—400 (Kurds of Ḳhorāsān), 1840, ix., p. 412—762, 1009—1048 (Persian Kurdistān), 1843, x., p. 690—734, 769, 1008 (the sources of the Tigris and Euphrates), 1844, xi., p. 128—146 (Western Kurds), 709, 749, 1007, 1026 etc.

Among works published since 1856 which have not been already quoted above, we may mention: Sandreczki, *Reise nach Mossul*, Stuttgart 1857; F. Jones, *Memoirs . . . on the Journey to the Frontier of Turkey and Persia*, Bombay 1857; O. Blau, *Die Stämme des n.-ö. Kurdistans*, Z. D. M. G., xii., 1858; Bianchi, *Viaggi in Armenia*, Milan 1863; Strecker, *Das obere Zab-Ala Gebiet*, *Peterm. Mitt.*, 1863, p. 257—262; Blau, *Vom Urmia-See nach d. Wan-See*, *Pet. (V. MINORSKY)

KURDS, an Iranian people of Nearer Asia, living in Persia, Transcaucasia, Turkey and al-'Irāk (cf. KURDISTAN). Before 1914 the number of Kurds living in compact bodies or isolated colonies (Khorāsān, Asia Minor, Cilicia, southern Syria) was estimated at two to three millions.

Although many travellers have passed through Kurdistan and there are a large number of important works dealing with the Kurds from the linguistic, historical, ethnographical and political point of view, we still lack a general study devoted to this people. Its preparation is rendered difficult by the fragmentary and sporadic character of our information and by the diversity of the methods employed by the writers on the subject.

A. Origins.

The classification of the Kurds among the Iranian nations is based mainly on linguistic and historical data and does not prejudice the fact there is a complexity of ethnical elements incorporated in them. The type of the latter varies visibly from place to place. It is probable that the expansion of the Kurd element took place from east (Western Persia) to west (Central Kurdistan) but there is nothing to have prevented the existence in Central Kurdistan, before the coming of the Kurds, of a nationality of different origin but bearing a similar name (Ḳardū) which later amalgamated with the Iranian Kurds.

On two Sumerian inscriptions dating from about 2,000 B.C., Thureau Dangin (*Revue d'Assyriologie*, v. 99; vi. 67) found a country *Kar-da-ka* mentioned (in which word the editor tells me privately the initial is *k* and not *ḳ* and the function of the element *ka* is uncertain). This country was beside the "people of Su" (cf. *Z. A.*, xxxv. 230, note 3) which Driver locates south of Lake Van; there is an old fortress Süy in the region of Bidlis (*Sharaf-nāma*, i. 146). A thousand years later Tiglath Pileser waged war on the people called *Kur-ti-e* in the mountains of Azu, which Driver (*ibid.*, p. 400) identifies with the modern Ḳazō (Sasun). The reading *Kur-ti-e* is not certain however.

Herodotos in the fifth century mentions no name like this, but, according to him (iii. 93), the thirteenth nome of the Achaemenid empire included next to the Armenians a Περδική which Nöldeke (*Gramm. d. neusyrischen Spr.*, Leipzig 1868, p. xviii.) and Kiepert (*Alt. Geogr.*, § 81) have connected with the name of Bokhtān (= Bohtān).

The retreat of the Ten Thousand described by Xenophon (401—400 B.C.) made famous the name of Carduks (Καρδοϋχοι) whose country lay to the east of the Kentritēs (Bohtān). From this time onwards we continually find the name on the left bank of the Tigris near Mount Djūdī [q. v.]. In classical authors the country became Corduene (on the numerous forms of this name probably produced by the difficulty of reproducing the Semitic *ḳ*, cf. Driver, *op. cit.*). In Aramaic the district was called Beth-Ḳardū and the present town of Djazirat Ibn 'Omar, Gazartā of Ḳardū. The Armenians had the name Kordudh, the Arabs (Balādhūri, p. 176; Ṭabari, iii., p. 610), Baḳardā (Ḳardai). According to Yāḳūt (iv. 56) who relies on the authority of Ibn al-Aḥḥir, the canton of Baḳardā formed part of Djazirat Ibn 'Omar, contained two hundred villages (al-Thamānīn, Djūdī, Firūz-Shābūr) and was situated on the left bank

of the Tigris opposite Bāzabdā on the right bank (cf. the full analysis of the texts in M. Hartmann, *Bohtan*, p. 33—35). Later, the name which was only applied to the district disappears from Muslim terminology and is replaced by Djazīrat Ibn 'Omar, Bohtān etc. To the Armenians and Arabs the territory of Ʒardū in the strict sense had a very limited application. We do not know the exact frontiers of the province of Corduene; its three towns, Sareisa, Satalka and Pinaka (= Finik) lay on the Tigris, but the statement of Strabo (ix. 12, 4) is remarkable, according to which the term Γορδουαία ὄρη was sometimes applied to the mountains between the modern Diyārbakr and Mūsh.

Now, who were the Καρδοῦχοι whose name undoubtedly survived in the later names (the termination -χοι must represent the Armenian plural in -kh, which is perhaps explained by the fact that the Greeks learned this name from an Armenian)? According to Xenophon (iv. 3, 1) the Karduchoi recognised neither the authority of King Artaxerxes, nor that of Armenia. When in the first century B. C., Corduene was conquered by Tigranes II he had its king Zarbienus executed. In 115 A. D. the king of Corduene was called Manisarus. According to Hübschmann, *Die altarm. Ortsnamen*, p. 239 and *Arm. Gramm.*, 1897, 1/ii, p. 518—520, the province of Corduene was only superficially armenicised.

There is nothing really surprising in finding at the time of Xenophon an Iranian tribe settled to the north of the Tigris, but we have nothing but the evidence of the name from which to judge the ethnology of the Karduchoi. The name has Semitic analogies (Accad. Assy. Ʒardu, "strong", "hero", Ʒarādū "to be strong"); on the other hand there is a certain consonantal resemblance with the name of a people Khaldī, better known under the Assyrian form Urartu Urashṭu, in Hebrew Ararat, among the Greeks Αλαρδίοι, Χάλδοι and sometimes Χαλδαίοι. This people appeared in Armenia towards the end of the ixth century B. C. and afterwards established a powerful kingdom in the region of Lake Vān which lasted until the beginning of the sixth century. Lehmann-Haupt, *Mater. z. älter. Gesch. Armeniens*, Göttingen 1907, p. 123, sees in them Khaldī immigrants from the west; E. Mayer, *Gesch. des Altertums*, 1/ii, 1913, § 474 seeks their original home on the central Araxes. As a result of the arrival of the Armenians, towards the viith century, the Khaldī were dispersed and driven towards the mountains (*Cyropaedia*, iii. 1—3). But their name survived in the toponymy of the region north of Lake Vān (the Byzantine theme Χαλδία near Trebizond the town of Khilāt = Akhlāt, etc.; cf. Belck and Lehmann, *Z. A.*, 1894, ix., p. 84; de Goeje, *ibid.*, x., p. 100; Streck, *ibid.*, xiv., p. 112). Parallels for the name Khaldī have been sought on the other side of the Caucasus: the Georgians are called *Khartu-eli-khart-ul-i* (in Svanian *khyard*; in Mingrelian, *khort-u*; cf. Adontz, *Armenia v epokhu Iustiniana*, St. Petersburg 1908, p. 398).

Whether we identify the Ʒardū as Semites or an indigenous people, it is certain that the land of the ancient Karduchoi is at the present day one of the principle centres of the Kurds. It has therefore been concluded that the Karduchoi were identical with the Kurds and this view was still considered axiomatic at the beginning of the xth century; cf. *Grundriss d. Iran. Phil.*, ii. 464.

Going a step further the Kurds were directly connected with the Χάλδοι; Reiske in his commentary on Constantine Porphyrogenetos, *De Ceremoniis*, B. 13 (713, 11) said "Chaldi et Kordi vel Curti, Gordyaei iidem". A similar opinion is expressed in the title of Lerch's work (1856), *Récherches sur les Kurdes Iraniens et sur leurs Ancêtres, les Chaldéens Septentrionaux*.

A new turn was given to the problem by the researches of M. Hartmann, Nöldeke and Weissbach, who showed the philological necessity of distinguishing between the stems *Kurd* and *Ʒardū*. These scholars at the same time proposed to recognise the Kurds in the Κύρτιοι, Cyrtii mentioned by classical writers in Media and Persia (Strabo, xi. 13, 3 and xv. 3, 1). This hypothesis is confirmed by the presence in Fārs of numerous Kurdish tribes in the Sāsānian period (cf. *Kārnamak-i Artakhschir-i Pāpakān*, translated by Nöldeke, Göttingen 1879, p. 37, 48 and the testimony of Arab writers).

The justifiable distinction between the names *Kurd* and *Ʒardū* does not, however, decide the important question, how the Cyrtii (= Iranian Kurds) came to colonise lands west of the Zagros, the country of the ancient Ʒardū and the mountains of the Anti-Taurus as far as northern Syria. The problem still requires careful research. In the first place the Median and Persian conquests must have brought about considerable displacements of the Iranian peoples. We have an example in the migrations of a part of the Asagartiya whose original home was in Sistān. In the Assyrian period we find these Sagartians in Media (*Zikirtu* or *Zakruti*, cf. Streck, *Z. A.*, xiv. 146) and in the time of Darius (Bahistūn inscr. 2, 90) their capital was already in the Assyrian plain at Arbela, where Darius had their chief Citrantakhma executed, whose portrait on the rock of Bisutūn suggests a Kurdish type (L. W. King, *The Sculptures of Behistan*, London 1907). Between 220 and 171 B. C. we find Cyrtii mercenaries taking part in the wars between Rome, the Seleucids and the kings of Pergamon (*Livy*, xlii. 58, 13; xxxvii. 40, 9; Polybius, v. 52, 5; cf. Weissbach in Pauly-Wissowa², s. v. *Cyrtii*, and A. J. Reinach, *Les Mercenaires de Pergame*, *Revue Archéologique*, 1909, p. 115—119). A very interesting state of transition is seen from the Armenian Geography of the viith century, in the case of the province of Korčēkh (according to Adontz, *Armenia*, p. 418: Korčēkh is from **kortīč-aikh* where *kortīč* means "Kurd" as *atrpātīč* means "inhabitant of Atropatene"). In the time of Faustus Byzantinus (ivth century) Korčēkh was only a canton near Salmās [q. v.]. As a province, Korčēkh stretched from Djūlāmerg to Djazīrat Ibn 'Omar and included the following cantons: Kordukh, the three Kordrikh (Kordikh), Aituanikh, Aigarkh, Mothoaukh (Othoaukh), Orsiraikh (Orisankh), Karathunikh (Sara-ponikh), Čahuk and Little Atbak (Hartmann, *Bohtan*, p. 93; Hübschmann, *Die altarm. Ortsnamen*, p. 255—259).

We see the changes that were gradually brought about. Of the three districts, Kordukh, Kordikh and Tmorikh, which Faustus mentions in place of the ancient Corduene, Kordukh had become a mere canton of Korčēkh and Tmorikh disappeared altogether to the advantage of Kordrikh (Kordikh) of which simply upper, middle and lower cantons were distinguished.

Hübschmann (*l. c.*, p. 385) confines himself to

distinguishing between the Kordrikh (Kordikh) or the *Κόρριοι* but in general the linguistic distinction established by M. Hartmann and Nöldeke does not preclude the existence of hybrid and corrupt forms (M. Hartmann, *l. c.*, 92: "es gingen wohl schon früh die Namen durcheinander"). Nöldeke even distinguishes a third group of names: Aramaic *Ḳartēwāyē* (Arabic *Ḳartāwiya*?), meaning the true Kurds; cf. Hoffmann, *Auszüge*, etc., p. 207, note 1639.

We thus find that about the period of the Arab conquest a single ethnical term *Kurd* (plur. *Akrād*) was beginning to be applied to an amalgamation of Iranian or iranised tribes. Among the latter, some were autochthonous (the *Ḳardū*; the *Tmorikh*/*Ṭamurayē* in the district of which *Alḳi* = Elk was the capital; the *Xodolṭrai* [= al-*Ḳhuwaithiya*] in the canton of *Khoit* of *Sāsūn*, the *Orṭayē* [= al-*Arṭān*] in the bend of the *Euphrates*); some were Semites (cf. the popular genealogies of the *Kurd* tribes) and some probably Armenian (it is said that the *Mamakān* tribe is of *Mamikonian* origin).

In the twentieth century the existence of an Iranian non-Kurdish element among the Kurds had been definitely established (the *Gürān-Zāzā* group). In several districts a social stratification based on the political domination of newcomers had been established (at *Sulaimāniya* [q.v.], at *Sāwdj-Bulāk* [q.v.], at *Ḳotūr* where we find remnants of the *Küresinli* [?]) in subjection to the *Shakāk*). Systematic investigation may discover traces of ancient peoples overlaid by a Kurdish element giving an appearance of unity.

Genealogies and popular Etymologies. The Muslim sources and Kurdish traditions do not help us to solve the problem of the origin of the Kurds. *Mas'ūdi* already (*Murūdj*, ed. Barbier de Meynard, iii. 251) speaks of their descent from those Persians who escaped from the tyrant *Dahḥāk*. This legend is best known from the version of the *Shāh-nāma* (Macan, i. 27—28; Mahl, i. 71; Vullers, i. 36, verses 29—38). In 1812 *Morier* (*Second Journey*, p. 357) mentions the celebration at *Damāwand* (on 31st August) of a festival commemorating the delivery of Persia from the tyranny of *Dahḥāk*, known as the '*Aid-i Kurdī*', "The *Kurd* festival". On the other hand the Kurds sought Arab genealogies for themselves. Some (*Murūdj*, iii. 253) claimed as their ancestor *Rabī'a b. Nizār b. Ma'add*, others *Muḍar b. Nizār*, both eponyms of the districts of *Diyār-Rabī'a* (*Mōṣul*) and *Diyār-Muḍar* (*Raḳḳa*). They said the Kurds had separated from the Arab stock as a result of feuds with the *Ghassānids* and, having retired to the mountains, intermingled with strangers and forgot their mother tongue. Of more interest is a series of ancestors among whom we find *Kurd b. Mard* (cf. *oi Mapdoi* the neighbours of the Kurds) b. *Ṣa'sa'a b. Ḥarb b. Ḥawāzin* (*Mas'ūdi*, *ibid.* and *al-Ṭanbih*, p. 88—91: *Kurd b. Isfandiādh b. Manūshahr*; *Fbn Hawḳal*, p. 185—187: *Kurd b. Mard b. 'Amr*). All these genealogies may contain a few grains of historical fact (iranisation of Semites, intermingling of the tribes of *Zagros* and of *Fārs*).

Nor is there any lack of popular etymologies. The attempt has been made (*Murūdj*, iii. 249) to connect the name with the Arabic root *karrada*; the Kurds would thus be the children of young slaves and the demon *Djasad* ("driven out" by

Solomon). Very frequently (cf. Driver, *J. R. A. S.*, 1923, p. 403) the name *Kurd* is connected with the Persian word *gurd* (hero) although this root really had a *g* in *Pahlavi* and goes back to the root *var* "to protect" (Horn, *Neuper. Etymol.*, p. 200).

In later times the names of tribes were often explained by those of their eponyms. The *Shāraf-nāma*, i. 158, makes all the Kurds (the *Badjnawī* and *Bokhtī* tribes) come from *Badjan* and *Bokht*; the former of these names may be connected with that of *Basn-āw*, a tributary of the *Tigris* (Andreas in Hartmann, p. 131) while the second recalls the *Πακρυκή* of *Herodotos*, or the "dragon-king" (*Kurd*?) *Haftān-Bokht* killed by *Artakhsir-i Pāpakān*; cf. Nöldeke, *Ṭabari*, p. 11. According to another legend, especially popular in the north and west, the Kurds were at one time divided into two branches, *Milān* and *Zilān*, the former coming from Arabia and the latter from the east; the *Zilān* were regarded as an inferior race (cf. M. Sykes, *Jour. R. Anthropol. Inst.*, 1908, xxxviii, p. 470).

B. History.

We have detailed notices of the Kurds from the time of the Arab conquest onwards. During the five first centuries of the *Hidjra* the Kurds frequently played a considerable part in events and often took the initiative in them. Several *Kurd* dynasties arose at this time. Waves of Turk and Mongol invaders seem to have submerged the Kurds from the vith to the xth century A.D. But the period of the wars between the *Ottoman Sultāns* and the *Safawī Shāhs* produced a state of affairs in *Kurdistān* favourable for the growth of a feudal system, of which a faithful picture is given in the *Shāraf-nāma* (1003 = 1596). The *Turco-Persian* frontier became gradually stabilised and the *Persians* fell back behind the wall of the *Zagros* and its northern extension. Then Turkey began the work of strengthening the authority of the central power within her eastern provinces. Towards the end of the xixth century the last *Kurdish* principalities disappeared in Turkish territory (*Hakkāri*, *Bidlis*, *Sulaimāniya*) and in *Persia* (*Ardalān*). But the great tribes still exist and their cadres assure the preservation of the *Kurdish* element with its social and ethnical peculiarities. *Persia* hardly ever interferes in the domestic affairs of her *Kurdish* tribes while *Turkey* tries to use the Kurds as a political support for the central authority. Sometimes the Kurds are overwhelmed with favours and sometimes they have to resist attempts to abolish the remnants of their ancient autonomy. Several risings of the Kurds took place in the xixth century and towards the beginning of the xxth century a *Kurd* movement added one

more to the nationalist agitators within the Turkish empire. The revolution of 1908 drew the Kurds into politics; newspapers, magazines and Kurd societies began to multiply. During the war of 1914—1918 the idea of an autonomous Kurdistan was first mooted by the Powers, but the plan has only been partially realised and only so far as the part of the old wilāyet of Mawṣil attached to the new state of Irāq is concerned.

The Kurds after the Arab conquest. We shall find it useful to begin by collecting the information given by Arab authors regarding the distribution of the Kurd tribes.

The term Kurdistan being unknown before the time of the Saldjūks, information regarding the Kurds is usually to be found in the Arab authors under such heads as Zawzān, *Khilāt*, Armīniya, Ādharbāidjān, Dījal, Fārs, etc. (cf. Driver, *Dispersion of the Kurds in Ancient Times*, *J.R.A.S.*, Oct. 1926, p. 563—572).

Mas'ūdī (about 332 = 943) and Iṣṭakhri (340 = 951) are the first to give systematic information about the Kurds. In the *Murūdj al-Dhahab* (iii. 253) Mas'ūdī enumerates the following tribes: at Dainawar and Hamadhān: *Shuhjdān*; at Kangawar: *Mādjurdān*; in Ādharbāidjān (so the text should be emended): *Hadhbāni* and *Sarāt* (probably *Shurāt* = "*Khāridjis* [q.v.]; cf. the story of Daisam below); in Dījal: *Shādandjān*, *Lazba* (Lurri?), *Mādandjān*, *Mazdānakān*, *Bārisān*, *Khālī* (Djalālī), *Djābārki*, *Djāwāni*, *Mustakān*; in Syria: *Dabābila* etc.; at Mawṣil and Dījūdi the Christian Kurds: *al-Ya'qūbiya* ("Jacobites") and the *Djurkān* (*Djurughān*). To this list the *Tanbih* of the same author (p. 88—91) only adds *Bāzindjān* (cf. Iṣṭakhri, p. 115), *Nashawira*, *Būdhikān* and *Kikān* (at the present day found near Marāsh) but he gives a list of the places where there were Kurds: the *rumūm* (*zumūm*?) of Fārs, Kirmān, Sidjīstān, *Khōrāsān* (Iṣṭakhri, p. 282: a Kurd village in the canton of Asadābād), *Iṣfahān* (a section of the *Bāzandjān* tribe and a flourishing town described as Kurd, *Ya'qūbi*, p. 275; Iṣṭakhri, p. 125), *Dījal*, notably *Māh Kūfa*, *Māh Baṣra*, *Māh Sabadhān* (*Māsabadhān*) and the two *Īghār* (i.e. *Karadj Ibn Dulaf* and *Burdj*), *Hamadhān*, *Shahrizūr*, with its dependencies *Darābād* and *Šamghān* (*Zimkān*), *Ādharbāidjān*, *Armenia* (at *Dwin* on the *Araxes* the Kurds lived in houses built of clay and of stone; Muḳaddasī, p. 277), *Arrān* (one of the gates of *Barda'a* was called *Bāb al-Akrād* and *Ibn Miskawaihi* says that at the invasion of the *Rūs* in 332 [1042] the local governor had Kurds under his command), *Bailakān*, *Bāb al-Abwāb* (*Darband*), *Djazīra*, *Syria* and *al-Thughūr* (i.e. the line of fortresses along the Cilician frontier).

Iṣṭakhri, p. 98 particularly mentions 5 *rumūm* in Fārs, this term being applied to districts over which the Kurds were distributed (in spite of de Goeje, *B. G. A.*, iv., p. 250, it is preferable to keep the reading *ramni-rumūm* [from Persian *ramm*, "flock", "crowd"] for it is improbable that *zōma* could have given a plural *zumūm*). Each *ramm* had its town, its Kurd chief in charge of the *khārādj* and responsible for public safety. These *rumūm* were: 1. *Djilōya*, or *Rāmidjān*, bordered by *Iṣfahān* and *Khūzistān*; 2. *Lawālīdjān*, between *Shīrāz* and the Persian Gulf; 3. *Dīwān*, in the *Kūra* of *Sābur*; 4. *Kāriyān* in the direction of *Kirmān*; 5. *Shāhriyār*, alongside of *Iṣfahān* also called *Bāzandjān* after

the principal tribe, a part of which had been transferred to the province of *Iṣfahān*. As a supplement to the list of *rumūm*, Iṣṭakhri, p. 114, gives a list of 33 nomad tribes (*ḥayy*, plur. *ahyā*) of Fārs, based on the records of the *Diwān al-Šadāqāt* and reproduced by *Ibn Ḥawqāl*, p. 185—187 and *Muḳaddasī*, p. 446: *Kirmāni*, *Rāmāni*, *Mudaththir*, *Muḥammad b. Baṣhar*, *Baḳīli* (Muḳaddasī: *Tha'labi*), *Bundādmahri*, *Muḥammad b. Iṣhāk*, *Sabāhi*, *Iṣhāki*, *Adharkāni*, *Shahraki*, *Ṭahmādhni*, *Zabādi*, *Shahrawi*, *Bundādaki*, *Khusrawi*, *Zandji*, *Safari*, *Shahyāri*, *Mihraḳi*, *Mubāraki*, *Iṣhtāmharī*, *Shāhūni*, *Furāti*, *Salmūni*, *Širi*, *Āzāddokhti*, *Barāz-dokhti*, *Muṭallabi*, *Mamālī*, *Shāhkāni*, *Kadji*, *Djalili*, in all 500,000 families living in tents.

The *Fārs-nāma* (c. 500 = 1107) says, p. 168, that the Kurds of the old large *ramm* of *Djilōya*, *Dhiwān*, *Lawālīdjān*, *Kāriyān* and *Bāzandjān*, who formed the most brilliant element in the old army of Fārs, all perished in the wars at the time of the introduction of Islām, with the exception of a single 'Alak, who became a Muslim and left descendants. Other Kurds were transferred from *Iṣfahān* to Fārs by 'Aḍud al-Dawla. It is difficult to admit that 500,000 (?) families of Kurds were exterminated, but we must recognise the possibility of regroupings among the tribes of Fārs and of their denationalisation. The old *ramm* of *Djilōya* (*Kūh-Galū*) is now inhabited by *Lurs*; we do not know how long they have been there. For the rest Iṣṭakhri's list mentions a tribe *al-Lurriya* (variant: *Lazba*?) among the Kurds of Fārs. On the other hand the *Fārs-nāma* distinguishes from the Kurds the *Shabānkara* [q.v.] clans, who had become very powerful in Fārs at the time of the last *Būyids*. The *Masālik al-Abṣār* of *al-'Umari* speaks of the *Shabānkara* under a separate heading and the *Sharaf-nāma* does not mention them among the Kurd dynasties. One of their clans however (*Rāmāni*) bears the name of one of the "Kurd" tribes of Iṣṭakhri. Everything then suggests that the Kurds of Fārs differed considerably from the tribes of Kurdistan (cf. *SHUL* and *LUR*).

The term *al-Zawzān* which corresponds broadly to central Kurdistan (*zōzān* in Kurdish "summer pasturages") is not well defined. According to *Ibn Ḥawqāl*, p. 250, the king of *Zawzān* was called *al-Dairāni* (= *Deranik*, Armenian king of *Was-purakān*). *Muḳaddasī*, p. 137 regards *Zawzān* as a *nāhiya* of *Djazīrat Ibn 'Omar*. Later this region which had a mixed Kurd and Christian population extended in area. According to *Ibn al-Athīr* (in *Yāqūt*, ii. 257) *al-Zawzān* began at two days' journey from *Mawṣil* and stretched to the borders of *Khilāt*; on the *Ādharbāidjān* side it extended to *Salmās*. Many strong places belonged to the *Bash-nawī* and *Bokhti* Kurds; the former held *Barkā*, *Bashīr* [and *Fanak*]; to the latter belonged: *Djur-dhakīl* (*Gurgil*) residence of their *malik* *Atil* (*Sharaf-nāma*, i. 117: *Nash Atil*), *'Allūs*, *Bāz al-ḥamrā*. To the lords of *Mawṣil* (the *Zangi*) belonged: *Alkī* (= *Elk*), *Arwakh*, *Bakhauxha* (= *Bektūi* in *Barwāri*), *Barkhō*, *Kingawar* (?), *Nirwa* (east of 'Akr?) and *Khawshab*. The text of *Yāqūt* is not very certain; in any case the reference here may be to Kurd strongholds gradually annexed by the *Ḥamdānids* and the *Zangī* (see below).

The Kurds under the Caliphs and *Būyids*. Mas'ūdī (*Murūdj*, iii. 249) has preserved traditions from the pre-Muḥammadan period of feuds between the Arab princes of *Ghassān* [q.v.]

and the Kurds. The Muslim Arabs came into contact with the Kurds after the occupation of Takrit and Ḥulwān in 16 (637). Sa'd b. Abī Wakkāṣ marched on Mawṣil where the districts with a Kurd population were occupied (al-Mardī Bā-Nuḥadhrah, Bā-Adhrā, Ḥibtūn, Dāsīn etc.); cf. Ibn al-Athīr, *al-Kāmil*, ed. Tornberg, ii. 408. The conquest of the region was completed by 'Iyād b. Ghānam and 'Uṭba (Balādhuri, *Futūḥ al-Buldān*, ed. de Goeje, p. 331). The *Baṭriq* of al-Zawzān in 19 (640) obtained confirmation of his authority on payment of *kharāj* (*Futūḥ*, p. 176). In Susiana in 18 (639) the Arabs fought against the Kurds, who had taken up the cause of al-Hurmuzān, Persian governor of Ahwāz (*Kāmil*, ii. 425). In Fārs likewise the Kurds supported the Persians in 23 (642) at the defence of Fasā and Darābdjird (*ibid.*, iii. 32). 'Omar had to send several expeditions against the Kurds of Ahwāz (*Futūḥ*, p. 382, 389; *Kāmil*, iii. 37). On the other hand in the reign of 'Omar the Kurds invaded the region of the central Karkhā (Ṣaimara, Māsabadhān) the language of which was still Persian in the time of Ya'qūbī (*B. G. A.*, vii. 236). The Arabs had reached Shahrizūr before Islām (Ibn al-Faḳīh, p. 130), but the final occupation of Shahrizūr, Dārahād and Ṣamghān in 22 (643) was only achieved after bloody fighting (*Futūḥ*, p. 334; *Kāmil*, iii. 29). In the south Abū Mūsā, governor of Baṣra, had to put down risings of the Kurds at Berūdh and Balasdjān in 25 (645), but the Kurds, forcibly converted to Islām, apostatised en masse (*Kāmil*, ii. 66, 76). Under the caliph 'Alī, the Kurds, along with the Persians and Christians, took part in the rebellion of al-Khirrit near Ahwāz and in Fārs, but the chief was defeated at Rām-Hurmuz (*ibid.*, iii. 309).

Al-Mukhtār, who had seized Armenia and Ādharbāidjān in the reign of the Omayyad caliph 'Abd al-Malik, appointed in 66 (685) a governor at Ḥulwān whose task was to fight the Kurds (*Kāmil*, iv. 187) but the death of al-Mukhtār prevented the plan from being carried out. Under the same caliph the rebel 'Abd al-Rahmān made an alliance in 83 (702) with the Kurds of Sābūr in Fārs (*ibid.*, iv. 352). In 90 (708) the Kurds ravaged Fārs and were punished by al-Ḥadjjādī. In 129 (746) the Kurds of Sābūr resisted the ally of the Khārdjis, Sulaimān who had rebelled against the caliph Marwān II and had besieged Sābūr (*ibid.*, iv. 387, 341; v. 283). The caliph Marwān himself was the son of a Kurdish slave-girl (Ṭabarī, iii. i. 51) whose blue eyes and fair complexion he had inherited (Sir W. Muir, *The Caliphate*, London 1891, p. 429).

Under the 'Abbāsīd Caliph Manṣūr the invasion of Armenia by the Khazārs, 147 (764) resulted in numerous risings. A few years later the Kurds (*intishār al-Akrād*) are again mentioned in connection with the rising at Mawṣil and its repercussions in Hamadān (*Kāmil*, v. 448; vi. 9). Dja'far, son of Manṣūr, was the son of a Kurdish slave-girl (Ṭabarī, iii. 442).

In the reign of al-Mu'taṣim, a Kurd rebellion is mentioned under 225 (839); it broke out in the district of Mawṣil, led by Dja'far b. Fahardjis, a scion of a noble Kurd family. Defeated at Bābaghesh, Dja'far took refuge in the mountains of Dāsīn where he defeated the troops of the Caliph. A new army commanded by the Turk Aitākḥ put an end to the rebellion (*Kāmil*, vi.

360—361). A Kurd rising broke out in 231 (845) in the regions of Iṣfahān, Djibāl and Fārs; it was speedily suppressed by the Turk general Waṣif.

The Kurds of Mawṣil in 252 (866) joined the Khāridjī Musāwir who had seized Mawṣil. In 262 (875) they played a considerable part in the Zandjī slave-revolt (cf. Nöldeke, *Sketches from Eastern History*, London, p. 146—175: *A Servile War in the East*) led by an 'Alid Khāridjī (?) 'Alī Muḥammad called al-Khabīth and in the rising of Ya'qūb al-Ṣaffār, founder of the Ṣaffārid dynasty [q. v.]. At Ahwāz, Ya'qūb appointed a Kurd lieutenant Muḥammad b. 'Ubaidallāh b. Hazārmard, who, cherishing ambitious plans, engaged in secret negotiations with al-Khabīth. With reinforcements sent by the latter, Muḥammad marched on Sūs but was defeated by Aḥmad b. Laithōya; the latter, also a Kurd and commander of the Kurd levies, had been sent by the Caliph to put down Ya'qūb's rising (Ibn Khallikān, *Wafayāt*, ed. de Slane, iv. 304—308). When Aḥmad had departed, Muḥammad, after securing from al-Khabīth further reinforcements consisting partly of Kurds, seized Shustar where, according to the arrangement he was to have had the *Khutba* read in the name of al-Khabīth, but instead he did it in the names of the Caliph al-Mu'tamid and his adversary Ya'qūb al-Ṣaffār. His Zandjī allies deserted Muḥammad and Shustar was reoccupied by Ibn Laithōya. Muḥammad retired to Rām-Hurmuz but he was dislodged from it by al-Khabīth's generals. As a result of difficulties with the Dārnān Kurds, Muḥammad again sought the help of al-Khabīth. The latter sent him troops which Muḥammad sent into battle but suddenly left them in the lurch and attacked them. To avoid a breach with al-Khabīth Muḥammad agreed to proclaim him Caliph. The death of Ya'qūb (265 = 879) and of al-Khabīth (270 = 883) put an end to these exploits (*Kāmil*, vii. 264).

About 281 (894) the Kurds were among the partisans of the Arab Ḥamdān b. Ḥamdūn (cf. ḤAMDANIDS) when he established himself in Mawṣil. The Kurd rebellion raised in 284 (897) by Abū Lailī did not last long (*ibid.*, vii. 325, 337). In 293 (906) the Hadhbānī Kurds led by their chief Muḥammad b. Bilāl laid waste the region of Niniveh. 'Abdallāh b. Ḥamdān, the new governor of Mawṣil, pursued them but suffered a reverse at Ma'qūba. With reinforcements sent by the Caliph he resumed next year the pursuit of 5,000 Hadhbānī families. The Kurds began negotiations to gain time and retired to Ādharbāidjān. 'Abdallāh returned to Mawṣil and with new troops set out once more against the Hadhbānī who had entrenched themselves at Djabal al-Salaḥ (probably Lāhidjān, cf. SĀWDJ-BULĀK). The Hadhbānī were forced to surrender and their pacification was followed by that of the Ḥumaidī tribe and of the people of Djabal Dāsīn (*ibid.*, vii. 371). In the reign of the Caliph al-Muktadir, the Kurds plundered the environs of Mawṣil but were punished by the Ḥamdānīd government; the Djalālī tribe put up a particularly stubborn resistance (*ibid.*, viii. 118). Under the year 337 (943) Ibn Miskawaih, *Tadjarib al-Umam*, *G.M.S.*, vi. 105 speaks of the expedition of the Ḥamdānīd Husain against Ādharbāidjān; on this occasion he had as an ally Dja'far b. Shakkōya chief of the Hadhbānī who were settled at Salmās.

About this time Daisam b. Ibrāhīm appeared on the scene and his adventurous life is closely

associated with the Kurds. He himself was the son of an Arab by a Kurd woman. His followers were Kurds with the exception of a small body of Dailamis. Daisam was a *Khāridjī*. He seized Ādharbāidjān after Yūsuf b. Abi 'l-Sādj and in 327 (938) used his Kurds to drive out Lashkāri b. Mardi, one of the lieutenants of the Ziyārid Washmīr. But the Musāfirid Marzubān, a noted *Shī'ī*, succeeded in taking Ādharbāidjān from Daisam and the latter took refuge with his friend Hādjik b. al-Dairānī (the Armenian king of Waspurakan Khačik-Gaghik, son of Deranik). Then the people of Tabriz appealed to Daisam but again he suffered a reverse and with the consent of the Musāfirids fell back to Tārum. In 337, Marzubān was made prisoner by the Būyid Rukn al-Dawla who sent a representative to Ādharbāidjān. Marzubān's brother Wahsūdān then thought of Daisam to whom his Kurds had remained faithful and sent him against Rukn al-Dawla's representative. Daisam was defeated but held out in Ardabil and Bardha'a. When Marzubān returned from his captivity, Daisam had to take refuge first in Armenia and then in Baghdad where the Būyid Mu'izz al-Dawla treated him generously. As his friends were urging him to return to Ādharbāidjān, he went to the Ḥamdānids of Mawṣil and Syria to ask for assistance. In the absence of Marzubān, Daisam returned to Salmās in 344 where he had the *khutba* read in the name of Saif al-Dawla of Syria. Once more driven out by Marzubān, Daisam sought refuge with his Armenian friends. Ibn al-Dairānī (Deranik b. Khačik) had to hand him over to Marzubān much against his will. Daisam was blinded and died in prison in 345 (*Tadjarib*, ed. Amedroz, i. 345; ii. 148—151; *Kāmil*, viii. 289, 361, 375—377).

During Marzubān's captivity in Raiy, several independent governors set up in the northwest of Persia. One of them (about 340/951) was Muḥammad Shaddād b. Kaṭṭū of the Rawādī tribe out of which later sprang the great dynasty of the Aiyūbids. The principal fiefs of the Shaddādids were Dabil and Gandja. The Shaddādids were allies of the Byzantines and of the Saljuqs. In 465 (1072) Abū Suwār bought Ani for his young son Manūče. From this time onwards the dynasty was divided into two branches: that of Gandja and that of Ani. In 1124, Ani was taken by the Georgians but between 520 (1126) and 557 (1161) and again from 1165 to 1174, Ani was again held by the Shaddādids. The Shaddādids were enlightened princes and left a number of remarkable buildings. Cf. the articles ARRĀN, DWĪN, GANDJA, SHADDĀD; the Armenian bibliography in Lynch, *Armenia*, i. 363—367; cf. also Barthold in the appendix to his Russian translation of *Muham. Dynasties*, by Lane-Poole, St. Petersburg 1899, p. 294; Barthold, *Pers. nadpis' na.... meketi Manūče*, Aniyskaya Seriya, N^o. 5; N. Marr, *Ešče o slove "celebi"* *Zapiski*, 1911, xx., p. 120; E. D. Ross, *On Three Muhammadan Dynasties*, Asia Major, 11/jii., 1925, p. 215.

In 349 (960) a pretender appeared in Ādharbāidjān. He was called Ishāk b. 'Isā and was supported by Faḍl, chief of the Kaṭṭānī (?) Kurds, while his adversary the Musāfirid Džastān b. Marzubān relied on Hādjbānī support. Ishāk was soon disposed of (*Tadjarib*, ii. 179). The Kurds and the Dailamis also played a considerable part in the quarrels between Džastān and his brother Našir al-Dawla and between Ibrāhīm b. Marzubān

and his cousin Ismā'īl b. Wahsūdān (*Tadjarib*, ii. 219, 229; *Kāmil*, viii. 420—423).

About 348 (959) the second Kurd dynasty arose in al-Djibāl (Lane-Poole, *Mohamm. Dynasties*, N^o. 57) founded by Ḥasanwaih (Ḥasanōya) b. Ḥasan (q.v.; cf. also the *Sharaf-nāma*, i. 20—23), chief of the Barzikānī (Barzīnī) tribe who had assisted the Būyid Rukn al-Dawla on his expedition to Khorāsān. Rukn al-Dawla showed great tolerance to the Kurds and when someone complained to him of their excesses he used to say: "Even the Kurds must live" (*Tadjarib*, ii. 281). Ibn al-Athīr (viii. 519) praises the noble character of Ḥasanwaih, his prudent policy and the purity of his morals. When Ḥasanwaih died in 369 (979) in his capital Sarmādj (south of Bisutūn), 'Aḍud al-Dawla overran his possessions (Hamadān, Dainawar, Nihāwand) to bring it under his authority, but in the end he granted investiture to Badr b. Ḥasanwaih (369—405 = 979—1014) [q. v.] who remained loyal to 'Aḍud al-Dawla and even fought against his own brothers who had taken the side of the rebel Fakhr al-Dawla. The Caliph gave Badr the title of *Nāṣir al-Din wa 'l-Dawla*. The historians give an extremely favourable verdict on Badr; he had his tribe educated, distributed taxation fairly and protected the peasants (*Tadjarib*, [Abū Shudjā], p. 287—299, 327; [Ibn Muḥassin], p. 429, 449—454; 'Utbi, *Kiṭābi Yamīnī*, transl. Reynolds, p. 424). Badr's successor Zāhir (Tāhir?) only reigned a year and in 406 (1015) was driven out by the Būyid Shams al-Dawla. Ḥasanwaih's uncle Wandād, chief of the 'Aishiya section, died in 349 (960), his brother Abū 'l-Ḥanā'im in 350 (961) and a little later his son Abū Salīm Daisam, the last of this collateral branch was dispossessed of his castles (Kaṣān or Kaṣān [Kaṣān? near Bābā Yādīgār on the Zohāb], Ḡhānim-ābād, etc.). 'Aḍud al-Dawla had to deal with the Kurds on several occasions, but he was much more severe with them than his father Rukn al-Dawla. In 368 (978), the Kurd Ibn Bādōya with the help of the Ḥamdānid Abū Taghlib became an independent ruler at Ardamušt (= Kawāshī near Djabal-Djūdi, Yāqūt, i. 199) but soon allowed himself to be seduced by the promises of 'Aḍud al-Dawla (*Tadjarib*, ii. 392). In 369 (979) the latter sent an expedition against the Kurds of Shahrizūr whom he wished to separate from the Banū Shaibān Beduins who had business and matrimonial ties with them. The town of Shahrizūr was occupied and the Arabs went back to the desert (*Tadjarib*, ii. 398; *Kāmil*, viii. 516).

Another expedition was sent in 370 (980) against the Hakkāri Kurds who were besieged and surrendered, relying on a promise that their lives would be spared. But the leader of the expedition crucified them along the side of the road for five farsakhs between Ma'alḥāyā and Mawṣil (*Kāmil*, viii. 521).

Even in the lifetime of 'Aḍud al-Dawla, the Ḥumaidī chief, Abū 'Abdallāh Ḥusain b. Duṣḥandj (or Abū Shudjā' Bādh b. Dustāk) known as Bādh has attained considerable notoriety. At first a shepherd, he gradually rose to be lord of Ardjīsh, Āmid and Maiyāfāriḳin. A rising in Naṣībīn brought him into conflict with Šamsām al-Dawla. Bādh defeated the latter's forces at Bā-Djulāiyā (on the Khabūr al-Ḥusainiya in the canton of Kawāshī = Ardamušt) seized Mawṣil and was planning a march on Baghdad to end Būyid rule

when he was defeated by Šamsām al-Dawla. He fell back on Maiyāfāriqin and, by an arrangement with the captain of the army sent against him, secured possession of Diyārbakr and the western part of Tur 'Abidin (374 = 984). Bādh did not relinquish his designs on Mawṣil and in 379 (990) having collected a large number of Baṣhnawī Kurds, encamped under the walls of this town and engaged in negotiations with its inhabitants. But the Ḥamdānid princes who had just regained possession of their hereditary fief, secured the help of the Banū 'Uḡail Arabs and attacked the invader. An accident put Bādh *hors de combat* and he was slain. His body was crucified, but the people of Mawṣil obtained his burial with the usual rites because he had fought against the unbelievers (*Kāmil*, ix. 25, 27, 38, 49; *Tad̲j̲ārīb* [Abū Shudjā'], p. 83—84, 176—178; Abu 'l-Faradj, *Mukhtaṣar al-Duwal*, ed. Pococke, 321—323).

In 380—390, Šamsām al-Dawla made an attempt to improve his position and with this object, made an alliance with Fūlād b. Mundhir, who was supported by the Kurd cavalry mobilised at Shīrāz. After the failure of the enterprise he sought refuge with the Kurds but the latter betrayed him and he took refuge with Fakhr al-Dawla, who was notorious for his hatred of the Kurds (*Tad̲j̲ārīb* [Abū Shudjā'], p. 184; on Ibn Fūlād see 'Utbi, *loc. cit.*, p. 424—425).

The Kurd dynasty of the Marwānids (Lane-Poole, No. 47) is closely connected with Bādh. After the defeat at Mawṣil, Abū 'Alī b. Marwān b. Dustāk, the son of Bādh's sister and his ally, withdrew to Ḥiṣn-Kaifā [q.v.] where Bādh's Dailami wife lived. He married her and took one of the strongholds that had belonged to Bādh. He twice took prisoner Abū 'Abdallāh al-Ḥamdāni who had defeated Bādh, but treated him generously. Ibn Marwān established himself in Diyārbakr and by his conciliatory attitude won the sympathy of the inhabitants. The Marwānids reigned from 380 (990) to 489 (1096). Their power extended not only over Diyārbakr (Āmid, Arzān, Maiyāfāriqin, Ḥiṣn-Kaifā) but also to Khilāt, Melāzgerd, Ardjish and the canton to the northeast of Lake Vān. On the west they held Urfa for a time. Abū 'Alī Ḥasan in 381 (991) invaded Syria and took it from the Byzantine Emperor Basil II. He was killed in 387 (997) by the people of Diyārbakr who had rebelled. His brother Abū Manṣūr Mumahhid al-Dawla who after the death of Bādh had seized Maiyāfāriqin reigned there till 402 (1011) (Abū 'l-Fidā', *Annales Moslemici*, ed. Reiske, ii. 569). His brother Abū Naṣr Aḥmad (Ibn Khallikān, i. 157—158) succeeded him and reigned from 402 to 453. In 416 (1025), he seized Urfa but the Byzantines re-established their power in 422 (1031) (Abū 'l-Faradj, p. 342). He earned the reputation of being a just and enlightened ruler, and able, though given to pleasure. In 442 (1050) Abū Naṣr had to pay homage to the Saldjūk Tughril. His son and successor Abū 'l-Qāsim Naṣr, called Nizām al-Dawla (453—472), shared the power with his brother Sa'īd (d. in 457). He added to his possessions Harrān, Suwaidā etc. His successor was Manṣūr b. Sa'īd, who nominally reigned from 472 to 489 but by 478 (1085) the Saldjūk general Fakhr al-Dawla b. Džahir had taken almost the whole of his lands, which were placed under the authority of the Atābeg of Mawṣil (Abū 'l-Fidā', iii. 77—79, 87,

121, 125, 249). On the Marwānids cf. the special study by Amedroz, *J.R.A.S.*, 1903, p. 123—154.

On the eve of the Turkish invasion we find frequent reference to exploits and expeditions of the Kurds. In the reign of al-Qādir (381—422) the historians record the exploit of the Kurd Aḥmad b. al-Daḥḥāk who killed the Emperor Basil II's general and thus stopped the Byzantine advance (*Tad̲j̲ārīb*, [Abū Shudjā'], p. 247). Between 366 and 388 the Kurds took part in the struggle between the Būyids and the Ziyārids for the possession of Džurdjān ('Utbi, p. 298—302; Ibn Isfandiār, *G.M.S.*, p. 226—228). A few years later we find Maḥmūd of Ghazna using Kurds against the Qarakḥānids ('Utbi, p. 336).

The Kurds took part in the civil wars of the Būyids, in the struggle of the Banū 'Uḡail for the possession of Mawṣil, etc. In 411 (1020) they fought against the Turkish troops who mutinied in Ḥamadān. In 415—420 we find them fighting in Fārs and Khūzistān against the last Būyid, Abū Kālidjār (*Kāmil*, ix. 100, 134, 226, 232, 239, 247, 249, 254, 265; *Tad̲j̲ārīb*, [Ibn Muḥassin], p. 348, 376, 381). Thus the Kurdish element was exhausting itself in continual fighting when the Turkish hordes arrived who were destined to modify radically the ethnical aspect of the Near East.

The Turkish Conquest. When in 420 (1029), the Ghuzz precursors of the Saldjūks reached Raiy, Tāsh Farrāsh, the Turkish general of the Ghaznawids went to meet them with 3,000 horsemen including a number of Kurds. The leader of the Kurds being captured by the Ghuzz sent a message to his men to cease fighting. This caused a tumult and Tāsh was killed (*Kāmil*, ix. 268). In the same year the Ghuzz reached Marāgha and executed many Hadhbāni Kurds. The Kurds made an alliance with the ruler of Aḡharbāidjān (Wahsūdān II) and the Ghuzz had to retreat. Another body of Ghuzz after a raid into Armenia returned to Urmia and the lands of Abū 'l-Haidjā Hadhbāni; the Kurds attacked the Ghuzz but suffered a defeat. In 432 (1041) the Musāfirid Wahsūdān II b. Mamlān massacred a large number of Ghuzz at Tabriz; the Ghuzz of Urmia went into Hakkāri, a dependency of Mawṣil, and ravaged the country, but while they were involved in the mountains the Kurds attacked them, killed 1,500 men and took many prisoners and much booty (*Kāmil*, 270—272).

On the approach of Tughrilbeg's troops, the Ghuzz took fright and pushed onwards. Kurdish guides led them through al-Zawzān to Džazira. One section of the Ghuzz under Manṣūr b. Ghuzoghli remained to the east of Džazira while the other under Būkā marched on Diyārbakr and going on pillaged the districts of Qardū, Bāzabdā, Ḥusainiya (Yāktū, ii. 270: a town between Mawṣil and Džazira) and Fēshābūr. The Marwānid Sulaimān b. Naṣr al-Dawla, ruler of Džazira, persuaded the Ghuzz to wait till the spring before traversing his lands to join the other Ghuzz who had settled in Syria. Then by a ruse he seized Manṣūr and with the help of the Baṣhnawī Kurds of Finik, pursued the Ghuzz. But the latter did not cease their depredations; they ravaged the district of Diyārbakr and seized Mawṣil (*Kāmil*, ix. 272—273).

Meanwhile the dynasty of the Ḥasanwaihids had perished and the power in Džibāl had passed

to a new family the Banū 'Annāz (cf. Sachau, *Ein Verzeichnis Muham. Dynastien*, p. 19; *Sharaf-nāma*, i. 22: 'Aiyār) which is often called Abu 'l-Shawk. Previously in 340 (951), during a Turkish rising in Hamadān, the Būyid Mu'izz al-Dawla had had recourse to the services of Ibn Abi 'l-Shawk, chief of Hulwān (*Tad̲j̲arib*, ii. 2). The real founder of the dynasty seems to have been Abū 'l-Faṭḥ Muḥammad b. 'Annāz (*Kāmil*, ix. 158) who ruled 380—401. His son Abu 'l-Shawk slew the last of the Ḥasanwaihids, Zāhir (Tāhir) in 406. The possessions of the Banū 'Annāz included Shahrizūr, Kirmānshāh (occupied in 431; *Kāmil*, ix. 300, 316), Bilawā, Samghān, Daḳūka, Khuf-tidhakān. In 437, Tughril sent his brother Ibrāhīm Yanāl to pacify D̲j̲ibāl. Ibrāhīm drove the Būyid Garshāsp out of Hamadān and he sought refuge with the D̲j̲uz̲k̲ān Kurds. At Kirmānshāh there was a garrison of Abū 'l-Shawk composed of Dailamis and Shād̲j̲and̲j̲ān Kurds. Kirmānshāh was occupied and Abū 'l-Shawk died in 438 (1046) at Sirwān. Ibrāhīm took Šamirān (Shamirān? Šaimara?) and subjugated the D̲j̲uz̲k̲ān. Sa'adī, son of Abu 'l-Shawk submitted to the Sald̲j̲ūks. The dynasty lasted till 520 (1116) (Müned̲j̲im-bashi, quoted by Sachau, *loc. cit.*).

The defeat of the Emperor Romanus IV at Melāzgerd (463 = 1071) delivered all Armenia into the hands of Alp Arslān. Under the Great Sald̲j̲ūks there arose in Fārs the turbulent dynasty of the Shabānkara [q.v.], but it is very doubtful if this dynasty, the fortunes of which can be traced from 421 to 756, was strictly Kurdish (cf. above). On the other hand the small Kurd dynasties were ruthlessly wiped out in favour of Turks. In 493 (1100) the last Marwānid disappeared in the region of Khilāt where the Turk Suḳmān Ḳuṭbi founded the dynasty of the Shāh Arman which lasted a century until the coming of the Aiyūbids. Under the date 495 (1101) Ibn al-Aṭhīr (x. 238) mentions the killing of two thousand Kurds of Surkhāb b. Badr, a scion of the Banū 'Annāz by the Turkomans of Salghūr Ḳarabulī. Other Turkomans later took all the lands of Surkhāb except Shahrizūr, Daḳūka and Khuf-tidhakān. In spite of these crushing blows the Kurds are often mentioned in the xith and xiith centuries. In his struggle with Kawurd of Kirmān, Malik Shāh employed Kurdish and Arab forces, whom he later rewarded with fiefs at Kirmān (*Kāmil*, x. 53) where there were already colonies of Kurds (cf. Mas'ūdī, *Tanbih*, p. 88; Ibn Ḳhallikān, i. 516). Raids of Kurds took place at Dūd̲j̲ail, Mārdin etc. in 496, 498, 503. In Muḥammad b. Malik Shāh's campaign against Syria 504 (1110) there took part the lord of Marāgha, Aḥmadil b. Wahsūdhan, a Kurd of the tribe of Rawādī (cf. *Kāmil*, x. 391) and the "Shāh of Armenia" Suḳmān. The campaign was a fiasco and the Kurds left to lay siege to the Turk Suḳmān (*Recueil des Hist. des Croisades, Docum. Orientaux*, iii. 542, 599).

During this period we often find the Kurds mentioned in Syria, where they came into contact with the Franks (cf. Derenbourg, *Ousāma b. Munqidh*). Under Sandjar the province of Kurdistān was formed of the western part of D̲j̲ibāl. Sulaimān, the nephew of Sandjar, became its ruler with Bahār (N. E. of Hamadān) as its capital. The province was in a flourishing state. In the reign of Sandjar also the Kurds took part in the troubles of 513. In 516 a punitive expedition

passed through the Hakkārī, Zozān and Bashnawī districts (*Kāmil*, x. 374, 377, 426), but shortly afterwards the Kurds seized the stronghold of the Christian patriarch at Ṭūr 'Abidin (Assemani, *Bibl. Or.*, ii. 221).

The Atābaks of Mawṣil. The Atābaks, the immediate neighbours of Central Kurdistān, played an important part there. 'Imād al-Dīn al-Zangī several times invaded Kurd territory. In 528 (1134), he took Ṭanza (on the left bank of the Bokhtān) and to punish the Ḥumaidī who had supported the Caliph Mustarshid when he was besieging Mawṣil, seized their fortresses, al-'Akr, Shūsh etc. (Shams al-Dīn in *Recueil*, iii. 666—667; Ibn al-Aṭhīr, *al-Atābakīya*, *ibid.*, ii. 87). Abū 'l-Haidjā, lord of Arbil, Aṣhib etc. submitted to Zangī (he must have been a Hakkārī?; at this period this tribe lived south of the territory which now bears its name; cf. Hoffmann, *Auszüge*, p. 203). After the death of Abi 'l-Haidjā, Zangī intervened in the quarrels among his successors, seized Aṣhib and dismantled its defences; the fort of Djalāb received the name of 'Amādiya (= 'Imādiya, in honour of 'Imād al-Dīn). In 534 (1139) Zangī took Shahrizūr from Ḳifd̲j̲āk b. Arslān Tāsh the Turkoman. In 537 (1142) he sent a new expedition against the Hakkārī and took the fortress of al-Sha'bānī (= Aṣhib?) which he rebuilt. In 538 Irūn and Khizān were taken (Shams al-Dīn in *Recueil*, iii. 685). 'Alī, lord of al-Rābiya (cf. *Sharaf-nāma*, i. 284, Rābiya-bulak?), Farah and Alḳā (Elk?) joined Zangī of his own accord. The last expedition of Zangī was against the Bashnawī of Fanak (Finik) but the siege of this town was raised on the death of the Atābak 541 (1146) (Ibn al-Aṭhīr, *al-Atābakīya* in *Recueil*, ii. 86, 114, 129, 188). Karādja Tād̲j̲na Muḳta' (?) of Hakkārī, who was sent in 547 by the Atābak of Mawṣil against the Atābak of Ādharbāid̲j̲ān, seems to have been a Turk foreign to the tribe.

Later after the death of Ṣalāḥ al-Dīn (589) the Zangids consolidated their position in Central Kurdistān. In 607 (1211) 'Imād al-Dīn, a younger son of Arslān Shāh Zangī, received as a fief the strongholds of Ḥumaidī ('Akr and Shūsh). In 615 (1218) the same prince seized 'Amādiya and "the remainder of the fortresses of the Hakkārī and Zawzān" which were ceded to him by Muẓaffar al-Dīn Kökbūri of Arbil (Abu 'l-Farād̲j̲, p. 433, 438). It must have been these events that caused the Hakkārī to be driven back towards the lands at the sources of the Great Zāb.

The Urtuḳids, Atābaks of Diyārbakr several times came into conflict with the Kurds (Abu 'l-Fidā', iii. 583; Usāma, i. 321). The 'Abbāsīd Caliphs, freeing themselves from the tutelage of their protectors negotiated with the Kurds (cf. the case of 'Isā Ḥumaidī in 528 and *Kāmil*, xi. 7, 188) and sought to weaken the Turks. In 581 (1185) under the Caliph al-Nāṣir, a minor incident resulted in a war between the Kurds and the Turkomans (*Kāmil*, iii. 342) which extended over a vast area (Syria, Diyārbakr, D̲j̲azira, Mawṣil, Shahrizūr, Khilāt and Ādharbāid̲j̲ān). Two years later the rivals stopped fighting in order to join against the Christians of Armenia, Assyria, Mesopotamia, Syria and Cappadocia, but new feuds soon broke out between the Kurds and Turkomans. After many fierce battles the Kurds fought their way back into Cilicia. The Turks practically exterminated the Kurds of Cilicia and Syria. As

the Kurds on leaving their old homes had entrusted their goods to their Christian neighbours and as the Christians concealed some Kurds, the Turks finally fell upon the Christians at Thel-muzen (?) and Arabthil (= Arabgir?) (Michael the Syrian, in *Recueil, Doc. Armen.*, p. 395).

The Aiyūbids. The Kurdish origins of this remarkable dynasty are well established (*Sharaf-nāma*, i. 55—82). The Armenian historian Hayton (Hethum) says on this point: "Postea vero Sarraceni amiserunt dominium Egipti et Medi, qui Cordins vulgariter dicebantur, regni Egipti dominium occupaverunt", *Recueil, Doc. Arm.*, ii. 225, 343). The grandfather of Ṣalāḥ al-Dīn *Shādhī* b. Marwān was a Rawādī Kurd (Rāwādī, Rawanda, a clan of the Hadhbānī) of Dwīn [q. v.].

The important fact is that it was from Dwīn that the Shaddādī dynasty had come, the memories of which must have been still alive in the time of *Shādhī*. Aiyūb [q. v.] and *Shirkūh* [q. v.], son of *Shādhī*, were born in the old home (the village of Adjdanakān). Ṣalāḥ al-Dīn [q. v.] was born at Takrit but Kurd traditions were certainly familiar to him through his father and uncle. The persistence of Iranian names in the Aiyūbid family is significant. Nevertheless the scene of the main activities of the dynasty was Egypt and Syria. The families of the old Saldjūk Atābaks, even when they became vassals of the Aiyūbids continued to rule in Diyārbakr (Urtūkids), Mawṣil (Zangids) and Arbīl (the Begteginids, at first deputies of the Zangids). By the treaty of 585 (1187), with 'Izz al-Dīn Zangī, Ṣalāḥ al-Dīn annexed only Aleppo and *Shahrizūr* (Ibn al-Athīr, *al-Atābakīya*, *Recueil*, ii. 334; *Kāmil*, xi. 340; Bahā' al-Dīn, *Recueil*, iii. 85). In 585, Ṣalāḥ al-Dīn gave *Shahrizūr* to his Mamlūk *Keshtoḡhdī* (?) a relative of Ya'qūb b. Kīfjdāḡ. The only independent way by which the Aiyūbids penetrated into Kurdistān was that of *Khilāt*. This district was at first conquered by Taḡī al-Dīn in 587 (1191) (*Kāmil*, xii. 40) but it was only after the death of Ṣalāḥ al-Dīn that his nephew Awhād Aiyūb installed himself there in 604 (1207). Later *Khilāt* passed to his brother Aṣṣraf, who assumed the title "Shāh Arman", and finally to the third brother Muẓaffar who ruled there till 642 (1244). The peace of this fief was several times broken by invasions of Georgians, of the *Khwarizmshāh* and of the Mongols. The Georgian troops who were operating round *Khilāt* at this time were commanded by the Armenian princes Zakare and Iwane whose genealogies make them descendants of the *Khel Babirakan*, i. e. of the Kurd tribe of Bāpirakān; cf. Marr in *Zap.*, 1911, xx., p. 120.

The Aiyūbid forces were composed mainly of Turks but the Kurdish element was by no means negligible. In 583 (1187), Ṣalāḥ al-Dīn addressed an appeal for a holy war to the Kurds on the upper Tigris. The *Djazira* forces were disbanded in 584 (1188) but the Diyārbakr detachments and particular tribes are often mentioned. These Kurds were sometimes on bad terms with the Turkomans (Bahā' al-Dīn, *Recueil*, iii. 86, 313, 381).

Kurds were numerous in the civil and military service of the Aiyūbids but very often they acted against the dynasty's interests. When *Shirkūh* died, there were Kurds who opposed the appointment of Ṣalāḥ al-Dīn as his successor (Ibn *Khalīkān*, iv. 494).

An important part was played by the family of Abu 'l-Haidjā (Hadhbānī) hereditary chief of Arbīl (?). He directed the defence of 'Akkā against the Crusaders and was appointed *isfahsālār* of the army and governor of Jerusalem. In 1196 he was transferred to Baghdād: he conducted an expedition against Hamadān and died at Daḡūka. His nephew Kuṭb al-Dīn built the Kuṭbiya madrasa in Cairo. Another Kurd, of the tribe of Hakkārī, Saif al-Dīn b. Aḥmad al-Maṣṣṭūb, succeeded Abu 'l-Haidjā at 'Akkā. His descendants had exciting careers; his son Aḥmad ended his days in the prison of Harrān; his grandson, the *Qādi* 'Imād al-Dīn plotted against al-Kāmil and had to go into exile.

Khwarizm Shāh Djalāl al-Dīn. In 614 (1217) the Kurds of Zagros inflicted a defeat on the troops of the *Khwarizmshāh* sent from Hamadān to Baghdād. Djalāl al-Dīn's operation against *Khilāt* (623—626) disorganised the life of the country and the Kurds were decimated by famine (*Kāmil*, xii. 207, 308). Defeated and pursued by the Mongols, Djalāl al-Dīn took refuge among the Kurds of Diyārbakr and in 628 (1321) was killed, probably by one of them (*Djuwaini*, ed. Muḥammad Kazwīnī, ii. 190; *Kāmil*, xii. 325; d'Ohsson, *Histoire des Mongols*, iii. 62). In 634 (1237) again the remnants of the *Khwarizm* hordes traversed and plundered the region of *Kharput* (Abu 'l-Faraj, *o. c.*, p. 477). After the death of Djalāl al-Dīn, the Mongols laid waste the region of Diyārbakr and *Khilāt*. Another horde had descended from Marāgha on Arbīl; this latter region was three times invaded. In 645 (1245), *Shahrizūr* was laid waste and in 650 (1252) Diyārbakr.

The Mongol *Ilkhāns*. The Kurds are rarely mentioned under the *Ilkhāns*. As these rulers — at first pagans and later Muslims — were on good terms with the Christians and the latter had sufficient causes of complaint against their Muslim neighbours, the Kurds so recently involved in the wars of the Aiyūbids had to remain confined to their mountains and to hope for success for the enemies of the Mongols.

The province of "Kurdistān" formed in the time of the Saldjūks, the capital of which was Bahār (near Hamadān) was conquered by Malik b. Tūdān, father of the celebrated Amir Čoban. Leaving Hamadān in 655, Hülāḡū marched on Baghdād. At Kirmānshāh the Mongols began to murder and plunder (Rashīd al-Dīn, ed. Quatremère, p. 225, 255, 267). Before the capture of Baghdād, Hülāḡū sent troops to take Arbīl. The governor of this stronghold, Tādī al-Dīn Ṣalāba (cf. Rashīd al-Dīn, ed. Blochet p. 261), submitted to the Mongols but the Kurd garrison refused to follow his example. Arbīl was taken with the help of the Atābak of Mawṣil, Badr al-Dīn Lu'lu' (d'Ohsson, iii. 256). The taking of Baghdād resulted in the depopulation of *Shahrizūr* [q. v.] and its Kurd inhabitants, according to *Shihāb* al-Dīn al-'Umārī, left for Syria and Egypt (cf. d'Ohsson, *op. cit.*, iii. 309, 330, 337). An echo of these events is found in the appearance in Algeria of two Kurd tribes: Lawēn and Babīn (Ibn *Khalidūn*, *Hist. des Berbères*, transl. de Slane, ii. 461 and iii. 413).

Returning to *Adharbāidjān*, Hülāḡū set out for Syria in 657. In the Hakkārī country, the Mongols put all the Kurds they found to the sword (Rashīd al-Dīn, ed. Quatremère, p. 328). *Djazira*, Diyārbakr, Mayafāriḡin (held by the Aiyūbid *Kāmil*) and Mardīn were taken in succession.

After the death of the Atābak Badr al-Dīn Lu'lu' who had remained faithful to Hūlagu, his son Šāliḥ went over to the side of Baibars, Sultān of Egypt and received confirmation of his investiture from him. The Kurds around Mawṣil at once fell upon the Christians. The garrison of Mawṣil consisting of Kurds, Turkomans and *Shūls*, courageously resisted the Mongols.

In Syria also the Kurds threw in their lot with the Mamlūks. In his letter to the Khān Berkaī, Baibars boasts of the number of his troops, who were Turks, Kurds and Arabs (d'Ohsson, iii. 385). In the time of Abaka, the Armenian Hayton tells how after an invasion by Egyptian troops (before 677/1278) the Kurds took 5,000 houses of Kurds (Gordins) living in Northern Syria (*Recueil, Doc. Armén.*, ii. 179). But after the defeat of the Mongols in 680 (1281), a body of Muslim troops, made up of Turkomans and Kurds, laid waste Cilicia. The rare cases in which Kurds are found allied to the Mongols were generally in distant Fārs. Under Ūldjaitū there were Kurds in the troops that invaded Gilān in 706. A little later a Kurd, Mūsā, who had proclaimed himself the *mahdī* of the *Shi'is* was executed by Ūldjaitū. In 712, Badr al-Dīn, the Kurd lord of Raḥba resisted the Mongols.

The Kurd provinces were governed by the Mongol Amirs. The fighting in Arbil never ceased. The "Kayači", Christian highlanders, forming part of the Mongol army and stationed in Arbil, brought a charge against their chief Zain al-Dīn Bālū and came into conflict with the Kurds whom the Arabs supported. Incidents began in 1297 but the situation came to a height in 1310. With great difficulty the Mongols drove the Christians out of the citadel. The Mongols had summoned the Kurds to help them in the siege but their amirs who were friendly with the Christians, wanted to use the Kurds to prevent the massacre of the Christians by the Arabs. The massacre took place but the Kurds had no share in it (*Histoire de Mar Jabalaha III*, transl. Chabot, Paris 1895, p. 152—177).

The country between Marāgha and Arbil was a kind of high road for the Mongol armies; at this time the country south of Lake Urmia was still for the most part occupied by Turks and Mongols (cf. *SĀWUJ-BULĀK*).

The capital of the province of "Kurdistān" under Ūldjaitū was moved from Bahār to Sultānābād (of Čamčamāl). The extent to which the province had suffered may be judged from the statement of the *Nuzhat al-Kulūb* (p. 107) according to which its revenues were reduced to one tenth of what they were under the Saldjūks.

When the *İlkhāns* had disappeared, two families of Mongol chiefs of the tribes of Sulduz [q. v.] and *Djalā'ir* [q. v.] became rivals for power. By virtue of the division of the fiefs between "the two Ḥasans" (in 738/1338), (Persian) Kurdistān and *Khūzistān* returned to the children of the amir Akrandj or Akraṣh (?). In 784—785 the *Djalā'ir* Bayazid carved a fief for himself out of Persian Kurdistān and 'Irāk 'Adjamī (Lane-Poole, *op. cit.*, No. 86 and d'Ohsson, iv. 747).

Table of the Kurd tribes in the time of the Mamlūk Sultāns. The Mongol conquest had completely eclipsed the political part played by the Kurd tribes but in Egypt where the Mamlūk Sultāns were cherishing secret plans against the *İlkhāns*, much interest was taken in

the fate of this Muslim element. The *Masālik al-Aḥṣār* of Shihāb al-Dīn al-'Umārī (d. 749 = 1348) shows how exactly the chancelleries of the Mamlūk Sultāns were informed about Kurd affairs. According to al-'Umārī there were Kurds near al-'Irāk and al-Diyār al-'Arab and in Syria and Yemen. The mountain country (al-'Djibāl) inhabited by the Kurds began near Hamadān and ended in Cilicia (*bilād al-Takfūr*); to the west of the Tigris the Kurds of al-'Djazira and Mārdīn were at the mercy of all their neighbours. At Mārdīn however a certain Ibrāhīm al-'Ars Bālū (?) had shortly before proclaimed himself independent and had attained considerable power. The author then gives a list of twenty tribes living between Hamadān and the part of al-'Djazira that lies between Mawṣil and Kawār (cf. Kēwar in the *Sharaf-nāma*).

1. The Gūrānī, who were warriors and agriculturists (*djund wa-ra'īya*).

2. The Gilālī (cf. the mountain called Galāla among the Sohrān; *Sharaf-nāma*, i. 286 and Rich, *Narrative*, i. 123: *Ghellali*). A portion of this tribe migrated to Syria. Their prince Sharaf al-Dīn was governor of Arbil under the Mongols but was killed by a Mongol.

3. The Zangalī (= Zangana?).

4. The Kūsa and the Mabir (?) of *Shahrizūr* [q. v.] migrated to Syria and Egypt.

5. The Sabūlī (Sutūnī?), lived in *Shahrizūr* and *Ushnū*. Near them lived the *Qartāwī* (? cf. Hoffmann, *Auszüge*, p. 207).

6. The Ḥasnānī (*Khushnāwī*?), several thousand in number divided into three branches, one of which living at Karkār alongside of the *Qartāwī* (?) levied tolls on the pass Darband-i Karabolī (the defile of the Little Zāb; cf. Hoffmann, *op. cit.*, p. 263).

7. Near Karḥīn (= Kirkūk?) and Daḳūḳ lived a tribe of 700 men.

8. A tribe living "between two mountains" (*bain al-djabalain*) on the territory of Arbil in winter sought the good graces of the Mongols and in summer assisted the invasions of Egyptian troops.

9. The Māzandjān[?] to the number of 500 lived near Arbil and Māzandjān, Nērwa and Bēkma (these two latter cantons are situated on the Great Zāb east of 'Akr). The chiefs of Māzandjān also ruled the related tribe of the Ḥumaidī (of which there were 1,000 men). The chief of the Māzandjān called Kak had received the title Mubārīz al-Dīn from the 'Abbāsids. The Mongols divided his lands into two and Kak remained *nā'ib* of Arbil. He was dispossessed for a time under Arghūn but according to the *Subḥ al-A'shā*, his sons and his grandsons retained their fief ('Akr and Shūsh).

10. Near Tell-Haftūn was the land of the numerous Sohrī tribe (Sohrān).

11. Their neighbours were the Zarzāri ("children of gold"). They also possessed Malāzgirid (= Rubār-i Barāzgirid) and Rustāk (the southern part of *Shamdinān*).

12. The *Djūlāmerg*, of Omayyad origin, numbered 3,000 men.

13. The Kurds of the district of Markawān (read Margawar) were allies of their *Djūlāmergī* and Zarzāri neighbours.

14. Near *Djūlāmerg* was the canton of Gawār.

15. Near *Djūlāmerg* beside 'Akr and 'Amādiya was the canton of Zibārī inhabited by 500 men.

16. The Hakkārī lived at 'Amādiya and numbered 4,000 men.

17. Near the Hakkārī beside Mardj were the *Djabal al-'Amrani* and the cave of Kahf Dāwūd where lived the Besitki (??).

18. Near *Djūlāmerg* towards Mawṣil lived the Bokhtī, rivals of the Ḥumaidi.

19. The Dāsini had been very numerous but their chief Badr al-Din came down to more accessible country and there were no more than 1,000 Dāsini in the province of Mawṣil. 500 Dāsini lived at 'Akr.

20. The Dumbūlī (?) inhabited the high mountains.

To this information given by the *Masūlik* the *Ṣubḥ al-A'shā* basing on *al-Tathkif* composed by Taḳī al-Din about 748 (1347) adds a list of 25 Kurd chiefs with whom the chancelleries of Cairo were in correspondence.

Timūr and the Turkoman dynasties. After the Mongols, the rival Turkoman dynasties extended their power over Kurdistan. This period, of which little is yet accurately known, was of considerable importance for the Kurds. The *Qara-Koyunlu* dynasties penetrated into the heart of Kurdistan, involved the Kurd tribes in political and religious quarrels (cf. the extreme *Shi'a* of the *Qara-Koyunlu*) and provoked considerable movements of the population: it was at this period that the Mukri Kurds seized the country south of the Lake of Urmia (cf. *sāwuj-bulāk*). In contrast to this, the conquest by Timūr which temporarily swept aside the *Qara-Koyunlu* had only a transitory character.

Many incidents in the history of Ḥiṣn Kaifā and *Djazira* between 796—897 (1393—1491) are recorded in the Syriac Chronicle (written at Haidham) publ. by Behnisch, *Rerum seculo XV in Mesopotamia gestarum liber*, Breslau 1838.

Timūr had to deal with the Kurds in his campaigns of 796 and 803. After overrunning Baghdad and Diyārbakr Timūr attacked *Djazira* which was destroyed. The dependencies of *Djazira* were likewise conquered. Timūr next crossed the mountains separating Diyārbakr from Mūsh and gave a favourable reception to *Sharaf al-Din* of Bidlis "renowned for his kindness and justness throughout all Kurdistan". In 803 Timūr returned from Baghdad to *Ādharbāidjan* and on the way was attacked by the Kurds.

After the death of Timūr, *Qara-Yūsuf Qara-Koyunlu* returned to Kurdistan and sought refuge at first with *Shams al-Din* of Bidlis. He gave him his daughter and with his assistance re-established his power. In 820 *Qara Yūsuf* by a *nishān* confirmed the princes of Bidlis in their possessions. When in 824 (1421), *Shāhrukh*, son of Timūr arrived in Armenia, homage was done to him by *Shams al-Din* of Bidlis, Malik Muḥammad Hakkārī, Malik Khalil of Ḥiṣn Kaifā, the amirs of *Khizān* etc. The Kurds of *Khōi* also remained loyal to *Shāhrukh's* governor (*Maṭla' al-Sa'dain*, *N. E.*, xiv., p. 153).

The *Ak-Koyunlu* (the Bayandur dynasty) whose principal centre was in Diyārbakr, conducted a systematic policy of exterminating the great Kurd families (*Sharaf-nāma*, i. 164: *istiṣāl-i khānawādahā-yi Kurdistan*) and in general persecuted tribes who had compromised themselves by their attachment to the *Qara-Koyunlu* like the great tribe of Čamishgezēk. Uzun Ḥasan's generals Ṣufi Khalil

and 'Arab-Shāh conquered Hakkārī, which was later taken for a brief period by the Dumbūlī tribe from Bohtān. In 875 (1470) (cf. Behnisch, *op. cit.*, p. 14) *Djazira* passed entirely into the power of the *Ak-Koyunlu* who appointed their own governor Čalabī Beg, whose merits are recognised even by the *Sharaf-nāma*, i. 123. The *Ak-Koyunlu* general Sulaimān b. Bīzan drove out of Bidlis the Ibrāhīm Khān who was later put to death by Ya'qūb b. Uzun Ḥasan.

The *Ṣafawī Shāhs* and the Ottoman Sultāns. Shāh Ismā'il had invaded Armenia at the beginning of his war with the *Ak-Koyunlu*. After the battle of *Sharūr* 907 (1502) he won all the country between Baghdad and Mar'ash. Ismā'il's policy with regard to the Kurds did not differ from that of the *Ak-Koyunlu*. Like the latter the Shāh relied on the Turkoman tribes but being a zealous extreme *Shi'i* (cf. *KHAṬĀ'Ī*) he was still more predisposed against the Sunnī Kurds. When eleven Kurd chiefs presented themselves at *Khōi* to pay homage, Ismā'il imprisoned most of them and appointed in their stead governors chosen from the *Kizil-bash* tribes.

Henceforth, for about three centuries Kurdistan became the arena for the struggle between the Ottoman Sultāns and the Shāhs of Persia. The defeat at Čaldirān (1514) was a terrible blow to the prestige of the new Persian dynasty. In spite of the temporary successes of the successors of Shāh Ismā'il, their conquests never attained the importance of his early victories and Persian territory west of the Zagros melted away. Ismā'il's attempt to thrust Persian governors upon the Kurds was a marked contrast to the Ottoman policy instituted by the able Ḥakīm Idris, himself a Kurd, which aimed at giving Kurdistan a feudal organisation securing the predominance of the Kurd nobility.

The battle of Čaldirān deeply affected Kurdistan. Malik Khalil (*Sharaf-nāma*, i. 155) the dispossessed prince of Ḥiṣn Kaifā had regained possession of Si'ird and was trying to regain his hereditary fief. Muḥammad Beg of Ṣāṣūn was fighting against the Persians. Aḥmad Beg of Maiyafāriḳin, Qāsim Beg of Agil, *Djamshīd* Beg of Pālū, had declared in favour of the Ottomans. The governor of *Djazira* had succeeded in repulsing the Persians of Mawṣil. Sa'īd Beg Sohrān had taken Arbīl and Kirkūk. Some twenty other chiefs were wavering in their loyalty to the Persians. A personal visit by Idris to all these chiefs won 25 of them over to the Sultān.

When Selim had left Tabriz, Ismā'il sent reinforcements to Diyārbakr and Ḥiṣn Kaifā. Idris summoned to his flag the Kurd levies and defeated Kurd Beg, a former Persian Governor of Kurdistan. The Kurds of Diyārbakr resisted the Persian attack until help arrived from Bīylklī Muḥammad Pāshā. Bīylklī and Idris met at Ḥiṣn-Kaifā and defeated the Persians. Then reinforced by 5,000 Kurds (from 'Amādiya?) the Turks relieved Diyārbakr and took Mārdin, except the citadel which remained in Persian hands. The Persian commander then executed a successful diversion from Baghdad and Kirkūk and the people of Mārdin drove out the Kurds and invited the Persians to re-occupy the town. The two armies met on the Naṣibin-Urfa road. The Persians were defeated and Bīylklī forced Sulaimān Khān who was still at Mārdin to surrender. The occupation of Naṣibin, Dārā,

Maiyāfārīqin, Diyārbakr and Sindjār followed and Idris completed the administrative organisation of the sandjak. In the province of Diyārbakr eleven sandjaks were put under Turkish officials, eight under Kurds (*Akrād beyliği*). The wālis confirmed the investitures of the new begs but the latter were always chosen from the same family. Five hereditary *hukūmat* (*kürd-hükümeti*) retained their dynasties with the transmission of power direct from father to son (cf. Tischendorf, *Das Lehnwesen in d. moslem. Staaten*, Leipzig 1872, ch. ii. and iv., quoting 'Ain-i 'Alī Mū'adhinzāde who wrote at the beginning of the xith [xvith] century). A similar system was later applied throughout Kurdistan from Malāṭiya to Bāyazīd and Shahrizūr (cf. below the *Sharaf-nāma*, and the very interesting remarks of Ewliyā Čelebi [iv. 176—180 and 271—316]: on the 37 sandjaks joined to Wān by the law of Sulaimān I and the order of march of the local army). Only the province of Kirmānshāh remained to the Persians. Idris was liberally rewarded and the firmāns of investiture were sent him with the spaces left blank for him to fill in the names of the recipients (von Hammer, *G. O. R.* 2, i. 749).

In 936 (1530) Shāh Tahmāsp recovered Baghdad from Dhu 'l-Fakār, a Kurd of the tribe of Mūslū (Moşullu?). A long series of wars began again. Sulṭān Sulaimān led an army against Persia in 1533, 1534, 1535, 1548, 1553 and 1554. In this last year the Baghdad troops conquered the Kurds of Belkās and Shahrizūr while the Persians were occupied in Georgia (von Hammer, *op. cit.*, ii. 236).

By the peace of 999 (1590) 'Abbās I had to cede to the Turks the western provinces including Ādharbāidjān, Shahrizūr and Luristān (*ibid.*, ii. 559) but in 1010 (1061) fighting was resumed and by the peace of 1021 (1612) Persia regained possession of the lost provinces, except Shahrizūr (*ibid.*, ii. 745). Shāh 'Abbās transported 15,000 Kurds to the frontier of Khorāsān to serve as a bulwark against the Turkomans.

Towards the end of the reign of Shāh 'Abbās, Turkish efforts were concentrated on Baghdad. During Hāfiz Pāshā's first campaign (1623) his army included the Kurdistan troops. The Kurds fought bravely. The Persians having defeated the attackers, sent punitive columns to Mārdin. After the death of Shāh 'Abbās, the grand vizier Khusraw Pāshā advanced on Baghdad in 1039 (1629). Saiyid Khān of 'Amādiya, Mīra Beg Sohrān and the mixed Kurdo-Arab tribe of Bādījilān took the side of Khusraw Pāshā while Aḥmad Khān Ardālān threatened the Turkish flank. Khusraw Pāshā advanced as far as Senna [q. v.] and Hamadān. On their way back the Turks defeated at Čamčāmāl and Dartang a Persian force. Baghdad still held out however and when Khusraw Pāshā had retired Aḥmad Khān Ardālān re-occupied Shahrizūr (von Hammer, *op. cit.*, iii. 17, 23, 49, 86, 93). Not till 1048 (1638) did Murād IV finally take Baghdad and in the next year the treaty was signed with Persia *prossio modo* which fixed the Turco-Persian frontier down to the sixteenth century (*Ta'rikh-i Na'imā*, i. 686). Persia was now completely behind the Zagros chain.

The great struggle between the Šafawis and Ottomans made the Kurds conscious of their political importance. The *Sharaf-nāma* has preserved for us an accurate picture of the feudal life of the

Kurd tribes and principalities at the height of its development about 1005 (1596).

Sharaf-nāma. This book by the chief of Bidlis, Sharaf al-Din (cf. BIDLIS) finished in 1005 (1596) occupies an exceptional place among the sources for Kurdish history. The history of the Kurds in the strict sense (vol. i. in Véliaminof Zernof's edition) is divided into four parts (*ṣahīfa*): the first of these deals with those Kurd dynasties which have actually enjoyed the privilege of royalty (*saṭṭanat*); the second with those whose members have sometimes had coins struck and the *khutba* recited in their name; the third enumerates the families of hereditary governors (*hukkām*) and the fourth is devoted to a detailed history of the chiefs of Bidlis. Part i. gives five dynasties, the Marwānids [q. v.] of Diyārbakr and Djazira, the Ḥasan-waihidis [q. v.] of Dainawar and Shahrizūr; the Faḍlūyids of the Great Lur; the princes of little Lur [cf. LUR] and the Aiyūbids [q. v.].

As the distinction between the second and third class of princes is rather subtle and the order in which Sharaf al-Din enumerates the dynasties is quite arbitrary it is better to arrange these dynasties according to the geographical position of the fiefs, taking Djazirat ibn 'Omar as the centre. This list will be followed by that of the Kurd tribes in Persia. The fiefs of the second class (including Bidlis) will be marked with an asterisk (*).

Sharaf al-Din distinguishes as far as possible between the tribes and the families of their chiefs and it is necessary always to bear in mind the bases of feudal organisation in Kurdistan. Chiefs of varied origins rule the Kurdish, Kurdicised and Christian tribes, with the help of warlike Kurd tribes (*ashīrat*), which are sometimes settled, sometimes nomad or rather semi-nomad.

Group A. Between Djazira and Darsīm.

1. The chiefs of Djazira* claimed Omaiya origin but gave as their ancestor Khālid b. Walid. In such confused genealogies we have a combination of memories of the Kurd alliances of the Omaiya with the local cult of the descendants of the famous general Khālid b. Walid [q. v.] whose tombs are shown near Si'ird (Hartmann, *Bohtān*, p. 19, 124). These chiefs were at first Yazidis and only later became converted to be orthodox Sunnis. After the death of Sulaimān b. Khālid his three sons divided his possessions: Djazira fell to Mir 'Abd al-'Aziz, Gurgil to Mir Ḥadīdji Beg and Finik to Mir Abdāl. These three branches each kept their own fiefs in later times.

The *Sharaf-nāma* refers to the possessions of this family as *wilāyet-i Bokhtī* (i. 320) and enumerates in detail but without system the 14 nāhiya forming this important fief: Gurgil, Arwakh, Pirūz, Bādān and Tanzē (Kalhūk) occupied by the tribe Kārsi; Finik; Tūr, Haitam (Hethum) and Shākḥ inhabited by Christians; Nīsh Atil; Aramshāt the tribe of which (Brāspi) is the chief among those of Bokht; Kēwar or Kamiz(?); Dair-dih which belongs to Tanzē.

In spite of the careful study by M. Hartmann, *Bohtan, Mitteil. d. Vorderasiat. Gesell.*, 1896, 2 and 1897, 1, p. 1—163, the localisation of some of these places is not quite certain.

The fief of Djazirat Ibn 'Omar lay between the right bank of the Bohtān and the Tigris. It did not include the sources of the Bohtān. Towards the east, the neighbours of the Bokhtī were the

Sindiyañ (cf. under 'Amādiya) settled on the Khābūr.

2. The ancestors of the rulers of Khizān, Isbāyerd (Sparhet, Ispert; in Ewliya Çelebi: Isbā'ird) and Muks (Mukus) were three brothers who came from Balidjan (Khnis) in the time of the Saldjūks (*Sharaf-nāma*, i. 217). The tribe of the principal fief was Namiran; this fief lay along the right bank tributaries of the Bohtān and stretched as far as Marwānān.

3. Shirwān (on the right bank of the Bohtān below Khizān and north-east of Si'ird). The ancestors of the "Shirawī" chiefs were in the services of the Aiyūbids and came to Shirwān at the same time as the "Malikān" to Hişn-Kaifā. The Shirawī played even the rôle of viziers by the Malikān (*op. cit.*, i. 155). The capital of Shirwān was Kufrā. The other dependencies were Awil, Shabistān (also called Garni = Kirnik?) and Irūn.

4. Bidlis. * The Rūzagi (Rōzagi) tribe is said to have taken its name from the fact that 24 clans, assembled one day (*rūzi*) in the village of Tāb in the canton of Khoit (now the qaḍā of Mōdkī west of Bidlis), formed a confederation which later became divided into two sections: Bilbāsi and Kawālisi. Sharaf al-Dīn (i. 361) enumerates the 24 (read 25) clans of the Rūzagi, of which five were old settlers and the others newcomers: Bilbāsi (10 clans) and Kawālisi (10 clans).

The Rūzagi took Bidlis and Hāzō (Şaşūn) from the Georgian king Tāvit (David the Courpalate, p. 984—1001?). Later they brought from Akhlat two brothers of Sāsānian origin. One became chief at Bidlis and the other at Şaşūn. 18 chiefs of the line of Diyā al-Dīn had ruled at Bidlis before 1005 (1596). The only interruptions took place under the Saldjūks (534—576), under the Aq-Koyunlu (871—900), under Shāh Ismā'il (913—920?) and between 941 and 986. In this last year Sultān Sulaimān wanted to exchange the hereditary fief of Amir Shams al-Dīn for that of Malāṭiya. Shams al-Dīn had to leave Bidlis but fearing new intrigues went to the court of Shāh Tahmāsp, who treated him with generosity. Shams al-Dīn died in Persia in 965. His son Sharaf al-Dīn, born in exile in 940, was carefully educated at the court (the Shāh even had him taught painting). He ruled several Persian provinces in succession, and was appointed chief of all the Persian Kurds. After the accession to the throne of Ismā'il II, Sharaf al-Dīn fell under suspicion and was sent to Nakhčuwān. From there he succeeded in reaching Wān and received from Murād I investiture for Bidlis, to which Mūsh was added in 991. For the year 1065 (1655) Ewliya Çelebi (iv. 81—121) gives us a detailed description of Bidlis. The last prince of Bidlis, Sharaf Beg was dispossessed by the Turks in 1849 (Lynch, *Armenia*, ii. 149).

5. The rulers of Şaşūn (Hāzō) were called 'Izzīn from their ancestor 'Izz al-Dīn, brother of Diyā al-Dīn of Bidlis. The 'ashirats of Şaşūn were at first Shirawī, Bābūsi, Sūsāni and Tamūki. The Rūzaki (cf. Bidlis) arrived afterwards; later after the annexation of Arzan the clans of that district: Khālidi, Dair Mughāni, 'Azizān, who had at first belonged to Hişn Kaifā, came to join those of Şaşūn.

6. The Suwaidi chiefs claimed a Barmecide origin. Their ancestors were adopted by the Suwaidi tribe. The hereditary fief of the Suwaidi was

Ganj (this should be read for *Kikh* in Véliaminof-Zernof, i. 260).

7. The Pāzūkī tribe which Sharaf al-Dīn places among the tribes of Persia (i. 328) is said to have been of Suwaidi origin. According to the *Sharaf-nāma*, i. 328, it had no definite religion and showed signs of heresy (*rafḍ wa-ilhād*). The tribe was divided into two branches, Khālidi-beglu and Sheker-beglu, and one was under the Amirs of Bidlis. Khālidi received as fiefs Khnis, Malāzgerd and the canton of Uḥkān (?) of Mūsh. They grew so proud that they thought of proclaiming their independence. After the battle of Čaldīrān the Suwaidi dispossessed the Pāzūkī from many of their fiefs (*ibid.*, i. 257). In the time of Shāh Tahmāsp, Kīlīdj Beg appointed chief of the Pāzūkī received Zagam (near Tiflis). Later Pāzūkī were transferred to Alashkert where the tribe increased.

8. The Mirdāsi chiefs (*Mirdāsi* in the *Selim-nāma*) claimed to be descended from the 'Abbāsids. Their ancestor was a religious man who came from Hakkāri to Agil and whose disciples the Mirdāsi became. The tribe themselves said they were of Arab origin, being Banū Kilāb from around Aleppo who migrated about 420 as a result of troubles with the Fātimids (cf. Lane-Poole, *The Muham. Dynasties*, No. 45: the Mirdāsids of Aleppo). The main one of the three branches, the Buldukāni, lived at Agil; it maintained good relations with the Aq-Koyunlu but under Shāh Ismā'il, Agil was occupied by the Persians. Of the two other branches of the Mirdāsi, one ruled at Pālū, at Bāghin (below Kighi) and at Kharput and the other first at Bardandj and later at Djarmūk (south of Arghana-ma'dan).

9. The rulers of Čamishgezек claimed to be of 'Abbāsid descent, but their names rather show a Turkish origin (Saldjūk). Their 'ashirat was called Malkishī (Malik-Shāhī?). There were about 1,000 hearths of Malkishī in the Persian service (in Persia?). The lands of the Malkishī were so numerous that the name *Kurdistan* had become synonymous with Čamishgezек (*Sharaf-nāma*, i. 163). They kept them in the Mongol period, under Timūr and Kara Yūsuf but the Aq-Koyunlu did all they could to weaken the tribes faithful to the Kara-Koyunlu and sent the Turkish tribe to Kharbandalu against Čamishgezек. Shaikh Hasan drove out the Kharbandalu and submitted to Shāh Ismā'il. The latter put a Persian governor in his place. Selim I restored the hereditary amir Pir Husain.

Group B. Between Djazira and Kilis.

10. Hasan-keif* (cf. Hişn-Kaifā). The local chiefs (*malikān*) claimed to be of Aiyūbid descent, which seems very probable. Their ancestor was alleged to have received the fief of Hişn-Kaifā from the ruler of Mārdin. The first chief mentioned by the *Sharaf-nāma*, is Malik Sulaimān who died in 736 (1335). The Aq-Koyunlu seized Hişn-Kaifā but Malik Khālil who had taken refuge in Hamā, later regained possession of his fief. At a later date the Ottomans dispossessed the sons of Malik Khālil. Among the dependencies of Hişn Kaifā, the *Sharaf-nāma* mentions Si'ird, Bishēri, Tūr (which sometimes figures among the possessions of Djazira, cf. *ibid.*, p. 117, 127, 157) and Arzan.

11. Sulaimāni, rulers of Marwānid origin (Omāiyad), established themselves at first at Khūkh in

the canton of Ghazālī (between the ʔulp and the Baṭmān-ṣu before they join) and gradually captured many strongholds and territory as far as the Tigris. They ruled a powerful confederation of tribes, the majority of which were nomads and in summer moved to the Ala-Tagh (Niphates). The chief of these tribes was Bānūki, but the more enterprising was Basiyān, 1,000 families of which migrated to Bāyazid under their chief Shāhsawār. A number of these tribes professed Yazīdī doctrines. The Sulaimānī lived on bad terms with their neighbours of Ṣāṣūn. They were divided into two branches, that of ʔulp and Baṭmān and that of Maiyāfāriḳin.

12. Zraḳī (the modern pronunciation attested by Addai Scher, *J. A.*, 1910, p. 119—139); according to Sharaf al-Dīn, Zraḳī, is a contraction of the Arabic Azraḳī. The ancestor of the family who was an Arab holy man from Syria of 'Alid origin arrived in Mārdīn in the time of Ortoḳ (d. 516 = 1122; Abu 'l-Faraj, *Mukhtaṣar*, p. 379). The family formed connections by marriage with the Ortoḳids and later with the Aḳ-Ḳoyunlu. There were four branches of Zraḳī, the principal branches were those of Tardjīl (west of the Baṭmān-ṣu) and 'Atāḳ. The two other branches were that of Darzīnī (an old Christian convent Dei-Zir?) and that of Kurdikān (between Diyārbakr and Maiyāfāriḳin) the latter descendants of the marriage of a Zraḳī chief and a gipsy woman (*dukhtar-i kābuli*).

13. Kilis. The ruling dynasty believed it was related to those of Hakkāri and 'Amādiya. Their ancestor Mand (Mantashā) had rendered services to the Aiyūbids who gave him the canton of ʔuşair (near Antioch). He united under his rule the Yazīdīs of ʔuşair and those living between Ḥamā and Mar'ash as well as the Kurds of Djōm and Kilis. Under the Mamlūk Sultāns and under Selim I disputes broke out between the Yazīdīs (Shāikh 'Izz al-Dīn) and the family of Mand, which ended in favour of the latter, but the hereditary rights of this North Syrian fief do not seem to have been on a very solid basis.

Group C. Between Djazīra and ʔhoi.

14. Hakkāri* (cf. HAKKĀRĪ and SHAMDĪNĀN). Sharaf al-Dīn does not seem to know the old quarters of the tribe around 'Amādiya from which the Zangid Atābegs had driven them northwards. The emīrs claimed to be of 'Abbāsīd descent.

The first Amīr mentioned in the *Sharaf-nāma* is 'Izz al-Dīn Shīr (probably simply an arabicisation of the name Yezdān-Shīr) who held out against Timūr in 789 (1387) in the fortress of Vān. Under the Aḳ-Ḳoyunlu the tribe of Dumbulī (of Djazīra) took possession of Hakkāri but the Christians or Diz (*Asūri* = Nestorians) went to Egypt to bring back the scion of the ancient family Asad al-Dīn Zarrīn Čang ("Golden arm"). The restored dynasty received the name of Shambō (M. Garzoni, *Grammatica della lingua kurda*, Rome 1787, p. 4: *Sciambō*). In the time of Ismā'īl I, the Shambō chiefs lived in the castle of Bāi (in Shamdīnān); a member of the family ruled at Wostān (south-west of Vān) but the possession of the nāhiya of Kawāsh west of Wostān was disputed to the Hakkāri by the Rūzakī. Hakkāri rule extended to Albāḳ in the north. The last representative of the Hakkāri house, Nūr-Allāh Beg, was dispossessed by the Ottomans after the rebellion of Badr Khān

Beg of Bokhtān and in 1845 Halime Khānīm surrendered Bash-ḳal'a to the Turks. The tribe of Pinyānīsh (*ibid.* i. 97, 100) which still exists is mentioned as living near the Hakkāri.

15. The Maḥmūdī fief lies north of Hakkāri on the rivers which feed the lakes of Vān and Arčak. The rulers (Marwānī or 'Abbāsīd of Bokhtan) who originally professed the Yazīdī faith (*Sharaf-nāma*, i. 307), settled there in the Kara-Ḳoyunlu period and soon came into conflict with the Hakkāri and Dumbulī.

16. The Dumbulī are a tribe of Bokhtān (*Sharaf-nāma*, i. 118, 310: *Dumbul-i Bokht*) which for long remained Yazīdī). The Dumbulī later came into Ādharbāidjān where they received as a fief Sukmanābād (Sögmanābād) north-west of ʔhoi (now: Zūrawā). Under the Aḳ-Ḳoyunlu the Dumbulī had seized the castle of Bāi (in Shamdīnān) and a part of Hakkāri (*ibid.*, i., p. 193). To their *odjaḳ* of Sukmanābād Shāh Tahmāsp added ʔhoi. Under Sultān Sulaimān the Dumbulī received ʔotur [q.v.] and Bārgiri, later they annexed Abaghā, Sulaimān-Sarāi (the modern Sarāi) and Cāldfrān. Zain al-'Abidin Shīrwānī in his *Bustān al-Siyāḥat* (beginning of the sixteenth century) says that all the Dumbulī are Shī'īs (cf. the allusion in the *Sharaf-nāma*, i. 312) and speak Turkish (!).

17. Brādōst. The ruling family was of Gūrān or Hasanwaihīd descent [q.v.]. Its lands lay west of Ūrmia. One branch ruled at Ṣōmāi [q.v.]; another at Tergewer and at ʔal'a Dāwūd. The remnants of the Brādōst tribe now live south of Shamdīnān on the Rūbār-i Brādōst (a tributary of the Great Zāb, the sources of which lie west of Ushnū).

18. Ustūnī. The chapter which is wanting in the manuscripts must certainly refer to the first dynasty of Shamdīnān, whose headquarters were Sutūnī in the nāhiya of Harkī (cf. SHAMDĪNĀN).

19. The history of the Zarzā (cf. the Zar-zari of Shihāb al-Dīn al-'Umārī) announced in the preface to the *Sharaf-nāma* is lacking in the text.

20. Tarzā. The paragraph is lacking in the manuscripts and we know nothing of the tribe.

Group D. South of Hakkāri.

21. 'Amādiya* [q.v.]. We have seen that the town of 'Amādiya was built on the site of an ancient castle under 'Imād al-Dīn Zangī (521—541). The local dynasty of Bahdīnān mentioned in the *Sharaf-nāma* seems to have settled in the country after the end of the Zangids (viii—viiith century). The chiefs of 'Amādiya were known for their fervour in religious studies. The *Sharaf-nāma* gives their names for the Timūrid period. Later (under Ismā'īl I) the Bahdīnān annexed the Zakhō district inhabited by the Sindī and Sulaimānī which had at one time formed a separate fief (*vilāyet-i Sindiyān*). In this way the fief of Bahdīnān incorporated the greater part of the mountainous country north of Mawṣil (Mount Gāra, etc.).

22. Tāsīnī (Dāsīnī). The chapter dealing with this important Yazīdī tribe is lacking in the manuscripts but in the text we find a reference which shows that the Amīrs of 'Amādiya took Dohūk from the sandjāḳ-i Tāsīnī (i. 109) and that in 941 (1534) Sultān Selīm I gave the sandjāḳ of Arbīl and the whole wilāyet of Sohrān to Ḥusain Beg Dāsēnī, a Yazīdī chief" which provoked a bloody war with the Sohrān (i. 274—277). The latter ended by regaining their patrimony

and Husain Beg was executed at Constantinople. On the region called Däsen, cf. Hoffmann, *Auszüge*, p. 202—207.

23. Sohrān ("the red ones"), descendants of Kalūs, an Arab shepherd of Baghdād who had fled to the village of Hūdiyān in the nāhiya of Āwān (in the Sohrān territory). His son was proclaimed Amir of Balakān (east of Rawānduz) and seized the castle of Āwān. The capital of Sohrān, which was embellished by their buildings (Rich, *Narrative*, i. 157) were Ḥarir (on a tributary of the Great Zāb below Rawānduz). The Sohrān were still a powerful tribe about 1005 A.H. but later succumbed to attacks of neighbours and the Bābān (*Narrative*, i. 157) benefited by their decline.

24. Bābān. This name is really applied to several successive dynasties. Their principal fief lay south of the Little Zāb and has as its capital Shāri-Bāzēr but in 1199 (1784) the Bābān built a new capital Sulaimāniya (q.v. for details).

25. Mukri, who now occupy the region south of Lake Urmia (for details see SĀWDJ-BULĀK) had broken off from the tribe of Bābān.

26. Bānā. The Ikhtiyār al-Dīn chiefs bore this name because they had adopted Islām of their own free will (*ikhhtiyār*) (for details see SĀWDJ-BULĀK).

27. Ardālān: see the articles, ARDILĀN, SHAH-RAZŪR, SENNA, SĪSAR.

28. Gāl-Bāghī (*Sharaf-nāma*, ii., suppl. 36—45, the addition is dated 1092). Their chief 'Abbās Āghā of the Turkish tribe of Ustādjalū received a "spring of water" in Mariwān (cf. SENNA) from Bige-beg Ardālān (900—942). 'Abbās Āghā later settled at Bilāwar, a former fief of the Kalhur. His followers were recruited from different tribes. Shāh Tahmāsp confirmed him in his rule over Bilāwar and the "Twelve Oimāk".

Later the Porte gave 'Alī-Khān Gālbāghī the sandjak consisting of Kirind, Shaikhān, Ākarān (?), Khorkhōra, Zend, etc., while Yār Allāh received the *timar* of Erekle(?), Rangrazān and Sahbānān (?).

29. Kalhur (Kalhurr). The chiefs claimed to be descended from Gudarz, son of Gīw, in the Persian epic. The *ashīrat* of the Kalhur is called Gūrān (i. 317) but some manuscripts talk of "Kalhur and Gūrān" (*Sharaf-nāma*, ii., suppl. 6). There were three branches of the Kalhur; those of Palangān (cf. SENNA), Dartang (cf. ZOHĀB) and Mahī-dasht (cf. KIRMĀNSHĀH).

The possessions of the chiefs of Darna and Dartang (now Ridjāb in the district of Zohāb) according to Shāraf al-Dīn, i. 319, corresponded to the older Hulwān [q.v.]. About 1005 the power of Kubād Beg stretched from Dainawar and Bilāwar to Baghdād. Mahīdasht and Bilāwar (south of the Murwārī pass) formed the patrimony (*odjak*) of the third branch of the Kalhurs. The Mahīdasht branch was nomadic. All this perhaps explains the scantiness of the information given by Rashīd al-Dīn. The Gūrān now keep their old patrimony but the Kalhur tribe occupies the region south of the great Baghdād-Kirmānshāh road.

Group E. The Persian Kurds.

The plan of the section (*fırka*) of the *Sharaf-nāma* devoted to the *Akrādī Īrān* is not very clear. The author was writing at a time when the Perso-Turkish frontier was not settled.

The principal tribes of Persia were three in number: Siyāh Maṣṣūr, Ġiganī and Zangana. Their eponyms

were three brothers who came from Luristān or "Gūrān and Ardālān". Besides those tribes and the lesser ones mentioned by Shāraf al-Dīn there were 24 tribes (*yirmi dōrt*) of Karabāgh (in Transcaucasia), about 30,000 men under one ruler, and the Gil tribe in Khorāsān without counting tribes of minor importance.

The tribe of Siyāh Maṣṣūr. In the time of Shāh Tahmāsp its chief had become *Amir al-umara'* of all the Kurds in Persia (over 24 tribes).

A part of the Ġiganī emigrated to Ġharċistān.

The tribe of Zangana (Zengene) distinguished itself in al-Īrāk and Khorāsān.

From 1650 to 1730. "Great Kurdistan", as it has been described by Shāraf al-Dīn, and in so far as it consisted of a series of autonomous Kurd chieftainships had been already reduced in size by the introduction of Turkish rule in the sandjaks of Diyārbakr and Vān. Not only did the treaty of 1049 (1639) put an end to Persian expansion westwards but Turkey during the reign of the Safawī epigones succeeded in re-occupying the western provinces of Persia as well as Transcaucasia (von Hammer, *G.O.R.*², iv. 235). Practically all the Kurds in this way were reunited under Ottoman rule. Having no longer cause to fear the Persians, the Turks systematically undertook the task of centralisation.

As early as the reign of Murād IV, we find Malik Aḥmad Pāshā, appointed governor-general of Diyārbakr in 1638, making an expedition against the Yazidī of Sindjār. Later (1065 = 1655) the same Pāshā after his transfer to Vān subdued all the Kurds in this region.

In 1666 a Kurd, the son of a *shaikh*, declared himself *Mahdī* but was captured by the rulers of Mawṣil and 'Amādiya. The affair ended harmlessly by Sulṭān Muḥammad IV taking the *soi-disant* Mahdī into his personal service (v. Hammer, iii. 589).

In the reign of the feeble Shāh Ḥusain, the Kurds of al-Īrāk, in 1719 besieged Hamadān and carried their depredations up to the capital itself. In 1722 by order of Shāh Tahmāsp II an attempt to retake Isfahān, which had been occupied by the Afghāns, was made by the Kurd chief Fandun (Feridūn) but it was confined to an attack on the Armenian quarter. The Afghāns drove off Fandun who went back to his lands and submitted to the Turks (Hanway, *A Historical Account of the British Trade*, 1753, vol. iii). Fortune deserted the Safawīs. Even 'Abbās Ḡulī Khān Ardālān submitted to Ḥasan Pāshā (J. v. Hammer, iv. 211; cf. however, *R. M. M.*, xlix., p. 87). His example was followed by the chiefs of Djawānrūd, Darna, Djāf, Harsin and finally by the *sipahsālār* 'Alī Mardān Bakhtiyārī [Fāilī?] (v. Hammer, iv. 227).

The Afghāns. During the bloody and transitory period of Afghān rule in Isfahān, Ashraf defeated the Turks (battle of Andjīdān in 1726) who had in their ranks 20,000 Kurds under Bebek Sulaimānoghlu (Sulaimān Bābān?). The Turks attributed their defeat to the conduct of the Kurds, upon whom Ashraf had lavished promises; indeed shortly before some of the Kurds had gone over to the Afghāns. In spite of his initial success, in the next year 1140 (1727) Ashraf had to repurchase his sovereign rights by ceding to the Turks the whole of western Persia including the Kurd and Lur cantons.

Nādir Shāh. Towards the end of the reign

of Sulṭān Aḥmad III affairs began to change. By the treaty of 1144 (1732) the Persians regained their western provinces and soon Nādir invaded Ottoman territory and advanced up to the gates of Baghdād. The Turks tried in vain to check his advance with Kurdish troops until in 1733 Topal ʿOṭmān Pāshā appeared on the scene with Kurd reinforcements he had raised in Mawṣil. Nādir was defeated. In 1734, he operated with success in the Caucasus and took Tiflis which had a garrison of 6,000 Kurds. By the peace of 1149 (1736), the old frontiers of 1049 (1639) were restored. In 1743, Nādir again invaded Turkish territory but in spite of Kurd and Arab help was driven back to Senna where he was finally defeated (ibid. iv., 317, 398—399).

Nādir was not popular with the Kurds although there is an epic poem in the Gūrānī dialect on his struggle with Topal ʿOṭmān Pāshā. Among the Ardalan, Nādir replaced Subḥān Werdi Khān by his brother which provoked a popular rising (*R. M. M.*, xlix., p. 88). In 1727 during a revolt of the Turkomans the Kurds of Khorāsān (Čamish-gezek and Karačorlu) refused their help to Nādir who punished them and transported them to Mashhad. Nādir was assassinated in 1747, while on his way to punish once more the Kurd rebels of Khorāsān (Jones, *Histoire de Nādir*, London 1770, p. 118—120). The Kurds (Dumbuli etc.) played their part in the anarchy which followed the death of Nādir but the Porte refrained from intervention.

The Zand dynasty. After the death of Nādir Shāh, Karim Khān Zand [q.v.], one of the best rulers Persia has ever had, ruled the greater part of the country. The Zand were a Kurdish tribe of secondary importance (*Sharaf-nāma*, i. 323) living between Hamadān and Malāyir in the district formerly called Ighār. Under Nādir they had been transported to Khorāsān but after his death they went back to their old homes (*Tā'rikh-i Zandiya*, ed. Beer, p. xi., xviii.). With the death of Luṭf ʿAlī Khān in 1209 (1794) the dynasty came to an end. The Zand tribe was certainly too weak to be a serious support to the dynasty but Karim Khān, like his predecessors had brought several Kurd tribes from Kurdistan to Shirāz (Aḥmadāwand, *R. M. M.*, xxxviii.; Kōrūnī, who live in a particular quarter in Shirāz, O. Mann, *Die Tājik Mundarten d. Provinz Fars*, Berlin 1909, xxix.).

The Kādĵars. On the death of Aghā Muḥammad Shāh Kādĵār (1211 = 1797) Šadik Khān Shākaĵi seized the crown jewels and for some time tried to gain the throne (*The Dynasty of the Kājars*, transl. by Harford Jones Brydges, London 1833, p. 20, 27—32, 37, 50, 78, 106; R. G. Watson, *A History of Persia*, London 1866, p. 107, 115, 125). In 1221 (1805) the Persians had intervened on behalf of ʿAbd al-Raḥmān Pāshā of Sulaimāniya [q.v.] (cf. Rich, *Narrative*, i., 384; Watson, *op. cit.*, p. 155 and the Mukrī Kurd song in the collection made by O. Mann, N^o. xvi.). In 1236 (1821) as a result of troubles caused by the Kurd tribes of Haidarānlu and Sipkān the Persians invaded Turkish territory as far as Bidlis and Mūsh; at the same time they advanced as far as Sherābān near Baghdād by the Kirmānshāh road. The peace of 1238 (1823) signed at Erzerūm restored the frontier of 1049 (1639) but the Persians refused to evacuate the district of Zohāb peopled by Kuris. The fate of Sulaimāniya remained in suspense. A

new war was about to break out in 1842 when Great Britain and Russia intervened to mediate and in 1246 (1847) a new treaty was signed at Erzerūm by which Zohāb was to be divided into two parts while Persia gave up all claim to Sulaimāniya in favour of Turkey. During 1848—1852, a mixed commission composed of representatives of four powers went over the frontier, but the attitude of the Ottoman delegate Darwish Pāshā prevented an agreement being reached. Darwish Pāshā not only had the canton of Kōtūr occupied by soldiers but in a secret memoir (published at Constantinople in 1286 and 1321) developed the thesis that all the Kurd cantons south and west of Lake Urmia belonged to Turkey.

Turkey in the sixteenth century. In 1826, the ruler of Siwās, Rashid Muḥammad Pāshā was given the task of pacifying the Kurds and installing Turkish governors in Kurdistan. About 1830 a great Kurd rising broke out in several places. Its leaders were Badr Khān and Saʿid Beg, Ismāʿil Beg and Muḥammad Pāshā of Rawānduz. About 1820 (1830?) he had declared himself independent and attacked the tribes of Khoshnāw; in 1831 he seized Arbil, Altun-Köprü, Kōi-Sandĵak and Rāniya. The following year he extended his power towards Mawṣil; at Alkosh 172 Christians were put to death. ʿAkra, Zibar and ʿAmādiya, were next taken. In 1833 the troops of Rawānduz penetrated as far as Zakhō, and Djazira to re-establish Badr Khān in power there. The Yazidis were severely punished on several occasions. Their chief ʿAlī who refused to become a convert to Islām was executed (cf. the popular ballad commemorating this event, *J. A.*, 1910, p. 134—136), and a whole body of Yazidis were massacred on the hill of Koyundĵik. In 1835 Ottoman troops were sent against Muḥammad Pāshā from Baghdād, Mawṣil and Siwās and in 1836 the Mir of Rawānduz was captured by a ruse. Risings and their suppressions continued for several years longer (cf. Poujoulat, *Voyages*, i. 373; Moltke, *Briefe*, Berlin 1841, p. 259—284).

The defeat at Nizib (1839) inflicted on the Ottomans by the Egyptians released new troubles in Kurdistan. In 1843 began the rising of Nūrullāh Beg of Hakkāri and of Badr Khān of Djazira. The Nestorians of Hakkāri had lodged a complaint in Mawṣil against the oppressions of Nūrullāh Beg. In reply the latter laid waste the Nestorian canton of Barwāri. The massacres went on for several years and the number of victims is said to have reached 10,000. The Powers made representations at Constantinople and in 1847 a large army under ʿOṭmān Pāshā attacked the Kurds. Badr Khān and Nurallāh, defeated in several battles, surrendered and were deported from Kurdistan (cf. Layard, *Nineveh*, chap. vii.; *Revue de l'Orient chrétien*, 1900, v. 649—653; Addai Scher in *J. A.*, 1910, *loc. cit.*; on Kurd-Nestorian affairs in general see: Grant, *The Nestorians*, New York 1841; Badger, *The Nestorians*, London 1852; Perkins, *A residence of 8 years among the Nestorian christians*, New York 1852; Sandreczki, *Reise nach Mosul*, Stuttgart 1857; Riley, *Christians and Kurds*, in *Contemporary Review*, Sept. 1889; Heazell, *Kurds and Christians*, London 1913; Wigram, *The cradle of mankind*, London 1914; Rockwell, *The pitiful plight of the Assyrian Christians*, New York 1906; H. Luke, *Mosul and its minorities*, London 1925).

The Russo-Turkish Wars. In 1804—1805, the Russians came into contact with the Kurds and this new influence soon made itself felt. The Russo-Turkish wars of 1828—1829, 1853—1858, 1877—1878, each had far reaching effects in Kurdistān (the question has been specially studied by Averianov, *Kurdī v. voinskikh Rossii*, Tiflis 1900). As early as 1829 the Russians had raised a Kurd regiment. As a result of the expatriation of Christians, the Kurds after the war began to spread considerably farther north and west. During the Crimean campaign, the Russians raised two Kurd regiments. On the other hand when the Turkish troops had left for the north, a considerable rising was stirred up in Bohtān by the popular Yazdān-Shīr, nephew and a former rival of Badr Khān.

The war of 1877—1878 was at once followed by a rising among the Hakkārī Kurds of Bahdīnān and Bohtān directed by the sons of Badr Khān and later by the rebellion under Shaikh 'Ubaiddallāh of the Naḡshbandī order. The Kurd invaders in 1880 ravaged the Persian districts of Urmia, Sāwāj-Bulāk, Miyando-āb and Marāgha and threatened Tabriz itself. The chief victims were Shīrīs. Russia sent a detachment of troops to protect the Araxes frontier. Persia mobilised considerable forces including the Mākū [q. v.] cavalry. Turkey, which had barely finished the war with Russia, endeavoured to avoid complications. Finally the Shaikh returned to Shāmdīnān whence he was sent to Constantinople. He soon escaped from the capital and via the Caucasus returned to Shāmdīnān but he was again captured and in 1883 died in Mecca.

The Hāmīdiya troops. The weakening of Turkey after 1878, art. 61 of the treaty of Berlin securing for the Armenians reforms and security against the Kurds and Circassians, the stubborn re-action of the Ottoman government against reforms, and from 1885 the development of the Armenian revolutionary movement with branches in Russia, Switzerland and London brought complications into the hitherto quite peaceable relations of Kurds and Armenians in as much as the latter had hitherto submitted to the authority of the Kurd feudal chiefs. About 1891 Shākīr Pāshā, later appointed to bring into operation the reforms in Anatolia, conceived the idea of creating irregular Kurd regiments, like those of Russian Cossacks. The object of the reform was to train the Kurds and attach them to the Ottoman government. The attempt was not considered satisfactory for later the Hāmīdiya levies were transformed into regulars (*Khafīf suwārī*). The creation of the Hāmīdiya in any case by the part given to the Kurds and the ambitions aroused, made a considerable stir. There was even bloodshed between the tribes.

Armeno-Kurd relation. At the same time relations between the Armenians and the Kurds (these "brothers of land and water" according to a phrase recorded by the European consuls) were changing for the worse. The summer of 1894 was marked by bloody encounters at Śāṣūn which ended by the devastation of five villages and the whole of the canton of Talorī (Dalvorikh) inhabited by Armenians. The events at Śāṣūn were the first of a long series of Armenian demonstrations and their sanguinary suppression in which the Kurds took an active part. In 1895 an attempt of a

rising had been made among the Hakkārī Kurds but was speedily suppressed; it was not directed against the Christians. From the beginning of the xxth century to the world war the relations between Armenians and Kurds seem to have been fairly peaceful. On the question in general see Abowian, *Kurdī* in the *Kawkaz* newspaper, Tiflis 1848, Nos. 46, 47, 49, 50, 51 (where the "father of Armenian literature" gives a very sympathetic picture of the Kurd character); Creagh, *Armenians, Koords and Turks*, London 1880; A. S. Zelenoy, *Zapiska k karte raspredeleniya armiansk. naseleniya, Zapis. Kavkaz. Otd. Geogr. Obshch.*, Tiflis 1895, xviii.; Vambéry, *Armenier u. Kurden, Deutsche Rundschau*, 1890, lxxvii., p. 216—231; Rohrbach, *Armenier u. Kurden, Verhand. d. Gesell. f. Erdkunde*, Berlin 1900, p. 128—133; Contenson, *Chrétien et Musulmans*, Paris 1901; Lynch, *Armenia*, passim; Mayewski, *Opisaniye Wanskago i Bitlis. wilayetow*, Tiflis 1904 (the authoritative work); N. Marr, *Yeshee o slove "celebi"*, *Zap.*, 1910, xx.; Zarzechi (consul of France at Wān), *La question kurdo-arménienne, La Revue de Paris*, N^o. of April 15, 1914 and the diplomatic correspondence, publ. in the "Livres jaunes", the "Blue books" and the Russian Orange book of 1914.

The xxth century. At the beginning of the xxth century a new figure appeared on the Kurd horizon outside of the usual centres of Kurd movements: Ibrāhīm Pāshā b. Maḥmūd b. Timawī b. Aiyūb, chief of the tribe Millī (Milān) in the canton of Shariwērān (between Diyārbakr and Aleppo). Ibrāhīm Pāshā had made himself an almost independent position. When the constitution of 1908 was proclaimed he openly rebelled and retired to the mountains of 'Abd al-'Azīz where he was killed (M. Wiedemann, *Ibrahim Pascha's Glück und Ende, Asien*, 1909, viii. 34—37, 52—54 and M. Sykes, *The Caliph's Last Heritage*, p. 317—327).

A considerable agitation was aroused among the Kurds when the question of the Turco-Persian frontier was re-opened. After the check to the Russians in the Far East (Russo-Japanese War), Turkey in 1905 occupied the disputed cantons of Urmia and Sāwāj-bulāk inhabited by Kurds. The latter were drawn into the very complicated political game. Turkish occupation only ceased at the beginning of the Balkan War (in October 1912) but only to make room for Russian troops sent into the districts of Khoi and Urmia. Scions of noble Kurd families travelled in Russia. On November 17, 1913 a protocol of delimitation was signed at Constantinople and just before the World War, a four Power Commission (Turkey, Persia, England and Russia) succeeded in settling the frontier of the disputed regions by re-establishing generally the *status quo* of the beginning of the sixteenth century (cf. Minorsky, *Turetsko-persidsk. razgraničeniye, Izvestia Russ. Geogr. Obshch.*, Petrograd 1916, lii., p. 351—392).

The War of 1914—1918. In the course of the war from 1914—1918 the Kurds were between two fires. On the activities of Ismā'il Agha Simko cf. the article SHAKĀK. — On the interallied plans (March 1916) regarding Kurdistān, cf. the documents in *Randel Aziatskoi Turtsii*, Moscow 1924, p. 185—187, 225.

After 1917—1918 the situation was radically changed. Kurd committees were formed every-

where (cf. Driver, *Report on Kurdistan*, Mount Carmel, Palestine 1919; this publication is in the British Museum). Sharif Pāshā assumed the role of Kurd representative in Paris and on March 22, 1919 and March 1, 1920 presented to the Peace Conference two memoirs on Kurd claims with a map of "Kurdistan intégral" (cf. *L'Asie Française*, 1919, N^o. 175, p. 192—193). At the same time, on December 20, 1919, an arrangement was reached between Sharif Pāshā and the Armenian representatives and the two parties made conjointly declarations to the conference (cf. the text of the agreement in the newspaper *Peyām-i Şabāh*, Constantinople, Feb. 24, 1920; cf. also *Le Temps*, Paris, March 10, 1920). The Treaty of Sèvres of August 10, 1920 having created Armenia (Art. 88—93) of the four wilāyet (of Trebizond, Erzerüm, Vān and Bidlis), provided in articles 62—64 for "a local autonomy for the land where the Kurd element predominates, lying east of the Euphrates, to the south of the frontier of Armenia and to the north of the frontier of Turkey with Syria and Mesopotamia". If the Kurd population within the limits mentioned shows to the Council of the League of Nations "that a majority of the population of these regions desires to be independent of Turkey and if the Council then thinks that this population is fit for independence", Turkey agrees to conform to the recommendation and in this case the allied Powers will raise no objection to the voluntary adhesion to this "independent Kurd state" of the Kurds living in the wilāyet of Mawşil. As a result of later events the Kurd question reduced itself to the fate of the Kurds in the wilāyet of Mawşil. The Turkish representatives held that "the Kurds differed in nothing from the Turks and that although speaking different languages, these two peoples formed a single bloc as regards race, faith and customs" (Conference at Lausanne, speech of İsmet Paşa at the meeting of Jan. 23, 1923). By the decision of the Council of the League of Nations on December 16, 1925 the wilāyet of Mawşil was allotted to İrak but with a stipulation reserving to the Kurds the fulfilment of their desires, notably that "officials of Kurd race should be appointed for the government of their country, for the administration of justice and for teaching in the schools and that the Kurd language should be the official language of all these services".

During the long negotiations concerning Mawşil serious troubles broke out in the region of Kharput and Diyarbakr as a result of the insurrection of Shaikh Sa'īd Nakshbandi. Shaikh Sa'īd was captured on April 16, 1925 and executed at Diyarbakr. Since the settlement of the Mawşil question, the Angora government has enforced a policy the tendency of which is to eliminate from Kurdistan feudal and tribal influences; cf. Gentizon, *L'insurrection kurde*, *La Revue de Paris*, Oct. 15, 1925.

Bibliography: The writer has to thank Mr. G. R. Driver, who with the greatest disinterestedness put at his disposal a large quantity of historical material on the Kurds. A history of the Kurds, the preliminaries of which have been outlined above would necessitate a great deal of preparatory work and research in Arabic, Persian, Armenian, Aramaic, and Georgian sources. A systematic

ransacking of sources like the *Selīm-nāma* of Hakim Idris and his son Abu 'l-Faql and the *Tārikh-i 'Ālam-ārā-yi 'Abbāsī* would yield a rich reward. The basis of our knowledge of Kurd history is certainly the *Sharaf-nāma* (down to 1005 = 1596). The text was published (mainly from a manuscript collated by the editor himself) by Veliaminof-Zernof, *Scheref-nameh*, vol. i. (history of the Kurds), St. Petersburg 1860; vol. ii. (variants of volume i. and general history of Turkey and Persia from the beginning of the Ottoman dynasty to 1005 = 1596), St. Petersburg 1862. The French translation by F. Charmoy: *Cheref-nūmah or Fastes de la nation Kurde* in 2 volumes and four parts, St. Petersburg 1868—1875, includes commentaries (including a translation of the relevant chapters in the *Dīkhān-numā* of Hādjdj Khalifa) but is now in many respects out of date and lacks an index. Cf. also the works of H. Barb, *Über die Kurden-Chronik von Scheref; Geschichtliche Skizze d. 33 verschiedenen kurdischen Fürstengeschlechter; Geschichte v. 5 Kurden-Dynastien; Gesch. v. weiteren Kurden-Dynastien; Geschichte d. kurdischen Fürstentherrschaft in Bidlis*, which appeared respectively in the *Sitzungsb. A. W. Wien*, x., 1853, p. 258—276; xxii., 1857, p. 3—28; xxviii., 1858, p. 3—54; xxx./i., 1859; xxxii., 1859, p. 145—250. The lost history of Kurdistan by Muḥammad Efendi Şahrazūrī (d. 1073 = 1662 at Medina, cf. *Tādj al-'Arūs*, s. v. *Kurd*) has not yet come to light again (1927). For the histories of the house of Ardalān cf. SENNA where should be added the history (to 1254 = 1834) of Khusraw b. Muḥammad b. Minūchīr, cf. Blochet, *Catalogue des manuscrits persans de la Bibl. Nationale*, i., p. 305, N^o. 498. On the *Risālat Ansāb al-Akrād*, belonging to the Asiatic Museum of Petrograd cf. Romasiewicz, in the *Mélanges Asiatique*, new ser., Petrograd 1918, p. 392. The newspaper *Zar-i Kurmāndjī* (of Rawānduz) has published in Kurdish a short history *Ġhunā-yi Bahārīstān* (1926) and announces the early publication of the *Tārikh-i Kurdān* of Zain al-'Abidin Beg. General information on Kurd history will be found in G. Campanile, *Storia della regione di Kurdistan e delle sette di religione ivi esistenti*, Naples 1818; Quatremère, *Notice sur le Masālik al-Abṣār*, N. E., xiii., 1838; Rich, *Narrative* (cf. SULAIMĀNIYA); Charmoy in the preface to his translation of the *Sharaf-nāma*; Lerch, *Izsledowaniya ob iranskikh Kurдах*, St. Petersburg 1856, i., p. 20—33; Hoffmann, *Auszüge aus syrisch. Akten*, 1880; Tomaschek, *Sasun, Sitzb. A. W. W.*, p. 133—134, 1895; Bittner, *Der Kurdengau Uschnje, Sitzb. A. W. Wien*, p. 133, 1895; Rawlinson and Wilson in the *Encyclop. Britannica*, 1911, xv. 949—951; Addai Scher, *Episodes de l'histoire du Kurdistan*, *J. A.*, 1910, xv., p. 119—140: the events of 1202, 1508, 1510—1512 (Djazīra), 1523, 1689, 1712 ('Amādiya), 1820—1836 (Rawānduz); Soane, *To Mesopotamia... in disguise*, London 1912, Chap. xvi.; Minorsky, *Kurdi*, St. Petersburg 1915; Driver, *Studies in Kurdish History*, *Bull. School of Orient Studies*, London 1922, II/3, p. 491—513. — In November 1926, Mr. Cl. Huart made several communications to the Institut des Inscriptions on the history of the Kurds but the death of the author has delayed their publication.

C. Anthropology, Sociology and Ethnography.

It is sufficient to compare the photographs of the Milli ("Arab type"), Girdî ("Mukri type"), Koçkiri ("Biblical Jew type"), Şamdinân ("Nestorian" and "Hakkârî" types) Kurds, that figure in Mark Sykes, *The Caliph's Last Heritage*, on p. 321, 343, 373, 425—429 or the types of northern Kurds given by Lynch, *Armenia*, ii., fig. 109 ("Turkoman" type) and fig. 114 (original and very marked type) to be able to say at once that any idea of finding a general formula for the "Kurd type" is quite illusory.

In consequence it is only as personal opinions that one can quote the generalisation of even the most careful observers like Duhoussset, *Etudes sur les populations de la Perse*, Paris 1863, p. 12—16; Khanikoff, *Mémoire sur l'ethnogr. de la Perse*, Paris 1866, p. 107; Chantre, *Aperçu sur les caractères ethniques des Ansariés et des Kurdes*, Bull. Soc. Anthropol. de Lyon, 1882, i., p. 162; v. Luschan, *Early inhabitants of Western Asia*, Annual Report Smithsonian Inst. for 1914, p. 561—562; do., *Die Wandervölker Kleinasiens*, Verh. d. Gesell. f. Anthropol., 1886 and *Völker, Rassen, Sprachen*, Berlin 1922; *Das Volk d. Kurden*, Globus, lviii., 25, p. 355—363; Pissou, *Races des hautes vallées du Tigre et de l'Euphrate*, Revue Scient., 1892, xlix., p. 557—560, 581—588.

All these characterisations with their contradictions evidently refer only to individuals that the authors had seen but no one has ever examined all the Kurd tribes. Scientific measurements have been rarely taken; cf. Duhoussset, *o. l.*, tables 7—8; Khanikoff, *o. l.*, p. 138, and the Russian works of Dr. Elisewew, *Anthropol. exkursiya, Izv. Geogr. Obsh.*, xxiii. and *Po belu Svétu*, St. Petersburg 1896, iii. 319, 332, of Dr. Danilow, A. A. Iwanowski (Yezidi, in *Russki Anthropol. Journal*, 1900, N° 3 with Russ. bibliography) and Dr. Pantukhow (cf. C. H., *Einige Notizen über die Kurden und Karapapachen nach Pantjuchow, Ausland*, 36, p. 719).

We now possess a fairly complete list of the names of Kurd tribes and their approximate distribution. But a complete survey, taking into account the facts of history and based on information collected on a uniform system would require a vast amount of preliminary work. We have the minute examination of the material available in 1856 in Lerch's work, *Izslédovaniya ob iranskikh Kurдах*, St. Petersburg 1856, i., p. 59—121 (this part of Lerch's book is omitted in the German translation *Forschungen über die Kurden*, St. Petersburg 1857—1858). Among later compilations may be mentioned: Jaba, *Recueil de notices et récits kourdes*, St. Petersburg 1860, p. 1—7; Spiegel, *Iranische Altertumskunde*, Leipzig 1871, i.; col. Kartsew, *Zamétki o kurдах*, in *Zap. Kawk. Otd. Geogr. Obsh.*, Tiflis 1897, xix., p. 339—368 (with a map) and the very fullest (305 names) by Sir Mark Sykes, *The Kurdish tribes of the Ottoman Empire*, *J. R. Anthropol. Inst. of Gr. Brit.*, 1908, p. 451—480 (with a map) reprinted in his *The Caliph's Last Heritage*, London 1915, p. 553—592; Driver, *Report on Kurdistan*, Mount Carmel 1919, p. 19—74. For the Persian tribes see the articles KIRMĀNŞĀH, LAK, MĀKŪ, SĀWĎJ-BULĀK, SENNA and URMIA; for the Kurds in Transcaucasia see E. Kondratenko, *Ethnogr. karti Zakawkazya*,

Zap. Kawk. Otd. Geogr. Obsh., Tiflis 1896, appendix to vol. xviii.

Three things are characteristic of the mode of life of the Kurds: the historical tendency of the Kurds to group themselves on territorial fiefs around strongholds occupied by their chiefs, who are often of origin foreign to the local tribes; the existence of a warrior caste which supports the chief and conserves the ethnic agglomeration formed; the presence among the Kurds of shepherds (nomads and semi-nomads) as well as of agriculturists (settled or semi-settled).

Completely nomad tribes living in tents the whole year round and spending the winter in the warm plains of Mesopotamia in the vicinity of Arabs are now rather rare (cf. the list given by Sir Mark Sykes). The majority of the Kurds are semi-nomadic or settled. The former, following the climatic conditions of the country, live in villages during 5 to 8 months of the year and in summer after the harvest go to the mountains where they occupy strictly defined areas. Even the stages of migration of tribes like the Džāf (cf. SENNA) are rigorously fixed. More often the Kurds of this class confine themselves to ascending the heights adjoining their villages (called *Sarān* in the region of SāwĎj-Bulāk).

The settled Kurds seem very often to represent the older population who were conquered by the 'ashīrat soldiers or accepted this domination to secure protection against their neighbours (cf. the article SĀWĎJ-BULĀK). Strabo, xvi. 3, 1 noted the presence of agriculturists among the Cyrtii of Fārs. At one time the nomad tribes of Mūsh found shelter in winter in the Armenian villages of the plains but gradually (since 1842) exclusively Kurd villages arose beside the Armenian villages; cf. *Correspondence respecting the condition of population in Asia Minor and Syria*, Blue Books, Turkey 1879, No. 10; 1880, N° 4 and 23; 1881, N° 6 [Trotter's reports were translated into Russian in *Izv. Kawk. Otd. Geogr. Obsh.*, Tiflis 1882, vii., appendix]; Lynch, *Armenia*, 1901, ii. 423; Mayewski, *Wanskii i Bitlis. Wilayet*, Tiflis 1904 (lists of Armenian and Kurd villages). The general tendency of the Kurds is towards a settled existence. In northern Mesopotamia the Kurds have shown themselves fairly skilful agriculturists and for this reason have an advantage over the Beduin Arab element; cf. the *Handbook* (N° 57) "Turkey in Asia" publ. by the Foreign Office, p. 104: "Northern Mesopotamia seems destined to become Kurdish land".

The statements of an ethnographic character (costume, occupation, games, etc.) differ from tribe to tribe in Kurdistan and a premature generalisation might prove misleading. Only the Kurds of Eriwān (living far from the great Kurd centres) have been made the subject of a complete monograph by Egiazarov (a professor of law speaking Kurdish from his infancy), *Kratkii ethnogr. očerĳ Kurdow Eriwan. gubernii*, *Zap. Kawk. Otd. Geogr. Obsh.*, Tiflis 1891, xiii/2; cf. also Khačaturow, *Kurdi, čerti yikh kharaktera i bita*, *Sborn. mater. po Kawkaz.*, Tiflis 1894, xx/1, p. 64—90. For the Kurds of Sulaimāniya see the remarkable work of Rich, *Narrative of a residence*, and Soane, *To Mesopotamia and Kurdistan in disguise*, chap. xvi.; for the region of Mukri and Urmia: Arakelian, *Kurdi v Persii*, *Izv. Kawk. Otd. Geogr. Obsh.*, xvii/1, 1904; de Morgan, *Miss. scientifique, Etudes geogr.*, ii.; Nikitine, *Quelques observations sur les*

Kurdes, Mercure de France, I, ii., 1921, p. 662—674; *La vie domestique kurde, Revue ethnogr. et des traditions populaires*, 1923, p. 334—344.

In the *Sharaf-nāma* (i. 98, 131, 173—174, 381; ii., add., p. 44) we find curious features showing the part played by women among the Kurds; they enjoyed less liberty than among the Turkomans but interfered actively in affairs and even (among the Kalhur) ruled their tribes. On Ḥalime-khānīm of Hakkārī cf. Cuinet, *La Turquie d'Asie*, ii. 717; on 'Ādila-khānīm of Alabēa (d. 1924 with the title "Khān bahādūr" conferred by the British government) cf. Soane, *To Mesopotamia*², 1926 and Minorsky, *Kurd*², St. Petersburg 1915, p. 37. Cf. also Rich, *Narrative*, ii. 285 and *passim*; Jaba, *Recueil*, p. 89, 99; Hyvernāt, *Du Caucase au Golfe Persique*, 1892, p. 174.

Bibliography: Other articles relating to the life of the Kurds: de Morgan, *La féodalité en Perse, Revue d'ethnogr. et de sociol.*, Paris 1912, p. 180—182; Nikitine, *La féodalité kurde*, R. M. M., ix., p. 1—27; *Kurdische Textil- und Bekleid.-Industrie, Österr. Monatsschrift f. d. Orient*, 1876, p. 126—127; v. Luschan, *Zwei mit Menschenhaaren besetzte Teppiche, Zeitschr. Ethnol.*, xx., 1888, 6, p. 439; *Kustarn. promish. na Kawkaze, Kowrow. promish. Kurdow. Eriwan. gubernii*, Tiflis 1903 (Kurd carpets of Eriwān); Berliner and Borchart, *Silberschmiedarbeiten aus Kurdistan*, 1922; Volland, *Beiträge z. Ethnogr. d. Bewohner v. Armenien und Kurdistan*, Arch. f. Anthrop., 36, 1909, p. 183—196; Mirza M. Djewād al-Kāzi, *Studien aus dem Rechtsleben, in Kurdistan*, Zeitschr. f. vergl. Rechtswiss., xxii., 1909, p. 321—347; do., *Der Kurdenstamm Manggur*, Globus, 98, p. 213—215; E. Noel, *The Character of the Kurds as illustrated by their Proverbs and Popular Sayings*, Bull. School of Orient. Stud., i./iv., 1921, p. 79—90.

D. Religion.

The Kurds themselves believe that their ancestors were *madjūsī* (Zoroastrians), cf. M. Sykes, *The Caliph's Last Heritage*, p. 425, and perhaps the name Bahdinān ('Amādiya) may be a relic of Mazdaean terminology (*bīhdīn* "orthodox, layman"). Aramaic Christian sources however rather suggest that the Kurds at first professed some kind of paganism. In the third century Mār Mārī of Urfa (d. 226) made converts to Christianity at Shāhgert (Shahrgert between Dakūkā and Arbīl, cf. Hoffmann, *Auszüge*, p. 270) of the king and the people who "worshipped trees and sacrificed to the idol of copper" (Raabe, *Mār Mārī*, p. 26). Ishō'yabī built a convent near Thāmānīn (near Djazirat Ibn 'Omar) at the "spot where the Kurds had sacrificed to devils". The Kurds whom Mār Sābhā (d. 485) converted to Christianity were worshippers of the sun, cf. Hoffmann, *Auszüge*, p. 75.

Statements regarding the attempts at evangelizing the Kurds are very scanty but it is a fact that Mas'ūdī, *Murūdj*, iii. 254, mentions among the Kurds al-Ya'qūbiya and al-Djūrḡān Christians living near Mawṣil and Djabal al-Djūdī (cf. Marco Polo, Ch. xxiv.). After their conversion to Islām, the Kurds frequently supported the Khāridjī movement (the rising of the Zandjī slaves in the region of Baṣra, that of Daisam in Ādharbāidjān; cf. Mas'ūdī, *ibid.*, v., p. 231: the Kurds scattered through Ādharbāidjān are known as *shurāt* = Khāridjīs). There were also Kurds who denied the authority

of the Caliphs 'Othmān and 'Alī (Mas'ūdī, *ibid.*, iii. 233). According to the *Sharaf-nāma*, i. 14, all the Muslim Kurds followed the Shāfi'ī Sunna rite (Ewliyā Çelebi, iv. 75, says the same). It is however certain that there were Shi'is among the Kurds under Persian rule. In the reign of Uldjāitū there was even a Kurd *mahdī*. The Shāḡakī [q.v.] living among the Shāh-sewan Turks became Shi'is; cf. also the evidence of the *Sharaf-nāma*, i. 316 on the Dumbulī following Shi'a doctrine (the meaning of the term *husainī* which the same author, i. 117 applies to four tribes of Djazīra in contrast to the three Yazidī tribes is not very clear).

On the other hand the testimony of the *Sharaf-nāma*, i. 14, is very convincing on the spread among the Kurds of Yazidī doctrines (the Dāseni, Khālidi, Basiyān tribes and parts of the Bokhtī, Maḥmūdī and Dumbulī, not to speak of the Sindjār which the *Sharaf-nāma* does not mention); cf. YAZIDIS.

Of the Pāzūkī tribe, the *Sharaf-nāma* remarks (i. 328) that it has no definite religion; from its close connection with the Šafawīs, one might suppose that it held extreme Shi'a views.

At the present day the great majority of the Kurds are still Shāfi'ī Sunnis. Even in Senna only the former ruling family of the Walī Ardalān was Shi'ī. The Shi'ī tribes of the provinces of Kirmānshāh are for the most part extremists; cf. Minorsky, *Notes sur les Ahlī-Haḡḡ*, R. M. M., 1920, xi., p. 59; for the district of Mawṣil see the articles SARLĪ and SHABAK. As a general rule extremist views, more or less Shi'ī, find adherents rather among the Īrānian tribes of Kurdistan who are not true Kurds (Gūrān, Zāzā). On the other hand the Kurds are much under the influence of Shaikh's of the various Sunni orders (especially the Naḡshbandī and Kādīriya whose head-quarters are at Awrāmān, Sulaimāniya, Mukri, Shāmdinān, Kharpūt, etc.). Their influence was apparent in the risings of Badr Khān (cf. Layard, *Discoveries*, London 1853, p. 375), 'Ubadallāh (1880), Shaikh Sa'īd (1926) etc.; cf. SHAMDINĀN and the articles by Nikitine there mentioned.

Bibliography: In addition to the works quoted, cf. N. Marr, *Yeshēe o slove "čelebi"*, Zap., 1910, xx. (the author studies the cultural part played by the Kurd nation in the history of Nearer Asia and thinks he can find among the Kurds [Yazidīs?] survivals of pagan beliefs; cf. ÇELEBİ); S. Reinach, *Charme pour obtenir la pluie* (in Kurdistan), L'Anthropologie, 1906, xvii., p. 633; Volland, *Aberglauben in Armenien und Kurdistan*, Globus, 1907, xci., N^o 22, p. 341—344 (on cups covered with magical inscriptions); Driver, *The religion of the Kurds*, Bull. School of Orient. Studies, 1922, II/ii., p. 197—215; Nikitine, *Les Kurdes et le Christianisme*, R. H. R., 1922.

E. The Kurdish Language.

Kurdish, like Persian, is a western Īrānian language but its descent is different from that of Persian. The history of the separation of western Īrānian into a northern and a southern branch has been traced by Andreas, Salemann, O. Mann (*Die Tajik Mundarten d. Provinz Fars*, Berlin 1909, p. i.—xxvi.), Meillet, *M. S. L.*, 1911—1912, xvii.; Lentz, *Die nordiranischen Elemente in d. neupers. Literatursprache bei Firdosi*, Z. für Indologie und Iranistik, 1926, iv. But P. Tedesco, in

his *Dialektologie d. westiranischen Turfantexte*, *Le Monde Oriental*, 1921, xv., fasc. 1—3, has shown that "western" Iranian (distinguished from Eastern Iranian: Soghdian, Saka) shows a considerable interpenetration of its northern and southern branches and this result has been corroborated by the work of W. Lentz quoted above.

In spite of this confusion and the co-existence of heterodox elements in the modern languages Kurdish as a whole shows a character clearly distinct from that of Persian. This fact would be more obvious if our Kurdish documents were not of much later date than the period in which the Persian literary language established its supremacy. The main characteristics of Kurdish compared with Persian are as follows:

a. Its specific pronunciation, the frequency of the Semitic ε and ζ even in Iranian words like *asp* (horse), *hawt* (seven); the velar *l* (a little different from the Slav and Turkish *l*), the rolled *r* distinguished from the weak *r*; the bilabial *w*; two consonants tolerated at the beginning (e.g. *brā*, *shēk*), and the sonant *n* and *r* acquiring a vocalic character (almost *b'ṛ*, *k'ṛ*).

b. The fundamental difference in the phonetic treatment of the same Iranian material is illustrated by the following examples:

Persian	Kurdish
<i>dil</i>	<i>zird</i>
<i>ādhar</i> (<i>ātash</i>)	<i>āhir</i> and <i>āgir</i>
<i>māhi</i>	<i>māsi</i>
<i>namāz</i>	<i>nuwēz</i>

c. Morphological differences: the survival of the oblique case; determinative suffix ("definite article") in *ākā*; different personal inflections: 3 pers. pron. poss. *-i/-ian*, plur. of the present: 1st person in *in*, 2nd and 3rd *in*; a form of *iṭāfat* (especially in the plural) in *t* (*-d*) (cf. the Ossetic plural in *tā*), e.g. *yār-i te* "thy friend", *yārid te*, "thy friends"; the old passive in *-ya* (cf. Salemann, *Zum mittelpers. Passiv*, St. Petersburg 1900; Meillet, *Grammaire du vieux perse*, p. 102) and a passive in *re*.

d. Syntactical differences: survival of the passive construction of transitive verbs in the preterite, particularly complicated in verbs compounded with prepositions (*kūestān-iān lē briwīn* "they have cut us off from the mountains" literally; "the mountains [by them] from we have-been-cut").

e. Lexicological differences: Not only, like the majority of the dialects of the north-west, does the Kurdish oppose *kar-*, *kap-* (and *vāč-*) respectively to the *kun-*, *uft-* (and *gō-*) of the south-west but it has *hāt* for *amad*, *āni* for *āvard*, *bist* for *shimīd*, *nārd* for *firistād* etc. The many borrowings from literary Arabic form an element connecting Kurdish with Persian but Kurdish also borrows from spoken Arabic, Ottoman Turkish, Aramaic and Armenian. In addition, Kurdish and Armenian may have borrowed from the same indigenous sources not yet identified.

While then the Iranian dialects of the north-west and south-west are not separated by an abyss, for all practical purposes Kurdish has its own well-marked type, which differentiates it not only from Modern Persian but from the other dialects of the north-west (Samnāni, "central" dialects, etc.).

Kurdish itself moreover includes very different

dialects. The majority of the Kurdish dialects are included under the term *Kurmāndjī*. According to the *Sharaf-nāma*, the Kurdish nation consists of four sections: *Kurmāndjī*, *Lur*, *Kalhur*, and *Gūrān*. Of these tribes the *Lurs* [q.v.] as far as their physical appearance and their language are concerned gravitate towards the south-west group (O. Mann, *Die Mundarten der Lur-Stämme*, Berlin 1910) and form a unity apart. The *Gūrān* (cf. *ZOHĀB*) like their relatives the *Awramī* (cf. *SENNA*), *Zāzā* [q.v.] etc. speak dialects of the north-west differing considerably from Kurdish (cf. "three" in *Gūrāni yeri*, in *Zāzā*: *hirye* agreeing with the Samnāni *heirā*, while Kurdish has *sē*); the *Zāzā*, according to Andreas (recorded by Christiansen) are related to the old Dailamites and this hypothesis is corroborated by traditions still alive among the *Awramī* (E. Soane, *In Disguise to ... Kurdistan*, p. 377).

According to the *Sharaf-nāma* the *Kalhurs* occupied the region between *Senna*, *Kirmānshāh* and *Zohāb*. The term *Kalhur* seems therefore to correspond in the *Sharaf-nāma*, p. 13, to the Kurd group "non-Kurmāndjī" of the districts of *Senna* and *Kirmānshāh*. These dialects have been studied by O. Mann but this part of his collections has not yet been published. According to the prospectus of his *Kurdisch-persische Forschungen* (the publication of which has been taken up by K. Hadank) one volume is to include the southern dialects of the province of *Kirmānshāh*: *Kirmānshāhi*, *Kalhuri*, *Lakki*, *Pahrawandī*, *Nānakali* and *Kulyāi*, the latter in the district of *Sunḡur* [q.v.]; another volume will be devoted to the dialects of the province of *Kurdistan* [cf. *SENNA*] and to those of *Kirind* [q.v.] and *Garrūs* (otherwise *Biḡār*, east of *Senna*). The people who speak these dialects usually call them *Kurdi* or by the name of the tribe concerned. On the borders of *Luristan* (in *Lakistan*) the southern Kurdish dialects are known as *Lakki* (cf. O. Mann, *Kurze Skizze der Luridialekte* S. B. A. W., 1904, xxxix.; Čirikow, *Putewoi journal*, St. Petersburg 1875, p. 227). There are *Lak* at *Salmās* [q.v.] and in the Province of *Fārs* (but the Kurd dialect of *Kalūn-Abdū*, described by O. Mann, *Die Tājik Mundarten*, p. 135 is not *Lakki*). The southern Kurd dialects of western Persia have lost the important features of Kurdish (e.g. the passive formation of the preterite in transitive verbs). The existence of these non-Kurmāndjī dialects may prove to be of some importance in settling the problem of the *Ḳardū-Kūptioi*.

We do not know the origin of the name *Kurmāndjī*. Is it a compound of *Kurd* with the name of another tribe of Media? In the *Kurmāndjī* area properly so-called two groups of dialects are distinguished: the eastern group (or rather south-east) and the western. Their exact boundaries are not yet defined. Eastern *Kurmāndjī* is spoken in the *Mukrī* region [cf. *SĀWDJ-BULĀḲ*] and in the region of the tributaries of the *Tigris*: the *Little Zāb*, *ʿAḡaim* [q.v.] and the *Diylā* [q.v.]. It is a very pure dialect and rich from the morphological point of view. The western branch includes the remainder of the *Kurmāndjī* dialects with their local peculiarities (*Diyārbakr*, *Mārdin*, *Bokhtān*, *Bahdīnān*, *Hakkāri*, *Urmia*, *Eriwān*, *Erzerūm* and the Kurd colonies in Asia Minor and *Khorāsān*). The Kurds of Northern Syria seem to use various dialects full of borrowings from Turkish (cf. *Le Coq's* collection).

Ewliyā Ćelebi, iv. 75, enumerates 15 Kurdish dialects (*lisan*).

Garzoni, *Grammatica*, distinguishes the dialect of Amādiya from those of Bidlis, Džulāmerg, okhtān and Sulaimāniya. Cf. also the scheme of assification in Soane, *Grammar of the Kurmanji*.

Bibliography: A list of all studies of Kurdish from 1783 to date is given in Lerch: *Izslədovaniya*, iii., p. i.—xxxi. and in the *Grundriss d. iran. Philol.*, 1/2., 253—254. The only scientific Kurdish grammars are: Justi, *Kurdische Grammatik*, St. Petersburg 1880, and Socin, *Die Sprache d. Kurden in Grundr. d. iran. Phil.*, 1/2, p. 249—286; these two are mainly concerned with Western Kurmāndji. In Eastern Kurmāndji the fundamental work is: O. Mann, *Die Mundart der Mukri-Kurden*, Berlin 1909, i., p. xxxiii.—cv.: *Grammatische Skizze*; cf. also Soane, *Notes on the Phonology of Southern Kurmanji*, *J.R.A.S.*, 1922, p. 199—226. The only Kurdish dictionary in existence is that of A. Jaba—F. Justi, *Dictionnaire kurde-français*, St. Petersburg 1879; it sums up all that had been published before this date (the supplement by H. Schindler appeared in *Z.D.M.G.*, xxxviii/1) but it is not sufficient for practical purposes. On the manuscript of a voluminous Kurdish dictionary compiled by E. B. Soane and belonging to the School of Oriental Studies, cf. E. D. Ross in the *Times*, Feb. 19, 1926.

The following is a list of the specimens of Kurdish dialects that are so far available:

I. Persian group: A. Senna—Kirmānshāh: Lerch, *Forschungen über die Kurden*, St. Petersburg 1857—1858, bibliography, a fragment of the *Gulistan* in the dialect of Senna; H. Schindler, *Beiträge z. kurdischen Wortschatze*, *Z. D. M. G.*, 1884, xxxviii., words and phrases in Zangana and Kalhuri; do., *Weitere Beiträge*, *Z. D. M. G.*, 1888, xlii., p. 73—79, analysis of a Sennāi vocabulary; Soane, *Southern Kurdish Folk-Song in Kermānshāhi*, *J. A. R. S.*, 1909, p. 35; cf. also De Morgan, *Mission scientifique*, V, cf. the review by O. Mann, in *Die Mundart d. Mukri-Kurden*, i., p. xxi.

B. Scattered Dialects: A. Querry, *La dialecte guerrouci*, *M. S. L.*, 1895, ix., p. 1—23, Garrūsi of the Khodjāwand in Māzandarān; O. Mann, *Die Tājik-Mundarten*, Berlin 1909, p. 135—155, Kurdish dialect of Kalūn Abdū in Fārs; W. Iwanow, *Khurasāni Kurdish*, to appear in the publications of the Royal Asiatic Society: this dialect is near to the Kurmāndji of Erzerūm; cf. also Bérézine, *Etudes*, phrases in Khorāsān Kurdish; H. Schindler, *Z.D.M.G.*, xxxviii/1, Amarlu dialect in Khorāsān, and various books of travels; Brugsch, *Reise d. preussischen Gesandtschaft*, 1863, ii. 496—498: Kurds of the environs of Teherān.

II. Eastern Kurmāndji: Chodzko, *Etudes philologiques sur la langue Kurde*, *J. A.*, 1857, p. 297—356, dialect of Sulaimāniya collected in Paris; O. Mann, *Die Mundart der Mukri-Kurden*, Berlin 1906, i., complete grammar, text, Berlin 1909, ii., translations, essay on the ballads of the Eastern Kurds; E. B. Soane, *Notes on a Kurdish dialect (Sulaimania)*, *J. R. A. S.*, 1912, p. 891—940; do., *Grammar of the Kurmanji Language*, London 1913, xvi. 289; Bittner, *Die heiligen Bücher d. Fesiden, Denksch. Wien. Akad.*, lv/iv., 1913; Soane, *Elementary Kurmanji*

grammar, Baghdad 1919, 194 pages; do., *Kitāb-i Awwalamini Qiraat-i Kurdi*, Baghdad 1920; L. O. Fossum, *A practical Kurdish grammar* (Mukri), Minneapolis 1919; cf. also: Bérézine, *Recherches sur les dialectes musulmans*, Kazan 1853; H. Schindler, *Z. D. M. G.*, 1884, xxxviii.; de Morgan, *Mission scientifique* V, 1904; von Le Coq, *Kurdische Texte*, ii., under Bābā = Bābān.

III. Northern and Western Kurmāndji.

Eriwān: S. A. Egiazarow, *Kratkii etnograficheski očerok Kurdow*, *Zap. Kavkaz. otd. Geogr. Obsčestwa*, xiii/1, Tiflis 1891, compte-rendu *W. Z. K. M.*, vi., p. 178; Khačaturow, *Kurdskie teksti*, *Soornik materialow dlia opisaniya Kawkaza*, Tiflis 1894, xi., p. 1—16, the language of the Barukli Kurds, near Mount Ararat; Adjarian, *Recueil de mots kurdes en dialecte de Novo-Bayazet*, *M. S. L.*, 1911, xvi., p. 349—383. Erzerūm-Bāyazid: Jaba, *Recueil des notices et extraits kurdes*, St. Petersburg 1860; Jaba—Justi, *Dictionnaire kurde-français*, St. Petersburg 1879, based principally on texts from Bāyazid but utilising all available materials; Jaba, *Dialogues kurde-français*, manuscript in my possession. Urmia—Hakkāri—Shamdinān: F. Müller, *Kurdisches und syrisches Wörterverzeichnis, Orient und Occident*, publ. by Benfey, iii., p. 104; S. Rhea, *Brief grammar and vocabulary of the Kurdish language of the Hakkāri district*, *J. A. O. S.*, 1872, x., p. 118—155; Makas, *Kurdische Studien*, Heidelberg 1900, p. 16—18; *Ein Gedicht aus Gawar*, on other materials from Gawar, cf. M. Hartmann in *Bull. Acad.*, St. Petersburg 1900; Nikitine, *Kratkii russko-kurdsii voyennii perevodnik*, Urmia 1916; Noel, *The Character of the Kurds as illustrated by their Proverbs* (Hakkāri), *Bull. School Oriental Studies*, 1/iv., 1921, p. 79—90; Agha Petros Ellow, *Assyrian, Kurdish and Yezidi*, Baghdad 1920, 87 pages; Nikitine and Soane, *The Tale of Suto and Tato*, *Bull. School Oriental Studies*, 1923, iii/1, p. 69—106; Nikitine, *Kurdish stories*, *ibid.*, 1926, iv/1, p. 121—138. Bahdinān—Bohtān: M. Garzoni, *Grammatica e vocabolario della lingua kurda*, Rome 1787, materials collected at Amādiya; on the peculiarity of this dialect, cf. *Sharaf-nāma*, i. 107; A. Socin, *Kurdische Sammlungen*, St. Petersburg 1890, ii-a and ii-b, text and translation in the dialect of "Bohtān" collected at Zākhō; Jardine, *Bahdinan Kurmanji*, Baghdad 1922, materials collected at Zākhō and presented as the "Kurmanji of the Kurds of Mosul division and surrounding districts of Kurdistan"; Dufresne, *Un comte kurde de la région de Sö'örd*, *J. A.*, 1910, p. 107—118, in the dialect of Bohtān but dictated by a "Sa'id Hikkari effendi"; Yūsuf Diyā al-Din pāshā al-Khālidi, *al-Hadiya Hal-amidiya fi 'l-Lughati 'l-Kurdiya*, Stambul 1310, the author was Kā'im-makām at Mōtki (Mōdki), cf. the compte-rendu *J. A.*, series ix., vol. 2, p. 545 and M. Hartmann, *Bohtān*; P. Beidar, *Grammaire Kurde*, Paris 1926: the dialect of Zākhō-Djazīra. Tūr 'Abdīn—Mārdīn—Diyārbakr: P. Lerch, *Forschungen über die Kurden*, St. Petersburg 1857—1858, texts collected at Roslawl from prisoners of war natives of the environs of Diyārbakr; Prym and Socin, *Kurdische Sammlungen*, St. Petersburg 1887, i-a and i-b, texts and translations, dialect of Tūr

‘Abdin; Makas, *Kurdische Studien*, Heidelberg 1900, p. 1—16: *Eine Probe des Dialektes v. Diyarbakir*; do., *Kurdische Texte*, St. Petersburg-Leningrad 1897—1926, collected in Budapest, dialect of Mardin. Northern Syria: von Le Coq, *Kurdische Texte*, Berlin 1903, not for sale, i., p. 1—81, texts collected at Zendjirli, + 1—92, phototype of the *Nawbahār* and *Mawlid-i Nabī*; ii. 1—115, transcription of texts of vol. i. and phrases in Zāzā, Lölö (?) and Bābā = Mukrī. Cf. also Bérézine, *Etudes sur les dialectes musulmans*, Kazan 1853; Soane, *The Shādī branch of Kurmanji*, *J. R. A. S.*, 1909, p. 895; Soane, *Grammar of the Kurmanji*, 1913.

Folklore, Literature, Newspapers.

The collections of Kurdish stories made by Jaba, Lerch, Prym-Socin, von Le Coq, O. Mann, Makas and Nikitine give a fair idea of the Kurds as story-tellers. The themes are often taken from folklore common to the Nearer East (fables, fairytales, stories of fools; cf. Mirza M. Djewad al-Kazi, *Ein Kurdisches Märchen*, *Globus*, 96, p. 187); more numerous and more interesting are the stories of the loves of popular heroes, of the wars of the clans etc. Prym-Socin and Makas have given detailed commentaries on the subject matter of stories of this category. O. Mann illustrated the ballad of the siege of Dīmdīmkaʿa in 1017 (1608) from the evidence of the official history of ‘Abbās I. Many popular subjects are treated both in prose and verse. Some cycles with their variants form regular epics like the *Mem-u Zin*, the story of a pair of lovers at the court of the emir of Bohtān, of which we have Aḥmad-khānī’s version and very numerous popular variants: Lerch, *Mélanges Asiatiques*, iii. 242—255; Prym-Socin, N^o. xxxi.; Mann, N^o. ii.; Makas, N^o. i. Cf. also: B. Chalatiān, *Kurdische Sagen*, *Zeitsch. d. Vereins. f. Völkerkunde*, 15, 1905, p. 322—330; 16, 1906, p. 35—46 and 402—414; 17, 1907, p. 76—80.

Jaba’s informant (*Recueil de notices*, p. 7—9) furnished him with a list of 9 Kurd poets but the data must be taken with some caution. These poets are:

‘Alī of Ḥarīr (in Shamdīnān) who lived 400—471 (1009—1078), which almost makes him contemporary with Firdawsī (?). He is the author of a Kurdish *diwān*ca.

Shaikh Aḥmad Malā-i Djizrī, a native of Djazira where his tomb is still to be seen. He is said to have flourished between 540 and 556 (1145—1160) in the time of a chief ‘Imād al-Dīn. But the *Diwān* of Malā-i Djizrī publ. in phototype by M. Hartmann, *Das Kurdische Diwan des Schēch Ahmed*, Berlin 1904, mentions the name (fol. 221) of the Persian poet Djāmi, who died in 898 (1492) so that he cannot be earlier than the end of the xvth century. An ode dedicated to Khān-i Khānān, who is the Shāh of Kurdistān (f. 171) who rules at Tabriz and who is greater than the Shāh of Khorāsān (f. 177) may refer to some Ak-Ḳoyunlu [q. v.] ruler.

Faḳī Teirān (707—777 = 1302—1375), born and buried at Mukus, was really called Muḥammad and used the *takhalluṣ* of Mīm Haiy. He wrote the *Hikāyata Shaikh Senāna* (*Ṣan‘ān*), “Stories of Barsisa”, the *Ḳawli hasp-i rash* (“The words of the black colour of the Prophet”) and other poems.

Malā-i Batē (Mullā Aḥmad), born and buried

in the village of Batē in Hakkārī (820—900 = 1417—1494), is the author of a *Diwān* and a *Mawlid*. The latter has been published in phototype by H. von Le Coq (*Kurd. Texte*, i. 49—96).

Aḥmad Khānī of Hakkārī flourished between 1000 and 1063 (1591—1652) and was buried at Bāyazīd near the mosque bearing his name. He wrote the poem *Mem-u Zin*, analysed by Jaba-Lerch, *Mélanges Asiatiques*, iii. 242—255 and publ. in 1338 (1920) at Constantinople by the publishers of the *Zin* newspaper. His rhymed Arabic Kurdish glossary *Naw-bār* (“Firstlings”) has been published by Yūsuf Diyā al-Dīn, who gives it the date of 1094 (*al-Ḥadiya al-Ḥamīdiyya*, p. 279—297), and in facsimile by Le Coq, i. 1—47. Aḥmad Khānī also wrote many poems in Kurdish, Arabic and Turkish.

Ismā‘īl of Bāyazīd, an imitator of Aḥmad Khānī (1065—1121 = 1654—1709), is the author of a Kurmāndjī-Arabic-Persian glossary *Gulzār* and many ghazals and poems. Sharīf-Khān, born and buried in Djulāmerg (1101—1161 = 1689—1748), belonged to the family of the Amirs of Hakkārī. He is the author of a large number of verses in Kurmāndjī and in Persian. Murād Khān of Bāyazīd (1150—1190 = 1737—1784) wrote lyric poems.

On the collections of Kurd poetry belonging to the Asiatic Museum in St. Petersburg, cf. Lerch, *Iszlédovaniya*, iii., p. xxvi. In 1322 (1904) appeared in Cairo the *Mawlid al-Nabī bi ‘l-Lughā al-Kurdiya* of Kurdi-zāda Aḥmad Rāmiz.

In the Kurdish newspaper (cf. below) we find biographical information about and specimens of the poetry of the following poets: Shāh Partau of Hakkārī whose *diwān* was finished in 1221 (1806); Nālī who is very popular in the region of Eastern Kurmāndjī, flourished towards the middle of the sixteenth century; a selection of his poems appeared at Constantinople in the anthology entitled *Shu‘a‘āt* (by Amin Faiḍī); Ḥājjdī Qādir Kō‘ī, very conscious of his Kurdish nationality (xixth century); ‘Abdullāh Beg Miṣbah al-Diwan (“Adab”), d. in Sāwdj-Bulāk during the world war; Shaikh Razāy (Riḍā) of the family of Ṭala-bānī (on the Sirwān), d. about 1910; Ṭahir Bey Djāf, son of ‘Othmān Pasha of Alabča, d. about 1920. The contemporary poets are: ‘Alī Kāmil of Sulaimāniya, ‘Abd al-Kādir Zahawī of Baghdād, Aḥmad Beg Fattāḥ Ṣāhibkīrān of Sulaimāniya, Muṣṭafā Bey Djāf (a satirical poet), Aḥmad Beg Djāf, son of ‘Ādila Khānīm Kirkūki (“Athir”). Other poets, whose names are found in the newspapers are: Shaikh Nūri Bābā ‘Alī, ‘Alī Beg Sālār Sa‘īd, Mullā Raḥīm Mukrī (Wafā‘ī’), Kāka Minī (= Amin) Mukrī, Kāk Muṣṭafā Irānī (= “Murshid-i Kāmil”), ‘Abd al-Khālīk, Sālīm etc.

Jaba’s authority (*Recueil*, p. 12) gives several authors of textbooks in Kurdish (‘Alī of Taramākḥ [after 1000 = 1591] wrote an Arabic grammar in Kurdish and Malā Yunis of Ḥalkaṭīn wrote three grammatical works on *taṣrif*, *zurūf* and *tarkīb*). To the same category belongs the “canonical Muslim prayer” written down about 1783 and published by C. Huart in *J. A.*, 1895, N^o. 1, p. 86—109, as well as the works already mentioned by Aḥmad Khānī etc. But as a rule Kurd authors writing on general subjects prefer Arabic, Persian or Turkish.

Among those who wrote in Arabic were the celebrated jurists and theologians: ‘Isā Hakkārī, d. 585 (1189); Taḳī al-Dīn Shahrāzūrī, d. at

Damascus in 643 (1245) (Ibn Khallikān, *Wafayāt*, ii. 188, 430); 'Abdullāh al-Kurdi of Sindjār (Ibn Battūta, ii. 142). On the Aiyūbid prince Abu 'l-Fidā', historian and geographer, see the article on him. Ibn al-Athīr, ix. 49, quotes the Arabic ode of Husain Bashnawī, a poet at the court of the Marwānids and mentions (xi. 7—8) the existence among the Kurds of men versed in local traditions. The *Sharaf-nāma* (i. 341—342) mentions among the natives of Bidlis Mawlānā 'Abd al-Raḥīm, Mawlānā Muḥammad Bar-kaḥī and Shaikh 'Ammār Yāsir (cf. *Nafaḥāt al-Uns*, ed. Nassau-Lees, p. 479) and speaks of the 'ulamā' and *fuḍalā'* of 'Amādiya. On the Kurd theologians of the modern period see the review *Rōzā-kurd*, N^o. 2, p. 23.

Many historical works have been written by Kurds in Persian (cf. above). The *Diwān* of the Kurd poetess Māh Sharaf-khānīm, d. 1264 (1847) (cf. SENNA), was published with a biographical notice at Teherān in 1926.

Among writers in Turkish of Kurdish origin was reckoned the very celebrated poet Fuḍūlī [q. v.] of Baghdad, d. 968 (1556). But Köprülü-zāde Mehmed Fūād, *Fuḍūlī, Ḥayātī we-Etherī*, Stambul 1924, p. 13—14 says that Fuḍūlī was a Turk of the Bayāt tribe. The Bayāts are certainly Turks, but it may be noted that Khurshid Efendi, *Siyāhat-nāme-i Hudūd*, Russ. transl., p. 193—194 mentions the Bayāt clans (*fırka*) of Kifri and Tuz-Khurmatū among the Kurds. Modern Turkish literature has quite a number of writers of Kurd origin (cf. J. Deny on the origin of the sociologist Diyā Gök Alp, *R. M. M.*, 1925, lxi., p. 3).

The publications of the Christian missionaries form a special category in Kurdish literature. The Gospel has been translated into several dialects: the Kirmānshāhi version was published in London in 1900. The Gospel according to St. Mark in Mukrī was published at Philippopolis in 1909. M. Fossum has published a Protestant catechism in Mukrī and in his grammar has given a rhymed translation of "Onward, Christian Soldiers" adapted to local conditions. Several of these publications are printed in the Armenian alphabet (Justi, *Kurd. Gramm.*, p. xxix.) and seem to be intended for the Armenians (of Diyārbakr) whose usual language is Kurdish. In April 1914 the Protestant missionaries of Urmia published the first number of the magazine *Kurdistan* (in Mukrī).

The first Kurd newspaper that we know of is *Kurdistan* published successively in Cairo, London and Folkestone, by 'Abd al-Raḥmān Beg, son of Badr Khān Beg of Bohtān. The Preussische Staatsbibliothek has Nos. 1—31, 1315—1320 (1892—1902); cf. *W. Z. K. M.*, xii., p. 112 and Makas, *Kurd. Stud.*, p. 19. After the Young Turk revolution, the Kurd students (*tullāb*) who had formed an association called *Hiwī* (Unity) founded the monthly review *Rōzā Kurd* (The Kurd Day) of which the first two Nos. embellished with portraits of Ṣalāh al-Dīn and Karīm Khān Zand appeared in Stambul on June 6 and July 6, 1329 (1912) under the editorship of 'Abd al-Karīm of Sulaimāniya; later this review got the name *Ḥatāwī Kurd* (The Kurd Sun). The magazine *Kurdistan* published by the missionaries of Urmia has already been mentioned above. The renewal of Kurd activity after the war of 1914—1918 was marked by the production of several newspapers in Constantinople, Egypt and Kurdistan (Diyārbakr, etc.). The earliest was

the weekly *Zin* ("Life") founded in 1919, which, though published in Turkish and in Constantinople, was dedicated to the propagation of the idea "Kurdistan for the Kurds". N^o. 32 appeared on 1st Djumādā I, 1338 = Jan. 23, 1920. As to Kurdish newspapers, in default of a complete list we may mention *Kurdistan*, a bi-monthly published in Cairo by Aḥmad 'Azīzī (i. e. of the tribe of Badr Khān); N^o. 2 is dated 15th Dhu 'l-Hidjdja, 1335; N^o. 11, 15th Rabī' I, 1336. The first newspaper published in Sulaimāniya was *Pishkawtin* ("Progress"), later replaced by *Bāng-i Kurdistan*, which was edited, before the English evacuation, by Hādjdji Muṣṭafā Pasha (13 Nos. between Aug. 2 and Oct. 1922); *Rōz-i Kurdistan*, organ of the "king of Kurdistan" (Mahmūd I = Shaikh Mahmūd), publ. at Sulaimāniya by Muḥammad Nūrī, N^o. 1 dated 15th ix. 1922 and N^o. 15 8th iii. 1923. *Bāng-i Haqq*, publ. by Shaikh Mahmūd after his flight (Nos. 1—8, iii.; N^o. 3—12, iv., 1923); cf. Edmonds *A Kurdish Newspaper, Journal Centr. As. Soc.*, 1925, i., p. 83—90; *Żiyānawue* ("Resurrection"), official (*hukūmatī*) weekly of Sulaimāniya (N^o. 1—18, viii., 1924); *Diyārī-yi Kurdistan* ("The Gift of K."), a weekly review in three languages publ. at Baghdad by Ṣāhibkīrān-zāde and Rashid Shawkī, Nos. 1—11, March 1925; *Zār-i Kirmāndjī*, a weekly review publ. at Rawānduz by Saiyid Husain Mukrī and 'Abd al-Raḥīm Gēw, founded 12th Dhu 'l-Ka'da, 1344. (V. MINORSKY)

KURKŪB, a town in Khūzistān, on the road from Wāsiṭ to Sūs (Susa). The statements regarding distances given by the Arab geographers are now collected and arranged in P. Schwarz, *Iran im Mittelalter nach den arab. Geograph.*, 1921, iv., p. 396 sq.; cf. also p. 431. The town was noted for its carpets; there was also a *fīrāz* of the Sūltān there. A material called *sūsandjird* was made there, cf. de Goeje's glossary in *B. G. A.*, iv., s. v. Al-Iṣṭakhrī says that the *sūsandjird* of Fasā [q. v.] is better than that of Kurkūb; the latter was a mixture of silk and cotton while in the former wool was used.

Bibliography: G. Le Strange, *The Lands of the Eastern Caliphate*, p. 241, 246; Schwarz, *loc. cit.*, ii. 98, where all the important quotations from the Arab geographers are given.

(M. PLESSNER)

KURRA B. SHARĪK B. MARTHAD B. ḤAZIM B. AL-ḤARITH AL-'ABSĪ AL-ḲAISĪ, governor of Egypt, belonged to the tribe of Kais b. Ghailān and was therefore a north Arabian. His native town was Kinnesrin in Syria. We do not know whether he had already held a high office before his appointment as governor of Egypt, but it is exceedingly probable, especially as the Umayyads were particularly careful only to appoint to this important office men of proved ability. As conditions then were, only a tried man in whom the caliphs had entire confidence could be considered for the governorship rendered vacant by the departure of prince 'Abd Allāh b. 'Abd al-Malik. Kurra entered al-Fuṣṭāṭ on the 3rd or 13th Rabī' I, 90 (Jan. 20 or 30, 709) and assumed complete control of the country, including its financial administration. He remained in office till his death on 23rd Rabī' I, 96 (Dec. 6, 714). Later biased historians have given us a very erroneous picture of the man. He is put alongside of the notorious al-Ḥādjdjādī b. Yūsuf, which meant that he was of the lowest moral character and is described as

a brutal tyrant and heretic. The historian loves to dwell on the story that he did not hesitate to have a drinking bout with music in the newly built mosque of 'Amr. We get a very different picture of this undoubtedly important figure from contemporary documents, yielded by the finds of papyri in the last fifty years. They reveal him as a conscientious and faithful official, strict towards his subordinates, lenient towards the people, the ruthless exploitation and oppression of whom by the minor officials he did his best to check. He devoted all his energies to a just and wise rule, always keeping the future of the land in view. That there were occasional hardships is easily understood, they never became a system with him, as with other amirs of the land. The serious economic damage which the famine of 86/87 (705/706) inflicted on the land with its terrible increase in prices, which was not made good even in 88, forced Kūrā to devote his whole energy to increasing agricultural production in Egypt. A measure as effective as it was farseeing was the recultivation of fallow lands, and great public works, of which the name *Iṣṭabl Kūrā* for the *Birkat al-Ḥabash* still reminds us, which Kūrā restored to cultivation in its entirety. He is said to have planted fields of sugar-cane. In these circumstances quite a different light is thrown on the fact that Kūrā found himself forced to depart from a very old tradition in the distribution of taxation and to make newly converted Copts pay the *ḡizya*, from which they had hitherto been exempt, by making them share in the cumulative quota of their community. Kūrā's name is also connected with the rebuilding of the mosque of 'Amr in al-Fuṣṭāṭ (old Cairo). In the year 63 Maslama b. Mukhallad had carried out the first and 'Abd al-'Azīz b. Marwān the second extension of this notable building and Kūrā was ordered by the Caliph al-Walid I to remove the whole mosque and erect a new one on its site. The work under the direction of Yaḥyā b. Ḥanzala took from Sha'bān 92 till Ramaḍān 93 to complete.

KURS. [See AKRĀS.]

KURSI, an Arabic loan-word from the Aramaic *kurseyā* (Syriac form; Hebrew: *kissē*; Nöldeke, *Mandäische Grammatik*, p. 128; S. Fraenkel, *De*

vocalibus peregrinis, p. 22), throne. It is only found twice in the Kūrān (ii. 256; xxxviii. 33); its occurrence in the first of these has given the verse the name of the Throne Verse (*āyat al-kursī*); the reference is to the throne of God, which is large enough to embrace the heavens and the earth. In the second passage the reference is to the throne of Solomon. The use of two different words, 'arsh and kursi, for the throne of God, very early troubled the exegists; some have seen in the second the stool placed in front of a throne on which a sovereign rests his feet; cf. the sculptures of Persepolis (Abū Mūsā, Asbāt, according to Soddi etc., in Ṭabarī, *Tafsīr*, iii. 7) while others took it to be only a synonym of 'arsh (al-Ḥasan al-Baḡrī, *ibid.*), and one school interpreted it allegorically, saying that the kursi of God is simply his knowledge (Sa'īd b. Djubair according to Ibn 'Abbās, *ibid.*). The use of this word in the second passage for "a throne on which one sits" shows clearly that it is a synonym of 'arsh.

The idea of an erection square in shape (which is also the origin of the word 'arsh) is retained in the different meanings assumed by the word. The four sides of the rectangle intended to enclose the letters forming a word or a number of phrases is so called. In Persian, these four sides are called *khufū-i kursi* and the rectangle itself, *kursi-bendī* (Huart, *Calligraphes*, p. 352). The Persians use it to describe a frame on which a carpet of wool or felt is stretched and under which a brazier is placed; the legs are slipped under the carpet to warm them in winter time (the *tandīr* of the Turks; Polak, *Persien*, i. 65; Fraser, ii. 188). The Arabs apply the name to the following objects: At Mecca, a kind of gangway or movable staircase on 4 wheels (now 6) which had nine steps and was placed against the wall of the Ka'ba so that its upper end was level with the threshold (Ibn Djubair, *Rihla*, p. 91; Ibn Baṭṭūṭa, i. 309; Dozy, *Supplément*, ii. 455); a lectern on which the Kūrān is placed (Maḳḳarī, i. 404); the stand for an astrolabe; the carriage of a ballista; a seat with a back for 3 or 4 persons; a table on which a plate is placed (Lane, *Modern Egyptians*, i. 195); a stand on which a turban is laid at night (*kursī al-ināma*; Dozy, *Vêtements*, p. 343, N^o. 1; Lane, *Modern Egyptians*, i. 50, 221); a holder into which is put the lower end of a pointed instrument (*J. A.*, 1850, i. 251); the card for pulling a ṭonbūr (*Description de l'Égypte*, xiii. 251).

The Moors give the name to lockets, silver boxes, square or triangular, which they wear in necklaces, on account of their shape (Dozy and Engelmann, *Glossaire des mots espagnols*, s. v.; Beaussier, p. 584). It is also the support for the pan and percussion apparatus in a flint lock; the bezel of a ring, conning bench (naut.) (Beaussier, *l. c.*); a chair of a particular shape on which a woman sits when about to give birth to a child (*kursī al-wilāda*) (Lane, ii. 275). Figuratively it is the capital of an empire, royal residence, see of a patriarch or a bishop (Dozy, *Suppl.*, ii. 456; Cuḥe, *Dict. ar.-frang.*, s. v.). (CL. HUART)

KŪṢ, a town in Upper Egypt on the east bank of the Nile. The form Kūṣ (Kūs in al-Farḡānī and Ibn Rusta) comes from the Coptic Kōs (or Kōs Berbir) which a popular etymology later connected with the Coptic verb meaning "to bury". In the Roman period the town was

called Apollinopolis Parva and sometimes Dioeletianopolis. In the early centuries of Islām, Kuş seems to have been of much less importance than the adjoining town of Kift [q.v.]. Some of the early geographers like Ibn Khurdādhbih do not mention it although it is found in the tables of al-Khwārizmī (ed. by von Mzik, p. 9) and al-Farghānī (ed. Golius, p. 36), who place it in the second climate. It is only after the beginning of the fifth century of the Hidjra that Kuş began to supplant Kift (Maḳrīzī, Būlāk 1270, p. 236) to become, in the eighth century, the largest town of al-Ṣaʿīd and the second city in importance in all Egypt (Abu 'l-Fida', ed. Reinaud and de Slane, p. 110—111). This development is no doubt to be attributed to the changes caused by the Crusades in the great trade-routes from west to east. We can see the beginning of this prosperity in Ibn Djubair (ed. Wright and de Goeje, p. 64—65) who passed through it in 1183 and describes it as an emporium for all the goods from Central Africa and the Yemen. It was also the rendez-vous of pilgrims from Egypt and the Maghrib who went from there to the Hidjāz through the port of 'Aidhāb (Ibn Djubair, p. 67). Later this route was supplanted by that of al-Kuṣair (Abu 'l-Fida'). Yāḳūt (iv. 201) already calls it the third town of Egypt. In the first centuries of the Mamlūk period, the governorship of the *muḍirīya* of Kuş (al-Kuṣīya) was extremely important and coins were struck there. At the same time it was a place of exile for individuals of importance, for example several of the 'Abbāsīd Caliphs at the Mamlūk court. Kuş was also noted as a centre of Muslim learning. The town had 6 madrasas and produced a number of scholars. A section of the inhabitants however always remained Christian. The Copts had several churches there. From 800 A.H. the town began to decline, especially after the plague of 806 in which 17,000 are said to have died. In the sixteenth century Kuş was half an hour's journey from the Nile. It is still an important market for simples, aromatic herbs and all kinds of vegetables. The Christian element is still considerable (cf. *al-Khiṭaṭ al-ḍjādīda*, xiv. 134).

(J. H. KRAMERS).

KUSAILA B. LEMZEM AL-AWRABī, successor or colleague of Sakardīd al-Awrabī in the chieftainship of the great tribe of Awraba which occupied the country west of Tlemcen (the passage in al-Bakrī, *Kitāb al-Masālik*, text, p. 50, which makes Kusaila reign at Ṭubna in the time of Mūsā b. Nuṣair, is certainly a mistake unless there were two Kusailas). During the Arab conquest, he led the resistance against Abu 'l-Muhādīr, successor to 'Oḳba, was defeated by him in 55 (674—675) at the "springs of Tlemcen" (now Al-Urīṭ), abjured Christianity and became a Muslim. He was able to win the favour of the conqueror and gained his confidence, which exposed him to the hatred of 'Oḳba, when the latter again was given the governorship of Ifrīḳīya and the Maghrib. He took a delight in humiliating

Kusaila, in spite of the sage warnings of Abu 'l-Muhādīr. Therefore when after his epic cavalry campaign in the west, the Arab general, on his return to Ḳairawān made the mistake of dividing his army, Kusaila, who accompanied him as a living trophy, came to an arrangement with the Greeks and Berbers who were following the Muslim march. The latter were surprised near Tahūda (63 = 682—683) and almost all including 'Oḳba and Abu 'l-Muhādīr died fighting. Kusaila entered Ḳairawān as a conqueror whence he governed Ifrīḳīya for five years, Arabs as well as Greeks and Berbers. When the Caliph 'Abd al-Malik was suddenly relieved of the difficulties, caused by the civil wars in the east, he sent an army to Zubair b. Ḳais, at Barka, with which the latter fought Kusaila at Mems, west of Ḳairawān. He defeated and slew him and regained the lost territory (69 = 688/689).

KUŞAIR or AL-KUŞAIR, a seaport on the African coast of the Red Sea. There is no reason to doubt that all the references of Oriental and European writers to Kuşair on the Red Sea are to the same place; the contradictions between different authors are simply due to inaccuracies as, in the first place there is not sufficient ground for supposing that there were two places called Kuşair and secondly Kuşair is unanimously described as the harbour of Kuş. If we were to have two places called Kuşair, they would have to be so far apart that one of them could not be described as the port of Kuş; but the place marked on our modern maps as Kuşair fulfils the condition of having been the port of Kuş perfectly so far as its position is concerned. The references therefore must be to this place which lies a little north of Lat. 26°. Yāḳūt is unreliable because he makes Kuşair lie near 'Aidhāb and then puts the distance from Kuş at 5 and from 'Aidhāb at 8 days' journey. Even in Egypt where they are used to great distances, two places 8 days' journey apart would not be described as near one another. A glance at the map shows that if it is five days from Kuşair to Kuş, it cannot be 8 from Kuşair to 'Aidhāb. The distance could not be covered in 18 days if the first statement is correct. As a matter of fact from 'Aidhāb to Kuş is according to al-Maḳrīzī 17, according to al-Idrīsī 20 days' journey so that it cannot be only 8 to Kuşair.

Even if we put 'Aidhāb farther north, as C. H. Becker (cf. 'AIDHĀB) and S. Lane-Poole have rightly done, the contradiction between these figures is not disposed of.

The significance of the harbours on the Red Sea for European trade with India and China and for the pilgrims to Mecca has often been described. At the same time the relative importance of the different harbours varied considerably in the course of centuries (cf. BAHR AL-KULZUM). While Kuṣair flourished particularly in the 'Abbāsid period, 'Aidhāb later became the principal port and still later al-Ṭūr. After Selim I had conquered Egypt, he tried again to revive Kuṣair and built a fortress there. The further history of the town to 1876 with a very full description of its condition in the seventies was given by C. A. Klunzinger, who was Egyptian medical officer there. He calls particular attention to the disastrous effect on its fortunes of the building of the railway to Suez and then of the Suez Canal. While in the fifties the traffic at Kuṣair along with that of Suez was "steadily increasing" (v. Neimans), the port is now only important for traffic to and from Egypt; through traffic through the Red Sea has no longer any inducement to touch Kuṣair; the decline of the town is most clearly seen from the figures given by Sāmī Bey at the end of the century in the *Kāmūs al-A'lām*.

(M. PLESSNER)

KUṢAIR 'AMRA. [See 'AMRA.]

KUṢAIY, an ancestor of Muḥammad in the fifth generation and restorer of the pre-Islāmic worship of the Ka'ba in Mecca. His genealogy is unanimously given in all sources as Kuṣaiy b. Kilāb b. Murra b. Ka'b b. Lu'ayy b. Fihr-Kuraish (cf. Wüstenfeld, *Geneal. Tabellen*, O.-T.), and his life and exploits are recorded by our sources in three recensions which only differ from each other in trifling details; these go back to Muḥammad al-Kalbī (d. 146), Ibn Ishāq (d. 150) and 'Abd al-Malik b. 'Abd al-'Aziz b. Djuraidj al-Makkī (d. 150). Kuṣaiy is represented, like the usual legendary type of hero who founds a city, as having passed his childhood and youth far

from his native land and in obscurity: a younger son of Kilāb b. Murra, a descendant of the Kuraish whose supremacy in Mecca had been replaced by that of the Banū Khuḏā'a, he loses his father soon after his birth and is taken by his mother Fātima bint Sa'd b. Sayal who had married again, her second husband being a member of the tribe of Banū 'Udhra, to his tribe in the north of the Arabian Peninsula (in the neighbourhood of Sargh according to al-Kalbī in Ibn Sa'd, i/i., 36, 25, a place on the Syrian frontier of the Hidjāz, near Tabūk [Yākūt, *Mu'djam*, ed. Wüstenfeld, iii. 77], or right into Syrian territory near Yarmuk [al-Bakrī, p. 773]); here his original name of Zaid was changed to Kuṣaiy from the root *k-ṣ-y*, "to go away". Having learned his true origin from his mother, he returned to Mecca where as a result of his marriage with Hubbā, the daughter of the Khuḏā'i chief Hulail b. Hubshiya, who controlled all the arrangements for the worship of the Ka'ba and the pilgrimage, he soon acquired an important position in the city. On the death of his father-in-law, Kuṣaiy managed to succeed him in his offices, either after a long struggle with the Khuḏā'a, or as a less reliable tradition has it by means of a tricky bargain like that of Jacob and Esau, which he made with (Abū) Ghubshān, son of Hulail or only some more distant relative of his (cf. Ibn Dūraid, *al-Ishṭikāk*, 277, line 7 with 282, line 2; the two complete genealogies are given in the source used by Ibn Dūraid, the *Djamharat al-Ansāb* of Ibn al-Kalbī). The detailed narrative of the events which brought Kuṣaiy to fame is given in the article KHUḌĀ'A [q. v.].

Becoming master of Mecca and guardian of the Ka'ba, Kuṣaiy rebuilt the latter and organised its worship; he united the clans of the Kuraish, who were previously scattered, into a solid body which assured them the mastery of the town for the future; indeed it is even said that it was on this account that the name Kuraish (from *taḡarrasha*, to combine) replaced the old name Banu 'l-Naḍr; Kuṣaiy is said to have been called Muḏjammi', the "re-uniter". On his death the sacred offices that had become his perquisites, were inherited by his four sons 'Abd al-Dār, 'Abd Manāf, 'Abd al-'Uzzā, 'Abd Kuṣaiy, the second of whom through his son Hāshim was a direct ancestor of the Prophet. The house which Kuṣaiy had built himself quite close to the Ka'ba was henceforth the centre of the civil and religious functions of the Kuraish under the name *Dār al-Nadwa* [q. v.]; the interesting description of the working of the Dār al-Nadwa goes back to Muḥammad b. Djubair b. Mu'ṭim, d. circa 100 (cf. Sprenger, *Leben und Lehre d. Mohammed*, iii., note clx). To Kuṣaiy is also attributed the discovery and digging of the well of al-'Adjūl (Kuṭb al-Dīn [Chron. Stadt Mekka, ed. Wüstenfeld, iii.], p. 107 infra; Balādhuri, *Futūḥ*, ed. de Goeje, p. 48; Yākūt, *Mu'djam*, iii. 19—20; Bakrī, p. 646, cf. 766).

From what has been said above it is evident that the Kuraish regarded Kuṣaiy as their true founder and the founder of the Ka'ba. The antiquity of this tradition is attested by a verse of al-A'shā (Bakrī, p. 489) and by several of Ḥassān b. Thābit. Later historiography has tried to harmonise this old native tradition with the genealogical system which later became established and according to which Kuraish = Fihr b. Mālik b. al-Naḍr (Wüstenfeld, *Geneal. Tabellen*, N.) as well

as with the tradition quite different in origin and character of the Abrahamic cult of the Ka'ba (q. v., ii., p. 587^a) and its vicissitudes under the Djurhum [q. v.] and the *Khuḏā'a*. Kuşaiy is therefore to Mecca "what Theseus was for Athens and Romulus for Rome" (Caetani). In the present state of our knowledge it is impossible to say whether he should be regarded as a historical personage transformed into a hero or the mythological transfiguration of a hero. His name is found, although by no means commonly, in the Arab onomasticon: a Nahik b. Kuşaiy al-Salūli, a contemporary of Muḥammad, is mentioned by Ibn al-Athīr, *Usd*, v. 14—15; Ibn Ḥadjar, *al-Isāba*, ed. Cairo, vi. 257; another contemporary of Muḥammad, whom Ibn al-Athīr, *Usd*, v. 205 calls Kaṣlī (?) and Ibn Ḥadjar, *al-Isāba*, v. 212, 241 Fuḏail or Kaṣl b. Zālim al-Sinbiṣī, according to the *Djama'harat al-Anṣāb* of Ibn Kalbī occurs in the Escorial manuscript (f. 58 r) of the latter as *Kuşaiy*. Lastly the same work (MS. British Museum, f. 162 v) mentions a tribe Kuşaiy b. Mālik b. Ṭha'laba b. Buhtha b. Sulaim. The fact that this name is to be recognised in the קִשְׁי of the Nabataean inscriptions and probably also in the *Kovrac* of a parchment from Dura on the Euphrates (cf. Cumont, *Les fouilles de Doura-Europos*, Paris 1926, p. 320) does not justify us in concluding that it is of northern origin, since as we have seen, it is found among different tribes. The tradition which makes Kuşaiy pass his childhood in Syria is in favour of the hypothesis which makes the worship of the Ka'ba introduced, or at least renewed, as a result of influences from the north; perhaps in some statements of tradition (e.g. al-Kalbī quoted by Ibn Sa'd, i. 39, 1—11) we have an echo of an actual fact, namely that on the old cult of Hubal, "the idol of the *Khuḏā'a*" (cf. Ibn al-Kalbī, *K. al-Aṣnām*, p. 28), there was super-imposed that of al-'Uzzā and Manāf-Manāt, for which we have definite evidence in Northern Arabia in particular.

In any case the figure of Kuşaiy soon became legendary; his story, as we have seen, has the characteristic features of the legends of eponymous heroes; his alleged sons are only symbols of the part played by Kuşaiy in the religion of Mecca. If it is not quite true that he was the object of regular divine worship (the name 'Abd al-Kuşaiy borne by one of his sons does not necessarily imply the divine character of the father), he was undoubtedly venerated according to the ancestor worship, which certainly existed in pre-Muḥammadan Arabia, although we know very little about it. The eponymous hero of the people of al-Ṭā'if, Ṭhakīf is analogous in character to Kuşaiy. The latter's memory remained particularly associated with the Dār al-Nadwa, which Lammens, developing a suggestion by M. Hartmann, has shown was not the "senate of Kuraish", as tradition has it, but rather a place for the celebration of rites, essentially social and religious in their origins. Its proximity to the Ka'ba, with which it is however never confounded, suggests that it was one of these private dwellings built beside Semitic temples, which, without being identified with the temple itself, came in time to acquire a religious character and certain religious functions. We have an example of this type of house in the "house of Lysias" in the precincts of the temple of the Palmyran deities at Dura (Cumont, *Les fouilles de Doura*, p. 36—37).

Whatever the origins may be, it is certain that at the beginning of the sixth century A. D. the control of the Ka'ba and of the *ḥadīdī* was in the hands of a clan claiming descent from Kuşaiy and that the Kuraish were agreed that he was the founder of their tribal unity. It is to be noted on the other hand that even if this clan included among its members some of the recognised chiefs of the Kuraish, among others the Banū Umaiyā, it was far from having complete political and financial control in its hands; the Banū Makhzūm for example, one of the most powerful families in Mecca, were not descended from Kuşaiy. It seems probable then that the Meccan republic was constituted on the initiative and under the direction of the Banū Kuşaiy, but that the latter were forced to admit into their social organism other clans having the same rights and privileges as themselves, although the prestige of noble blood and supremacy in religious matters always remained the exclusive prerogative of the Banū Kuşaiy; it is a process which presents striking analogies with that which may, we think, be noted in the formation of national unity among the Israelites, as a result of the fusion of the tribes of Judah and Levi with the Ephraimite tribes.

KUŞDAR, or KUẒDĀR, is the name of a town in 27° 48' N. and 66° 37' E. and of the district in which it is situated, a long, narrow valley, important by reason of its central position at the point of convergence of roads from Kalāt on the north, Karāḥī and Bela on the south, Kaḥī on the east, and Makrān and *Khārān* on the west. Yāqūt describes it as a small town in a fertile district, which he calls Ṭūrān, producing grapes, pomegranates, and other fruits, but not dates. It is a city of India, or rather, he says, of Sind, situated at a distance of eighty farsakhs from Bust. It was conquered by the 'Arabs shortly after their conquest of Makrān, and Ibn Hawkal says that it was governed by an 'Arab residing at Kaikanān, who admitted the name of the 'Abbāsīd *Khalīfa* into the public prayers, but Yāqūt quotes a traveller who describes the district as the abode of the *Khawāridj*, and its capital as the seat of their *Khalīfa*. In A. D. 977—978 it was taken by Subuktigin, and its ruler was captured, but was restored on condition of his agreeing to pay tribute and causing the *Khutba* to be recited in Subuktigin's name. At a later date he was again attacked by Subuktigin,

owing to his failure to remit tribute. Kuşdar is now the principal town of the Jhalawān division of the Kalāt State in Balūčistān.

KUŞHAIR, an Arab tribe forming part of the great group of the Banū 'Āmir b. Ṣaṣ'a'a [q. v.] whose fortunes we find them almost continuously sharing in the period before as well as after Islām. They had particularly close associations with the tribes of 'Ukail and Dja'da [q. v.] whose genealogical table makes them brothers. Their genealogy is Kuşhair b. Ka'b b. Rabia' b. 'Āmir b. Ṣaṣ'a'a. Tradition makes the mother of Kuşhair Raiṭa bint Kuṣfudh b. Mālik of the tribe of the Banū Sulaim [q. v.]. During the pre-Muḥammadan period, the Banū Kuşhair settled in al-Yamāma were involved in all the wars of the 'Āmir b. Ṣaṣ'a'a especially in those against the Tamim, the Shaiḅān, whose chief Ḥāḍij b. Zurāra was made prisoner by Mālik b. Salama al-Khair b. Kuşhair, called Dhu 'l-Ruḳaiba, at the battle of Djabala, and against the kings of al-Hira (cf. *Naḳā'id*, ed. Bevan, p. 70, 404—405). After Muḥammad's successes in Central Arabia, the Kuşhair joined with the other tribes of the 'Āmir in sending him envoys and coming to an arrangement with him; it is to this time that tradition dates their conversion to Islām (cf. the texts in Cāetani, *Annali dell' Islām*, i./i., 297 [9 A. H., § 78]). Later they took part without particularly distinguishing themselves in the wars of conquest in Syria and the 'Irāk, and settled particularly in the eastern parts of the Arab empire. In the Omayyad period, they were very numerous and powerful in Khurāsān, of which several Kuşhairis were governors (among others Zurāra b. 'Uḳba whose family possessed a very highly esteemed breed of horses). This Kuşhairī colony had as its founder and common ancestor Ḥaida b. Mu'āwiya b. Kuşhair, a half-mythical personage who is said to have lived to a fabulous age and to have had a thousand descendants (Ibn Ḥadjar, *Iṣṭāḥa*, Cairo 1325, ii. 56, N^o. 1890; Abū Ḥātim al-Sidjistānī, *K. al-Mu'annarin*, in Goldziher, *Abhandlungen zur arab. Phil.*, ii. 97). On the other hand we find in Mubarrad, ed. Wright, p. 273, a similar longevity attributed to Dhu 'l-Ruḳaiba, the Kuşhairī chief mentioned above, and indeed almost all the Kuşhairis of note settled in Khurāsān, recorded by history, belonged to the clan of Salama al-Khair to which Dhu 'l-Ruḳaiba belonged, and which seems to have been the aristocracy of the tribe.

The Kuşhair did not number many poets of note among them; the best known is Yazid Ibn al-Taḥṭriya who lived between the end of the Omayyad period and the beginning of the 'Abbāsīd period.

The genealogical sources and in particular Ibn al-Kalbī also mention other ethnical groups bearing the name Banū Kuşhair, two of which belonged to the southern tribes of the Aslam and the Aws (Anṣār).

KUŞHAIRĪ, ABU 'L-KĀSIM 'ABD AL-KARIM B. HAWĀZIN B. 'ABD AL-MALIK B. ṬAIḤA B. MUḤAMMAD, born in 376 (986), died in 465 (1074), was in dogmatic theology the pupil of the Ash'arī Abū Bakr b. Fūrak and in mysticism a follower of al-Sulamī and 'Abū 'Alī al-Daḳḳāk, whose daughter Fāṭima (d. 480 = 1087) he married. He was persecuted by the other Ash'arīs, by Ḥanbalī jurists and the Saldjūk officials from 440 (1048) to 455 (1063). His best known works are the two manifestoes, the *Risāla ilā Djamād'at al-ṣūfiya bi-Buldān al-Islām*, written in 438 (1046) to adapt Ṣūfism to Ash'arī metaphysics and the *Shakāya ilā Ahl al-Sunna bi-Hikāya mā nālahum min al-Mihna* written in 446 (1054) to clear the memory of al-Ash'arī from the charge of heterodoxy laid against his atomist metaphysics (publ. in Subkī, *Ṭabakāt*, first ed. Cairo, n. d., ii. 276—288). We also have from Kuşhairī's pen a mystical commentary on the Kur'an entitled *Laṭā'if al-Ishārāt* and a manual of mystic paths, *Tarīḥ al-Sulūk*, the esotericism of which is deliberately obscure. The *Risāla*, a classical manual of Muslim mysticism was criticised from the Imāmi point of view by Ibn al-Dā'ī (*Tabṣira*, lith. Teherān 1312, p. 405—409) and published with the *Sharḥ* of al-Anṣārī at Cairo in 1290 in 4 volumes. — This is the only useful edition; the little editions in one volume (1318 A. H., etc.) are swarming with typographical mistakes.

(L. MASSIGNON)

KUSKUSU (Couscous), a dish prepared with semolina. Throughout northwest Africa (Tripolitania, Sahara, Tunisia, Algeria, and Morocco) it is the basis of the food of the people. It is sometimes called *ṭa'am* i. e. food par excellence. The Beduins of Eastern Algeria also call it *na'ama*, which has the same meaning; those of Western Algeria, *ma'ash*; those of the South and of the Sahara, *aish*, also with the same sense. In Tunisia, the name *ṭa'am* has even become applied to feasts at which this dish is particularly used, feasts known elsewhere as *zarda* (Eastern Algeria), *wa'ada* (Western Algeria) and *mussem* (Morocco). In the Judaeo-Arabic of Africa *kuskusu* is called *fiṭl*.

Kuskusu may be prepared at any time. Some however prepare it in the nights of Monday and Friday, which according to the sunna are peculiarly auspicious nights. The ceremony of preparation, which has been given a kind of religious character, at which certain rites have to be performed, always begins with an invocation or pious formula. The woman preparing it must not hear or see anything which might be a bad omen. Those near her avoid speaking of anything except saints or agricultural prosperity, the wealth of the produce of the land or of the family in which she is.

To make kuskusu, the woman sits on the ground, puts in front of her a wooden dish called *djafna* or *ksa'a* according to the district. Beside her is the bag of semolina and a vessel of slightly salted water. Some add to the salted water two or three drops of water of Nisān (the rain that falls at the beginning of May, which is kept in a flask) which

has peculiar virtues. She then takes a handful of semolina, puts it in the *djafna*, sprinkles salt water over it with the hollow of her hand and rolls it under her fingers in the dish to right and left until little pellets are formed like lead drops. She goes on in this way, handful by handful. From time to time she stirs the *djafna* to separate the little pellets from the large and rolls the latter to make them smaller.

In the meanwhile she is boiling on a brazier, in the *kedra* (a kind of earthenware saucepan) water and meat, if the kuskusu is to be prepared with meat, or vegetables (chick peas, turnips, wild chard) if it is to be made with vegetables, water alone if it is to be with sugar. Finally the required quantity of semolina for the kuskusu having been prepared, the woman shuts it up for some time in a bag or bottle of leather. In this the little pellets run together as they dry up and form a kind of rough grained paste. The cook then turns out this paste into a special sieve and taking up her pestle crushes it through the sieve. The round grains that pass through the holes of the sieve are the real grains of kuskusu; the grains too large to go through are used to make *bar-kūkes* (cf. below) or semolina cakes called *mokāffa*.

In the meanwhile the *kedra* half filled with water has been boiling on the brazier. The cook then takes the *keskas*, a kind of earthenware pot shaped like a funnel without a neck and pierced with little holes in the bottom. The *keskas* is placed on the *kedra*, the edges of which are wrapped in cloth to prevent the steam escaping between the two vessels. The *keskas* is filled with grains of kuskusu. The steam in order to escape has to pass through the holes in the bottom of the *keskas* and through the grains of kuskusu which it cooks. From time to time the cook puts her finger in the middle of it to see if it is done to a nicety. When it is she pours the grains into the *djafna*, rolls them again with her hand to prevent them forming a paste or clotting, then steams them again in the *keskas*. This time as soon as the kuskusu begins to give off steam, she puts it finally in the *djafna*.

Now if the cook wishes to make *masfūf* or sweet kuskusu she powders it with sugar and puts here and there little pieces of butter which melt and impregnate the little pellets of semolina under the influence of the heat. The water is thrown from the *kedra*. If the kuskusu is to be made with meat or vegetables the woman adds water to the *kedra* so that the bouillon or *sakīya* may go farther and a little salt. This bouillon is used to sprinkle on dishes before they are served.

Whatever be the number of courses to a meal, the kuskusu is always served last. According to the manner of its preparation the kuskusu has different names, which vary also in the different linguistic areas. To those already mentioned may be added: 1. *masfūf*, very fine grained with sugar, 2. *ma'ūar*, very fine grained with meat, 3. *barbūkeh* (Tunis, Constantine), fine grained, eaten cold with butter or fat of any kind, sprinkled with buttermilk, in the west called *sikūh*, 4. *maḥammša*, kuskusu with very large grains, 5. *bar-kūkes* or *bar-kūkes*h or *mardūd* of large grains swollen by steam and cooked in bouillon or milk — called *aish* in Southern Algeria, 6. *barbūsha*, made with barley semolina, in place of wheat semolina — in the west called *brīūl*.

KUSS IBN SĀ'IDA of the tribe of Yād, a half legendary figure, called "the sage, the arbiter (*hakam*) of the Arabs". His eloquence is proverbial. He seems to have been a Christian, but not Bishop of Nadjrān as has been said. There was a proverbial expression: "eloquent as the bishop of Nadjrān". This must have facilitated the confusion, of which there is no trace in the oldest references. The *Sira* and *Hadīth* take an interest in Kuss because his personality, surrounded with a halo of asceticism, increased by one the lamentably small group of the *ḥanīf*. He is also said to have predicted the imminent coming of the Prophet. The latter is said to have heard him preach at the fair of 'Ukāz. If Kuss really was a historical individual, he must have lived at a much earlier period than the generation contemporary with Muḥammad; it is impossible to think that he could have become a legendary figure if he lived about the time of the *Hidjra*. At this time the tribe of Yād had ceased to exist as a separate group.

Bibliography: Ibn al-Athīr, *Uṣd al-Ḡhāba*, iv. 204; *Aghānī*, xiv. 41—42; *Djāhīz*, *al-Bayān wa 'l-Tabayin*, i. 137; 'Alī b. Burhān al-Dīn, *al-Sira al-ḥalābiya*, i. 210—212, 216—218. In *Shu'arā' al-naṣrāniya*, ed. Cheikho, p. 211—218, are given the poems attributed to Kuss and a critical examination of the legend in Suyūṭī, *al-La'ālī al-maṣnū'a fi 'l-Aḥādīth al-mawḍū'a*, i. 95—100; A. Sprenger, *Das Leben und die Lehre des Moḥammad*, i. 102—106.

(H. LAMMENS)

KUSŪF, **KHUSŪF**, eclipse of the sun or of the moon. As regards linguistic usage, it may be noted that *al-kusūf* is used alike for the eclipse of the moon (*kusūf al-ḥamar*) and for that of the sun (*kusūf al-ḥams*), e.g. in al-Farghānī, *Qoṣṭā b. Lūkā*, al-Battānī, al-Bīrūnī; but they are often distinguished as *al-khusūf*, eclipse of the moon, and *al-kusūf* of the sun; e.g. by al-Kazwīnī (on the linguistic usage, it should be noted that according to the *Mafātiḥ al-'Ulūm*, ed. van Vloten, the viith form should not be used, although this is very often done; e.g. by al-Kazwīnī and others).

The eclipse of the sun and of the moon have from the earliest times attracted the liveliest attention. Ptolemy, following Hipparchus, studied the theory of eclipses, and following him the Arabs and Syrians, etc. We shall deal first with the eclipse of the moon. It must be premised that the apparent path of the moon — we must adhere to the geocentric view — cuts the ecliptic in two opposite points, which however in course of time come to move on to the ecliptic. These points are called *al-djāw'ahar* (Persian *djāwz čīhr*, nut-shape, or less correctly *guy čīhr*, globe-shape); they are also called *al-tinnin*, "dragon" (see below). All the planets have of course such *djāwzahar*; without an addition the word always refers to the moon. Their positions are given in the Ephemerides. The massive ball into which according to Ibn al-Haiṭham the moon is inserted, and which carries it along as it moves, is called *falak al-djāwzahar*.

The eclipse of the moon is caused, as was early recognised, by a dark body coming between the sun and the moon. It was at one time thought that this was a dragon, which ended at two opposite points on the globe of the heavens and had the same motion as the nodes of the moon. Eclipses occur when we cannot see the moon, because the head or tail of the dragon comes between us and the moon. From this idea comes the name for the crescent and waning nodes, i. e. the points where the moon passes through the ecliptic, "head, *al-ra's*" and "tail, *al-dhanab*", which were retained long after the "dragon" had disappeared. The sign Ω for the length of the node is a distorted dragon. The astrologers credited this dragon with certain influences on the horoscope. But Severus Sebokt (c. 650) (I. Nau, *Notes d'Astronomie Syrienne*, J. A. [Ser. 10], 1910, xvi., p. 15) long ago denied this, as there was no dragon and the calculations in question referred to the movements of the nodes. But we still find in al-Birūnī's *Tafhīm* etc. the assertion that head and tail have separate natures. The head is hot, auspicious, and indicates increase (of property etc.). The tail is cold, brings misfortune, and indicates diminution of wealth etc. Eclipses of the sun or of the moon are really caused by the earth coming between the sun and moon or the moon coming between the earth and the sun. Instead of *djawzahar* we often have the word "node" *'akd* and *'ukda* used, also in combination with *ra's* and *dhanab*.

The shadow of the earth arising in the first instance, because the sun is considerably larger than the earth, consists of a cone-shaped convergent shadow (the shadow) on one side and a divergent shadow (penumbra) on the other side. Only in the shadow is there absolute darkness. As the diameter of the shadow at the place of the moon's path is considerably greater than that of the moon at the same point, under certain conditions, the moon may remain some time in the shadow and therefore be perfectly eclipsed for the period. Ibn al-Haitham, for example, investigated these conditions very fully (E. Wiedemann, *Beitr.*, xiii., *Über eine Schrift von Ibn al-Haitham*, "Über die Beschaffenheit der Schatten", S. B. P. M. S., *Erig.*, 1907, xxxix., p. 226).

If earth, sun and moon were very small bodies, mere points, eclipses would only take place when the sun and moon were exactly in the nodes. But as they are large, eclipses also occur when these bodies have passed beyond the nodes, i. e. have experienced an alteration in latitude and longitude. A total eclipse occurs when the breadth is smaller than the difference between the diameter of the shadow and that of the moon, a partial eclipse when it is larger than the latter but smaller than the sum of the diameters; if it is however equal to the latter, there is only a contact but no eclipse.

Taking into consideration the shadow alone, the *makhṛūt* (cone) or *ṣanawbar* (pine-apple) — its cross-section is called *dā'irat al-zill* — we have the following: the entrance into the shadow is called *bad'* *al-kusuf*, beginning of the eclipse; the phase from the beginning of the eclipse, to the beginning of totality, is called *subūt* (falling, the *ἐπιπνοίς* of Ptolemy), the middle of the path covered in shadow is called *wasf* (middle). The phase which corresponds to complete emergence

is called *tamām al-inḍjilā'* (the completion of disappearance); *al-makṭh* (stop, stay) means the phase in which the moon is eclipsed; in a partial eclipse there is no such stop. A *kusuf kull al-ḥamar bilā makṭh*, a total eclipse without a stop is said to occur when the moon's path is such that the darkened moon touches the cone of the shadow at only one point; then a total eclipse exists at this point only. For the case of total eclipse, the place where it begins is called *awwal al-makṭh* and where the moon begins to emerge from the shadow, *ākhir al-makṭh*.

A diminution of light but no complete extinction also occurs when the moon moves through the half-shadow. In his classical work on the shadows Ibn al-Haitham (see above) discussed the theory of this question and checked it by observation. In very rare cases, however, the whole of the eclipsed moon does not appear quite black but shows different colours, especially a dark red; this was observed by various early astronomers and minutely described by Ibn al-Haitham (his statements agree with modern observation, e.g. Joh. Müller, *Lehrbuch der kosmischen Physik* 5, § 9, p. 196). Al-Birūnī further studied these colours (*al-Ḳānūn al-Maṣ'ūdī*, *maḳāla* vii., *bāb* vii., *faṣl* iii.); he also examines critically earlier views and particularly Indian ideas on the astrological significance of the colours (cf. E. Wiedemann, *Über die verschiedenen bei der Mondfinsternis auftretenden Farben nach Birūnī*, in *Eders Jahrbuch für Photographie*, etc., 1914). This light on the completely eclipsed moon is explained by the fact that the sun's rays are diverted in passing through the earth's atmosphere and thus enter the shadow and illuminate the moon. According to the amount of moisture in the atmosphere, these diverted rays are more or less coloured. For the possibility of a solar eclipse, the conditions are the same as for a lunar one.

Solar Eclipse: As the angle at which the moon appears to us is smaller, although only slightly, than that at which the sun appears, the moon can never completely cover the sun. Therefore even at a so-called total eclipse of the sun, even if the centres of sun and moon and earth all lie on a straight line, a narrow rim of light still remains. Bright formations, the corona and the protuberances radiate from this. They are described by al-Birūnī in *al-Ḳānūn al-Maṣ'ūdī*, *maḳāla*, viii., *bāb*, xi. (cf. E. Wiedemann, *Erscheinungen bei der Dämmerung und Sonnenfinsternis*, in *Arch. f. Gesch. d. Med.*, xv., 1923, p. 43).

The local times at which the same lunar or solar eclipse appears at different places is obtained from the difference of their geographical longitudes. The calculations are made difficult by the fact that these bodies show a considerable parallax. This partly explains the great differences between the calculated and true values.

It would take us too far to go into the details of the theoretical considerations, for example when each eclipse begins, how long it lasts, its periodicity, etc. In the works of al-Farghānī, Ḳoṣṭā b. Lūḳā, al-Ḳazwīnī, al-Djaghminī, al-Ḳhīrākī, and particularly in that of Abu 'l-Faradj, *Le Livre de l'ascension de l'esprit*, ed. F. Nau, Paris 1849, also in the *Kitāb Tafhīm* etc. of al-Birūnī we find more or less full general descriptions while the works on astronomical theory like the *Zīj* (tables) of al-Ḳhwārizmī, of al-Battānī, the *Ḳānūn al-Maṣ'ūdī*

of al-Birūnī, the *Zīj* of Naṣīr al-Dīn al-Ṭūsī etc. give information about mathematical considerations and the particular observations to be made (on the above scholars, cf. H. Suter, *Die Mathematiker und Astronomen der Araber in Abhandl. zur Gesch. der math. Wissensch.*, Heft x., 1900).

To obtain a standard for measuring the amount of the eclipse, the diameter of the sun or of the moon, was divided into twelve equal parts, called "fingers" (*iṣbaʿ* or *iṣbaʿ al-kusuf*) and the number of these that were eclipsed was calculated. In the West one spoke of "digits". In the same way the surface is imagined to be divided into 12 equal parts and it is calculated how many of these are eclipsed. The latter may be calculated from the former which refer only to length. Al-Battānī, for example, gives tables in connection with this. The diopter of Hipparchus was used to measure the magnitude of a lunar eclipse. Two rods are fixed at right angles to a rod. The one with a small round hole is fixed and the other with a larger round hole can be moved towards the other. The second hole is so placed that at an appropriate distance from the other the moon is seen to fill it exactly. A dark plane is pushed in front of the second hole. The amount *a* of the shifting of its edge from one side of the hole, which bounds the dark side of the moon, to the edge of its bright part, is measured, and the magnitude *b* of the shifting over the whole surface of the moon and their relation expressed as *a* : *b*. The amount *g* in fingers of the eclipse is $g = \frac{a}{b} \cdot 12$.

(E. WIEDEMANN)

KŪT AL-ʿAMĀRA, a place in al-ʿIrāq, on the left bank of the Tigris, between Baghdād and ʿAmāra, 100 miles S. E. of Baghdād as the crow flies. *Kūt* is the Hindustānī word *koṭ* meaning "fortress" found in other place-names in al-ʿIrāq, like *Kūt al-Muʿammar*; *Kūt al-ʿAmāra* is often simply called *Kūt*. *Kūt* lies opposite the mouth of the *Shaṭṭ al-Haij*, also called al-*Gharrāf*, the old canal connecting the Tigris with the Euphrates, which has several junctions with the Euphrates, e. g. at Nāṣiriya and *Sūk al-Shuyūkh*. The plains to the north of *Kūt* are inhabited by the Banū Rabīʿa, a division of the great tribe of Banū Lām. *Kūt* is not an old town; it has been proposed to identify it with al-Madhār mentioned by Yaḳūt (iv. 275; cf. Le Strange, *The Lands of the Eastern Culiphate*, p. 38 and H. H. Schaefer in *Islam*, xiv. 17). In the beginning of the sixteenth century and down to 1860 it was a miserable little village surrounded by walls of terre pisée (Keppel in 1824, according to Ritter; Petermann, *Reisen im Orient*, Leipzig 1860, ii. 150). But after Messrs. Lynch obtained a concession for a line of steamers between Baghdād and Baṣra, *Kūt* became an important station on the river and the result was a considerable increase in its population. In the last period of Turkish administration (1861), *Kūt* was the capital of a *ḥaḍā* of the same name in the *sandjak* of Baghdād (and it still is under the new ʿIrāq government). About 1890 the population was estimated at 4,115 (Cuinet) almost all Shīʿīs (about 100 Sunnis and 100 Jews). The *ḥaḍā* extends northwards as far as the mountains of Luristān. The plain at the foot of the mountains is watered by the river Kallāl and contains several villages the Turkish ownership of which was disputed by the Persian authorities. The population of the

ḥaḍā likewise grew after 1861 and about 1890 numbered 30,000, all Sunnis (except the population of *Kūt* itself).

The strategic importance of the site of *Kūt* made it play a prominent part in the Great War. During the first English advance against the Turks, General Townshend occupied *Kūt* in September 1915. Soon after, it became the base for an advance on Baghdād, which ended in the retreat of the English troops, soon followed by the siege of *Kūt* by the Turks, which began on Dec. 8, 1915. As attempts to relieve it failed, *Kūt* was taken on April 29, 1916. The Turks entrenched themselves in their turn in *Kūt* until in December 1916 it again fell into English hands and in 1920 was incorporated in the new kingdom of ʿIrāq.

KŪṬAʿ. [See **KŪṬAʿ**.]

KUTĀHIYA (the ancient Cotyaeum), a town in Asia Minor, the capital of a *sandjak* in the province of Khudāwendigīār, on the river Pursaḳ, which enters the Saḳariya, near it. It is 3,000 feet above sea-level, has 22,266 inhabitants, of whom 4,000 are Greek Orthodox and 3,000 Armenians; it contains 24 mosques, 21 madrasas, 2 libraries, 16 dervish monasteries, 4 churches, 9 caravanserais, 11 baths, 12 potteries. It is a station on the Baghdād railway. In the sixteenth century it was the capital of the Germiyanoghlu; the mosques of this period are in ruins; other notable buildings are the Medjidie Medrese (704 = 1304), the *Ḳurshūn-lu Djamīʿ* (777 = 1375—1376), another mosque (783 = 1381), the mosque of Yaḳūb Čelebi (837 = 1433—1434); the great mosque, *Ülū-Djamīʿ*, the building of which is attributed to the Germiyanoghlu, but is not earlier than Bāyazid I. It has an old citadel in ruins built on a height. The marble lion and the Byzantine sarcophagus mentioned by Texier no longer exist. There are promenades called Aḳ-ṣū, Sultān bāghi, Kebgir, Sultān Bāyazid Baghçe-si; there are hot springs in the neighbourhood. It was once an important centre for the manufacture of glazed pottery with floral decorations (the so-called Rhodian pottery); an attempt has been made to revive this industry but the recent products are not so good as the old ones.

The town formed the dowry of the daughter of the Germiyanoghlu who married Bāyazid I; it was taken by Timūr after the battle of Anycra (1402). The conqueror left his son Shāhruḳh there as governor, while he advanced on Ephesus (H. A. Gibbons, *The foundation of the Ottoman empire*, Oxford 1916, p. 156, 258).

(CL. HUART)

KUTAI, an independent district (sultanate) in Eastern Borneo, belonging to the

administrative division of Samarinda in the residency of "Zuider- en Oosterafdeeling van Borneo". It comprises mainly the valley of the very important and for a great part navigable river Mahakam as far as Muara Mujub. The road from Makassar marks the eastern frontier. The Dutch assistant resident lives in Samarinda on the Mahakam; the capital of the Sultān, Tengggarung, is a little farther up the river. The country is prosperous; the land is rich in anthracite and petroleum and under normal conditions there is a busy trade in forest products and dried and salt fish. The opinion has been expressed that in the name of the sultanate the name Yava-koṭi (Sanskrit *koṭi* = end, point), known from Indian geographical works, survives. It is certain that even before the fifth century A. D. Hindus had founded a colony here directly from India and not through Java. The inscriptions, written in pure Sanskrit, found in Kutai on four stone dedicatory pillars prove the existence of a flourishing Hindu kingdom here under a king Mūlavarman, and very probably other antiquities, notably the Brahmanistic images of deities found in a cave on Mount Kombeng have also to be traced to this kingdom. Any later Hindu civilisation that existed in Borneo came through Java; in the xvth century Kutai formed part of the territories of the Javanese empire of Majapahit. A native tradition of the origin of the kingdom and the genealogy of the royal house of Kutai is known to us from a Malay manuscript in the possession of the Sultān in Tengggarung (there is another copy in Berlin); according to this "*salasila*", the first part of which, largely mythical, has been published with a Dutch translation, Islām was introduced here about 1600 in the reign of Radja Makoeta from Celebes.

The population is of a very mixed character. The Dayaks, the original inhabitants of the country, are for the most part still pagan. Along the Mahakam there are practically no settlements of them left; they are being more and more driven into the interior by other peoples who are settling there. The chiefs of the tribe of Tundjung Dayaks are said to be related to the royal house of Kutai; according to the *salasila* already mentioned, the Tundjung prince Kērna married a sister of the reigning chief Radja Putēri about 1450. There are still a few nomadic tribes away in the interior. The other peoples, Kutainese, Buginese, Bandjarese and Badjau all profess Islām, although in many customs and even in court ceremonies at Tengggarung old animistic conceptions are still very predominant. The Kutainese who form the principal element in the population are probably descendants of early immigrant Malays of various stocks; they are found all over the country. As to the origin of the Buginese settlements we again have a native tradition preserved in a work entitled *Salasila Bugis*; this immigration had probably begun by 1686 mainly from Wadjo and it is still going on. The Buginese lived at first exclusively in Samarinda; they formed a well defined section of the population, who were practically independent of the Sultān of Kutai, and were ruled by a chief of their own (*pua adu*), who was elected by the elders of the different groups of families. This Buginese republic in Kutai no longer exists and at the present day the Buginese stand in the same relation to the Sultān as all other inhabitants; they have settled in the whole country and are mainly engaged in

trade. The numbers of the Bandjarese immigrants from the south of Borneo are also increasing; their main industry is the collection of forest products. The Badjau come from the Sulu Islands; they used to be pirates but now they have permanent settlements at the mouth of the Mahakam where they live by fishing. The heterogeneous composition of the population is reflected in the language, a not yet sufficiently investigated variety of Malay; one feature is the large number of Javanese words that occur in it. The first contact of the Dutch with Kutai took place in 1635, when the Dutch East India Company made their first treaty with the chief. By treaties of the years 1825 and 1844, the Sultān recognised Dutch suzerainty. The Sultān governs with the help of four notables. The Dayaks are under their own chiefs, whose rank is hereditary with the approval of the Sultān.

KUTAIBA B. MUSLIM, ABŪ ḤAFṢ al-BAḤILĪ, an Arab general. Kūtaiba was born in 49 (669/670). In the war against ʿAbd al-Rahmān b. Muḥammad b. al-Ashʿath [q. v.], al-Ḥadjjādī recognised his ability and when the caliph ʿAbd al-Malik in 85 (704) had to fill the vacant governorship of Khorāsān, he gave the post to Kūtaiba on the advice of al-Ḥadjjādī, to whom the governors of Khorāsān were subordinate. After his arrival in Merw, Kūtaiba was able to make full use of his military gifts and by a series of successful expeditions against the neighbouring Turkish tribes, he extended the frontiers of the Arab caliphate to such an extent that he must be reckoned one of the greatest conquerors of the Umayyad period. In 86 (705) he undertook his campaign against Tokhāristān, where the lord of Akhrūn and Shūmān bought peace. According to some historians, Kūtaiba first attacked Saghāniyān, the king of which surrendered at once, and next Tokhāristān from which he returned to Merw. In the following year he turned his attention to Bukhārā. After he had succeeded in concluding a peace with Nēzak, king of Bādaghīs, against whom the previous governor of Khorāsān Yazīd b. al-Muḥallab had conducted a campaign, he crossed the Oxus and advanced on Baikand. The people of the town however sought help from the adjoining states: the latter barred the routes and for two months Kūtaiba was completely surrounded. He finally succeeded in defeating the enemy and the town had to surrender. But, as soon as he had gone, the people rebelled and killed the governor appointed by him, whereupon Kūtaiba returned and stormed the town. After he had put down all resistance he returned to Merw. In 88 (706/707) a campaign against Bukhārā was undertaken, in which he took the towns of Nūmushakāth and Rāmīthana. Fighting was renewed next year but seems to have been indecisive. In any case Kūtaiba returned in 90 (708/709) and defeated the people of Bukhārā after a stubborn resistance and the king of Soghdiana had to sue for peace. Nēzak then rebelled, imprisoned his suzerain, the king of Tokhāristān and called upon several neighbouring rulers to join with him against Kūtaiba. As winter was approaching, the latter himself could do nothing, but he sent his brother ʿAbd al-Rahmān to occupy Balkh. In 91 (710) he took the field again and after bringing the rebels to terms, advanced on Nēzak. The latter fought his way to Farghāna and entrenched himself in the citadel of al-Kurz. After a two months' siege, Kūtaiba captured him through treachery and had him put to death, although he had definitely promised him a pardon. In the same year he conquered Shūmān, which had rebelled against him, along with Kiss and Nasaf, and installed a king loyal to him in Bukhārā [q. v.]. In 92 (710/711) Kūtaiba is said to have undertaken an expedition against Sijīstān, but the ruler there sought peace, and he returned without a blow being struck. Next year he helped the king of Khwārizm against his rebellious brother. He then advanced on Sa-

markand, defeated the forces from al-Shāsh and Farghāna, which had hurried to the help of the Soghdians and seized the town, which was occupied by his troops in spite of the terms of peace. In 94 (712/713) he sent an army against al-Shāsh and advanced victoriously as far as Khodjande and Kāshān in Farghāna. In the summer of 95 (714) he had advanced as far as al-Shāsh or Kushmāhan, when the news of the death of al-Ḥadjjādī reached him. He therefore returned to Merw but in 96 (715) he began a new campaign of conquest against Farghāna. Here he heard of the death of the Caliph al-Walid and as Kūtaiba feared the vengeance of his brother Sulaimān [q. v.] because he had supported the plan of excluding the latter from the succession, he declined to pay homage to the new caliph. This however incited his troops to mutiny and in Dhū l-Ḥijja 96 (Aug.-Sept. 715) or, according to another statement not till the beginning of 97, Kūtaiba was killed by the mutinous soldiers (cf. FARGHĀNA).

(K. V. ZETTERSTÉEN)

AL-KUTĀMĪ, epithet ("culture-like") of the Arab poet ʿUmayr b. Shūyaim b. ʿAmr of the clan of Taim b. Usāma of the Taghlib, a contemporary and fellow-tribesman of the poet al-Akhtal and like the latter played a part in the feuds which raged in the second half of the first century A. H. between the tribes of Taghlib and the Kais ʿAilān. His own experiences in battle and the glorification of the exploits of his tribe in war form the main themes of his poems. In contrast to al-Akhtal however he does justice to his opponents, while venting particular hatred on the Yamanīs. His panegyrics are mainly devoted to the Umayyads, e. g. one to Walid I. The date of his death is not known; according to Ḥadjjādī Khalifa, iii. 5619, he died in 101 A. H. According to several sources he was a convert from Christianity to Islām, but in his poems he shows himself a thorough Beduin, always ready for a fight, anxious about his property in camels, not averse to wine drinking, and looking down upon the townsmen with the haughty pride of the nomad.

The name al-Kutāmī is also borne by two otherwise little known or quoted poets, one of the tribe of Kalb and the other of the tribe of Dubaīʿa, but in practically all references al-Kutāmī without further names means the Taghlibī first mentioned.

Bibliography: *Kitāb al-Aghānī*, xx. 118 sqq.; *Hamāsa*, ed. Freytag, p. 170; much quoted in lexicographical and *Adab* works; his *Diwān* with the commentary of an unknown writer was edited by J. Barth, Leyden 1902, mainly from the Berlin MS., Pm 589 Ahlwardt, *Katal.*, vi. 548. (H. H. BRÄU)

AL-KUTB, the pole (Latin *alchitot*), in addition to the usual meanings has also the following: In a circle the poles lie on the perpendicular erected in its centre thus the poles of the

meridian are the north and south point of the horizon. In places on the equator they lie on it. The poles of the equator (*ḡuṭb mu'adil al-nahār*) are the north and south poles of the earth (*al-ḡuṭb al-shamālī* and *al-ḡuṭb al-djāmūbī* also *ḡuṭb al-ālam*); they are also called poles of the first movement. They are transferred to the globe of heaven. The circle of the four poles goes through them and the poles of the ecliptic (*ḡuṭb falak al-burūdī*). The north pole is also called *ḡuṭb al-djuddaīy* (Pole Star) or *ḡuṭb banāt al-na'sh* (Great Bear) and the south pole *ḡuṭb al-suhail*. For the north pole we also find the term *ḡuṭb al-djāh* (pole of the place). (On these last names cf. G. Ferrand, *Contributions à l'histoire de la boussole*, *Publ. de l'Inst. des Hautes Etudes Marocaines*, *Mélanges*, R. Basset, i. 1923, p. 1—10). The poles of revolving spheres are always the point in which the line around which the sphere revolves intersects the globe of the heavens.

Technically *al-ḡuṭb* means the axis, i. e. if two opposite points of a ring have cylinders attached to them outwards which revolve in corresponding directions as in the case of the rings of the armillary sphere inserted in one another. For axes in the usual sense the word *al-miḡwar* is generally used, but *al-ḡuṭb* is also found. Thus for example the round rod placed through the cylindrical hole of an astrolabe holding the spider on the north side and the alidade on the back is called *al-ḡuṭb* or *al-miḡwar*. The axis is prevented by a pin from slipping out of the instrument. The latter is called from its shape *al-faras* i. e. horse. The pin which connects the separate parts of the parallelactic lineal, is called *al-ḡuṭb* by al-Battānī who says that he uses a *ḡuṭb* like that on the astrolabe. The hole or pin in the centre of the astronomical quadrant is also called *al-ḡuṭb*, to which is fastened the measuring thread.

In theological and mystical language (cf. the article TAṢAWWUF) *al-ḡuṭb* is the name for the holiest of saints, who however is unknown to the world. The founders of the dervish orders are also called *Ḳuṭb* (for the literature, cf. Dozy, *Supplément*, s. v.). *Ḳuṭb* was the name given by Tipū Sultan of Mysore (1783—1799) to his smallest copper coin = 1/8 paise. (E. WIEDEMANN)

ḲUṬB AL-DĪN. [See MAWḌUD B. ZENGĪ.]

ḲUṬB AL-DĪN MUḤAMMAD KHẒĀRIZMŠĀH, founder of a dynasty in KhẒārizm [q. v.]. His father Anūshtagīn (or Nūshtagīn) *gharča* was in charge of the silver and crockery (*tasht-khāna*) at the court of the Saldjūks; the expenses of this branch of the court household were defrayed out of the tribute from KhẒārizm just as the expenses of administration of the clothing-depot (*djāma-khāna*) were defrayed by the tribute from Khūzistān; Anūshtagīn therefore, without actually governing KhẒārizm, held the title of a military governor (*shakhne*) of this country. He had his son educated in Merw. After the assassination of the KhẒārizmshāh Ikinči b. Kočkar in 490 (1097) or 491 (1098) Ḳuṭb al-Dīn was appointed governor of KhẒārizm with the title KhẒārizmshāh and ruled till his death in 521 (1127) or 522 (1128). He was succeeded by his son Atsız [q. v.]. As KhẒārizmshāh Ḳuṭb al-Dīn was a faithful vassal of Sulṭān Sandjar [q. v.]. Every two years he went himself to the court of the Sulṭān and in the interval he was represented there by his son. He is reputed to have been a patron of learned men.

The medical textbook *Dhakhira-i KhẒārizmshāhi* by Djurdjānī [q. v.] is dedicated to him (cf. Rieu, *Catal. Pers. MSS.*, p. 466). [The statement in Brockelmann, *G. A. L.*, i. 487, also given above under DJURDJĀNĪ, ISMĀ'IL, from the Catalogue of the Yeñi Djāmi' that this work is extant in two Arabic MSS. (No. 915 and 916) is probably due to a mistake by the author of the Turkish Catalogue, especially as the title is also given there in the above Persian form, impossible in Arabic].

Bibliography: Djuwainī in *G. M. S.*, xvi/ii, p. 2 sq.; W. Barthold, *Turkestan*, ii. 346. (W. BARTHOLD)

ḲUṬB AL-DĪN AL-NAHRAWĀLĪ. [See AL-NAHRAWĀLĪ.]

ḲUṬB AL-DĪN, AL-SHĪRĀZĪ MAḤMUD B. MAS'UD B. MUSLIḤ, was born in Šafar 634 (1236) in Shīrāz and died in Tabriz on 17th Ramaḍān 710 (1311). Like many Muslim medical men, Ḳuṭb al-Dīn belonged to a family of distinguished physicians; at the same time however he was not only a prominent medical man, at least as regards his writings but he distinguished himself in astronomy, philosophy, and the treatment of religious problems. This versatility induced Abu 'l-Fidā' to give him the name *al-mutaḡannin* "experienced in many fields". He received his medical training with his father Dīyā' al-Dīn Mas'ud al-Ḳāzīrūnī, i. e. of Ḳāzīrūn (a town west of Shīrāz), in the hospital of Shīrāz. He lost his father at the age of 14 and then became a pupil of his uncles Kamāl al-Dīn Khair al-Ḳāzīrūnī and Sharaf al-Dīn al-Zakī al-Rushkānī (Suyūṭī has: Rukshawī) and Shams al-Dīn al-Kutubī; he then went to Našīr al-Dīn al-Tūsī, studied with him and surpassed everyone. It was probably Našīr al-Dīn also who stimulated him to study astronomy. While still quite young he conceived the idea of editing the *Kulliyāt*, the first theoretical part of the *Kānūn* of Ibn Sīnā. He next sought instruction with the physicians in Shīrāz and then studied deeply the works of earlier scholars. He then travelled in Khurāsān, the two 'Irāqs, Persia, Asia Minor, and Syria. Everywhere, as he tells us in the introduction to the commentary on the *Kulliyāt*, he sought the acquaintance of scholars. It was probably after these journeys that he became associated with the Tatar rulers of Persia, the Īl-Khāns; in what year and under which ruler this happened, we do not know. In any case in 681 (1282—1283) he was Ḳāḍī of Sīwās and of Malatya (in Asia Minor) under Aḡmad (Nikudar, 680—683 = 1281—1284). There he was still engaged on the *Kulliyāt*; he must have played a part in politics, as Aḡmad sent him with his uncle Kamāl al-Dīn to Egypt to the Mamlūk Sulṭān al-Manṣūr Saif al-Dīn Ḳalā'ūn (678—689 = 1279—1290). He was sent to report the former's conversion to Islām, no doubt the result of Ḳuṭb al-Dīn's influence and to conclude a peace between Muslims and Tatars. The latter part of his mission was a failure. In Egypt also he collected material for the *Kulliyāt*. He dedicated the work, probably finished shortly after his return from Egypt, to Muḡammad Sa'd al-Dīn, Aḡmad Khān's vizier, and called it *al-Tuḡfa al-Sa'dīya*, "the present to Sa'd", or *Nuḡhat al-Hukamā' wa-Rawḡat al-Aṭibbā'*, "the delight of the wise and garden of the physicians".

In his later years Ḳuṭb al-Dīn retired to Tabriz. Towards the end of his life he ardently studied Ḥadīth and made critical notes on the subject,

e. g. on the *Ḍjam' al-Uṣūl*, "Encyclopaedia of principles", and to the *Sharḥ al-Sunna* (Commentary on the *Sunna*). Ibn Shubha or al-Subkī gives a sketch of the character of Ḳuṭb al-Dīn. He had a brilliant intelligence, combined with unusual penetration; at the same time his humour was clean; he was known as "the scholar of the Persians". It is evidence of his efforts to preserve his independence that in spite of his prestige with princes and subjects he lived remote from the court. He also led the life of a Ṣūfī. It is emphasised that he had many pupils; among these was Kamāl al-Dīn (see below), who cannot praise him highly enough: he also induced al-Taḥṭānī (d. 766 = 1364; see Brockelmann, *G. A. L.*, ii. 209) to come to critical decisions (*Muḥākamat*) on the *Ishārāt* of Ibn Sīnā on points disputed between Naṣīr al-Dīn and al-Fakhr al-Rāzī (Ḥādjdjī *Khalifa*, No. 743). He neglected his religious duties; nevertheless al-Suyūṭī mentions that in Tabriz he always performed his *ṣalāt*'s with the congregation. He loved wine and sat among the scorners. He was a brilliant chess-player and played continuously; he was also skilled in the tricks of the conjurer and played the small violin (*rabāba*). His commentary on the *Ḥikmat al-Ishrāk* ("the philosophy of illumination") of Suhrawardī is undoubtedly connected with his religious attitude. Nevertheless al-Ḥādjdjī *Khalifa* (No. 1169) emphasises, Ḳuṭb al-Dīn distinguished himself in theology. He annotated the *Qur'ān* very thoroughly and in a fashion that won recognition in his *Faṭḥ al-Mannān fi Tafsīr al-Qur'ān*; in the *Fī Mushkilāt al-Qur'ān* he also dealt with passages in the *Qur'ān* difficult to reconcile with one another. He wrote a commentary on *al-Kashshāf 'an Ḥaḳā'ik al-Tanzīl* of al-Zamakhsharī. Ḳuṭb al-Dīn played a special part in the history of optics, because he called the attention of his pupil Kamāl al-Dīn al-Fārisī [q. v.] (d. c. 720 = 1320) to the *Optics* of Ibn al-Haiṭham, with which he had become acquainted on his travels, and procured a copy for him. Al-Fārisī wrote a commentary on it and extended it by his own observations. It is noteworthy that Ḳuṭb al-Dīn so completely forgot Ibn al-Haiṭham's expositions that he based his observation not on rays of light like the latter, but on rays of vision.

In the two comprehensive astronomical works *Nihāyat al-Idrāk fi Dirāyat al-Aflāk*, the "highest intelligence in the knowledge of the spheres", and *al-Tuḥfa al-Shāhiya fi 'l-Ha'fa*, which are very similar to each other, Ḳuṭb al-Dīn has in my opinion given the best Arabic account of astronomy (cosmography) with mathematical aids. It closely follows the *al-Tadhkira al-Naṣiriya*, the memoranda of Naṣīr al-Dīn al-Ṭūsī, his teacher. But Ḳuṭb al-Dīn's works are very much fuller and deal with many questions which Naṣīr al-Dīn did not touch; they are therefore much more than commentaries. The *Nihāya* discusses, for example, details of the cosmography of al-Khiraḳī or Ibn al-Haiṭham which are again found in Roger Bacon. I have discussed the following passages from these works:

Zu den optischen Kenntnissen von Ḳuṭb al-Dīn al-Shirāzī, in *Archiv für die Gesch. der Naturwissensch.* etc., iii., 1912, p. 187—193. *Über die Gestalt, Lage und Bewegung der Erde, sowie philosophisch-astronomische Betrachtungen von Ḳuṭb al-Dīn al-Shirāzī*, *ibid.*, p. 395—422. *Beiträge*,

xxvii., *Auszüge aus al-Shirāzī's Werk über Astronomie*, in *S. B. P. M. S. Ergl.*, xlv., 1912, p. 27—35. *Erscheinungen bei der Dämmerung und bei Sonnenfinsternissen nach arabischen Quellen*, in *Archiv für Gesch. der Medizin*, xv., 1923, p. 47—48. *Inhalt eines Gefäßes in verschiedenen Abständen vom Erdmittelpunkt*, in *Z. S. für Physik.*, xiii., 1923, S. 59—60.

One work is entitled *Sharḥ al-Tadhkira al-Naṣiriya*. As an appendix to the *Nihāya*, Ḳuṭb al-Dīn wrote the *Fī Harakāt al-Dahradja wa 'l-Nisba bain al-mustawī wa 'l-munḥani*, "On the motion of rolling and the connection between the straight and the crooked". Other works are *al-Tabṣira fi 'l-Ha'fa* and a work with a very peculiar title: *Kitāb fa'altu fa 'lā talum fi 'l-Ha'fa*, "Work on astronomy; I have composed it but blame it not".

Besides the works by Ḳuṭb al-Dīn already mentioned there are also recorded a treatise on diseases of the eye and a commentary on the *Urdjūza* of Ibn Sīnā; also commentaries on the work, mainly grammatical of al-Sakkākī and on a work of Ibn al-Ḥādjbī.

After his death Zain al-Dīn Ibn al-Wardī wrote verses on Ḳuṭb al-Dīn, in which he expresses surprise that the mill (*raḥan*) of knowledge still turns after it has lost its axis (*Ḳuṭb*).

Bibliography: Abu 'l-Fidā', *Annales musulmici*, ed. J. J. Reiske, 1794, v., p. 63, 243; Taḳī al-Dīn Ibn Shubha, *Ṭabaḳāt al-Shāfi'ya* (Cod. Goth. 1763). The larger work by al-Subkī on the *Shāfi'is* according to Prof. Dr. Schaade hardly contains any more; F. Wüstenfeld, *Geschichte der arabischen Ärzte und Naturforscher*, 1840, No. 247; H. Suter, *Die arabischen Mathematiker und Astronomen*, No. 387 and the supplement; L. Leclerc, *Histoire de la médecine arabe* (contains the substance of the autobiography at the beginning of the *Kulliyāt*), 1876, ii., p. 129—130; *G. A. L.*, ii. 211 sq.; According to Brockelmann also contain biographical information *Khwāndamīr*, *Ḥabīb al-Siyar*, iii., p. 1, 67, 112 (Lith. Bombay 1857) and Suyūṭī, *Bughyat al-Wu'at*, p. 389.

(E. WIEDEMANN)

ḲUṬB AL-DĪN MUBĀRAK, the fifth and last king of the Khaldjī dynasty of Dihli, was the third son of 'Alā' al-Dīn Muḥammad. When his father died, on Jan. 2, 1316, the minister Malik Nā'ib raised to the throne Mubārak's youngest brother, Shihāb al-Dīn 'Umar, a child of six, blinded his two elder brothers, Khidr Khān and Shādī Khān, and would have blinded Mubārak, had he not persuaded the soldiers sent to perform the task to put Malik Nā'ib to death. He assumed the regency, but on April 1, 1316, blinded his infant brother and ascended the throne as Ḳuṭb al-Dīn Mubārak Shāh. He began his reign by releasing all prisoners, by rescinding all the harsher edicts of his father, including the compulsory tariff, and by restoring confiscated lands. He was addicted to the grossest immorality and appointed his vile favourite, a scavenger who had been named Ḥasan on his nominal conversion to Islām, and was entitled *Khusraw Khān*, minister of the kingdom. Mubārak sent an officer to restore the royal authority in Gudjarāt, and marched to Devagīr, where he slew the rebellious Harpāl, restored order throughout the Dakan and the Peninsula, and built the

great mosque. During his absence a conspiracy was formed, with the object of putting him to death and raising to the throne a son of his brother, *Khidr Khān*, but he discovered the plot, executed the conspirators, and on his return to the capital put all his relatives, including his blind brothers, to death, and married *Khidr Khān's* widow, the beautiful *Deval Devi* of *Gudjarāt*.

His court was a scene of the most disgusting debauchery and buffoonery, and he arrogated to himself the style of Caliph and the pontifical title of *al-Waṭiḥ bi 'llāh*.

Rebellions broke out in *Gudjarāt* and *Devagir*, but were suppressed, and *Khusraw Khān*, absent on an expedition to *Madura*, meditated rebellion in that region, but abandoned the design as hopeless and, returning to the capital, succeeded in persuading the king that he had been falsely accused.

Mubārak's infatuation permitted *Khusraw Khān* to surround himself with a large body of troops and to acquire supreme power in the state, and on the night of April 14, 1320, the favourite caused his master to be assassinated in his palace, seized the throne, and married *Deval Devi*.

The usurper, who assumed the title of *Nāṣir al-Dīn Khusraw Shāh*, was defeated and slain on Sept. 5, 1320, by the warden of the north-western frontier, *Ghiyāth al-Dīn*, entitled *Ghāzī Malik*, who, on the following day, ascended the throne as *Ghiyāth al-Dīn Tughluḳ Shāh*.

Bibliography: *Diya' al-Dīn . Baranī, Tarīkh-i Firūz Shāhī*; *Nizām al-Dīn Aḥmad, Tabaqāt-i Akbarī*; *Khāfi Khān, Muntakhab al-Tawārikh*, and translation by G. S. A. Ranking (all in the *Bibl. Ind. Series of the A. S. B.*); *Muḥammad Kāsim Firishṭa, Gulshan-i Ibrāhīmī*, Bombay 1832. (T. W. HAIG)

KUṬB MĪNĀR, a lofty tower of red sandstone, said by *Fergusson* (ii. 206) and *Diez* (p. 165) to be one of the most beautiful buildings of its kind in the world, is situated about 11 miles from the modern city of *Dihlī* [q. v.], in the ruins of the first city of that name, — about 160 feet from the great mosque which was erected by *Kuṭb al-Dīn Aibeg* [v. AIBEG, i. 209] in 1193, just after the capture of the city from the Hindu king, *Prithirādj*. Like the *Minār* at *Ghazna* [q. v.] and the *Minār* at *Koel* (no longer in existence), it is an isolated structure, from which the *mu'adhdhin* gave the call to prayer, and is 238 feet in height; it is not attached to the mosque, but stands in the S. E. corner of the southern outer court, which was added in 1225 to *Aibeg's* mosque by *İltutmish* [q. v.]; it is not straight, but tapering, and is divided into five stories, above each of which (with the exception of the topmost story) are boldly projecting balconies, with richly-sculptured bands of inscriptions below them. The basement story appears to have been built while *Aibeg* still recognised the overlordship of *Mu'izz al-Dīn* (i. e. before 1205); the second, third and fourth stories were built by *İltutmish*, but during the reign of *Firūz Shāh* [q. v.] the building was struck by lightning and this king in 1368 had it repaired and added a fifth story. The two uppermost stories, both of which in their present form are probably the work of *Firūz Shāh*, have a plain surface, chiefly of white marble, with bands of red sandstone; but the rest of the surface of the tower is entirely of red sandstone, and is not round but made up of flutings, which in the base-

ment story are alternately round and angular, in the second rounded only, and in the third angular only. The line of each fluting is carried up unbroken through each story. The inscriptions are partly historical in character and partly made up of quotations from the *Kur'ān*; they have been reproduced and translated in *Epigraphia Indo-Moslemica*, 1911—12.

The tower derives its name from the saint *Khwādja Kuṭb al-Dīn Bakhtiyār Kākī*, who was held in high honour by *İltutmish*; he died at *Dihlī* in 1235 and his tomb is not far from the *Minār*.

KUṬBSHĀHĪ, one of the five independent Muslim dynasties of the *Dakan*, which arose on the ruins of the *Bahmanī* Kingdom, named, like the others, from the title (*Kuṭb al-Mulk*) borne under the *Bahmanī* kings by its founder, *Sultān Qūlī*, a *Qarakūyunlū* Turk of *Sa'd-ābād*, near *Hamadān*, who, entering the service of *Muḥammad III*, was entitled by his son, *Maḥmūd*, *Khawāṣṣ Khān*. When, in 1490, the provincial governors of *Aḥmadnagar*, *Bidjāpūr*, and *Barār* proclaimed their independence of *Bidar*, *Sultān Qūlī* was still at *Maḥmūd's* court. After the death of *Kuṭb al-Mulk* the *Dakanī*, before *Djāmshādī* in 1493, *Sultān Qūlī* received his title, captured the fortress from the rebels, and in 1495 was rewarded with the government of *Telingāna*. He maintained a semblance of loyalty to *Bidar* until 1512, when he declared himself independent in *Golkonda*, but never assumed the royal title, though historians usually style him *Sultān Qūlī Kuṭb Shāh*. He was assassinated in 1543 at the instance of his son *Djāmshīd*, who succeeded him. The names of the Kings of his house, with the dates of their succession, are as follows:

<i>Sultān Qūlī</i>	1512
<i>Djāmshīd</i>	1543
<i>Subḥān Qūlī</i>	1550
<i>Ibrāhīm</i>	1550
<i>Muḥammad Qūlī</i>	1580
<i>Muḥammad</i>	1612
' <i>Abd Allāh</i>	1626
<i>Abu 'l-Ḥasan</i>	1672

Each was distinguished by the title *Kuṭb Shāh*, which, however, was never accorded to them by the *Mughul* emperors, who invariably addressed them as *Kuṭb al-Mulk*. All were *Shī'ī's*, and their religion, the grievances of *Mir Djumla*, and the licence accorded to *Hindus* were *Awrangzēb's* pretexts, if any were needed, for the destruction of the independent state of *Golkonda*, effected by the capture of the fortress and the imprisonment of *Abu 'l-Ḥasan Kuṭb Shāh* in 1687.

Golkonda was the third in importance of the five independent kingdoms of the Dakan.

(T. W. HAIG)

KUTHĀ is a very old town in the 'Irāq, on one of the canals joining the Euphrates and Tigris. The town as well as the canal are often mentioned in cuneiform inscriptions (cf. the references in Meissner, *Babylonien und Assyrien*, 1920—1925, Indices, s. v. Kuta or Kutū and the map by Schwenzner in the first volume). The town is said to be identical with the place mentioned in Kings ii., xvii. 24, from which came a part of the people whom the king of Assyria settled in Samaria in place of the deported Israelites. The course of the canal, at least for its western part, coincides with that of the modern Ḥabl Ibrāhīm; on the most recent maps (e.g. *Karte von Mesopotamien* [temporary edition for official use only], prepared by the Map Dept. of the German General Staff, Dec. 1917, 1:400,000, Sheet 5d) the Ḥabl Ibrāhīm ends in the Shaṭṭ al-Nōl; the Arab geographers make no reference to this but make this canal flow direct into the Tigris (cf. G. Le Strange, *The Lands of the Eastern Caliphate*, Map ii.). In other respects also the statements of the geographers regarding the canal vary considerably; and when Streck, *Die alte Landschaft Babylonien*, i. 28, in his description of the canal relies solely on Ibn Serapion, it must be pointed out that al-Iṣṭakhṛī for example (*B.G.A.*, i., p. 85) makes such confused statements about the canal that one is forced to assume that in the period of the Caliphs the canals were not unchanging, but the canals and their courses in three centuries had a history which is reflected in the contradictory statements of the geographers and has to be reconstructed. But little progress can be made in this direction without archaeological research.

The Arab geographers distinguish two places called Kūthā in al-'Irāq, Kūthā Rabbā and Kūthā al-Ṭarīq but only give further information about the former. The distances from other places are collected in Streck, *op. cit.*, p. 11. The geographers also mention the bridge of boats over the canal at Kūthā and the Ibrāhīm legends, which are associated with the town; al-Muḥaddasī (*B.G.A.*, iii. 1, p. 121) actually calls the town Madinat Ibrāhīm and to this day the ruins of the town are located in the Tell Ibrāhīm which lies approximately on the site of the ancient Kūthā; and the name of the town comes from that of his maternal great-grandfather. When his mother (her name is very variously given: Yākūt writes Būnā bint Karnabā b. Kūthā; the Talmud, *Babā batrā*, 91a, אמלתיכי כרנו; for other names see Eisenberg, art. IBRĀHĪM and *Das Leben der Propheten nach d. arab. Legende*, II: *Das Leben Abrahams* [Hebr., 1912], p. 9 note) was about to give him birth, she had to take refuge from Nimrod in a cave outside the town. Later Nimrod threw her into a fiery furnace; therefore in the

time of the Arab geographers, many heaps of ashes were still pointed out which came from this fire.

Kūthā is also the name of the *ṭassūdī* around the town in the district of Ardashīr Ḥābgān and is in turn divided into 10 rustāks. According to al-Mas'ūdī (*Tanbih*, *B.G.A.*, viii., p. 79), Ūr Kashd (the Biblical Ūr Kasdim) from which Abraham migrated is a place *min bilād Kūthā*.

The nisba from Kūthā is *Kūthī* or *Kūthānī*. Besides Kūthā in Mesopotamia Yākūt and al-Bakrī also mention a place of pilgrimage of this name in Mecca.

Bibliography: (in addition to references in the article): Ibn Serapion, *J.R.A.S.*, 1895, p. 75; Ibn Ḥawkal, *B.G.A.*, ii., p. 168; al-Muḥaddasī, *B.G.A.*, iii. 1, p. 26, 121 sq.; Ibn Khordadbeh, *B.G.A.*, vi., p. 7, 9, 125, 185, 236 sq.; Ibn Rusta, *B.G.A.*, vii., p. 174, 182; Yākūt, *Muḍjam*, ed. Wüstenfeld, iv. 317 sq.; do., *Muḥṭarik*, ed. Wüstenfeld, ii. 377; al-Bakrī, *Muḍjam*, ed. Wüstenfeld, p. 485; Streck, *Die alte Landschaft Babylonien*, i. 11, 16, 24; G. Le Strange, *The Lands of the Eastern Caliphate*, p. 68 sq. — On the question of the canals cf. also Ritter, *Erdkunde*, xi. 771; M. Hartmann, art. 'IRĀQ, esp. p. 549. — The map in P. Sykes, *History of Persia*, i., 1921, is very instructive for the different periods of oriental history.

(M. PLESSNER)

KUTHAIYIR B. 'ABD AL-RAḤMĀN ABŪ ṢAKHR AL-KHUZĀ'Ī also called IBN ABĪ DĪUM'Ā after his maternal grandfather, one of the great poets of the Umayyad period. From his beloved 'Azza whose praises he sang he was called KUTHAIYIR 'AZZA.

He lived as a ruler in Medīna but also in the Ḥidjāz. A member of the Khuzā'a he was fond of connecting himself with al-Ṣalt b. al-Nadr b. Kināna, a group which, according to al-Ya'qūbī (i. 268, 8—11), had joined the Khuzā'a. He was on this account despised by some. His unpleasing, dwarflike figure also readily provoked ridicule. His stupidity and foolishness are also said to have people caused to ridicule him.

He held extreme Shī'a views and under the influence of his friend the poet Khindif followed the doctrines of the return (*radf'a*, q. v.) and transmigration (*tanāsukh*, q. v.); but his utterances on these matters seem hardly to have been taken seriously by his contemporaries. He professed loyalty to the son of the 'Alids as the "little prophet". The Imām (Mahdī) was for him Muḥammad b. al-Ḥanafīya [q. v.] and he was one of those Kaisānis who expected his return from concealment in the mountains of Raḍwā [q. v.] (see KAISĀNIYA, KHASHABĪYA, KURABĪYA).

But his opinions did not prevent him addressing panegyrics to the Marwānids. The Caliph 'Abd al-Malik thought highly of his poetry and several times rewarded the poet richly. He devoted an elegy to the Caliph on his death. After a long period of waiting he was admitted with other poets to 'Umar II and was able to strike the right note with him also. 'Umar however is said to have distrusted those 'Alids who showed sympathy with Kuthaiyir. The Muhallabids were also patrons of the poet.

There are contradictory anecdotes about Kuthaiyir's relationship to 'Azza, whom he mentions in many verses. Critics asserted that, in contrast

to Djamil's [q. v.] emotions, his love was not a real passion but a simulated one.

Kuthaiyir was the *rāwīya* of Djamil, whom he regarded as the greatest of poets and took as his model. The *rāwīya* of Kuthaiyir was Sā'ib b. Dhakwān (e. g. *al-Aghānī*, xi. 18, 3, 11; xiv. 155, 5; *ibid.*, xi. 50 *infra*: al-Sā'ib b. al-Ḥukaim al-Sadūsī).

Kuthaiyir died in the reign of Yazīd II in 105 (723), as is often mentioned, on the same day as the theologian 'Ikrima (cf. however Ibn Ḥajjar, *Tahdhīb al-Tahdhīb*, Ḥaidarābād 1325—1327, vii. 271).

Some scholars of the iind (viiith) century regarded Kuthaiyir as the greatest poet of Islām. Ibn Sallām al-Djumaḥī says that the people of the Ḥidjāz regarded him as the greatest of poets while he was less esteemed in al-'Irāk. According to some his talent was best displayed in the panegyric (*madīḥ*), according to others in the part of the poem dedicated to his beloved (*nasīb*) although Djamil surpassed him in this. Many of Kuthaiyir's poems were set to music and sung.

Al-Zubair b. Bakkār and Ishāk b. Ibrāhīm al-Mawṣilī collected information about Kuthaiyir (*Akhbār Kuthaiyir*, Ibn al-Nadīm, *al-Fihrist*, p. 111, 10, 142, 20). There was also a *Kitāb Kuthaiyir wa-Azza* in circulation (*op. cit.*, p. 306, 11). MSS. of the *Diwān* of Kuthaiyir, two parts of which al-Kālī had read in Ibn Duraid (Ibn Khair, *Fihrist*, etc., i. [B. A.-H., ix], p. 396, 4) and which is also mentioned by Ḥādjdī Khalīfa (ed. Flügel, iii. 303, N^o. 5630), do not seem now to be known. The MS. Escorial N^o. 409 (H. Derenbourg, *Les manuscrits arabes de l'Escorial*, Paris 1884, i, p. 273) does not contain the *Diwān*, but only one *Qaṣida* (see P. Schwarz, *Escorial-Studien zur arab. Literatur- und Sprachkunde*, Stuttgart 1922, i, p. 1—17). A few *Qaṣida*'s exist in MS. in Berlin (Ahlwardt, *Verzeichn.*, N^o. 7524, 2; 8255, 41; 8471, 6).

(C. VAN ARENDONK)

KUTLUGH-KHĀN, i. a dynasty in Kirmān [q. v.] in the viith (xiith) century, descended from the heathen Qara-Khitai people [q. v.]. The dynasty, successively vassals of the Khwārizmshāh, the Great Mongol Khāns and the dynasty of Hūlāgū Khān (Ilkhāns), lasted from 619 (620?) to 706 and never had more than local importance. It entertained close relations with the neighbouring dynasties of the Atābegs of Yazd, the Salghurids of Fārs and the Muzaffarids [q. v.] and came into occasional contact with the Caliph and with India. The founder of the dynasty (from 619/620) was Naṣr al-Dunyā wa 'l-Dīn Abu 'l-Fawāris Kutlugh Sulṭān Burāk-Ḥādīb. [q. v.], son of Kuldūz (?), d. in 632. His title Kutlugh Sulṭān was given him by the Caliph, although his Islām was of a very recent date. He had a son Rukn al-Dīn Khādjādjuḥ (or Mubārak-Khwādja) and four daughters, of whom Sawindj Turkān was married to Djaghatai Khān, Khān Turkān to her cousin Kuṭb al-Dīn and the two others to members of the family of the Atābegs of Yazd.

Burāk appointed as his successor his nephew and son-in-law Kuṭb al-Dīn Abu 'l-Faṭḥ Muḥammad Khān whose father Khāmītūn Tāyanguḥ b. Kuldūz (variants: Khāmītūr, Khāntimūr, Tānikū) is perhaps identical with the Qara-Khitai chief captured by the Khwārizmians in 607 (1210); cf. Barthold, *Turkestan*, ii. 391. Kuṭb al-Dīn at the end of a year had to retire into Mongolia on the approach of Rukn al-Dīn, son of Burāk and Ūkā-Khātūn, who after spending some time at the Mongol court received from Ügedei investiture for the fiefs of Kirmān and Narmashīr. He ruled for 16 years. He was not well disposed to the Tādjiks and men of letters (*Simṭ al-'ulā'*).

In 650 he had in turn to make way for Kuṭb al-Dīn who had in the interval been serving in China under Maḥmūd Valwādī and upon whom Mangu after his accession conferred the *yarlūḡ* over Kirmān. Kuṭb al-Dīn was authorised by the Kā'ān to put Rukn al-Dīn to death as he was suspected of intriguing with the Caliph. He soon suppressed a rising by a pretender who claimed to be the Khwārizmshāh Djalāl al-Dīn. He severely punished the Kōč and the Balōč. His successes were attributed to the advice of his wife Kutlugh Turkān Khātūn whose wisdom is highly praised by the historians. Some doubts exist as to her origin; according to the *Ta'rikh-i Guzida* she had been the concubine (*surriya*) of Burāk (according to the *Ḥabīb al-Siyar*, that of Ghiyāth al-Dīn, brother of the Khwārizmshāh Djalāl al-Dīn) and would thus be a different person from Khān Turkān, daughter of Burāk; this fact might explain her feud with the sons of Kuṭb al-Dīn.

Kuṭb al-Dīn died in 655. His son Ḥādjdjādī being a minor, the notables asked the Kā'ān to entrust the government to the widow of Kuṭb al-Dīn Iṣmat al-Dunyā wa 'l-Dīn Kutlugh Turkān, who ruled from 655—681 (in 662 her powers were confirmed by Hūlāgū; cf. Rashīd al-Dīn, ed. Quatremère, p. 403).

Ḥādjdjādī when he grew up sought to get into touch with the sons of Ügedei and acted with little regard for Kutlugh Turkān but the latter, strong in the support of her daughter Pādshā-Khātūn, married to Abakā-Khān, forced Ḥādjdjādī to retire to Dehli (in 666). Then the other son of Kuṭb al-Dīn Suyurghatmish successfully disputed Turkān's

power and she went to Tabrīz, where she died in 681. Her daughter Bibī Khātūn, who had married the amir 'Aḡud al-Dīn Ḥādjī removed her remains to Kirmān. Marco Polo went through Kirmān (about 1272) in the reign of Kutlugh Turkān.

Djalāl al-Dīn Abū Muẓaffar Suyurghatmish (681—693) received his investiture from the Ilkhān Ahmad but could not agree with his sister Pādshā-Khātūn. She had been brought up among her brothers under the name of Ḥasan Shāh (cf. MĪRKHWAND) to enable her to escape compulsory marriage with a Mongol prince. She became however the wife first of Abakā and after his death of his son Kai-Khātū. The latter on coming to the throne in 690 gave Kirmān to Pādshā-Khātūn. The princess who was a poetess of talent was of a vindictive and passionate nature. At first Suyurghatmish governed the province in name of the Pādshā but she later threw him into prison. He was freed by his wife Khudāwand-zāde Kardudjīn, daughter of Mangu Timur b. Hūlāgū and the Salghurid [q. v.] princess Abish, ruler of Fārs, and by his daughter Shāh 'Ālam. Kai-Khātū however handed him over to Pādshā-Khātūn who had him strangled. His death was followed by the execution of his vizier who was captured by stratagem. In 694 Baidū, husband of 'Ālam Khātūn, became king. Pādshā was handed over to the vengeance of the wife and daughter of Suyurghatmish. In the reign of Pādshā Marco Polo (ed. Yule-Cordier, p. 23, 91) passed through Kirmān on his return journey (c. 1293).

In 695 Muẓaffar al-Dīn Abū 'l-Hārith Muḥammad Shāh Sulṭān b. Ḥādjīdādī succeeded his aunt by command of Ghāzān Khān but his brothers slew his vizier and rebelled in Kirmān. The troops of Fārs and 'Irāk besieged Kirmān for 18 months. Muẓaffar al-Dīn came from Tabrīz, forced the town to surrender and executed the ringleaders. His methods must have been summary, for his new vizier left him in terror. Muẓaffar al-Dīn, who loved wine, died in 703 as a result of his excesses.

His nephew Sulṭān Kuṭb al-Dīn II Shāh Djāhān b. Suyurghatmish succeeded him and ruled for two years and a half (to 706 = 1306). As he was very cruel and did not pay his dues regularly to the Mongol treasury, Uljāitū deposed him and appointed a simple governor to Kirmān, Nāṣir al-Dīn Muḥammad b. Burhān. Kuṭb al-Dīn II retired to Shirāz to Kardudjīn, wife of his father. His daughter Kutlugh Khān (*wālidat al-salāṭīn*) in 729 (1328/1329) married the wife of Mubārīz al-Dīn Muḥammad, the real founder of the Muẓaffarid dynasty, who later took possession of Kirmān (in 741).

Before the earthquake of 1896 there still existed in Kirmān *Qubba-yi-sabz* (remains of the Madrasa of Turkānābād) bearing the date 640 (1242) (i. e. contemporary with Rukn al-Dīn). This "green mausoleum" was the family tomb for the dynasty (cf. P. M. Sykes, *Ten Thousand Miles in Persia*, London 1902, p. 60—62, 194, 264). Turkān Khātūn founded the little towns of Sar-āsiyāb and Čatrūd to which she brought a water supply. Suyurghatmish built the madrasa of Darb-i Naw, where he was buried.

Bibliography: The particular history of Kutlugh Khān is the *Simṭ al-'ulwā li 'l-Haḡrat al-'ulyā*, written in 716; cf. Rieu, *Cat. Pers. MSS.* in the *B. M.*, p. 849, Add. 222, 695 and

the MS. in the Bibl. Nat. Paris, Persian N^o. 1377. The author Nāṣir al-Dīn was the son of Khwādja Muntadjab al-Dīn Yazdī, the trusted adviser of Kuṭb al-Dīn I (cf. the Paris MS., fol. 125). On Burāk, Rukn al-Dīn and Kuṭb al-Dīn, cf. Djuwainī, ed. Muḥammad Khān Kāzwinī, ii. 211—218. On the whole dynasty: *Tārīkh-i Guzīda*, G. M. S., xiv/i., p. 527—535, 625; *Rawḡat al-Safā*, Bombay 1266, iv. 128—131; cf. E. A. Strandman, *Chuandamir's af-handling om Qarachitaiska dynastin i Kirman*, Helsingfors 1869; *Ḥabīb al-Siyar*, Bombay, Djuz² II, Djild III, p. 10—12; Münadjjim-bashī, *Stambul* 1285, ii. 587; Rieu also quotes Wassāf, iii., (to the year 694) and the *Geography of Ḥafīz Abrū*, part ii. of which seems to contain full references. Cf. d'Ohsson, *Hist. des Mongols*, iii. 5, 19, 32, 131—133, 396; iv. 90—93, 269, 485. 2. The title Kutlugh-khān was conferred in 629 (1231) by Ügedei on Abū Bakr b. Sa'ad, the Salghurid [q. v.], cf. d'Ohsson, iii. 398.

(V. MINORSKY)

KUTR, means in Arab geometry 1) the diameter of a circle or of any section of a cone and the diameter of a cone; 2) the diagonal of a parallelogram or of any quadrilateral; 3) in trigonometry, the hypotenuse of the so-called umbra triangle; as such it is either the secant or the cosecant of an angle, according as the side opposite it is the tangent or cotangent of this angle; in the first case it is called *kuṭr al-ḡill al-awwal* (hypotenuse of the first umbra), in the second case *kuṭr al-ḡill al-thānī* (hypotenuse of the second umbra).

(H. SUTER)

KUTRUB, surname of the famous grammarian and lexicographer Abū 'Alī Muḥammad b. (AḤMAD) AL-MUSTANĪR, born at Baṣra and died in the caliphate of al-Ma'mūn in 206 (821/822).

He studied grammar with Sibawaih [q. v.] and Mu'tazila doctrine with the celebrated al-Nazzām [q. v.]. He was tutor to the children of Abū Dulaf al-Kāsim b. 'Isā, who was vizier under al-Ma'mūn and al-Mu'taṣim and was thus allowed to preach in the mosque, where he taught his heterodox views and read the commentary on the Qur'ān which he had composed according to Mu'tazila teaching.

As regards language, his authority is rather disputed; nevertheless, as Ibn Khallikān observes, he was the first to compose a work on Arabic words of the same form, which change their meaning according as they are pronounced with one or other of the three vowels. Out of some twenty works attributed to him, we only know the following: 1. *Kit. al-Muthallath*, a collection in prose of thirty words which may be read in three different ways and change their meaning with each vocalisation, e. g. *kalām* "discourse", *kilām* "wounds", *kulām* "rocky", each group is followed by a philological commentary and examples taken from the Qur'ān and very often from pre-Islāmic poets (Paris Bibl. Nat., Nos. 825, iv.; Leyden, *Cat. Cod. Arab.*, i., N^o. 43; Berlin, N^o. 7071—7073; two copies belonging to the writer). The *Muthallath* was versified by several scholars, among them 'Abd al-Wahhāb b. al-Ḥasan al-Muhallabī al-Bahnasī, whose poem has been published several times in Cairo and edited and translated with a Latin commentary by Ed. Vilmar (*Carmen*

de vocibus tergeminis arabicis ad Qutrubum auctorem relatum, Marburg 1857); 2. *Kit. al-Addād*, a collection of words with different meanings, Berlin N^o. 7091; 3. *Kit. mā khālafa fihi l-insān al-bahima*, ed. by R. Geyer in *Sitz.-Ber. der Akad. der Wiss. in Wien*, phil.-hist. Cl., 1888, cv.; 4. *Kit. al-Azmina*, Brit. Mus., *Cat.*, N^o. 536.

Bibliography: *al-Fihrist*, p. 52; Ibn Khallikān, *Wafayāt*, Cairo 1310, i. 494; al-Anbārī, *Nuḥat al-Ālibbā fī Ṭabaqāt al-Udabāʾ*, Cairo 1294, p. 119—120; al-Suyūfī, *Buḥyat al-Wuʾāt*, Cairo 1326, p. 104; do., *al-Muḥir*, Būlāḳ 1282, ii. 216; Flügel, *Die gramm. (MOH. BEN CHENEB)

AL-KUTUBĪ, ṢALĀḤ (or FAKHR) AL-DĪN MUḤAMMAD b. ṢHĀKIR AL-ḤALABĪ, Arab historian and biographer. The only known sketch of his life is in the *Kitāb al-Durar al-kāmina fī Aʿyān al-Miʾa al-thāmina* of Ibn Ḥajar al-ʿAskalānī [q.v.] still unpublished, but used by Brockelmann in *G.A.L.*, ii. 48. According to this, Kuṭubī studied in Ḥalab, Aleppo, and Damascus, and made a considerable fortune as a bookseller; he died in Ramaḍān 764 (June–July 1363), but the best known and the only one printed of his works, a continuation of Ibn Khallikān's *Wafayāt* with the title *Fawāt al-Wafayāt* (Būlāḳ 1283, 1299), contains a biography which gives the year of his death as 773, which caused the editor of the Būlāḳ edition to write a note on this doubtful point. The contradiction had already been satisfactorily explained in Wüstenfeld, *Die Geschichtsschreiber der Araber und ihre Werke* (repr. from *A. G. W. Gött.*, 1882, xxviii. sq., p. 178): in the biography the date should read 733.

Further works of his are: 1. *Rawḍat al-Adhkār wa-Ḥadīkat al-Ashʿār*, a collection of *ghazal*'s (Ḥādjdjī Khalifa, N^o. 6622); 2. *ʿUyūn al-Tawārikh* (cf. Brockelmann, *loc. cit.*), the whole comprises 6 volumes according to Ḥādjdjī Khalifa, N^o. 8463.

(M. PLESSNER)

KUṬUZ AL-MALIK AL-MUẒAFFAR SAIF AL-DĪN AL-MUʾIZZĪ (so called after Sulṭān al-Malik al-Muʾizz Aibak), the third Bahrī Sulṭān (cf. BAḤRĪ) ascended the throne of Egypt towards the end of 657 (1259). He is said to have been a nephew of the Khwārizmshāh Djalāl al-Dīn Khwārizmshāh and to have been originally called Maḥmūd b. Mamdūd; he was captured in war with the Tatars, sold in Damascus and purchased and brought to Cairo by Sulṭān Muʾizz al-Dīn Aibak. In 650 (1252) Sulṭān Aibak appointed him his deputy (*Nāʾib al-Saltāna*). When the Sulṭān was murdered in 655 (1257) by his wife Shādjār al-Durr [q.v.], the Mamlūks placed his son Nūr al-Dīn ʿAlī on the throne; Kuṭuz remained deputy and administrator of the kingdom and guardian of the young prince. These first Mamlūk sulṭāns were continually threatened by the danger of attack from the Aiyūbid Sulṭāns of Syria who regarded themselves as the legitimate successors of their relatives in Cairo. The Aiyūbid Sulṭān of Karak, al-Malik al-Mughith, tried to invade Egypt with the help of the Mamlūks of the late Egyptian Sulṭān Najm al-Dīn Aiyūb. Kuṭuz collected his forces and met the enemy at

Ṣālīhiya near Cairo. Although some of his amīrs went over to the representative of the old dynasty, he completely routed the king of Karak and forced him to retreat. Meanwhile, the great danger was threatening from the east, the advance of the Tatars under Hūlagū [q.v.]. In this difficult situation the ambitious Kuṭuz thought he had better assume the reins of government *de jure* which he already held *de facto*. He deposed the boy sulṭān and seized the throne without meeting with serious resistance. During his short reign he won great renown by breaking the power of the Tatars in Syria and saving Egypt from being laid desolate. Hūlagū had conquered Syria, installed his governors everywhere and demanded the submission of Egypt through his envoys in an arrogant letter which is preserved by the historians. Kuṭuz, determined to resist to the last, executed the envoys to make negotiations impossible. For the fear of the Tatars was so great that the amīrs only reluctantly obeyed him and were inclined to negotiate, although the example of the devastation of Syria was sufficient warning to them. In Shaʿbān 658 (1260) Kuṭuz led his troops to Ṣālīhiya and revived their failing courage. Baibars [q.v.] afterwards Sulṭān commanded the vanguard and met the Tatar outposts at Gaza. The main army marched on ʿAin Djalūt (Goliath's well), where they met the Tatars, commanded by Ketboḡhā, governor of Damascus. At the first onslaught the Egyptian left wing was driven back. In this critical moment the Sulṭān himself took command; inspired by the splendid example of his bravery, the Egyptian forces rallied for a tremendous attack and put the Tatars to flight. The defeat was decisive. Ketboḡhā and other Tatar princes fell in the battle; defeated in further fighting as they retreated, the Tatars were forced to leave Syria. The whole country was occupied by the Egyptians and the separate principalities given back to their owners as fiefs. Aleppo alone, the ruler of which remained in Hūlagū's camp, was given to Malik al-Saʿīd, son of Badr al-Dīn Luṭʾ of Mōṣul one of the few princes who had preferred leaving his country to acknowledging the suzerainty of Hūlagū. But this gift proved the ruin of Kuṭuz. His tried general Baibars had hoped to get Aleppo himself and now disappointed, planned vengeance. On the homeward journey through Syria, while hunting, he murdered Kuṭuz with the help of a few fellow-conspirators. He was then elected Sulṭān. In spite of his bravery Sulṭān Kuṭuz was not popular. The needs of his army led to great expenditure and he had to raise the money by harsh taxation and levies. Therefore, according to Maḳrīzī, there was neither indignation nor mourning at his assassination. Ibn Taghribirdī tells a different story. He says that the corpse of Kuṭuz lay unburied for three days and then was interred in Qūzair by his Mamlūks. The tomb was visited like a place of pilgrimage and his assassination deeply lamented. Sulṭān Baibars therefore had the body dug up and buried secretly in another place, which was not made known. Thus he became gradually forgotten.

AL-KUWAIT, a seaport on the Arabian, coast of the Persian Gulf, capital of the

amirate of the same name, which lies along the coast from *Khōr Zubair*; it is bounded on the north by the former Turkish province of *ʿIrāq* and on the south by *al-Ḥaṣa*² and stretches for 120 miles. The greatest breadth is nominally 160 miles but the authority of the *amīr* does not extend much more than a day's journey into the interior. The soil north of the Gulf of *al-Kuwait* is sandy, farther south, partly sand and partly loam; only a small strip is fertile on which the chief vegetation is date-palms and a few fruit-trees of different kinds. The only perennial water-course, a small river, affords the necessary irrigation to the impoverished soil. The coast is low; reefs and shallows are found up to 30—50 miles out and make it difficult for ships of any size to approach. *Al-Kuwait* and *al-Bahrain* are however the only good harbours in this part of the Persian Gulf and *al-Kuwait* is a harbour capable of taking large steamers. The bay has a broad entrance, leading from the north-west corner of the Persian Gulf; it is 20 miles long and half as broad and there is good anchorage in most of it. The depth of the water in the harbour varies from 16 to 4½ fathoms and varies at the top of the Gulf from shallow to a depth of 4 fathoms. Ships of over 20 feet draught have to anchor 2 miles from the town. The town covers a wide area; the streets are clean. Since 1921 the town has been enclosed by a wall over 2 miles long and 12 feet high, which was built out of fear of *Ibn Saʿūd* and is defended by 5 large and 57 small towers. The climate is hot but not unhealthy; the supply of drinking-water alone leaves something to be desired. It has to be brought by ship from *Baṣra*, 3 days' journey distant, and is an article of trade. Corn also is imported. Wool, mutton-tallow and hides are exported.

Al-Kuwait is also an important emporium for the coffee caravans which come via *Nadīrān* from *Yemen* and the port from which the fine horses from *Nadīd* (*Hāyel*) are exported to *India*. The town is therefore of great importance for the country of *Djebel Shammar* and the ruling house of *Ibn Rashīd* as a port for imports and exports and it is natural that the ruler of this extensive hinterland has always endeavoured to be on good terms with the ruler of *al-Kuwait*. The number of inhabitants is not certainly known. The estimates vary between 18,000 and 35,000; the latter must be too high when we reflect that the whole amirate of *Kuwait* only contains 37,000 settled inhabitants and 13,000 *Beduins*. The former include about 1,000 *Persians*, who were domiciled here before the conquest of *Sawād* by the *Arabs*. The harbour is not only frequented by several hundred smaller ships of its own but has a regular steamship connection with *India*. *Manāma*, the harbour of *al-Bahrain*, offers strong competition with *al-Kuwait* for the trade with the interior, but the latter has undoubtedly a great future, especially when it has been connected by railway with *al-Baṣra*, as with *al-Bahrain* it is the only important point for the export trade of the *Wahhābī* kingdom.

We know nothing definite about the foundation of the town, although we are on historic ground; for in the Gulf of *Kāzima* where little sailing boats now lie to shelter from the winds, terminated the great ditch which *Sābūr Dhu 'l-Aktāf* of *Hit* dug through the territory west of the *Euphrates* to protect the *Sawād* from *Arab* raids.

In 12 (633) there was a battle here between the *Arabs* under *Khālīd b. al-Walīd* and the *Persians* under *Hurmuz*, in which the latter were defeated. In the xvth century the *Portuguese* established themselves on the coast here and the remains of a castle built by them can still be seen, but they never mention the name *al-Kuwait*. Whether the name of the place — *al-Kuwait* means "the little castle" — owes its origin to this building seems doubtful. It is in any case interesting that the *Persians* call the place *al-Krēn*, as *Niebuhr* tells us. *Al-Kuwait* was therefore presumably only founded at the beginning of the xviiith century, whether by members of a central *Arabian* tribe or by *Umm Kaṣr* of *Khōr ʿAbd Allāh* is not certain. The former version, which has much in its favour, is found in the records of the *Bombay* government and the plans of the *Turkish* general *Midḥat Pasha*.

In any case the town grew very rapidly. In the beginning of the sixties of the xviiith century, according to *Niebuhr*, it had 800 ships and 10,000 inhabitants, who were mainly engaged in pearl-fishery and fishing. It grew rapidly and became prosperous, especially as after the conquest of *al-Baṣra* by the *Persians* in 1776, *Indian* trade with *Baghdād*, *Aleppo*, *Smyrna* and *Constantinople* no longer went by *Baṣra* but by *al-Kuwait*. In 1793 the *English* transferred their factory from *al-Baṣra* to *al-Kuwait* and the at first very modest port at once attained considerable importance for *England's* position and policy in the *Persian Gulf*. As early as 1805 *Great Britain* was to take the *Shaikh* or *al-Kuwait* under her protection to defend him from aggression by the *Wahhābīs*, but the plan came to nothing. In 1821 the *British* resident in *al-Baṣra* moved to *Failaka* which belonged to *al-Kuwait*. Even then we find *al-Kuwait* adopting a hostile attitude to the *Porte* and it seems to have been fairly independent. In 1829 the lord of *al-Kuwait* had to recognise the suzerainty of *Turkey* and to pay tribute, a circumstance which later led to a closer association with the wilāyet of *Baghdād*. The mutual confidence and good relations between the *Porte* and the *Shaikh* of *al-Kuwait* found expression in the latter's flying the *Turkish* flag and undertaking the defence of the harbour of *al-Baṣra* in return for a subsidy (1845) and in 1853 placing himself directly under the protection of *Turkey* and in 1863 and 1865 *al-Kuwait* undertook the defence of the mouth of the *Shatt al-ʿArab*. In 1869/1870 the able and energetic *Midḥat Pasha* succeeded in getting the then lord of *al-Kuwait*, *ʿAbd Allāh b. Šabbāh*, to join him with *Nāšir*, the chief of the *Muntaṣīk*, in his expedition against *al-Ḥaṣa*² in which the young *Mubārak b. Šabbāh* took part as leader of the land forces. The result of this joint enterprise was the conquest of the territory of *al-Ḥaṣa*² which became a *Turkish* administrative area under the name *Nadīd*. But soon the position of the *Porte* changed when *al-Kuwait* was drawn into the new developments of central *Arabian* politics.

ʿAbd al-Raḥmān b. Saʿūd, the ruler of *al-Riyāḍ*, defeated by *Muḥammad b. Rashīd*, had taken refuge in 1891 in *al-Hufhūf*, where he placed himself under *Turkish* protection and later went to *Baghdād* and *Constantinople*. He returned laden with gifts to *al-Baṣra* but had soon to recognise that his hope that the *Turks* would restore him to his throne would not be realised. He therefore decided to settle at the court of *Mubārak b. Šabbāh*,

lord of al-Kuwait. His enemy Muḥammad b. Rashīd, whose kingdom in 1892 comprised over two-thirds of Arabia, but nowhere touched the coast and had therefore no harbour, had hitherto been dependent on the favour of the lord of the various coast-towns, and of the Turkish officials in al-Ḥasa', Mesopotamia and Syria. Most of his arms came from al-Kuwait and from the little Turkish harbour of al-ʿAẓār (al-ʿUkair) in the district of al-Ḥasa'. But since ʿAbd al-Raḥmān b. Saʿūd had been in Constantinople, and had settled in al-Kuwait, great difficulties were put in Muḥammad's way in both harbours so that he decided he must possess a harbour of his own. As he did not wish to irritate the Turks, on whose goodwill he was dependent for trade with Mesopotamia, he decided to attack al-Kuwait, which suited his purpose better from its geographical position and the fact that from the end of the sixth century it had been the terminus and starting-point for the trading-caravans of al-Riyāḍ. In addition the Shaikh of al-Kuwait had recently shown himself insubordinate to the Porte on several occasions, so that it was hardly to be expected that Turkey would interfere seriously on his behalf. In 1895 war broke out between Muḥammad b. Rashīd and Mubārak b. Ṣabbāḥ which was to prove fatal to the dynasty of the former and make the Shaikh of al-Kuwait an ally of England. In 1897 Muḥammad b. Rashīd was poisoned, but the war with al-Kuwait did not cease but continued under his successor ʿAbd al-ʿAzīz, especially as the banished prince of al-Riyāḍ, ʿAbd al-Raḥmān b. Saʿūd, was working against him in al-Kuwait. ʿAbd al-ʿAzīz found support for his campaign against al-Kuwait in the Turkish government, which would have liked to depose the untrustworthy Shaikh Mubārak b. Ṣabbāḥ, who although appointed Turkish Kā'im-makām in 1897, paid no attention to his superior officer, the governor of al-Baṣra, but under pressure of circumstances asked England to assume a protectorate over his territory, from which he also hoped to gain material advantages. His request was refused at the time. But when in connection with the proposed Baghdād railway the proposal was made to link up a branch line to the Persian Gulf from Zubair with that via Baghdād, Kerbalā', Najaf and Zubair to Baṣra, and thus give Germany and Turkey an outlet by land on the Persian Gulf, England, who, in view of her interests in India was attentively watching the development of the Baghdād railway problems, took measures to meet eventualities. Lord Curzon, the Viceroy of India, who pursued with all his influence and energy the policy of allowing no other power than England to gain influence on the Persian Gulf, gave the English resident in Būshīr, Colonel Meade, authority to contract a treaty with the Shaikh of al-Kuwait, the contents of which were at first secret, but it contained the important clause that the lord of al-Kuwait bound himself not to let or otherwise cede any part of his territory to other governments or subjects of other governments than England, and to receive no representatives of foreign powers without being authorised to do so; for this concession he received a subsidy and was assured of the good offices of the British government, which soon found expression in considerably increased imports of arms and munitions from England and France. The treaty was concluded on Jan. 23, 1899. When at the beginning of 1900

the German Consul-General Stemrich arrived from Constantinople to negotiate, as head of the surveying commission of the Baghdād railway, with the Shaikh of al-Kuwait about the terminus and to obtain a concession at Rās Kāzima (Kāḍhamah on English maps) on the Gulf, the Sulṭān had to refuse to enter into negotiations in view of the treaty concluded with England.

In the spring of 1900 the war between Mubārak b. Ṣabbāḥ and Ibn Rashīd flared up again. The former fell upon a large caravan of the Shammar and captured several thousand camels. In the autumn of the same year this game was to be repeated on a large caravan, which the prince of the Shammar was sending to Mesopotamia to secure from al-Samāwa food, clothing, and munitions for the whole winter. Mubārak's plan failed however, Turkish troops defended the caravan until ʿAbd al-ʿAzīz b. Rashīd came up with reinforcements and brought the caravan without any loss to Ḥāyil. In January 1901, Mubārak b. Ṣabbāḥ took the offensive again, having been joined by a number of places in the south of Ibn Rashīd's kingdom as well as by several tribes who wished to shake off the yoke of the prince of the Shammar. But when a body of the rebels was defeated at the end of February 1901 at al-Bkeriye and the rebellious villages had again returned to their allegiance and left Mubārak b. Ṣabbāḥ's main force in the lurch, the latter was wiped out at al-Ṣarīṭ on March 17, 1901 by the warriors of ʿAbd al-ʿAzīz b. Rashīd. ʿAbd al-ʿAzīz thereupon advanced on al-Kuwait with a large force but halted at al-Ḥafar on the caravan road from al-Nbāḍj to al-Kuwait, when the news reached him of a general rising in the south of his kingdom from which the garrisons had been withdrawn for the war with al-Kuwait. He was therefore forced to return. A Turkish corvette, which had already appeared in the roadstead of al-Kuwait with Turkish soldiers to join in the fighting had to return without doing anything, as the Indian government sent a warship to protect the lord of al-Kuwait and its commander forbade the landing of Turkish troops. Besides the news of the rising in his rear, another circumstance contributed to the collapse of the campaign and the retreat of ʿAbd al-ʿAzīz b. Rashīd; this was the fact that there were English ships in the harbour of al-Kuwait and English troops occupying a post 18 miles inland. No further advance could be made without an open breach with England, especially as Turkey in Sept. 1901 had agreed to the status quo and promised not to send troops to al-Kuwait so long as England did not occupy the place or declare it a British protectorate. But, when in the following year (1902) Turkey instituted military posts in Umm Qaşr, Safwān and on the island of Bubia, the result was a diplomatic and military intervention by England, as the Shaikh of al-Kuwait claimed the territory, which was of importance for the development of the Baghdād railway as well as the country up to a point 20 miles N. E. of Khōr ʿAbd Allāh. In 1907 another treaty with England was concluded by Mubārak b. Ṣabbāḥ, and in 1913 an agreement was come to between England and Turkey, articles 1—10 of which declared the territory of al-Kuwait, more minutely defined in articles 5 and 7, an autonomous qaḍā' of the Turkish empire and the validity of the treaties concluded with England by the Shaikh of al-Kuwait was

confirmed. Turkey was permitted to have a representative at the court of the Shaiḡh. At the same time the question of the continuation of the Baghdad railway was discussed and it was agreed that the Baghdad Railway Company should take over the stretch from Baghdad to al-Baṣra, but that the branch line to al-Kuwait should be built by an English company. The outbreak of the World War prevented the ratification of this treaty as well as that of another on the Baghdad railway, Mesopotamia and other questions. On the outbreak of war England declared al-Kuwait an independent kingdom under British protection. The points in dispute with ‘Abd al-Azīz b. Sa‘ūd, who as lord of Central Arabia had no less interest in al-Kuwait than the Shammar prince ‘Abd al-Azīz b. Rashīd whom he had conquered, were settled in a treaty concluded between Mubārak and Ibn Sa‘ūd on Dec. 26, 1915. Ibn Sa‘ūd withdrew any claim to al-Kuwait and the surrounding country for a breadth of 70 miles and this region was recognised as belonging to the amīr of al-Kuwait. Mubārak b. Ṣabbāḡ died on Jan. 3, 1916 and left three sons, Djābir, Sālīm and Nāṣir who began to fight about the succession. Nāṣir gained the support of the settled people of al-Kuwait, Sālīm of the nomad tribes and with their help fought his brothers and their followers. Djābir was however regarded as the real successor of his father. After his death at the end of 1916, Sālīm was recognised as his successor, although his brother Nāṣir had the support of England. In the Great War, Sālīm was a Turcophil and showed this by facilitating the caravan traffic of the prince of Shammar who was an ally of the Turks. In September, 1917, a caravan of 3,000 camels succeeded in getting through from al-Kuwait to Ḥayil in spite of the English blockade. Sālīm died on Feb. 2, 1921. He was succeeded by Djābir’s son Aḥmad, who had represented al-Kuwait on Oct. 31, 1919 when the Arab kings were received at the English court.

GENEALOGICAL TABLE OF THE AMĪRS
OF AL-KUWAIT

Mubārak b. Ṣabbāḡ
(d. January 3, 1916)
